Subject: RE: MPSC Review of OPO 135169P and Peer Visit

[REDACTED]

We haven't had any indication from the MPSC that they no longer want to pursue an on-site peer visit, but I've reached out to the Chair to confirm this is still the case. I will let you know his response as soon as I hear back from him.

During their interview with the MPSC in February 2020, the OPO did inform the MPSC that CMS investigated the event regarding Donor [REDACTED]

Best Regards,

Subject: RE: MPSC Review of OPO 135169P and Peer Visit

Good morning [REDACTED] our assumption is that the MPSC is still interested in the on-site directed peer visit. Please let us know asap this morning if that is not the case.

Also, did the OPO inform the MPSC that CMS conducted an investigation re the event with Donor [REDACTED] The attached CMS form 2567 documents the violation found by CMS and the CAP.

Thanks, [REDACTED]

Good Morning Everyone,

The OPO recently informed us that CMS showed up for an unannounced site visit at this OPO on Monday. I wanted to pass it along to make sure everyone was aware.

[REDACTED] If you have any further information or guidance about this issue, please let us know.

Thank you,  
[REDACTED]

For each case included in the list below, the donor IDs are in bold at the end of the case description.

Thank you,  
[REDACTED]

**Recent Cases**

- February 2019: Notice of Noncompliance for allocating a liver-kidney to a candidate that was not eligible for SLK.

Donor AFEF077

- February 2019: Notice of Noncompliance for bypassing a transplant center when allocating a kidney, requiring the OPO to withdraw a primary offer. Donor [REDACTED]
- February 2020: Interview with the MPSC after the Committee reviewed a report the OPO recovered organs prior to asystole, despite family authorization. The MPSC initially recommended Probation, but after the interview the Committee decided to issue a Letter of Warning and continue to monitor the OPO. Donor [REDACTED]
- February 2020: Notice of Noncompliance for allocating three donors hearts and/or lungs out of sequence. Donors [REDACTED] and [REDACTED]
- July 2020: OPO staff incorrectly entered an EBV IgG result as negative in DonorNet, closed for self-reporting. Donor [REDACTED]
- July 2020: The MPSC reviewed OPO's submissions requested after its February interview. The MPSC reviewed the most recent Quality Assurance and Performance Improvement (QAPI) plan; the most recent QAPI metrics; examples of recent RCAs OPO has conducted; and QAPI meeting minutes. The MPSC expressed concerns in its review, and requested that the OPO participate in a peer visit, but delayed that visit due to the COVID pandemic. No new donor information
- February 2021: OPO 135169P affixed TransNet labels with the wrong ABO information on the liver, blood, tissue, and shipping packages. After reviewing this case, and taking into account the OPO's other recent cases, the MPSC is considering recommending Probation. The MPSC also suggested conducting the peer visit as soon as possible. Subject: RE: MPSC Review of OPO 135169P and Peer Visit

Good afternoon,

As we discussed on the MPSC leadership call on Tuesday, in an effort to bring all of the different pieces of information and conversations together, we are including a detailed summary of comments and concerns about OPO 135169P and combining it with the additional information about the benefits of an in-person peer visit. We have included direct quotes from MPSC members during their review of these cases.

At this time, since we have not arranged any travel or been able to confirm that the appropriate OPO staff will be available, **we will not be able to use the week of May 3 as anticipated for the peer visit.** We will need to adjust the dates expected, and will need to poll again to confirm the peers to participate.

Once again, **if HRSA does not choose to direct the peer visit at this time, staff are prepared to schedule the OPO's interview for Probation as soon as possible and postpone the peer visit to a later date.** Also, staff will provide some update to the MPSC on this topic at its call Thursday, April 22.

Thank you,  
[REDACTED]

#### Contents

1. Overall MPSC Concerns
2. Recent Cases with Specific MPSC Concerns
3. MPSC Concerns Regarding a Virtual Peer Visit
4. Logistical Challenges for a Virtual Peer Visit

#### 1. Overall MPSC Concerns

- Need for improved patient safety training for leadership and staff.
- Recent cases illustrate OPO staff is uncomfortable stopping processes to identify errors; leading to concerns about culture and leadership.
- QAPI meetings appear focused on reporting of issues, not performance improvement.
- OPO should tailor its QAPI plan to address the OPO's specific needs.
- QAPI metrics difficult to understand and interpret.
- On-going patient safety concerns at the staff and administrative levels.
-

- Lack of consistent leadership accountability.

## **2. Recent Cases and Specific MPSC Concerns**

- **February 2019: Notice of Noncompliance for allocating a liver-kidney to a candidate that was not eligible for SLK.**

Subcommittee Concerns: "The OPO noted this error . . . one day after the donor OR when match-run was being reviewed by internal QA. Had the OPO performed a "time-out" or "Huddle" with AOC prior to donor OR it would have been noted that recipient was not correctly identified as being on the match run. OPO does not routinely contact AOC to review allocations when a kidney is involved. They note that they always take this step for non-renal, multi-organ allocations."

- **February 2019: Notice of Noncompliance for bypassing a transplant center when allocating a kidney, requiring the OPO to withdraw a primary offer.**

Subcommittee Concerns: "This was self-reported which is good. The OPO however states it is considering limiting multiple staff from making organ offers on a case. This should be implemented. Disciplinary action and staff retraining is not sufficient as this could occur again. Especially given the OPOs history with strained relationships in the DSA, it is imperative that the OPO conduct organ offers in a [REDACTED] that will minimize withdrawing offers or confusion over which center is primary."

- **February 2020: Interview with the MPSC regarding a report the OPO recovered organs prior to asystole, despite family authorization only for DCD recovery. The MPSC initially recommended Probation, but after the interview the Committee decided to issue a Letter of Warning and continue to monitor the OPO. However, the MPSC was very concerned the OPO re-approached the donor's mother months after organ recovery and asked her to submit a letter stating she verbally authorized DCD recovery.**

Full MPSC Concerns: "The letter bothered me. It's something he [the OPO director] could have obtained an affidavit from people that were in the OR that said it was clear, the intent was clear from the professionals involved. Approaching the grieving parent for that shows a lack of judgement and I don't understand how he could perceive that this body was asking for that."

"My concerns with this case going in have not been [REDACTED] because at the end of the day. They have only demonstrated . . . that when told we want you to do x, y, z and produce documentation they will do it but are never ahead of the game. . . . There's nothing proactive, it is all reactive and is basically filling in the blanks of what any reasonable person could interpret from our comments, questions, and requests for information. So we may not have an issue of recurrence of this particular event again, which is the traditional definition of risk of recurrence, but we have a likely recurrence there are other huge holes in their process from an operational standpoint and a quality standpoint. . . . There aren't going to be policies or protocols to cover every nuance . . . but at the end of the day the ability to stop and have a constructive thought process about what might work, what might go wrong and then be able to defend that is not there. I do doubt they have any meaningful QAPI process, that their policies prepare their staff to deal with challenges that they have, and that their administrators on call are properly engaged to say okay, this is how we're going to handle this. . . ."

"Just go back the last 12 months. This OPO bypassed a transplant center while allocating a kidney, which required them to withdraw an offer; allocated a kidney for an SLK to somebody that wasn't on the SLK list; and now has this. . . . This is a process problem, and the list is ten years long . . . if this was their first time in front of us, I think you could look to say there's a learning opportunity. . . . we're going to be here 12 months from now talking about another event going oh we didn't see this one coming, but it will be the same OPO."

"They have a systemic issue with quality systems. Our peer review teams looked at that, our peer review teams were concerned about it. We felt like they had fixed it, and here we have how many incidents since they've been released as a Member Not in Good Standing . . . it's the same cycle over and over again . . . ."

- **February 2020: Notice of Noncompliance for allocating three donors hearts and/or lungs out of sequence.**

Subcommittee Concerns: Reviewer One: "A couple of these cases are sloppy but there is no real policy violation, just

unnecessary delays or questionable interpretation of stability. The remainder appear to me to have been poorly managed cases (medically or logistically or both), and were thus expedited unnecessarily. . . .”

Reviewer Two: “This is not a huge number of allocation variances given the organ transplant volume. But I am concerned that four of the seven appear to have no rational basis. . . . [Donor 1] Lung allocation should have continued and the OR held until it was completed. There appears to be no clinical reason to expedite this OR. . . . [Donor 2] There appears to have been a significant delay in brain death to allocation . . . . Especially on a case where family is pushing to go to recovery sooner, this should have been expedited. This can be closed with no action because it’s not a policy violation, per se, but it’s not good practice either. [Donor 3] Reason given is donor instability. Allocation not begun for ~24 hours after brain death (registered donor). Conflicting reports of donor stability. This donor did not need to be expedited. The reason given is “family time constraints” but this was a brain dead registered donor, so time constraints should not have been an issue. . . . [Donor 4] This was two late declines prior to OR. . . . but the OPO was able to re-schedule a 3rd OR for ~22 hours after the 1st OR time, and they completed heart allocation >12 hours prior to this 3rd rescheduled OR. They should not have expedited heart placement, but should have continued normal allocation procedures until the heart was placed. . . . [Donor 5] Heart allocation should have continued and the OR held until it was completed. There appears to be no clinical reason to expedite this OR. . . .”

- **July 2020: OPO staff incorrectly entered an EBV IgG result as negative in DonorNet, closed for self-reporting.**

Subcommittee Concerns: “I will support a close with no action, but I feel obligated to mention that this same OPO was noted on a recent MPSC discussion to have problems with staff not feeling empowered to speak out on perceived errors. This is another example of that kind of situation, and I am concerned that perhaps leadership telling us that staff feels empowered is not the same as staff feeling empowered.”

- **July 2020: The MPSC reviewed OPO’s submissions requested after its February interview. The MPSC reviewed the most recent QAPI plan; the most recent QAPI metrics; examples of recent RCAs OPO has conducted; and QAPI meeting minutes. The MPSC expressed concerns in its review, and requested that the OPO participate in a peer visit, but delayed that visit due to the COVID pandemic.**

Subcommittee Concerns: Reviewer One: “The QAPI plan looks good on paper but does look like it was pieced together from other sources and not created specially to meet the needs of the organization. Certainly we all borrow and cut and paste at times, why reinvent the wheel, but this goes beyond that level. The QAPI minutes do not show the process improvement, responsibility assignments and follow through that I am used to seeing when a Quality work group comes together. As was noted it seems more a round table report of activity than a process improvement road map. I am concerned by the long history and continued culture issues. . . . Is there some sort of Peer mentoring that can be recommended? Maybe a more hands on approach from an OPO with a highly functioning highly efficient Quality department can assist more than the MPSC has been able to?”

Reviewer Two: “My general thoughts after reviewing [the OPO]’s documentation:

- I continue to have concerns that they “get it”. After countless hours . . . . I still do not have a sense that they understand their issues in the realms of policy violation, safe and appropriate operations, or quality.
- I continue to have concerns that they submit significant amounts of verbiage that looks like the equivalent of stock photos. In other words, they buy and read books then transcribe the lingo into a policy document but when issues arise, their application of the policy indicates they don’t fully understand their own policies.
- I continue to be concerned that they frequently do not provide everything we ask of them nor do they proactively provide much of what they should if they had a true grasp of the issues. In most cases, they are like a witness being led by the questioning lawyer: “You have a QAPI plan? Please provide it.” Then it arrives.
- The MPSC has, since 2015 at least, provided them with countless hours of consulting and

guidance at who knows what cost. Yet they are still before the MPSC, not because they have failures or errors (every OPO and transplant center does), but because of their reaction or lack thereof.

- Their overall quality culture, and for that [REDACTED] the core organizational culture are still lacking, in my opinion. Mention is made in these documents that staff are uncomfortable asking questions.

I am troubled that this member has been under scrutiny since at least 2015 and remains under scrutiny. It is further troubling that this level of scrutiny is not superficial nor has it been for unconnected issues but rather that it is a continuation of the same themes: lack of a quality culture, lack of understanding, lack of progress, and ineffective leadership/governance. Finally, it is troubling that after all the effort the MPSC has put into educating, leading, and sometimes guiding this member, they are still in this state. . . .”

Reviewer Three: “Common themes appear to continue after discussions with them, those of culture, clarity of procedures and execution of quality systems. . . . They still need monitoring and help – although they don’t appear to think they do.”

Full MPSC Concerns: “During the in person interview with the OPO we gave them some very clear feedback around their quality program, their QAPI program in general, how they can set that up. . . my concern as an MPSC member is that if we just continue to monitor then it’s as if we’re telling the OPO what their providing is appropriate at this point and we’re going to continue to monitor to make sure that continues and then potentially release them. I think what we’re seen is there’s not a strong culture of quality. The QAPI program looks more like a huddle process or a roundtable discussion, not necessarily a review or an improvement process. . . . I’m wondering if we can continue to monitor with a peer visit when possible.”

- **February 2021: OPO 135169P affixed TransNet labels with the wrong ABO information on the liver, blood, tissue, and shipping packages. After reviewing this case, and taking into account the OPO’s other recent cases, the MPSC is considering recommending Probation. The MPSC also suggested conducting the peer visit as soon as possible.**

Subcommittee Concerns: Reviewer One: “This seems to be further evidence of poorly-developed procedures. I would like to see better patient safety training for their leadership and staff.”

Reviewer Two: “I think we should consider a Letter of Warning as this seems to be a near miss in terms of misreporting a donor ABO.”

Reviewer Three: “We have engaged with this member many times; they are well known to us from prior MPSC engagements. Does a policy violation exist? Yes. Has CAP addressed problem? I believe so. RCA looks appropriate, CAP appropriate. Recurrence unlikely. No systemic quality issues seem evident. I see no reason for going above a level of Notice of Noncompliance. . . . I advocate for issuance to member of Notice of Noncompliance.”

Reviewer Four: “This OPO has had 6 events reviewed by MPSC within the past 2 years including a letter of warning and on-site peer review pending. This latest event highlights on-going patient safety concerns at the staff level as well as the administrative level (AOC). I appreciate the response and CAP to the latest issue, but in the presence of the extensive history with policy violation, I support full committee discussion.”

Reviewer Five: “Normally, I believe a notice of noncompliance would be appropriate however this OPO has had three notices of noncompliance in the past 18 months in addition to the letter of warning. This suggests a problem with culture and leadership in this OPO which needs to be addressed.”

Reviewer Six: “This is the 6th violation in a short period of time with this one involving a discrepancy in ABO documentation. With the known MPSC history, it seems this OPO needs to implement additional levels of quality checks and consistent leadership accountability.”

### **3. MPSC Concerns Regarding a Virtual Peer Visit**

-

- “I want to agree the virtual peer visit, it seems unlikely to best get at these cultural issues, and also not as good to convey messages that we are really feeling that something needs to change. I just wonder why don’t we just do a peer visit? I know there must be impediments, but we figured out how to transplant during this pandemic. We’re talking about an OPO that has recovered over 600 organs in a year, so shutting it down seems like a bad idea, but we’re highly concerned. This just reaches the highest level of concern, so why aren’t we doing a peer visit? It seems like that would help guide us with these other things like referral to the HHS. It seems like it would be hard to refer to the Secretary without having boots on the ground.”
- “I think it [the peer visit] needs to be in person rather than virtual. I think it needs to be a team who can meet with a lot of different people in the OPO. The office environment being what it is in COVID it may not be as easy to happen in an [REDACTED] fashion, which I think would be best. You know, the idea of just happening to pull someone aside while we’re there and saying hey come and talk to me for a few minutes. We need to do something like that. I personally volunteer to travel; I think it is that important.”

#### **4. Logistical Challenges for a Virtual Peer Visit**

- **Technology issues, either for the peer team members, UNOS, or the OPO.** There have been issues with even the most carefully [REDACTED] virtual interactions, for Committee members, transplant community members, and UNOS staff. For example, Member Quality’s performance improvement team has had numerous technical challenges with their Individual Member Focused Improvement (IMFI) meetings, including not being able to use video for most of the meetings.
- **The peers won’t be able to tour the OPO’s facilities.** Other peer teams have gathered a lot of good insight by talking to staff on the floor during their tours. Also, peer teams are asked to make recommendations about the Member’s facilities. However, this isn’t required. Peer teams often eliminate the tour in order to focus on other areas of concern.
- **Lack of connection.** It may be harder for the peers to make the interpersonal connections with OPO staff needed to foster honest feedback.
- **Distractions.** When the peer team is on site in a conference room with Member leadership or staff, there are very few distractions. The peers aren’t on their laptops or phones looking at their e-mails, or exposed to other home/work disruptions.
- **Peer team cohesiveness.** The peers often meet to discuss the desired outcomes for the day ahead before going on site. They also usually meet at the end of the day to go over their observations.
- **Schedule flexibility.** The peers often decide to talk to additional staff, or bring back certain staff members to ask more questions. Sometimes individual staff ask if they can talk with the peer team privately. This may be harder to coordinate virtually, and staff may not be able to comfortably ask for a private discussion when the peer visit isn’t happening in person. In addition, the peers won’t be able to easily read body language, or see if there are Member staff in the meeting who aren’t talking.
- **OPO staff may have concerns about privacy and security,** and may be hesitant to talk openly and honestly in a virtual environment.
- **Two ten-hour days, plus an additional half day, is a long time for the peer team to be on a remote meeting and remain focused.** Because the peers’ schedules are very full, it will be hard to break the visit up into more days with shorter hours. Other Member Quality staff have had difficulty scheduling virtual peer mentoring sessions for these reasons.

**Subject:** MPSC Review of OPO 135169P and Peer Visit

Good afternoon,

In response to the discussion on the leadership call yesterday, we wanted to provide some information about OPO 135169P's current review state and the committee's concerns. As a reminder, the MPSC requested a peer visit of OPO 135169P. The peer visit had been on hold due to the COVID pandemic, but at its February meeting the MPSC felt that it should be conducted soon. The MPSC also considered recommending Probation for the OPO, which offers the OPO the right to an interview.

OPO 135169P leadership stated that they did not feel comfortable asking staff to participate in an in-person peer visit at this time. On the MPSC Leadership call yesterday, we discussed several options in response. One option was for the MPSC to postpone the peer visit again and move forward quickly with the interview. Another consideration was for HRSA to direct the in-person peer visit.

Should HRSA choose to direct UNOS to perform an in-person peer visit, below is a summary of the cases and MPSC concerns that led to the recommendation of the peer visit and consideration of Probation and could inform the requests for the review. As you know, OPO 135169P was also a Member Not in Good Standing from December 2015 to December 2017, so the MPSC has that history in mind during its review.

In addition to any direction to perform the peer visit and requests to review, we would need HRSA to approve several clerical items.

- We have contacted peers and have representation of an Executive Director, Clinical Manager, Quality Manager, and Medical Director, who are available for a visit the weeks of April 29 or May 3. Is this timing acceptable?
- We would propose updating the MPSC leadership and HRSA on the Chair call immediately after the visit. We would inform everyone if the team finds any significant patient safety risks as soon as possible.
- The report and OPO's response will be reviewed and monitored by the MPSC.

#### **MPSC Concerns**

- Need for improved patient safety training for leadership and staff.
- Recent cases illustrate OPO staff is uncomfortable stopping processes to identify errors; leading to concerns about culture and leadership
- QAPI meetings appear focused on reporting of issues, not performance improvement.
- OPO should tailor its QAPI plan to address the OPO's specific needs.
- QAPI metrics difficult to understand and interpret.
- On-going patient safety concerns at the staff and administrative levels.
- Lack of consistent leadership accountability.

#### **Recent Cases**

- February 2019: Notice of Noncompliance for allocating a liver-kidney to a candidate that was not eligible for SLK.
- February 2019: Notice of Noncompliance for bypassing a transplant center when allocating a kidney, requiring the OPO to withdraw a primary offer.
- February 2020: Interview with the MPSC after the Committee reviewed a report the OPO recovered organs prior to asystole, despite family authorization. The MPSC initially recommended Probation, but after the interview the Committee decided to issue a Letter of Warning and continue to monitor the OPO.
- February 2020: Notice of Noncompliance for allocating three donors hearts and/or lungs out of sequence.
- July 2020: OPO staff incorrectly entered an EBV IgG result as negative in DonorNet, closed for self-reporting.
- **July 2020: The MPSC reviewed OPO's submissions requested after its February interview. The MPSC reviewed the most recent Quality Assurance and Performance Improvement (QAPI) plan; the most recent QAPI metrics; examples of recent RCAs OPO has conducted; and QAPI meeting minutes. The MPSC expressed concerns in its review, and requested that the OPO participate in a peer visit, but delayed that visit due to the COVID pandemic.**
- February 2021: OPO 135169P affixed TransNet labels with the wrong ABO information on the liver, blood, tissue, and shipping packages. After reviewing this case, and taking into account the OPO's other recent cases, the MPSC is considering recommending Probation. The MPSC also suggested conducting the peer visit as soon as possible.

**Site Survey Information**

- A routine on site survey of the OPO occurred on June 26, 2018. The OPO had a clinical score of 99 percent and a few administrative errors. The MPSC reviewed the results of the survey at its meeting in February 2019 and closed the review with no action.

Should HRSA not direct the in-person peer visit, we will move forward with scheduling the OPO's interview and postpone the peer visit to a later date.

Please let us know if you have any questions, and we will wait to hear from you.

Thank you,
