CORDELL HULL, Tennessee.

I. M. STEWART, *Clerk*

PREFACE

It became apparent months ago that a revision of the revenue laws would be necessary during the present session of Congress. A detailed analysis of the fiscal condition of the Government and a recommendation as to increased tax rates on individual and corporation incomes and on estates, and also the imposition of sundry excise and miscellaneous taxes, were presented to Congress in the annual report of the Secretary of the Treasury.

In contemplation of the necessary revision, the Ways and Means Committee of the House of Representatives held hearings beginning January 13, 1932, and concluding April 4. That committee framed a proposal which was introduced and reported to the House of Representatives on March 8. After a lengthy debate on the measure, the bill was passed by the House, with amendment, on April 1 and came to the Senate on April 4. It was immediately referred to the Committee on Finance.

A meeting was called by the chairman for April 6, and public hearings were held pursuant to the following notice authorized by the committee:

NOTICE OF REVENUE HEARINGS

(H. R. 10236)

In connection with the revenue bill of 1932, which has recently passed the House of Representatives and which has for its purpose the equalization of taxes and the providing of additional revenue through increased and additional taxes, the Senate Committee on Finance announces to all concerned that it will hold public hearings at Washington, D. C., beginning April 6, 1932, at 10 o'clock a. m.

A tentative schedule of hearings has been arranged as follows:

General statements—
Wednesday and Thursday, April 6 and 7.

Income-tax rates—
Monday, April 11.

Income-tax, general and supplemental provisions—
Tuesday, April 12, 10 a. m. to 12 noon.

Estate and gift taxes—
Tuesday, April 12, 2 p. m. to 4 p. m.

Sales tax—
Wednesday, April 13.

Postal rates—
Thursday, April 14.

Miscellaneous taxes—
Friday, April 15; Monday, Tuesday, Wednesday, Thursday, April 18 to 21, inclusive.

Administrative and general provisions—
Friday, April 22.

Hearings will be conducted in the hearing room of the committee, room 312 Senate Office Building, Washington, D. C. Sessions will begin at 10 o'clock a. m. and 2 o'clock p. m. unless otherwise ordered by the committee.

Persons desiring to be heard should apply to the clerk of the committee at least one day prior to the date of the hearings on the subject concerned, in order to be assigned time on the calendar for that day. In making such application, the following information should be given: Name; business address; temporary

address in Washington; business or occupation; the person, firm, corporation, or association represented; subject concerning which testimony will be given; number of the section of the revenue bill, or number of the section of the revenue act of 1928, or other act to which it relates, if any; and the amount of time desired.

In order to avoid duplication of arguments or suggestions, it is requested that persons having the same problems to present agree upon one representative to present their views. So far as practicable, the committee will seek to recognize witnesses who are qualified to give first-hand information.

Briefs may be submitted in lieu of or to augment oral testimony; but if such papers are printed on both sides of the sheet, two copies must be filed with the clerk for printing in the record.

In accordance with the foregoing notice, hearings were commenced April 6 and concluded April 21, one day in advance of the schedule, during which time 209 witnesses were heard. Stenographic reports were taken of all testimony presented to the committee.

The testimony presented, together with the briefs and other exhibits submitted, is grouped together as far as practical in the numerical order of the House bill. This necessitated the abandonment of the sequence of statements and the order of appearance.

A general index, both as to witnesses and subjects, has been prepared and appended hereto.

ISAAC M. STEWART, *Clerk.*

REVENUE ACT OF 1932

WEDNESDAY, APRIL 6, 1932

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met, pursuant to call, at 10 o'clock a. m., in room 312, Senate Office Building, Senator Reed Smoot presiding.

Present: Senators Smoot (chairman), Reed, Shortridge, Couzens, Keyes, La Follette, Thomas of Idaho, Jones, Harrison, King, George, Walsh of Massachusetts, Connally, Gore, and Hull.

The CHAIRMAN. The committee will come to order. The committee has met to open hearings on the tax bill, H. R. 10236. The first witness is the Secretary of the Treasury, The committee would like to have Secretary Mills present to us whatever statement he has in relation to the bill now pending before the committee.

GENERAL STATEMENTS

STATEMENT OF HON. OGDEN L. MILLS, SECRETARY OF THE TREASURY

Secretary MILLS. Mr. Chairman and gentlemen of the committee, I have divided this statement in two parts: One, general in character, and the other dealing with individual items. I should very much appreciate it if the committee would permit me to complete the general statement without interruption, and after that I will be glad, of course, to answer any questions as to the individual items.

The revenue for the fiscal year 1932-33 under existing laws, it is estimated, will amount to $2,375,000,000. Expenditures, likewise under existing laws, are estimated at $4,113,000,000. As far as the expenditure figures are concerned these are the figures submitted in the annual budget message. The revenue figures represent the revenues as estimated by the Treasury for the Ways and Means Committee. Thus the prospective deficit amounts to $1,738,000,000. If we exclude sinking fund requirements, the amount needed to balance the budget in the sense that current expenditures will be covered by adequate receipts, and that there will be no increase in the public debt, is $1,241,000,000. This must be obtained through decreased expenditures and increased taxes.

The Treasury's position is that the budget must be balanced in the sense above described. There is no need of my presenting to this committee the compelling and unanswerable arguments in favor of a balanced budget. It is essential to preserve unimpaired the credit of the United States Government. Bring that credit into question and our difficulties of to-day, great as they are, become infinitely greater and recovery from the business depression will be indefinitely

postponed. The House has declared its determination to balance the budget. I am confident the Treasury Department will have the support and cooperation of the Senate in maintaining the finances of our Government on a sound basis.

The House proposes to balance the budget by raising according to our estimates, about $1,030,000,000 in additional revenue and by reducing expenditures by $200,000,000, in addition to those reductions already provided for in the annual Budget submitted to the Congress in December. The Treasury Department urges the necessity of reducing expenditures. When asked to assume an enormously heavy tax burden the people are entitled to have the cost of Government reduced to a minimum and every expenditure not essential to the proper functioning of Government eliminated. I need not point out to this committee that to accomplish any such reduction as $200,000,000 in expenditures will require amendments to existing law relieving the departments and independent establishments of obligations now existing. This is one of the essential tasks which confronts the executive and legislative branches of the Government. It is a fundamental and indispensable element in our program. The more you examine the difficulties of raising adequate revenue, the more you will appreciate the compelling necessity of addressing yourselves as well to the task of reducing the cost of government.

The causes which have led up to our present critical situation are well known to you. Our expenses in the fiscal year 1933, including sinking fund requirements, are estimated at $4,113,000,000, as compared with $3,994,000,000 in 1930, whereas under existing law our revenues in the next fiscal year are estimated as $2,375,000,000, as compared with $4,178,000,000 in 1930. It is apparent that our budgetary problem arises from a collapse in our revenue collections due to the business depression acting directly on a tax system particularly sensitive to business fluctuations.

It is no easy task to raise a billion dollars in additional taxes, or an amount which exceeds half the revenue provided for under existing statutes. If we except the estate tax, broadly speaking, there are only three ways in which money can be raised by the Federal Government through taxation: First, by a tax on income; secondly, by a tax on outgo; or, third, by a combination of the two. The income tax is in many respects an ideal tax. Advantages of this tax are as follows: It is direct and unconcealed so that each man knows what Government is costing him. It can be made to yield a very large revenue even in very bad times if applied on a broad base. It only reaches those who have ability to pay and through a progressive rate compels those best able to contribute to pay relatively most.

Disadvantages are: As a practical matter it is very difficult to impose on all citizens having taxpaying ability. Being direct it is felt, and being felt it is unpopular. Consequently, the tendency is to impose it on fewer and fewer taxpayers. This enormously limits its usefulness as a money raiser and weakens its fundamental fairness. It involves trouble to the taxpayer and administrative difficulties to the Government. It is neither easy, unnoticed nor painless. Therefore, in practice we limit its application and even in ordinary times look elsewhere for additional revenue.

Under the income-tax system developed in this country high exemptions relieve people of small and moderate means from contributing

to the support of the Federal Government in the form of income taxation. Because of the great volume of tax-exempt securities, which, as long as 10 years ago, the Treasury urged Congress to do away with through a constitutional amendment, the application of the income tax to the large income derived from inherited or accumulated wealth is necessarily limited. The result is that our income tax of necessity rests essentially on the active American business man and on the successful professional classes.

In times of active business when their capital is fruitfully employed and profits are large the Government collects from them considerable revenue. When industry and commerce go flat, capital ceases to work, and profits disappear, their income likewise vanishes, and so do our taxes. That is why the income tax as applied to individuals has failed us in this emergency. The large profits and the big incomes have melted away. Taxes on incomes of $100,000 and over fell off by 66 per cent from 1928 to 1930, and have fallen off to a great extent since then.

I think the figures indicate that the taxable net income of those having $100,000 and more amounted to approximately $4,500,000,000 in 1928, and it is estimated will amount to but $550,000,000 in 1931.

Senator GORE. State that again, Mr. Secretary.

Secretary MILLS. I am talking now from memory, and not reading from the statement. My recollection is that our figures show that net incomes of $100,000 and over amounted in 1928 to $4,500,000,000, and that our Treasury estimates indicate that in the calendar year 1931 they amounted to but $550,000,000.

Men talk of doubling or tripling the rates on the very large incomes. Those that remain would probably seek isles of safety. But that isn't the point. Raising the rates on the larger incomes does not solve our problem. They are no longer there. There is no nourishment in the hole in a doughnut.

What I wish to bring home to you very definitely is that if we turn to the income tax as a means of furnishing in large measure the additional revenue required, we can not think of the problem in terms of simply raising the rates on those who already pay income taxes. To raise greatly increased revenue through income taxation we must be prepared to lower the exemptions to as low a point probably as England does, and to impose a substantial normal tax on all taxpayers, even in the lower brackets.

The British normal rate I think is 25 per cent, with a very low exemption. Our lowest normal rate is 2 per cent, with a comparatively high exemption even in the proposed revenue bill.

While recommending some broadening of the base, the Treasury Department has not advocated such a course. In spite of its theoretical advantages there are very cogent arguments which may be urged against it. For a long period of years we have relied on a limited rather than a general income tax. We have become accustomed to high exemptions and very low rates on the smaller taxable incomes. That is our fixed conception of an income tax, and it is very difficult as a practical matter to change fixed conceptions of this character. Moreover, it must not be forgotten that the real burden of taxation in this country is due for the most part to local and State taxes, and they are borne, generally speaking, by people of small and moderate means.

There is a very real justification, therefore, for hesitation when it comes to the adoption of a Federal income tax which would really reach the lower incomes. But, having reached that conclusion, the next conclusion becomes inevitable, and that is that we must look elsewhere and to other forms of taxation in order to fill the greater portion of the gap that has developed in our revenues. To impose the full weight of the additional taxes on the present income tax-paying class would make their burden almost unbearable and would so penalize the capital actually employed in business as to seriously affect the general economy of the Nation.

In its study of the problem the Treasury Department early realized that it was necessary to look elsewhere than to the income tax for the necessary revenue. We recommended, to be sure, a broadening of the income tax base by a reduction of the exemptions and an increase in the surtax rates to the level of the 1924 act, which meant practically a doubling of the rates in the upper brackets, as a means not only of obtaining such additional revenues as these measures would yield, moderate though the amounts are, but because we recognized that if ever there were a time when the doctrine of ability to pay should apply, it is now. In searching for additional sources of revenue, we canvassed the entire field.

We considered a general sales or turnover tax, and rejected it because of administrative difficulties and because we considered it unsound in principle.

We considered the manufacturers' sales tax as exemplified by the Canadian law. And I want to make a very sharp distinction between a manufacturers' sales tax and a general sales, or turnover, tax. They are something totally different, from the administrative standpoint, from the standpoint of pyramiding, and from the standpoint in many cases of incidence. In the recent debates which took place in the House, a general sales tax was frequently confused with the manufacturers' sales tax reported by the Ways and Means Committee, and on more than one occasion the Treasury's opposition to a general sales tax was quoted in opposition to the Canadian manufacturers' tax system. This was absolutely unwarranted.

We gave very serious consideration indeed to the Canadian manufacturers' sales tax. Doctor Adams and Mr. Alvord made a special trip to Canada at our request to make a study on the ground and to give the Treasury a report as to the workings of this tax and the benefit of their advice. We did not recommend it because we concluded that there exist in this country administrative difficulties that might be hard to overcome, and because on the whole we felt it was safer to travel along known roads rather than to venture into untried paths.

We decided to recommend instead a series of selective excise taxes, applied to subjects which, generally speaking, had a broad base; which would yield in each case a very considerable revenue; involve no administrative difficulties; were not open to evasion; and would not affect the competitive position of the subjects taxed. The articles or services selected were, therefore, picked for very definite reasons. They may be summarized as follows: Ease in administration; large revenue yield; lack of effect on the competitive position of the industry; and the fact that the purchase of the article or service would, generally speaking, indicate tax-paying ability.

The Treasury program, which I am submitting herewith in detailed form in Schedule A, comprised, generally speaking, a progressive income tax at increased rates; a progressive estate tax at increased rates; a series of selective excise taxes, following in the main the lines of the 1921 and 1924 acts; and increased rates on postage adequate to put the Post Office Department on a self-sustaining basis.

The Ways and Means Committee reported a bill in which the income tax rates were increased substantially along the lines of the Treasury recommendations; the estate-tax rates were sharply increased over the recommendations of the Treasury; a gift tax was included; generally speaking, in lieu of the series of excise taxes recommended by the Treasury, while some were retained, a manufacturers' sales tax, based on the Canadian model though more comprehensive in character and at a lower rate, was sustituted. An increase in postal rates was not recommended.

The details of the Ways and Means Committee bill and the revenue yield under each head appear in Schedule B, hereto attached.

The Treasury stated that while the recommendations of the committee did not conform to those originally made by the Treasury, nevertheless the Ways and Means Committee bill was acceptable to the Treasury.

The bill now before you lowers the income-tax exemptions from $3,500 to $2,500 for married couples, and from $1,500 to $1,000 for single individuals; it increases the normal-tax rates to 2 per cent, 4 per cent, and 7 per cent; does away with the exemption of dividends from the normal tax; and sharply increases surtaxes, particularly those applicable to the upper brackets; it provides for much higher estate-tax rates than have ever existed in this country, even in war time, and supplements them with a gift tax at correspondingly higher rates; it raises the corporation income-tax rate from 12 per cent to 13¾ per cent, and for corporations filing consolidated returns to 15 per cent; it provides for a very great number of manufacturers' excise taxes, which, generally speaking, seem to be directed at what might be described as luxuries, though I am a little at a loss to know why soap and toothpaste should be included in this category; it imposes two new tariff duties; and provides increased postal charges calculated to yield approximately $165,000,000.

The detailed schedules are presented in Table C, hereto attached.

The great merit of the House bill is that it raises $1,030,000,000 of new revenue, and that, from the standpoint of the Treasury, is a most vital consideration. It is, however, susceptible to improvement in a number of important respects. I should like to mention the more important features which we think subject to criticism and submit as a part of this report a more detailed analysis of the principal sections of the bill.

I believe that the corporation income tax rate is too high; that there is no justification for compelling corporations to pay for the privilege of filing income tax returns in accordance with their usual method of doing business and keeping their books; that the concealed double taxation involved in discontinuing the exemption of dividends from normal tax is unsound, resulting as it does in discrimination against the corporate form of doing business for smaller corporations as compared with partnerships; that completely doing away with the

net loss provision is hard to justify in times like these; that the stock transfer tax is excessive under existing conditions; and that the estate tax rates are altogether too high.

It must not be forgotten that the bill already provides for a sharp increase in normal and surtax rates; that losses on the sales of stocks and bonds are to be limited to any gains which happen to be derived from sales of securities in the same year; that the Treasury Department and the Ways and Means Committee were ready to limit the net loss carry-over provision to one year, and that very heavy taxes indeed were proposed in the Ways and Means Committee bill on the issuance and transfer of securities.

The cumulative effect of all these provisions is very great. They tend to converge the full weight of each of them separately upon capital actively employed in business, and to discourage the normal flow of capital into industry and commerce at a time when business men are hesitant and industry stagnant. Their combined restrictive effect magnified by the deadening influence of the depression will in my judgment tend to retard business recovery.

What we want to accomplish above all else at the present time is to break down the vicious circle of deflation of credit, industrial stagnation, falling prices and loss of purchasing power. To put men to work capital must go to work. Credit must be sought and freely offered. But capital must see some chance of profit to compensate for the risk. Business men will not borrow and banks will not lend unless the enterprise offers some fair chance of a reasonable return.

Yet the particular provisions to which I refer, and which were written into the House bill at the very last minute, certainly without mature consideration, have a very definite inhibiting effect. On the one hand, at a period when looses are only too real and too common they would deny to business the right which it now enjoys to carry over the losses from this, a very bad year, to next year, which it is hoped will be a better one; and on the other hand, the tax on any possible profits is very greatly increased. To illustrate: Take the case of a corporation that sustains a loss of $200,000 this year and makes a profit of, say $100,000 next year. Its operations over a 24-month period show a loss of $100,000. Yet under this bill it will be taxed at higher rates on the $100,000 of earnings next year, and at still higher rates when it distributes those earnings, while no recognition whatsoever is to be given to the $200,000 loss sustained during this calendar year.

The corporation income tax is to be increased in some cases to 13¾ per cent and in others to 15 per cent, and on top of this distributed profits are to bear an additional tax of 7 per cent, making in the one case a tax of 20¾ per cent and in the other 22 per cent, as compared with 12 per cent to-day. This is apart from the fact that the stockholder in any event is to pay increased surtaxes.

For the purpose of illustration, consider the case of the railroads. Their bonds are largely held by the great insurance companies, savings banks, and other fiduciary institutions, or, in other words, the savings of the American people are invested in them to a very great extent. These bonds, as we all know, are much depreciated in value. A diminished earning power is of course largely responsible, though fixed charges are for the most part being earned. But the serious part of the situation is that the equities back of these bonds are gradually

being eaten away. With the heavy taxes proposed on future possible railroad earnings and on railroad dividends, coupled with the inhabition on carrying over losses from one year to another, the restoration of equity values essential to the restoration of the high standing of the underlying securities and of the ability of the railroads to obtain essential capital becomes increasingly difficult.

In this connection it should not be forgotten that in normal times railroads spend annually anywhere from $600,000,000 to $800,000,000 for capital improvements, giving employment directly to many thousands of men in making their capital improvements and indirectly to many thousands of others through the orders they place. These funds must be obtained from investors through the security markets. But what reason is there to believe that the capital needed by these railroads for these capital investments will flow freely into railroad securities when with the railroad industry prostrate and flat on its back the Congress of the United States selects this particular moment to impose these punitive business taxes?

I do not want the committee to understand that my criticism is directed to the bill as a whole. There are, however, as I have pointed out, certain very serious defects. These relate to provisions for the most part written in the bill in the last 48 hours, some of which had earlier in the year been definitely turned down by the Ways and Means Committee and on some of which no hearings whatsoever were held. Those are the provisions to which I direct your particular attention with an expression of hope that this committee, after mature considertion, will find it possible either to eliminate them entirely or to modify them so as to make them sound from a tax standpoint.

I wish now, Mr. Chairman, to turn to the analysis of some of the more important provisions of the bill, a discussion of which I hope may prove helpful to this committee. And I shall be ready, I may say, from now on to answer any questions that any member of the committee cares to ask.

Senator KING. By that you mean that you have indicated heretofore the objections to the bill?

Secretary MILLS. Generally speaking. I now want to take up the individual sections.

Senator KING. In a way they comprise first the thought that the taxes upon corporations are too high; that the inheritance and gift taxes are rather too large, and the same with regard to some of the higher brackets?

Secretary MILLS. Not so much a question of the taxes being too high. After all we were willing to go to 13 per cent on corporations, and it can be argued that there is not any great difference between 13 and 13½. I hesitated to recommended 13. I am very sure that 13½ is going a bit too far. But what I am objecting to is the double taxation involved in taking away the exemption from the normal tax on dividends, which is a concealed form of double taxation. I am objecting to the net loss provisions. If you want to tax people put your rates on the actual income which they receive, but do not tax losses. Do not tax the income which they have not got. Those are the kind of errors that have crept into this bill—hidden double taxation.

Senator WALSH of Massachusetts. Just what do you mean by your statement that distributed profits are to bear an additional tax of 7 per cent?

Secretary MILLS. I mean that now the corporation pays a normal tax of 12 per cent on all of its earnings, and up to the present time, ever since we have had an income tax law, beginning in 1913, it was felt that since the corporation had paid the normal rate on earnings the normal rate should not be applied again when the dividends were distributed.

Senator WALSH of Massachusetts. This is for the first time that this is done.

Secretary MILLS. Now for the first time since 1913 the House has done away with that historic conception and has decided to tax not only the profits of the corporation but to apply the normal tax a second time when the dividends are distributed. You understand, of course, that the dividends were always subject to surtaxes. But they were not subject to normal taxes because the normal taxes had already been paid by the corporation. And that puts the small corporation at a very serious disadvantage with the large corporation. If you and I, Senator, are in partnership and run a comparatively small business, or even a large business, and if we incorporate under this bill we will first pay 13½ per cent on our profits, and then when we distribute those profits in the form of dividends to ourselves we pay another 7 per cent. If we were a partnership we would only pay the individual normal rates, the highest of which as proposed is 7 per cent, on those profits.

Senator WALSH of Massachusetts. I take it you have considered this one of the grievous injustices in the bill?

Secretary MILLS. I think it is a very serious injustice. And, as I tried to point out in this general statement, if you take any one of these provisions standing alone it may be unjust, but we can probably stand it during a comparatively short period. But it is the cumulative effect of these provisions that I think makes it worth while for me to speak of them with such emphasis at this time. You can stand injustice in taxation if it is for a limited period of time, but you just can not stand too much injustice for even a limited time.

Senator HARRISON. Mr. Secretary, may I ask you a question? This statement that I have been reading and what you have been saying is in criticism of the House bill and the House action?

Secretary MILLS. Certain provisions, Senator.

Senator HARRISON. Yes, certain provisions. And then you attach here the recommendations of the Treasury to the House Ways and Means Committee?

Secretary MILLS. Yes, sir.

Senator HARRISON. Are you making specific recommendations to this committee as to how you think the budget should be balanced, and are they different from the recommendations that you made to the House Ways and Means Committee?

Secretary MILLS. No, but I think this committee would be fully justified in keeping a large part of the House bill, eliminating some of these faulty provisions, and inasmuch as their elimination would involve a loss of revenue, turning to the Treasury program to supplement the loss occasioned by the elimination of some of the unsound features. That would be my recommendation.

Senator HARRISON. Then you do not propose to recommend specifically to the Finance Committee a particular program, notwithstanding the action of the House?

Secretary MILLS. As I see it this committee has three courses it can follow. Possibly more. But it certainly can either take the Treasury recommendations, which represent, whether you agree with it or not, a fairly well balanced tax program. You can take the Ways and Means Committee bill, which after all was a carefully worked out revenue bill, also well balanced. Or you can take the House bill.

The House bill is before you. I say to you that there are certain features of this House bill that I think are bad. You asked me a very proper question, Senator Harrison, if I understand it. You say if we eliminate these bad provisions we will be short of revenue. What do you suggest? My suggestion is that if you desire to proceed on the basis of the House bill that after eliminating those bad provisions you then turn to the Treasury recommendations and you can find excise taxes that will be ample to make up the revenue.

The CHAIRMAN. Speaking of the House bill, you mean the bill that was reported from the Ways and Means Committee to the House?

Secretary MILLS. No, I mean the bill now before the Senate Finance Committee, Senator.

Senator HARRISON. Would the Treasury Department object to furnishing the Finance Committee now specifically a proposal to balance the budget, taking into consideration the defects in the House bill, the Treasury eliminating them, and then putting it up in a proposal as you did to the Ways and Means Committee, to see just how much revenue we then would get?

Senator WALSH of Massachusetts. In other words, Senator, you would like to have an opportunity—I am sure other Democrats join with you—to have a vote upon a bill drafted in every detail and particular by the Treasury Department, saying that this is what the Treasury wants to balance the budget?

Senator HARRISON. Yes.

Senator WALSH of Massachusetts. Can that not be done, Mr. Secretary?

Secretary MILLS. Yes. I say to you this morning perfectly frankly that I prefer the Treasury program to the House bill. If it was good in December it is still good, and I stand by it. If I had my choice I should prefer the Treasury program to the bill now before you. I prefer the Treasury program to the Ways and Means Committee bill, though I think that was a pretty good bill.

The CHAIRMAN. Mr. Mills, can you not take the bill as it comes to the Senate and point out or delete the provisions that you think are really bad legislation?

Secretary MILLS. And suggest substitutes?

The CHAIRMAN. Yes.

Secretary MILLS. I will be very glad to do that.

The CHAIRMAN. And then suggest legislation that will bring the same amount of money, or the amount necessary for the balancing of the Budget?

Secretary MILLS. I will be very glad to do that.

The CHAIRMAN. I will ask you to do that.

Secretary MILLS. As a matter of fact, when you have an opportunity to study this statement and the annexes you will see that all of that material is right here. It is simply a question of putting it together.

Senator HARRISON. We have not been able to study that yet. For instance, in your recommendation to the Ways and Means Committee the Treasury recommended a retroactive tax. The House has expressed itself very strongly on that proposition. So eliminating the retroactive tax in your proposal will you then furnish us the items and the programs which would raise sufficient money?

Secretary MILLS. I will be very glad to.

Senator WALSH of Massachusetts. The administration has abandoned the retroactive tax, has it not?

Secretary MILLS. We have abandoned the retroactive tax, Senator Walsh, through sheer necessity, because March 15 has rolled by. People have made their returns and paid their taxes, and it is water over the dam. I still think that we were right and that there was no reason whatsoever why the rates on 1931 incomes should not have been raised so as to help the Budget not only this year but next year. I think we were right, and I think the House was wrong.

Senator CONNALLY. Do you still favor the retroactive tax if we can put it in now?

Secretary MILLS. I do not think you can.

Senator CONNALLY. I know, but if we can do it now, do you favor it?

Secretary MILLS. I do not favor it now after people have made their tax returns and in some cases paid their full taxes.

Senator CONNALLY. Part of them are still payable in July.

Secretary MILLS. I do not favor it now. I favored it prior to March 15.

Senator CONNALLY. You did favor it?

Secretary MILLS. Yes.

Senator CONNALLY. And now you do not favor it?

Secretary MILLS. Now I say, however, that it is water over the dam.

The CHAIRMAN. The first payment has already been made.

Secretary MILLS. That is all settled.

Senator CONNALLY. I understand all that, but we could put them on now if the Treasury wants them.

Secretary MILLS. The Treasury does not recommend them now.

Senator CONNALLY. The Treasury does not recommend them now?

Secretary MILLS. No, the Treasury says to you very frankly that we consider that the time has passed.

Senator SHORTRIDGE. As a matter of law do you think we could?

Senator CONNALLY. Yes; we can tax anything, anywhere, any time.

Senator SHORTRIDGE. After the payment has been made?

Senator CONNALLY. Why certainly.

Senator SHORTRIDGE. Under the guise of—

Senator CONNALLY. Under the Constitution you can tax anything out of existence if you want to, so it is a question of being willing, and if the Treasury wants to have a retroactive tax.

Senator SHORTRIDGE. Yes; I follow you.

Senator CONNALLY. Now it is our duty to consider it, and I am trying to find out if the Treasury now advocates a retroactive tax on the 1931 income.

Secretary MILLS. No; the Treasury believes that the time has passed, Senator Connally. It is too late.

Senator CONNALLY. Then the Treasury has retreated from that position?

Secretary MILLS. Not at all.

Senator SHORTRIDGE. You say you could not fix it now. Why not, Mr. Secretary?

Secretary MILLS. Because I think the time has passed. This law will not go into effect in all human probability now until six months of this year have elapsed. The position of people has now been changed. They are budgeting for 1932 on the basis of a fixed schedule of taxes. It was my contention, Senator Shortridge, when we urged making the tax retroactive that it conformed with the practice always followed by the Congress when we were reducing the rates, and if it was right when you were reducing the rates it was just as right when you were raising the rates. I contend that the average individual pays the tax on his 1931 income out of 1932 income. There are very few individuals that, during the course of 1931, set up a reserve for taxes to be paid in 1932. There may be some very careful and businesslike gentlemen who do. But the average man pays his 1931 income tax out of his 1932 income. Therefore, if he had known as early as January that the rates were going to be raised no hardship would have been imposed. But now there is a hardship. Why? Because he has made his March 15 return. In some cases he has paid his entire tax. By the time this bill becomes law half the year will have passed, and he will have adjusted his 1932 budget on the basis of the old rates. You do him an injustice if you change now. Our assumption was predicated on the fact that a revenue bill would be enacted by February 1.

Senator CONNALLY. Mr. Chairman, may I ask one other question on that point? Mr. Secretary, you have served in Congress, and did you believe when you submitted the retroactive feature that the tax bill would get through both Houses of Congress and be signed by the President by the 15th of March?

Secretary MILLS. No; but——

Senator CONNALLY. Then why did you recommend the retroactive feature?

Secretary MILLS. I thought if the suggestion was well received by the Ways and Means Committee that it was perfectly possible to put a joint resolution through covering income tax rates, and that is what we were prepared to suggest. We knew very well that you could not get a complicated tax bill through by the 15th of March, but if the Ways and Means Committee had said, "We favor the retroactive tax," we would have said at once, "All right, segregate that from your general tax bill, put a joint resolution through making the 1924 rates applicable to 1931 income," and that could have been put through both Houses in 10 days or 2 weeks. You gentlemen can move awful fast when you have a mind to.

Senator CONNALLY. The Treasury can change awful fast when it has a mind to.

Secretary MILLS. Yes; we have to be agile.

Senator GORE. There is one question I want to ask at this point. You have asked the Secretary to submit a schedule of taxes, eliminating certain features, and suggesting other sources of revenue. Is

it the desire of the committee that he should recommend the general sales tax in that?

Senator WALSH of Massachusetts. The manufacturers' tax?

Senator GORE. The manufacturers' tax.

Senator WALSH of Massachusetts. Rather than the sales tax.

Secretary MILLS. I will say to Senator Gore that it is not my intention to make that recommendation. I shall return to the original recommendation made by the Treasury to the Ways and Means Committee.

Senator GORE. While I have the Secretary's attention, let me say this. In regard to the capital profit and loss, the gain and loss provision; I have had an idea that that ought to be eliminated entirely in the long run or in the future, both ways. I have a concrete case in mind. This is off the record.

(At this point Senator Gore made a short statement off the record.)

Secretary MILLS. I agree with the Senator. And we agree with the Ways and Means Committee, recognizing that in many cases it is going to be a real hardship because the losses are not going to be paper losses, but they are going to be genuine.

Senator GORE. I think you are right. It is not playing the game to cut them off now.

Secretary MILLS. But in order to do away with the practice of wiping out what I call other income, that is income from dividends or other business profits through so-called paper losses in stocks we agreed with the Ways and Means Committee, and it is in this bill, and we indorsed it, that you should only be allowed to deduct losses sustained through the sale of capital assets from the profits made by the sale of capital assets in that same year. That is in the bill.

Senator GORE. But that does not meet your approval, does it?

Secretary MILLS. Yes, sir, it does.

Senator GORE. I understand you to criticize it.

Secretary MILLS. No, sir. I am criticizing the net loss provision, which is the right that a man in business or a corporation now enjoys of carrying over the loss in any given year to the next year and in part to the second year.

Senator GORE. I did not understand your point.

Senator HARRISON. Mr. Secretary, under your estimate of the House bill they would raise, as I understood you to say, $1,109,000,000?

Secretary MILLS. $1,030,000,000.

Senator HARRISON. $1,030,000,000?

Secretary MILLS. Yes.

Senator HARRISON. There is some difference between the House estimate and your estimate with reference to the cutting of expenditures for this year. There is a difference on that. As I understood, at first you said they would only be able to cut down and save $125,000,000. The estimate of the Ways and Means Committee was $200,000,000, and you afterwards cut it to $100,000,000, as I understood it.

Secretary MILLS. No, I said that I was willing to reach for $125,000,000. Mind you, I do not want you to misunderstand me, Senator Harrison. I am fully in accord with the Ways and Means Committee that we ought to try to reduce expenditures $200,000,000. But I was not quite as optimistic as the Ways and Means Committee was as to whether we will reduce them actually $200,000,000.

Senator HARRISON. I understand there is a difference between the Ways and Means Committee estimate and yours, and it is due largely to that expenditure item.

Secretary MILLS. Yes. There was not any very substantial difference on the revenue side.

Senator HARRISON. Yes.

Secretary MILLS. Though I think I ought to call your attention to the fact that since those estimates were made up, the Post Office Department has notified us that their estimates will be cut by $10,000,000. In other words, that it should be $155,000,000 instead of $165,000,000. So that makes really $1,020,000,000.

Senator HARRISON. So in balancing the proposition you estimated at first that there would be some deficits still, and then it was that the House put on this tax on stock dividends, and so on. Now what is the estimate for 1933, according to your figures? I do not have them here.

Secretary MILLS. Of the expenditures?

Senator HARRISON. Of the revenues.

Secretary MILLS. Under existing law?

Senator HARRISON. No; under this item where you have balanced the Budget. You have said that you will get $1,030,000,000 in increased revenues by virtue of this bill that passed the House. What will you get from it the next year?

Secretary MILLS. In 1934?

Senator HARRISON. Yes; the fiscal year 1934.

Secretary MILLS. I can not give you that offhand, but I will get it for you.

Senator HARRISON. Well, it would be considerably larger than for this year?

Secretary MILLS. Not as much as you suppose.

Senator HARRISON. How much would you say?

Secretary MILLS. I will get you the exact figures, Senator Harrison, but you are going to be disappointed, because the income tax figures are going to rise very slowly due to the fact that the 1934 income-tax figures—the first six months of 1934 will include taxes on income during the year 1932, which we know is a low year. And the second six months will include 1933; that being, we hope, a year of moderate recovery. So you can not hope that 1934 will be very much higher than these estimates for 1933.

Senator HARRISON. On the corporation income tax, for instance, you will only collect for practically one-half a year. You put in your estimate, $43,400,000 for the fiscal year 1933?

Secretary MILLS. Yes.

Senator HARRISON. Now for the calendar year 1933 estimate it would be around $86,000,000 increase?

Secretary MILLS. Yes. Oh, you will pick up all right.

Senator HARRISON. Yes.

Secretary MILLS. But you do not pick up quite as much as we hope.

Senator HARRISON. Because you will have a full year to operate there.

Secretary MILLS. Yes; but you do not pick up as much as you would hope.

Senator HARRISON. Additional income taxes in 1933 you estimate at $132,000,000. Of course, Mr. Parker, of the Joint Committee, estimates $145,000,000.

Secretary MILLS. Well; we are probably nearer right than he is.

Senator HARRISON. He has been nearer right than you have been in the past.

Secretary MILLS. I believe he is high on his 1932 collections.

Senator HARRISON. Yes; he is higher on that.

Secretary MILLS. And we already have the March returns in, and they indicate that our estimates of income-tax collections in 1932 are still somewhat too high.

Senator HARRISON. At any rate, on the $132,000,000 for 1933, operating for practically half of the year, you estimate you will at least get $200,000,000 for 1933?

Secretary MILLS. For 1934 you are talking about?

Senator HARRISON. Yes, 1934.

Secretary MILLS. Yes, you will go up in 1934, Senator Harrison. I am not denying that. You do not go up as much as we had hoped, that is all.

Senator HARRISON. And the estate taxes estimate for this year $20,000,000?

Secretary MILLS. Yes, sir.

Senator HARRISON. Whereas in the next year it will go up considerably, will it not?

Secretary MILLS. It will jump up, but not by such an enormous amount.

Senator HARRISON. It will jump up to $120,000,000, will it not?

Secretary MILLS. Yes, it might.

Senator HARRISON. That makes a difference of approximately $200,000,000 or $250,000,000 on those three items.

Secretary MILLS. I will give you the exact figures. That is safer.

Senator HARRISON. Oh, yes, that is safer, but the idea is that this year on those three items you will get something over $150,000,000 more?

Secretary MILLS. Yes, but are we not going to have a balanced Budget in the sense that we are going to take care of the sinking fund?

Senator HARRISON. I hope we will.

Secretary MILLS. After all we are talking about a balanced Budget in 1933 without a sinking fund.

Senator HARRISON. I appreciate that.

Secretary MILLS. And the Treasury's program—and I would not be willing to back up on that program one bit—is to balance the Budget with the sinking fund included, Senator, in 1934.

Senator HARRISON. You have estimated that for this year we would receive $1,030,000,000?

Secretary MILLS. Yes.

Senator HARRISON. It would be more the coming year, 1934?

Secretary MILLS. Yes.

Senator HARRISON. It would be more by $150,000,000. You say you will figure out the exact amount.

Secretary MILLS. Yes.

Senator HARRISON. The country has not gotten that at all.

Secretary MILLS. Well, the country ought to have gotten it, because in our original estimates we stated very frankly what our program

was. Balance the Budget without the sinking fund in 1933. Balance the Budget with the sinking fund in 1934. And the Treasury taxes were calculated to accomplish both those objects. I still insist that your revenue bill ought to do those two things. Not just balance in 1934 with the sinking fund still out, but balance in 1934 with the sinking fund in. And that means you have got to pick up quite a bit in 1934.

Senator GORE. What is the exact amount of the sinking fund?

Secretary MILLS. About $440,000,000 in 1934.

The CHAIRMAN. That is not for one year?

Secretary MILLS. Yes.

Senator CONNALLY. Mr. Secretary, you estimate that this House bill will bring in $1,030,000,000?

Secretary MILLS. $1,020,000,000 now, because the Post Office knocked off $10,000,000.

Senator CONNALLY. If you strike out these items that you are objecting to in that bill, how much will that take off?

Secretary MILLS. I have not figured it out, but I will figure it out and suggest the substitutes.

Senator CONNALLY. That is what I want to know. How much will it reduce the prospective revenue under this bill if the committee should strike out the items to which you object, and where would we get the additional revenue?

Secretary MILLS. I will give you the dividend item now. I think that is about $90,000,000.

Senator CONNALLY. On the 7 per cent?

Secretary MILLS. At the normal rates.

Senator CONNALLY. $90,000,000?

Secretary MILLS. Yes. On the stock transfer tax, assuming that you can collect it—and I think you gentlemen will have to have some testimony on that, as to whether the traffic in the present conditions will bear one-fourth of 1 per cent—assuming that you can collect it, why the difference there is $42,000,000, I think.

Senator CONNALLY. So that is $132,000,000, additional revenue in two items.

Secretary MILLS. Yes. There is not any doubt about what happened, Senator Connally. It was under the pressure of finding needed revenue after the Ways and Means Committee bill had been rejected that the House turned to these provisions which we object to. They did not have them in originally.

Senator CONNALLY. Where would you get that additional revenue?

Secretary MILLS. A tax on checks will bring in $95,000,000.

Senator CONNALLY. Do you recommend that?

Secretary MILLS. Yes, sir, most decidedly, as compared with this double hidden taxation. There is nothing wrong about a tax on checks. It is a perfectly legitimate excise tax. It is one that I suggest.

Senator HARRISON. How do you get that estimate, Mr. Secretary, of an additional tax on checks in that amount?

Secretary MILLS. Well, Mr. Stark made a pretty complicated estimate. I would rather have him explain it to you. He explained it to me at the time, and I understood it.

Senator HARRISON. We had it in force during the Spanish-American War for a brief period, as I understand, and we raised then something like $30,000,000.

Mr. STARK. Something over $30,000,000 for a group of items, the chief of which was the check tax. We do not know exactly what was collected under the check tax even at that time.

Senator KING. Mr. Secretary, have you not underestimated the deficit that will exist this year, or rather the appropriations which will be made this session before we adjourn? And also perhaps deferred items which will have to be met in the deficiency bill, or with a supplemental bill or special appropriation bill in December?

Secretary MILLS. I do not know. The economy wave seems to be rolling up right now. I do not know how much it is going to sweep in.

Senator KING. I am afraid it will lose its force. It will not be a force measure by any means.

Senator SHORTRIDGE. I think I understand you, but assuming that the items to which you offer objection are eliminated entirely, you intend to submit to the committee substitute sources of revenue to equal the amount?

Secretary MILLS. Taken from our original program.

Senator HARRISON. May I ask you, Mr. Secretary: Have you recommended— you did not in your first recommendation— anything in reference to second-class mail matter?

Secretary MILLS. No.

Senator HARRISON. Have you given much thought to that?

Secretary MILLS. No. I thought that was a matter for the Postmaster General. All the Treasury did was to take the position that there was no reason on earth why if you exclude the special subsidies the Post Office Department should not pay its way. And we suggested that the Ways and Means Committee call the Postmaster General and ask him as to the best means of raising the necessary revenue so as to have a balanced budget in the Post Office Department.

Senator SHORTRIDGE. And they suggested 3 cents instead of 2 cents?

Secretary MILLS. They suggested the 3 cents.

Senator GORE. And the increase was limited to first-class matter?

Secretary MILLS. The increase was limited to first-class matter.

Senator HARRISON. You did not recommend anything being done with second-class matter?

Secretary MILLS. Not as far as I know, Senator Harrison.

Senator GORE. Have you made any study or report with respect to the House bill rate on crude oil and gas or not?

Secretary MILLS. The House bill does not lay any tax on gasoline, Senator Gore.

Senator CONNALLY. Imported, he is talking about.

Senator GORE. Imported crude oil.

Secretary MILLS. We made an estimate that the tariff on imported oil would yield $5,000,000 in revenue. That was based, I may say, on analyses by the Department of Commerce and in part on Tariff Commission data. We did not make any original studies in the Treasury Department.

Senator GORE. The point I was making is that the House bill, through inadvertence or otherwise, fixed the same rate on crude oil and on gasoline.

Senator SHORTRIDGE. That manifestly was erroneous, was it not, Senator Gore?

Senator GORE. Yes. I was asking the Secretary if he had made any study or any report on that point.

Secretary MILLS. No, sir; we did not. All we did was to report the amount of revenue, because we felt that whether the tariff duty should be imposed or not was a matter of policy for the Congress to determine, and the Treasury did not express an opinion as to that tariff schedule any more than it expresses an opinion on any tariff schedule in any general tariff bill.

Senator GORE. Could you submit a report as to what the compensating duty should be? As to what the rate on gasoline ought to be if it remains to-day 1 cent a gallon on crude oil?

Secretary MILLS. I will be glad to act as an intermediary; in other words, to get the information from the Tariff Commission or the Department of Commerce.

Senator GORE. Well, I would not want to trouble you with it.

Secretary MILLS. We have not got it, but we can get it easily enough.

Senator GORE. The committee can get it from the sources that you suggest.

Secretary MILLS. If you want the information, we will get it, Senator Gore. Did I understand that you wanted it?

Senator GORE. Yes.

Senator HARRISON. In talking about the manufacturers' excise taxes, I notice the statement:

> Those taxes which are in effect protective tariff duties present problems usually dealt with under a tariff act. Whether they should be included in a revenue bill is a matter of policy for the Congress to determine.

Will you give us your opinion as to whether there ought to be included in this bill the proposition of the tariff on oil or any other proposition?

Secretary MILLS. I do not believe we should do that. We have never, so far as I know, Senator Harrison, in the making of a tariff bill ever been called upon to express an opinion as to individual schedules. All the Treasury has ever been called upon to do is to advise as to the administrative provisions of a tariff law.

Senator HARRISON. What is your opinion as to the policy of putting a tariff rate on a revenue bill?

Secretary MILLS. Well, I do not care to express an opinion. I think that is a matter for you gentlemen to determine.

Senator SHORTRIDGE. Would you give us an estimate as to the revenue that would flow from it?

Secretary MILLS. Perfectly willing. We have given you an estimate.

Senator WALSH of Massachusetts. With all due respect to you, Mr. Secretary, let me say that you have already criticized things in the House bill. Why do you hesitate to make an answer to this?

Secretary MILLS. Because that is a matter of pure policy. I pick those two out and say these are tariff items. Now if you gentlemen think as a matter of policy you want to include tariff items in this bill, that is for you to determine.

Senator HARRISON. But you picked out the items of soap and toothpaste and referred to them.

Secretary MILLS. I said that I did not understand why soap and toothpaste should be regarded as luxuries.

Senator HARRISON. I agree with you.

Senator SHORTRIDGE. Well, are they not luxuries?

Senator JONES. Mr. Secretary, before you start on that let me ask you a question: Is there anywhere in the Ways and Means Committee hearing a statement showing the English income tax system?

Secretary MILLS. No, I think not.

Senator JONES. I mean of the income taxes that they impose on their citizens.

Secretary MILLS. No, there is not.

Senator JONES. Can you furnish to this committee a synposis anyway, or a statement showing the taxes that the English Government imposes?

Secretary MILLS. I will be glad to do that. But, generally speaking, their exemptions are very much lower than ours.

Senator JONES. And their taxes are very much higher as imposed upon their citizens?

Secretary MILLS. Yes. For instance, I think the exemption for a married couple is about $730 exclusive of the earned income allowance. The normal tax in Great Britain is 25 per cent, which applies to all net income above the exemptions, though the first £175 are taxed at one-half the normal rate.

Senator JONES. Will you furnish for our record a statement of that tax?

Secretary MILLS. Yes. In addition to that they have sharply graduated surtaxes, so that generally speaking their income tax is much more drastic and a much more effective tax than ours is. The principal revenue, however, is as might be expected derived from the very high normal tax which applies of course to a very broad base.

Senator JONES. Yes; I so understand.

Secretary MILLS. I am speaking from memory now, but my impression is that they will collect this year from the normal tax rate more than a billion and a quarter dollars, including corporations.

Senator JONES. I should just like for you to furnish a statement of the income taxes of Great Britain for the purpose of our record.

The CHAIRMAN. Yes, Mr. Secretary; if you have that information please send it to us.

Secretary MILLS. I will be glad to do so.

(A statement of the income taxes imposed by Great Britain is as follows:)

BRITISH INCOME TAX

The British income tax includes two forms of levy. One, known as the income tax, is at a standard flat rate of tax (comparable to our Federal normal tax) payable on total annual income, less allowable deductions, allowances, etc., of all individuals and corporations. This tax is in part collected directly from the recipient of the income and in part collected at the source. The tax is paid by corporations at the standard rate—this is the only tax on income paid by corporations—and is treated as effecting the collection at the source of the tax, at the standard rate, due by individuals on income received in the form of dividends. The second class of levy is known as the surtax and applies at graduated rates to the total annual income less allowable deductions of individuals from all sources in excess of £2,000 without deduction of personal exemptions and similar allowances.

For purposes of reporting income for the assessment of tax under the British system, income is classified under one or more of five schedules according to its character and source. This classification of income is significant primarily in connection with such considerations as the basis of assessment, the deductions allowed, and the method and time of collection. Tax rates are applied to the aggregate of taxable income as reported under all schedules.

Under the last finance act (Finance No. 2 Act 1931) the standard rate of income tax (which corresponds to our normal rates) was fixed at 25 per cent, except that the first £175 of net taxable income is taxed at one-half the standard rate of 25 per cent.

The standard rate applies to the income in excess of certain specified deductions and allowances. The most important of the so-called allowances are the following:

Married individual	£150
Single individual	100
Credit for first dependent child	50
(Other dependent children £40 each.)	
One-fifth the amount of earned income up to	300

The surtax rates imposed on net income, without deduction of the above and similar allowances, are as follows:

Net income:	Per cent tax rate
First £2,000	Nil.
Next £500	5.500
Next £500	6.875
Next £1,000	11.000
Next £1,000	16.500
Next £1,000	19.250
Next £2,000	22.000
Next £2,000	27.500
Next £5,000	30.250
Next £5,000	33.000
Next £10,000	35.750
Next £20,000	38.500
In excess of £50,000	41.250

The general structure of the British income tax presents many important points of difference as compared with our Federal system in respect of the basis of assessment, the taking of deductions, the rates and time of payment.

In general, the basis of assessment of tax in a given year is the income of the preceding year, as is the case under our Federal system. In the case of certain classes of income, however, the tax is assessed on the basis of income in the year of assessment.

In general, payment of British income taxes is not due as soon after the close of the year in which income arises as is the case of our Federal taxes. The full or first quarter payment of our income taxes (both normal and surtax) is due 2½ months after the close of the income year and the last quarter is due 11½ months after the close of the income year. Except for certain collections at the source, payment of the British income tax at the standard rate is not due until nine months after the close of the income year, and payment of the last quarter of the amount due may be posptoned under certain schedules for six months longer. Payment of the British surtax is not due until 21 months after the close of the income year. The surtax is therefore a deferred payment of income tax because the surtax on the income of a given year is paid a year later than income tax at the standard rate.

Profits from dealings in securities and other capital assets, which under our income-tax law have been an important source of revenue in recent years, are not included in the taxable income of Great Britain, except profits from such dealings carried on as a business.

For purposes of illustration, the following table is submitted in which there is presented a comparison between the computed tax for various incomes under the above British income tax rates and the rates as proposed under H. R. 10236 as passed by the House.

Total income tax payable, married individual, one dependent, earned income only

Net income	United States (H. R. 10236, as passed by House)	United Kingdom (Finance No. 2 Act 1931)	Net income	United States (H. R. 10236, as passed by House)	United Kingdom (Finance No. 2 Act 1931)
$1,500		$28.34	$25,000	$1,892.00	$7,366.14
$2,000		78.34	$50,000	7,142.00	19,583.13
$2,500		150.22	$100,000	26,592.00	48,021.13
$5,000	$29.50	650.22	$250,000	97,092.00	142,102.83
$7,500	88.25	1,160.24	$500,000	214,592.00	307,817.83
$10,000	194.00	1,700.94	$1,000,000	449,592.00	639,067.83

Senator JONES. Could you give us any idea of the situation at this time?

Secretary MILLS. I have here in my statement some figures on our normal tax. In 1932 it is estimated at around $82,000,000. When I was discussing a truly effective income tax raising a vast volume of revenue I had in mind a tax similar to the British tax; which, however, I do not recommend.

Senator JONES. But you will furnish us a statement of the income taxes of Great Britain?

Secretary MILLS. Yes.

Senator SHORTRIDGE. Mr. Secretary, when you speak of Great Britain do you mean England and Scotland, do you limit it to those two countries?

Secretary MILLS. Yes; and the north of Ireland, I believe, comes under their internal revenue system.

Senator SHORTRIDGE. For instance, Ulster.

The CHAIRMAN. All right, Mr. Secretary, you may proceed with your statement.

Secretary MILLS. Corporation income tax: The bill increases the rate of corporation income tax from 12 per cent to 13½ per cent. As I have said, I think that this increase may be too great. In dealing with the rate of the corporation income tax, it is to be borne in mind that the income which we refer to as the income of the corporation is in reality the income of a group of individual stockholders. The tax imposed upon the corporation may fall unfairly upon the individual stockholders. It can not be apportioned or levied with reference to the individual status of the different stockholders. When the corporation rate is increased, the increase affects equally stockholders of small means and stockholders of large means, and does not rest fairly on these different classes of stockholders. It is also to be borne in mind that when it comes to a relatively high rate for income of corporations, the relation of the income of the corporation to the capital involved in the enterprise is a very important factor. An increase in the corporation rate may be entirely bearable by a corporation which is fortunate enough to be earning a high rate of return on its capital. In the case of a corporation, however, which is earning a low rate of return upon its capital the increase in the flat rate of the corporation income tax may bear with great hardship. The increase in the rate of the flat corporation income tax should be kept within bounds. I felt some doubt as to the soundness of recommending as we did, that the corporation income tax rate be increased from 12 per cent to 13 per cent.

Consolidated returns of corporations: Certain income tax provisions relate to the treatment under the tax law of business enterprises conducted through the medium of corporations. I refer first to the wholly novel treatment in this bill of consolidated returns of corporations. The bill provides that consolidated returns may be made by corporations having subsidiaries, but that for the right to make such return the corporations shall pay a price in the form of 1½ per cent more of their net incomes than would be required as tax in the case of a corporation filing a separate return. I can conceive of no sound argument for putting a price upon the right to file a particular kind of income tax return.

The provision for consolidated returns should be retained as part of the law, like other parts of the law which recognize sound business practices and are designed to permit recognition of such practices in the computation of taxable income. When the revenue act of 1928 was enacted, it was determined to confine the use of consolidated returns to cases in which affiliation rests upon 95 per cent ownership of the voting stock by another corporation. It has been the practice of most corporations operating with subsidiary corporations to file consolidated returns of income and of operations of the group, and under this provision the income and operation of the group are reported for tax purposes in the same manner in which they are reported and dealt with in the corporation's reports for stockholders, for banks, and for other purposes.

In other words, the consolidated income tax return permits a corporation to report its income in accordance with its normal method of keeping its books and in accordance with its normal method of reporting its income for business purposes. And it seems to me that in so far as an income tax return can conform to legitimate business practice it is all to the good to have it do so.

Senator SHORTRIDGE. Mr. Secretary, just in a word what was the reason assigned for imposing this additional 1½ per cent?

Secretary MILLS. I do not know of any reason, Senator Shortridge, and I can not conceive of any legitimate reason if the consolidated return is the proper way of filing an income-tax return; and on that question I want to refer you to the report of this committee made in 1928, in which this committee held in the strongest possible language that the consolidated return was not only proper but highly desirable. If that be so, I can see no conceivable justification for making a corporation pay 1½ per cent for the privilege of doing what is the right thing anyhow. You might just as well say: "All right; we will give you your exemption for your wife and dependents provided you pay 1 per cent extra."

Senator CONNALLY. Mr. Chairman, might I ask the Secretary a question?

The CHAIRMAN. Certainly.

Senator CONNALLY. How did the original consolidated return come about in the first place? As I understand the situation some concerns own a number of corporations or a number of different plants.

The CHAIRMAN. Yes; in all sections of the country.

Senator CONNALLY. That is right. Under the old law each one had its own return. Now, when you consolidated them you permitted the prosperous ones to offset gains by losses in others, and therefore a special provision was put in that if you are going to give a

concern that has a number of plants that advantage over those that have only one plant, in the way of taking up the slack, they would pay this additional tax. Now, isn't that the real reason for it?

Secretary MILLS. I do not think there is any advantage. Let us suppose, Senator Connally, that you own a department store. And let us say that the profits of the toy department were very satisfactory while the operations of the dry-goods department showed a loss. Now, would you say it was proper to tax you as the owner of that department store, which is one going concern, on the profits of your toy department while refusing to recognize the losses sustained in your dry-goods department?

Senator CONNALLY. That is not a fair comparison.

Secretary MILLS. Well, let me go one step further.

Senator CONNALLY. That is a refinement.

Secretary MILLS. Let us suppose, as happens, that you own a single business but that that business operates through three corporations, and that you own all the stock of those corporations. Whether you make a profit depends upon the success or failure of all three businesses, the sum total of all three operations. It would be entirely illogical to say that we will recognize the profits of one but won't allow you a deduction for the others.

But I can not answer that better I think than by reading the language of your own report to which I have just referred.

The CHAIRMAN. Mr. Secretary, isn't this to be taken into consideration, and I know it was when that bill was passed: Take the Piggly Wiggly stores, and they have hundreds of them throughout the United States. They will go into a new community and start a store. They can run out the store operating there by underselling and making losses, and can keep it up for 1 year or 2 years, or, if necessary, for 3 years, and by taking losses they will run out the store located in that community and thereby drive out competitors. Then they are allowed to deduct that loss from the gains made in other parts of the country. That was the object of it.

Senator CONNALLY. Yes, and they have already driven them out.

The CHAIRMAN. Doubtless so. I do not mention the Piggly Wiggly stores in particular, or any more than I would any other similar organization.

Secretary MILLS. At the same time, if you are a manufacturing concern doing a nation-wide business and because of State laws it becomes necessary to form selling corporations of which the parent corporation owns all the stock, you can see the situation. Do you get a fairer picture of the entire business by having a consolidated return, or do you get a fairer picture by having the parent concern file its return and then have the subsidiaries file separate returns?

Senator Connally, if you were a business man——

Senator CONNALLY. Oh, now, Mr. Secretary, don't classify me as a business man. I object to that.

Secretary MILLS. Then you as a statesman making an investment——

Senator CONNALLY (interposing). Well, I will accept that statement. [Laughter.]

Secretary MILLS. You would want the entire picture of that parent manufacturing corporation and of its various sales corporations. You would not be satisfied to have simply a picture of the

manufacturing operations if they were selling the goods at cost and without profit to the several subsidiaries. Moreover, if you do away with the consolidated return you inevitably permit all sorts of intercompany transactions, which through manipulation can result in a writing down of profits for income tax purposes.

Now, as I have said, I believe I can not state it any better, nor indeed half so well, as you gentlemen did four years ago, and this is what this committee said at that time——

Senator CONNALLY (interposing). Mr. Secretary, before you read that let me suggest another point so as to get one answer for all points. The point I now want to make is that the consolidated return gives an advantage to the concern with a great many subsidiaries over the large number of individual proprietors.

Secretary MILLS. I do not think so. I think it puts them on the same basis.

Senator CONNALLY. I disagree with the Secretary, with all due respect. And I have to disagree with the Treasury Department, although I admit that I am generally out of agreement with anything that has money in it.

Secretary MILLS. Well, you can not accuse us of having any money these days. [Laughter.]

Senator CONNALLY. I want to ask you about chain banks. Here is a great string of banks all over the country owned by one concern. Their competitors are individual banks all over the country. Individual banks that make a profit would have to pay, and individual banks that did not make a profit would not have. But the chain banking system instead of paying on profits from their banks that did prosper, would be able to deduct the losses suffered by any of the others, and the sum total of the chain banks would pay a lower tax than the same number of individual banks. That is why I am insisting that the consolidated return gives a benefit to the monopolistic concerns that have great chains of stores or factories or banks throughout the country, and penalizes their independent competitors. And therefore it is that if they are to have the privilege of making a consolidated return they ought to be taxed for it.

The CHAIRMAN. And that, as I have stated, was the object when the law was agreed to.

Senator CONNALLY. Certainly.

The CHAIRMAN. In the act that Senator Connally is referring to not only banks but Piggly Wiggly stores and these other concerns that have branches all over the country, in every little town, and there are dozens of them in Washington, were to be reached, and that was the object of it.

Secretary MILLS. Might I now read this report made by this committee in 1928, because it states the situation very clearly and succinctly (reading):

> The permission to file consolidated returns by affiliated corporations merely recognizes the business entity as distinguished from the legal corporate entity of the business enterprise. Unless the affiliated group as a whole in the conduct of its business enterprise shows net profits, the individuals conducting the business have realized no gain. The failure to recognize the entire business enterprise means drawing technical legal distinctions, as contrasted with the recognition of actual facts. The mere fact that by legal fiction several corporations owned by the same stockholders are separate entities should not obscure the fact that they are in reality one and the same business owned by the same individuals and operated

as a unit. To refuse to recognize this situation and to require for tax purposes the breaking up of a single business into its constituent parts is just as unreasonable as to require a single corporation to report separately for tax purposes the gains from its sales department, from its manufacturing activities, from its investments, and from each and every one of its agencies. It would be just as unreasonable to demand that an individual engaged in two or more businesses treat each business separately for tax purposes.

Much of the misapprehension about consolidated returns will be removed when it is realized that it is only when the corporations are really but one corporation that the permission to file consolidated returns is given, and that no ultimate advantage under the tax laws really results. The present law permits the filing of consolidated returns only where one corporation owns at least 95 per cent of the stock of the other corporation of it at least 95 per cent of the stock of both corporations is owned by the same interest. The provision is a business man's conception of a practical existing state of facts. Your committee believes that rather than departing from business practices and standards our revenue laws should be brought nearer to a recognition of them.

Now, that was from the report of the Senate Finance Committee on the revenue bill of 1928.

Senator SHORTRIDGE. That means that the holding company must own a full 95 per cent of the stock of the other company.

Secretary MILLS. Yes.

The CHAIRMAN. You may proceed, Mr. Secretary.

Secretary MILLS. Dealing with income returns of corporations in this way, with the elimination of the effect of purely intercompany transactions, causes the tax to rest upon a true net income of the group as a whole. This provision eliminates the necessity of going into questions of intercompany accounting, and eliminates artificial effects upon income which might be harmful to the revenue resulting from considering the operations of single subsidiaries, without regard to what may be offsetting or modifying operations of other subsidiaries.

The provision of the bill following the carefully considered provisions of the present revenue act, treats affiliated corporations on a basis which accords with business practice, which appears to be sound and practicable in the light of many years of experience of the Treasury with such returns, and any departure from the use of that basis in the law would be a backward step. The novel idea of putting a price upon the use of sound accounting methods by affiliated corporations, should be eliminated from the bill.

The statement of this committee on the subject of consolidated returns in reporting the revenue bill of 1928, was in part as follows—and I am now giving a quotation other than the one I just read:

> Your committee has considered the matter very carefully and is convinced that the elimination of the consolidated returns provision will not produce any increase in revenue, will not impose any greater taxes on corporations and will in all probability permit of tax avoidance to such an extent as to decrease revenues.

Now, that was the opinion of the Finance Committee in 1928.

Changed treatment of dividends: A new feature of great importance embodied in this bill is the giving up of the exemption of dividends on corporate stock from normal tax. And I dwelt on that somewhat this morning. Under all of the revenue acts since 1913, dividends received by individuals have been exempt from normal tax. The reason for this treatment of dividends was, of course, the idea that the actual receipt by the individual stockholder of a portion of the income of the corporation, which had already been subjected to the basic income tax, should not create a new liability to the same basic normal tax. You will recall that under the first income tax, the

rate of normal tax upon individuals was 1 per cent, and the rate of tax upon the net income of corporations was also 1 per cent. It was believed that when the income of the corporation had been subjected to the 1 per cent tax, it should not again be subjected to the same tax when received by the individual stockholder. It was concluded that unless dividends received by individual stockholders were made exempt from normal tax, there would be a duplication of tax in the case of income realized by individuals through the medium of corporations.

Senator SHORTRIDGE. What revenue would that bring about provided you carried out the original law of not allowing the deduction?

Secretary MILLS. This provision by eliminating the exemption brings in about $90,000,000 of revenue.

Senator SHORTRIDGE. All right.

The CHAIRMAN. You may continue, Mr. Secretary.

Secretary MILLS. This treatment of dividends in the manner to prevent what was regarded as a duplication of normal tax and a discrimination against the use of the corporate form, was continued, as I have said, under all the succeeding revenue acts.

Senator HULL. Does this tax apply on dividends derived from corporations by individuals, or does it apply to dividends derived by one corporation from another?

Secretary MILLS. I think it applies only to individuals.

Senator HULL. And not to a corporation that holds stock in another corporation?

Secretary MILLS. I do not so understand.

Senator HULL. That was the provision that was inserted in the original law temporarily and then stricken out. There it did not relate to individuals at all.

Secretary MILLS. No; but it did relate to individuals in all subsequent revenue acts. In other words, we have never applied, so far as I know, the normal tax to dividends.

Senator HULL. You are entirely correct as to that.

Senator CONNALLY. One corporation though would pay the normal tax on its dividends received from another corporation 13 per cent.

Secretary MILLS. No. The first corporation pays the tax.

Senator CONNALLY. Oh, I see. It is paid by the earning corporation before it reaches the other corporation by way of dividends, and there is no additional tax to the corporation.

The CHAIRMAN. You may proceed, Mr. Secretary.

Secretary MILLS. The exemption of corporate dividends of normal tax may be said to be one of the basic ideas or principles which has hitherto been followed in the structure of our income tax. There can be no doubt that the financing of business enterprises has been based to some extent upon the expectation of the continuance of this treatment of corporations' dividends under the law. Exemption of dividends from normal tax has played an important part in the securing of equity money for business enterprises. It has been a consideration of particular importance in connection with the financing through the sale of preferred stock. The exemption of dividends from normal tax gives the preferred stock some compensating attraction as compared with the bond, which, while ranking ahead of the preferred stock does not have this exemption.

It will, of course, be borne in mind that the interest paid on the bond constitutes a deduction by the corporation in computing its

net income and hence has not been subjected to the corporation income tax rate, as are the earnings from which preferred and other dividends are paid.

The changed treatment of dividends found in the House bill would rest with particular hardship on small corporations. It is obvious that in the case of enterprises controlled by a few individuals, carried on in a corporate form, the change would mean that the income from the business having been subjected to the corporation income tax at an increased rate, would, when distributed as dividends, be subjected to the normal tax; while, if the business were carried on under the partnership form the income would be subject to the normal tax only. Exemption of dividends from normal tax does not fully equalize discrimination which has been involved ever since the corporation income tax rate was made to exceed the normal tax rate. Taking away that exemption, however, materially increases discrimination against the corporate form. Some effort was made in the bill to relieve against this effect in the case of small corporations by providing that dividends should be exempt where received from a corporation the gross income of which in the previous year did not exceed $25,000. This provision is obviously not inclusive and would be difficult of satisfactory application.

Notwithstanding the large amount of revenue which this change would yield, I think that it is a sounder course to adhere to the treatment of dividends which has been followed in all the revenue acts up to the present time, and not to embark now upon a novel treatment of that subject. Business recovery depends in a very material degree upon the securing of capital for new enterprises and more capital for existing enterprises. The most needed funds are those which should be brought in through investments in stock. The securing of such funds will be rendered more difficult by the proposed change and the discrimination against the using of corporations for the conduct of business would be sharply increased.

Senator SHORTRIDGE. What was the estimated amount of revenue to come from the additional tax on dividends?

Secretary MILLS. It is $90,000,000.

Senator SHORTRIDGE. And of course the House might have been looking for revenue.

Secretary MILLS. I can assure you, Senator Shortridge, that the House of Representatives was looking very hard for revenue when it reached that point.

Senator JONES. Does that change the practice and policy or decisions made by the Treasury Department under the acts heretofore?

Secretary MILLS. No; it is a matter of law. We have always exempted dividends from the normal tax. It is not a matter of regulation or interpretation.

Senator JONES. So that previous decisions under the existing law would apply now to that provision?

Secretary MILLS. I do not quite get the force of your question. However, it is not a matter of interpretation or of regulation. The exemption has been written into every statute.

Senator JONES. This relates solely to exemptions?

Secretary MILLS. Yes.

Senator HULL. What proportion of dividends go to other corporations and what proportion to individuals?

Secretary MILLS. I can not answer that question offhand, Senator Hull. But ultimately, of course, they must all find their way to individuals.

Senator CONNALLY. Mr. Secretary, you have mentioned partnerships. Do you advocate treating partnerships and corporations absolutely on the same basis?

Secretary MILLS. No, you can not do that. The ideal system would be to bring them as closely as possible together, however.

Senator CONNALLY. Don't you think a corporation ought to pay an additional amount for the privilege it has over individuals in not being subject to debts for their stock?

Secretary MILLS. They do not get that privilege from the Federal Government.

Senator CONNALLY. If they do business under interstate commerce they get it from the Federal Government?

Secretary Mills. They get that privilege from the State governments, and I might add the State governments make them pay for it.

Senator CONNALLY. When they come across the State line they are under Federal jurisdiction?

Secretary MILLS. To-day a corporation does relatively pay a higher amount.

Senator CONNALLY. And you think they ought to pay on the same basis?

Secretary MILLS. I think you ought to bring them as close together as possible, but I do not see any possibility of ever producing a condition whereby a corporation will pay the same as a partnership. I think it will inevitably be more.

Senator CONNALLY. And for my part I hope it will.

Senator HULL. There is no new idea about making the individual rather than the corporation more and more the unit in this income-tax situation, is there?

Secretary MILLS. Do you mean involved in this bill?

Senator HULL. I asked if there had been any new development in the way of an effort to make the individual the unit of income tax rather than lodging some of it in the corporation.

Secretary MILLS. I have not seen any signs of it.

Senator HULL. That would be the more equitable method of measuring it if it could be done.

Secretary MILLS. Of course if you want to have an entirely equitable income tax base the way to do is to reach the individual in accordance with his taxpaying ability after granting him a minimum exemption covering a certain amount; and after that taxing every one at a progressive rate whereby you make the ones best able to pay pay the most. But we are a long ways from that ideal.

Senator HULL. What is the average of corporate earnings of corporations that are paying a tax for this last year? I mean, what is the average percentage of their earnings? Is it as much as 6 per cent?

Secretary MILLS. Do you mean on capital invested?

Senator HULL. Yes. That would be the only way you could get at it.

Secretary MILLS. Mr. Stark tells me there was a decline of about 42 per cent in the tax income last year. But I do not believe that was your question, Senator Hull.

Senator HULL. No. What was the percentage of return of profits of corporations during the past calendar year? Would the average earnings level be 6 per cent or 8 per cent or 10 per cent? Or more especially what percentage of them have an average earning level of 8 per cent on income?

Secretary MILLS. Of course that would involve going into the whole question of capitalization, wouldn't it?

Senator HULL. Yes, to some extent.

Secretary MILLS. I do not think we have any statistics showing that.

Senator HULL. And you would not be able to approximate that?

Secretary MILLS. Senator Hull, you will remember that that was the great difficulty we had with our war taxes, on the matter of invested capital.

Senator HULL. But we finally got that worked out pretty well, didn't we?

Secretary MILLS. Well, I do not know whether the Internal Revenue Bureau ever admitted that excess profit tax was ever successfully worked out.

The CHAIRMAN. You may proceed, Mr. Secretary.

Secretary MILLS. Net losses: Another change embodied in the bill, which is likely to have adverse effect upon the conduct of business enterprises, is the change which denies to any business the right to carry over as a deduction for a succeeding year a net loss which may be the result of the operations in a particular year. Under our law the computation of taxable income is, in general, required to be made upon the basis of annual accounting periods. For many years, however, it has been recognized that in the case of business enterprises continuously carried on, the requirement that each year should be treated as a unit without reference to what happened in other years, works a hardship. If no recognition whatever were to be permitted of losses for particular years in business continually carried on, the result, of course, is that business enterprises would actually be required to pay tax on more income than they have had, because the income over a series of years represents the combined effect of gains and losses for these years.

In reporting the bill the Ways and Means Committee recommended that the net loss deduction be confined to a deduction for the year immediately succeeding the year of the loss, cutting off the right to a deduction for a second succeeding year. The bill, as it passed the House, however, provides that until 1935 there shall be no deduction of a loss for a prior year. I believe that the net loss provisions of the recent revenue acts rested upon sound principle. I believe that it was justifiable, in view of the existing emergency, to qualify the application of that principle to the extent of limiting the right to a 1-year carry-over. But the total elimination of recognition of the effect of losses for particular years upon the income account and of the hardship which results from always having to pay tax on profit for a good year, without any right to offset profits by losses of a bad year, is unsound.

Indeed, the House bill recognizes that it is unsound because it provides for a 1-year carry-over of net losses beginning in 1935. In other words, what the House bill says is: Because we need the money during the 1-year period we are going to deny you the right to deduct

losses which we consider to be fundamentally sound, but after the immediate pressure is relaxed we will restore this equitable provision. If that be true, it means that you are going to get this money by taxing losses. That is all it can mean. That is unsound. I think it is indefensible, really. It takes income on whatever rates are necessary. After all, when a man has income he has taxpaying ability, but do not tax him on his losses and then pick out the two years when his losses will probably be the greatest in a decade.

Senator CONNALLY. Right on that point, Mr. Secretary, let me ask you: You think the ability to pay is the true test, don't you?

Secretary MILLS. Oh, yes.

Senator CONNALLY. And that the man who makes money ought to pay and the man who loses ought not to pay.

Secretary MILLS. Exactly.

Senator CONNALLY. Well, don't you think it would be fair with reference to corporations, that those that have a high return, say 12 per cent, should pay a higher tax than those making only 6 per cent? In other words, an excess profit tax.

Secretary MILLS. Theoretically an excess profits tax is a beautiful tax, but practically it is an abomination, because when we tried it we were not able to find out what invested capital was. That is why it was repealed in 1921.

Senator CONNALLY. No; I think not. It was repealed in 1921 because so much pressure was brought against it by the big concerns that were taxed under it. I think it is as fair a tax as the graduated income tax.

Secretary MILLS. Theoretically it is, but those who have attempted to administer it will testify that from an administrative standpoint it is a horror.

Senator CONNALLY. No doubt it is hard of administration. But the Government ought to smoke out these corporations and boil down their water to the point where the Government will find out what is actually invested in these corporations. There is no more useful pursuit the Government can engage in that that. I believe it is a fair tax.

The CHAIRMAN. I think if you will make an investigation, Senator Connally, you will find out that the smaller corporations and the medium-sized corporations, take a period of five years, make a larger percentage of profit than the larger corporations.

Senator CONNALLY. Well, that is all right if it is a corporation that is making money. Take a man who is 5 feet 4 inches and you do not tax him any more than the man who is 6 feet 4 inches, do you?

The CHAIRMAN. No; but that is your theory.

Senator CONNALLY. Oh, no. For instance, if Mr. Mill's earning power is $150,000 a year you would make him pay a graduated tax on that, and if my earning power is $5,000 a year I would pay on that. And if here is one corporation that is earning 12 per cent, and here is another one earning, we will say, 6 per cent, the first corporation ought to pay a higher tax because it is making more money in its invested capital. I am not basing the argument on the size of the corporation. Of course it would not be a fair thing to tax the corporation simply because it was big. The rate of return is the true measure. If it has a million dollars of capital and makes 6

per cent it ought to be taxed the same as the little corporation with only $10,000 capital but which makes but 6 per cent. Now is a good time to rectify this matter and put it into effect in this bill.

Secretary MILLS. Senator Connally, Mr. Ballantine was in the Treasury Department during the war years, and he knows about the excess profits tax, and I am sure he knows how it worked and why it was repealed, I am sure there are men here who will tell you the way that worked and not to try it again. And I think Mr. Alvord will tell you that. They are both here. It is a pretty dangerous prophesy for me to make, perhaps, but I will venture that Mr. Ballantine will tell you that.

Senator CONNALLY. It is the right way to tax.

Secretary MILLS. Theoretically it is a beautiful tax.

Senator CONNALLY. It is fair, honest, and square.

Secretary MILLS. In theory, yes, but how a tax will work out in practice is the real test.

The CHAIRMAN. You may proceed, Mr. Secretary.

Secretary MILLS. I spoke this morning about limitation on the reduction of losses from the sale of capital assets——

Senator HULL (interposing). Before you leave the other subject, Mr. Secretary, let me ask you: I have not looked at this for some time but this portion you went over applies to corporations, does it not?

Secretary MILLS. Do you mean the carry-over?

Senator HULL. Yes.

Secretary MILLS. It applies to all business concerns, individuals, partnerships, or corporations.

Senator HULL. The English income tax, which is stronger than ours, they were trying to get back to the 1-year period that we were using, presumably on the theory that the taxpayer might have two or three fine years, and as you say he pays out of his current income as a rule. So that if he should strike a panic he would not be able to pay at the end of three years maybe on three profitable years. I think that was the thought advanced. Now, have the English taken any active steps in this direction?

Secretary MILLS. I am not sure. But I have the same impression that you have, that they are working back to the 1-year statute rather than the average of three years. But as to what they are doing on the net loss carry over I do not know. I can look it up and put it into the record if you wish.

Senator HULL. If there is anything new on that subject, I should be glad to see it go into the record.

Secretary MILLS. I will be very glad to comply with your request.

(The data called for is as follows:)

TREATMENT OF NET LOSSES FROM BUSINESS

The British income-tax system has more liberal provisions for offsetting business losses against the assessable profits of other years than is provided by our Federal income tax. As under our Federal law, the basis for assessment of income tax on business profits in a given year is the profits of the preceding year. If the British taxpayer suffers a business loss, he may offset this loss first against profits on which his taxes are assessed in that year (that is the profits of the preceding year). If the loss is not offset against, or is in excess of, such profits the loss or the excess may be carried forward and offset against the assessable profits of the six following years. The loss must be deducted from the earliest possible assessment of the succeeding years and its must be deducted from net profits before any allowances.

The CHAIRMAN. You may resume, Mr. Secretary.

Secretary MILLS. Limitation on the deduction of losses: Another provision which should, in my opinion, be amended, is the section limiting the right to deduct losses on transactions in securities to the offsetting of gains from similar transactions in the same taxable year as provided in section 23. In recent years income from business profits, from salaries, and from other sources, has in many cases been offset by losses on security transactions. It is the effect of such losses in diminishing the tax upon forms of income, such as I have mentioned, which, to a considerable extent, is responsible for the diminished yield of the income tax in these years. Undoubtedly, a very serious case can be made for continuing the right to so deduct such losses. In many cases, however, the losses thus deducted may be said to be paper or fictitious losses. In place of the securities in which the losses were taken, other securities were purchased without substantial change in income. The Treasury was disposed to agree that it was not unreasonable under present conditions to deny to taxpayers the privilege of offsetting forms of ordinary income through security losses. I think, however, that banks should be expected. Banks, as a part of their regular business, purchase securities for investment purposes, which become an important element in their necessary secondary reserves. Speculation is not involved, nor is the question of protecting the revenues from improper deductions. It is my opinion that, particularly in the case of banks, a tax upon the gains and a denial of the losses is not necessary and can not be justified. I also recommend that the provision not apply to bonds, which are normally purchased and held for investment purposes and which are not susceptible of manipulation so as to create fictitious losses.

In other words, people have been able through the taking of losses on sales of securities to wipe out any profits by way of dividends, or from business, and so forth. And in some cases the selling of securities and the taking of losses have not represented actual losses, but nevertheless they have been enormously effective in wiping out what we have described as other income.

Now, the Ways and Means Committee felt, and the Treasury agreed, that that abuse has grown to such a point that something ought to be done about it. And something ought to be done about it in spite of the fact that we are going to hit some people that have suffered some very genuine losses and not mere paper losses. But we do not know how to remedy that particular abuse without doing some injustice, and I am afraid some people have got to suffer because of the general abuse of the privilege by many other taxpayers. So the Treasury did agree with the Ways and Means Committee that you ought to limit the deduction of losses from the sale of securities to the amount of profits made in that same year from the sale of securities, and that the loss resulting from sale of securities should not be used to wipe out other income.

Senator HULL. That was in the act of 1916.

Secretary MILLS. Yes, it was. But in reaching for a particular abuse, once you have remedied that abuse you may not be able to stop short of interfering wtih ordinary business transactions.

Now, the bill does exempt the dealer in securities. It does not, however, exempt banks, and I think banks should not come under this provision. Banks necessarily have to buy securities. They

hold them as secondary reserves. It is a part of their business to buy and sell investment securities. Therefore to say to a bank: We are going to tax you whenever you make a profit on the sale of your investment securities but we are going to deny to you the right to take losses is, it seems to me, unsound in dealing with the normal business of a bank. And that business is not connected with the well-to-do individual with a large income from other sources who wipes it out by a sale of securities, during October and November, at the close of the calendar year. Therefore I suggest that this committee amend this provision so as to include not only dealers in securities but banks.

I think also that generally speaking you could well afford to exclude bonds from the provision, because after all—while it may not be entirely true to-day, generally speaking, bonds do not fluctuate enough in value or price to permit them to be used for the purpose which we are attempting to curtail. I think that this provision is a very drastic one at best, and that you will accomplish all we are really seeking to accomplish if you limit the application to stocks and exclude bonds, and exclude banks, as well as dealers in securities.

Senator HULL. Where would you draw the line between banks that are performing largely a legitimate banking business and banks that have security affiliates and all kinds of security connections?

Secretary MILLS. Well, banks are inevitably in the business of buying and selling securities to some extent. Their income from buying and selling securities is normal business income, and I think they are entitled to take losses on their normal business income. But the fellow we are trying to hit is the man who is wiping out his normal income from dividends and business profits by taking paper losses on the sale of stocks. We are perfectly willing to give him a deduction on his normal business losses and to tax him on his normal business gains. But we are unwilling to allow him to wipe out his normal business gains by this arbitrary taking of losses on outside transactions. I do not think that is true of banks. It is a part of their normal business to buy and sell securities and therefore their losses arise in the normal course of events and they are not arbitrary or fictitious losses made for the purpose of wiping out the normal income.

The CHAIRMAN. That would apply also to the broker, whether a company or an individual. That is all of his business. He does no business outside of the buying and selling of stocks. How would you treat him?

Secretary MILLS. Well, if he is a security dealer in the sense that he merchandises securities, the bill already exempts him from this provision. But the ordinary broker would not be exempt from this provision as I understand it.

Senator SHORTRIDGE. And who determines that?

Secretary MILLS. It is written into the law. I suppose ultimately, like all these things, the Bureau of Internal Revenue will have to write a regulation; that is, unless Mr. Beaman has done a good enough job so that we do not have to. Have you, Mr. Beaman?

Mr. BEAMAN. I do not know.

Senator SHORTRIDGE. But you say when he is an ordinary broker, or his business is almost exclusively the buying and selling of securities, then he might write it off.

Secretary MILLS. No, I did not say that. I say we would exclude the firms that are in the business of buying and selling securities the way the grocer buys and sells groceries, those who merchandise securities. The bill already excludes them. Now then, we say you ought to go a step further. It is likewise the business of a bank to buy and sell securities, and banks ought not to be under this section. That is the only suggestion I make, except that inasmuch as this is a very drastic provision and bonds are not particularly adaptable instruments for effecting this purpose, that you might very well exclude bonds and limit it to stock.

Senator CONNALLY. Then it would not matter about bonds. In other words, if it does not affect anything, why take them out?

Secretary MILLS. I think if you take banks out the bond provision is not so important. If you do not take banks out then the bond provision is very important because that is their principal form of investment.

The CHAIRMAN. Was this matter presented to the Committee on Ways and Means of the House?

Secretary MILLS. Do you mean this particular argument?

The CHAIRMAN. Yes.

Secretary MILLS. I did not present it to them.

The CHAIRMAN. You may proceed with your statement, Mr. Secretary.

Secretary MILLS. Estate tax: The recommendation of the Treasury with regard to additional estate tax was that it should be such as to increase the rates to the level of the 1921 act. This would have increased the maximum rate from 20 per cent to 25 per cent. It was proposed that this tax be so framed as to constitute an additional tax to which credits for the payment of State inheritance or estate taxes permitted the amount of 80 per cent as against the present estate tax should not apply. In other words, this was to be a sort of supertax the full benefit of which would be derived by the Federal Government.

In the House bill the recommended basis for the treatment of additional estate tax is preserved but the rates are drastically increased. The schedule begins with amounts in excess of $50,000 instead of $100,000 as at present; is graded sharply upward with narrow brackets and reaches a maximum rate of 45 per cent. The effect of the steeper gradation of a tax will be seen when it is observed that under the present law the maximum rate on an estate of $500,000 is 5 per cent while in the new law it would be 13 per cent. The maximum rate is 80 per cent higher than the highest rate employed during the war, and the gradation upward is very much more rapid than under the war-time schedule.

So far as the production of additional revenue in the immediate emergency is concerned, the estate tax is not an available source for the reason that new rates apply only to estates of decedents dying subsequent to the passage of the Act and the tax is not due until one year after the date of the death, and the time for payment may be long extended. In the bill it is recognized that the higher rates necessitate the allowance of a much longer period for payment, and it is provided that in the case of tax shown to be due by the return the period may be extended up to eight years, while in the case of deficiencies the period may be extended to four years. In the case of any

extension interest must be paid at the rate of 6 per cent. The total amount of additional revenue from the estate tax during the year 1933 is estimated at $20,000,000.

The CHAIRMAN. In that provision does it provide any deductions on account of taxes imposed within a State?

Secretary MILLS. As I understand it, in so far as the States are concerned they get the benefit of 80 per cent under the present rates and the Federal Government gets the benefit of all the additional revenue under the new rate.

Senator KING. That is to say, this is a supplemental tax to the existing one?

Secretary MILLS. It is.

Senator KING. And you leave the present law as to the States?

Secretary MILLS. You leave the present law on revenue derived by States as it is to-day, and the additional revenue enures to the benefit of the Federal Government.

Senator KING. You do not attempt to combine them either for the purpose of credits or of debits?

Secretary MILLS. No.

Senator CONNALLY. You recommend a maximum of 25 per cent on estates?

Secretary MILLS. Yes.

Senator CONNALLY. And the bill fixes a maximum of 45 per cent in the highest brackets.

Secretary MILLS. Yes; and in the much closer brackets with a sharper gradation.

Senator CONNALLY. Do you know what the English rates are?

Secretary MILLS. No, but I believe the maximum rate is 50 per cent.

Senator CONNALLY. On what size estate?

Secretary MILLS. Fifty per cent on the amount of net taxable estate (after credit of £100) in excess of £1,999,900 ($9,732,713 at par of exchange).

Senator KING. As I understand the situation, Senator Connally, here is a dual tax imposed.

Senator CONNALLY. No——

Senator KING (continuing). You have the existing tax with a credit of course of 80 per cent, and then you have the additional tax and if the additional tax is 45 per cent that does not take cognizance of the anterior tax.

Senator CONNALLY. Forty-five per cent includes the old tax and the present tax.

Senator KING. Is there a combination for the purpose of determining it?

Senator CONNALLY. Yes.

Secretary MILLS. The first thing I want to point out is that this estate tax increase does not help us materially during the emergency. In the first place, so far as the fiscal year 1932–33 is concerned the new rates do not apply as to anyone who dies before the law goes into effect; furthermore the executor or administrator has a year to file a return, and under the terms of this bill would have eight years to pay the tax on the amount actually returned, and four years to pay any deficiencies. So that as a result of the one year provision, which really carries you over into the fiscal year 1934, as a practical matter,

though the yield is estimated at $20,000,000 in the year 1933 on the assumption that this bill becomes a law prior to June, as a matter of fact we can not look to the estate tax as a means of balancing the Budget in the fiscal year 1933.

Senator CONNALLY. It would be very much heavier, though, in the following year, would it not?

Secretary MILLS. Yes; it will begin to grow after that.

Senator CONNALLY. It will help to pay the bonds that we will have to issue now.

Secretary MILLS. Oh, yes. And you ought to consider it, therefore, not as a part of an emergency program to balance the Budget next year, but strictly from the standpoint of long-time tax policy and the economic effects which it will have from a long-time standpoint. You can not consider the estate tax as a part of your emergency program, but you must consider it from the standpoint of permanent legislation.

Senator CONNALLY. As a man having conservative views on taxation, do you not regard the graduated estate tax as a legitimate field for permanent taxation for the Federal Government?

Secretary MILLS. Most decidedly. I want to be quite sincere. In the first instance I felt very strongly that the estate and inheritance taxes belonged to the States as a matter of legal theory and as a matter of tradition and a matter of revenue need. I thought the States needed the estate and inheritance taxes much worse than the Federal Government did. That was my opinion for a very long time. But it was perfectly obvious that when certain States were able by constitutional amendment or otherwise to create——

Senator KING. Isles of safety.

Secretary MILLS (continuing). Sort of migratory bird refuges, or isles of safety, that estate taxes imposed by the States must be ineffective. And therefore, I voted when I was a Member of Congress and a member of the Ways and Means Committee for the present law under which the Federal Government assesses the tax and allows an 80 per cent credit for estate or inheritance taxes paid to the State. I am entirely satisfied with it. And I believe in an estate tax as part of our revenue system. The only thing that I questioned—and I question it as a matter of fundamental economic doctrine—is as to how high you should put the rates.

Now we might as well be perfectly honest about it. Either you are imposing a tax with an idea of getting considerable revenue, and then probably 25 per cent is as high as you want to go, or as a matter of social and economic policy you want to use the taxing power of the Federal Government to break up large estates. Now I think that both of those considerations enter into this picture.

The CHAIRMAN. Would it not be better for the States to use that power? Why not leave the estate tax to the States?

Secretary MILLS. Senator Smoot, I think that is water over the dam. I think the Federal Government is in the field, that the 80 per cent provision is furnishing much more revenue to the States than they ever could get on their own account, and I consider that a matter of settled policy. As far as I am concerned, while I was not for it in the first instance, because I felt the tax revenue from estates should belong to the States, I have become convinced it is the right policy, and as far as I am concerned I am for a Federal estate tax.

Senator CONNALLY. Mr. Secretary, whatever your theories about State rights might have been with reference to it in the beginning, is this not true with regard to the great fortunes. Take Mr. Ford, for instance. His body is in Detroit, but his fortune has been made off of the people of the United States, and it is not just to let Michigan have all of the inheritance tax off of his estate. The same thing is true with regard to the great fortunes in New York held in the great corporations, the railroads and others that extend throughout the whole Union. Those fortunes have been made and contributed by all of the people, and the Federal inheritance tax is the only tax that will adequately reach them and give the Federal Government or all of the people of the United States the benefit of that tax.

Personally I am opposed to the 80 per cent. I do not think that we ought to give the States as much as 80 per cent. I think the States ought to be entitled to levy their own inheritance taxes and the Federal Government levy its taxes. We do not have any income taxes from which the States are allowed to deduct. Some States have income taxes and some do not. This 80 per cent was merely a compromise at the time between the proponents who wanted an entire Federal tax and those who did not want any, but wanted it left entirely for the States. I think 80 per cent is too high for the States.

Secretary MILLS. Senator Connally, if you are going to have the Federal Government and the State governments each taxing the same subject entirely independently you are going to have the greatest tax chaos in this country that you have ever seen. We are rapidly approaching that point. I venture to say that before another year is up what you gentlemen will be considering in both the House and the Senate is the relationship between State and Federal taxes. There is a very direct relationship. In your State, Senator La Follette, you have a 14 per cent tax on incomes, do you not? Now, you can not in levying an income tax just blindly shut your eyes to the fact that Wisconsin has a 14 per cent income tax, and therefore its action deprives you of the right of going as high as you might care to. Suppose some other State puts the rates as high as 25 per cent or 50 per cent. What we have to do is to recognize that there exists a real comity between the Federal and the State governments. We have got to consider the respective rights of each and adjust our respective systems of taxation so that the unfortunate taxpayer will not be crucified between two different systems of taxes by two separate sovereignties acting entirely independently.

The CHAIRMAN. That is the same position I take.

Senator CONNALLY. Yes; but the Secretary just suggested that we can not use the same field. Yet his own State of New York has a heavy personal income tax. Would he therefore not levy any income tax in New York?

Secretary MILLS. No; but I think we have got to consider this whole question sooner or later.

Senator CONNALLY. I agree with you that we ought to let the States have certain sources, and that we ought to stay off of those sources. But I do not think the inheritance tax ought to be relinquished to the States entirely. They ought to get some, but I think they are getting too much when they get 80 per cent.

Secretary MILLS. I agree with you on that. But I think the States need it more than the Federal Government. After all where is the real tax burden in the United States to-day?

Senator CONNALLY. All over.

Secretary MILLS. It is the State and local taxes that are crushing the people, not the Federal taxes. You hear about the troubles of the farmer. One of his chief troubles is that he is being crucified by taxation, local and State taxation. Consider the dweller in the cities. Is he troubled by Federal taxation? Not to any great extent. But he is burdened by the heavy taxes on real estate which he pays through rent and does not know that he is paying it. That is where the real tax problem in the United States is. I am not troubled about the revenues of the Federal Government. Eventually we will have all we need, and probably more than we should have. But there is a terrible problem in the States and the local communities. And to the extent that we can give them a clear field and relieve these burdens on real property, we will be doing something that represents real statesmanship.

Senator KING. I hope that you will approve a resolution which I offered six years ago, and which I am offering now, calling for a conference between the Federal Government and the States for the purpose of agreeing upon a plan to levy estate taxes and for proper allocation. For one source of income. That is, one collecting agency. And then a proper allocation in order to avoid the conflicts which you have stated and the pyramiding, because in some estates that have come to my attention where the property is in five or six States the entire amount has been eaten up.

It does seem to me that there ought to be one source of collection, one collecting agency, and then a proper allocation of the funds derived from your estate taxes between the States and the Federal Government. If a conference were called between the Federal Government and the representatives of the States and a treaty entered into which would be crystallized into law by the Federal Government and the States for the purpose of settling that problem, I think that would be real statesmanship.

Senator SHORTRIDGE. May I ask a question for the record, and perhaps for others? The case of Mr. Ford is cited. Now, he is a resident, let us assume, of the State of Michigan. He dies leaving a vast estate. The present bill proposes 45 per cent, would it not be, on his estate?

Secretary MILLS. I do not know how much Mr. Ford is worth.

Senator KING. In the highest brackets.

Senator SHORTRIDGE. Exactly. Eighty per cent of that tax, then, would be remitted to the State.

Secretary MILLS. Providing the State of Michigan has taken full advantage of the 80 per cent provision.

Senator COUZENS. Oh, no.

Secretary MILLS. No, not the new tax. No, only 80 per cent of the old.

Senator COUZENS. Yes.

Senator SHORTRIDGE. That is what I wanted to have cleared up.

Secretary MILLS. 80 per cent of the old. All of the new tax goes to the Federal Government.

Senator COUZENS. I would like to ask the Secretary this question, and if I am asking him something that he has already answered, I will drop it. Why the difference in the graduation between the gift tax and the estate tax? It seems to me that they ought to be comparable.

Secretary MILLS. I think the reason for the differential is that it was hoped to get a little revenue from gifts. Though I think properly looked at a gift tax is not a revenue measure at all. It is a measure intended to protect both the estate and the income taxes from evasion. That is the reason for the gift tax. I think the differential is due to the hope that some persons might be tempted to make some gifts and we might get some revenue.

Senator LA FOLLETTE. Theoretically there ought to be some definite ratio in the rates between estate tax and the gift tax, should there not?

Secretary MILLS. I suppose the real purpose of the gift tax, Senator La Follette, is to prevent gifts, is it not?

Senator LA FOLLETTE. That is, where they are made in contemplation of death and for the purpose of evading the estate tax.

Secretary MILLS. Yes. I think the gift tax as drafted by the House probably goes farther than that. I am in entire accord with the gift tax intended to prevent a distribution for the purpose of avoiding either the estate or the income tax. But I think the gift tax that goes beyond that is very questionable.

Senator KING. I want to ask one question. Mr. Secretary, I have been told that some wealthy people have formed corporations in Newfoundland or Canada or some other country, on the Western Hemisphere, however, usually in Canada or Newfoundland, and transferred their property to that corporation for the purpose of avoiding inheritance or estate or gift or income taxes. Has the Treasury Department any information relative to this, and, if so, whether the administrative provisions of the pending bill sufficiently guard and protect us against such flagrant evasions or attempted evasions?

Secretary MILLS. I think so. I think that there are some provisions in here that have been written in for the purpose of taking care of those situations, and the experts tell me they do. Frankly, I have no personal knowledge of those devices. I am told that they exist, and I am also told by gentlemen who are familiar with them that the provisions in the House bill do plug those particular holes. But when you get to the administrative provisions I think you had better have the exports explain them to you.

Senator KING. I shall pretermit any further questions, but I am told that those are things that ought to be guarded against.

Secretary MILLS. Now if I may get back to the estate tax and the question of rates. You put rates as high as 45 per cent, and it is very obvious that in many many cases executors and administrators are going to find difficulty in making payment because of insufficient liquid assets, that is, assets that can at once be turned into cash. And it is by no means sure that this particular problem can be solved by extending the time of payment, particularly when your delayed payments carry an interest rate as high as 6 per cent. Therefore, in many many cases the necessity of paying these high taxes is going to mean the disruption of individual business and the destruction of capital values. I think that is perfectly inescapable when you get a capital levy as high as 45 per cent.

Now there is no immediate effect, of course, on the revenues, but I think that it is possible—though this seems somewhat remote, and I am basing my objections on much more fundamental grounds—that the imposition of these drastic rates may put pressure on constructive business men to refrain from making certain character of investments and for the protection of their families, their children, to prefer to keep part of their assets in liquid form. That means that they are not going to make the greatest possible productive use of their capital.

Senator COUZENS. I assume that it is not practical to assess this tax in kind, is it?

Secretary MILLS. What would you do with the factories, Senator Couzens?

Senator COUZENS. That is what I am asking you. The suggestion has been made that the estate tax be collected in kind.

Secretary MILLS. It would be fine in the case of securities. It would be much better. But I do not see what you can do with a factory.

Senator COUZENS. Well, of course, it would put the Government in business if it took a percentage of a factory, that is true.

Secretary MILLS. Yes.

Senator COUZENS. I just wanted to know how much thought you had given to it, and what your views were.

Secretary MILLS. I go further. I think that when you get up to 45 per cent, not just of income, but 45 per cent of capital, you are doing something more than collect revenue.

Senator CONNALLY. It only applies, though, above $10,000,000.

Secretary MILLS. But it is sharply graded all the way. And whether it applies to $10,000,000 or $5,000,000, 45 per cent assessment on capital is something more than a tax. I know it is argued, and I recognize the sincerity and naturally the right of people who believe that it is better for the country to break up these so-called large estates. I question, though, the wisdom of using the taxing power to re-distribute wealth, either through the agency of income or estate taxation.

Personally I think it an unsound economic view. If I did not agree with the present social and economic order, if I thought that it was better for the Nation to have large aggregations of capital not in the control of a given number of individuals, I would much rather—and of course I do not agree with that contention, because I believe in the present economic order—but if I did not believe in it, then I would much rather keep capital intact and put it in semipublic corporations as a sort of a semipublic trust with a fixed return to the owners of the capital, than to destroy working capital by taxation. When we levy these 50 per cent taxes on income and these 45 or 50 per cent taxes on estates we tend to suck into the unproductive channels of current Government expenditures the working capital of the Nation.

I am not interested, here, in the individual point of view. Taking the large point of view and looking at the life of a nation, what consequence is it whether for a short term of 25 or 30 years a particular individual or 10 or 20 individuals do control a certain amount of capital. What does that mean in the life of the Nation? Nothing, if those funds during those years are all being productively used to increase the wealth of the Nation through increased industrial

capacity, and the production of goods and the satisfaction of human wants.

Senator COUZENS. The point arises, though, Mr Secretary, as to how that is distributed while that earning power is going on.

Secretary MILLS. I do not think that that is the real point, Senator Couzens.

Senator COUZENS. Well, I know you do not, but I do.

Secretary MILLS. I do not think that is the real point. The question is, do we want to destroy or at least cripple the effective functioning of the existing machine by taxation? That is a perfectly honest facing of the issue. I would not do it, but if I were not satisfied with the existing order, subject to improvement, I would go clean over to the other side and at least have a system that would work. But I would not sabotage the existing order by destroying working capital or the incentive to create it. That it seems to me is the worst thing we can do, for that would mean that the present economic machine would not function to the fullest possible extent and give its fullest possible value, which would mean suffering and failure of progress for the Nation as a whole.

Senator HULL. Mr. Secretary, what would be an average amount of an estate tax under the graduations as at present proposed, up to 25 per cent? What would be the actual amount when you allow for the exemptions and for the graduations?

Secretary MILLS. It depends on the size of the estate. I could give you the different amounts. I am not particularly concerned, Senator Hull, with our rates, as compared to anyone else's rates. I say that we do not want to go too high, because when we go too high we destroy working capital and the incentive to create it by risk, effort, and saving. And if you study the history of a great industrial nation like England over the course of the last decade you can not help but wonder their economic prostration is not due in part to a policy which resulted in depleting their capital through taxation.

Senator CONNALLY. Mr. Secretary, let me ask you a question. You say levying high rates on these estate destroys the working capital and sucks it out. Suppose an estate consists in stocks and bonds in a going concern. They are taxed and put up and sold. Does not somebody else buy them? Does not the business go on just like it was always doing? And is there the subtraction of a single dollar from the capital of that concern? There is simply the changing of hands in the owners of those stocks.

Secretary MILLS. It does not work out that way, because, to begin with, if you are dealing with a large estate there is a considerable block of stock. Therefore the forced sale of it breaks the value of the stock.

Senator CONNALLY. The intrinsic value of that plant and that investment has not changed a dollar, has it? It is still there?

Secretary MILLS. No; but the value of its securities.

Senator CONNALLY. I am talking about things. I am not talking about stocks and bonds.

Secretary MILLS. All right; let us talk about things.

Senator CONNALLY. If the stock changes hands, is there any change whatever in the plant, or necessarily in its business?

Secretary MILLS. Yes, sir; but that isn't the real point.

Senator KING. Many of the securities, may I say, Senator, are put up as collateral by the owners of them in order to continue the plant's

operation so as to build additions thereto. So that securities are not free from a lien. Many securities held by rich men are subject to liens, and they have been utilized for the purpose of obtaining liquid capital in order to make investments in capitalistic enterprises.

Secretary MILLS. The real answer to Senator Connally's question is that you can not view this transaction simply as a transfer of a given block of securities from one individual to another individual or individuals. You must visualize all of the productive capital in the country as forming a common pool. When the United States Government makes a capital levy through the form of an estate tax, it takes just that much out of this pool for its own purposes. If this process be continued indefinitely, it is bound to have an effect on the working capital of the country. But there is a second point that I would like to make: We have not got anything in this country that resembles a rentier class. We have not got people living off of accumulated wealth or inherited wealth, generally speaking.

Senator CONNALLY. Mr. Secretary, you point that out in your own report this morning.

Secretary MILLS. Let me finish, if you will, this one sentence. Most of the rich men in this country—there are exceptions but most of the rich men in this country are men who are in active business, using their capital every day in the year. Now when you take a large block of stock in any given concern, why was it in that particular estate? Because you will generally find that the rich man who owned that particular block of stock was a very active business man in building up that particular company. What is more, he stood back of that company. And if you study the history of most of these companies you will find that at one stage or another of their life some one or two or three men had to have sufficient confidence in them to see them through some very bad times. To lend them money. To stand back of them. To pledge their own personal fortunes to see that a particular industry in which they were active was pulled through.

Now spread that particular aggregate of capital, scatter it, among thousands of individuals, and what do you do? You no longer have that wealth mobilized for the support and use of that particular industry. You have destroyed a mobilized unit. That is what you have done. And when you destroy a mobilized unit, you destroy in effect an asset just as effectively as if you disband a regiment of a thousand men and make of them once more a thousand different individuals. Acting as a regiment there are, to be sure, one thousand individuals in that regiment, but that regiment is infinitely stronger because those thousand men are acting together as a unit than if those thousand men are each acting alone.

The same is true of concentrating capital in a particular industry in the hands of a man or men who have built up the industry. It is more actively used, and potentially stronger than when completely distributed among countless small stockholders. And whatever their faults may be—and I have no doubt there have been many, and I am not appearing here to-day as defending people of wealth; I am trying to discuss a fundamental economic conception as I see it, and with all sincerity—whatever may be said of the American business man who has amassed wealth, he has not only amassed wealth for himself, but he has created wealth for others by developing this great

country of ours and making it the greatest industrial nation in the world. And how has it become the greatest industrial nation? Through the development of its resources and the accumulation of capital.

Many men in this room can remember the day when capital was considered the most vital element. When we did not have any capital of our own. When we had to draw capital from all over the world in order to develop our own country. Why do you suppose the banker throughout the United States occupied his great position of power and respect in the community, was usually the leading man in the community? Why? Because he had capital which men needed more than anything else in that community in order to develop it, in order to build up their enterprises and make of it an industrial community able to produce more and more goods for the satisfaction of its needs and the welfare of its citizens. That is the reason why the banker in American history played so important a part particularly in the newer communities.

People when they did not have capital recognized its tremendous value to the country. But having acquired capital, having seen it productively used by intelligent and industrious men for the development of the country, we ought to go very slow before we begin to destroy it, simply because of some vague economic theory that somehow or other we can make a better world through the use of the taxing power.

If we are dissatisfied with the existing system, the consistent and sound course to pursue is to seek to improve it, or even radically to change it, not to attack it by indirection and to prevent its functioning at its maximum efficiency.

To say that I do not like the present system and therefore I am going to destroy it by indirection, through taxation, through diverting and dissipating and working capital, and by making it difficult for it to function efficiently, seems to me to be all wrong. The very essence of the capitalistic system under which we live and under which we have prospered is the free flow of capital and the free right of every man to make use of his own powers to the utmost possible extent consistent with the rights of others.

I did not live up to my promise, Senator Couzens. I told you I would not grow oratorical, and I apologize. But I have a very deep feeling that when it comes to a long-time policy, we ought to consider the whole problem objectively and think it clean through before reaching a final decision.

Senator COUZENS. In that connection may I ask you this question? What is the primary object in disseminating this stock among the utility users so that the corporations eventually became owned by the users, such as the A. T. & T. and the diversification of stock among the employees of the United States Steel Corporation and general movements along that line that have been going on for years? Does that not do just what you are objecting to?

Secretary MILLS. No; I do not think it does. After all the public utility corporations are thoroughly regulated anyhow.

Senator COUZENS. Well, we will take the Steel Corporation.

Secretary MILLS. Take a corporation like the Steel Corporation. I do not know how many stockholders there are in it.

Senator COUZENS. Several hundred thousand.

Secretary MILLS. But I think they still have enough large stockholders who devote their personal attention to the enterprise to give it that element of personal supervision which to my mind spells the difference between success and failure. In any business that I might be connected with, Senator, the last kind of a board of directors that I want is a board of directors that does not own stock in the concern. They may be the best and wisest men in the world, but if they sit on the board of directors I want them to own stock in the business and know the business.

Senator COUZENS. How much stock do you want them to own to be directors?

Secretary MILLS. I am not talking about these great corporations that may be affected with a public interest, but the run of ordinary business enterprises. The way to have a business successful is to have it run by men who know the business and who have a direct interest in the business.

Senator COUZENS. Does the Secretary believe that our railroads are run by a board of directors of that character?

Secretary MILLS. No. The railroads of to-day I think for all practical purposes are run by their executives to the extent that the Interstate Commerce Commission lets them run them, and they constitute a group of skilled technicians.

Senator COUZENS. But the board of directors are made up of a great many men who do not hold substantial holdings in the railroad.

Secretary MILLS. That is absolutely true. But I think the success of railroads nowadays depends very largely on the executive management rather than on the board of directors, and it depends even more on the Government agencies that control their policy than on the executive management.

Senator COUZENS. Then there is not much use having a board of directors for the railroads, is there?

Secretary MILLS. Well, I would not go that far. But railroads are no longer free enterprises. They are controlled.

Senator KING. That largely accounts for their inefficiency.

Senator CONNALLY. Mr. Chairman, I want to ask one other question if I may.

The CHAIRMAN. Yes, Senator, and then we will ask the Secretary to continue with his statement, as we want to get through by 4 o'clock.

Senator CONNALLY. The Secretary made the statement a moment ago that there were not many people in this country that were living on inherited or idle wealth. And yet I quote from page 3 of his statement as follows:

> Because of the great volume of tax-exempt securities, which, as long as 10 years ago, the Treasury urged Congress to do away with through a constitutional amendment, the application of the income tax to the large income derived from inherited or accumulated wealth is necessarily limited.

The Secretary there was pointing out that because of these tax-exempt securities that these great fortunes of accumulated wealth were free from income tax largely. If they are free from income tax, how are you going to reach them unless you tax them when the owner dies?

I want to express my entire dissent from the idea that the Secretary suggested that because the stock has got the name of John Smith written on it or Henry Ford written on it, that it has a different

valuation than if it has the name of Bill Johnson or Sam Jones written on it. It is still the same property. According to his theory when Henry Ford dies, if his children get the property free of an inheritance tax, why, fine, business is going to go along good. But if that same stock is sold to somebody else, why, it is a destruction of capital and a sucking out of the fortunes of the land—our productive capital.

Secretary MILLS. Well, if he dies you will have to find another Henry Ford.

Senator CONNALLY. But we do not tax Henry Ford when he dies. There is no pocket in the shroud. It is going to go to somebody. You talk about a man accumulating property and enjoying it. Fine. We do not disturb that. But when he seeks to entail it down through the generations I think it is sound policy from the social standpoint and from the economic standpoint to impose that tax. Every tax you levy here is viewed in its social aspect as well as its economic aspect. When a tax is put on income you say, "Do not make it too heavy, because you affect the economic situation." When you put it on land you view it from the social as well as the economic standpoint. And I do not see when you come to the great fortunes of the land why you should have a great halo thrown around them while you are taxing every picture show and every little article of the poor.

Secretary MILLS. Do not misunderstand me. I am willing to tax them.

Senator CONNALLY. But you are protesting against the high rate.

Secretary MILLS. I am.

Senator CONNALLY. England is a conservative country—perhaps it may not be now under the present government, but it has always been looked upon as a conservative country, and yet when they levied the recent taxes the rich and everybody else said, "Fine, we are willing to pay these inheritance taxes."

Secretary MILLS. And they have been paying them for 10 years, and I do not notice that England's economic prosperity has been a shining example of conspicuous success for the last decade.

Senator CONNALLY. Their deficit is less than ours to-day, with these taxes that they have been getting, as compared to ours.

Secretary MILLS. Oh, yes; they balanced their budget this year. It is a magnificent performance. I do not want to take any credit away from them. I think it is a magnificent performance. But I think very few of them would argue in favor of 45 per cent estate taxes or 50 per cent income taxes except on the ground of sheer necessity. I do not think you could get any Englishman to tell you that they had benefited their industry or improved their national welfare by imposing those taxes.

The CHAIRMAN. Will you proceed, Mr. Secretary?

Senator CONNALLY. I beg your pardon for taking up so much time.

Secretary MILLS. Well, I must beg the committee's pardon for taking up so much time. I must have had a speech in my system.

Senator CONNALLY. Well, it is always a good one. I do not want to see the Secretary, though, carry out the threat of going plumb Bolshevik and going over to the Socialists, which he said he would rather do.

Secretary MILLS. I did not say that I would do it.

Senator CONNALLY. You said you would prefer to do it rather than to take up these higher brackets.

Secretary MILLS. Than to use the taxing power to redistribute wealth.

Senator CONNALLY. I hope the Secretary will let us know before he turns entirely Bolshevik so we can get prepared for the shock.

Secretary MILLS. Well, I might lead the parade. You can not tell.

The CHAIRMAN. Let us get back to the statement.

Secretary MILLS. The manufacturers' excise taxes provided for under Title IV of the act include a considerable list, but a number of them of a very minor character so far as expected revenue is concerned.

These contrast with the relatively few taxes of much larger expected yield embodied in the Treasury proposals and with the manufacturers' excise tax as appearing in the bill reported by the Ways and Means Committee.

Those taxes which are in effect protective tariff duties present problems usually dealt with under a tariff act. Whether they should be included in a revenue bill is a matter of policy for the Congress to determine.

Each of the special sales taxes is deserving of being studied with reference to its scope and particularly its effect on the competitive position of the article taxed.

I think you ought to consider when it comes to these special excise taxes whether in imposing a tax on any given industry that particular industry selected is in as good a position to bear the tax as some other industry not selected. And I suspect that there are some industries subject to these sales taxes whose present condition is none too happy.

Sales taxes applying to great numbers of small establishments with no exemptions are, of course, very much more difficult and costly to administer and more subject to evasion than the broader taxes suggested by the Treasury.

Tax on transfer of stock:

Senator KING. Before you leave that, Mr. Secretary. My attention has been called to a number of manufacturing organizations that have control of patented commodities such as a shoe company—I do not recall the name of it.

Senator CONNALLY. The United States Shoe Machinery Co.

Senator KING. It is an organization that manufactures machinery, and they have a monopoly of it, and they make enormous revenues because it is a monopoly. They will not sell; they only lease. If they sold it would be different, but they refuse to sell and obtain enormous revenues from leasing. I should be very glad before we get through with this bill to have the views of the Treasury as to whether or not that might be a field which we might invade to obtain some little tax.

Secretary MILLS. If you will give us the industries that you would like to have studied, Senator, we would be very glad to do it.

The provision for additional tax on transfers of capital stock and similar interests introduces a new principle of basing the tax, not upon the number or par value of the shares, or certificates, but upon the selling price of the shares in case there is a selling price. It is provided that the transfer tax imposed shall not in any case be less than one-fourth of 1 per cent of the selling price. The additional taxes to be imposed must be considered in the light of the recent doubling of the transfer tax imposed by the State of New York.

As to whether the proposed tax is so high as to seriously interfere with the volume of security transactions in normal times the Treasury Department has not the information upon which to base an opinion. In view, however, of the present conditions existing in the security markets, it is a doubtful wisdom to attempt an experiment of this kind. Indeed those men competent to know advise us that such a tax will seriously curtail legitimate and necessary activity on the security markets.

The provision appearing as section 723 (b), intended to effect the application of the stock transfer tax to transfers occurring outside the United States, calls for close study. Obviously, there is doubt as to the legal power to give the tax extra territorial effect and doubt as to whether the provisions of this section are capable of administration, or of just application.

From the administrative standpoint, there is some objection to basing a stamp tax liability upon a consideration of selling price or value instead of upon the simpler consideration of number or par value of shares which permit the tax to be most readily and definitely determined.

Tax on the transfer of bonds. The bill includes a tax upon the transfer of bonds, which is to be 2 cents on each $100 or a fraction thereof, but not less than one-eighth of 1 per cent of the selling price. (Section 724.) No tax on transfers of bonds was included in the war revenue acts, or in any subsequent act. The reason for this sprang, undoubtedly, from the fact that bonds are, in general, negotiable instruments in bearer form, which can be transferred from hand to hand by mere delivery without the use of any instruments of transfer. In view of this freedom of transfer, the imposition of the tax upon a transfer is peculiarly difficult to enforce. It seems impossible to avoid widespread evasion of such tax. Particularly as the great masses of bonds are sold, as you gentlemen know, over the counter and not through established exchanges.

The introduction of the determination of the tax by the selling price has the objection of making the tax less easy to determine automatically and does not seem to be suitable for a stamp tax.

I think, Mr. Chairman, that concludes my analysis.

I would like to emphasize in conclusion the vital need of raising adequate revenue to balance the Budget, after effecting all possible economies. In so far as the present bill is concerned, as I said in the beginning, the Treasury is not here to oppose it, but as I pointed out, it does contain many provisions that are certainly worthy of serious examination on your part; and of course if you should decide to eliminate any of these provisions and thereby lose some revenue, that revenue will have to be found elsewhere. When it comes to that, we suggest that you examine the original program submitted by the Treasury Department to the Ways and Means Committee.

The CHAIRMAN. That is in the hearings.

Secretary MILLS. And it is attached as an exhibit to this statement.

Of course, Mr. Chairman, during the consideration of this measure all of us at the Treasury Department are entirely at the disposal of this committee, and I trust you will not fail to call on us if we can be of any service to you in any way.

Senator LA FOLLETTE. There are a few questions that I would like to ask you, Mr. Mills, if it is satisfactory to you at this time.

I have been interested in the emphasis on balancing the Budget. Have we not balanced Budgets in the past, particularly during the war, not only by taxing to secure revenue, but also by borrowing?

Secretary MILLS. We did, of course. That is how we created our very large war debt.

Senator LA FOLLETTE. Also, in connection with that, why is the fiscal year taken as the objective to be attained? Why not the Budget be balanced, assuming that Congress wanted to adopt it as a policy, over a period of 18 months or 36 months, instead of over a period of 12 months?

Secretary MILLS. I think it could, Senator La Follette; but there the trouble is that we are not dealing with a single year. We closed the year 1931 with a deficit of over $900,000,000. We shall close the fiscal year 1932 with a deficit of over $2,500,000,000, and we have not done anything about either one of those deficits; and we are now faced with a third one, a deficit aggregating $1,700,000,000, and a fourth year following with another large deficit. So the Treasury, while it did not raise any cry of alarm in 1931 when the first deficit occurred, when it saw the second deficit reaching such a monumental figure as $2,500,000,000, to be followed by a third and fourth, was obliged to raise a cry of warning that the time had now come to do something about it.

Senator LA FOLLETTE. I admit that.

Secretary MILLS. If we were just dealing with the deficit of a single year I would agree with you—why all this pother? Just carry over one year. But this is a succession of years. That is the trouble with this situation. These are not ordinary deficits, but monumental deficits.

Senator LA FOLLETTE. I recognize that; but there is a question, however, of the exercise of judgment, is there not, with respect to the matter of keeping the deficit within bounds, rather than the necessity, as a definite policy and objective of securing a balanced Budget within a 6-months or a 12-months period?

Secretary MILLS. But all we are trying to do, following two years of large deficits, is to balance the Budget within the subsequent 24-months period, because next year it will not be balanced.

Senator LA FOLLETTE. In other words, it is your judgment that to let it extend beyond the 24-months period would be an unsound and unwise policy?

Secretary MILLS. Not only that, but very dangerous. I go the whole distance on that, for we have reached the point that, unless we do something about it, we are in serious trouble.

Senator LA FOLLETTE. What do you envision as the new dangers and evils, I think you termed it in your statement—that recovery would be indefinitely prolonged if the Budget were not balanced in the time recommended by the Treasury? Could you be more specific about that?

Secretary MILLS. Yes, I can, though I have taken up so much time of the committee that I hesitate to go into fundamentals again.

But as I see the latter phases of this business depression, we have had, certainly since last September, what may be called a credit crisis. In other words, up to last September I think that on the whole the liquidation of credit did not proceed quite as fast as the liquidation of prices and the rapid restriction in industrial activity.

But certainly after England went off the gold standard we had a very real credit crisis in this country, and from September to the present time credit in this country has been deflated much more rapidly than either prices or industrial activity.

We had a period when there were a great number of bank failures, and the situation was sufficiently serious so that, first of all, the banks got together and mobilized their resources in order to strengthen the credit of our financial structure as a whole; and then, as you know, later on the Government came along, and in order to bolster up the credit structure, put the credit of the National Government back of the general commercial credit structure of the country. That is what the Reconstruction Finance Corporation was really intended to do. I do not say that the ordinary credit structure of this country had become finally weakened, but it became sufficiently weakened so that we felt that there was a great enough emergency to come to you gentlemen, and you gentlemen said, "All right; we will step in and underpin the credit structure of the country by putting back of it $2,000,000,000 of Federal credit."

That is all you did. You did not put any funds back of it, because we did not have any. We had nothing but a deficit. But you had to invoke the public credit in order to support the private credit of the Nation.

What does that mean? It means that the public credit must be kept beyond all question; and it so happens that after you have had a deficit of almost a billion dollars, then one of more than $2,500,000,000 if you are so improvident that you simply say, "What of it?" and do nothing about it, the mere fact that you do not take it seriously necessarily creates in the public mind the apprehension that the public credit may be impaired through the improvidence of those in control of the National Government.

Against that background you would then have to begin to issue an enormous volume of securities apparently for an indefinite period. We have had to issue, and will issue this year, an enormous volume of securities. But remember that from November on it has been announced by all in authority, both in the executive branch of the Government and in both Houses, that this budget is going to be balanced after June 30, in the sense that there will be no further increase of the public debt. The people who invest in Government securities have been proceeding on that assumption.

If you were to declare to-morrow that we are going back on that program, you would see almost at once a rapid and precipitous decline in the value of all Government securities, because people would be perfectly sure that apparently for an indefinite period of time we were going to pump out Government securities.

After all, when we borrow we have got to find lenders. That means that some one has got to be willing to buy our securities and loan us their private funds. When we come to tax, we use the taxing power and take theirs away from them; but when we borrow, it requires the voluntary action of the lender. The lender, knowing that it is not just a question of selling five hundred millions on the 1st of May and five hundred millions on the 1st of June, but that it is going to be kept up for an indefinite period, and that the more we pump out the higher the interest rate is going to rise, is going to refuse to buy the initial issues because he would foresee a loss. Suppose you begin by selling

at 4 per cent and after 5 or 6 months, in order to sell the securities, you have to begin to sell at 6 per cent. That means the securities that are at par at 4 per cent go to a discount when you are obliged to put out 6 per cent securities. So that, knowing that you are going to borrow for an indefinite period and that the interest rate will be totally inadequate to finance the Government 12 months from now, no one will buy your securities. That is sufficiently obvious. At least, the ordinary investor will not buy them because he will not want to take a loss.

Senator LA FOLLETTE. Is it the position of the Treasury, then, that the public debt should not be further increased?

Secretary MILLS. After June 30?

Senator LA FOLLETTE. Yes.

Secretary MILLS. Yes; very decidedly.

Senator LA FOLLETTE. What is the present size of the public debt?

Secretary MILLS. About $18,000,000,000.

Senator LA FOLLETTE. Can you give me any estimate as to what the total volume will be on June 30, 1932?

Secretary MILLS. It will be somewhat in excess of that.

Senator LA FOLLETTE. How much has it increased since June 30, 1931?

Secretary MILLS. It will be increased from 1931 to 1932 by about the amount of the deficit less statutory debt retirements; that is about two and a half billions of dollars and over.

But I have not completed all of the picture, if you want to know what happens with an unbalanced Budget. That is just the beginning. You impair the value of your Government securities and later the value of private securities. The day you permit the Government credit to become impaired you bring again into question the whole credit structure that only six weeks ago required the support of the public credit. But the fundamental question is: How are you going to sell your securities? I say that the private investor—and by that I mean banks as well as individuals and insurance companies and other large purchasers—will not be willing to buy.

The CHAIRMAN. Gentlemen, I have got to go to another committee at 4 o'clock. The Secretary of the Interior will be there. Let Mr. Mills continue with his testimony, and then the committee will take a recess until 10 o'clock to-morrow morning.

(The chairman withdrew from the committee room.)

Secretary MILLS. That means, Senator, that you then have got to take the next step. How did we finance the war? Not through actual investment sales; not at all. Government bonds were purchased by banks and by individuals. The individuals borrowed from their banks. The banks, in turn, hypothecated the bonds with the Federal reserve banks. This was inflation. So that the Government, if it could not sell to investors, would then be driven to sell to banks, with the understanding that the banks in turn would get the funds from the Federal reserve banks, or even directly to Federal reserve banks, and you would than have a classic example of the effects of an unbalanced budget, the Government resorting to the central bank and the central bank issuing paper money to the Government with which to pay its bills.

I have only to refer you to the two recent examples of Germany and France to show what happens when that process is undertaken.

It is all very well to say that never could happen to us. I say to you that any Nation that disregards sound financial principles, that has not got the fortitude and the courage to tax itself when able to stand it, and to pursue a sound financial policy, but prefers to follow the easy road of inflating its currency in order to pay Government bills—I say to you that that Nation is starting on the toboggan, and no one can tell how deep the bottom of the toboggan is.

Senator LA FOLLETTE. Of course I was not suggesting that nothing should be done about it. The thing I was interested in was the emphasis that had been placed on no further borrowing to balance the Budget after a drastic increase in tax, let us say, had been enacted by Congress.

Can you give me some indication as to how the estimates that the Treasury makes as to the revenue to be produced from taxes are made up? Take the income tax, for instance: When rates are suggested, or as they are contained in this bill, how is the estimate which the Treasury presents made up? How is that done?

Secretary MILLS. I will be very glad to have Mr. Stark, who presides over those mysterious operations, explain the processes through which these figures are finally evolved. I have sat down with him and gone through the processes, but I think it would be much more satisfactory if Mr. Stark explained the basis on which these estimates are made, rather than to have you hear it from me secondhand. We have got an economic section that I think is a very competent section, that throughout the year studies all of the factors that are likely to affect revenues, and makes a continuous study of the different trends and of these different factors, and then, based on certain methods which they have developed, they make the estimates which come to the Secretary of the Treasury and are transmitted by him to the Congress. In other words, the estimates that come to Congress represent the very best estimates that trained economists can work out. Of course they may make mistakes. It is very difficult to judge. But, on the whole, their judgment and forecasts are likely to be better than others, because that is their job, and they devote 12 months of the year to it; and they are highly intelligent, well-trained individuals.

I should be very glad if the committee wants to take the time to have Mr. Stark tell you in detail just how these estimates are prepared.

Certainly they did a very remarkable job in estimating the 1931 income, because on the basis of those estimates our figures showed that we would collect in March, which is of course, the test month, $200,000,000, and actually collected $193,000,000. When you consider what happened during the calendar year 1931 and the difficulty of measuring what business trends were and what the business losses were, and the falling off of dividends and the writing down of inventories and the taking of losses on the stock exchange, and so on, to hit the March estimates within $8,000,000 I think is a very remarkable performance.

Senator LA FOLLETTE. I am not casting any reflection on the methods that are being pursued, but I was interested in the procedure.

Secretary MILLS. I should be delighted to have you go into it, and for the whole committee to go into it, and to have Mr. Stark

explain to you just by what methods he reached the estimates which are now before you.

Senator LA FOLLETTE. Perhaps we can do that at some later time.

Secretary MILLS. Certainly it would be better to have him do it.

Senator SHORTRIDGE. The committee will recess until 10 o'clock to-morrow morning.

(The explanation above referred to is here printed in full, as follows:)

H. R. 10236 as amended in the House—Estimated yield, fiscal year 1933 (Treasury revised estimates)

	Millions of dollars
Title I. Income tax:	
Individual income tax—	
H. R. 10236, as introduced	112
Amendment increasing highest normal rate to 7 per cent	3
Additional surtax brackets, beginning $6,000	7
Dividends subject to normal tax	89
Total	211.0
Corporation income tax—	
H. R. 10236, as introduced	21
Reduction in exemption from $2,000 to $1,000	6
Further increase in rate, 13 to 13½ per cent	8.4
Additional increase in rate from 13½ to 15 per cent for consolidated returns	8.0
Total	43.4
Other income tax changes, largely administrative—	
H. R. 10236 (administrative changes in bill as introduced)	100
Repeal of net loss provisions	7
Dividends (sec. 115 b)	6
Dividends (sec. 115 d)	2
Revision of depletion allowance	1
Dividends, tax on foreign corporations and nonresident aliens	3
Total	119.0
Title II. Additional estate tax (H. R. 10236, as amended)	[1] 20
Title III. Gift tax (H. R. 10236, as amended)	[2] 5
Title IV. Manufacturers' excise tax:	
Lubricating oils (4 cents per gallon)	35
Brewer's wort and malt, 5 cents and 35 cents per gallon; grape concentrates (40 per cent)	46
Imported gasoline, fuel oil, etc. (1 cent per gallon)	5
Imported coal ($2 per ton)	.5
Toilet preparations (10 per cent manufacturers' sales)	20
Furs (10 per cent manufacturers' sales)	15
Jewelry (10 per cent manufacturers' sales)	15
Passenger automobiles (3 per cent manufacturers' sales)	44
Trucks (2 per cent manufacturers' sales)	4
Accessories (1 per cent manufacturers' sales)	8
Yachts, motor boats, etc. (above $15 value, 10 per cent)	.5
Radio and phonograph equipment and accessories (5 per cent manufacturers' sales)	11
Mechanical refrigerators (5 per cent manufacturers' sales)	6
Sporting goods and cameras (10 per cent manufacturers' sales)	6.5
Firearms and shells (10 per cent manufacturers' sales)	2.5
Matches (4 cents per 1,000)	11
Candy (5 per cent manufacturers' sales)	12

[1] Assuming collections beginning May 1, 1931.
[2] Assuming tax effective beginning July 1, 1932.

	Millions of dollars
Title IV. Manufacturers' excise tax—Continued.	
Chewing gum (5 per cent manufacturers' sales)	3
Soft drinks (basis 1921 act)	10
Total	255. 0
Title V. Miscellaneous taxes:	
Part I. Telephone, telegraph messages, etc., except newspapers (5 cents on messages costing 31 cents to 49 cents and 10 cents on messages costing 50 cents or more)	33
Part II. Admissions (1 cent for each 10 cents over 45 cents)	40
Part III. Stamp taxes—	
Issues of bonds and capital stock, etc. (10 cents per $100)	8
Transfer of stocks, etc. (4 cents per $100 par value or 4 cents per share no par, but not less than one-fourth of 1 per cent, 4 cents to apply to loans of stock)	70
Transfer of bonds, etc. (2 cents on each $100 par value but not less than one-eighth of 1 per cent)	25
Conveyances (50 cents on $100–$500, 50 cents per $500 in excess)	10
Sales of produce for future delivery (5 cents per $100)	6
Part IV. Oil transported by pipe line (8 per cent of charge)	20
Part V. Leases of safety deposit boxes (10 per cent of rental)	1
Total	213. 0
Total additional taxes	866. 4
Title VIII. Increased postage rates and other postal provisions (estimate of the Committee on Ways and Means)	[1] 165. 5
Total	1, 031. 9
Required to balance Budget (excluding debt retirement)	1, 241. 0
Surplus (+), deficit (−)	−209. 1

DISCUSSION BY COMMITTEE REGARDING SUPPLEMENTAL TREASURY RECOMMENDATIONS

Senator HARRISON. Mr. Chairman, before the witness proceeds I would like to know if Mr. Mills has complied with the request that he said he would comply with in sending his specific recommendations to the committee?

The CHAIRMAN. I have a letter from Mr. Mills. Do you want this in the record?

Senator HARRISON. Yes.

The CHAIRMAN. I have a letter from Mr. Mills, Secretary of the Treasury, dated April 12, 1932, reading as follows [reading]:

MY DEAR SENATOR SMOOT: I understand from my telephone conversation with you that the Senate Finance Committee at a meeting this morning instructed you to request the Treasury Department to submit a program of revenue legislation adequate to balance the budget.

I wish respectfully to call to your attention that after many weeks of careful study and mature consideration, the Secretary of the Treasury submitted to the Ways and Means Committee a well-balanced program intended to provide the necessary revenue in the existing emergency. Later, when on the basis of additional information the Treasury estimates of revenue were revised, I submitted to the Ways and Means Committee some suggestions supplementing the original Treasury program.

Subsequently, the Ways and Means Committee reported out a bill constructed on somewhat different lines from the Treasury program, but nevertheless constituting a well-balanced and sound revenue measure. I then stated that while

[1] Includes estimated effect on Budget of H. R. 10236 and of other bills recently passed by the House.

the Ways and Means Committee bill did not conform to the original proposals submitted by this department, it was acceptable to the Treasury.

On Wednesday last I appeared before the Finance Committee and expressed in detail the views of this department regarding the revenue bill which passed the House of Representatives and is now before your committee for consideration. In the exhibits attached to my formal statement submitted to the Finance Committee I set forth a summary of the Treasury recommendations, the Ways and Means Committee proposals, and the House provisions.

It seems to me, therefore, that the Treasury's position has been fully presented.

If the committee desires us to recommend a complete plan as an entire substitute for the House bill, I must refer you to the program submitted to the Ways and Means Committee or to the Ways and Means Committee bill, which I declared to be acceptable to this department. Either of these plans is preferable to the measure now before you. If, however, the Senate Finance Committee decides to deal with the problem by taking the House bill as the basis of the revenue measure which it will recommend to the Senate—and I am not to be understood as opposed to such a course—then I shall, of course, be only too glad to cooperate with the committee in any way I can in attempting to perfect this measure, and shall hold myself in readiness to appear before you at any time you may call upon me.

Sincerely yours,

OGDEN L. MILLS,
Secretary of the Treasury.

Hon. REED SMOOT,
Chairman Committee on Finance, United States Senate.

Senator HARRISON. Well, Mr. Chairman, I just desired to say that he has evaded the question. He has not been fair with this committee, and he has not lived up to the promises that he made to this committee.

The CHAIRMAN. I can not agree to that, Senator.

Senator HARRISON. If you will remember what he said you will certainly agree with me on it, because here is the testimony of Mr. Mills. And I can see no reason in the world why Mr. Mills would object to furnishing a specific program in view of what has gone on in the House of Representatives. There has been no disposition on the part of the minority members of this committee, and I hope there will not be, to inject any partisan politics into it. And certainly his recommendation will tend toward removing friction and expedite the consideration of the proposition.

The CHAIRMAN. Senator, do you not consider that he has already made recommendations now to the committee?

Senator HARRISON. The recommendations that he made to the Ways and Means Committee included the retroactive tax, which would fall short of balancing the budget over $100,000,000. There can be no reason in the world when he thought well enough to specify and particularize to the Ways and Means Committee as to the administration's program of balancing the Budget, why, in view of what has gone on before, he can not do the same thing to the Finance Committee here.

This is what Mr. Mills said in his testimony [reading]:

Senator HARRISON. Would the Treasury Department object to furnishing the Finance Committee now specifically a proposal to balance the Budget, taking into consideration the defects in the House bill, the Treasury eliminating them, and then putting it up in a proposal as you did to the Ways and Means Committee, to see just how much revenue we then would get?

Senator WALSH of Massachusetts. In other words, Senator, you would like to have an opportunity—I am sure other Democrats join with you—to have a vote upon a bill drafted in every detail and particular by the Treasury Department, saying that this is what the Treasury wants to balance the budget?

Senator HARRISON. Yes.

Senator WALSH of Massachusetts. Can that not be done, Mr. Secretary?

Secretary MILLS. Yes. I say to you this morning perfectly freely and frankly that I prefer the Treasury bill to the House bill. If it was good in December it is still good, and I stand by it. If I had my choice, I should much prefer the Treasury program to the bill now before you. I prefer the Treasury program to the Ways and Means Committee bill, though I think that was a pretty good bill.

The CHAIRMAN. Mr. Mills, can you not take the bill as it comes to the Senate and point out or delete the provisions that you think are really bad legislation?

Secretary MILLS. And suggest substitutes?

The CHAIRMAN. Yes.

Secretary MILLS. I will be very glad to do that.

Senator HARRISON. And I may say that in a conference with Secretary Mills over the telephone he told me that he was going to send it up immediately. He waits here four or five days and then sends it up. And I want to say to the administration that they will get nowhere by such propositions as that.

The CHAIRMAN. I will call Secretary Mills's attention to what you read from the testimony that was given in the committee. But he says, of course, he is perfectly willing here now to cooperate with the committee in any way if it be desired that he come here.

Senator HARRISON. He has camouflaged the issue. There are certain people here who think that it might be well to take the administration's program in toto. Why does he refuse to furnish to this committee here the recommendations as he did to the Ways and Means Committee? We are not asking an unnecessary or unreasonable proposition.

The CHAIRMAN. No; it is not unnecessary——

Senator HARRISON. But he is not willing to assume responsibility in this crisis for making new recommendations.

The CHAIRMAN. I think he has assumed in this letter that he has made recommendations. I think he says here that the Treasury Department has not only submitted one, but two plans. If the committee desires Secretary Mills to come before us he is only too willing to come, because he says so in his letter.

Senator REED. Let us go ahead with the hearing.

Senator COUZENS. Is this charged against the witnesses who are appearing against the bill at this time?

The CHAIRMAN. No. The Senator asked for this, and it came up the first thing this morning.

SUPPLEMENTAL STATEFENT OF HON. OGDEN L. MILLS, SECRETARY OF THE TREASURY, WASHINGTON, D. C.

The CHAIRMAN. Mr. Secretary, at the request of the committee I wish to say that we called you here for the purpose, perhaps, of answering certain questions that may be submitted to you by members of the committee.

Secretary MILLS. Mr. Chairman——

Senator HARRISON. One moment before the Secretary proceeds. I did not understand that he was called here for the purpose of submitting himself for questioning. A controversy arose with reference to the testimony of the Secretary of the Treasury, touching a request that I made and Senator Walsh made, and that you made, in furnishing the committee up to date, as he did to the Ways and

Means Committee, information specifying particularly his recommendations brought up to date. When the chairman talked to me about bringing him down here, I said I did not care anything about that; that all I wanted was that statement. So I do not want the statement to go in here that he was brought here by the committee for the purpose of asking questions.

The CHAIRMAN. I will say to the committee that I understood that the Secretary had stated that he submitted to the committee his recommendations and said if there was anything else he would come to the committee and answer whatever questions might be asked; and I am quite sure that the Secretary came with that in view, or to tell the committee just what he wanted to do in relation to the pending measure.

Senator REED. I have some questions I would like to ask him, Mr. Chairman.

Secretary MILLS. Mr. Chairman, if the committee would permit, I would like to make a brief statement, and then, if possible, do what I can to explain away this misunderstanding, which I think arises from questions that were asked which were somewhat confusing, and the record disclosed, I think, the cause of the misunderstanding. But I do understand that I am here at the request of the committee, due to the misunderstanding as to the scope of the information which I was to furnish, and due, possibly, to some misunderstanding as to the attitude of my department.

There is no doubt as to the position of the Treasury Department. I stand ready to cooperate with this committee as heartily as I did with the Ways and Means Committee of the House, with a view to drafting the best revenue measure possible to meet the present emergency.

I believe that the way to proceed is to lay aside all partisanship, to sit around this table with one single thought in our minds, the national interest, and with an unequivocal willingness on the part of all concerned to assume their share of the responsibility and their share of whatever unpopularity goes with imposing a great tax burden at this time.

That has been our position from the first, Mr. Chairman. When the Congress met, it would have been perfectly possible and it would have been perfectly proper for the Secretary of the Treasury to have simply submitted a report on finances to the Congress, pointing out the great and the growing deficits, and recommended to the Congress that they impose such additional revenue as would balance the Budget, and have stopped there. But we did not consider that our duty stopped there. We considered that it was our duty to assist the Congress and to share with the Congress all of the burdens of the exacting task which lay before them. Therefore, the Treasury Department did not just recommend raising additional revenue. It told in complete detail how it would propose to raise the revenue if it were writing the tax law.

And I may say for the benefit of my good friend from Mississippi, that one of the most distinguished members of his party told me, "You were a mighty poor politician when you went out on the limb and recommended a lot of taxes, when you could have rested satisfied with a general recommendation." He said, "It was a fine thing

to do and it was a courageous thing to do." And I want to add whether it was fine or courageous, it was the right thing to do.

When the Ways and Means Committee met they told us very frankly that they did not propose to adopt the recommendations of the Treasury, but proposed to follow their own ideas and to draft their own bill. We said very promptly, "All right; our time, our judgment, and all of the information we have are at your disposal in the drafting of that measure," and all three were given freely during the weeks which ensued.

What is more, I told the chairman of the Ways and Means Committee:

> Not only will we help you draft the best possible measure we can along your lines and in accordance with your ideas, but when the job is completed, if we think it is a sound tax measure, we will say publicly that it is acceptable to the Treasury and the Treasury stands ready to accept whatever responsibility goes with the adoption of that measure.

And as soon as that bill was reported by the Ways and Means Committee, I made that public declaration.

Understand, I am not citing this record or these facts to pat the Treasury on the back, but simply as evidence of the spirit which the Treasury has shown ever since this question of a new revenue bill has been before the Congress.

Our position to-day is what it was in December, and ever since. We stand ready to cooperate with this committee as we cooperated with the Ways and Means Committee, without partisanship, without bias, with complete frankness, and with an absolute willingness to share whatever responsibility may ensue in the drafting of a revenue bill.

So much for the attitude of the Treasury.

Mr. Chairman, how did this misunderstanding arise? It is very simple. If you turn to page 18 of the record of the hearing of last week you will find that Senator Harrison asked:

> Would the Treasury Department object to furnishing the Finance Committee now specifically a proposal to balance the Budget, taking into consideration the defects in the House bill, the Treasury eliminating them, and then putting it up in a proposal as you did to the Ways and Means Committee, to see just how much revenue we then would get?
>
> Senator WALSH of Massachusetts. In other words, Senator, you would like to have an opportunity—I am sure other Democrats join with you—to have a vote upon a bill drafted in every detail and particular by the Treasury Department, saying that this is what the Treasury wants to balance the Budget?
>
> Senator HARRISON. Yes.

In other words, what was requested of me was a complete program for balancing the Budget, representing the Treasury's views. There can not be any question about that.

If you go a little further you will find that you, Mr. Chairman, asked me:

> Mr. Mills, can you not take the bill as it comes to the Senate and point out or delete the provisions that you think are really bad legislation?

And I said:

> And suggest substitutes?
>
> The CHAIRMAN. Yes.
>
> Secretary MILLS. I will be very glad to do that.

Now, then, I had two entirely different requests. The Senator from Mississippi and the Senator from Massachusetts requested me

to submit a complete Treasury program for balancing the Budget, and when you telephoned me—I think it was the day before yesterday—saying that the committee would like a Treasury program, it was my understanding that what was wanted of the Treasury Department was a complete Treasury program and not a rewrite of the House bill.

In response to that inquiry I said in my letter—and I must repeat now—that the Treasury Department recommends the program submitted to the Congress in December, as amended and supplemented by the program submitted to the Ways and Means Committee.

We did not just submit a program to the Ways and Means Committee, Mr. Chairman. We submitted our mature judgment as to the best means of raising this additional revenue to the Ways and Means Committee, the House of Representatives, the Senate of the United States, and the people of the United States.

That was our program. That is still our program. If you told me to go back to-morrow and draft a revenue bill I would be obliged to draft that revenue bill around the program already submitted.

But I went further in my letter of yesterday. I said:

> If you do not like the Treasury program, if you want another program in its entirety, then I say to you that the bill reported by the Ways and Means Committee is acceptable to my department.

I can not do more than that, Mr. Chairman. The summary of the program is contained in the annex to the statement I submitted when I was last here. It is contained in detail in the report of the Secretary of the Treasury to the Congress. That is the Treasury program, and I submit in all earnestness that that answer is completely responsive to the question asked me by the Senator from Mississippi and the Senator from Massachusetts, though it does not do what you asked in your question.

Having explained that, I stand ready, of course, to submit any information that this committee desires, or, if they want, a brief of our views on any one of these taxes that may be proposed. I am here to help. I am here to play ball. That is my position.

Senator REED. Mr. Mills, could you take the bill as it finally passed the House and by changing a section here and a section there make an acceptable bill out of it?

Secretary MILLS. Very frankly, Senator Reed, if you asked me to take the House bill as a basis, I would take the income-tax provisions, leaving out and doing away completely with net losses, limiting it to one year, leaving out the double tax involved by taking away the exemption on dividends. I should take the estate tax and reduce the rates. I should keep to the rates in the 1921 tax. I should keep the gift tax, adjusting the rates of the gift tax to the rates of the estate tax. I should keep the stamp taxes provided in the bill, although reducing the rates on stock transfer. And around those provisions, practically all of which are contained in the original Treasury recommendation, with the exception of the gift tax, I would write a new bill.

The CHAIRMAN. That is the idea that I had when I asked you simply if you were going to submit items that could be deleted from the bill.

Secretary MILLS. What I would really do would be to take those portions of the House bill which are already contained in the Treasury recommendations and then write a new measure around those provisions.

Senator REED. You do not mean that you would reduce the rates of the income tax and the estate tax to the levels of the present law?

Secretary MILLS. Oh, no; not at all. I would keep the income-tax rates provided for in the House bill, which represents a doubling of the rates, and the application of the 40 per cent rate to $100,000 incomes. I would keep those. I do not want to be misunderstood, Senator Reed. I would keep the increase in the surtax rates provided in the House bill.

The CHAIRMAN. And how about the estate taxes?

Secretary MILLS. No; the estate-tax rates in the House bill are, in the judgment of the Treasury, too high. I would recommend the rates of the 1921 act for the estate tax. But, in substance, I would take the provisions in the House bill which are already in the Treasury program, and then I would build a new bill around those provisions, which would necessarily involve these excise taxes.

Senator REED. Do you think the list of excise taxes is comprehensive enough?

Secretary MILLS. You mean in the House bill?

Senator REED. Yes.

Secretary MILLS. I think in the main, Senator Reed, that either the Ways and Means approach to this problem, or the Treasury approach is, either one of them, better than the House approach to the problem.

Senator REED. We were told this morning, for example, that the tax on matches amounts to a sales tax of 55 per cent.

Secretary MILLS. Yes; and then a lot of taxes were imposed very hurriedly, without any consideration as to the state of the industry, or without any consideration as to how it would affect the competitive position of the industry, and a lot of them comparatively insignificant in character, like the tax on cartridges, and that sort of thing, the tax on sporting goods, a lot of little taxes here and there which are difficult of administration and nothing like as satisfactory as either adopting a perfectly simple plan such as the Ways and Means adopted or selecting a comparatively few articles that have a very large volume, that are productive of real revenue and whose competitive position is not affected in the slightest degree by the tax that is imposed, which was the Treasury's approach to the problem.

Senator BINGHAM. Do you prefer the manufacturers' excise tax as reported by the Ways and Means Committee to the bill as finally passed by the House and which has come over to us?

Secretary MILLS. I think the Ways and Means Committee, Senator Bingham, is a better bill than the House bill, without any question.

Senator BINGHAM. I am asking particularly with reference to the manufacturers' excise tax.

Secretary MILLS. I look upon a revenue bill as constituting an entity. You have got to view the bill as a whole. I do not admit that when you have got the problem of raising over a billion dollars

in new taxes that you can just consider that part of the bill which raises $200,000,000 here or $200,000,000 there. I think each part has got to have a definite relationship to the whole, so as to apportion the weight of the burden.

The weakness of the House bill is that, constructed as it was on the spur of the moment and practically being written on the floor of the House, it is not a balanced bill. A lot of taxes were submitted hurriedly, one superimposed on top of the other, without any great consideration of the whole field. The Ways and Means Committee spent three or four weeks working out a tax bill, and when they got through you might not agree with it, but it was a pretty well balanced unit.

Senator BINGHAM. How much would that provision in the House Bill, which was known as the manufacturers' sales tax, be likely to yield, in your opinion?

Secretary MILLS. I think we gave a figure of $595,000,000. But by applying a rate of 1½ per cent to all manufactured articles, doing away with pyramiding, exempting all food products and all clothing, you could get $320,000,000.

Senator REED. Mr. Mills, it has been suggested that the most effective way to prevent pyramiding it to impose the tax on the manufacturer's gross sales, after deducting all of his purchases of supplies of every sort. That would conclusively prevent pyramiding, wouldn't it?

Secretary MILLS. Senator Reed, I would want to study that out a little more carefully. Off-hand, I think it would.

Senator REED. Will you study it or have it studied?

Secretary MILLS. Yes. Of course, we do know that the licensing system employed in Canada does effectively do away with pyramiding.

Senator REED. Yes; but this is simpler, simpler of administration, and does not mean creating a lot of new jobs.

Secretary MILLS. As I said when I was here the other day, we might as well face this fundamental and inescapable fact: You can only get revenue from two sources. You can either get it by means of an excise or sales tax or you have got to get it from income. If you gentlemen want to face that de novo, you have got to meet that inescapable fact. Senator Couzens tells me he has under consideration the income method of solving this problem, and he believes that by going back to the war rates, with a high normal tax, 6 and 12 per cent, and normal surtaxes, that you can raise a very large amount of revenue.

Senator REED. You could if this were England, without a great mass of tax-free securities; but would not the problem be more difficult here?

Secretary MILLS. It would be more difficult, Senator. Therefore, I think in so far as as some of the upper brackets are concerned, you will have a fixed volume of revenue, once you put your exemptions down to a reasonable point, and I am willing to start in with a 6 per cent rate on the first twelve thousand and 4 per cent on the next. However, I am not prepared to make any recommendation as to that proposal. In fact we have not had an opportunity to really consider it, but I cited that as a perfectly consistent applica-

tion of the alternative cost. If you say I am not prepared to impose excess taxes in such a way as to raise the revenue, then you have got to turn to income taxes, and when you turn to income taxes, then you have got to be prepared to do pretty much what was done in war taxation, and, that is, begin to impose real rates sufficiently down on a line where the base is broad to raise the real revenue.

As a matter of fact, I do not think you can do this whole job that way, Senator Couzens, because our figures do not quite show the raising of the necessary revenue; but you will raise a very large amount of revenue by a perfect, thoroughgoing application of the taxing of income in accordance with ability to pay, and that means taxing all income above the margin of subsistence, and not doing what we are doing in this country to-day, for all practical purposes, exempting all people of moderate means from any income taxation. After all, we give an exemption of $3,500, and then when we begin to tax we only impose a 2 per cent tax. The British give a much lower exemption, and then when they begin to tax they impose a 12½ per cent rate on the first $750 of taxable income, and then they go the whole hog and apply a 25 per cent normal rate right down the line to all incomes, large or small.

You were not here, Senator Reed, when I appeared before the committee before. I think it is enormously difficult to get the American people, accustomed as they are to our conception of the income tax, with very high exemptions and very low normal rates, to adopt anything as drastic as the British system; but anyone honestly considering this program has got to look at those two alternatives—either you are going to tax all income as representing tax-carrying ability, at rates that will produce the revenue, or else you have got to have a modified income-tax system, and you have got to further face the fact that you are going to impose excise taxes in one form or another; and then I say, if you are going to impose excise taxes, you should do it along the lines suggested by the Treasury and along the lines suggested by the Ways and Means Committee rather than this heterogeneous conglomeration in the House bill.

Senator COUZENS. Do you believe, Mr. Secretary, it is better to tax income than it is to tax consumptive goods?

Secretary MILLS. Senator Couzens, all things being equal, there is nothing fairer than an income tax, after all, because you do not tax anyone unless he has got an income, and if you tax at a progressive rate, you can make each man contribute to the support of the Government in accordance with his ability to pay. It is the fairest tax I know if you can apply it honestly right down the line.

Senator REED. Is not this the fallacy of the situation: If we resort to war-time tax rates, we put a terrific burden on the man with the comparatively small income and we drive the richest men, inevitably, into tax exempts?

Secretary MILLS. Senator Reed, I pointed out that that was the great weakness in our form of income tax.

Senator REED. So in practice it means at both ends socking the little party.

Secretary MILLS. Not quite. I think that if the tax were made temporary in character, so you could say to the public, "Here, we are going to ask you to pay a very high tax, because this is an

emergency that is just as serious as war, and we are going to ask you to play the game for two years and submit to this very high taxation, that at the end of two years this automatically goes off," and you really mean it, then I think the people might approach the problem in that spirit, as they did in war time, and not seek to evade the tax. But I think you have got to be honest about it. I do not think you ought to say that we think a 65 and a 72 per cent income tax imposed by the Federal Government, with 14 per cent on top of it imposed by Wisconsin, making 86 per cent of a man's income, or 6 per cent imposed by New York, making 78 per cent of a man's income—I do not think we ought to say to the taxpayer that "We, the Congress of the United States, think that that is a proper form of taxation," because, if you do, they step from under, being human beings.

Senator REED. Being human beings, they are offered 6 per cent tax-free bonds by the city of New York right now.

Secretary MILLS. I do not think you can quite buy them on 6 per cent, but you can buy them, completely tax exempt, on a 5 per cent basis.

Senator REED. They would have to get about 30 per cent on an ordinary mortgage or a promissory note to equal that.

Secretary MILLS. I honestly think if you can afford at this time to impose fairly high surtaxes—and I am not prepared to say just how high, without much further study, but I am perfectly willing to go to 40 per cent with the distinct understanding that it is an emergency measure which Congress will repeal or which will automatically cease when the emergency is over, then you are free to consider the whole problem. But, of course, investors and people who keep their capital actively engaged in business are going to be scared to death. As I said here the other day, if this is treated not as an emergency revenue measure but as a new plan to redistribute your taxation, if that idea gets abroad, then, of course, all of the means of tax avoidance which you suggest, and a good many others which you have not mentioned, come into being.

Senator REED. There are plenty of others. The purchase of annuities, and so on.

Secretary MILLS. The taxpayer is always one step ahead of the tax collector. Don't forget that. We have never caught up with him yet.

The CHAIRMAN. Your maximum rate from incomes would be 40 per cent.

Secretary MILLS. That is the maximum rate we recommended. That is the maximum rate the Ways and Means Committee recommended and that is the maximum rate recommended in the House bill.

Senator REED. That really means 47 per cent, counting the normal tax.

Secretary MILLS. Oh, yes; that is the surtax rate, in addition to the normal.

Senator COUZENS. Of course, it is understood we do not take 40 per cent of anybody's income.

Secretary MILLS. Oh, no; of course we do not.

Senator COUZENS. I mean, there is a general public impression that when you talk about that, that that means 40 per cent of the man's whole income, and it does not take into account that the lower brackets pay a much lesser amount.

Secretary MILLS. A much lesser amount; yes.

Senator REED. Do you believe in the action of the House in striking the earned income exemption down to $12,000 from $30,000?

Secretary MILLS. No; I do not. I think I was responsible for getting the first earned income item into a revenue bill, when I was a member of the Ways and Means Committee, and I have always been in favor, up to a certain point, of greater earned income in the preferred class.

Senator REED. The British allow one-sixth deduction, don't they?

Secretary MILLS. Yes; but up to a very limited amount. Only up to 300 pounds, Senator Reed.

Senator REED. I am finished, Mr. Chairman.

Senator HARRISON. Mr. Secretary, I understood you to say that you did not gather the impression from your testimony that the committee expected to receive from you a new proposal, whether it embodied the old proposal of the various items in the first proposition to the Ways and Means Committee in such form as would specify the recommendations of the committee so as to show a balanced budget at this time.

Secretary MILLS. Yes; I understood that that was the only thing that you asked for, Senator Harrison.

Senator HARRISON. Why is it you do not give it to us?

Secretary MILLS. I have given it to you. I have read you——

Senator REED. What is the objection to your furnishing it to us on 1 sheet or 2 sheets or 3 sheets of paper, as you furnished it to the Ways and Means Committee?

Secretary MILLS. If you will turn to——

Senator HARRISON. I have it before me, as you presented it to the Ways and Means Committee.

Secretary MILLS. If you will turn to Annex A——

Senator HARRISON. I have it before me.

Secretary MILLS. There is our proposal in detail.

Senator HARRISON. So you stand on that proposal?

Secretary MILLS. I stand on that proposal, reserving the right to make some modifications; but in substance and for all practical purposes, I stand on that proposal.

Senator HARRISON. In other words, if the Committee on Finance should report out to the Senate and the Senate should pass just this, it would be perfectly satisfactory to the Treasury Department.

Secretary MILLS. It would be satisfactory to the Treasury Department, though if you propose to take this as the basis, as your working basis, I should like the opportunity to make some minor suggestions. But in substance, I stand on this program. I do not mean that to be a qualification. I stand on that program.

Senator HARRISON. You stand on that program?

Secretary MILLS. I do.

Senator HARRISON. Then the Treasury has not changed its mind at all; in other words, it is not influenced by what has gone on in the House or the present condition of the Treasury or anything else? You stand on that proposal?

Secretary MILLS. May I call your attention to the fact that the House has never had the opportunity of passing on our program. It was never submitted to them in any form.

Senator HARRISON. I understand, but it went to the committee of the House, just as you are now presenting it to this committee.

Secretary MILLS. The committee of the House rejected our plan, and the committee of the House made and adopted one of their own, and then the House rejected the committee's plan. So the Treasury's proposal has never been considered by the House.

Senator HARRISON. So when you answered these various questions, you thought that this Exhibit A to your statement would suffice for the Finance Committee, that that was what we were seeking to obtain?

Secretary MILLS. If what you wanted was the Treasury's program, that is the Treasury's program.

Senator HARRISON. Did not you consider at the time you were answering those questions that that matter was before us and you had cited it in your testimony and that each member of the committee could look at it and see it?

Secretary MILLS. You asked me for a complete Treasury program.

Senator HARRISON. Yes.

Secretary MILLS. I say to you that Annex A constitutes a complete Treasury program. Now, if you say to me, "Mr. Secretary, I want you to go back and prepare a new program," that is something else again; but that is our program, and I say if you do not want that, turn to Annex B, and I will accept the Ways and Means Committee bill. I will state publicly that that is acceptable.

Senator HARRISON. But you state that is the program, notwithstanding when you appeared before the Ways and Means Committee and submitted it as a balanced program that would be agreeable, the Budget carried with it $107,000,000 in retroactive taxes, and you stated the other day before the committee you did not insist on that.

Secretary MILLS. I do.

Senator HARRISON. And yet is it not a program to balance the Budget, with the $107,000,000?

Secretary MILLS. Yes; it is a program to balance the Budget within $25,000,000. We lose $107,000,000 through the failure of Congress to follow our recommendation and apply the increased rates to the 1931 incomes. That we are not responsible for. But faced with that new situation, there is another favorable factor. I had estimated on the likelihood of not being able to reduce expenditures by much more than we have, $118,000,000.

Senator HARRISON. You said $118,000,000 in this statement.

Secretary MILLS. In that statement. In the last few days I have had the privilege of associating with the Economy Committee of the House and the President and working on a Nation economy program. It is now perfectly clear to me, if there is a real determination to economize, that we can certainly have a national economy program that will cut expenditures by a minimum of $200,000,000. It is definitely in sight, and therefore the figures which you now have before you balance the Budget within $25,000,000. That is an insignificant amount. I won't have any difficulty whatsoever in suggesting the means of finding that $25,000,000. If you want to know now, I will suggest tentatively taxing wort and malt, and that will give

you $35,000,000, and we then balance the Budget with $10,000,000 over.

Senator HARRISON. Then, as I understand, now, you submit to this committee, as your particularized program, these items that were included in your statement of January 18, I believe it is: Corporation incomes, according to their program; individual incomes, according to that statement and not according to the bill as passed: estates, according to the recommendation and not according to the bill as passed by the House.

Secretary MILLS. Estates according to the recommendation?

Senator HARRISON. Yes.

Secretary MILLS. But I am perfectly willing to accept the minor change made by the committee involving the application of 40 per cent. I think we applied 38 per cent at one hundred thousand and 40 per cent at two hundred thousand, and the House bill provides 40 per cent at one hundred thousand.

Senator HARRISON. Yes.

Secretary MILLS. That is perfectly acceptable to the Treasury Department.

Senator CONNALLY. He is talking about estates.

Secretary MILLS. I am talking about the surtax on incomes. On the estates, we stand on our recommendation, which was to return to the 1921 rates.

Senator HARRISON. That is what I understand. And you would insist under your program now, before this committee, on the tax on tobacco manufactures.

Secretary MILLS. I never insist, Senator.

Senator HARRISON. Well, you recommend.

Secretary MILLS. Senator——

Senator HARRISON. I am just unfortunate in the use of the word.

Secretary MILLS. I am here as an adviser. It is your constitutional duty to raise the revenue.

Senator HARRISON. I appreciate that, and I apologize to you for using the word "insist," because you never insist on your point. But you recommend the substitution in this bill of tax on tobacco manufactures in order to raise $58,000,000 in that way.

Secretary MILLS. I do not recommend a substitution. I stand on the original program recommended by the Treasury Department.

Senator HARRISON. But that includes tobacco manufactures, to obtain $58,000,000.

Secretary MILLS. It does.

Senator HARRISON. That is not in the House bill.

Secretary MILLS. No, sir.

Senator HARRISON. And on conveyances or realty, you would stand on that?

Secretary MILLS. That is in the House bill.

Senator HARRISON. Yes. And sales or transfers of capital stock. You still stand on that?

Secretary MILLS. Yes; but that is at a lower rate than the House provided.

Senator HARRISON. That is at 2 cents.

Secretary MILLS. Doubling the present rate.

Senator HARRISON. You stand for another 2 cents, or 4 cents?

Secretary MILLS. Yes; I stand for doubling the present rate, which makes it 4 cents.

Senator HARRISON. But you did not recommend that.

Secretary MILLS. I did.

Senator HARRISON. Automobiles and accessories according to the tax imposed in 1924.

Secretary MILLS. That is correct.

Senator HARRISON. You still stand on that?

Secretary MILLS. I do.

Senator HARRISON. Although the House did not go that high?

Secretary MILLS. No; but the whole principle back of our recommendations, Senator Harrison, was to take a step backwards and restore the 1924 act, which was passed by the overwhelming vote of both Houses of Congress.

Senator HARRISON. I understand that thoroughly.

Secretary MILLS. And which the country was accustomed to.

Senator HARRISON. And you still stand on the admissions as recommended in this exhibit?

Secretary MILLS. I do.

Senator HARRISON. And not the admission provisions as fixed in the House bill?

Secretary MILLS. I do.

Senator HARRISON. And your telephone and telegraph messages, you still stand on those?

Secretary MILLS. I do.

Senator HARRISON. Do you still stand on checks and drafts, 2 cents each?

Secretary MILLS. I do.

Senator HARRISON. And you still stand on the 1-cent gasoline tax?

Secretary MILLS. I do.

Senator HARRISON. And on the domestic consumption of electricity and gas?

Secretary MILLS. I should want to modify that.

Senator HARRISON. How would you want to modify it?

Secretary MILLS. I would want to reduce the rates.

Senator HARRISON. Well, it is 1 cent here. No, it is 7 per cent.

Secretary MILLS. Seven per cent.

Senator HARRISON. You would reduce it to what?

Secretary MILLS. I would want to reduce it. I am not sure how far I would want to reduce it until I could study to see where I could get the additional revenue, but that is one adjustment I should want to make.

Senator HARRISON. You proposed to get ninety-four millions out of it under your tax.

Secretary MILLS. Yes.

Senator HARRISON. How much would you propose to get out of it under your modified recommendation?

Secretary MILLS. I should want to get fifty or sixty millions out of it.

Senator HARRISON. And you have not yet determined just where you will get the difference?

Secretary MILLS. No; I have not.

Senator HARRISON. Could you supply the committee with any recommendation you have on that?

Secretary MILLS. Oh, I would be very glad to.

Senator HARRISON. So there would be no question raised in the future about just what we want?

Secretary MILLS. Oh, no; there is no question as to the record. It was made long before to-day. This record was made back in December or February.

Senator HARRISON. And for the postal deficit you recommended getting $150,000,000. Do you still stand on that?

Secretary MILLS. Most decidedly.

Senator HARRISON. The House bill gives you more than that.

Secretary MILLS. No; it does not.

Senator HARRISON. According to the estimate I have here, it is more.

Secretary MILLS. No. The Post Office Department has since informed us you have to reduce it by ten millions.

Senator HARRISON. Ten millions?

Secretary MILLS. Yes.

The CHAIRMAN. From the testimony that was given to-day, I should think you would have to reduce it a great deal more than that.

Secretary MILLS. But on the basis of the House recommendations, the Post Office Department informed us it should be 150 and not 160.

Senator HARRISON. Did this recommendation carry with it just the 1-cent increase in postage?

Secretary MILLS. Our recommendation in the first instance was that the Post Office Department should be self-supporting, exclusive of subsidies or so-called free service, and we recommended to the Ways and Means Committee to ask the Postmaster General to make the recommendations as to how best to make it self-supporting.

Senator HARRISON. Did you have in mind that prices on second-class mail should be changed or modified?

Secretary MILLS. I did not have anything in mind.

Senator HARRISON. How did you mean to go about it then?

Secretary MILLS. I am not familiar with the Post Office Department. I asked the Ways and Means Committee to call the Postmaster General, and simply took the position that as a business proposition the Post Office ought to be self-supporting.

Senator HARRISON. You do not care to make any specific recommendation as to second-class mail then?

Secretary MILLS. No, because I do not know, Senator Harrison.

Senator HARRISON. That is a dangerous proposition, to advocate one way or the other ——

Secretary MILLS. I think that is an uncalled-for remark.

Senator REED. Won't the Post Office Department take the responsibility for it?

Secretary MILLS. And I should like to have that on the record, that that is an uncalled-for remark.

Senator HARRISON. I hate to take up the time of the committee, but I want to ask you specifically as to various provisions in the House bill, as to whether or not you O.K. them or disapprove them.

Secretary MILLS. What are we doing this afternoon, seeking information on a tax bill or attempting to make a political record?

Senator HARRISON. There have been no politics in this proposition, but I want to read the testimony, all of it, just to show you there is a

real misunderstanding between you and me, and, I think, between you and the committee, as to just what you have given us and what you have stated you would give us:

Senator HARRISON. Mr. Secretary, may I ask you a question? This statement that I have been reading and that you have been saying is in criticism of the House bill and the House action?

Secretary MILLS. Certain provisions, Senator.

Senator HARRISON. Yes, certain provisions. And then you attach here the recommendations of the Treasury to the House Ways and Means Committee?

Secretary MILLS. Yes, sir.

Senator HARRISON. Are you making specific recommendations to this committee as to how you think the budget should be balanced, and are they different from the recommendations that you made to the House Ways and Means Committee?

Secretary MILLS. No; but I think this committee would be fully justified in keeping a large part of the House bill, eliminating some of these faulty provisions, and inasmuch as their elimination would involve a loss of revenue, turning to the Treasury program to supplement the loss occasioned by the elimination of some of the unsound features. That would be my recommendation.

Senator HARRISON. Then you do not propose to recommend specifically to the Finance Committee a particular program, notwithstanding the action of the House?

Secretary MILLS. As I see it, this committee has three courses it can follow; possibly more. But it certainly can either take the Treasury recommendations, which represent, whether you agree with it or not, a fairly well balanced tax program. You can take the Ways and Means Committee bill, which, after all, was a carefully worked out revenue bill, also well balanced. Or you can take the House bill.

The House bill is before you. I say to you that there are certain features of this House bill that I think are bad. You asked me a very proper question, Senator Harrison, if I understand it. You say if we eliminate these bad provisions, we will be short of revenue. What do you suggest? My suggestion is that if you desire to proceed on the basis of the House bill, that after eliminating those bad provisions you then turn to the Treasury recommendations and you can find excise taxes that will be ample to make up the revenue.

The CHAIRMAN. Speaking of the House bill, you mean the bill that was reported from the Ways and Means Committee to the House?

Secretary MILLS. No; I mean the bill now before the Senate Finance Committee, Senator.

Senator HARRISON. Would the Treasury Department object to furnishing the Finance Committee now specifically a proposal to balance the Budget, taking into consideration the defects in the House bill, the Treasury eliminating them, and then putting it up in a proposal as you did in the Ways and Means Committee, to see just how much revenue we then would get?

Senator WALSH of Massachusetts. In other words, Senator, you would like to have an opportunity—I am sure other Democrats join with you—to have a vote upon a bill drafted in every detail and particularly by the Treasury Department, saying that this is what the Treasury wants to balance the Budget?

Senator HARRISON. Yes.

Senator WALSH of Massachusetts. Can that not be done, Mr. Secretary?

Secretary MILLS. Yes. I say to you this morning perfectly freely and frankly that I prefer the Treasury bill to the House bill. If it was good in December it is still good, and I stand by it. If I had my choice, I should much prefer the Treasury program to the bill now before you. I prefer the Treasury program to the Ways and Means Committee bill, though I think that was a pretty good bill.

The CHAIRMAN. Mr. Mills, can you not take the bill as it comes to the Senate and point out or delete the provisions that you think are really bad legislation?

Secretary MILLS. And suggest substitutes?

The CHAIRMAN. Yes.

Secretary MILLS. I will be very glad to do that.

The CHAIRMAN. And then suggest——

You did not read this a moment ago.

The CHAIRMAN. And then suggest legislation that will bring the same amount of money, or the amount necessary for the balancing of the Budget?

Secretary MILLS. I will be very glad to do that.

The CHAIRMAN. I will ask you to do that.

Secretary MILLS. As a matter of fact, when you have an opportunity to study this statement and the annexes you will see that all of that material is right here. It is simply a question of putting it together.

Senator HARRISON. We have not been able to study that yet. For instance, in your recommendation to the Ways and Means Committee the Treasury recommends a retroactive tax. The House has expressed itself very strongly on that proposition. So eliminating the retroactive tax in your proposal will you then furnish us the items and the programs which would raise sufficient money?

Secretary MILLS. I will be very glad to.

I did not think there was any question about that. I did not see that there was any objection to it, other than the members might think that you had convinced them that you did not understand the exact proposition.

Secretary MILLS. I do not know what you want to-day.

Senator HARRISON. But I think you have not complied with the request.

Secretary MILLS. I do not know what you want to-day, because you accepted Senator Walsh's interpretation of your question, and he said that what you wanted was a bill drafted in every particular and detail by the Treasury Department, saying "This is what the Treasury wants to balance the Budget." Now, if I am to furnish you that, then I stand on my original program. If you want something else, I wish you would tell me what it is. Let us clear it up right now. Just what is it that you do want?

Senator HARRISON. I think everybody generally knows what is wanted.

Secretary MILLS. Well, then, tell me. I don't know.

Senator HARRISON. All right. I have got a very high respect for your ability.

Secretary MILLS. I am beginning to suspect, but——

Senator HARRISON. I am willing to admit you are one of the smartest men that has ever been in the Treasury Department, and I can not understand why there has been such a change come over you so quickly. Now, would you object to furnishing to the committee, brought up to date, just as you furnished to the Ways and Means Committee, the Treasury's proposal, itemized, and showing a balanced Budget?

Secretary MILLS. Yes.

Senator HARRISON. You have no objection to that?

Secretary MILLS. No; because it is all there.

Senator HARRISON. And you will kindly send that over to us?

Secretary MILLS. The only modification I know of now is that I may propose to reduce the rate on the domestic consumption of gas and electricity, but otherwise the program you now have represents the program on which I shall stand.

Senator HARRISON. So you will send it up?

Secretary MILLS. Again.

Senator HARRISON. Again, all right. That will be the first time.

The CHAIRMAN. Mr. Secretary, in the testimony before the committee this morning it was testified by at least a dozen men that at least an increase of 1 cent in the postal rates would not bring an

increased revenue but more than likely a deficit. You have not made up your mind as to that?

Secretary MILLS. Senator Smoot, I tell you very frankly, I have not studied the post-office end of this at all. All we did, as I told Senator Harrison, was to take the position, as the responsible head of the Treasury Department, that the Post Office Department of the United States should be self-supporting, outside of the free services provided for by law; and, having said that, we recommended to the Congress that they call the Postmaster General and ask him how to bring about such a businesslike result. I have never even discussed it with the Postmaster General. If you want to go into that matter, you will have to call him. I do not know.

Senator REED. I am told that last summer the Postmaster General did submit a plan for balancing the post-office budget, including an increase on second-class mail matter. Do you know whether that is true?

Secretary MILLS. Senator Reed, I do not. I have never seen it.

The CHAIRMAN. Then we will have to get the information from the Postmaster General.

Secretary MILLS. You really will.

The CHAIRMAN. We have got to know just the amount before we would know whether the Budget would be balanced or not. In other words, you have here a postal deficit of $150,000,000. That was upon the information furnished you by the Postmaster General.

Secretary MILLS. No, that was on the definite assumption that as a matter of policy the rates would be so adjusted as to do away with the post-office deficit; and since we have made that recommendation the House went into the matter and reached the conclusion that the rates which I recommended would do that very thing, and the Treasury has accepted their judgment in the matter. If there is any question as to the validity of those figures, then I think you ought to get first-hand information from the Post Office Department, Mr. Chairman.

The CHAIRMAN. I think that is what the committee will do, of course, but if the testimony that was given to the committee this morning is borne out by the increased rate, as suggested, we would fall short here at least $50,000,000; and if that is the case, then we would have to raise it from some other source.

Secretary MILLS. That convinces me—and I am not saying this seriously—that the thing to do is to report this revenue bill out as fast as possible, because every week the Ways and Means Committee considered it we lost revenue and had to make it up as we went along.

Senator HULL. Have you considered in here the matter of the tariff?

Secretary MILLS. If our items were not included in the original Treasury recommendation——

Senator HULL. They would not be included in the next?

Secretary MILLS. Certainly. As you know, during my 11 years experience, most of which have been spent either as a member of the Ways and Means Committee or in the Treasury Department, it has always been the policy of the Treasury Department to look upon the tariff policy as one to be exclusively determined by the Congress; and whenever you made up a tariff bill the Treasury Department has

never been called upon to express an opinion as to individual schedules, but simply as to the administrative provisions of the tariff law; and having found that tradition established for a long time, I should hesitate to disturb it, in view of the perils which it involves. [Laughter.]

Senator HULL. You mean by that that the condition of the Treasury is not safe enough to take the responsibility or the Government's credit is not eminent enough to justify any such consideration of the question as to whether we shall undertake to make up a combined income revenue and tax bill, or whether we should separate those for the purpose of taking care of the Treasury situation?

Secretary MILLS. Senator Hull, you have no illusions—I know some people have, but you have none—as to the character of the two items in this bill.

Senator HULL. I was just hoping that I had not.

Secretary MILLS. I certainly have not. They are not revenue measures. They are protective tariff measures.

Senator SHORTRIDGE. Would not they raise some additional revenue, Mr. Secretary? We are framing a bill for the purpose of securing additional revenue.

Secretary MILLS. Not carfare, though, Senator.

Senator SHORTRIDGE. But we are seeking additional revenue. And, speaking for myself, if we can secure a large additional revenue by imposing a tariff on some imported articles, there is no reason on earth, no logical reason that I now see, which would preclude us or prevent us from including it in this revenue raising bill.

Senator HULL. Even if it takes until October.

Senator SHORTRIDGE. It need not take that long, Senator, not at all.

The CHAIRMAN. It would not be the first time that it had been done in a revenue bill.

Senator SHORTRIDGE. No.

Senator HARRISON. May I ask the Secretary, if there is no other question right now, would you have any objection, as Secretary of the Treasury, to taking the House bill as it passed and giving the committee the benefit of your views on each of the items, whether you approve them or disapprove them or substitutions should be made, in the opinion of the Treasury Department?

Secretary MILLS. I would be perfectly willing to take the House bill as a whole and write a new revenue bill. I would not want the responsibility of being tied to the House bill and then having the product labeled a Treasury product. I am here as an adviser. I will do anything you want me to do. If you direct me to take out certain provisions of the House bill and attempt to find adequate revenue for you, I will furnish you the schedules. In other words, I consider myself as a servant of the committee, to carry out its wishes, and I will follow out any instructions that you may give me, Senator Harrison, but in following your instructions it has got to be understood that it is a Harrison product and not a Mills product. That is the only distinction I want made.

Senator HARRISON. I have no idea of having it styled a Harrison proposal, but I am just wondering now if you have any objection to taking this bill as it passed the House and giving the committee your

various views as to the various items, if you approve of the items, or if you disapprove of them, what you offer as a substitute.

Secretary MILLS. I will rewrite the House bill, if you so desire.

Senator HARRISON. I really would like to get that, Mr. Secretary.

Senator WATSON. Do you really think that is a fair way to get at the proposition?

Secretary MILLS. No; of course not. You can not ask me to take out a tax on cartridges, which brings in $2,000,000, and find another item that will bring in $2,000,000 also. You have got to say, "If you do not like the House bill, then recast it along the lines that you think are satisfactory, so as to furnish adequate revenue." That I will do.

Senator HARRISON. Yes.

Secretary MILLS. But you must not ask me to take out the tax on candy, if I do not happen to agree with it, and find another item that will exactly bring in $10,000,000.

Senator HARRISON. If there are a certain number of items that will entail a loss of thirty millions, you can set out other items, generally, that will aggregate that amount.

Secretary MILLS. I will rewrite the House bill for you in its entirety, keeping in such parts as I think are good.

Senator HARRISON. I will be very glad to have you send it over.

The CHAIRMAN. If the Secretary does that, will the Senator be content with the recommendations that he makes?

Senator HARRISON. I may. I no doubt will on a majority of the propositions. There are certain features of the House bill I am very much opposed to, and there are certain other features of the House bill that I am for.

Secretary MILLS. But it must be understood, Senator, that that can not be labeled a Treasury program.

Senator HARRISON. I understand that.

Secretary MILLS. I just want that understood.

Senator REED. You are not accepting any share in the paternity of the House bill?

Secretary MILLS. No, I am not; not at any stage of the game.

Senator HARRISON. I hope when we get through here you will not go on the radio and lambast these fellows who have worked so hard to evolve something here.

Secretary MILLS. Within 48 hours after the Ways and Means Committee had reported, I was on the radio supporting it 100 per cent.

Senator HARRISON. But the ex-chairman of the Republican Committee was on the radio in a short time giving the leaders over in the House the devil for their stand on the sales tax.

Secretary MILLS. Let us avoid all partisanship, Senator Harrison. If you will stop sparring for position, I will sit down with the members of this committee at any time and put all the cards on the table, face up, and give every bit of information we have got, the way we played the game for four weeks with the Ways and Means Committee. The Ways and Means Committee had all of their cards on the table, face up, all of the time, and all of those four weeks we dealt on that basis, and with the most satisfactory results in the way of producing the revenue needed.

Senator HARRISON. The cards are up with this committee, but whenever you say in your testimony you are going to do a thing and then do not do it, some of the members won't have much faith in your promises.

The CHAIRMAN. Mr. Secretary, I want to say this, and also to Senator Harrison, that as soon as we get through with these hearings and the testimony is closed and all printed, so that each member of the committee can have a copy of it, as chairman of the committee, I want the Secretary, as far as I personally am concerned, either the Secretary himself or some representative who could speak for him, to be with this committee in rewriting the bill, if we do rewrite any part of it; and I have not any doubt but what a great part of it will be rewritten.

Senator CONNALLY. Mr. Chairman, I want to ask the Secretary a question. Your first preference, of course, is to your own recommendations made in December to the Ways and Means Committee.

Secretary MILLS. With the supplemental additions that we had to make when the estimates were revised.

Senator CONNALLY. In other words, you were running behind later more than you thought you were, and you had to fill up the gaps to get some more money?

Secretary MILLS. Yes.

Senator CONNALLY. So the first preference is the recommendations of the Treasury, with the substitutes.

Secretary MILLS. Yes.

Senator CONNALLY. Then your next preference is the House Ways and Means bill as reported?

Secretary MILLS. Yes.

Senator CONNALLY. And then, finally, you did approve the House bill itself, didn't you, at the time it was up?

Secretary MILLS. No, sir.

Senator CONNALLY. Didn't you say you generally accepted it?

Secretary MILLS. No; I never accepted the House bill.

Senator CONNALLY. I thought I heard you over the radio make that statement.

Secretary MILLS. No; that was the Ways and Means Committee bill.

Senator CONNALLY. The Ways and Means Committee bill that you did approve is the one that carried the manufacturers' sales tax?

Secretary MILLS. It did.

Senator CONNALLY. So you prefer that bill to the one passed by the House finally?

Secretary MILLS. Yes; it is a better bill than the bill now before you, in my judgment.

Senator CONNALLY. Then you have indicated here some of the features in this particular bill you disagreed with, such as the estate tax, the deduction of dividends and stock transfer tax, and others.

Secretary MILLS. The rates that apply rather than the taxes themselves.

Senator CONNALLY. As carried in the bill.

Secretary MILLS. The rates that apply, Senator.

Senator CONNALLY. I want to say, Mr. Chairman, that I do not agree to support this bill when the secretary reports it back here.

The CHAIRMAN. That is understood, of course.

Senator CONNALLY. Some of us are not gamblers, and I do not propose to go into this card game.

Secretary MILLS. I am going to report back the Harrison bill; I want that understood. [Laughter.]

Senator HARRISON. I did not commit myself to stand by all your proposals. [Renewed laughter.]

Senator LA FOLLETTE. Mr. Chairman, may I ask the Secretary as to his purpose in rewriting this House bill? It really is not going to be any different than the recommendations you made in December, is it, except with those adjustments?

Secretary MILLS. It is not, Senator La Follette. Of course, it is not.

Senator LA FOLLETTE. Then, why all this shooting about it? After all, unless you want to do the thing which you refused to do, I see no point of your going and taking out a little item here or there and plugging that up with another little item that you prefer. If you are simply going to take the House bill and retain the features which you think are good and substitute in lieu of the features which you think are bad others which you prefer, won't you come back to your Treasury recommendations of December?

Secretary MILLS. Come very close to it. We may improve on them a little, but we won't be very far from it when the job is finished.

The CHAIRMAN. It won't take you long to do it, and we would like to have it just as quickly as possible.

Secretary MILLS. But I want it understood—and I am quite serious about this—that if I am to write a revenue bill, I want complete freedom of action in writing it. If I am told that I have got to take a particular bill as a base and write around it, then I am not writing a revenue bill. That, I think, ought to be understood.

The CHAIRMAN. I do not think it is understood that way.

Senator SHORTRIDGE. What is he called upon to do? Rewrite the whole bill?

The CHAIRMAN. That is what I said, that he was not called upon to do, in my opinion.

Senator SHORTRIDGE. I think it is a waste of time. He is not the legislative department.

The CHAIRMAN. This is a recommendation to the legislative branch of the Government.

Senator SHORTRIDGE. Well, it is a waste of time.

Senator REED. It is all as clear as mud.

Senator CONNALLY. Mr. Secretary, you made a statement a while ago that it was not the business of the Treasury Department to advise the Congress about tariff policies. You adhere to that, don't you?

Secretary MILLS. I say that is a tradition which exists.

Senator CONNALLY. And you are observing that tradition?

Secretary MILLS. I am not prepared to disturb the tradition.

Senator CONNALLY. But in answer to Senator Hull you did seem to express some opinion with reference to certain items in this bill. Do you want to depart from that now?

Secretary MILLS. I am not making any recommendation as to those items. They struck me as smacking more of protective tariff measures than restrictive revenue measures.

Senator CONNALLY. That does not hurt your soul.

Secretary MILLS. No, that does not hurt my soul, because I am a good protectionist, but it must wring the hearts of some members of your party. [Laughter.]

Senator CONNALLY. Mr. Chairman, I am prepared to answer that if I can get a little quiet from this ribald and coarse audience. [Renewed laughter.] I will say to the Secretary that he is obtruding his views here when he announces it is a traditional policy of the Treasury Department not to, and then when we come in here with a few items which are revenue producers and are not protective, because of the findings of the Tariff Commission that the rates fixed are less than half of the differential between foreign cost and production, the Senator from Texas is not departing from the traditional policy of his party, any more than the Treasury is departing from its traditional policy in advocating revenue-producing measures on imports.

Senator SHORTRIDGE. Tariff for revenue only.

Senator CONNALLY. But revenue.

Senator SHORTRIDGE. No protection at all, but just for revenue.

Senator CONNALLY. Up to 1913 every revenue bill we had here was a tariff measure, if you want to call it such. It was a tax on imports to raise revenue.

The CHAIRMAN. Until when?

Senator CONNALLY. Until we passed the income tax law.

Senator SHORTRIDGE. Leaving out the element of protection, do you mean, Senator? It was merely for revenue only.

Senator CONNALLY. It is a revenue tariff.

Secretary MILLS. We had some excise taxes in those days, as I remember.

Senator CONNALLY. We had tobacco and whisky, of course.

The CHAIRMAN. Is that all with the Secretary?

Senator SHORTRIDGE. I have nothing further.

The CHAIRMAN. Thank you, Mr. Secretary.

(The statement of the Secretary of the Treasury is here printed in the record in full, as follows:)

I am here at the request of the committee, due apparently to some misunderstanding as to the scope of the information to be furnished by me in response to inquiries made by some members of the committee and as to the attitude of my department.

There can be no doubt as to the position of the Treasury Department. I stand ready to cooperate with this committee as heartily as I did with the Ways and Means Committee of the House with a view to drafting the best revenue measure possible to meet the present emergency. I believe that the way to proceed is to lay aside all partisanship, to sit around this table with one single thought in mind—the national interest—and with an unequivocal willingness to share the responsibility, and, I may add, whatever degree of unpopularity may come from the imposition of additional taxes in times such as these.

That has been our position from the first. When the Congress met we could have contented ourselves with calling attention to the great and growing deficit and simply urged the Congress to impose such additional revenue as would balance the Budget, and thus have avoided the difficult and responsible task of submitting a detailed program of additional taxation. But we felt that it was our duty to share in the exacting task confronting the Congress, and we submitted, therefore, a detailed tax program adequate to raise the revenue necessary to balance the Budget in the sense in which it has been discussed.

When the Ways and Means Committee told us that they did not propose to take our program but to prepare one of their own, I told the chairman that

our time, information, and judgment were at his disposal in the working out of the committee program. All were freely given over a period of several weeks.

I told the chairman of the Ways and Means Committee that if their program when completed was in our judgment sound, even though it differed from what we had recommended, I would support the program and that the Treasury would assume its share of the responsibility involved in imposing the proposed taxes.

This I did at once as soon as the Ways and Means Committee report was presented to the House of Representatives.

I mention this record because the question has been raised as to our willingness to cooperate. I say to you that I stand ready now and until you complete your consideration of the revenue bill to work with you as sincerely, as wholeheartedly, and as cooperatively as I did with the Ways and Means Committee. As far as I am concerned, there will be no partisanship and no shirking of responsibility.

STATEMENT OF M. L. SEIDMAN, NEW YORK CITY, REPRESENTING NEW YORK BOARD OF TRADE

The CHAIRMAN. Mr. Seidman, where do you live?

Mr. SEIDMAN. New York City.

The CHAIRMAN. Whom do you represent?

Mr. SEIDMAN. I represent the New York Board of Trade.

The CHAIRMAN. Do you want to speak upon any particular provision of the bill?

Mr. SEIDMAN. No, sir; I want to make a general statement on the bill.

The CHAIRMAN. Well, no statement outside of what this bill contains. We do not want any rambling around.

Mr. SEIDMAN. That is correct. I will stay within the bill.

The CHAIRMAN. You understand that, do you not?

Mr. SEIDMAN. Yes, sir.

The CHAIRMAN. All right, then. You may proceed.

Mr. SEIDMAN. Gentlemen, the New York Board of Trade stands first and foremost for the balancing of the Budget at any price, if necessary. It hopes that it can be done to a great extent by the cutting of Government expenditures. In that connection it was much encouraged yesterday by the statement of Secretary Mills before you here when he stated:

> The Treasury Department urges the necessity of reducing expenditures. When asked to assume an enormously heavy tax burden the people are entitled to have the cost of government reduced to a minimum and every expenditure not essential to the proper functioning of government eliminated.

The great majority of salary and wage earners employed in private industry throughout the United States have had to take cuts in their earnings of from 10 per cent to 40 per cent in the past two years or so, and they considered themselves fortunate to have employment at all. It is a great satisfaction to know that the idea has finally taken root that governmental expenditures must be cut. The reorganization of boards and bureaus, however, is a slow process, and we wonder whether during the emergency and until a complete reorganization takes place if it would not be a fair thing in getting up your estimates and budgets here to figure on the cutting down of governmental salaries, at least in proportion to the reduction in the cost of living during the last two years. We make this statement with the full recognition that Government employees generally have

not been too liberally paid in the past, but this is an emergency to which private individuals have had to comply.

With reduction of expenditures as a primary condition the New York Board of Trade, and for that matter I believe that most of the industry in this country, will stand for almost anything in taxation that is fair and reasonable.

Senator HARRISON. Do you fix any definite amount that you think it ought to be cut?

Mr. SEIDMAN. I understand that the average reduction in the cost of living has been somewhere around 20 per cent, and I should assume that if employees were reduced to the extent of 20 per cent they would be back in the same position where they were in 1929. Their purchasing power would be available to the same extent as it was available during 1929.

Senator REED. Some of them are paying 1929 debts, however.

Mr. SEIDMAN. That is most unfortunate. That is most unfortunate. But I do not know that you can exempt those who have debts to pay.

Senator KING. You can raise commodity prices.

Mr. SEIDMAN. Yes: if you know a way of doing that as quickly as reducing costs, why, that would be an ideal thing to do.

Senator KING. Well, I know a way it can be done, but I will not enter into a discussion of it now.

Mr. SEIDMAN. We believe that the Treasury Department has made to you about as fair and equitable a presentation of this pending bill as business generally would want to have stated for it were it represented directly by the Treasury Department, as I assume in fact it is.

Specifically the board of trade recommends that the net loss provision permitting losses to be carried forward a year, repealed by the House, until July 1, 1934, be resorted; that the estate tax be reduced from the maximum of 45 per cent adopted by the House to 25 per cent; that the exemptions from normal income taxes of dividends on stock that have been repealed by the House bill for a period of two years be restored.

Senator KING. You mean to say that you do not believe in taxing dividends the normal tax?

Mr. SEIDMAN. I do not believe in putting a tax on dividends when that tax has already been placed on the corporation, and the corporation has already paid a normal tax greater than that which would be imposed upon the individual had he received the profit or his share of the profit directly. It is purely double taxation.

The CHAIRMAN. Do you propose to suggest additional taxes to take the place of the taxes that you now ask to be repealed?

Mr. SEIDMAN. Mr. Chairman, we are, generally, in agreement with Secretary Mills on his recommendation.

Senator HARRISON. But he has not recommended yet what he would substitute for these other changes that he would make in the House bill.

Mr. SEIDMAN. I do not know exactly how the situation will figure out, but from the statement appearing in the press yesterday I understand that the Secretary has recommended definite items.

Senator COUZENS. He recommended, Senator, going back to the original proposition which he made.

Senator HARRISON. Yes, he suggested that he stood by his original recommendations. But since the time of the original recommendations there was an increased deficit, and he said in answer to the committee's questions that he would furnish the committee a bill of particulars and again make the recommendations of the Treasury Department in view of the changes in the House bill, which we have not received.

Mr. SEIDMAN. The New York Board of Trade, as I said, in the first place believes that in an effort to balance the Budget, after everything has been done to cut expenditures, and after the program of the Treasury Department has been exhausted, if there is a shortage in balancing the Budget then it is in favor of a manufacturers' sales tax, and only then.

The CHAIRMAN. That is what I was trying to get you to state. Evidently you know, as has been indicated from the statement you have already made, that there will be a shortage in the meeting of expenses of our Government, and what I wanted you to do was to express an opinion, if you have an opinion to express to the committee, as to how you would raise that money. You say you would raise it by the sales tax?

Senator KING. Manufacturers'.

Mr. SEIDMAN. By the manufacturers' sales tax only as a last resort, if the committee please.

The CHAIRMAN. You know we would be compelled to raise more money?

Mr. SEIDMAN. I do not know exactly. When you take into consideration the possibility of perhaps a 20 per cent cut in salaries generally, I do not know to what extent that would eliminate the necessity of raising revenue.

The CHAIRMAN. I will say to you very frankly that it would not meet the situation.

Senator COUZENS. You might as well find some other means of reducing the budget, because that is not going to happen.

Mr. SEIDMAN. Well then, I will say to you very frankly that under such circumstances the New York Board of Trade would be in favor of a manufacturers' sales tax.

Senator CONNALLY. You have favored that all the time, have you not? You would like to see that put on as a permanent proposition?

Mr. SEIDMAN. No; our board has been in favor of a selective sales tax.

Senator CONNALLY. As a permanent policy of taxation?

Mr. SEIDMAN. I do not believe so.

Senator CONNALLY. Well now, if you do not know, why, of course you can not say.

Mr. SEIDMAN. Well, I do know that.

Senator CONNALLY. Well, do not say you believe. Tell us what you know.

Mr. SEIDMAN. I do know that the board has not been in favor as a permanent policy of taxation of any sales tax.

Senator CONNALLY. Could we not lower these high and oppressive income tax rates if we put on a manufacturers' sales tax all the time?

Mr. SEIDMAN. I do not think it would be fair to lower "the high and oppressive" income-tax rates.

Senator CONNALLY. You do not think it would be fair?

Mr. SEIDMAN. I would much rather, and I am sure the board would much rather see a high income tax as against a sales tax. The sales tax here if it is recommended at all is recommended in conjunction with a high income tax.

Senator CONNALLY. What do you mean by "high"? How high?

Mr. SEIDMAN. Surtaxes as high as 40 per cent. Normal taxes as high as 10 per cent.

Senator CONNALLY. You are here to say just "amen" to Mr. Mills, in effect that is your attitude? You just want to approve what Secretary Mills said yesterday?

Mr. SEIDMAN. I did not start out to do that, Senator. I came here with my own ideas and those of the board of trade.

Senator CONNALLY. I am not trying to reflect on you at all. But the effect of your testimony is to just approve what the Secretary of the Treasury just submitted? Is that right?

Mr. SEIDMAN. I think that is probably a fair statement on my testimony thus far.

The CHAIRMAN. Proceed.

Senator HARRISON. Would you provide in this bill sufficient taxes to supply the sinking fund this year?

Mr. SEIDMAN. I would not.

Senator HARRISON. Would you supply them next year?

Mr. SEIDMAN. I would not.

Senator HARRISON. You differ from Mr. Mills to that extent, then?

Mr. SEIDMAN. I do.

Senator COUZENS. Would you agree to a moratorium next year on the foreign debts and put the amount in the Budget?

Mr. SEIDMAN. That is a nut which better men that I am will have to crack.

Senator HARRISON. How does the board get its recommendations up? Do you have a committee of the board of trade and they discuss all these plans?

Mr. SEIDMAN. Yes, sir.

Senator HARRISON. Or do they just designate a committee of two or three men to get them up?

Mr. SEIDMAN. We have a standing committee of six. A committee of taxation and finance that is constantly giving study to tax questions, and recommendations are made to the body as a whole and voted upon. These policies have been discussed and considered from time to time throughout the past year.

Senator HARRISON. Do you believe that there ought to be so many taxes laid for this fiscal year as to create a surplus next year?

Mr. SEIDMAN. No, by no means. I think we will be very fortunate if we can manage to balance the Budget.

Senator HARRISON. Do you think it would be wise to take this year and next year and strike an average so that there would not be any appreciable surplus, but just enough receipts and disbursements to balance?

Mr. SEIDMAN. I think the whole country has its eye on the balancing of the Budget, and I believe the quicker we do that the better. I do not think I would carry over a deficit from this year to next.

Senator HARRISON. No. But how about creating a surplus next year? Under Mr. Mills's figures you would have a surplus of over $300,000,000 next year if you do not supply the sinking fund next

year. Under his figures and recommendations. You do not believe in that?

Mr. SEIDMAN. I do not believe that will be necessary. I do not believe in taxing industry any more than is absolutely necessary to balance the Budget.

The CHAIRMAN. In other words, you believe that the sinking fund ought to be delayed?

Mr. SEIDMAN. I believe that is a matter of payment of debt. It should not be a matter of balancing the Budget for the time being anyway during the period of this emergency.

The CHAIRMAN. Go on.

Mr. SEIDMAN. There is one element in this bill which Mr. Mills skimmed over yesterday, although I believe he commented upon it fairly, and that is the provision whereby taxpayers are deprived of deducting from other income in their current tax returns, losses on securities. Mr. Mills in describing this provision stated:

> Another provision which should, in my opinion, be amended, is the section limiting the right to deduct losses on transactions in securities to the offsetting of gains from similar transactions in the same taxable year, as provided in section 23.

And then he goes on to explain:

> In recent years income from business profits, from salaries, and from other sources, has in many cases been offset by losses on security transactions. It is the effect of such losses in diminishing the tax upon forms of income, such as I have mentioned, which, to a considerable extent, is responsible for the diminished yield of the income tax in these years.

He then goes on to say:

> Undoubtedly, a very serious case can be made for continuing the right to so deduct such losses. In many cases, however, the losses thus deducted may be said to be paper or fictitious losses. In place of the securities in which the losses were taken, other securities were purchased without substantial change in income.

Then he goes on to say that the Treasury was disposed to agree with the elimination of the deduction of these losses, but suggests that that situation should not apply to banks and security dealers.

I believe this is a provision which has a more widespread effect than has been generally recognized. And I want to comment for a moment or two on that feature of the bill. To illustrate the effect of the bill simply, we will take an individual who has an income from his business or profession of, say, $25,000, and he loses an equal amount during the same year through security investments. He will have to pay the tax on the full $25,000, without a single dollar of deduction, unless he happens to have, that same year, profit from the sale of securities. Then only will he be able to deduct the loss from such profit, but from no other income or profit.

The arrangement, if enacted, is bound to drastically affect security owners who have counted on at least being able to deduct such losses in their current income-tax return, and thus cutting their tax bill to that extent. The proposed change will deny them that right. In my opinion, it is by far the most serious change affecting investors, although there has not been a general recognition of its possible far-reaching consequences.

Considering the widespread effect it is bound to have upon a large number of people, it is really surprising how little comment or discussion the proposal has received in the public press. Interest has

been quite generally absorbed by the major revenue raising issues. Those issues, affecting only a particular group of taxpayers, have therefore been overshadowed by the more spectacular issues.

Senator CONNALLY. Mr. Chairman, may I ask a question right on this point? Let us take two men. One of them has an income of $25,000 salary, and that is all he has. Another man is rich and has $25,000 salary, and he speculates and invests his millions in stock operations, and he loses, as you say. The man that has a salary only would still pay on his $25,000 income, would he not?

Mr. SEIDMAN. I think I——

Senator CONNALLY. Will you answer that question?

Mr. SEIDMAN. I will supply the answer to that question, if you will permit me, Senator.

Senator CONNALLY. All right; go ahead.

Mr. SEIDMAN. I will cover that point.

Considering the proposed arrangement for the treatment of security losses it is not only inequitable, but results in a tax not in accordance with ability to pay. I think I can illustrate that with a simple example We will use an extreme case for emphasis and for brevity, as I think yours was an extreme case. Take an individual who starts out with no capital at the beginning of the year at all and we will say during the year he makes a profit from his business or profession of, say, $10,000. With this profit he buys securities and, before the year is over, he is cleaned out. Thus he had nothing at the beginning of the year and he has nothing at the end of the year. Now he is told this: "You have made a taxable profit of $10,000 because the security loss which you have taken during the year is not deductible from your business profit."

Now just where is the profit? Just where is it, and in what tangible form is it? It has disappeared. It is in fact a very real loss to this taxpayer; and, not having any capital, he has at least nothing to worry about. In that, at least, he is fortunate, for the tax under such circumstances can not be collected by the Government. They can not take anything from him unless they put a lien on his future income.

But in the case of one who has capital the tax would have to be paid out of his capital. And I think that that tax then becomes a tax on capital and not on income. And it is income that we are taxing here.

The arrangement certainly gives an unfair advantage to those taxpayers who took their security losses during 1930 and 1931. Those who listened to the promises of prosperity being "just around the corner," or who, from patriotic motives, refrained from aggravating an already aggravated situation in the security markets, are now confronted with not only an additional shrinkage in their security values but with a further loss of the income tax deduction given to others who did sell before 1932. The man who took his loss is thus, by law, placed at a substantial advantage over him who listened and was persuaded.

Senator CONNALLY. Mr. Chairman, may I interject? I am going to leave in a minute. Do you think, Mr. Witness, you have answered my question? Is that your answer to my question?

Mr. SEIDMAN. I believe so, Senator.

Senator CONNALLY. I submit you did not answer it at all. I submitted to you the case of a man who has a $25,000 salary and nothing else. Another man who has $25,000 salary and in addition he has a large fortune, we will say. When the income taxpaying time comes the man with the salary only would have to pay on it, would he not?

Mr. SEIDMAN. That is right.

Senator CONNALLY. Under your plan the other man, who was much richer and had a larger income, if he had losses would be able to offset the loss and might be able to pay no income tax at all, is that it?

Mr. SEIDMAN. That is correct.

Senator CONNALLY. And that is your view of the justice of taxation, is that right?

Mr. SEIDMAN. It is absolutely just, because income is something which can not take in only one side of the profit and loss statement. It must take in both sides.

Senator CONNALLY. Your complaint is that because in the one case the fellow goes busted and the Government can not take any tax, therefore, that in the case of the man who has an income and the Government can get it out of him, that he ought not to pay any?

The CHAIRMAN. In either case, Senator, there would be the loss.

Senator CONNALLY. Yes, the Government would lose on both ends, that is true.

The CHAIRMAN. No; in either case there would be a loss to the individual taxpayer. Of course, the one could stand it a great deal better than the other.

Mr. SEIDMAN. If he had enough capital.

Now, regarding these security losses, we were told that security selling for tax purposes creates an artificial market condition, particularly around the end of each year, which this proposed remedy is intended to cure. In addition, it is supposed to provide a source of revenue not heretofore available to the Government. In my opinion neither of these are likely to be accomplished. The arrangement is bound to dry up speculative enterprise. Certainly it will make more difficult the attraction of capital. What incentive would there be for a man to put his money into securities for profit when, as and if he realizes such a profit, he will have to part with the major portion of his profit for income taxes? And in addition he will probably have to pay a stiff State income tax.

Senator KING. May I interrupt you just a moment? Do you know what proportion of those who have losses by reason of stocks, and have gains, are what might be denominated speculators in contradistinction to pure investors? My understanding is from a little inquiry which I have made that most of the losses have been made by persons who have some gains, that is, by speculators. "A" buys certain stocks and makes a gain, and he buys certain other stock and takes a loss. And in order oftentimes to obviate the payment of taxes on his gains, he sells stocks at a loss in order to offset them. I was wondering to what extent the element of speculation rather than investment, if you could reduce it to percentages, enters into this matter.

Mr. SEIDMAN. Senator, I am afraid I can not reduce it to percentages, but I know this to be a fact from contact with a great many people——

Senator HARRISON. Mr. Chairman, the Democrats have got a conference, and I have got to go for a few moments.

The CHAIRMAN. We will go right on with the hearing. Proceed.

Mr. SEIDMAN. To answer Senator King's question—although he is not here to listen to it he will get it on the record—my own work has brought me in contact with a great many business men who have to some extent been able to accumulate savings in one form or another. Most businesses have a reserve invested in securities. Most individuals have laid away money for a rainy day. I am speaking of those individuals who have invested in securities instead of putting their money in savings banks. Now those men are the men who have not sold. They have hung on. They have lived in hopes that the security values will come back, and that they will not be the losers. They have been undoubtedly sadly disappointed, at least to this point. A great many of them must sell. A great many businesses must sell securities in order to draw upon their reserves. A great many individuals must do the same. Now when they sell these securities they are not taking paper losses. They are taking real losses. I believe that the paper losses have to a very great extent already been taken and by those very ones who will now by law be guaranteed their tax deduction. They have taken them. Thus the fellow who has not taken his loss is now told that he can take it all right, but of course if he did not take it earlier he can not have it as a deduction from his income tax at this time. That is the unfair part of it.

Now I have said that I do not believe that this provision will raise any revenue, because the arrangement is bound to dry up speculative enterprise and investment. Because there will be no incentive. A man has saved money and is about to invest it. If he makes a profit a great portion of it will be taken away from him. If he makes a loss he has got to stand 100 per cent of it. Now where is the incentive for him to risk his money? And of course if money is not risked you can not produce income and if income is not produced you can not collect an income tax.

I think there is something particularly inequitable and discriminatory about such an arrangement. It singles out securities from all other forms of property and provides that only security losses shall not be deductible from taxable income. All other losses are recognized. As for security losses, even the fellow whose sole business is trading in stocks, or buying and selling stocks and bonds, is denied what to him is a business loss. May be his sole and only business. Every other business can deduct its losses from all taxable income, but not the security business. Why single out securities, when the owners of them have already been made to absorb the most staggering losses in this country's financial history?

It has been stated that the plan is directed against stock market losses; but in practice it is bound to operate against all other security losses, although this may not have been intended by the framers of the law. For instance, it will apply to the small fellow who, having been doing business as a corporation, winds up his business, and takes his loss. That would be a "security" loss, because he takes his loss

on his investment in his little corporation, and he can not deduct that loss from his other income if he has other income.

Senator SHORTRIDGE. May I ask you a question? It has been suggested that there are a considerable number of cases where men took a loss for no other reason than to have an offset to their income tax. Have you any information as to how extensive, if extensive, that is? How extensively that is done?

Mr. SEIDMAN. I have information, Mr. Senator, to the effect that that has been very extensively done. There is no doubt about it. There is no doubt about it. That losses have been taken through the sale of securities and the repurchase of such securities or other securities. Now of course if a man is going to rebuy the same securities he must wait, under the present law, 30 days before he rebuys. He can not deduct his loss unless he waits 30 days for the repurchase. But he can, of course, buy similar securities, or a security of the same type, of the same class. So that he would keep his investment. And yet will have realized his loss. Now I say that that has been already done to a great extent. Undoubtedly it is so. There can not be any dispute about it; 1929 was a good, prosperous year, and if a fellow had losses at the end of 1929 he took them and deducted them from the income he had to pay tax on thus reducing his tax in that way. If he did not do that, if in 1929 he listened to rosy stories and promises and hopes that he will be better off if he waits until 1930, he had another chance at the end of 1930 to take his loss and wipe out his income, if he had any taxable income. If he did not do that in 1930 he had another chance in 1931.

Now all of that has been done. I say that this is now trying to lock the door of the stable when the horse is gone. Those paper losses have been taken. And it is the real honest-to-goodness losses that remain. The fellow that waited and hoped must now take his loss because his resources are nearly exhausted. Businesses must now draw upon their resources, who have not been called upon to draw on their reserves before. These are honest-to-goodness losses. These are the very losses that are penalized at this time. That is the unfair part of that arrangement.

Senator SHORTRIDGE. Whereas formerly they were allowed?

Mr. SEIDMAN. Whereas formerly they were allowed. Now is that not placing a premium by law upon the disregard of what our administration has been advocating for the last two or three years?

Senator GEORGE. Will you not have the same thing happening in 1932 that happened in 1931?

Mr. SEIDMAN. Mr. Senator, I wish I could answer that question. That of course is dealing with the future possibilities of business. But we know this, that paper security losses certainly have been taken to a far greater extent than actual losses still remaining. These if they are taken during 1932, will be taken by people who can less afford the loss, and who could less afford to lose the income tax deduction on account of the loss.

The CHAIRMAN. In other words, they prefer now to take a chance on a rise in the market and sell a stock for the purpose of taking a loss? Is that not the picture?

Mr. SEIDMAN. No; my point, Mr. Chairman, is that whoever has securities left has done at least two things. In the first place he has waited to a time when he has to sell. When his resources are ex-

hausted; when his reserves are exhausted. And second, he has co-operated with the administration in that he did not throw over his securities upon an aggrevated market situation. And that fellow is being penalized.

The CHAIRMAN. Nobody is going to sell securities now unless they are compelled to.

Mr. SEIDMAN. I think that is right.

The CHAIRMAN. They are not going to sell any securities to get the tax deduction.

Mr. SEIDMAN. That is right.

Senator SHORTRIDGE. Your point is, then, that where a man is compelled to sell at a loss he should be given credit for that loss?

Mr. SEIDMAN. That is right. Except that I am afraid we can not embody in our law that provision that only when a man is compelled to sell he can get a deduction. We can very well assume that the compulsory sales are coming along now. That the longer a man has waited the more likely the chances are that he will now be forced to sell, and it is those very losses that he will not be able to deduct.

Senator GEORGE. There were a great many voluntary sales made for that purpose in the past years?

Mr. SEIDMAN. Undoubtedly so.

Senator GEORGE. Will there not be some voluntary sales made for that purpose, for that same purpose, this year?

Mr. SEIDMAN. No question about that. No doubt about that. No question but that some voluntary losses will be taken. But I firmly believe that they will be in the great minority at this time, almost three years after the market break.

Senator GEORGE. They will be less?

Mr. SEIDMAN. Yes.

Senator GEORGE. I imagine so. Profits might be less too.

Mr. SEIDMAN. That is true; or non existant.

Senator GORE. Do you not think that a great many people sold and then bought back for the purpose of taking their loss?

Mr. SEIDMAN. Those people have already taken a loss, and own their securities now at a price where they have got an additional loss, in some cases anyway.

Senator GORE. I understand. But what I am referring to, and what I mean is as to the future. They might do the same thing in the future. Sell at a low figure and take their loss against the income, and then buy it back later on.

Mr. SEIDMAN. Well, Senator, there will always be a certain amount of that kind of loss taken. But it is my opinion that the worst on that score has happened, and at this time if you do this thing you will penalize those fellows who will take a legitimate loss, though even the so-called "paper losses" are in fact legitimate losses.

Senator GORE. I understand that. What would you think eventually, however, of abolishing this plan entirely both as to capital gains and losses?

Mr. SEIDMAN. Well, of course, that is the English system of income taxation. They have been operating under that system for a good part of a century. But their arrangement is at least fair. They do not tax the gain and do not allow the loss.

Senator GORE. I understand that. I am not making any point about that. It is fair to play it both ways; if you tax the gains, to

deduct the losses. Aren't there a great many securities in people's hands in this country who said that they would not sell because they did not want to pay the high tax on the high price?

Mr. SEIDMAN. Well, they have paid the penalty, Senator.

Senator GORE. That is not the question I asked. Do you not think it obstructs the free disposition of securities?

Mr. SEIDMAN. By all means, and I believe this proposed arrangement will as well obstruct the free disposition of securities, because a man will not sell if he can at all avoid selling until he has a profit from the same source. It will force the realization of profits.

Senator GORE. And when his profits are extraordinarily large he will not sell because he does not want to pay such a heavy tax. During the bull market in 1929 was not the free exchange and disposition of stocks and securities interfered with by the tendency which it had to prevent people who held stock on which they had a large profit from selling them, because they did not want to pay a heavy income tax on the profits that they would take on the capital sales?

Mr. SEIDMAN. I think that is entirely correct.

Senator GORE. Do you not think that is a mistake?

Mr. SEIDMAN. Yes; I think it is.

Senator GORE. That is the point I wanted to get at.

Senator REED. Is not the effect to accentuate the peaks of the booms and to accentuate the depths of the depression?

Mr. SEIDMAN. That is exactly the way of stating it.

Senator REED. It is to the taxpayer's interest to hold on when he ought to sell, and it is to his interest to sell when he ought to hold on.

Mr. SEIDMAN. That is correct, Senator. And this proposed change will accentuate it.

Senator GORE. And this makes the gyrations work both ways.

Mr. SEIDMAN. I think so. I think it certainly interferes with free markets of securities.

Senator REED. And furthermore, from the standpoint of revenue, taking it over a long period of years, it is probably true that the Government loses in revenue more than it gains by treating these capital transactions as income; is that not so?

Mr. SEIDMAN. It has been my experience in tax matters that I have come in contact with—and we have had occasion to advise on tax matters and prepare tax returns for clients—that the taxpayer has always gone out of his way to record losses when he had offsetting income and to record income when he had offsetting losses. And it creates an artificial situation which you could undoubtedly eliminate if you eliminated the taxation of capital gains and, as an offset to that, prohibited the deduction from income of capital losses.

Senator GORE. Now if the people who held securities in 1929 during the boom period, who had large profits on those securities, and did not want to sell them and pay the heavy income tax, if they had been free to sell their securities without facing that danger, would not the unloading of their securities on the market have had a tendency at least to prevent stock from reaching these dizzy summits?

Mr. SEIDMAN. Those are exactly my own conclusions on that question after mature deliberation.

I was about to say that the New York Board of Trade has always been a staunch supporter of the income tax as the fairest kind of a tax to be imposed upon industry, but if the income tax is to remain a

permanent American institution the framers of our tax laws must avoid attempts to collect revenue at the expense of fairness and equity. And I believe that this provision as to the denial of a deduction of a security loss under the circumstances I have here explained is an inequitable provision. The proposed plan not only violates the rules of equity, but, as I have shown you by an illustration, violates the fundamental principle that a tax must be imposed only in accordance with ability to pay. One who has lost his income in a business transaction is manifestly unable to pay a tax imposed upon such income.

Thank you.

STATEMENT OF BENJAMIN C. MARSH, BLISS BUILDING, WASHINGTON, D. C., REPRESENTING THE PEOPLES LOBBY AND JOINT COMMITTEE ON UNEMPLOYMENT

The CHAIRMAN. Mr. Marsh, you may proceed.

Mr. MARSH. Mr. Chairman and members of the committee. My name is Benjamin C. Marsh. I am speaking on behalf of the Peoples Lobby, which has headquarters here in the Bliss Building. The president of it is Prof. John Dewey.

I understand that the discussion this morning is to be on the general features of the bill, including the income tax, and I want to point out that the variety of taxes proposed in the House bill and all the taxes we have had, except the estate tax, are substantially income taxes, and to suggest that if you want to prevent widespread defaulting and panic you have got to tax incomes much higher than we have ever taxed them here. Starting at least with $10,000. And that I may be purely personal I will say that I ought to pay $500 or $600 more a year taxes than I do, and I am perfectly willing to do it providing you apply the general principle.

The assumption that a sales tax is not an income tax is an assumption that it is going to be paid by those who haven't any income. The only question is whether the Congress of the United States has the courage in an election year to face the situation and to realize that only Congress can through this revenue bill redistribute the national income in time to prevent a collapse.

We all know about this 4-power pact that is on in Europe, and what the situation is there. The House passed a 4 per cent tax, I believe, on stock sales out of which perhaps the Federal Government was to get $25,000,000, and in three days, if I am correctly informed, following the adoption of that provision by the House, the value of securities fell off something like $739,000,000. That was a capital levy, but the Government got $25,000,000 out of it. And the value of the securities went down considerably more.

We suggest that the Federal Government raise its revenue this year—and I shall give you figures to support our reasons—by reducing the exemption for income tax, by increasing the normal rate and the surtax rates very heavily, by increasing the estate-tax rates, which admittedly will not yield very much immediately, by taxing tax-exempt securities, by taxing corporation surpluses, and by plugging the holes in the administrative features of the revenue bill.

With regard to the last matter I shall not go into detail, but I am going to ask, Mr. Chairman, if I may file with the committee a series of something like 16 specific suggestions for amending the tax law to

insure increased revenue yield. The references are to sections of the revenue law and articles of regulations 74, prepared for us by a very experienced certified public accountant in New York. They will be more valuable than my going into detail.

The CHAIRMAN. They will be put into the record at this point.

Mr. MARSH. Thank you.

(The matter presented by Mr. Marsh for the record is as follows:)

SUGGESTIONS FOR AMENDING TAX LAW TO INSURE INCREASED REVENUE YIELD

(NOTE.—References are to sections of law and articles of regulations 74.)

Section 21—Net income. Article 60—Sale by corporation of its capital stock: This article provides that a corporation derives no gain or loss from the sale of its own capital stock. Recently many companies have been manipulating their own stock in the market, buying and selling it as though it were another company's securities. An amendment to stop this loophole should provide that all such profits in excess of losses be subject to tax, and losses be allowed only to the extent of the gain.

Section 22—Gross income. Article 105—Inventories by dealers in securities: There has been a great deal of confusion regarding who is and who is not a dealer in securities. A recent ruling allowed a person who had made a certain number of transactions all for his own account, to be treated as a dealer, so that he could take losses by the inventory method without even selling his securities. This article should be amended so that no one may be deemed a dealer unless he trades for others.

Section 23—Deductions from gross income Article 126 (1)—Compensation for personal services: Under this provision, unreasonable salaries are allowed to officers of corporations. This has the practical effect, in many instances, of paying out all of a company's profits as salaries, leaving the latter no taxable income. This is especially true of the small or closed corporation. New York State, in exercising its franchise tax, places a limitation on such salaries and if a similar minimum tax were to be placed by the Government based upon profits prior to the deduction of officers' salaries, a tremendous increase of revenue could be effected. If you believe this item important, I will explain the New York State plan and other plans I have regarding limitation of officers' salaries.

Section 23, article 191—Bad debts: Under this article, bad debts actually incurred may be deducted when so "ascertained" by the taxpayer. Where the latter does not choose to "ascertain," he is enabled to juggle these losses in order to cut down income in profitable years. It is suggested that the only correct method of allowing bad debts would be by the reserve method as explained in subsection 2 of article 191. The amount of the reserve is estimated based on the actual experience of the taxpayer and under this method, the losses are spread in accordance with sound accounting practice. Where the reserve becomes too large, the Revenue Department can require a reduction of the amount of the annual charge to bad debts. The word "ascertain" leaves many loopholes and the taxpayer can always maintain in numerous cases that he did not know that the account was bad when he may have known it right along.

Section 23, article 124—Repairs: A great many taxpayers deduct repairs which are really in the nature of replacements for which a reserve for depreciation has been accumulated so that taxpayers receive the benefit of a double deduction, one for repairs, and the other for depreciation. During prosperous years, items are charged to repairs that should be included in the capital account as improvements, and in lean years, repairs are capitalized in order to provide for future depreciation charges. It is suggested that this item be amended so that repairs may only be deducted in the form of a reserve for repairs, in the same manner as a reserve for bad debts. This may be done by determining the annual repair charges for the period of five years and allowing the taxpayer to deduct this average, setting up a reserve. A system of this kind is used by public utilities and other uniform systems of accounts. This has the effect of spreading repair expense and more accurately determining the income for each year.

Section 23 (k)—Depreciation: A requirement should be inserted in this section that all fully depreciated property should be written off against a reserve each year. In many cases depreciation is computed on the total value of the property even though part of this property has been fully depreciated. The regulations should be changed giving the allowable depreciation rates on various classes of property and thus bring about uniformity in connection with this item.

Section 44—Installment basis: Where property is sold on the installment plan, the gain or loss upon repossession of such property is not clearly defined, and it appears that the Board of Tax Appeals and the commissioner disagree in the treatment of this matter. Where the taxpayer surrenders a mortgage and receives back his property, the gain or loss is computed on the difference between the value of the property and the basis of this mortgage. The regulations provide that the value of the property is the bid price at the auction. Such bid price, however, does not reflect value and it is apparent that at any auction sale of real estate, no real public bids are made but the mortgagee is allowed to take the property for the approximate amount of his mortgage, and this does not represent market value. In cases such as these, the assessed or appraised value should be used in determining the taxpayer's gain or loss.

Section 25 (d)—Credit for dependents: Very often credit is taken for dependents for children over 18 years of age, and for distant relatives. Taxpayers claiming credit for dependents should supply all necessary information so that errors may be readily detected by an office audit.

Section 41, article 323.—Methods of accounting: While this section requires the keeping of accounts, nothing seems to have been done to enforce the provision, and numerous evasion, result from keeping incomplete records or no records at all. It is suggested that special regulations be prepared which would give the minimum accounting requirements for each trade or business, consideration being given for the amount of business done.

Section 104—Accumulation of surplus to evade surtaxes: Numerous companies retain surplus far above the normal expansion needs. In this way stockholders avoid payment of surtaxes. Should dividends become subject to normal tax under the proposed law, this evasion will become even more important. As a remedy, I would suggest that where a corporation announces a fixed policy of distributing 40 per cent of its annual net earnings to its stockholders, that such corporations be taxed 1 per cent less than other corporations.

Section 113 (b)—Property acquired before March 1, 1913: The gain or loss upon property acquired before March 1, 1913, is based upon actual cost or 1913 value, whichever is higher. Under the New York State law, where a loss is incurred, the basis is the value, whichever is lower. If this provision be inserted in the Federal act, a large gain in revenue will result. The following will illustrate: Cost of property in 1900, $80,000; market value March 1, 1913, $100,000; sold in 1932, $50,000. Under the New York State law, the loss is $30,000: under the Federal law, the loss is $50,000.

Section 115 (c)—Distribution and liquidation: The profit of a taxpayer when he receives a liquidating dividend is the difference between the market value of the corporate assets he receives and the cost to him of his stock. Where the taxpayer originally purchased his stock by turning over securities to the company and upon liquidation receives the identical securities back again, he may be receiving the benefit of a loss without actually having disposed of his securities. Thus, A transfers 1,000 shares of X stock costing him $50 per share in exchange for the stock of Y company. The X stock depreciates in value. Y liquidates, and turns back to A his X stock which now is worth $5 per share, giving A a deductible loss of $45 per share without actually surrendering the control of the stock.

Section 142—Affiliations: In many instances the same interests control enterprises doing business as individuals, partnerships, and corporations. By means of intercompany transactions, losses of one company may be transferred to offset the gains of another company. Where such conditions exist, it is suggested that one consolidated return be required from the entire affiliation, and that the tax rate be higher in such cases.

Section 144—Withholding tax at source: Where individuals receive salaries of $5,000 or over per annum, the tax based on the individual's exemption should be withheld by his employer, and paid directly to the Government. Many individuals spend their entire income and do not set aside a reserve to meet the Federal tax, with the result that when the tax report is due, they haven't sufficient funds to meet the payment, and evasion usually occurs.

Article 811: Information at the source should be required where annual payments are made such as attorneys on the annual retainer basis. Under the present law, such payments need not be reported. It is further suggested that information returns be required where payments are $500 per annum, as numerous taxpayers change their position several times during the year.

Article 841—Dividends: In view of the possibility of taxing dividends at the normal rates, information returns regarding all payments above $250 during the year should be reported by all corporations and exchange brokers.

Section 182—Partnerships: All partnership agreements should be submitted with each new or change in partnership. It is a very simple matter to add a partner to a firm and thus reduce each share of the partnership earnings. Upon submitting the partnership agreement with each change, this loss may be avoided.

Joint reports—husband and wife: This should provide that where husband and wife choose to file a joint or a separate report, that this method be followed consistently, once adopted. In many cases, husband and wife file separate returns, and in the following year joint returns, depending upon the nature of the income and how much they could save thereby. This is a privilege extended in the law, but with the need of additional revenue, the above limitation will create additional revenue.

Senator REED. When you say you would tax tax-free securities——

Mr. MARSH. May I take that up a little later, Senator?

Senator REED. Yes, surely; if you are going to do so.

Mr. MARSH. If you want me to do it now I will be glad to do so, but I am going to take it up later on.

Senator REED. Very well.

Mr. MARSH. Now this point must be stressed. You can put on a capital levy. I do not think you are ready to do it yet. Ultimately of course you have got to do it or have repudiation. But here are the figures as to the income. In Great Britain—I do not know whether Mr. Mills told this to the committee yesterday—he made this statement in a speech before the Economic Club in New York several months ago—in Great Britain a man with a wife and a dependent child, and an income of $5,000, pays approximately twenty times as much income tax as in the United States. A man similarly situated, with a wife and a dependent child, with an income of $10,000, pays approximately twelve times as much. But in Great Britain, as well as in most other countries, when you get up to the $100,000 income they get a little bit more solicitous for the perpetuation of the Government and the validity of securities, so it is only two and one-quarter times as much that a man with $100,000 income pays in Great Britain compared with what a man with a similar income pays in the United States.

Senator GORE. Have you got the rate there? Would that not be 100 per cent?

Mr. MARSH. I beg your pardon?

Senator GORE. Would that not be 100 per cent in England?

Mr. MARSH. I do not know what the English rate is. No; that is the average.

Senator GORE. You mean two and one-half with reference to the existing law?

Mr. MARSH. I am speaking about the law, Senator, not about the bill.

Senator GORE. I understand.

Mr. MARSH. We tried to get some information from the Secretary of the Treasury as to what exemption you would have to have and what income tax rates to raise the revenue to balance the Budget, if you are going to balance it. And we respectfully submit that it is not fair nor decent to call a Budget balanced that does not meet the Federal Government's responsibility on unemployment. It has passed the buck to the cities and States, and they are going broke.

I wrote, therefore, to the Secretary of the Treasury, Mr. Mills, and under date of March 31, 1932, I have this brief letter in reply, which I would like to read, because it confirms all that our contentions

will be this morning. It was signed by Mr. A. A. Ballantine, Undersecretary of the Treasury. It is as follows [reading]:

THE UNDERSECRETARY OF THE TREASURY,
Washington, March 31, 1932.

DEAR SIR: For the Secretary of the Treasury, receipt is acknowledged of your letter of March 14, 1932, requesting Treasury estimates for individual incomes for the calendar year 1932, including the number of individuals with net incomes, the net income, and also the net income by certain income classes.

The Treasury's estimates for periods not yet elapsed are based on a continuous study of many factors, such as business profits, volume of production, prices of commodities and securities, dividends, etc. Under existing conditions it is particularly difficult to forecast, a full year in advance, aggregate incomes and taxes. Estimates are, of course, made by the Treasury, broken down into broad classes, but there is no attempt to predict the amount of income in each individual bracket in the manner which you have in mind.

It is much too early to form an opinion as to the accuracy of the Treasury estimates for 1932. That the Treasury forecast of the yield of income taxes from income of 1931 is reasonably accurate is indicated by the fact that collections for March have been but about 5 per cent under the final estimate.

The latest year for which the distribution of income is available is the year 1930, and I am inclosing a copy of the "Statistics of Income for 1930" (preliminary report).

Very truly yours,

A. A. BALLANTINE,
Under Secretary of the Treasury.

Mr. BENJAMIN C. MARSH,
The People's Lobby, Washington, D. C.

Now we submit that it is only the actuaries of the Treasury Department who have the data on which the Senate Finance Committee or the House Ways and Means Committee or anyone else can determine what the exemptions must be and what the rates of normal income tax and of surtaxes must be to balance or come near balancing whatever Budget is adopted, and that is put at the figure of $4,482,000,000 for this year by the Secretary of the Treasury. You should get, we respectfully suggest, this specific information as a basis for determining your rates.

We regard a sales tax as a coward's method to soak the helpless. You must recall that there are about 8,000,000 people unemployed. There is no indication that any of the policies hitherto adopted by the administration—and I am not talking in a partisan way, because it has been bi-partisan action, we are told—has relieved the economic situation, nor is there any prospect that it is going to relieve it in any material way unless you transfer at least six or seven billion dollars of the income of those with incomes above $5,000 to those who have less, or nothing. In other words, the whole problem to-day is redistribution of the national income to start up industry.

What good will it do Mr. Ford to put out a million more automobiles on the market, if he is planning to do so, if nobody can buy them. No individual industry and no combination of industries and no business men's organizations can meet the situation any more than they could take charge and run a war. It is up to the point where the Federal Government has got to act.

The income is adequate. Of course it is going to be less in 1932 than it was in 1930. Although the figures I have seen are only estimates I would say that the national income this year will be around $65,000,000,000. That may be two or three billion dollars off either way. I am inclined to think it is rather high. It will still be adequate.

Great Britain collected in the income tax last year 10 per cent of the total net taxable income. We collected only 3½ per cent. It is perfectly obvious that if we collected anything approximating the same amount that Great Britain collected or substantially the same amount that we would not have the deficit.

Senator GORE. Do you remember the total amount they did collect?

Mr. MARSH. I do not have it in mind, Senator Gore, I am sorry. I will try to look it up for you.

Senator GORE. Yes.

Mr. MARSH. Now an excise tax on any necessity of life of course is direct encouragement to hoarding. Probably a heavy income tax is the most effective way of ending hoarding, because you pay the income tax on what you have, whereas if you say "We will wait until people buy things," you know, if they are scared they will 'not buy them.

There is nothing more definite, nothing more sure and certain to unbalance a budget when you think you have got it beautifully balanced than to have reliance upon a sales tax. For instance, the very last time that the House Committee on Ways and Means was sitting—I think it was their last guess at the yield of the sales tax from manufacturers—I figured out that instead of yielding as they claimed $585,000,000, it would yield at the outside $360,000,000, and probably less than $325,000,000. Certainly not very much over half of what they estimated.

Senator Reed, you made an estimate last summer of what a certain sales tax would yield. I got all the figures, and found it would yield between one-fifth and one-sixth of your estimate. I am not criticizing you, but simply pointing out the very great unreliability of a tax like that.

Now we have practically gone into State capitalism in this country through the Reconstruction Finance Corporation etc. I do not speak of the success of the measure, because that remains to be seen, but it is not out of place to realize that somewhat changing the policy of Government toward the public welfare is equally imperative. I do not need to say that no sane person has any idea of vindictiveness or punishment of those who have large incomes or large fortunes. But we simply have reached the stage where two years have proven, to the satisfaction I think of every fair-minded, informed person, that the old methods are through, and the Federal Government must act.

Now have we adequate revenue? I am using Government figures. In 1930, 6,152 persons with incomes over $100,000 each had an aggregate net taxable income of $1,556,000,000. Using round figures. Their gross incomes—and it is on gross income that most of the sales taxes would be paid on purchases—their gross income was about $1,950,000.

Now, gentlemen of the committee, those persons with incomes of over $100,000 paid to the Federal Government on 1930 income in income taxes and surtaxes, only $237,716,046. We feel that they should pay about $600,000,000 more.

You must remember a few of the people, in fact it is true to-day that 3½ per cent of the people and the families of those people, get very close to a quarter of the national income, and the rest of the people have to live.

Senator GORE. Just one minute, Mr. Marsh. Did I understand you to say that 3½ per cent of the people get about a quarter of the national income?

Mr. MARSH. Approximately that, Senator Gore. In other words, I am saying, and have the figures to prove, that in 1930, 736,357 persons with incomes of over $5,000 had an aggregate net income of $10,198,753,000, and a gross income of approximately $14,784,000,000. But what did they pay? They paid in Federal income taxes and surtaxes only $462,439,563. Those persons with incomes of over $5,000 should have paid at least $1,200,000,000 more, which would have been only 16.3 per cent of their net income, not of their gross income.

We believe that this shows very clearly that if you are going to get the money from those able to pay the only direct, fair, and satisfactory way to do it is through the income tax. You would better reduce the income tax exemption for a married person to $2,000, and suppose you would put a single man's exemption at $1,000 or even $750, if you please. Then suppose you had a sales tax of 2½ per cent—and that would be only an entering wedge in what the chairman of the committee has said is the proper way to raise revenue by a general sales tax—and if a man bought $800 worth of goods for himself and family, and for the purpose of easy figuring, say you had a 2 per cent sales tax, he would then pay $16, it is only a dollar more, and when you get down to the lower incomes, where the larger percentage of the income is paid, if you have a sales tax you will see where you would be. The assumption generally is this, that——

Senator REED (interposing). Mr. Marsh, would that be true if you excluded foodstuffs and clothing?

Mr. MARSH. No, not if you have a selective sales tax.

The CHAIRMAN. Oh, Mr. Marsh, no one has ever suggested a sales tax without eliminating farm products and food of every kind.

Mr. MARSH. Well, then, you can not get much money. You certainly can not get any money for the Federal Government by exempting everything.

The CHAIRMAN. And nobody has ever said we should exempt everything. No one has ever made any such proposition as that. Let us confine this discussion to the proposal before us, or at least not go beyond any proposals that have ever been made.

Mr. MARSH. Well, you can not keep on making exemptions and expect to get any revenue for the Federal Government. And might I at this point suggest that you read the testimony of Dr. Thomas Adams given before the House Committee on Ways and Means in which he criticized the House severely for making the exemptions they did make.

The CHAIRMAN. Oh, well, whatever statements he may have made represented his view of the matter.

Mr. MARSH. Well, I want to say—but I will not repeat a personal conversation with the chairman or anybody else. At the same time it seems to be somewhat the general idea to get money from those who are helpless to protect themselves.

The CHAIRMAN. The only time a sales tax has ever been voted upon in the Senate of the United States was upon a proposal in which all farm products were exempted.

Mr. MARSH. Oh, well, a man can not live on farm products alone, not in a civilized community.

The CHAIRMAN. If we confine the discussion to the proposal that is before us, the situation will be better understood.

Mr. MARSH. Isn't this a fair statement, Mr. Chairman: If you say a man is entitled to a certain exemption, be it $2,000 or $3,000 or if you will, $1,000, in the matter of an income tax, and then you turn around and soak him with a sales tax covering everything on which you levy a sales tax you are repudiating your assumption of an exemption if that figure is the exemption to which you hold he is entitled. In other words, you nullify his exemption, but I do not like to use the word "nullify."

Senator GORE. Mr. Marsh, let me see if I understand your position: Do you use the term general sales tax to mean the same thing as a turnover tax? In other words, you are not limiting it to a manufacturer's tax.

Mr. MARSH. Any tax which is paid by the consumer now is going to limit consumption, and the job of the Federal Government to-day is to make possible wider consumption out of current income. Now, the gentleman who appeared before you this morning representing the New York Board of Trade, if I understood him correctly, spoke of the horrible injustice of taxing a man who happened to have no income but a million dollars' worth of property. How about the injustice of taxing a man who has no income and no proprety? And that is about the alternative with which you are facing some of us. A man ought to be grateful to be able to pay on property. You might have to vote a capital levy.

Now, as to an estate tax: Frankly I think it is very problematical what the Government will receive at once, but we think the rate should be raised in this matter just as we think the maximum surtax rate should be raised to 75 per cent on incomes in excess of $1,000,000. At that only 145 would have been liable in 1930. So we think the estate tax rate should be raised to a minimum at least of 75 per cent on an excess of $10,000,000. For 1929, the last year for which I have been able to get figures, the value of the net estates of all resident decedents as to which estates were filed was $2,377,000,000.

Senator GORE. Did you say that was for the year 1929?

Mr. MARSH. Yes. And the tax on those estates was $152,391,000, out of which the Federal Government got the sum of $39,003,061. Obviously that is not a fair return to the Federal Government from estate taxes. I will say that I thought they were all going to drop off, but the New York Times reported that the late Paul M. Warburg left an estate, valued some two months ago, at $50,000,000 at least—and you understand that I am now quoting the New York Times. And Mr. Eastman's estate is valued at least at $20,000,000, according to the figures I am quoting now from the press. Every year the gross value of estates transferred is between three and a half and five billions of dollars, and in normal years it is quite obvious that the Federal Government should get at least $400,000,000 or $500,000,000 from an estate tax. And none of us, of course, suggest that it should be paid in one installment. We therefore do not stress this as a method for raising revenue for 1933. But we do suggest that the most of these rates, or at least the increase in the income surtax rates

must be made retroactive if you are going to begin to get out of the hole financially for some time to come.

Now, Senator Reed, may I take up the question of tax-exempt securities?

Senator GEORGE. What was that?

Mr. MARSH. Taxation of tax-exempt securities. The Secretary of the Treasury reports that on December 31, 1930—and that is in his last report, at page 563—the estimated amount of securities outstanding, interest on which is wholly exempt from the Federal normal income tax and surtax, was $23,041,000,000, of which $17,559,000,000 were securities of States, counties, cities, and so forth; $166,000,000 of Territories and insular possessions; $3,485,000,000 of the United States Government, and $1,831,000,000 were securities of the Federal farm loan system.

The Secretary also reported that at the end of September, 1931, United States securities outstanding, interest on which is exempt from normal income tax only, of the Federal Government was $12,807,000,000.

Senator GORE. And is that entirely apart from the $23,000,000,000 you mentioned above?

Mr. MARSH. Yes, sir. This $23,000,000,000 is wholly exempt in addition to bonds partially exempt.

Senator GORE. And that includes only about $3,500,000,000 of Federal securities.

Mr. MARSH. Those wholly exempt are $3,500,000,000. But the total of the completely or wholly and partly exempt securities is approximately $36,000,000,000. These figures are sometime back. Of the total outstanding securities at the end of 1930, $2,526,000,000 were held in sinking funds all owned by the United States Government, so the net outstanding was only $20,515,000,000.

Now, 10 years ago the present Secretary of the Treasury, Mr. Mills, was a Member of the House of Representatives, and on the floor of that body he stated:

> Tax-exempt securities must inevitably destroy the progressive income tax law, and I am by no means sure that the evil has not already reached such proportion as to make any possible action too late to save our present income tax.

The Federal Trade Commission in a report submitted to the Congress on tax-exempt income differs entirely from that opinion, and I should like to read to you just a few lines from that report, if I may [reading]:

> The Supreme Court has also held that the Sixteenth Amendment did not extend the taxing powers of Congress to new subjects, but merely did away with an erroneous principle of legal interpretation that had been imported into the Pollock case. The erroneous principle referred to consisted of looking past the particular income that was being taxed to the property from which the income was derived and thereby discovering that the tax was a direct tax in the constitutional sense, instead of an indirect tax like customs duties and excises. If, therefore, the court should refuse to look past the taxed income to its source, it might hold that taxation of the interest from these securities does not constitute taxation of those instrumentalities, expecially when not separately and differently taxed, but merely comprehended in the aggregate income received irrespective of source.

Also on pages 6 and 7 of this report by the Federal Trade Commission it was stated [reading]:

> There appears to be an avenue by which the Supreme Court can consistently uphold the validity of a Federal Act to tax interest received from investments in

State and local government obligations. It consists of holding that taxation of this interest not specifically but incidentally as part of all income of all individuals and companies in the United States, does not constitute a tax upon the governmental instrumentalities. Failing this, the only recourse would be a constitutional amendment. An amendment that does not subject the existing issues of Federal, State, and local obligations to income taxation will not, however, be effective in preventing wealthy individuals from escaping surtaxes until the present issues are retired or refunded into taxable securities.

Senator GORE. Mr. Marsh, will you read that again? I seem to have lost your point.

Mr. MARSH. The report of the Federal Trade Commission says [reading]:

An amendment that does not subject the existing issues of Federal, State, and local obligations to income taxation will not, however, be effective in preventing wealthy individuals from escaping surtaxes until the present issues are retired or refunded into taxable securities.

I should say, of course, that a lot of those securities have been retired since then. And they report back in 1922 it was estimated that [reading]:

Of the entire $31,921,000,000 of interest-bearing tax-exempt bonds, notes, and certificates outstanding at or near the close of 1922, business corporations held $10,700,000,000, or about one-third; individuals whose taxable incomes for 1922 exceeded $10,000 held over $4,450,000,000, and that the remaining $16,771,000,000 was distributed, in the main, among that great body of individuals whose taxable incomes were below $10,000, or by eleemosynary corporations.

Now, I think you will all agree that the Supreme Court is inclined to follow the bread lines.

Senator GORE. Follow what?

Mr. MARSH. The bread lines. I think it would be a very good proposition to put up to the Supreme Court as to whether anybody has the right to escape taxes, as they have done in this case, through tax-exempt securities. It has not meant any material advantage, as was claimed, in the way of pu[illegible] I had hoped it would but it has not.

Senator SHORTRIDG[illegible] it would be to their advantage to i[illegible]

Mr. MARSH. Th[illegible] wo[illegible]e, but[illegible] are beginning to learn th[illegible]ade a ve[illegible]eat mist[illegible]. And if the Government[illegible]d for the [illegible] it pro[illegible]ould not now have $60[illegible] retirement, which w[illegible] W[illegible], and it is not a pleas[illegible]g.

Senator Go[illegible]want [illegible]on or t[illegible]t that, and I will add[illegible]am ine[illegible] you a[illegible]ng the expenses of t[illegible]s we we[illegible]

Mr. MARS[illegible]or G[illegible] there: I am not a la[illegible] a [illegible]s had a great deal of e[illegible] New Y[illegible] and who has been very a[illegible] prac[illegible] come ar[illegible] the constitutionality of [illegible]e your com[illegible]e, next [illegible] I am not a lawyer and I can n[illegible] legal qu[illegible]

Senator GORE. M[illegible] with you that we ought to have paid t[illegible] out of the profits made during the war. But[illegible]se I want to ask you about now. Is it your idea tha[illegible] tax-exempt securities tempt

capital to invest in them in order to escape taxes? That is your point about the trouble with them, isn't it?

Mr. MARSH. It provides about the only way of escaping taxes, except hoarding.

Senator GORE. Don't you think that has a tendency to raise the price of tax-exempt securities higher than they otherwise would be?

Mr. MARSH. It has that tendency unless you counteract it by the rapidly progressive surtax. It is a sort of game of hide and seek between the Government and the wealthy of America to-day as I see it.

Senator GORE. I am talking now entirely about tax-exempt securities. The Federal Government can not tax local and State securities, and the State can not tax Federal securities.

Mr. MARSH. The argument the Federal Trade Commission made is that the Federal Government can tax income from tax-exempt securities, merged with other income.

Senator GORE. And the constitutional amendment says they can tax it regardless of source.

Mr. MARSH. Yes, sir.

Senator GORE. But that is not the source. These tax-exempt securities tempt investors who want to evade taxation undoubtedly, but they pay the price when they buy them, do they not?

Mr. MARSH. Who do you mean pays the price, the Federal Government?

Senator GORE. No; whoever buys such securities buys them partly because they are exempt from taxation.

Mr. MARSH. Yes, sir.

Senator GORE. And that exemption from taxation contributes more or less to the price of the security.

Mr. MARSH. Quite so.

Senator GORE. In other words, the man who is buying that immunity has to capitalize it and pay for it.

Mr. MARSH. Well, he tries to do so, but——

Senator GORE (interposing). Here is the point that concerns me. If you permit the Federal Government to tax State and local securities, and permit State Governments to tax Federal securities, wouldnit prospective purchaser in the first instance capitalize the prospect of the tax and subtract it from the price he paid for the security?

Mr. MARSH. He might.

Senator GORE. And if he did wouldn't you come out just where you went in?

Mr. MARSH. I think no, because you can reach it by means of the income tax and the surtax.

Senator GORE. No.

Mr. MARSH. It seems to me you could.

Senator GORE. Well, if they are exempt from such taxes he pays the price for that exemption, doesn't he?

Mr. MARSH. Yes.

Senator GORE. And if you remove the exemption and subject such securities to a tax, doesn't it really work the other way, and doesn't the investor capitalize the tax he has got to pay and subtract it from the price he pays in the first instance? And if he does that aren't you in fact going around in a circle and just having your pains for your trouble?

Mr. MARSH. No. There are two ways to get out of it. First, you must realize that to-day you have capital seeking investment. And I believe the Government in its recent offering had the tax-exempt bonds bearing a low rate of interest oversubscribed nearly fourfold. In the second place, the Federal Government and the States and municipalities do not have to use bankers to float their bonds. You will recall that in the construction bill introduced by Senator Wagner and now before the Senate Committee on Commerce, it bears the provision that bonds for $1,100,000,000 shall be issued in units of $50 or less and that the Federal Government may sell them directly. So you have two ways to avoid that as it seems to me.

Senator GORE. I do not see how you can avoid it. I have given a good deal of thought to this tax-exempt security business, if the members of the committee will pardon me for saying so, and it has always occurred to me that the prospective buyer, whenever a State or the Federal Government sold bonds, would capitalize that situation and subtract it from the price he paid, so that the Government would get less in the first instance, which you would undertake to make up in the second instance. Now, if that is true it is a futile thing to do. There is no way to ascertain with absolute certainty but it is a good deal like the single tax. As I remember some years ago when we were figuring on a canal from Chicago to deep sea, the point was made by the single taxers that if the Government did that it would simply capitalize the value of real property in Chicago and the people would not really get any advantage out of it. I can see how that would be. But the point is that when a man went to buy a United States bond that was going to be subject to taxation by States and cities, he would figure out what that tax would amount to in the long run and subtract it from the price he paid the Federal Government for the bond. The Federal Government would get less than it would otherwise get, and then you say they will go ahead and tax the bond in the future and make it up.

Mr. MARSH. Of course, we do not need to issue many more bonds. Fortunately the discussion now is on the question of balancing the budget so as not to run into debt. There would be difficulty in the matter of outstanding bonds, but many of them would be retired within a short time.

Senator GORE. Cities are having trouble now selling bonds even though tax exempt.

Mr. MARSH. Cities are having trouble, yes. But answering your question so far as the Federal Government is concerned, since the Federal Government will not issue more bonds, if any hardship enured, and I can not see that it would, through a lower price for bonds, it would be a hardship for State governments and for local governments and not for the Federal Government. The Federal Government I think can stop the leak by increasing the surtaxes.

Senator GORE. But the point according to your plan, as I understand it, contemplates subjecting bonds now outstanding to State taxation.

Mr. MARSH. Yes.

Senator GORE. And of course if the States can tax Federal bonds they can tax them to any extent they see fit, and if the Federal Government can tax State bonds they can do it to any extent.

Mr. MARSH. It would be a question according to the lawyer whom I should like to appear before this committee next week, as to what extent States could tax Federal securities. He feels it is a very questionable thing. On the other hand, the Federal Government can tax State securities and the Federal Government has got to retire its securities in a hurry. I will say that I think you are going to have to have a capital levy in order to pay the public debt, if the Federal Government allows things to go on as to-day, where 4 per cent of the people have four-fifths of the national wealth. I think the American people are too patriotic to stand for that kind of hogging. They are in a mood to do something of the kind, and I think are thinking on that point quite vigorously.

Senator GORE. There isn't any doubt but what the people are having to pay the war bonds two, three, and perhaps four times over. That was one reason why I wanted to pay the expenses of the war out of the profits of the war as we went along.

Mr. MARSH. I remember that you made that point, Senator Gore, at the time.

Now, there are only two more points I want to make. We suggest also a tax on corporation surpluses. The report of the Commissioner of Internal Revenue for 1929, on pages 338 and 339, and on page 42, gives the following facts:

For 1929 the total net income of 259,849 corporations reporting net income was $11,653,886,000, of which 1,042 had $7,002,709,440 of net income, while at the close of that year the surplus and undivided profits of 239,637 corporations with net income whose balance sheets were tabulated, was $50,725,383,062, but 1,314 of them had nearly three-fifths of the total surplus and undivided profits, amounting to $29,388,368,967.

We suggest a direct tax upon the surplus and undivided profits of corporations. There is as big a concentration in that as in net personal income, and there is certainly no question of the constitutionality of such a tax upon the surplus and undivided profits of corporations.

In closing we suggest that you limit yourselves to direct taxation. I think everyone agrees, or at least many economists and others agree, that an indirect tax costs the consumer anywhere from 50 per cent up more than the Government gets, yes, up to twice as much as the Government gets. The House Committee on Ways and Means suggested——

Senator REED (interposing). Mr. Marsh, is that true of taxes on tobacco, for example?

Mr. MARSH. I think it is about half as much, although I do not know exactly. Of course in a time of falling prices it is much more difficult, admittedly, to shift the tax. I agree to that. But I believe prices are so low for a good many things that there will be some increase. And further, as you have doubtless seen, as to goods under price-fixing agreements, the retail price has not fallen as retail prices of other goods have. But as a general proposition I think nearly every economist agrees that an indirect tax always costs the consumer a great deal more than the Federal Government gets from it. I believe one of the principles of taxation we have to adhere to this year is to have it so as to penalize as little as possible the payer and get the maximum for the Federal Government.

Senator COUZENS. For the purpose of a question, let me give you an illustration: Assuming an article was selling for $1 and the Government put a 10 per cent sales tax on it, and the retailer sold it for $1.10, do you mean to say the Federal Government would not get the whole of the 10 cents from it?

Mr. MARSH. Oh, yes; if it insisted upon collecting it.

Senator COUZENS. Well, I mean for the Government to do that.

Mr. MARSH. But ordinarily a seller will try to raise the price more than 10 per cent tax: I mean what he gets in order to pay the 10 per cent tax over to the Government.

Senator COUZENS. How would he do it in the case of a retail sales tax? I am merely asking you for the purpose of getting information.

Mr. MARSH. He could not do it of course if his competitors were constantly reducing their prices and reducing their profits. But it would tend, of course, to price-cutting unquestionably, and limit the profits, which might be a good thing, might it not? Ordinarily, if a retailer is just breaking even he has to advance the tax when he buys the goods, and he is going to add something for advancing the tax and taking the risk incident thereto.

Senator COUZENS. But he does not advance the tax until he sells the goods.

Mr. MARSH. Do you mean the retailer?

Senator COUZENS. I say, he does not pay the tax when he buys the goods.

Mr. MARSH. He does not pay the tax when he buys the goods?

Senator COUZENS. No. If it is a retail sales tax he does not pay it until he sells the goods.

Mr. MARSH. Well, he figures the cost of the business and the price he has to pay plus the 10 per cent tax. If he does pay it himself, it is a part of his cost of doing business, isn't it?

Senator COUZENS. I am not talking about his paying it himself. It is the same as we apply to the theater tax. If the seat is 50 cents and the theater tax is 10 per cent, obviously the man collects 55 cents and the Government gets the 5 cents, doesn't it?

Mr. MARSH. Yes, sir.

Senator COUZENS. What is the difference between that and a retail sales tax?

Mr. MARSH. There may not be any difference so far as the Government getting the revenue is concerned, but it puts the Government in the position of picking the pockets of poor individuals, and that is what I object to.

Senator COUZENS. I am not in favor of a general sales tax but am asking you for information.

Mr. MARSH. I know you are not, Senator Couzens.

Senator COUZENS. But what you are trying to impress upon this committee, and perhaps the audience, is that the Government does not get the tax, and I contend that it does.

Mr. MARSH. Well, Senator Couzens, perhaps I did not make myself clear.

Senator COUZENS. You said the Government did not get all of the tax.

Mr. MARSH. No; Senator Couzens, I think you misunderstood me. What I meant to say was this, that the consumer pays more than the amount of the tax which the Government gets.

Senator COUZENS. And I contend that they do not any more than they do in the case of a theater tax.

Mr. MARSH. The theater tax is on one article where you have a printed price. When the ordinary purchaser goes into a retail store, how does he know what the tax is, and what the first price of the goods is? And if the retailer is any good he will mark the price up to more than the amount of the tax. Or if he did not he would not be a good business man.

The CHAIRMAN. Well, if his competitor did not do that he would not get any trade.

Mr. MARSH. Of course, he might have an agreement.

The CHAIRMAN. Oh, yes, he might have many things.

Senator COUZENS. Mr. Marsh, I may have to leave the committee room in a moment. You spoke about asking for the privilege of having a constitutional lawyer come here to argue that income from State and municipal securities was taxable because the Federal Government does not tax the instrument. I wish you would have him draw up an amendment in order to include that idea in this tax bill. I should like to propose it because I think it is a perfectly justifiable proposition.

Mr. MARSH. All right, Senator Couzens, I will write to him to-day about it. And I will say to you that I think there are some people now with the Federal Trade Commission and who have access to a great deal of data up to date which no private person can get, if you would ask them to furnish that data.

Senator COUZENS. Have you any record as to where the Supreme Court of the United States has passed upon taxing income is the same as taxing the instrumentality itself?

Mr. MARSH. No. I discussed that with the lawyer I refer to, and he can go into the details of that.

Senator COUZENS. You do not know whether there is any Supreme Court opinion about that or not?

Mr. MARSH. I think it is doubtful. And what I stressed before is, that the Supreme Court is made up of gentlemen who have been attorneys for great corporations, and they know exactly what we are up against.

Senator SHORTRIDGE. Now, Mr. Marsh, I do not think that is a proper remark. The inference to be drawn would be that the Supreme Court is influenced by what you have just said, namely, that perhaps some of its members formerly represented certain groups.

Mr. MARSH. Senator Shortridge, could you name one member of the Supreme Court of the United States who did not represent corporate interests?

The CHAIRMAN. Oh, Senator Shortridge, you must remember that that is a very moderate statement for Mr. Marsh to make.

Senator SHORTRIDGE. That may be so, but I think every member of the Supreme Court of the United States is an honorable man, and abstracts himself from all partisanship, abstracts himself from all considerations of prior employment by anybody.

Senator COUZENS. Why do Senators have a discussion of that here anyway?

Senator SHORTRIDGE. That is what I think.

Mr. MARSH. I was referring to the fact that as business men they know we are up against a proposition we never faced before, and

that the Constitution, if it is to survive, has got to be just as Mr. Justice Brandeis says, adaptable to existing conditions. I was not in this instance trying to criticize the Supreme Court.

Senator SHORTRIDGE. Well, do you think that Mr. Justice Brandeis, or Mr. Justice McReynolds, or Mr. Chief Justice Hughes, or any other one of the Justices of the Supreme Court of the United States, is influenced in his decision in the way that you inferred by your statement?

Mr. MARSH. The inference which you draw and impute to me, Senator Shortridge, is your privilege. But it is my privilege to disavow any such inference, and point out that we have had honorable men on our Supreme Court, but that our system has gone to smash, and you are here to deal with a system that has smashed, and whether considering the way these people are being dealt with we can have prosperity with 4 per cent of the people having four-fifths of the money.

Senator SHORTRIDGE. But you made a reflection upon the Supreme Court of the United States.

Mr. MARSH. I made a statement which your intimate acquaintance with the members of the Supreme Court of the United States led you to consider a criticism. It was not so intended. You have a perfect prerogative to make that inference as you know them better than I do.

Senator REED. Oh, Mr. Chairman, let us get back to a discussion of the bill that is before the committee.

The CHAIRMAN. Certainly.

Mr. MARSH. All right, but I want to say that I can not be bluffed by any Senator.

Senator SHORTRIDGE. There was no attempt on the part of any Senator to bluff you, and I want to say that you certainly can not bluff me.

Mr. MARSH. All right.

The CHAIRMAN. Oh, go ahead with your statement.

Mr. MARSH. Mr. Chairman, we want to ask that next week your committee will hear Rev. Dr. John A. Ryan, Rabbi Stephen S. Wise, and other representatives of churches and other organizations who are members of the joint committee on unemployment, who will ask that income taxes and surtaxes be raised. And also to emphasize that this Budget which you are trying to balance must include the Federal Government's responsibility for the unemployed. I would ask that you permit them to appear, and I will try to arrange for any day that is convenient to the committee. Also to have some economists and lawyers who will speak on the direct aspects of the situation.

Senator COUZENS. Mr. Marsh, have you any suggestion as to a limit for the exemptions that ought to be placed in the income tax law?

Mr. MARSH. I will speak personally on that matter, and I think $1,000 for a single man and $2,500 for a married person is probably as low as you can go in justice.

Senator REED. That is what the House bill did.

Mr. MARSH. Yes. You might shave it to $750 for a single man and $2,000 for a married man, because, of course, you have an exemption for children of $400 for each dependent. But I should like to stress this point, that the great bulk of the additional revenue must

be derived from increasing the normal tax rates and increasing the surtaxes on people with incomes of $4,000 up to $25,000 or $40,000. You can not really depend upon the top brackets, I will say very frankly. I know that you are going to hit campaign contributors and city editors all over the country, and that you are going to hit me and the most of the groups working on this unemployment problem, but we ought to pay more and have got to pay more, and we are not trying to pass the buck to a few wealthy people, because they can not pay it if you take 100 per cent of their incomes. You have got to follow the example of Great Britain, which started with surtaxes at a low rate.

Senator SHORTRIDGE. I understood you to speak of estate taxes, that you thought the greater brackets should bear up to 75 per cent.

Mr. MARSH. On an excess of $10,000,000.

Senator SHORTRIDGE. Yes; did you say the full 75 per cent?

Mr. MARSH. Yes.

Senator SHORTRIDGE. Well, now, there would be 25 per cent of your estate levy if the Government took 75 per cent of it.

Mr. MARSH. Oh, no; that is a misunderstanding, I think. I heard Senator Reed over the radio the other day say we were going to take 72 per cent of certain incomes, and we are talking about estates now, but a progressive rate means that you have a certain rate to pay on a certain amount, and then you raise the rate, but it does not mean 72 per cent of the total.

Senator COUZENS. Certainly not.

Mr. MARSH. It even means less than half of that percentage. The proof of that is that last year we got only 3½ per cent of the net taxable income, and with all our surtaxes we got a miserably small amount. No; I would very much prefer that you put it so folks could know what is happening as a direct tax, and say it is 50 per cent on an income of $100,000.

Senator SHORTRIDGE. But what about estates?

Mr. MARSH. This progressive idea is somewhat confusing, but you can not get away from it now. But I think the misunderstanding should be corrected. No one has suggested 72 per cent on all incomes, but 72 per cent on part of the excess of what anybody should have. No patriot will retain an income of $50,000 if it means levying a tax upon 8,000,000 unemployed.

Now, Mr. Chairman, may we understand that we may instruct the witnesses from the joint committee on unemployment to appear before your committee next week?

The CHAIRMAN. If the gentleman makes application to the chairman of the committee I will tell him.

Mr. MARSH. But they asked me to arrange it to suit the convenience of yourself and the committee.

The CHAIRMAN. If he comes down here I will give him an opportunity the first chance we get.

Mr. MARSH. We will appreciate it, inasmuch as they are very busy men.

STATEMENT OF CHESTER H. GRAY, WASHINGTON REPRESENTATIVE OF THE AMERICAN FARM BUREAU FEDERATION, WASHINGTON, D. C.

Mr. GRAY. Mr. Chairman, I wish to inquire this morning, if I may, first, what is the pleasure of the chairman and of the committee in relation to the testimony of the American Farm Bureau Federation? You have an announced schedule in which for this morning you are listing income-tax rates, and then for subsequent days this week other rates. However, do you wish myself and the other farm organizations to make our full presentation this morning?

The CHAIRMAN. Yes. We have them all down here on the first sheet of the calendar. Mr. Fred Brenckman of the National Grange and John A. Simpson of the National Farmers' Union. And you are the first one called, on behalf of the American Farm Bureau Federation. You may proceed.

Senator REED. Better cover the whole subject, Mr. Gray.

The CHAIRMAN. And, Mr. Gray, may I say this, that wherever there are items appearing in the House hearings I wish you would not repeat those, because we use the House hearings as well as we do the Senate hearings, and we hate to have to take time here to examine both of them. So if you will eliminate as much as you can the statements you made in the House it will help the committee a great deal.

Mr. GRAY. I shall try to do so, and I think I can succeed in complying with that request.

I suppose that it is unnecessary to say in the beginning that the approach of the Farm Bureau to the tax question, as well as the approach of every other organization and the Congress itself is, first, to balance the Budget. Whether that Budget is going to be balanced next year or the second year from now is a debatable point, but need not be gone into. We are going to balance the Budget as soon as we can. It is with that purpose and from that point of view that the American Farm Bureau Federation desires to submit this morning to the committee its revised schedule of tax items which, in our judgment, will balance the budget in an early year.

The CHAIRMAN. What we hope to do is to balance the Budget this coming year.

Mr. GRAY. That is what we all hope to do.

The CHAIRMAN. That is what we are going to try to do at this time.

Mr. GRAY. Whether that can be done will depend upon the collections from these revised rates which will be ordered by Congress in due time.

The CHAIRMAN. All right; you may proceed, then, Mr. Gray.

Mr. GRAY. On that basis we are contemplating in the American Farm Bureau Federation a possible economy in government of perhaps $150,000,000. Some estimate a great deal more economy than that. But in our judgment if the Government next year can reduce its massed budgetary expense one hundred and fifty millions of dollars it will have accomplished as much as reasonably can be expected.

Then we have eliminated also, Mr. Chairman, and gentlemen of the committee, any payments on the sinking fund, which run between

$400,000,000 and $500,000,000 per year. We have eliminated that arbitrarily until the Budget can be balanced. And then we hope that those payments will be resumed as of former years.

Taking up now the schedule that we have for your consideration this morning, which will be substantially, I assume, the program to be presented to you later by the National Grange and the Farmers' Union by Mr. Brenckman and Mr. Simpson, respectively, let me say that for the income tax rates we desire to retain the rates in the House bill which bring in or are designed to bring in approximately $122,000,000 in excess of rates formerly and now in effect.

We have a hope and make the recommendation to this committee that in regard to the surtaxes the rates in the so-called Swing amendment will be considered for incorporation in the bill.

Senator REED. What are those rates, Mr. Gray?

Mr. GRAY. Without defining them in detail, let me say that they reach a maximum of 65 per cent. You can find them, Senator Reed, on page 7524, April 1 issue of the Congressional Record.

Senator REED. I remember hearing about that. I did not know them by name.

Mr. GRAY. They were first adopted by the House, then were disallowed, and another rate schedule for surtaxes was adopted by the House reaching a maximum of 45 per cent.

Senator REED. Would you apply those rates to earned income?

Mr. GRAY. Yes.

Senator REED. That would mean 72 per cent altogether on earned income of the highest bracket.

Mr. GRAY. On the very highest bracket. It would be so.

Senator COUZENS. Do you know of any earned income that reaches 72 per cent?

Mr. GRAY. No, not at the present time.

Senator REED. Where does the 65 per cent rate begin to apply?

Mr. GRAY. Above five million dollars per annum. The information along that line might be helpful to the committee, which is contained in a recent summary in the National City Bank Bulletin of April, 1932, which, if it please the committee, I should like to have offered for the record.

(The summary in the National City Bank Bulletin of April, 1932, presented by Mr. Gray, is here printed in the record in full, as follows:)

Summary of business profits for the years 1929–1931

[Net profits are shown after depreciation, interest, taxes, and other charges and reserves, but before dividends. Net worth includes book value of outstanding preferred and common stock and surplus account at beginning of each year]

No.	Industry	Annual net profits (fiscal years)			Per cent change		Net worth Jan. 1, 1931	Rate of return (per cent)		
		1929	1930	1931	1930–31	1929–31		1929	1930	1931
13	Agricultural implements	$75,650,000	$42,198,000	[1] $6,057,000			$587,880,000	14.3	7.3	
17	Amusements	42,077,000	33,081,000	11,713,000	−64.6	−72.2	303,319,000	17.0	11.8	3.9
28	Apparel	21,430,000	7,735,000	[1] 2,904,000			167,133,000	12.5	4.4	
26	Automobiles	355,909,000	160,600,000	57,114,000	−58.2	−81.1	1,690,247,000	22.0	9.2	4.0

[1] Before certain charges.
[2] Preliminary.
[3] Figures refer to shareholders only. Because of the large proportion of bonded indebtedness, actual return on the property investment is less than the above.
[4] Fire and casualty. Figures represent total shareholders' gains or losses on both underwriting and investments.

Mr. GRAY. In this Bulletin is this summary which comes from 1,620 industrial groups over the Nation, 1,302 of which are individual manufacturing and trading groups, the rest being the railroad groups and such as that.

Senator BINGHAM. What is the date of that?

Mr. GRAY. The date of it is April, 1932; the last Bulletin of the National City Bank. In that Bulletin is shown, among other data, the rate of return in percentages of 1929 and 1931 with 1930 compared. And although, as is obvious, 1931 does not show as hopeful a condition of rate return as in 1929, it still shows that for a great group of industrials there were in 1931 fairly good returns.

Senator REED. You are speaking of dividends now?

Mr. GRAY. Returns in dividends, surely. The Bulletin, I believe, would be helpful to the committee if it could be put into the record, and without any further comment on it I shall submit it for the record.

Senator BINGHAM. We have not got it before us. How does it bear on your recommendation of 65 per cent surtax?

Mr. GRAY. It is corollary, Senator Bingham, to that idea in that it shows that a fairly representative per cent of the industrial groups in the United States in 1931 was making dividends and consequently could stand increased Federal taxation. Whether or not these groups can stand the rate of surtaxes as in the Swing amendment is a thing that all of us will have to consider more, and perhaps a little bit more thoroughly, than we have done to this date; and consequently in recommending your attention to the Swing amendment, I am not asking unequivocally that the rates of the Swing amendment be incorporated in whatever bill you shall report, but that you consider it in making up your surtax rates. And if you should include the Swing amendment you will add to the income derived from individual income tax rates about $17,000,000 a year.

Senator BINGHAM. Provided those persons do not buy nontaxable bonds, of which there are $12,000,000,000 outstanding.

Mr. GRAY. Will you pardon a correction, Senator Bingham, in that regard as to your total? There are slightly in excess, according to the estimates I have, of $20,000,000,000 of tax-free securities out at the present time.

Senator BINGHAM. I thank you for the correction.

Senator GORE. Does that include national, State and municipal—all three?

Mr. GRAY. All kinds, Senator GORE. All kind of tax-free securities are now slightly in excess of $20,000,000,000.

Senator GORE. I have not figured them out. I have seen three statements; one of them was that the total, including those that are entirely exempt and partially exempt, runs up to about $36,000,000,000.

Mr. GRAY. There are different estimates. And referring to Chairman Smoot's suggestion a while ago, that we do not duplicate too much of what was in our House testimony, may I refer the committee to a table which was submitted to the Ways and Means Committee from governmental sources showing for a recent 15-year period the gradual growth of tax-free securities amounting in 1931 to about $20,000,000,000.

Senator BINGHAM. You have simply made my point a little stronger, Mr. Gray, that quite a lot of these tax-exempt securities can be ob-

tained, and did we not find before, when we have very high surtaxes, that we received more income from lowering the surtaxes than when the surtaxes were high?

Mr. GRAY. That was true at one time. And you, or any other group writing a tax law realize, of course, that there is a point beyond which a tax rate becomes nonremunerative. It reaches beyond the point of usefulness; destroys its own efficacy.

Senator BINGHAM. I remember when William G. Rockefeller died that there were discovered in his portfolio some $27,000,000 worth of tax-exempt securities.

Mr. GRAY. Dealing with that question further, may I say, Mr. Chairman, that the American Farm Bureau Federation 10 or 12 years ago enunciated its position, which it has not modified since, that any tax structure is not complete so long as in that structure there is a haven of tax exemption, to which haven large wealth can flow. Accordingly in this schedule which I am seeking as briefly as may be to analyze this morning, we are suggesting to this committee that there be in this forthcoming revenue law a tax on the income of tax-exempt securities.

Senator KING. You mean Federal tax-exempt securities?

Mr. GRAY. That would perhaps be the logical elimination. Pardon me, you had a question, Senator Reed?

Senator REED. What kind of faith is that, Mr. Gray, to issue a tax-exempt bond of the United States and then break the promise and tax it?

Mr. GRAY. There is only one argument to justify it, and that is the necessary argument of balancing the Budget. Otherwise it would be a wholly untenable proposition.

Senator BINGHAM. That would justify a man in helping himself to my pocketbook if he could not get money any other way, would it not?

Mr. GRAY. No; pardon me.

Senator GORE. Why no quit paying the debt?

Mr. GRAY. We are not advocating the taxing of the capital invested in tax-exempt investments, but taxing the income from the tax-exempt securities.

Senator REED. However, we have sold them with the agreement that we will not do that.

Mr. GRAY. No; you have not given that agreement specifically; only by implication have you given that agreement. You have given the agreement by the Federal Government that you are not going to tax the capital invested in those things.

Senator REED. Oh, no.

Senator BINGHAM. Oh, no; the income.

The CHAIRMAN. Tax exempt.

Senator REED. Principal and income.

Mr. GRAY. There is only one argument, as I see, Senator Reed, to justify that position, and that is the argument as to the necessity of balancing the Budget, which requires all citizens and groups of citizens to bear a part of the load.

The CHAIRMAN. Do you think for a moment that if that question were taken to the Supreme Court that the Supreme Court would sustain it?

Mr. GRAY. I would not assume, of course, to say what the Supreme Court would do.

The CHAIRMAN. I asked you what you thought.

Mr. GRAY. From other decisions the Supreme Court has given, under modern conditions, recently, it might support that kind of a Federal tax.

Senator GORE. I would like to interject here that the Supreme Court in the Trapp case held that a tax exemption which constituted a part of the consideration of the contract was a vested property right entitled to protection under the fifth amendment.

Senator HARRISON. You spoke, Mr. Gray, of increasing the rate in the higher brackets to 65 per cent, according to the Swing amendment. The Swing amendment did not deal with the lower brackets at all. It started with $100,000 and then lifted it up. What is your reaction with reference to increasing the income tax in the House bill between $5,000 or $10,000 and $100,000? Do you think it is sufficient in the House bill?

Mr. GRAY. The House bill, Senator Harrison, very largely adopted the schedule of rates which the Farm Bureau advocates, so I would answer your question by saying that the schedule of tax rates, as in the House bill applicable to the income tax is worthy to be copied on the Senate side.

Senator GEORGE. You are not making any recommendations with respect to that?

Mr. GRAY. I am not making any recommendations with respect to changing those rates.

Senator GORE. Do you mean the 40 per cent?

Mr. GRAY. Pardon me?

Senator GORE. Do you mean the 40 per cent?

Mr. GRAY. No; I understood Senator Harrison's question to apply to the income tax and not the surtax.

Senator HARRISON. Yes. Well, the surtaxes between $10,000, say, and $100,000; you do not advocate any change in the House bill on those? You merely want to go about the $100,000 income according to the Swing amendment, I understand?

Mr. GRAY. I get your point more thoroughly now. We advocate a $50,000 exemption instead of $100,000, to begin with.

Senator HARRISON. You are talking about the estate taxes now. I am talking about the income taxes and surtaxes. The Swing amendment did not have anything to do with the estate tax. That was the Ramseyer amendment.

Mr. GRAY. Yes.

Senator HARRISON. And the Swing amendment dealt with incomes above $100,000.

Mr. GRAY. That is right.

Senator HARRISON. Would you go below $100,000 and make any changes in the House bill, or would you leave that intact?

Mr. GRAY. Leave it as it is in the Swing amendment or the $100,000 starting point.

Senator GORE. Your point is that it ought to be made 65 per cent, the highest rate?

Mr. GRAY. That would be the maximum rate for incomes of $5,000,000 and above annually.

Senator GORE. Yes. Now this Bulletin of the National City Bank that you submitted showed that the industrial and trading companies for 1929 had profits amounting to $3,500,000,000 and in 1930 amount-

ing to $2,000,000,000 and in 1931 amounting to about $715,000,000, is that correct?

Mr. GRAY. You are approximately correct, as I remember the figures.

Senator GORE. In 1929 the personal income brought a billion dollars and the corporate income brought a billion dollars. Each one brought a billion dollars.

Mr. GRAY. Yes; in that year.

Senator GORE. Yes. Now that category of concerns had dropped down to about $715,000,000?

Mr. GRAY. That is true, as I remember the figures.

Senator GORE. And you want the tax raised to 65 per cent, the summit of the surtax?

Mr. GRAY. We should desire that the committee consider the Swing amendment, which has a maximum of 65 per cent in surtaxes, in writing this bill, and if that 65 per cent does not go beyond the point of profitable returns, adopt it.

Senator GORE. That would make the surtax and the normal amount to 72 per cent, would it not?

Mr. GRAY. Yes, it would.

Senator GORE. And some of the States have an income tax of 15 per cent, do they not? That would be 87 per cent.

Mr. GRAY. Some of them have.

Senator BINGHAM. Be careful, Senator. You will be getting above par presently.

Senator GORE. I was wondering if you wanted to exclude the States entirely from the income tax field, or retard the movement that had been in effect in some of the States with regard to the income tax.

Mr. GRAY. No; that is not our desire. And I do not think that anyone who testified before the Ways and Means Committee had the thought that these extraordinary rates that we are advocating, and in some form or another would be written in the law, should continue except for a temporary period. Whenever the Budget is balanced, which we hope will be within the 2-year period consummating the life of this law, these rates automatically will be terminated by the writing of the next revenue bill. And we would not advocate, Senator Gore, the imposition of rates of this nature except that the emergency faces us of balancing the Budget.

Senator GORE. Yes; we have got to get taxes wherever we can. But I have been wondering whether these incomes are not largely phantom incomes in this depression? I do not know of anybody that has escaped it.

Mr. GRAY. Some of them are, there is no question about that.

Senator GEORGE. You are not suggesting that the income or estate taxes imposed by whatever act we arrive at expire at a given time?

Mr. GRAY. No.

Senator GEORGE. As was done with reference to certain of the excise taxes in the House bill?

Mr. GRAY. That is not our recommendation. Our recommendation is that whenever the Budget is balanced, and it is definitely known to be balanced, which likely will not be for another 2-year period, then in the writing of the next revenue bill you can adjust the rates in keeping with the conditions that exist at that time.

Senator GEORGE. Yes; that is, Congress itself would simply write another act. That is, of course, another proposition. I was simply wanting to get clear your position on the point that I raised.

Mr. GRAY. Senator Couzens, you had a question?

Senator COUZENS. I have to go to the meeting of the Committee on Banking and Currency. I was wondering whether you were going to deal with the question of taxes on transactions on the commodity and stock exchanges? Do you want to have such taxes imposed?

Mr. GRAY. That is in our list. If you desire, Senator, I will take that up right now.

Senator COUZENS. No. I will read it in the record.

Mr. GRAY. I will take that up later.

Senator GORE. What was that, Mr. Gray?

Mr. GRAY. Tax rates on transactions on commodity exchanges.

Senator GORE. Yes. I also have to go to the meeting of the Committee on Banking and Currency. Do you favor or oppose that?

Mr. GRAY. We favor it.

Senator KING. On commodity exchanges as well as stock exchanges?

Mr. GRAY. On commodity as well as stock exchanges.

Senator GEORGE. The same as the House rates?

Mr. GRAY. Since that question has been brought up at this time it had just as well be discussed, because there is no particular order in which these things might be discussed. We are advocating a progressive rate on speculative sales on stock exchanges graduated from one-half per cent to 2 per cent of the gross sales. And the same kind of a graduated scale on speculative sales on the grain and cotton exchanges, which would bring in really sizable amounts of money to the Federal Treasury. Such taxes have never been imposed in times prior.

Senator CONNALLY. Would you make that assessable against the operations of the Farm Board on the exchanges?

Mr. GRAY. If its transactions fell within the definition of the Internal Revenue Bureau as to a speculative transaction.

Senator BINGHAM. What is a speculative transaction?

Mr. GRAY. This sort of a proposal, Senator Bingham, if it were written into the law would have to be made conditional upon rules and regulations promulgated by the Bureau of Internal Revenue, in which rules and regulations speculative trading would be defined.

Senator BINGHAM. No; I asked you what your idea was.

Mr. GRAY. You can approach it from two points of view. You could say that whenever the speculation exceeded a certain amount per day or a certain amount per individual or a certain amount per commodity it became speculative. Or you could approach it from the other point of view of letting the Internal Revenue Bureau devise any other yardstick which it wanted to devise in conjunction with the other departments which have the regulatory control of these exchanges, and thereby get at the yardstick to determine speculation.

Senator BINGHAM. I am not so sure of the wisdom of these bureaus, but I would like to have your definition of a speculative transaction that ought to be taxed two per cent.

Mr. GRAY. My definition of it would be just as it is in Senator Capper's bill now pending before the Committee of Agriculture of the Senate, in which he says that a transaction in excess of 2,000,000

bushels of grain by any one operator constitutes a speculative transaction, which amount may, at the discretion of the Secretary of Agriculture be reduced to 500,000, leaving the Department of Agriculture, through the Secretary, the medium to devise what shall constitute speculation. Now in cotton similar amounts would be 50,000 bales the maximum, and ten or fifteen thousand bales the minimum, compared to 2,000,000 bushels of wheat and 500,000 bushels of wheat, as in the Capper bill.

Senator GORE. Would you require it to be speculative at both ends, Mr. Gray, or if either end is speculative would you place that in the category of speculative transactions?

Mr. GRAY. What do you mean by both ends, Senator Gore?

Senator GORE. Well, I mean that a man might be selling an honest hedge against spot cotton or cash wheat. It might be speculative at both ends, or it might be just a short sale or a long purchase.

Mr. GRAY. No: we have no intention of putting a Federal tax on actual cash transactions either on the commodity or stock exchanges, nor on what is ordinarily called legitimate hedging. Only on speculative transactions.

Senator GORE. Well, you know often a man could not hedge at all unless some speculator was at the other end of it.

Senator THOMAS of Idaho. Mr. Gray, do I understand that you say that you favor taxing only speculative transactions on the exchanges, either the stock or on the grain exchanges?

Mr. GRAY. That is our position. If you put a tax on the commodity exchanges; for instance, if you put a tax as is now carried in the House bill of whatever the rate is—it escapes me for the moment——

Senator HARRISON. One-fourth of 1 per cent.

Mr. GRAY. One-fourth of 1 per cent.

And the transactions run into millions of bushels and millions of bales, it cumulates as a pretty heavy burden on the actual trading. But if you get into the speculative side, which has been running rampant on the commodity and the stock exchanges both, in recent years, you put a burden on transactions which are in many cases, such as short sales, harmful in the ordinary course of events to the trading, and also bearable by those who conduct the business on those exchanges. For instance, may I submit, Senator Harrison, exactly in line with your question, that taking the Chicago wheat pit as example, the commissions charged on cash wheat in 1900 were one-half cent a bushel. In 1905 they were 1 cent a bushel. In 1917 they were 1 per cent of the value, with the minimum of 1 cent per bushel. In 1921 they were 1 per cent of value, with the minimum of 1½ cents per bushel. And that is where they stay to-day. And although in 1921 wheat was a fairly good price, and now it is at 50 cents, the commission is the same now as it was in 1921, which makes the rate that the farmer must pay to get his goods sold unbearably high compared to 1921, in proportion.

Turning now to the wheat futures on the Chicago Board of Trade, in 1900 the commission was one-eighth of 1 cent per bushel; in 1905, one-quarter of 1 cent per bushel; in 1906, one-eighth of 1 cent per bushel; in 1911, three-twentieths of 1 cent per bushel; in 1919, one-quarter of 1 cent per bushel—all of these being applicable to nonmembers of the board, with members getting one-half those rates. The rate for

1919, as I quoted, one-quarter of a cent per bushel on futures, as I have the data, is now continuing.

What I am meaning by this data, Senator Harrison, is that the commission men who are dealing in cash and in future wheat on the Chicago Board of Trade, as well as those who deal in what I have denominated speculative transactions, are getting just as large commissions as they got several years ago when prices were higher; and this kind of a rate schedule which we are advocating, beginning at one-half per cent, and running up to 2, is not exorbitant in comparison with the commissions that they are getting.

Senator GORE. You figure, Mr. Gray, that the speculators could not and would not pass that back to the farmers, and that the burden of this tax would not finally fall on the farmers?

Mr. GRAY. I am not figuring that, Senator Gore, because you would have to confess that a part of this, maybe all of it, maybe in some instances none of it, would go back to the farmer.

Senator GORE. I think that is an important point.

Mr. GRAY. If it were on the stock exchange a part of it would go back to those who own the stocks and bonds. But we can not avoid that in a revenue bill. So far as I know, if you put any rate on these things at all the same thing would apply.

Senator THOMAS of Idaho. Would you change the present provision in the House bill, Mr. Gray, to limit the stock transfer tax only to speculative transactions?

Mr. GRAY. Yes, because as the House bill stands now, Senator Thomas, I fear that the whole burden would come back on the farmer on the commodity exchanges. Whereas if you transfer it to the speculative field, although it may in part come back to the farmer it will not wholly come back to him; and it will have the secondary and special effect somewhat of curtailing short selling, which we are seeking to do by other kinds of legislation now pending before the House and the Senate.

Senator THOMAS of Idaho. That applies, of course, to the grain and the cotton, but I also had reference to the transfer of stock. Corporation stock on the stock market.

Mr. GRAY. That is a portion of our schedule of tax items, and there is provided in the Farm Bureau schedule what you might call a stamp tax for those transfers.

Senator HARRISON. Mr. Gray, as far as I am concerned this tax on stock sales and produce sales is about the hardest nut to crack in this whole proposition, and I want all the information that I can get with reference to it. As I understand you, you think that the tax is too high and is liable to affect legitimate business, as it is incorporated in the House bill?

Mr. GRAY. It seems so.

Senator HARRISON. And you would change it so as to apply a tax on speculative sales, but not on legitimate sales, as I understand it?

Mr. GRAY. On legitimate sales, whether the word "legitimate" applies to hedging or cash transactions. The incidence of the tax, under the Farm Bureau recommendations, would apply to but speculative transactions. We are hitting at what is ordinarily called short selling, but which is a terminology that covers a great many transactions.

Senator HARRISON. You would wipe out short sales altogether?

Mr. GRAY. If we could.

Senator HARRISON. If you could.

Mr. GRAY. But this would not do it.

Senator KING. You would not do that by the taxing power, but by direct statute punitive in provision?

Mr. GRAY. We are advocating a bill on the House side and on the Senate side which would, by their direct legislation, either severely limit or exterminate short selling. This, as proposed in the revenue bill, will have a secondary effect in the same line, but not to the point of extermination.

Senator HARRISON. In other words, you would think that the present law even would be more preferable than the law as written in this bill, if you had to choose between the two?

Mr. GRAY. No, I believe, Senator Harrison, choosing between the House bill as written and the present law, we in the Farm Bureau would take the House bill.

Senator HARRISON. You would rather have the House bill?

Mr. GRAY. But we would like to have it modified in the way I have suggested to you this morning.

The CHAIRMAN. What are the particular reasons why you would prefer to have it? As far as I am concerned I do not see that there is very much difference.

Mr. GRAY. Looking at it, Senator Smoot, as I am almost required to do, from the point of view of the commodity exchanges, dropping out for the present the stock exchanges, we fear that the House mechanism in this particular tax item would be a burden on the farmer who has the commodity to sell. It would be passed back to him through his commission charges, and would deduct whatever the tax is from the price per unit that he secured on his commodity. That is the fundamental objection that we have in the House bill.

Senator GORE. That is probably true.

Mr. GRAY. Whereas if you put it on the speculative basis you get away from that, Senator Gore, as I suggested a while ago, in part, and put the burden more directly where it will be paid, on the speculators and manipulators; and if in part it should be turned back and passed back to the farmer it will be only so in part.

Senator REED. Have you thought, though, what that would give in the way of encouragement to the establishment of bucket shops?

Mr. GRAY. Somewhat.

Senator REED. All speculative transactions would tend to go through bucket shops, would they not?

Mr. GRAY. That is a very noticeable development in recent years.

Senator GORE. In practical truth it would be segregating the speculative and the nonspeculative transactions.

The CHAIRMAN. I do not see how you can tell what is in a man's mind when that transaction is undertaken.

Senator GORE. You almost have to search their minds.

Senator HARRISON. Mr. Gray, you are wrong in your figures. In the House bill it is one-twentieth of 1 per cent on produce. One-fourth of 1 per cent on stocks.

Mr. GRAY. Well, even that is a quite noticeable sum when it is laid on the unit of the farm commodity flowing into the markets. Now the same thing would apply to the unit of the stock transaction,

but I am not speaking of that so much, because that does not as directly concern agriculture as the other does.

Now continuing, Senator Smoot, and gentlemen of the committee, it is evident that the American Farm Bureau Federation is not trying to lay all this increased Federal burden on some group other than agriculture; but we are approaching it from the point of view that every citizen, no matter what group he may be in, has got to bear a portion of the tax burden. So we desire that the conditions of the House bill relative to exemptions of the individual be retained, being stricken down as they are now to a thousand dollars for the unmarried person, $2,500 for the married person, with $300 for the dependent. And if that does not broaden the thing out so that you get enough people on whom to apply this tax, we in the Farm Bureau by our most recent resolution, would not be at all averse to your still further reducing those exemptions.

We are in favor, whether it hits agriculture or industry, citizens in farming or citizens in town life, of broadening this tax-income base of the Federal Government so that we get more people paying the income tax to the Federal Government.

Some people object to that because they say it adds to the expense of collection if you do not get more than $5 from the individual. It adds only a slight trifle more; because now most of those people have to send their returns in to the Bureau of Internal Revenue every year. Their returns have to be audited and checked and scrutinized, and it would cost only a few cents more to get the check from them to pay their Federal income tax than is the cost at the present time.

Senator HARRISON. You have no objection to the increased normal tax in the House bill, have you?

Mr. GRAY. None whatever.

The CHAIRMAN. What would you suggest on the exemptions? Would you suggest a reduction to $1,000.

Mr. GRAY. I would not suggest less than $1,000 on the unmarried person, perhaps. The married person's exemption might go a bit lower. Perhaps $500 lower. The exemption for the dependent might go down to $250, if you choose to make it so.

Senator HARRISON. It is $400 now.

Mr. GRAY. It is $300 in the bill pending. It was $400 in the law.

Senator GEORGE. Yes, $400 in the law.

Mr. GRAY. The House has stricken it to $300, and it could be stricken still further if you desire, and the Farm Bureau would not criticise that sort of reduced exemptions; because the time has come when so many of our people are on the salaried list, and without an income tax that reaches them they do not contribute to Government in any way unless it be in automobile taxes.

Senator HARRISON. Mr. Gray, let me call your attention to the fact that in Great Britain, for instance, on a $30,000 income they pay $9,475 income tax. Under this bill the income tax payment would be $2,660. In other words, Britain raises tremendous amounts of income in the brackets from $5,000 say, on up to $100,000. Of course you take the $10,000,000 income, and under the House bill one would pay $4,679,560. In great Britain under their law they would pay $6,988,000.

Mr. GRAY. Generally speaking you would say that the tax rates in England are more severe than they are with us.

Senator KING. Three to four times.

Senator HARRISON. Yes; very much more.

Mr. GRAY. Yes.

Senator HARRISON. And especially in the brackets ranging from $10,000 to $70,000 or $80,000.

Mr. GRAY. Yes, that is true.

Senator BINGHAM. May I say along the line that Senator Harrison just brought out relative to the tax on the very largest incomes up to 65 per cent, which is what Mr. Gray has recommended, that it is my information that in England there are extremely few available tax-exempt securities, whereas in this country the amount is indeterminate, or is at least $15,000,000,000 of tax-exempt securities.

Senator HARRISON. I do not think there is any doubt about that.

Senator BINGHAM. Whereas in England there are very few tax-exempt securities. And you can not get it when you charge 65 per cent. What I am maintaining is that you can not get it in this country because you simply drive them into the purchase of tax exempts, and then you get less than you did before.

Senator HARRISON. I did not ask the question carrying any idea that I was in favor of Great Britain's income tax law, but there is that difference that in the lower brackets, between $10,000 and $100,000, they are tremendously higher than in the United States, ranging anywhere from two to three times as much.

Mr. GRAY. That is true. And, reverting again to Senator Bingham's comments upon income tax exemptions, let me say again that most anything that this committee or this Congress might do to correct that situation will have the approval of the American Farm Bureau Federation, whether it be along the line that I suggested a while ago, taxing the incomes from them, or in any other way. Right now, Senator Bingham, I do not need to call to your attention the fact that Congress recently has enacted a law which of necessity will throw onto the market a billion and one-half more tax-free securities in the Reconstruction Finance Corporation. There is added to our untaxed wealth a billion and one-half, granting that General Dawes and the board of directors will find it necessary to issue the debentures to the extent that the law authorizes them to do.

Senator CONNALLY. May I ask you a question there? Suppose you tax the income on those bonds, do you think you can sell them at the same rate that you now do?

Mr. GRAY. No; the rate would go up.

Senator CONNALLY. So you would raise the rate and try to get some of it back. Do you not know, as a matter of fact, that a great body of the tax-exempt securities are held by trust companies, and savings banks, and other corporations who do not pay any surtax at all? They pay a flat corporation tax. And that even if you taxed them you would not get anything like the revenue that you anticipate?

Mr. GRAY. Senator Connally, we would not get the revenue which should be secured from those sources, let us agree on that.

Senator CONNALLY. Yes.

Mr. GRAY. But we would get a very measurable income to the Federal Government, and we would close that haven to which invest-

ments now flow, and which destroys to a certain extent, just like Senator Bingham points out, the efficacy of any high income or corporate tax rates.

Senator CONNALLY. You would get back about 25 per cent in taxes of what you would pay in interest rates on tax-free securities. That was thoroughly demonstrated when we had up here the constitutional amendment to tax tax-free securities. I want to ask you this question: Do you favor the Federal Government taxing the income from State, county, and municipal tax-free bonds?

Mr. GRAY. Yes.

Senator CONNALLY. Then you favor adding at least 1 per cent interest rate to every schoolhouse, municipal, county, and State security that is in existence? Or that would ever afterwards be issued? Because that is what the Secretary of the Treasury, Mr. Mellon, testified years ago, that if you put a potential tax against these tax-free securities that you would add at least 1 per cent per annum increased interest rate before you could sell it.

Mr. GRAY. Whether it be 1 per cent or less than that, of course, is a question of difference of opinion.

Senator CONNALLY. It is the potentiality of the tax, not the actual tax, that depresses the price and forces the interest rate up. If a man buys a bond and knows that the Government can come along later and assess him whatever tax the Government wants to place on it, he is not going to buy that bond at a low rate of interest; he is going to insist on being paid a higher rate of interest. I think you are entirely wrong in your attitude that the Federal Government should have the right to tax municipal and State bonds.

Senator BINGHAM. Do you think it can be done? Do you think the Supreme Court would uphold it?

Senator CONNALLY. It can not be done. There would have to be a constitutional amendment. The Supreme Court has held that repeatedly.

Mr. GRAY. The Treasury Department, as was called to this committee's attention last week by Mr. Mills, advocated the prevention of all tax-free bonds.

Senator CONNALLY. Yes; but it has got to be by constitutional amendment. It can not be done here in the Finance Committee. We can do a lot of things, but not that.

The CHAIRMAN. Mr. Gray, you have taken nearly an hour. If you will go along now with your statement.

Mr. GRAY. Then by reducing tax exemptions you can get a better and bigger tax base and get more people paying Federal income taxes, and thereby get more revenue to the the Federal Government without much increased cost to the Federal Government.

Then there is another way of getting income to the Federal Government, more effective, in my judgment, than hiking up the rates.

Before I describe that other way may I say that almost our invariable approach to a tax proposition in getting more money is to raise the rates. The other way that I am bringing to your attention now is the question of deductions. I have not had time, gentlemen of the committee, to analyze the data of the Internal Revenue Bureau for 1930, because it is only out recently, and somewhat tentatively, but I have analyzed the deduction figures for 1929, which was a more prosperous year than we are in now, and the data from which are not

wholly applicable to the condition which exists now. It is worthy to note, however, that in 1929, of all the aggregate wealth of corporations reported upon to the Internal Revenue Bureau, reaching an approximate amount of $130,000,000,000, deductions were permissible to the extent of $118,000,000,000, approximately; leaving only an approximate $12,000,000,000 tax base for corporations to pay upon.

Senator KING. That is, the gross earnings were over $100,000,000,000?

Mr. GRAY. One hundred and thirty billion dollars, approximately.

Senator KING. And after allowing the deductions it only gave you a base of $12,000,000,000 upon which you might raise your tax?

Mr. GRAY. Yes. For the personal income-tax structure the same year, Senator King, as I remember the figures, there was a gross return from individuals of approximately twenty-two and one-half billion dollars, a deductible amount of approximately four and one-half billion dollars, leaving a tax base for individuals to pay on between $17,000,000,000 and $18,000,000,000 for the same year.

Now the deductions for corporations are classified in the bulletins of the Internal Revenue Bureau under five or six great heads, like costs and losses, and bad debts, and deprediation, and whatnot.

The fact of it seems to be that with no fault in the way of enforcement on the part of the Bureau of Internal Revenue, but with a fault of the last revenue law, deductions are too easily secured. So I am pointing out to this committee that other than raising the rates, which is always a troublesome proposition to do, but which in this case is necessary under certain limits, let us consider the matter of deductions, and write this law in such a way that the Bureau of Internal Revenue can be a little but more severe in denying deductions than it can be under the present and existing law. The House bill has covered that matter of deductions in some particulars, but not wholly.

Taking up then, Senator Smoot, a very important portion, as I view it, of the situation which confronts all of us at the present time—the matter of deductions—may I say, and considering exemptions at the same time, that the reduction in corporation income-tax exemptions from $2,000 to $1,000 should be put into effect, and it will bring in, according to our estimates, about $6,000,000. The normal income rates should be applied to stock dividends of corporations.

Senator CONNALLY. That is in the bill.

Senator GEORGE. Is that not in the bill, Mr. Gray?

Mr. GRAY. Yes. And it should be retained. It will bring in, according to the best estimates of the Treasury Department and others, about $88,000,000. Some have a very great dubiousness about putting that in. They say that if the stock dividends of corporations are taxed and the individual receiving the dividends later has to pay a tax on that later, that it is double taxation. I guess it is double taxation. I guess there is no denying that it is double taxation. But many another piece of property in the United States, town property and farm property and others, have double taxation. Take a farm like mine in Missouri. It has three or four taxes on it. And if I lived in an irrigation district, such as they have in Senator Thomas's State, it would be taxed again. And if we had a library in my district, I would have a library tax on top. And then if I lived in

a territory where we had special roads bonds, I would be paying another tax. So that this sort of a tax which would bring in $88,000,000 confessedly would be double taxation. But that is not a novelty in our tax structure of the American Government at the present time, nor is it a novelty in our State taxation system. Double taxation is the vogue rather than the exception, it seems to me.

Senator KING. Mr. Gray, was the evidence that was adduced before the House committee reasonably satisfactory that the tax be about approximately $88,000,000 upon these dividends?

Mr. GRAY. Yes.

Senator KING. I saw the general result, but I did not read the evidence, and I was not satisfied, and I am not satisfied that the evidence justified that. I do not dissent from the view.

Senator CONNALLY. Secretary Mills testified here the other day that it would be $90,000,000.

Mr. GRAY. There is a little bit of difference in the estimate between the Ways and Means Committee, the Treasury Department and the Joint Committee of Internal Revenue Taxation. But about $88,000,000 to $90,000,000.

Senator HARRISON. One estimated $88,000,000 and the other $89,000,000.

Mr. GRAY. Yes.

The CHAIRMAN. Mr. Gray, have you any list that you can put in without reading, because we will never get through the way you are going.

Mr. GRAY. I have a list of the deductions as well as all the other items, which I will put in the record.

The CHAIRMAN. Anything that you can put in in the way of a list or a statement prepared, please put it in without going into it. Just simply stating what it is.

Mr. GRAY. The reason why I called attention to one or two of these deductions was on account of the rather large amounts of money that would be brought in if they were incorporated in the law.

I think that if I should conclude then, Senator Smoot, and gentlemen of the committee, by submitting the complete schedule of tax items from which some comments have been drawn this morning, it will be satisfactory. May I in conclusion say that according to this list of the Farm Bureau it will bring in $1,318,000,000, which is a bit more than necessary to balance the Budget, not including in it even any excise taxes on imports, which is another available source of revenue if we either desire, or by necessity are forced into, that to raise revenue.

Senator KING. Are you not optimistic in assuming that it will only need $1,000,000,000 plus to balance the Budget? You do not know the appropriations that are to be made between now and the adjournment.

Mr. GRAY. I do not know what appropriations will be made.

Senator KING. And what deficits will be submitted to us before we adjourn, and submitted in December. If I were guessing, I would guess that not $1,000,000,000 nor $1,300,000,000 would be sufficient.

Mr. GRAY. You may be correct.

Senator GEORGE. Do you refer in your list there to the duties on oil, as in the House bill?

Mr. GRAY. No.

Senator GEORGE. And coal?

Mr. GRAY. No. We have taken no position in regard to tax on oil and coal.

Senator GEORGE. I mean, did you include them in the list?

Mr. GRAY. No; I have not.

Senator GEORGE. Have you got all your recommendations tabulated therein order, Mr. Gray?

Mr. GRAY. Yes.

Senator GEORGE. And you are putting that in the record?

Mr. GRAY. I am seeking to do so.

Senator REED. I offer that for the record.

(The proposed tax program presented by the American Farm Bureau Federation is printed in the record, in full, at the conclusion of Mr. Gray's testimony.)

Mr. GRAY. In conclusion, I should just like to call to your attention perhaps the joint position of the three farm organizations, the American Farm Bureau Federation, the National Grange, and the National Farmers Union on the negative side of the tax structure. What I have said thus far is positive. We are approving certain things. Now, on the negative side we shall continue to resist a general sales tax, a manufacturers' excise tax, the Federal gasoline tax, a bank-check tax, or a tax on automobiles and trucks.

Senator REED. Why do you resist a manufacturers' excise tax?

Mr. GRAY. Fundamentally it violates the principle that taxes should be levied as mush as possible on the basis of ability to pay.

Senator REED. If you exclude rent, food, and clothing, it would seem that you did put the tax on ability to pay, would it not?

Mr. GRAY. The fundamental criticism of that, Senator Reed, as approached first by the Ways and Means Committee of giving a lot of exemptions to this, that, and the other, is that it puts one group, like agriculture, in the position of advocating a tax for everybody else, and then getting out from under for ourselves. May I say this, that when that fight was on before the Ways and Means Committee we did not become involved in the advocacy of getting exemptions for food and food products. We fought the entire manufacturers' excise tax fundamentally; and realized that when it was defeated we would have to stand for special taxes on certain commodities which are in this list that I have filed; and so bear a part of the burden on a few commodities rather than have the entire burden put over the retail counter to the consuming public.

Senator REED. Do you think it is better to put a large sales tax on a few commodities than a general sales tax on everything that is a matter of necessity?

Mr. GRAY. I think that is true, and that is the position we took.

I am through, Mr. Chairman, and I thank you sincerely for your attention, and request permission to file an appendix to this verbal presentation.

The CHAIRMAN. Thank you for your statement.

(The statement is as follows:)

Proposed tax program submitted to Senate Finance Committee by American Farm Bureau Federation

Individual income-tax rates:	
Retain increases in House bill	$122,000,000
Adopt Swing amendment	17,000,000
Corporation income-tax rates: Increase rate to graduated basis, 10 to 16 per cent	50,000,000
Reduction of exemptions and deductions:	
Retain provisions in House bill—	
Reduction in corporation income-tax exemption from $2,000 to $1,000	6,000,000
Application of normal income rates to stock dividends of corporations	88,000,000
Additional increase in corporation income rate from 13 to 15 per cent for consolidated returns	8,000,000
Revision in capital gains and losses tax to prevent evasions	100,000,000
Repeal of net loss provision	15,000,000
Elimination of certain exceptions in the case of stock dividends	8,000,000
Revision of depletion allowances	3,000,000
Additional recommendations—	
Make income on tax-exempt securities taxable	180,000,000
Additional curtailment of exemptions and deductions	20,000,000
Estate tax: Retain House rates	20,000,000
Gift tax: Retain House rates	10,000,000
Postage rates: Double second-class postage rates	25,000,000
Miscellaneous taxes:	
Tax on short sales and other speculative sales on stock exchanges (graduated tax from one-half to 2 per cent of gross sales)	100,000,000
Tax on short sales and other speculative sales on grain and cotton exchanges (graduated rate, one-half to 2 per cent of gross sales)	50,000,000
Sales of bonds (one-eighth per cent)	25,000,000
Conveyances, mortgages, contracts, and other realty transfers (5 cents on each document)	5,000,000
Stamp tax on receipts, acquittances, etc. (1 cent under $100; 2 cents above)	25,000,000
Issues of capital stocks and bonds	8,000,000
Theater admissions (1 cent on each 10 cents above 25 cents)	75,000,000
Telephone and telegraph messages (5 cents on 31 to 49 cents; 10 cents on 50 cents or more)	33,000,000
Cosmetics (10 per cent on manufacturers' sales)	20,000,000
Furs (10 per cent on manufacturers' sales)	15,000,000
Jewelry, precious stones, etc. (10 per cent on manufacturers' sales)	15,000,000
Sporting goods and cameras (10 per cent on manufacturers' sales)	6,500,000
Beverages (1921 rates)	10,000,000
Matches (2 cents per 1,000)	5,500,000
Chewing gum (5 per cent on manufacturers' sales)	3,000,000
Radios and phonographs (5 per cent on manufacturers' sales)	11,000,000
Mechanical refrigerators (5 per cent on manufacturers' sales)	6,000,000
Candy (5 per cent on manufacturers' sales)	12,000,000
Lubricating oil (2 cents per gallon)	15,000,000
Yachts, motorboats, etc. (above $15 in value, 10 per cent)	500,000
Radio advertising (5 per cent of gross receipts)	5,000,000
Safety deposit boxes (10 per cent of annual rental)	1,000,000
Corporation registration tax (under $10,000 capitalization, $5; from $10,000 to $150,000, $10; from $150,000 to $250,000, $20; from $250,000 to $500,000, $40; from $500,000 to $1,000,000, $50; from $1,000,000 to $5,000,000, $100; over $5,000,000, $500)	50,000,000
Savings from governmental economy	150,000,000
Total revenue	1,318,500,000
Total required to balance Budget	1,241,000,000

EXCISE TAXES ON IMPORTS TO YIELD ADDITIONAL REVENUE

Coffee (2 cents per pound)	$35,000,000
Tea (3 cents per pound)	2,500,000
Spices, that are now free of duty (5 cents per pound)	3,500,000
Tapioca and other tropical starches free of duty (2½ cents per pound)	3,000,000
Jute (unmanufactured, 5 cents per pound; manufactured, 6 cents)	10,000,000
Sugar, raw and refined (½ cent per pound)	25,000,000
Bananas (25 cents per bunch)	14,000,000
Total	93,000,000

ITEMS IN HOUSE BILL SPECIFICALLY OPPOSED BY AMERICAN FARM BUREAU FEDERATION

Tax on automobiles (3 per cent of manufacturers' sales)	$44,000,000
Tax on trucks (2 per cent on manufacturers' sales)	4,000,000
Accessories (1 per cent on manufacturers' sales)	8,000,000
Increase in first-class postage (1 cent additional)	165,000,000

PROPOSED TAXES OPPOSED BY AMERICAN FARM BUREAU FEDERATION

1. General sales tax.
2. Manufacturers' excise tax.
3. Federal gasoline tax.
4. Federal tax on bank checks.

EXPLANATION OF ITEMS IN PROPOSED TAX PROGRAM SUBMITTED BY THE AMERICAN FARM BUREAU FEDERATION

INDIVIDUAL INCOME-TAX RATES

The increases in individual income-tax rates provided in the House bill should be retained, and in addition some further increases should be made in the rates on the very large incomes. The so-called Swing amendment, which was adopted by the House in the Committee of the Whole and later rejected by a close vote by the House, would bring in approximately $17,000,000 additional revenue under a very conservative estimate. It would not affect very many people and would be paid by those who are most able of any of our citizens to pay additional taxes.

The provisions of the amendment are as follows:

Net incomes in excess of $100,000 and not in excess of $150,000, 40 per cent in addition of such excess.

42 per cent of the amount by which the net incomes exceed $150,000 and do not exceed $200,000.

44 per cent of the amount by which the net incomes exceed $200,000 and do not exceed $250,000.

46 per cent of the amount by which the net incomes exceed $250,000 and do not exceed $300,000.

48 per cent of the amount by which the net incomes exceed $300,000 and do not exceed $400,000.

50 per cent of the amount by which the net incomes exceed $400,000 and do not exceed $500,000.

52 per cent of the amount by which the net incomes exceed $500,000 and do not exceed $750,000.

54 per cent of the amount by which the net incomes exceed $750,000 and do not exceed $1,000,000.

56 per cent of the amount by which the net incomes exceed $1,000,000 and do not exceed $1,500,000.

58 per cent of the amount by which the net incomes exceed $1,500,000 and do not exceed $2,000,000.

60 per cent of the amount by which the net incomes exceed $2,000,000 and do not exceed $3,000,000.

62 per cent of the amount by which the net incomes exceed $3,000,000 and do not exceed $4,000,000.

64 per cent of the amount by which the net incomes exceed $4,000,000 and do not exceed $5,000,000.

65 per cent of the amount by which the net incomes exceed $5,000,000.

The American Farm Bureau Federation does not insist that the provisions of the Swing amendment be adopted in toto, but recommends that the higher income groups pay a little larger share of the increase in taxes than is provided for in the House bill. This recommendation is not made for the purpose of "soaking the rich." It is made solely upon the principle of "ability to pay." In times of extreme suffering and economic depression such as we are now experiencing, it is more important than ever before to observe the principle of ability to pay in levying taxes. The problem of raising a billion dollars of additional revenue in a time like this resolves itself mainly in the question where can additional revenue be obtained with the minimum of burden. Obviously, little additional revenue can be exacted without hardship and privation from the masses of our working people and our farmers whose incomes are scarcely sufficient to meet the necessities of life. There are a considerable number of our citizens, however, who are situated much more fortunately and who are able to pay additional taxes out of their abundance.

Our income tax schedules can be made to yield a great deal more revenue than they have been yielding during recent years, when Government necessity requires it, as it does at the present time. In 1930 the total income taxes collected from individuals on a total net income of $17,220,753,620 amounted to $473,689,563. The average tax rate for all returns was 2.75 per cent, and for taxable returns the average tax rate was 3.56 per cent (p. 2, Statistics of Income for 1930, Preliminary Report, Bureau of Internal Revenue, 1931). This is a very modest rate of taxation and shows clearly that the rates can be sharply increased without undue hardship. This is particularly true in the case of the higher incomes which would be reached under the Swing amendment. In 1930 there were 137 individuals reporting a net income of $5,000,000 and over, 531 with a net income between $1,000,000 and $5,000,000, 655 persons with a net income between $500,000 and $1,000,000, 1,211 persons with a net income between $250,000 and $500,000, 3,145 persons with a net income between $100,000 and $250,000, according to statistics published by the Bureau of Internal Revenue.

CORPORATION INCOME TAX RATES

It is recommended that the flat rate provided for in the bill be changed to a graduated tax. It is believed that a graduated tax will not only bring in more revenue, but also will distribute the tax burden much more equitably than a flat rate. The following rates are suggested in lieu of the rates in the House bill:

	Per cent
Under $2,000 net income	10
$2,000 under $3,000 net income	11
$3,000 under $5,000 net income	12
$5,000 under $25,000 net income	12½
$25,000 under $100,000 net income	13
$100,000 under $500,000 net income	14
$500,000 under $1,000,000 net income	15
$1,000,000 and over net income	16

A flat rate for all corporations penalizes the small corporation or the one which has a small net profit, because it pays the same rate as the large corporation, or as a corporation with an enormous profit. The movement for consolidation and mergers has reached such alarming proportions in this country, that there is grave danger of eliminating individual business initiative and enterprise through the concentration of business in a few large corporations or combinations. A recent investigation by the Federal Trade Commission showed that one-fifth of all the bread sold in the United States was produced by less than a half-dozen large corporations and their subsidiaries. According to statistics published by the Bureau of the Census, the number of manufacturing establishments with a production of $1,000,000 and over worth of goods each has trebled since 1914; the number with a production between $500,000 and $1,000,000 has more than doubled; the number between $100,000 and $500,000 has increased about 60 per cent; while the number between $5,000 and $20,000 has declined about 20 per cent.

Thousands of small enterprises have been forced out of business by ruthless competition of "big business." A graduated tax would serve the dual purpose of providing additional revenue, and incidentally helping to equalize to some extent competitive opportunity.

A graduated tax would distribute the tax burden more equitably. This is more necessary now than it was a few years ago. Even in 1929, when industrial

groups were enjoying prosperity, the largest part of the corporate net income was earned by a relatively small group of large corporations. Statistics published by the Bureau of Internal Revenue show that one-fourth of all corporations reporting a net income in 1929 received less than $1,000 each in net income; 40 per cent received less than $2,000 each; 67 per cent, or more than two-thirds, received less than $5,000 each; and 93 per cent received less than $50,000 each. In striking contrast with these modest net incomes for the bulk of the corporations reporting net incomes, a little group of corporations, representing only 1 per cent of the total number reporting net incomes received 68 per cent, or more than two-thirds, of the total corporate net income in the United States, or $7,900,000,000, out of a total corporate net income of $11,653,886,000. Included in this little group were 300 corporations, or eleven-hundredths of 1 per cent of all corporations reporting net incomes, who received 42 per cent of the total corporate net income in the United States, receiving $4,885,929,000 out of $11,653,886,000 for all.

The concentration of corporate income was even greater in 1930 than in 1929. In 1930, 82 per cent of the corporations reporting net incomes received less than $1,000 each, compared to 25 per cent in 1929; 49 per cent received less than $2,000 each, compared with 40 per cent in 1929; 75 per cent received less than $5,000 each, compared with 67 per cent in 1929; 95 per cent received less than $50,000 each, compared with 93 per cent in 1929.

While the net income of corporations has declined considerably since 1929, it is still large enough in volume, particularly among the larger corporations, to bear additional taxation. In 1931 a survey of 900 industrial corporations showed a total net profit of $592,105,000 on the basis of a net worth of $17,703,055,000, or an average net return of 3.3 per cent. Several groups of corporations made handsome profits in 1931—in some cases greater profits than they made in the preceding year. For example, chain stores made an average net profit of 15.7 per cent in 1931 compared to 14.8 per cent in 1930. Tobacco corporations made an average net profit of 13.6 per cent in 1931 compared with 13.7 per cent in 1930. Printing and publishing corporations made an average net profit of 10.9 per cent. Drugs and sundries made an average net profit of 17.6 per cent. Bakery corporations made an average net profit of 11.3 per cent. Food product corporations made an average net profit of 6.9 per cent. Shoe corporations made an average net profit of 5.7 per cent. Stockyards made an average net profit of 8.3 per cent.

It is estimated that the graduated tax proposed above would bring in a total revenue of approximately $50,000,000. As an alternative suggestion to a graduated tax as proposed above, it is suggested that the flat rate be increased to 15 per cent. It is estimated that this would bring in approximately $40,000,000 additional revenue.

REDUCTIONS OF EXEMPTIONS AND DEDUCTIONS

The Federal Government has been much too liberal in allowing deductions and exemptions in computing individual income taxes and corporation income taxes. In the case of individual income taxes for the year 1930, deductions were allowed totaling $4,444,752,230 out of a total reported income of $21,665,505,850, leaving a net taxable income of $17,220,753,620. In the case of corporation incomes, in 1930 deductions were allowed totaling $102,528,596,848 out of a total gross income of $112,789,903,992, leaving a net taxable income of $10,261,307,144. (Statistics of Income, 1930, Bureau of Internal Revenue, 1931.)

There may have been some justification for this when ample revenues were pouring into the Federal Treasury and surpluses were being applied to the reduction of our national debt. But now when the Federal Government is confronted with an enormous deficit, these exemptions and deductions should be sharply curtailed.

The House bill made helpful progress in reducing the number of exemptions and deductions. In the case of the corporation income tax, it reduced the exemption from $2,000 to $1,000. It made the normal individual income rates apply to stock dividends of corporations. It increased the income rate from 13 per cent to 15 per cent upon corporations filing consolidated returns. It revised the capital gains and losses tax to prevent evasions. It repealed the net loss provision. It eliminated certain exemptions in the case of stock dividends. It revised the provisions relating to allowances for depletion. All these provisions will be helpful in bringing additional revenue into the Treasury and should be retained.

Still further curtailments should be made, and if properly done should result in yielding considerable additional revenue. The following additional suggestions are offered for consideration:

1. *Taxation of income on tax-exempt securities.*—The American Farm Bureau Federation for many years has held to the position that the practice of issuing tax-exempt securities should be discontinued and such securities should be taxable. On January 1, 1931, the value of tax-exempt securities outstanding totaled $19,679,000,000. The rates of interest on these securities, which include Federal, State, municipal, and other governmental securities, would vary considerably, but assuming an average yield of 3½ per cent per annum, the total annual income to the holders of these securities would total $686,760,000. It is recommended that the income from these securities be made taxable. It is contended that the tax-exemption privilege extended to these securities does not extend to the income derived therefrom, but only to the principal.

The income from these securities is now deductable in computing individual net income. If this deduction were no longer permitted, the tax yield from this source would depend on how the securities are distributed among the different classes of income taxpayers—the larger the percentage held by the big income groups, the larger the yield which would be obtained from this tax because of the higher rates which apply in the larger income groups. Even if they were all held by taxpayers in the $10,000 class who pay no surtaxes, the tax yield at 7 per cent would total $48,213,000. Assuming a distribution, however, that would pay an average tax of 26 per cent (rate on $51,000 income), the tax yield from this source would total $179,078,000.

2. *Eliminate all deduction of dividends.*—The House bill curtails to some extent the privilege of deducting dividends from corporations in computing individual net income. Congress would be justified under the existing emergency in eliminating all deduction of dividends in computing individual net incomes. The criticism of "double taxation" is not a valid argument against this action. The corporation makes its profit as an institution, and as such should bear its share of the tax burden. Its net earnings in the form of dividends accrue to individuals as an individual profit, and should bear their share of the tax burden. It is no more double taxation than the taxing of a farmer first in the form of property taxes on his land, and then again in the form of income taxes both State and Federal on the net income derived from the land, after paying a property tax and other expenses.

3. *Eliminate deduction of income earned from sources without the United States.*—People residing in the United States and enjoying its protection should pay proportionately out of their income, regardless of where their income is obtained to help support the Government. If the elimination of this deduction in computing individual net incomes has the effect of discouraging the export of their capital for investment abroad, it would be beneficial to the country from that standpoint.

4. *Limit deductions for salaries and bonuses.*—The practice of paying huge bonuses in excess of handsome salaries has become prevalent among our corporations. For example, the head of the American Tobacco Co. is reported to have received a bonus of at least $850,000 in 1931, in addition to his salary of $168,000. This salary was more than double that of the President of the United States, in addition to the bonus of more than three-fourths of a million dollars. Such lavish and extravagant diversion of profits of corporations should not be allowed as a deduction in computing their net taxable income. A limitation of $50,000, or some other reasonable limit, might well be placed as the maximum deduction to be allowed as a payment to any one employee for salary or bonus in computing the taxable net income of corporations.

5. *Repeal deduction of foreign taxes in computing net income.*—Some progress is made in the House bill along this line, but the repeal of all deductions of foreign taxes might well be considered for the same reasons as apply in the case of eliminating deduction of income earned abroad.

6. *Eliminate deduction of losses from short sales of stocks, bonds, and commodities.*—The purpose of this recommendation is not only to provide an additional source of revenue, but to place an additional penalty upon purely speculative transactions such as short sales, "bear raids," etc.

7. *Lowering of income-tax brackets.*—If congress finds it necessary in order to balance the Budget, a still further lowering of the individual income tax brackets would be proper in order to broaden our tax base and bring in additional revenue.

ESTATE TAX

The increased rate on estates provided for in the House bill should be retained. It may be possible to obtain even more revenue from this source than provided for in the House bill, but at least these rates should not be curtailed. The estimate of $20,000,000 additional revenue from this source is extremely conservative. It will require several years for this tax to yield its maximum rate. It is estimated that these rates will yield $500,000,000 in revenue annually to the Federal Government when they reach their full productive capacity. These rates are in the form of a "supertax," in excess of the existing Federal estate taxes.

GIFT TAX

The gift tax rates provided in the House bill are somewhat lower than the estate tax and should not be reduced. If the estate taxes are raised, the gift taxes should be raised proportionately in order to prevent evasion of the estate taxes. It is essential to maintain this form of taxation in order to safeguard the effectiveness of the estate tax.

POSTAGE RATES

The House bill contains a provision which proposes to increase the first class postage rates from 2 cents to 3 cents per ounce. The American Farm Bureau Federation is opposed to this provision because it violates the fundamental pricipie of "ability to pay." The burden of the $165,500,000 proposed to be raised from this source will fall in the main upon the classes of people least able to bear additional expense. The unemployed, the workers and farmers who are struggling to make ends meet, will have to pay an additional cent for every letter mailed.

A great hue and cry has been raised against the proposal to increase sharply the surtaxes on individual incomes and the rates of the corporation tax. This is condemned by some as "soaking the rich," but it does not even compare in extent with this proposal to increase first class postage rates which just as accurately can be characterized as an attempt to "soak the poor." If the increases in income tax can be said to "soak the rich," then the increase in first class postage rates by comparison can be said to drown the poor. This is apparent by comparing the additional revenues expected from these sources. Under the Swing amendment increasing individual surtaxes a total of $17,000,000 additional revenue is expected. Under all of the increases in corporation income taxes a total revenue of $43,400,000 is expected to be raised. Whereas, it is proposed to raise from the increase in letter mail a total of $165,500,000.

The first-class mail service has been earning a surplus of approximately $100,000,000, whereas second-class mail service has been carrying a loss of approximately $75,000,000, according to estimates of the Post Office Department. The Parcel Post Service, which has been alleged to operate at a loss, is to receive increases in the rates, already ordered by the Postmaster General, and to become effective October 1, 1932. Why should the poor people of the country be called upon to raise $165,500,000 to pay a subsidy of $75,000,000 to the publishing interests of the country who use second-class mail service, particularly when the users of the first-class service are already paying a great deal more for this service than it actually costs. The millionaire publishers are much more able to pay additional taxes on second-class matter than the masses of our people are to pay additional postage on letters.

In this connection attention is invited to the fact that the printing and publishing business still remains an exceedingly profitable one for many of those engaged in it, particularly corporations engaged in this enterprise. Printing and publishing corporations made an average net profit of 10.9 per cent in 1931, according to a tabulation published in the National City Bank Monthly Letter, March, 1932, previously referred to.

Furthermore, the Post Office Department is paying approximately $19,000,000 annually in mail subsidies to steamship lines. Adding these subsidies to the subsidy maintained for second-class mail service, there is a total of $94,000,000 which the Post Office Department is paying out annually. We submit that it is unfair to place an additional tax upon letter postage to pay these subsidies.

In order to meet this situation and deal with it fairly, the American Farm Bureau Federation is recommending that no increase be made in first-class postage rates and that these subsidies be eliminated as soon as practicable. To this end an increase in the second-class postage rates in the present revenue bill,

by doubling the existing rates, is suggested. It is conservatively estimated that this would bring in $25,000,000 additional revenue.

The objection usually offered against this proposal is that no more revenue can be secured from second-class postage. The statement that no more revenue can be secured from the users of second-class postage is open to challenge in view of the profitable showing made by these companies last year. Certainly, even if true, it would not justify taking advantage of the necessities of the poor by exacting from them an additional cent on every letter mailed, which would constitute an increase of 50 per cent in the tax rate.

Furthermore, there are numerous other sources of revenue which can be utilized and which are sufficient in all to balance the Budget without resorting to an increase in first-class rates.

MISCELLANEOUS RATES

1. *Tax on speculative sales on exchanges.*—The House bill places a tax on all transactions on the stock exchanges and on the commodity exchanges. The American Farm Bureau Federation recommends as a substitute for this proposal that a tax be placed only upon the purely speculative transactions on the exchanges. In lieu of the taxes provided in the House bill, it is recommended that a graduated tax of from one-half to 2 per cent of the gross sales be placed on short sales and on other sales of a purely speculative nature on the stock exchanges and on the grain and cotton futures exchanges.

It is further recommended that the tax on speculative trading on the grain exchanges be made to rest mainly upon speculative transactions in excess of 500,000 bushels of any one trader during any one day in any one future, with a more moderate burden on speculative transactions between 100,000 and 500,000 bushels. Similarly, it is recommended in the case of the cotton exchanges that the tax on speculative sales of cotton be made to rest mainly upon the speculative transactions in excess of 25,000 bales of any one trader during any one day in any one future, with a more moderate burden on speculative transactions between 1,000 bales and 25,000 bales.

By limiting the tax to speculative transactions only, no penalty is likely to reach back to the farmers in the form of lower prices for his commodities, because these speculative transactions are purely "phantom" and do not involve usually the actual transfer of any commodity.

A specific exemption should be provided in the statute for hedging, cash trading and other legitimate forms of trading. The problem of determining what constitutes a purely speculative transaction and what constitutes hedging may be left to the Bureau of Internal Revenue to work out by regulations, in cooperation with the United States Department of Agriculture. As a suggestion along this line, it may be practicable for the bureau to require through its administrative rulings that customers state on their orders whether the transaction is a hedging operation and thereby place the burden of proof on the operator to show that his transaction is not a speculative one. In other words, it would be assumed that all future trading operations are speculative for the purposes of the revenue act unless the customer shows proof to the contrary.

2. *Stamp tax on conveyances.*—The rate of 50 cents on each $500, as provided in the House bill, is somewhat excessive. A large portion of the transfers of real estate at the present time represent forced sales and are usually exceedingly unprofitable transactions for the seller. This tax in such sales would be deducted as a part of the expense of sale and would therefore fall on the seller, who is least able to pay it. It is recommended, therefore, that this tax be reduced to 5 cents on each document, which would not be an excessive burden and would bring in the modest sum of $5,000,000.

3. *Sales of bonds.*—The provisions for a tax of one-eighth per cent on sales of bonds, provided for in the House bill, is approved.

4. *Stamp tax on receipts, acquittances, etc.*—A moderate tax of 1 cent per $100 and 2 cents for amounts in excess of $100 is suggested on receipts, acquittances, etc. It is estimated to bring in a total revenue of $25,000,000. This is not provided for in the House bill.

5. *Issues of capital stocks and bonds.*—The House bill provides for a rate of 10 cents per $100, estimated to bring in $8,000,000 in additional revenue. This should be retained.

6. *Theater admissions.*—The House bill provides a tax of 1 cent for each 10 cents over 45 cents, with an estimated revenue therefrom totaling $40,000,000.

The American Farm Bureau Federation recommends the same tax rate but suggests that the exemption limit be lowered to 25 cents, making the tax apply to all admissions in excess of 25 cents. This will exempt virtually all of the so-called neighborhood movies and the least expensive forms of amusement.

7. *Corporation-registration tax.*—A graduated registration tax on corporations is suggested ranging from $5 on corporations under $10,000 capitalization to $500 for those with capitalization in excess of $5,000,000. This is estimated to yield $50,000,000 in additional revenue. This tax is based upon the theory that a corporation enjoying as it does special privileges and benefits by virtue of its corporate status, should properly pay to the Government a measure of taxes commensurate with the benefits received.

8. *Matches.*—An excise tax of 4 cents per 1,000 is contained in the House bill. This is perhaps excessive as it would mean a tax of 2 cents on a 5-cent box of matches. It is suggested that this be reduced to 2 cents per 1,000, which would be 1 cent on a 5-cent box.

9. *Luxury taxes.*—In addition to the theater-admissions tax, numerous other taxes on luxuries are contained in the recommendations of the American Farm Bureau Federation, including the following items: Cosmetics, furs, jewelry, sporting goods and cameras, beverages, chewing gum, radios and phonographs, mechanical refrigerators, candy, yachts, and motorboats. It is suggested that these taxes be provided for a temporary period and that they be collected at the point of manufacture in order to facilitate their collection and to avoid not only the expense, but the inevitable irritation incident to collecting taxes on retail sales. All of these luxury taxes are included in the House bill and should be retained if necessary to balance the Budget.

10. *Miscellaneous.*—A tax of 4 cents per gallon on lubricating oil is contained in the House bill. If necessary to balance the Budget, this form of tax may properly be retained temporarily, but the rate should be reduced to 2 cents per gallon as the 4-cent rate is too high. A tax on lubricating oil has not been exploited by the States to the extent that the gasoline tax has, and because of its higher value per gallon can bear increased taxes to a greater extent than gasoline.

A tax of 10 per cent on the annual rental of safety deposit boxes is included in the House bill and should be retained, not only because of the revenue received, but as a penalty upon hoarding.

A tax of 5 per cent of the gross receipts of radio advertising is suggested as an additional item which is not in the House bill, and which could be used if necessary to balance the Budget.

In presenting its program of suggested sources of revenue to balance the Budget, the American Farm Bureau Federation has not taken the position of transferring all the burden to other groups than agriculture. Many of the taxes which have been suggested will fall in part upon farmers. An effort has been made to formulate a tax program which will provide sufficient revenue to balance the Budget and which will distribute the burden on the basis of ability to pay.

EXCISE TAXES ON IMPORTS

The sources of revenue thus far suggested by the American Farm Bureau Federation are estimated to yield $1,318,500,000, if an allowance of $150,000,000 be included as savings through economy. If these estimates are correct, this sum would be approximately $77,500,000 in excess of the $1,241,000,000 estimated to be required to balance the Budget.

If additional revenue is necessary to balance the Budget, it is estimated an additional $93,000,000 may be obtained through the imposition of excise taxes on certain imports into the United States which are now free of duty for the most part. Coffee, tea, most of the spices, tapioca and other tropical starches, jute in unmanufactured form, and bananas all enter the United States free of duty. If additional revenue is needed to balance the Budget, these items should bear some portion of the additional tax burden. Taxes of 2 cents per pound on coffee, 3 cents per pound on tea, 5 cents per pound on spices that are now free of duty, 2½ cents per pound on tapioca and other tropical starches, 5 cents per pound on unmanufactured jute and 6 cents per pound on manufactured jute, one-half cent per pound on sugar, and 25 cents per bunch on bananas are suggested. While sugar is already dutiable, the price of sugar has dropped to such an extremely low point that it can easily bear an additional one-half cent if applied for revenue purposes, if necessary to balance the Budget.

ITEMS IN THE HOUSE BILL SPECIFICALLY OPPOSED BY AMERICAN FARM BUREAU FEDERATION

1. *Taxes on automobiles, trucks, and accessories.*—This tax will be more burdensome to the farmers and the working people than to any other groups in the Nation, which would be affected thereby. Over 90 per cent of the passenger automobiles sold in the United States are below $1,000 in value. There is no question but what the manufacturers will pass this tax on in full to the consumers. This means that the bulk of the tax will be paid by the purchasers of low-priced cars of less than $1,000 in value. So far as the farmer is concerned the automobile and the truck are more of a necessity than a luxury. It is his means of transportation to market.

Furthermore, the States have already utilized this field of taxation rather severely. The estimated average annual tax per motor vehicle, not including gasoline taxes, is $145, or including gasoline taxes, $288.

State and municipal taxes on motor vehicles have almost reached the "saturation" point. In 1930 the amounts in taxes for motor vehicles were:

Registration fees	$355, 704, 860
Personal property and municipal taxes	150, 000, 000
Total	505, 704, 860
Gasoline tax	494, 683, 410
Total	1, 000, 388, 270

The following table shows how extensively automobiles, trucks, and tractors are used on the farm:

Farm machinery and facilities by States, 1930

State	Automobiles	Motor trucks	Tractors	State	Automobiles	Motor trucks	Tractors
Alabama	73, 634	12, 838	4, 664	New Hampshire	11, 079	4, 539	1, 066
Arizona	9, 916	3, 062	2, 558	New Jersey	22, 371	14, 753	8, 088
Arkansas	65, 935	11, 000	5, 684	New Mexico	15, 395	5, 328	2, 497
California	136, 842	40, 971	44, 437	New York	141, 916	58, 974	40, 369
Colorado	52, 258	16, 918	13, 334	North Carolina	132, 876	18, 556	11, 426
Connecticut	13, 154	6, 344	2, 667	North Dakota	78, 796	16, 990	37, 605
Delaware	8, 724	2, 996	1, 600	Ohio	201, 552	39, 210	52, 974
Florida	26, 387	12, 203	5, 618	Oklahoma	127, 448	23, 930	25, 962
Georgia	33, 966	6, 281	4, 691	Oregon	47, 440	9, 741	9, 838
Illinois	192, 873	40, 371	69, 628	Pennsylvania	152, 222	47, 062	33, 513
Indiana	154, 556	30, 037	41, 979	Rhode Island	2, 569	1, 701	589
Iowa	240, 512	32, 669	66, 258	South Carolina	61, 754	6, 966	3, 462
Kansas	171, 018	33, 648	66, 275	South Dakota	81, 923	14, 816	33, 837
Kentucky	86, 784	7, 188	7, 322	Tennessee	89, 032	9, 039	6, 865
Louisiana	43, 082	9, 281	5, 016	Texas	300, 176	52, 580	37, 348
Maine	26, 227	10, 781	3, 410	Utah	17, 574	4, 189	1, 426
Maryland	37, 972	11, 284	7, 206	Vermont	18, 620	5, 035	2, 426
Massachusetts	17, 638	9, 572	3, 921	Virginia	88, 463	19, 459	9, 757
Michigan	150, 922	36, 768	34, 579	Washington	55, 995	18, 836	8, 388
Minnesota	185, 717	36, 557	48, 457	West Virginia	36, 978	7, 432	2, 792
Mississippi	85, 563	16, 503	5, 542	Wisconsin	176, 764	51, 786	50, 173
Missouri	176, 466	20, 132	24, 909	Wyoming	12, 824	4, 108	4, 110
Montana	38, 166	14, 615	19, 031	Idaho	33, 906	6, 281	4, 691
Nebraska	141, 144	26, 045	40, 729				
Nevada	2, 921	1, 241	360	Total	4, 080, 112	890, 618	919, 188

2. *Increase in first-class postage.*—The American Farm Bureau Federation opposes any increase in the first-class postage rate. The reasons for this position have already been set forth under the discussion of the proposed increase in second-class rates.

OTHER PROPOSED TAXES OPPOSED BY AMERICAN FARM BUREAU FEDERATION

1. *General sales tax.*—For 10 years the American Farm Bureau Federation has consistently opposed the general sales tax. Its principal objection to this tax is that it is not based upon "ability to pay" but upon the "necessity to consume." It places too much of the tax burden upon the people least able to bear it. It is highly irritating from an administrative standpoint. Even though food, clothing, and certain other necessities of life should be exempted from the tax, it would be

an unwise public policy to embark upon this form of taxation, because once started it would probably never be abandoned, but instead it is feared that each time the Federal Government is pinched for revenue, some extension of the tax would be made on the theory that it is easy to collect. As a result, it is feared that this tax, if once established in our tax structure, would be broadened more and more until it would largely displace the estate tax, the gift tax, and the income tax as the basis of our Federal revenues. Such a development would be exceedingly unfortunate from the standpoint of public policy because it would penalize the poor for the benefit of the rich.

2. *Manufacturers' excise tax.*—The American Farm Bureau Federation opposes the manufacturers' excise tax for the same reasons that it opposes a general sales tax. The same arguments apply to both except that the manufacturers' excise tax, although collected with less irritation to the consumers, nevertheless opens the way for the abuse of pyramiding between the manufacturer and the consumer so that the consumer would probably pay in many instances several times the amount of the tax actually collected in the first instance.

3. *Federal gasoline tax.*—The American Farm Bureau Federation opposes the Federal Government entering this field of taxation because it has been so thoroughly exploited by the States that the commodity can scarcely bear any additional taxes. Some States now collect as much as 6 and 7 cents per gallon on gasoline, which, with retail prices of approximately 15 cents, is near the point of confiscation in the sense that if the tax goes much higher many consumers will have to forego its use. Inasmuch as the States have already exploited extensively this form of taxation, the Federal Government should leave it to the States exclusively as a source of revenue.

4. *Federal tax on bank checks.*—This is a particularly onerous tax upon the cooperative marketing associations and particular types of business enterprise which deal with a large number of patrons. It hits the dairy industry particularly hard because of the large volume of small milk checks which are a necessary part of the marketing methods in this industry. There is no necessity for resorting to this tax, which particularly penalizes the dairy farmers, the poultry and egg producers and their cooperative associations, as well as a large number of individual citizens. Ample funds can be obtained from other sources with which to balance the Budget.

STATEMENT OF FREDERIC BRENCKMAN, WASHINGTON, D. C., WASHINGTON REPRESENTATIVE OF THE NATIONAL GRANGE

The CHAIRMAN. You represent the National Grange, Mr. Brenckman?

Mr. BRENCKMAN. Yes, sir.

The CHAIRMAN. Are you in accord, substantially, with the statement made by Mr. Gray?

Mr. BRENCKMAN. The entire statement?

The CHAIRMAN. Well, substantially.

Mr. BRENCKMAN. Well, in the main we are in accord.

The CHAIRMAN. If so, a mere statement to that effect would be very, very acceptable to the committee; but if you have anything else or have any criticism you want to offer, I wish you would confine yourself to that.

Mr. BRENCKMAN. There are various things that I would like to mention, Mr. Chairman, that were not touched upon by Mr. Gray.

The CHAIRMAN. Very well.

Mr. BRENCKMAN. I will try to be as brief as possible so as to conserve the time of the committee.

The CHAIRMAN. I wish you would.

Mr. BRENCKMAN. Our organization is the oldest general farm organization in the country. It was established 65 years ago. We have approximately 800,000 members, and we maintain State organizations in 32 States.

Our policy with reference to public questions is framed at our annual conventions, at which all States in which the grange is established are represented by voting delegates. At our last annual convention, held at Madison, Wis., in November, 1931, we outlined our program on the subject of taxation in a series of short resolutions. If there is no objection, I would like to read that program into the record at this time.

The CHAIRMAN. Yes; that may be done.

Mr. BRENCKMAN (reading):

We, your committee on taxation, submit the following report:

As outlined in detail further in our report we indorse the recommendations made by the national master in his annual address, agreeing that economy and efficiency are the crying needs of government; that the first step in tax reduction is to curtail tax spending and eliminate duplication in government; that a conscious taxpayer means a conscious tax spender; and that no man should be permitted to enjoy his share of government free of charge.

We reaffirm our stand for equity and justice in taxation as summarized in three simple declarations passed during previous sessions:

1. "*Resolved*, That the National Grange express its conviction that any just system of taxation requires that taxes be levied in proportion to benefits received and to ability to pay." (Sacramento, 1925.)

2. "We urge the passage of laws that will force luxury and privilege to pay a part of the cost of government, thus relieving farms, homes, and general business from some of its too heavy burden." (Cleveland, 1927.)

3. "We favor distribution of a portion of the proceeds of the Federal income and estate tax among the States on the basis of school registration or some other similarly equitable basis." (Cleveland, 1927.)

General points:

1. This committee believes that the time has come when immediate relief from oppressive real estate taxes should be granted to our farmers. The share of the cost of Government defrayed by the general property tax is disproportionate and unfair, and the amount of real estate required in relation to income is far greater in farming than in most occupations. Our system of taxation, even in the face of far-reaching economic changes, has undergone comparatively little fundamental revision. If it were possible to wipe the slate clean of all existing tax laws, no sane person would consider for a moment building up in our country a tax system which required that general property should pay 80 per cent or more of the taxes. Any plan for equalizing taxation should have for its first object, not the obtaining of more revenue, but the shifting of the tax base away from real estate. Now, when there is so much of delinquent taxes and of tax sales in rural communities, seems to be the psychological time to make our demands heard. When the present depression shall have come to an end, and when its effects shall be forgotten in a period of reasonably general prosperity, public opinion will change and will desire expansion in public expenditures. Unless some form of tax equalization is adopted previous to that period, the farmer will feel, even more heavily than now, the burden of unjust taxation.

Our task is threefold:

1. To formulate plans for reducing total expenditures without injury to essential services.

2. To develop plans for improvement in the administration of existing tax laws.

3. To propose tax-revision which will more justly distribute tax burdens.

Budgeting is the first step in controlling expenditures; but the Budget itself must be controlled. There is need of a study of budget laws, and especially of the new State budgetary control laws, now being tried out in Indiana, Iowa, and New Mexico. It is suggested that in the publishing of proposed budgets, the expenditures and budgets of previous years be also published, tabulated for ready reference. Consolidation of some local governmental units should also prove helpful in reducing tax expenditures. Proposed expenditures should be given wide publicity in plainest terms in advance of action. When finances, through borrowing, there should be required a substantial sum out of current taxation. This would have a sobering effect. Federal and State relationships should be worked out carefully so as to avoid harmful double taxing.

In the administration of existing tax laws, all property should be assessed equitably. Each district should study its tax exemptions to discover if all income-bearing property legally taxable is carrying its share of the tax burden.

The duties of a tax assessor require experience and honesty, and their decisions should not be politically influenced. Care should be exercised by voters in the choosing of such officials. Methods should be perfected to enforce legal assessment and to improve assessment laws in the interest of equitable assessment. In the States not having a strong central taxation authority in the form of a tax commission or commissioner, such authority should be established. This body could do much to bring on to the tax rolls property now escaping, thus reducing farm tax burden.

To the end that tax burdens may be more justly distributed, your committee makes the following recommendations:

FEDERAL

1. No reduction in the Federal income tax.
2. Maintain and increase the estate tax, and allow the States to retain a greater portion of tax collected.
3. The collection of a limited tax on luxuries.
4. A substantial portion of the Federal corporation income tax returned to the States, and the individual paying both Federal and State income tax to be allowed to deduct from his Federal tax a substantial portion of his State income tax.
5. To avoid evasion of the purposes of the estate tax, there should be a Federal and State gift tax.

STATE AND LOCAL

1. A debt control law.
2. Pending the enactment of Federal legislation under which a substantial portion of Federal income tax is apportioned to the State, there should be an equitable graduated income tax, with low exemptions and low rates. Credit to the Federal income taxpayer for State income taxes paid up to a reasonable per cent of the Federal tax would help to induce States to adopt the personal income tax, and would be conducive to greater uniformity in income taxation among the States.
3. Limitation of all special assessments against real estate.

We urgently recommend the study of the relative merits of various State budgetary control laws, especially those of Indiana and Iowa, to the end that those being followed might be improved and local governments following no budget law might be induced to adopt the better system.

We oppose:

1. Issuing bonds to cover current expenses.
2. General sales tax, either Federal or State.
3. The use of funds obtained from automobile licenses and gasoline tax for other than highway purposes.

We were well aware when our convention was held that it would be necessary to levy additional taxes in order to balance the Federal Budget. With this in mind, we advocated increased income and estate taxes, together with a restoration of the gift tax, to prevent evasions of the law. Our organization has always been opposed to a general sales tax, because it ignores the principle of ability to pay and is a tax upon the necessities of the people.

In our opinion the House acted wisely in rejecting the proposal for a manufacturers' sales tax, and we trust that no effort will be made by the Senate to revive it.

In his apperance before the committee last Wednesday, Mr. Mills, the Secretary of the Treasury, well said: "There is no nourishment in the hole of a doughnut."

To say that a general sales tax under prevailing conditions would be a legislative monstrosity is but stating the truth. It is conceded that there are probably 7,000,000 people in this country to-day who are unemployed. Adding their dependents, it would probably be conservative to say that about 25,000,000 people have little or no income, while many of them are subsisting upon charity.

The disproportionate burdens of taxation placed upon agriculture, together with the collapse of farm prices have worked the virtual ruin of a large part of our farmers. Combining the unemployed in our industrial centers with our agricultural population gives us a total of approximately 50,000,000 people whose purchasing power has been greatly impaired or wholly destroyed.

Reputable economists tell us that 80 per cent of the wealth of the country is owned by 4 per cent of the people. It is plain that the inequitable distribution of wealth was one of the major factors in bringing on the present depression, and it stands to reason that our troubles can not be remedied by the imposition of a sales tax on the necessities of the people.

Treasury figures show that during the year 1929 there were 504 men in the United States who had net taxable incomes of over $1,000,000.

Senator GEORGE. One billion.

Mr. BRENCKMAN. More than $1,000,000 each.

Senator GEORGE. $1,000,000 each?

Mr. BRENCKMAN. Yes. The aggregate net incomes of these 504 men was $1,212,098,000.

Senator BINGHAM. What was it last year?

Mr. BRENCKMAN. It dropped considerably.

The Yearbook of the Department of Agriculture shows that the farm value of the cotton crop as of December 1, 1930, was $674,000,000

Senator BINGHAM. Just a moment. You gave us the figures for 1929, which was a very abnormal year.

Mr. BRENCKMAN. Yes, sir.

Senator BINGHAM. Have you got the figures for 1930?

Mr. BRENCKMAN. The figures are included in the hearing, which I put in before the Ways and Means Committee.

Senator BINGHAM. Very well.

Mr. BRENCKMAN. The farm value of the wheat crop was $517,000,000.

Senator REED. What year was that?

Mr. BRENCKMAN. 1930. Adding these figures together gives us a total of $1,191,000,000. From this it will be seen that these 504 men had a net income which was greater than the value of the wheat and cotton crops combined during the year 1930, in the whole United States.

Senator BINGHAM. But you have given us the figures for 1929, have you not?

Mr. BRENCKMAN. Yes, sir.

Senator BINGHAM. When it was very high. And the other figures you have given us were for 1930, when it was down. Do you think that is fair?

Mr. BRENCKMAN. Well, I think that the figures for farm income are not far from the average.

How can we expect prosperity to be general when the wealth of the country is concentrated in such a few hands?

What is needed is greater consumptive capacity on the part of the people. That is a fact which Congress should bear in mind in passing legislation to balance the Budget.

In general terms, we approve of the increased income and inheritance taxes contained in the House bill. We also approve of the gift tax.

Senator HARRISON. Do you mean by that that they went high enough, in the House bill, on the gift tax provision?

Mr. BRENCKMAN. Well, if, in the opinion of the committee, more money could be secured by raising those rates, I think it would be much fairer than taxing the people who have no income.

There is justification for saying that the Federal Government has been receiving only a small portion of the revenue that it should derive from the estate tax. This is a just tax and does not in the least stifle enterprise or initiative.

Senator HARRISON. May I interrupt there to say that Mr. Parker has just handed me the figures which show that there were 456 people who had over $1,000,000?

Mr. BRENCKMAN. Yes.

Senator BINGHAM. That is compared with the 504 men who he said had $1,000,000.

Senator HARRISON. Yes; that is his figures.

Mr. BRENCKMAN. However, there isn't any class of people whose income has been cut down in the last few years to the same extent as the farmer's income has been reduced. The value of farm commodities to-day is, roughly, just half what it was in 1921, while the fixed expenses, such as taxes, freight rates, interest on the mortgage, and so forth, cost just the same as before.

Senator HARRISON. It is higher in some cases, because in many cases the freight rates have been increased. And local taxes have been increased.

Mr. BRENCKMAN. Yes; and I might say that during some of our most prosperous years, from 1926 to 1929, when we saw the greatest era of prosperity ever known in times of peace in this country, there were 682,000 men who lost their homes and farms through tax sales and foreclosures. That is more than one-tenth of the number of farmers in the United States. And all that happened before the present depression set in.

Senator BINGHAM. Did you say one-tenth?

Mr. BRENCKMAN. One-tenth.

Senator BINGHAM. We were told last year that in the city of Philadelphia 30 per cent of the people lost their homes through tax sales and foreclosures.

Mr. BRENCKMAN. I don't suppose that is true throughout the country. But if a more horrible example is needed, look at the news of a few days ago from Senator Harrison's own State of Mississippi, where more than one-fourth of the homes of the State were sold for taxes in a single day.

Senator HARRISON. I do not think it is any worse there than in some other parts of the country.

Mr. BRENCKMAN. No.

Senator HARRISON. We, of course, sell them all at one time, and not at various times throughout the year, as is the case in some States.

Senator CONNALLY. And that is not final; they have the opportunity to buy them back.

Senator HARRISON. If they can get enough money, yes.

Senator BINGHAM. My idea in interrupting was to suggest that in the cities just as many people are suffering and are unable to pay their taxes and the interest on the mortgages on their homes as in the farming communities.

Mr. BRENCKMAN. I do not mean to convey the impression that the farmers are the only people who are suffering. I know there are others who are suffering as well.

The purposes of the estate tax are twofold: First, to prevent the accumulations of wealth in the hands of those who did little or nothing to create it; and, second, to lighten the burdens of taxation that weigh so heavily upon the backs of those who toil.

Andrew Carnegie, one of the wealthiest men of his time, was a firm believer in the justice of the estate tax. In his book, The Gospel of Wealth, published in 1900, he said:

> The growing disposition to tax more and more heavily large estates left at death is a cheering indication of the growth of a salutary change in public opinion. Of all forms of taxation this seems the wisest. Men who are hoarding great sums all their lives, the proper use of which for public ends would work good to the community from which it chiefly came, should be made to feel that the community, in the form of the State, can not thus be deprived of its proper share.

Senator HARRISON. Would you go higher than the estate tax law as incorporated in the House bill?

Mr. BRENCKMAN. I think, under present conditions, we would be justified in doing that, Senator Harrison.

I just want to cite you these figures that are contained in bill. On a $10,000,000 estate, that estate, under the old law, would have paid $1,334,500; under the new bill it would pay $3,094,500.

Under a $100,000,000 estate, under the old law it would have paid $19,333,500; under this law it would pay $43,593,500.

Senator GEORGE. Nearly half.

Senator HARRISON. Yes.

Mr. BRENCKMAN. I think that is the rate.

Senator HARRISON. Take a $400,000 estate, it now pays, under the present law, $8,500; under this new bill it would pay $30,500. So they have graded it up so that in the smaller ones there is a very large increase.

Mr. BRENCKMAN. Continuing, Mr. Carnegie said:

> It is desirable that nations should go much farther in this direction. Indeed, it is difficult to set bounds to the share of a rich man's estate which should go at his death to the public through the agency of the State, and by all means, such taxes should be graduated, beginning at nothing upon moderate sums to dependents, and increasing rapidly as the amounts swell.

I am tempted to say just a word at this time about something that Mr. Gray touched upon.

Senator CONNALLY. You do not want to forget Mr. Roosevelt.

Mr. BRENCKMAN. I think he did.

Mr. Gray spoke of the possibilities of getting increased revenue by stiffening up the law with reference to exemptions and abatements and refunds. The Ways and Means Committee has stated that by administrative changes in that connection about $100,000,000 additional could be covered into the Treasury. In my opinion, that is a very modest estimate. According to figures furnished by the Joint Committee on Internal Revenue during the years from 1922 to 1930, inclusive, the deductions and abatements and cash refunds allowed by the Treasury Department under the existing law reached the colossal sum of $3,400,000,000.

The CHAIRMAN. You say under the existing law?

Mr. BRENCKMAN. Well, under the laws during those years.

The CHAIRMAN. The laws in affect during the war.

Mr. BRENCKMAN. Well, it dated from 1922 to 1930, inclusive. It would seem, therefore, that an estimate of $100,000,000 a year to be saved to the Government in that connection is a very modest estimate, and that the committee of the Senate might well consider what could be done by stiffening up the rules about exemptions, abatements, and refunds.

The wisdom of imposing tariff items in an internal revenue measure, as the House bill does in two instances, is to be doubted. The inclusion of a few more such items might easily lead to a tariff fight which, with its unsettling effects, would be likely to work more harm than good to the country under prevailing conditions.

Senator SHORTRIDGE. Pardon me. Assuming, however, as to tariff items, that it could be limited to one or two or three or four, that would not necessarily prolong discussion, would it, in your judgment? As, for example, take oil, coal, copper, and possibly one or two other items: should we not limit the discussion to those three or four or five?

Mr. BRENCKMAN. Possibly it could be done. I know that there are various people around Washington now who are being encouraged by the existing situation, and inquiring whether it would not be possible for them to get increased tariff rates on commodities in which they are interested.

We are opposed to the imposition of a Federal tax on automobiles, accessories, and gasoline. In our opinion, that is a field of taxation which is already well exploited and which should be left to the States. The gasoline tax in 1931 amounted to $524,000,000; license fees totaled $348,000,000.

Senator SHORTRIDGE. All State legislation?

Mr. BRENCKMAN. Yes. While personal property and municipal taxes on motor vehicles took $150,000,000. This makes a total of $1,022,000,000, or about one-tenth of all taxes paid in the United States—Federal, State, and local.

Senator BINGHAM. How much of that money goes into the building of roads?

Mr. BRENCKMAN. The theory is that it should all go into the building of roads, but the tendency is to divert those taxes to other uses, which is an unsound proposition.

Senator HARRISON. But as a general rule, the imposition of the gasoline tax in the States is for the purpose, and it goes toward putting up the State's part for the building of roads; is that not true?

Mr. BRENCKMAN. Yes; as a general rule, although I heard recently that the State of New Jersey was intending to put up State buildings costing millions of dollars and pay for them out of the taxes on gasoline and license fees.

We have expended billions of dollars in building improved highways, and it would be unwise to adopt a policy of taxation that would tend to make it prohibitive to use those highways.

The House bill places a tax of 3 per cent on passenger automobiles, 2 per cent on trucks, and 1 per cent on accessories. It is estimated that these combined taxes would yield $56,000,000. But in view of the heavy taxes already levied on motor vehicles, these new taxes would be discriminatory and unjust.

Roughly speaking, one-fifth of all the automobiles and trucks in the country are on the farms of the United States. The trucks on our farms alone number more than 900,000. They form a part of the necessary equipment of our farms. They are no more luxuries than freight cars and locomotives are luxuries, yet no one would think of placing a special tax on freight cars and locomotives.

If these items should be stricken from the House bill, as we think they should be, the question naturally arises as to where we should look for the——

Senator SHORTRIDGE (interposing). I was about to ask that question.

Mr. BRENCKMAN (continuing). Where we are to look for the $56,000,000 in revenue which these proposed special taxes are estimated to produce.

The record shows that the Ways and Means Committee considered the propriety of placing a tax on gas and electricity. The Treasury Department likewise suggested a tax on the domestic consumption of electricity and gas. According to the estimates of the Treasury, a tax of 7 per cent on domestic consumption would produce revenues of $94,000,000 a year. But if such a tax is to be levied, why should it be limited to domestic consumption?

According to figures furnished to the Ways and Means Committee by the Federal Trade Commission, the total revenues of the electric power companies during the past year were $2,137,000,000. The value of the natural gas produced was $415,000,000; while manufactured gas was valued at $521,000,000. This makes a total of $3,073,000,000. Three per cent on that sum would net $92,190,000. And if 7 per cent is not excessive as a rate of taxation on domestic consumption, I do not see why anybody should claim that 3 per cent is too much for all of us to pay.

Such a tax would be more fair and equitable than the proposed special taxes on automobiles, trucks, and accessories. There is reason to believe, moreover, that such a tax could be largely absorbed, instead of being passed on in full to the consumer.

I just want to say at this point, Mr. Chairman, that the other two farm organizations are in accord with the stand taken by the National Grange regarding taxes on automobiles, trucks, and accessories.

It is gratifying to note that in taking steps to balance the Budget Congress is not depending on the levying of taxes alone. Efficiency and economy are quite as necessary as additional taxes in meeting the financial situation with which the Government is confronted.

Senator SHORTRIDGE. Let me ask you one question: Assuming that your views should prevail as to exempting from the suggested taxes the items you referred to, you have suggested other sources of taxation?

Mr. BRENCKMAN. Yes; that was my purpose. I believe the proposed automobile taxes should be dropped and that we should find other sources of revenue to take their place.

The CHAIRMAN. Thank you, Mr. Brenckman.

STATEMENT OF JOHN A. SIMPSON, PRESIDENT FARMERS NATIONAL UNION, WASHINGTON, D. C.

The CHAIRMAN. Mr. Simpson, your name is John A. Simpson?
Mr. SIMPSON. Yes, sir.
The CHAIRMAN. You represent the Farmers National Union?
Mr. SIMPSON. Yes, sir.
The CHAIRMAN. You may proceed.
Mr. SIMPSON. In the main, I agree with what the other gentlemen, who represented the Grange and the Farm Bureau, have said. I want to emphasize the position of the National Farmers Union on the fundamental principle of taxation, that the burden should be placed where they are most able to bear it; that those able to pay should be the ones that are taxed.

On that basis, we think there is no fairer tax than a net income tax. If a man has a net income he can pay without having his capital investment confiscated. When he has no net income and he has to pay a tax, he is paying it out of his capital investment, and that is wrong.

The CHAIRMAN. Under this bill, if he does not have a net income he would not have to pay a tax.
Mr. SIMPSON. If you have a general sales tax he would pay whether he had an income or not.
The CHAIRMAN. That is correct. But not under this bill.
Mr. SIMPSON. Yes.
Senator CONNALLY. Of course, you do not carry that over as against the estate tax, do you? You favor that, do you not?
Mr. SIMPSON. Yes. I will come to that in a minute, Senator.
Senator CONNALLY. All right.
Mr. SIMPSON. One of the troubles of the farmer to-day is that he has been taking out of his capital right along to pay taxes and, of course, to pay his other bills, too.
Senator BINGHAM. How about the millions of industrial workers who have been paying money out of their savings accounts to pay for everything that they have bought in the last few years?
Mr. SIMPSON. Under the Good News Flashes in the papers, I see where our industrials pay dividends right along.
Senator BINGHAM. I am not talking about the industrialists who own the plants, but about the 3,000,000 or 4,000,000 people who are compelled to pay expenses out of the savings they have accumulated, their Liberty bonds, and such things as they have. They have been living on their savings for the last two or three years.
Mr. SIMPSON. It is on their behalf that I speak, as well as on behalf of the farmers. I don't want any tax placed on that sort of an individual. I don't want them to have to pay tax when they purchase something. I want the man taxed who has a net income.
Senator BINGHAM. Then you would not be in favor of the suggestion made a few moments ago that they be compelled to pay a tax on the electric light which they consume in their houses in the city.
Mr. SIMPSON. I would say that I do not like that tax. I don't want a tax that applies to the poor man, I don't want a tax that goes on the man with no net income.

In this distressed time—I think as great as any time in the history of our Nation—war time, or any other time, I would say that war-time income tax rates are not inconsistent with the situation.

Senator BINGHAM. War-time incomes?

Mr. SIMPSON. War-time income tax rates are not inconsistent with the situation.

Senator BINGHAM. I wondered whether you thought anyone had war-time incomes.

Mr. SIMPSON. Inheritance and gift tax rates on large estates should be in line with income tax rates. Our position is that the life of this Nation depends on estate taxes and gift taxes that will redistribute the wealth of the country. We believe that we are the friends of the unfortunate individual, who has acquired large wealth, when we propose such measures. The history of all nations teaches that the people of a nation will not stand for more than so much concentration of wealth, and if there is not a redistribution there is revolution and overthrow of government. That is the history of all nations. Anybody that studies it will find that true.

In this country, I have Senator Borah's statement, made a year ago, and unchallenged, that we have reached a place in the concentration of wealth where 4 per cent of the people own 80 per cent of the wealth; and 96 per cent have only 20 per cent of the wealth.

Senator SHORTRIDGE. And you would bring about redistribution by way of taxing estates?

Mr. SIMPSON. That, I think, is one of the best ways of saving this Nation from the menace of the concentration of wealth.

I am sure you will agree with me on this, that somewhere between 4 per cent owning 80 per cent of the wealth of the country, and one family owning it, there would be a revolution. The people would not stand for it. I am sure you will agree that is true. Now how much further we have to go before you reach the point of overthrow of the Government on account of the concentration of wealth, none of us know, but it may not be very far. The organization I represent is in favor of such rates of inheritance and gift taxes as will save this Nation from that situation.

Senator HARRISON. Do you think, Mr. Simpson, that the House rate provisions are sufficient?

Mr. SIMPSON. No, sir; that will not save the Nation.

Senator HARRISON. How much further would you go?

Mr. SIMPSON. I think that the inheritance and gift taxes should go at least as high as the income taxes were during the war.

Senator HARRISON. Under the amendment put on in the House, we have the highest estate tax we have ever imposed.

Mr. SIMPSON. Yes; I think that is right, but not as high as the income rates.

The CHAIRMAN. Where a State has fixed an inheritance tax of 40 per cent, do you think the Government should impose 40 per cent also?

Mr. SIMPSON. It is my understanding that when a State puts on a tax, the Government allows whatever is put on by the State.

Senator HARRISON. That was true under the old law; that is not the case under this bill.

Mr. SIMPSON. This all goes to the Federal Government.

The CHAIRMAN. For instance, I know of estates now that if those rates are carried into the law and the State would impose the same inheritance tax that is now imposed, there will be very little left of any estate, no matter how large it is.

Mr. SIMPSON. If you leave the thing uncorrelated as to State and Federal Governments, it is possible to have more than it should be. It is necessary to take the two into consideration. You might have a State tax that would put on more than 50 per cent and a Federal Government tax that would put on more than 50 per cent, and that would take the whole estate.

Senator CONNALLY. Under this bill an estate of $100,000,000 would pay an estate tax of $43,600,000.

Mr. SIMPSON. That is going pretty good, but that will not save this Nation under the circumstances.

Senator SHORTRIDGE. Immediately, we are looking for some revenue.

Mr. SIMPSON. Yes; and that will give you revenue.

Senator HARRISON. Mr. Simpson, this is what gives me some concern: Suppose a man who has a large ranch; a man who is a large landowner; everything he has is in lands. Of course, you appreciate now and may be for several years, it is going to be impossible to dispose of those lands. How is the State going to collect its money? If it is sold now, the whole value of it would be jeopardized. When we sell land, we sell at the market price, and there is no market price.

Mr. SIMPSON. That is true, whether you make it 40 per cent, or 75 per cent.

Senator HARRISON. Yes; but that is different from where a man has stocks and bonds, which you can sell.

Mr. SIMPSON. Yes; that is different.

Senator HARRISON. That is what is giving me some concern.

Senator BINGHAM. Mr. Simpson, your idea is that in order to save the country there must be a redistribution of wealth?

Mr. SIMPSON. There must be.

Senator BINGHAM. And you go so far as to say that a man who has 500 acres of land should give up half of that to a man who has only 100 acres, in order to equalize it?

Mr. SIMPSON. Well, I think it is a long ways from a man who has $2,000,000,000, or more, down to a farmer who has something that he can not sell.

Senator REED. What reliable information have you that anybody is worth $2,000,000,000?

Mr. SIMPSON. It is in the papers every day.

Senator SHORTRIDGE. Who are they? Mr. Ford and Mr. Rockefeller, or who? I have never heard the name given of any man who is supposed to be worth that much.

Mr. SIMPSON. Well, the Mellon family is said to be worth over $2,000,000,000.

Senator REED. They do not think so.

Mr. SIMPSON. That they control over $8,000,000,000 worth of property; are worth $2,000,000,000, and control over $8,000,000,000 worth of property.

Senator REED. Where did you get that?

Mr. SIMPSON. Out of a financial report in one of the papers.

The CHAIRMAN. Well, if they control it, have $2,000,000,000, they have $10,000,000,000, instead of $8,000,000,000.

Mr. SIMPSON. Not necessarily. They control that much. I understand Mr. Rockefeller controlled the Santa Fe when he had only 10 per cent of it.

Senator GEORGE. The $8,000,000,000 may not represent what they own.

Mr. SIMPSON. No. You are in a hurry.

The CHAIRMAN. Yes.

Senator BINGHAM. You are not in favor of equalizing farms, then? If you have a man with a large farm, and one with a smaller farm——

Mr. SIMPSON. Possibly with very large holdings.

Senator BINGHAM. Suppose one man has 1,000 acres, and the man next to him has only 40 acres, do you think they should be equalized?

Mr. SIMPSON. It depends a lot upon the value. The 40 acres might be worth more than 2,000 acres.

Senator BINGHAM. Yes; it might be.

Mr. SIMPSON. It not only might be but is often true.

Senator REED. Then the man with 40 acres should give up something to the man with 1,000 acres?

Mr. SIMPSON. Senator Reed, there is not any joke about this.

Senator REED. No; there is not any joke; but to be logical, I am trying to get your idea.

Mr. SIMPSON. Let me sound the warning that, unless there is a redistribution of wealth in this country something is going to happen.

Senator REED. Why wait for people to die? Why not do it now and call it communism?

Mr. SIMPSON. You will have communism if you don't do something to redistribute the wealth of this country. Let me give you an illustration.

You invite a dozen of your friends to your home, and seat them around the dining table. At plate is soup and greens. On the table there is a lot of good things, roast turkey, pie, cakes, nuts, and fruit. One of your guests reaches out and says, "I will take all the goodies, you fellows can have the greens and the soup." You wouldn't have a guest there that would not have the manhood to get up and say, "You can't do that, you hog." [Laughter.] In the whole United States there is not a man whose family would permit him to do that. And yet we sit down around the national table at the end of the year and 4 per cent of the people say, "We will take the goodies, and you, 96 per cent, can have the soup and greens." There will come a time when the 96 per cent will rise up and say to the 4 per cent, "you can not do it."

Senator SHORTRIDGE. You do not include beverages?

Mr. SIMPSON. We are all supposed to be dry.

Senator REED. Where do you get that 4 per cent?

Mr. SIMPSON. I told you, from Senator Borah.

Senator REED. Where do you get any confirmatory evidence of it?

Mr. SIMPSON. The Senate ought to at least chastise him if his statement is not true.

Senator CONNALLY. Mr. Simpson, let me see if I understand you correctly. If you fix these rates on inheritance, the fact that a man has that in lands, you would do it?

Mr. SIMPSON. Sure.

Senator CONNALLY. I was saying that in answer to Senator Bingham. The fact that he was a farmer, you would not make any difference to him?

Mr. SIMPSON. It doesn't make any difference whether it is in stocks, bonds, or farm land, or what it is.

The CHAIRMAN. If he took his money, then, and invested it in foreign bonds and foreign stocks and lands, would you confiscate that?

Mr. SIMPSON. At the present time they are not worth anything.

The CHAIRMAN. I want to get your idea.

Mr. SIMPSON. Whatever is in his estate.

The CHAIRMAN. No matter where it is?

Mr. SIMPSON. Wherever it is. Whatever is his estate would be the subject of taxation in this country to apply just the same, whether you have 10 per cent inheritance tax, or 75 per cent, the same rules would apply.

Senator SHORTRIDGE. Mr. Simpson, I do not want to delay you, but you would distribute and divide up this 1,000-acre ranch quite regardless of what it was devoted to, would you? What I mean is this: Suppose it were being cultivated and many, many men were employed producing a necessary crop, would you consider the uses to which the land was devoted?

Mr. SIMPSON. Senator, that would be taken care of the very same as they would take over a Ford plant; they wouldn't break it up into a million different plants. They would go on operating it, but the Government would own a certain interest on it.

Senator SHORTRIDGE. The Government, then, would take it?

Mr. SIMPSON. The Government would take it. No one would buy.

Senator SHORTRIDGE. And the Government would carry on the cultivation or operation of this 1,000-acre ranch?

Mr. SIMPSON. In some cases it would be the Government that would get the property, instead of so many dollars. If somebody bought it, then it would be so many dollars.

Senator SHORTRIDGE. Do you think it a wise provision for the Government to own the lands of the Nation?

Mr. SIMPSON. They owned about all of it originally. They can own an interest in it until such time as it could be sold to good advantage. The States have taken 70,000,000 acres for taxes in the last four years.

Senator SHORTRIDGE. Very well.

Mr. SIMPSON. They should not press sales. The Federal land banks are not Government owned, but Government controlled, and are pressing foreclosures too much. They should give those people an opportunity. To foreclose mortgages and sell for taxes now, Senator, is a good deal like the fellows who follow up after a battle and rob the wounded and dead.

The CHAIRMAN. Would you have a distribution every 10 years, or every 5 years?

Mr. SIMPSON. Every time there is a death; every time a man's estate is to be divided up, there would be distribution.

Senator SHORTRIDGE. And it goes to the Federal Government?

Mr. SIMPSON. It goes to inheritance and gift taxes.

Now, there is another part of the bill on which I take a positive position. As a poor substitute for what Congress ought to be doing for home production, the bill provides a tax on oil and coal. I am for this provision. It ought to include copper.

The CHAIRMAN. You mean a duty?

Mr. SIMPSON. It is a tax in this bill. It should be a duty that would protect home production.

Senator SHORTRIDGE. I agree with you on that.

Mr. SIMPSON. The Farmers Union stands for an American market for American producers.

Senator SHORTRIDGE. That is my theory.

Mr. SIMPSON. If your new tariff bill had taken care of oil, coal, wood pulp, and copper, there would be a million men at work to-day that are out of jobs.

I believe that is about all I have to say.

The CHAIRMAN. Thank you.

Senator SHORTRIDGE. Right there, I think the rate of 1 cent a barrel on imported oil should be more than doubled.

Mr. SIMPSON. You should have the same rule with the refined products as you have the 1 cent on the crude.

Senator SHORTRIDGE. That would be 3 cents.

Mr. SIMPSON. It is inconsistent to say that crude bears 1 cent per gallon, and gasoline 1 cent, when it takes 3 gallons of crude lubricants to make 1 of gasoline.

Senator SHORTRIDGE. Certainly three times as much. It should be at least three.

Mr. SIMPSON. Yes. That is all.

Senator CONNALLY. Mr. Chairman, before we adjourn for the morning, I would like to move that we limit the speakers hereafter to 15 minutes each. If we do not, we will never get through.

Senator BINGHAM. I second that motion and amend it to include that they talk about subjects on which they are qualified.

Senator CONNALLY. If a man knows what he is talking about, he can tell us more in 15 minutes than we can act upon in a month.

Senator SHORTRIDGE. Then if we should interrupt him to ask him questions, that time should not be counted against him.

Senator CONNALLY. No; I think if we ask him questions, his time might be extended.

The CHAIRMAN. His time can be extended when it has expired, if the committee desires.

The CHAIRMAN. All in favor of limiting the speakers hereafter to 15 minutes, will say aye. Contrary no. The motion is carried.

Senator BINGHAM. I understand his speech should be limited to 15 minutes, and then if he is pressed, we can extend the time afterwards.

The CHAIRMAN. Yes.

STATEMENT OF REV. JOHN A. RYAN, D. D., CATHOLIC UNIVERSITY, WASHINGTON, D. C.

Doctor RYAN. Mr. Chairman and gentlemen, I was asked to appear here by the Joint Committee on Unemployment, because that committee feels that there is a considerable relation between some of the provisions of the bill providing for new taxes which passed the House of Representatives the other day and the general subject of unemployment. I was asked to present the subject from the point of view of ethics, although I shall not neglect the economic side, inasmuch as I happen to teach both these branches.

The moralists agree with the economists that the right rule of taxation is ability to pay. Now the proper measure of ability is current income rather than total wealth. The latter may be wholly unproductive, as stocks that pay no dividends. The principle of ability to pay implies equality of sacrifice, not equality of rates. The

who pays 2 per cent on an income of $2,000 makes a greater sacrifice than the man who is taxed at the same rate on an income of $10,000. The same rate deprives the former of more important goods. In fixing income tax rates, therefore, the just method is not that of uniformity but that of progression. The same principle applies to the rates imposed upon estates or inheritances. The principles of ability to pay and equality of sacrifice are themselves corollaries of the far-reaching principle of distributive justice, namely, that the state should distribute benefits according to needs and burdens according to capacities.

How high may the progression of rates go without violating justice? In the House of Representatives, it was asserted a few days ago that a 65 per cent surtax, plus a 7 per cent normal tax, on that portion of a man's income which exceeds $5,000,000 would amount to confiscation. Presumably this term was used as a synonym for injustice, or at least as connoting injustice. I am unable to find any line of argument by which this contention could be substantiated. The person who was fortunate, or unfortunate, enough to come under these maximum rates would still be permitted to retain more than one-half of his first $5,000,000 of income and 28 per cent of the remainder. In view of the fact that God created all men equal and that he gave the earth as a common bounty to all the children of men, the receivers of such enormous incomes are not unjustly treated when they are required to contribute approximately half of their annual gains for the welfare of their country and the maintenance of the Government under whose protection the incomes have been obtained. If we are to reject the 72 per cent schedule, or even a higher schedule, we shall have to do so on other grounds than that of injustice to the individuals that pay these taxes.

Certain social reasons may be and have been urged against these high rates. The receivers of the very large incomes would be tempted to put their money into tax-exempt bonds. To this objection there are two obvious answers: First, the law might limit the amount of any individual investment in Federal bonds that would be immune from Federal taxation; second, the purchase of public bonds is a benefit to the political community which issues them, particularly at the present time.

Therefore, the injury which the very rich might do to the Federal Government by putting some of their money into tax-exempt bonds would be offset by the service which they rendered to the States or cities issuing the bonds and in need of the money. The second objection urged upon social grounds is that very high income and inheritance tax rates tend to discourage the flow of capital into industry. No person who raises this objection need be taken seriously until he can point out a considerable number of manufacturers or merchants who are unable to meet an increased demand for their goods solely because they can not obtain capital or credit to finance the new sales. To-day we have an abundance of idle capital seeking employment on almost any terms. The assumption that the owners of this capital would prefer no income at all to an income from which the Government took half, or even more, does not deserve fearful or prayerful consideration.

The great need of industry to-day is not more capital but more sales. In this connection, a statement made before his committee a

few days ago by Secretary Mills in answer to a question by Senator Couzens is sadly typical of the fallacious theory long entertained by the masters of capital, industry, and finance.

According to Secretary Mills, it is not important how the product of industry is distributed in relation to the demand for goods. The rulers of our economic system have assumed that production might be increased and multiplied indefinitely without making adequate provision for the sale of this huge product. They failed to see to it that sufficient purchasing power was put into the hands of those economic classes who were willing, if they had it, to exercise that power. Hence the existing depression.

The general principle of ability to pay not only justifies high income and inheritance taxes but condemns all taxes levied on the staple articles of consumption. A tax upon necessaries and comforts affects practically the whole of the smaller incomes, but touches only a small portion of the large incomes. Hence the injustice of all sales taxes except those upon such luxuries as are purchased mainly by persons enjoying high incomes and, therefore, possessing ample ability to pay. In general, we may say that the greater the proportion of any commodity which is purchased by persons of moderate means, the less suitable, ethically speaking, is that commodity for taxation. Ford cars or Chevrolet cars are not as reasonable objects of tax levies as Lincolns, Cadillacs, or Rolls-Royces. To forestall any argumentum ad hominem, let me say I have a Lincoln car, not a Ford or a Chevrolet.

While the observations just made are of universal application, they are particularly apposite in the existing depression. No improvement in business can take place without an increase in the sales and purchases of consumption goods. Any diminution in the amount of money available for such purchases inevitably makes the depression deeper. Such will be the effect of any tax upon these commodities which are mainly consumed by persons in receipt of small incomes. The money available for the purchase of goods and the maintenance of production will be diminished by almost the full amount of money derived from this sort of taxation. On the other hand, any tax, whether upon incomes, goods or transactions, which is paid mainly by the well-to-do and the rich will diminish only slightly if at all the total purchases of consumption goods and the level of business activities. What such taxes will diminish is the amount of money which is vainly seeking investment in an already overdeveloped capital structure.

To the objection that high taxes upon incomes and inheritances together with all other possible taxes upon the better-off classes would not be sufficient to balance the Budget, I would make the following reply: The demand for a balanced Budget has become, in the minds and mouths of the majority who are most articulate about it, an empty slogan. The slogan is working or being worked overtime as a facile substitute for the arduous processes of analysis and thinking. The budget of any government is always balanced in the sense that the annual income is equal to the annual expenditure. Money can not be paid out unless it has come in. The vital questions are the source of the income and the time of balancing. The current cant implies that the Budget must be balanced immediately and without borrowing. Both assumptions are without foundation. Every solvent business man must balance his budget,

but he does not think it necessary to balance it in any given year at the beginning of July. He may prudently effect the balance between income and outgo at the end of December. And he may have good reason to produce this result by borrowing against the future.

Similarly, the Federal Budget need not be balanced without borrowing this year nor next year. It was not balanced in that way during the Great War. At that time, the Federal Government borrowed, through the sale of Liberty bonds, against its taxation possibilities not only for the following 2 or 3 of 5 years, but for the following 20 or 25 years. It can use the same method now. In so far as the Budget can not be completely balanced through taxes upon incomes and inheritances and other taxes which will take the maximum from those who do not want to spend money for immediate consumption and the minimum from those who do, the required remainder can and should be obtained through the sale of bonds or Treasury certificates; in other words, by borrowing. This is the way, and the only way, in which the Federal Government can avoid intensifying the depression through its fiscal legislation.

If the foregoing argument is sound it yields the following brief conclusions and inferences:

1. The just principle of taxation is ability to pay as illustrated in progressive levies upon incomes and inheritances.
2. The highest rates that have been advocated for the pending bill can not be proved unjust.
3. Nor are these rates detrimental to social welfare in the matters of tax-exempt bonds and the alleged need of new capital.
4. Taxes upon the necessaries and elementary comforts of life violate the principle of ability to pay because they absorb a much greater proportion of a small income than of a large income.
5. Since a general sales tax would lessen the buying of consumption goods, it would be peculiarly harmful in the existing depression.
6. If balancing the Budget involves diminution of consumption, whether through a sales tax, a business tax, reduction of wages, or reduction of moderate salaries, it will prove a distinct hindrance to business recovery.

Senator SHORTRIDGE. Thank you, Doctor.

Is Mr. Raymond here? Is there any other witness present who wants to appear this afternoon? Mr. Raymond has not yet come. If not, the committee will stand in recess until 10 o'clock to-morrow morning.

(Whereupon, at 4 o'clock p. m., Monday, April 11, 1932, the committee adjourned to 10 o'clock a. m. of the following day, Tuesday, April 12, 1932.)

STATEMENT OF JAMES A. EMERY, REPRESENTING THE TAX COMMITTEE OF THE NATIONAL ASSOCIATION OF MANUFACTURERS, WASHINGTON, D. C.

The CHAIRMAN. You may proceed, Mr. Emery.

Mr. EMERY. Mr. Chairman and gentlemen of the committee, my name is James A. Emery. I appear representing the tax committee of the National Association of Manufacturers, consisting of the following:

Mr. George H. Coppers, National Biscuit Co., New York, N. Y., chairman.
Mr. Fred Arn, J. M. Card Lumber Co., Chattanooga, Tenn.
Mr. C. B. Towle, Curtis, Towle & Paine Co., Lincoln, Nebr.
Mr. John Tomec, Sloane-Blabon Corporation, Trention, N. J.
Mr. A. L. Green, Farr Alpaca Co., Holyoke, Mass.
Mr. William S. Bennet, Edwin Hines Associated Lumber Interests, Chicago, Ill.
Mr. R. H. Knowlton, Connecticut Light & Power Co., Hartford, Conn.
Mr. R. E. Blake, International Shoe Co., St. Louis, Mo.
Mr. J. Frank Zoller, General Electric Co., Schenectady, N. Y.
Mr. Eugene Chrystal, Eastman Kodak Co., Rochester, N. Y.
Mr. Harrison Jones, Coca-Cola Co., Atlanta, Ga.
Mr. W. L. Cherry, Cherry-Burrell Corporation, Chicago, Ill.

Mr. Chairman and gentlemen of the committee, the membership of the National Association of Manufacturers, engaged in industrial production in every State of the Union, recognizes the fiscal emergency confronting the country. They are prepared to make their contribution to any sacrifice essential to the maintenance of unimpaired national credit. The first essential is the passage of a sound tax act to dispel the bewildering uncertainty now preventing business from making future commitments until it understands the nature and extent of the burdens and obligations it is required to assume.

We venture to suggest to your committee that there are four considerations preliminary to the proper consideration and approach to any bill.

The first is that it should balance the Budget in the next fiscal year. And by that we mean equalizing current receipts with current expenditures without further increase in the public national debt.

The second is that the first step to that end is drastic reduction in Federal expenditure. For declining private income justly requires the adoption by the Government of every saving a well-informed Congress can identify and effect. We are greatly encouraged and appreciative of the nonpartisan legislative efforts now being made and trust they will be pursued with vigor and determination. And we think that this effort should be accompanied by stern resistance to any new appropriation not demonstrably essential, or a balanced Budget will be immediately unbalanced.

And, thirdly, the Government should avoid undue entrance to the loan market in competition with private business for the limited credit now available.

And, fourthly, we urge upon your committee the overwhelming need of the prompt adoption of a sound tax policy as essential to any future progress in business recovery. Private industry hesitates to make new commitments until it knows the nature and amount of its public obligations. Every day of delay means a loss of revenue to the Government itself.

Now, in a general condition of loss, additional burdens should be fairly distributed with due regard for the circumstances of the situation and without the arbitrary selection of particular groups for excessive rates. Double taxation should be avoided and reasonable consideration given to recognized losses. For every form of business

endures not by the returns of the year, but by its average returns. We recognize, too, that no protest should be made against any particular proposal for the raising of revenue, unless we can accompany that protest with suggestions for the raising of revenue from another source—another source from which revenue may be produced.

This association, therefore, ventures to urge several substitute tax proposals, one of which it urges is that the corporate rate should be fixed at 13 per cent, as is recommended by the Treasury, and without the additional rate of 1½ per cent, as in the House bill, and that the rate of 14½ per cent for consolidated returns should be abandoned.

And we urge that individual credit for dividends received be restored and allowed. That the taxpayer be allowed to carry over losses for one year. That the stock transfer tax be limited, as originally recommended, to 4 cents per share, with such rate for "short" loan purposes as Congress deems advisable, and that special manufacturers' excise taxes be abandoned.

The CHAIRMAN. Mr. Emery, in your statement do you suggest ways to raise money?

Mr. EMERY. Yes: I shall come to that just as soon as I point out to you what we suggest should be changed in the pending bill.

Senator KING. A manufacturers' sales tax, I suppose?

Mr. EMERY. Will you permit me to reach that in a moment, Senator?

Senator KING. Certainly.

Mr. EMERY. It may be I will suggest more than that.

Senator KING. All right.

Mr. EMERY. We further urge, as a matter of sound policy, first, that import duties, as amendments to the tax act, be dealt with separately; and, second, no tariff duty should be considered by Congress that has not been the subject of previous investigation and recommendation by the Tariff Commission.

In lieu of the revenue losses involved in these proposals, amounting, by the revised estimate of the Joint Committee on Internal Revenue Taxation, to a total of $488,000,000, we urge the consideration and adoption of the following:

First, that the committee reconsider and adopt a manufacturers' excise tax of 1 per cent. This is 1¼ per cent less than was proposed in the House bill. This is estimated to yield $200,000,000, an estimate that, we think, is the minimum of the yield by such an excise tax.

Second, that your committee adopt a tax on stock transfer, sales and stock-loan tax, as recommended by the Ways and Means Committee of the House, which would raise $28,000,000.

And, third, amend the Volstead Act to permit the regulation, manufacture, and sale of a wholesome, palatable cereal beverage, nonintoxicating in fact, and taxed to raise revenue which is estimated at a minimum of $270,000,000.

This would provide a total substitute revenue of $500,000,000, as against the $488,000,000 which would be affected by the changes which were previously suggested. And we venture to suggest that you might consider whether that surplus might be properly employed to equalize the lowest surtax with the highest normal income-tax rate, which is the only suggestion we make with reference to the income tax, because, I think, for the first time in the United States you have a surtax beginning below the highest normal income rate.

Now the reasons for the proposed changes in the continually increasing spread between the highest normal individual and corporate rate and which is manifestly unjust. From the beginnings of our our income-tax system, we recognized a tax on a corporation is a tax on the stockholder and undertook to maintain parity between the highest normal individual income-tax rate and the corporate rate.

It was 1 per cent, to begin with, and when those rates were raised, they raised in conjunction with each other, and then you began to spread and to provide what was argued to be a difference in the corporate rate, predicated upon the advantages and privileges of doing business in a corporate form. We venture to suggest that while that is worthy of consideration as a ground for emergency taxation, that it is unfair to make the difference between the two from 600 per cent, which is the lowest normal rate, to a spread of at least 100 per cent between the highest normal rate and the rate for corporation income taxes.

Now it is generally recognized that a tax on a corporation is a tax on the shareholder and, therefore, a differentiation between the tax on the corporation and the tax derived from a person individually or from a partnership is a tax that must be just, because often the income of the individual consists in nothing but the business of the corporation or partnership from which it is derived. So a man deriving the same income from a partnership or corporation business will reach the same rate when they reach a certain point, no difference existing there, and yet there is a difference of at least 100 per cent in the rate on the highest normal rate, and if his income is low from savings and investments of his lifetime, it represents the lowest income brackets, but he will pay 600 per cent more taxes than he would if he derived the same income from his exertions as a professional man, or individual form of business, and the individual form of business is still spread widely over the United States in our towns, and reaches an enormous source in the employment of the country and the employment of its revenues.

Senator COUZENS. Are you going to bring out whether there is any way to discern between earned and unearned income?

Mr. EMERY. Yes; I think there are certain tests, Senator. I have not touched on that here, because, representing this committee, we undertook to confine ourselves to those features which had, primarily, a bearing on the manufacturing industries. Not that the individual man would, perhaps, make any distinction in the payment of it, but we think we must have some part of a bill that we do not like, but the sacrifice must be made by every citizen for the condition in which we find ourselves.

Senator COUZENS. When you reach the higher rate, it as you point out affects the stockholders?

Mr. EMERY. Yes, sir.

Senator COUZENS. That, in itself, makes the difference between earned and unearned income, does it not?

Mr. EMERY. Yes; because the earned income is the income derived in large measure from the efforts of the private individual; a man's wages, a professional man's income, a business man's income from the standpoint of salary. It all represents income. If he invests his savings from those efforts, the dividends returned to him are, in themselves, earned income, because they represent his effort. That

distinction is not always made; but I say this, personally only, Senator, that I think one of the greatest injustices that can be done is to recognize amortization, obsolescence, and deterioration of material and machinery and give no consideration whatever to the wearing out of the human brain and human energies.

Senator COUZENS. I quite agree with that, but I am trying to point out that the tax on corporations will be a difference between the tax paid by the corporations and the tax paid by the individual who exerts his human body and brain, and that it represents a substantial difference between earned and unearned income.

Mr. EMERY. Do I understand you are considering the investment of a man, a corporate investment, and an earned income?

Senator COUZENS. Yes.

Mr. EMERY. It is not an unearned income so far as it represents the savings of the individual. He puts that in there as his savings and because it is his savings from his personal efforts, it represents earned income.

Senator COUZENS. So you do not recognize, in that statement, the difference between earned and unearned income?

Mr. EMERY. I do, but I recognize that as secondary, as distinguished from primary income, where it represents savings from an earned income of the individual.

Senator COUZENS. Have you any method by which we can depreciate the human energy and human brain, as we do in machinery?

Mr. EMERY. You have done that hitherto, Senator, by reducing by a certain amount the taxable income, and giving credit.

Senator COUZENS. But that is done only by giving credit on the taxable income.

Mr. EMERY. Yes, sir.

Senator REED. The first $5,000.

Mr. EMERY. The first $5,000, and for administrative reasons, the rest is income itself.

The CHAIRMAN. All right, proceed, Mr. Emery.

Senator REED. One more question. Mr. Emery, I do not know whether you included the question of any possibility of pyramiding the excise taxes on the primary producers. Has it occurred to you that if we make a tax on the gross sales after deducting all the purchases, it would conclusively prevent pyramiding?

Mr. EMERY. You mean the purchases of materials and supplies?

Senator REED. Yes.

Mr. EMERY. And then a tax on the balance?

Senator REED. Yes.

Mr. EMERY. Well, that has been very carefully considered by our committee in the course of its hearings.

Senator REED. What conclusion did you come to?

Mr. EMERY. Well, it reached the conclusion that it had a great many administrative difficulties that they can see; that it has the difficulty of novelty of administration. Their view was, Senator, that the administrative side of the Manufacturers' excise tax which was proposed in the House bill represented a very practical method of avoiding, to the greatest extent of any bill I have ever seen in that form, which is through a licensing system, the pyramiding of taxes, and that it represented, through the authority given to the Treasury Department, as complete and distinct a determination of level as we

have ever had and, in comparison with the Canadian system, with limited exemptions, it was a very successful system and that it would work. And we do not suggest to this committee for a moment the reconsideration of the manufacturers' tax because in most cases they can pass it on. In many cases they can not, because of the condition of business. It is much more easy to pass on a 1 per cent manufacturers' tax as a contribution to the public revenue, than to undertake to pass on 14 selective taxes of 10 per cent each, in which groups of industries are arbitrarily taken out and taxed at a high rate; because if it is taken out, anybody who objects to a sales tax has far more reason to object to them.

Senator REED. I agree with you thoroughly. But anybody who objects to a sales tax should object to the House bill, because it is a higher rate.

Mr. EMERY. It is a higher rate, but ——

Senator REED (interposing). But let me ask you this final question: It seems to me the House bill is ineffective by setting up a great amount of machinery that is unnecessary. I think that is a great objection to the House bill—a system of licensing that is needlessly complicated. But if every person or corporation who are obliged to pay a sales tax were permitted to deduct purchases of materials and supplies it would be a conclusive argument to the charge of pyramiding.

The CHAIRMAN. You would not get much tax that way.

Mr. EMERY. You would get considerable tax. We have had it advocated by men experienced in it over a long period of time.

Senator REED. You would not get 1 per cent.

Mr. EMERY. We are advocating the 1 per cent sales tax, which is a very low tax and which certainly reduces the argument, even assuming the translation of it, to a minimum. But I am satisfied our committee's thought is it would be absorbed in a large proportion. But the absorption of 1 per cent, in the present condition of business, would be easier that the other.

Senator REED. Let me ask you if in your consideration you would not exempt foodstuffs and clothing?

Mr. EMERY. We are exempting all the things that were exempted in the last bill in the House, and we have included, in addition to that, a number of other things, including wearing materials, and food, and farm fertilizers, and fungicides, and insecticides, and materials employed in the manufacture of malt syrups, and also including machinery used in bakeries. That was the final conclusion of our committee.

The CHAIRMAN. Your time has passed, Mr. Emery.

Senator COUZENS. I move that he be permitted to finish his statement.

Mr. EMERY. I will be able to finish it very quickly, Mr. Chairman.

The CHAIRMAN. Proceed.

Mr. EMERY. I had reached that point where I had given the suggestions our committee is making to your committee. It will take only a few moments to finish the rest. I was saying that from the beginnings of our income-tax system, we recognized a tax on a corporation is a tax on the stockholder and undertook to maintain parity between the highest normal individual income tax and the corporate rate.

We insist that this has been unfairly abandoned to create a continually increasing arbitrary discrimination, because of the source from which income is derived, between the corporate stockholder and the individual and partnership. The important thing, we urge, is to encourage, without unduly burdening in this emergency, business activity. Our position is that we should urge, and stimulate in every way a continued resumption of production and consumption of services and products. The care of the unemployed, important as it is, is less important than the encourgement of those conditions that will bring about employment in every form by those who are anxious to give it. This can be done by encouraging and urging the fixing of a rate that will encourage the resumption of production, consumption, and employment.

There is no good reason for treating an accepted business practice, such as the making of consolidated returns, under departmental regulations that identify and prevent abuse, as a privilege to be penalized.

Nothing could be more unfair than failure to recognize that numerous individuals and businesses have suffered and are suffering severe losses. To permit these to be carried for but a single year is the maximum sacrifice that may be fairly asked without bringing many to the verge of ruin.

To tax the assets of the shareholder in his corporation and again upon distribution is to levy an indefensible double tax, arbitrarily discriminating against him, because of the form of business from which he derives his income as against the partnership and corporation.

It should be recognized that the stock-transfer tax affects a fundamental business activity and, carried to the limits proposed, reacts to injure normal business functions and to lessen the volume of anticipated revenue.

We believe it far wiser to spread a tax over all manufacturing operations than to levy $250,000,000 upon an arbitrarily selected group. The general manufacturers' tax was debated and defeated as a general sales tax rather than a tax spread over industry. We do not urge it because we believe it can be passed on but because its absorption, in whole or part, is less likely to retard the recovery of the employing power of manufacturers than the imposition of heavy special taxes upon arbitrarily selected groups. A sober reconsideration of such a tax at less than half the rate proposed will yield abundant and reliable revenue, impose hardship on none, and relieve many of unbearable burdens, while the exemptions suggested include all the substantial necessities of life.

We urge the amendment of the Volstead Act and the regulated manufacture of a cereal beverage with a higher alcoholic content as an indispensable revenue measure. We are concerned neither with the pros or cons of prohibition. The only issue is whether we shall have beer with or without revenue. The bill before you recognizes a market for many illicit beverages, and proposes to tax the raw materials. We urge the permissible manufacture of a palatable non-intoxicant, competing with an illicit beverage, to produce revenue in a national emergency.

The cumulative effect of the rates and administrative features we protest threaten to retard that business recovery in which we are all vitally concerned. The program we submit, while involving inevi-

table hardships, will encourage industry, yield abundant and reliable revenue, and stimulate industrial operation and employment.

The CHAIRMAN. Thank you, Mr. Emery.

Mr. W. A. Dower.

Mr. DOWER. Mr. Chairman, Prof. F. R. Fairchild, professor of political economy in Yale University, has been asked to speak on behalf of the Manufacturers' Association of Connecticut, in my stead. If that is agreeable to the committee, Professor Fairchild will speak in my place.

The CHAIRMAN. Very well. Is Professor Fairchild here?

Mr. FAIRCHILD. Yes, sir.

Mr. DOWER. As a matter of qualification for Professor Fairchild, let me state that he has been the professional adviser of the local government in Porto Rico, and also the financial adviser in the Territory of Hawaii.

STATEMENT OF F. R. FAIRCHILD, PROFESSOR OF POLITICAL ECONOMY, YALE UNIVERSITY, NEW HAVEN, CONN.

Mr. FAIRCHILD. Mr. Chairman and gentlemen of the committee, my name is Fred Rogers Fairchild, professor of political economy at Yale University.

I have been asked by the Manufacturers' Association of Connecticut to appear here this morning. For a good many years I have worked with this association as general adviser on tax matters, an association which I have found agreeable, because this organization has always permitted me to express my own ideas as to general public interest, and I think you will see, when I am through, that I have had that in mind this morning, rather than any special plea for this particular group.

I might add that this association represents some 800 manufacturers in Connecticut, being virtually the entire industrial employing strength of the State.

I am, first of all, favorably impressed with the evident attitude on the part of the administration and Congress to balance the Federal Budget. And if that attitude is adhered to, I am very sure that it will meet most favorable response, not only on the part of the business manufacturing interests of the country, but on the part of serious thinkers on public problems, and it especially meets with the favor of those who are students of political economy.

The American policy, from our first establishment, has always looked in this direction. The Revolutionary public debt, which was inherited from the war, was a thing that was looked upon to be wiped out at the earliest possible moment. Surplus revenues were used for that purpose until, in 1835, the United States stood free of public debt. I think that is an achievement that has never been equaled in any government.

The Civil War debt of $3,000,000,000 which, at that time, looked like a tremendous burden, was likewise attacked in the same spirit, and in the last decade of the nineteenth century it had been reduced to one-third of that amount.

The CHAIRMAN. We want to balance the Budget to-day, Professor, if you will tell us about that.

Mr. FAIRCHILD. Perhaps it is not necessary to urge that point, and I would simply suggest, then, that we take it for granted that at the

present time the Budget is to be balanced. Further borrowing and inflation have always produced unfortunate results in the past, and there seems to be less excuse for that to-day than before.

Another gratifying thing is the evident interest in economy. The American public has been bearing a tax burden of tremendous weight and one which has been increased at a very rapid rate during the past generation. You are doubtless aware that the burden of taxation which we bear to-day is some six or seven times what it was a generation ago. And while that burden could be borne with some resignation during prosperous times, this tremendous burden of taxation during a period of depression is a staggering blow to the public as a whole, and a special blow to industry which is seeking to recover from the depression and bring about a restoration of prosperity, to which we all look with hope and desire.

Now, at the present time, an increase in taxation is inevitable. I think the public is expecting that, as the administration is. But I think the public is looking to the administration and to Congress also to see that public expenditures will be kept at the lowest possible level, and that the increased taxes will come only after the most careful scrutiny of public expenditures.

And I think we have learned, in the last two and a half years of depression, the futility of seeking to ward off depression and restore prosperity by means of lavish governmental expenditure, whether by means of public works or other expenditures. Whatever theorists may have thought of that three years ago, I think bitter experience must have taught them a lesson. So that increased taxation must be made acceptable by good faith in the reduction of the cost of Government.

The increased taxes which, I think, the public is well prepared to accept in order that the Budget may be balanced should, I think, be levied as a part of a well-rounded taxing system. The revenue system of the Government up to the time of the World War consisted almost entirely of consumption taxes, the tariff revenue and excise taxes dividing the burden about half and half.

With the World War came a swing to inheritance and income taxes, forms of direct taxation, which has thrown the center of gravity far the other way, until, during the past few years, the Government has depended upon that form of taxation, and now, in time of emergency, when it becomes necessary to find further revenue and, mind you, in a time of depression when former rates are yielding us far less than before, it will inevitably be necessary to seek now increased and new revenues in many different fields.

If I could offer criticism of the general spirit of the House bill, it would be to the effect that too much attention has been given to raising this additional needed revenue from the few who are wealthy and well to do, and too little from the mass of the people. The attempt to legislate drastic increases in the rates on the income and the estate taxes may well push those taxes beyond the point at which they can bear the burden. Remember that taxable incomes and taxable estates have been shrinking seriously in the past three years. In fact, it is the shrinking of just that tax base which is one of the reasons for the depressed and the financial crisis which the Government is to-day facing. And, remember that any amount of increases in these rates is not going to bring any tremendous increases in.

revenue, and many have serious adverse effects in evasion and the destruction of the very base upon which those rates rest. The time, it seems to me, has certainly come when we must seek revenue not only from estate taxes or inheritance taxes as the base, but to an extent from consumption taxes.

That is done in the bill before you, but not as far as it should be. I am convinced that a well-rounded revenue system must involve both the use of the income and inheritance taxes, which rest upon the few, and upon a consumption tax, which rests upon the many. I think the attempt should be to rest on a wide tax base, in which all shall contribute in some capacity and ability to pay.

And with this idea it would seem idle to attempt to apply consumption taxes, and then, at the same time, attempt to select the commodities which are consumed chiefly by the well to do. The idea of a consumption tax is to develop a wide tax base. We can not have our cake and eat it too. We can not relieve the burden of some by an inheritance tax, by levying a consumption tax, and then let this tax rest not on those who consume, but on a few. That does not get the necessary revenue.

My first general criticism, then, is that; and my second point on the House bill before you is that in the selection of articles for a consumption tax the base has not been made so broad as it might be.

I have been speaking in general terms, and if I might, I will now take up certain specific points. I would offer, very briefly, these suggestions: On the whole, I believe that the rates on the income tax have been made higher, really, than a traffic will bear, and that not much less revenue and a much better balanced tax system would come from slightly lower rates.

I would suggest that the surtax starts rather too low; and that the third normal tax seems unduly high.

The earned income credit, it seems to me, should be kept. It does not amount to much anyway, and to reduce it as now proposed is a minor irritation, reducing the advantages of an income tax, without sufficient increased revenue to justify it.

The double taxation of dividends, as proposed, I believe is not justified. Dividend income is already discriminated against in that the 12 per cent corporation tax rate is offset only by the 5 per cent normal tax rate.

Going on, in addition to the normal tax rate, it is not merely a discrimination between earned and unearned income, but is a hit and miss double taxation on a particular class of unearned income, leaving income from bonds and mortgages, and income from partnerships and individual business not so treated.

The extra 1½ per cent from incomes reporting by consolidated returns, it seems to me, not to be justified. There would seem to be every reason, from the Government's point of view, for permitting corporations to report according to their regular system of business accounts and, on the whole, I think the Government is more served than the taxpayer by eliminating the necessity of meticulous accounts of corporations subsidiary to each other.

Denial of the carrying over of loss to the next year, I think, is unfortunate.

On the other hand, the lowering of personal examptions, as proposed in the House bill, it seems to me is entirely justifiable. That is

in line with my idea of a broad tax base, to bring the revenue income down to a large number of taxpayers.

Likewise, limiting the losses to the gain is a good thing.

The admission tax is a good tax. And I would suggest that the 10-cent limit of the administration bill is better than the 45-cent limit, and the 45 cents is not so good as the 24 cents.

STATEMENT OF NORMAN THOMAS, NEW YORK CITY, REPRESENTING JOINT COMMITTEE ON UNEMPLOYMENT

Mr. THOMAS. Mr. Chairman and gentlemen, may I begin by saying that owing to lack of time I was unable to consult officially any Socialist committee, and therefore I appear as an individual, but I think I am warranted in saying that what I say expresses in general the Socialist position.

I want to emphasize in the beginning that to our mind it is impossible to talk of a budget being balanced in any true sense which leaves us without a provision in sight for the very desperate and increasingly urgent situation of the unemployed in America. Owing to constitutional limitations on their power in part and owing to the economic situation and the great volume of delinquent taxes that fall on real estate it is simply not true that local government areas are going to be able to take care of the unemployed even as they have been. In a city as rich and powerful as New York there is not at present a dollar in sight for unemployment relief. Although there are about 1,160,000 needy persons dependent upon such relief, according to our welfare workers, there will not be a dollar in sight after June first. Conditions are worse rather than better, proportionately, in many other cities. And any kind of budget, to our minds, any kind of financial legislation, ought to take into account this very desperate and urgent situation and the need of making direct provision for it.

I think that that does not require a direct provision by taxation. I think that it is entirely possible to use Government credit. But in order to use Government credit effectively and efficiently I think that the amounts provided in the House bill should be raised.

Beyond that it seems to me that if in the war we could carry a weight of debt of $26,000,000,000 for the war against poverty that is now on it would be possible to add to our $18,000,000,000 of debt another $5,000,000,000, providing the rest of the Budget is balanced, for public works and other necessary unemployment relief. I want to stress that because it seems to me that it has been too little considered in Congress, that there is no balancing of a budget with this need so largely neglected.

May I say in this connection that, of course, this particular need, which is the need of a whole class of workers, can never be met by the arbitrary payment, on any terms, of a bonus to veterans, some of whom are unemployed and some of whom are not.

May I also say in this connection that in speaking of balancing the Budget and the possibility of carrying, if necessary, further loads of credit to be repaid out of future income and inheritance taxes, I am not unmindful of the importance of economy. It seems rather unnecessary to go on, for instance, building ships when you can not house people decently in the United States of America.

Senator KING. And when there is nothing to put into the ships.

Mr. THOMAS. When there is nothing to put in.

Senator KING. In the way of cargo.

Mr. THOMAS. I was speaking of building up to any Navy treaty limits, among other things.

Now with regard to the House bill——

Senator COUZENS. Before you start on that may I ask if you see any difference between a Government debt of some $18,000,000,000 or $19,000,000,000 in these times and the $26,000,000,000 debt during times when the whole country was prosperous and making money?

Mr. THOMAS. As a Socialist I see considerable difference—some that I am a little surprised that non-Socialists would want to stress. In other words I think we have come to a point in the history of capitalism when it takes a good war to make us prosperous while the war is on and for a while afterwards. As a Socialist I think a system that has to be saved and made prosperous by war is in a bad way. But I assume that this committee does not accept that premise. And assuming that your capitalistic system still has vitality I think it ought to be revived by something less than a war so it could carry this weight. Indeed I am inclined to think that to a certain limited degree a proper program of large scale public works and housing would actually stimulate revival because it would create employment that means real social wealth in housing, in roads, and so forth.

Senator COUZENS. Have you any yardstick by which you can measure the vitality of the capitalistic system?

Mr. THOMAS. I have got 15 minutes, Senator, and I have a yardstick that I would like to apply and I hope to apply with increasing accuracy through the days and months to come. I would like to get on to this tax bill.

The CHAIRMAN. Proceed. You have only got 10 minutes more.

Mr. THOMAS. I am aware of that, and that is why I did not want to answer the Senator as fully as I would like in this place at this time.

The CHAIRMAN. Well, I hope he will not ask you any more questions.

Mr. THOMAS. I hope he will if I can shed light on the subject.

The present tax bill, that is the House bill, has the great virtue of having defeated a general sales tax which is not only unjust in the way in which it falls upon the poor, but is likely to still further check that resumption of purchasing power upon which any moderate return of prosperity depends.

Senator REED. Mr. Thomas, if it exempts rent and food and clothing, through what method does it fall upon the poor?

Mr. THOMAS. Well, statistics of how much you wanted to raise proves that it falls upon your general purchasers, and your general purchasers, even with those exemptions, do not by any means purchase goods in proportion to wealth, which is a fair principle of taxation. Moreover, may I add, it has other vicious effects. Not only are sales taxes pyramided on the way from the manufacturer to the consumer but also they are so lost and concealed in the general price structure that their vicious weight is concealed even from their victims, and as it goes on people are not aware of how much they are paying. And as time goes on and you get prosperity, then the drive will be not

to reduce your sales tax, but to reduce your income taxes, leaving a still further burden to fall on the unscientific method of sales tax rather than the more scientific and just method of income and inheritance taxes.

Senator REED. It has not been found to be pyramided in Canada, has it?

Mr. THOMAS. I think it has been. I read a rather favorable statement about it. But it is a rather unheard-of thing if there is no pyramiding of these taxes. I should expect them to be pyramided.

While I am glad that the general sales tax was defeated, may I say that I object to most of the sales taxes in the House bill, and in particular to the raise in postage rates to three cents which is not designed primarily to balance scientifically your postal deficit. That would require a different treatment of second-class mail and newspapers and magazines which carry great advertising, 99 per cent of which are altogether opposed to all doles except to newspapers and magazines in second-class rates. That is another reason for opposing this particular increase.

Senator GEORGE. And all of which want to balance the Budget.

Mr. THOMAS. They all want to balance the Budget their way. You know how it is; it is always that way. It depends on who gets the dole. I favor what you call doles to the unemployed. I think it is justice. From that point of view I am opposed in general to the sales tax.

Professor Seligman, of Columbia, in a statement that I can not readily lay my hands on, but which statement I will file, writing in the New York Times in December, 1931, said that if the British estate tax rates were applied to American inheritance you would raise some $640,000,000, which is more than the entire amount estimated to be forthcoming from your sales tax, plus the additional income estimated to be forthcoming by broadening the basis of income tax.

The widely quoted estimates that appeared in Walter Lippman's article showed that in America you would get about 1 per cent on your estate tax, whereas in England they get about 10 per cent on their estate tax. I mean in the new House bill. That in England they get 50 per cent from their income tax, and in America under the House bill we will get 37 per cent on our income tax.

I am quite aware that you could, especially in time of depression, put inheritance taxes to such a point that it would be necessary for the Government to arrange to go into business still further. As a Socialist I do not mind that in the least. It is evidently having to go into business anyhow in worse ways. But I do advocate then at least the application of the British estate tax rate; making allowance for some State inheritance taxes, it should still be done.

Mr. Henry Rosner, research secretary of the Socialist Party of New York, at my request has prepared a statement showing what would happen if the British rates were applied on incomes from $10,000 up. He figures on this statement that you would get over $2,600,000,000 in the 1931 returns based on the 1930 income. Allowing for that further depreciation which the Treasury Department expects, you would still get a return, if the British rates were applied here in the United States—and I will file a statement with the exact figures—you would still get a return of about $1,500,000,000, again allowing

for some reductions in estate and income taxes. You have in the income tax above $10,000 statistically a sufficient means of balancing your Budget and a very much more just means than any other means now applied.

(The tables presented by Mr. Thomas are here printed in the record in full, as follows:)

Estimate of 1931 revenue from personal income tax based upon 1930 statistics of income if rates comparable to British rates had been in force. Increased rates applied to incomes beginning with $10,000

Income category	Rate applied	Tax collected
	Per cent	
$10,000 to $11,000	20	$74,574,000
$11,000 to $12,000	21	68,832,000
$12,000 to $13,000	22	63,723,000
$13,000 to $14,000	24	61,374,000
$14,000 to $15,000	26	59,474,000
$15,000 to $20,000	28	239,888,000
$20,000 to $25,000	31	178,549,000
$25,000 to $30,000	35	145,622,000
$30,000 to $40,000	38	219,147,000
$40,000 to $50,000	45	171,705,000
$50,000 to $60,000	48	137,853,000
$60,000 to $70,000	50	106,004,000
$70,000 to $80,000	51	86,357,000
$80,000 to $90,000	52	69,347,000
$90,000 to $100,000	54	61,237,000
$100,000 to $150,000	57	211,749,000
$150,000 to $200,000	58	115,843,000
$200,000 to $250,000	60	72,315,000
$250,000 to $300,000	62	58,750,000
$300,000 to $400,000	63	84,757,000
$400,000 to $500,000	64	46,312,000
$500,000 and up	65	356,180,000
Total		2,680,593,000
Tax collected on low incomes under existing rates		35,000,000
Total tax collected in 1931		2,721,593,000

Comparison of present British rates and rates in new revenue bill

Effective rate of present British tax in case of married couple with 1 child—income earned			Treasury Department figure; effective Federal tax under new bill		
Income in pounds	Rate per pound		Percentage rate of tax	Income in dollars	Tax in percentage
	Shillings	Pence			
2,000	3	6½	17½		
2,500	4	0½	20		
3,000	4	5	22	10,000	1.53
4,000	5	1½	25½		
5,000	5	9	28½	15,000	3.04
6,000	6	3½	31½	20,000	4.35
7,000	6	8½	33½		
8,000	7	0½	35.2	25,000	5.62
9,000	7	5½	37.2		
10,000	7	9	38.7		
15,000	8	10	44	50,000	11.10
20,000	9	6½	47.7		
25,000	10	0½	50.2		
30,000	10	5	52	100,000	22.03
40,000	11		55		
50,000	11	4	56.6		
100,000	12	3½	61½	500,000	39.81

NOTE.—The rates vary, depending upon dependents and unearned income. There is an allowance for earned income as well as dependents. In the higher brackets, however, the effective rates will not vary much although conditions vary. This particular category, therefore, shows the trend.

Mr. THOMAS. Prof. Clair Wilcox, of Swarthmore, in a recent estimate of probable incidence of taxation under the House bill pointed out that on incomes below $3,500—that is, what you might call the mass of poor and moderately off—would fall the responsibility for providing 41 per cent of the present deficit of the United States. And that is grossly too high.

Senator KING. You mean under the House bill?

Mr. THOMAS. Under the House bill. That was the estimate of Prof. Clair Wilcox. I haven't his figures with me.

May I also point out that it seems to me that this committee should give its very urgent attention to the importance of preventing the escape of big fortunes in tax-exempt securities. I am not a lawyer, and I do not know the constitutional argument. I hope it is not unconstitutional to stop the escape of great fortunes that are in tax exempt bonds. If it is, so much the more need for revising the constitution.

May I also call attention to the fact that the House bill makes what seems to me the serious error of stopping the sharp graduating of the rate of income taxes at $100,000, if I remember correctly. Which means that if a man has an income of a million dollars a year—and I understand such still exist—or even $30,000,000 or $40,000,000 a year—and it is rumored that even such may exist—he is paying at the same rate as the man with an income of $100,000, which is frankly absurd, I think.

May I suggest that Mr. Maxwell Stewart in The Nation of March 23, 1932, printed some very interesting statistics to show the evasion of income taxes. To meet this evasion I earnestly recommend the reinsertion of the provisions of publicity that were in the 1924 law. It does make a difference, this general knowledge of the matter, and I see no unfairness in it.

I think I have kept pretty well within the time, and I want to file this statement with you.

(The excerpt from the article How to Tax the Rich, by Maxwell S. Stewart, appearing in The Nation, March 23, 1932, presented by Mr. Thomas, is here printed in the record in full, as follows:)

The amazing drop in income-tax receipts in 1931 leads one, moreover, to wonder now much of the decline is due to reduced incomes and how much is the result of a growing facility in dodging the tax. While the secrecy with which individual returns are shrouded makes it impossible for outsiders to detect specific cases of tax evasion, there are substantial reasons for suspecting the gradual growth of such evasion. An analysis of the income-tax reports for 1929 and 1930 bears out this suspicion. Despite the general depression, it is common knowledge that salaries were almost universally maintained at their former level throughout 1930, especially in the higher income groups. Yet the tax reports show a decline in wages and salaries of over 16 per cent. It is difficult to say how much represents falsified returns, but it is likely that both factors were present. A glance at the next largest source of income reveals even more conclusive evidence. Although the total payments for interest and dividends in 1930 reached the highest mark since the war—$8,208,000,000 as compared with $7,588,000,000 in 1929 and $7,073,723,000 in 1928—the returns of the individual taxpayers indicate a decline of 14.5 per cent in this category over the previous year. This point carries especial significance when we consider the fact that 70 per cent of the corporation stock in this country is owned by the 1 per cent of the population "earning" over $10,000 a year, and that 43 per cent of our national income goes to the owners of land and capital.

Further evidence of the inadequacy of the present arrangement for tax collection may be obtained by a comparison of the income-tax reports with the estimated distribution of the national income. According to a careful and apparently

accurate compilation, the gross income of the approximately 45,000 persons receiving more than $50,000 in 1928 was 9.4 per cent of the entire national income, or approximately $8,400,000,000; while the total tax paid by the 43,184 persons reporting a net income of over $50,000 was only $900,000,000. After making full allowance for the small difference in the number of persons involved, it will be seen that the tax paid by this group is less than 11 per cent of their total income, although the official tax rate for this income group in the year stated was 5 per cent plus a surtax of between 13 and 20 per cent. Even more startling results are obtained from an examination of the amount paid by the 355,000 moderately well-to-do persons whose incomes ranged between $10,000 and $50,000 during 1928. Although the total income of this group is estimated to have been approximately $8,800,000,000, the 339,000 persons reporting a net income between these figures paid only $220,000,000 in taxes—just 2.5 per cent of their gross income.

Mr. THOMAS. What I am pleading for is, first, recognition here and in every committee of Congress of the very grave fact that no Budget can be balanced that leaves out of account the desperate urgency of help for the unemployed. That what we are actually doing in America is to invite men either to starve or to riot, unless such provision is made. That this is a national emergency. That the state of our laws as well as of our economy makes it necessary to deal with it on a national scale. That we invite unrest otherwise.

In urging increased expenditures here I am also urging economy where economy can be applied without still further reducing employment. Curtailment of work, as the Federal Government and States have contemplated, actually increases the burden we have to meet and bear.

May I urge that any plan for the use of credit or otherwise for large-scale help should first go to the unemployed, and that ought to be assumed in all Budgets, and not arbitrarily under pressure to a particular class of veterans.

Allowing, then, that what we have got to do is to raise the money that the House bill calls for, may I urge that the proper method of taxation is estate and income taxation, and I submit suggested figures in that connection. I do not consider that there is an economic argument of weight against it.

What we need in a country of idle machines is increase of purchasing power and not increased capital investments. We need working capital, but large estates are not investing in working capital. They do not provide working capital, commercial banks provide that, and they provide it in proportion to demand—to need of goods. And that demand or need is in turn furthered by increasing, not reducing, purchasing power.

I think that the argument against income and inheritance taxation in this connection is political and not economic. It is the people with incomes of $10,000 and up who are most vocal in America, who control the papers, and those who write a large part of the articles are paid by the people who have incomes of over $10,000. Witness the present newspaper discussion. Also they are the ones that contribute to campaign funds—not socialist campaign funds, but other campaign funds.

Senator COUZENS. Have you dealt with the corporation tax?

Mr. THOMAS. I have not.

Senator COUZENS. Have you any views on that?

Mr. THOMAS. I think the House meets that fairly adequately, but I reserve the right to change my mind with more education. I am

particularly interested in the kind of taxes, income and inheritance taxes, of which I spoke. I do not believe that it is an unfair form of double taxation in this emergency to do as the House bill does, and to forbid for two years at least the exemption of dividends from personal incomes if the corporations have paid the tax.

Senator COUZENS. What would you say as to eliminating double taxation by making the corporation tax 20 per cent and cutting out the duplication of taxation by taxing dividends?

Mr. THOMAS. I would be perfectly willing to consider that if I had the figures to know how it would work out. I am not familiar enough with the situation off-hand to give an intelligent answer.

The CHAIRMAN. Have you anything further, Mr. Thomas?

Mr. THOMAS. That is all. I will file a statement.

The CHAIRMAN. You may do so.

(The statement presented by Mr. Thomas is here printed in the record in full, as follows:)

STATEMENT OF NORMAN THOMAS

I desire to make it plain that owing to lack of time for consultation with any official committee of the Socialist Party I am appearing as an individual socialist rather than as a spokesman of a carefully considered official position of the party. Nevertheless, I think I represent accurately the general Socialist opinion.

May I begin by stressing the fact that in no proper sense can the budget be said to be balanced by the House bill now before us. In particular, no budget is balanced which utterly ignores the demands for direct Federal relief for the unemployed. Provision for the unemployed is an absolute and urgent necessity. Present conditions in America and the constitutional and financial incapacity of a great many local government areas to meet the need invites men to riot as the only alternative to starvation, unless Congress makes adequate provision for the emergency. Such provision, especially in the form of a great program of public works, should be financed, not by immediate taxation, but by loans to be repaid out of future income and inheritance taxes.

The public debt of the United States in the emergency of international war reached $26,000,000,000. In spite of precipitant haste to reduce income taxes in the gambling era which has closed, the public debt has already been reduced to about $18,000,000,000. You who believe that capitalism is not completely played out can not in sincerity hold that the public debt can not be increased in a necessary war against the poverty of unemployment without impairing our credit structure. I should like to make it plain that this is no argument for foolish expenditures. It is no argument for building a big navy in a country where human beings are homeless. It is no argument for putting the demands of veterans, employed or unemployed, ahead of the desperate needs of unemployed workers and bankrupt farmers. It is an argument that the United States can and must face the unemployment problem without trying to evade it under any talk of balancing the budget or any fear of weakening our credit structure.

Assuming that the House bill provides the minimum necessary for proper financing I desire to protest against the way in which this burden is apportioned under the terms of the law. Some good things can be said for the law as it passed the House. The general sales tax was defeated. Not only is such a tax monstrously unfair in that it would fall with peculiar weight upon the poor. It is also of all taxes the one most likely to check any resumption of active purchasing on which any slight degree of recovery from depression depends. Not only are sales taxes pyramided on the way from the manufacturer to the consumer but also they are so lost in the general price structure that their vicious weight is concealed even from their victims. They tend to be perpetual because they are not seen and the future drive to reduce taxes will be made to apply to income taxes.

Although the House did well to defeat the general sales tax which on no account should be reinstated, it served the masses of the producers in the United States very ill when it kept in as many particular sales taxes as it did.

Prof. Clair Wilcox, of Swarthmore, has computed that under the House bill as passed 41 per cent of the total def 't must be paid by taxes on the poor, that is on incomes below $3,500. Particularly, I object to the increase in first-class postage

rates. This is not intended to balance the postal Budget but simply to raise revenue. If there is to be an increase in postal rates it ought to be on second-class matter carrying advertising that is now heavily subsidized by a generous Government in the interest of newspaper proprietors who then decry doles for the unemployed.

I also object in varying degrees to the other sales taxes and in fact to all sales taxes except those on super luxuries. If the Congress were to adopt the rates applied in British estates' taxes the United States would be able to get from the inheritance tax alone about $650,000,000, or an increase sufficient to cover the entire amount estimated as forthcoming from the proposed sales taxes and the lowering of the income taxes. My authority for this estimate is a statement by Prof. Seligman, of Columbia, in the New York Times of December 10, 1931.

Under the House bill, according to the widely quoted estimate of Walter Lippman, the new income taxes will raise about 37 per cent of our revenue, the estate tax about 1 per cent of our revenue, whereas British revenues are derived 50 per cent from income taxes and 10 per cent from estate taxes.

Mr. Henry Rosner, research secretary of the Socialist Party of New York, has drawn for me a table showing the application of the British income-tax rates to American incomes, from $10,000 up. His figures are on the 1930 incomes and they show that on this basis the total income tax collected in 1931 would have been $2,721,593,000. Assuming that the decline in incomes from 1930 to 1931 follows the prediction of the Treasury Department it is still true that the Federal Government could collect for 1932, $31,528,524,000. Even allowing for some readjustment in American rates in consideration of the fact that some States have income taxes, the Budget could still be easily balanced, with a margin to strengthen the Government position in meeting the needs of the unemployed by the application of British rates to incomes of $10,000 and over, plus the British estate tax. In this connection it is important to note that contrary to all sound policy the upper limit to which sharp income-tax graduation has been carried has fallen in the House bill to only $100,000. Which means that a man receiving an income of $1,000,000 a year and over—and remember there are thirty and forty million dollar incomes in America—pays the same surtax rate as if his income were $100,000. The graduation should be carried up sharply to the very top of reported incomes in the United States. The possibility of these great fortunes going into tax-exempt bonds should be ended.

Figures set forth in some detail by Mr. Maxwell Stewart in The Nation of March 23, 1932, show on the face of them the great evasion of effective income taxation. It would help in remedying this evasion if the publicity feature of the 1924 income tax law were reinserted.

The economic objections to high income and estate taxes which the Secretary of the Treasury and others have expressed are not sound. America with its idle machines suffers from the lack of purchasing power, not of adequate investment. Large estates are not invested in working capital but in fixed capital, of which we have too much. It is commercial banks which create and provide working capital whenever business men want it. They want it whenever there is a demand for the goods they produce. Taxes which check a demand for goods have the effect that Mr. Mills fears. There is no reason to think that the Treasury Department's present estimates of economic consequences of taxes which it dislikes are any more accurate than its previous estimates concerning surpluses in good years and deficits in bad years. It has been wrong on both counts.

The real case against high income taxes is political. People with incomes in excess of $10,000 are vocal. They control the newspapers. They contribute to the campaign funds of both old parties. Hence their astonishing success in putting over their class interest as if it were a public interest.

In these recommendations for meeting the deficit by income and inheritance taxation I do not assume that we can tax our way out of depression into prosperity. As a Socialist, I look upon income and inheritance taxation not only as a means of providing revenue but as a means to facilitate the transition of our chaotic capitalism to an intelligently planned socialism, under which alone the evils of unemployment can be solved. But on your own premises on the vitality of capitalism—premises which I do not share—you have no case against the taxation of the rich into whose laps the gambling era has poured such great wealth but who now want to escape their just responsibility in this hour of tragic need.

COMMUNICATION FROM HON. W. G. McADOO

McADOO, NEBLETT & GLAGETT,
Washington, D. C., February 3, 1932.

Hon. THOMAS J. WALSH,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Replying to your recent letter, I feel honored that you should want my views on taxation, and I am glad to submit a few suggestions without attempting to go into all phases of the problem.

I expressed the conviction some years ago that the policy of paying our war debt over a short term of years, was unjust to the present generation because it imposed upon it a larger part of the burden than it should be required to bear. I believe, of course, that the quicker the Nation gets out of debt, the better; but in determining what is the reasonable period over which the war burden should be spread, we should have regard to economic conditions and the ability of the taxpayers of this generation to carry the load. During the past 12 years a larger portion of the debt has been paid than should have been justly apportioned to the present generation. For this reason I think that we may with wisdom fund a considerable part of the Treasury deficit into long-term bonds and thereby reduce the amount of new taxation which the public will otherwise be forced to bear. This is particularly necessary in view of the exhausted condition of the country. Reports are so conflicting that I am unable to make a satisfactory estimate as to the probable Treasury deficit for the fiscal year 1932. I understand that it will amount to $2,000,000,000 or more. In any case, I should say that it would be sound and wise to fund 60 per cent of it into long-time obligations and to raise the remaining 40 per cent by taxation.

When it comes to the distribution of the new tax burden, we naturally turn first to incomes.

Having regard to the present distressing conditions, I think it would be unwise to reduce existing exemptions; and I think, too, that it would be extremely hurtful to make the new income taxes retroactive to 1931. Manifestly, the surtaxes should be increased on large incomes, especially on those above $100,000, although it should be borne in mind that the heavier this tax, the greater will be the inducement to owners of large incomes to escape it by investing in tax-exempt securities. Already there are more than $30,000,000,000 of tax-exempt bonds in the United States. The income from this vast amount of wealth is immune from all taxation except inheritance taxes. I have long been opposed to the practice of issuing tax-exempt bonds. Our Federal, State, and local Governments have carried it to extremes. The courts have upheld the validity of these exemptions and there is no escape from what has already been done. But the policy ought to be discontinued. It is unsound and uneconomic to enlarge this tax-exempt refuge and to further increase that privileged class which makes no contribution to the support of our Federal, State, and local Governments. I mention this fact not because it is altogether relevant to the subject of this letter, but to indicate that the return from excessive surtaxes on large incomes is not, for the reasons stated, a safe reliance for greatly increased revenues.

In the field of excise taxes, it is difficult to say where the burden may be placed with least distress to the masses of the people. Excise taxes are consumption taxes. If confined to luxuries, or so-called luxuries, they are not sufficiently productive, especially in hard times; nevertheless we should get all the revenue obtainable from that source. Obviously, taxes should not be laid upon the necessaries of life. Gasoline is a case in point. Gasoline has become a necessity of modern life—to the farmer who operates his tractor to cultivate his field, and his automobile to haul his produce to market; to the laboring man who must have a motor to carry him to and from his work, and to every class of our people to which the automobile is an indispensable accessory of present-day life. Already the various States have imposed large taxes on domestic gasoline, and it seems to me that it would be unwise for the Federal Government to invade this field and put new burdens on gasoline users. I think it would be better to lay a tax on imported crude and fuel oil and on imported gasoline. This would produce not only a substantial revenue, but it would tend to revive the domestic oil industry in some of the most important States of the Union, all of which are now suffering from a flood of foreign oil importations with resulting shutdowns of wells and enforced idleness of thousands of oil workers who, with their families, are suffering from actual want. Moreover, the reduction and, in many cases, the actual cessation of royalty payments to great numbers of farmers and others who own oil-bearing lands, and the reduction or suspension of oil dividends, have

contributed in no small degree to the prevailing distress in large sections of the country.

FEBRUARY 8, 1932.

It occurs to me—and I submit it merely as a suggestion—that it would be wise to impose, for the year 1932, a very heavy tax on passports with a special provision for reductions in cases where it can be shown to the satisfaction of the State Department that passports are required for necessary business purposes or to meet emergencies arising from illness or accidents. While the revenues from this source might not be great, the contribution to our domestic prosperity would be substantial if our citizens who now spend in European and other foreign countries vast sums of money on holiday tours would spend that money at home this year. It would stimulate American summer resorts and American trade in thousands of directions with marked benefit to the economic situation. I am sure that patriotic Americans are willing to cooperate by this means to help their country in this trying period.

I think, too, that a levy should be made on the initial offering of all foreign securities in the United States. The evidence developed by Senator Johnson in his recent investigation of foreign bonds sold in our markets will, doubtless, put an end to or greatly reduce such offerings for the present, but the time is opportune to establish the policy, and it should have a salutary effect. This form of taxation is not without precedent in other countries.

We all read, from time to time, statements about the vast amount of money the Government is losing because of the prohibition laws. It is said that bootleggers are making a billion and a half dollars per annum from their illicit trade; that if the Government would legalize and tax the liquor business this immense sum would flow into the coffers of the Treasury.

Without discussing the accuracy of these statements or the futility of the suggestion because of insuperable legal obstacles, or the merits or demerits of prohibition, I think that if the bootleggers are profiting each year to the extent of $1,500,000,000, or any other sum, through violation of the laws of the United States, it is the obvious duty of the Government to take the entire amount of such profits through taxation. It is a fundamental principle of law that no one shall be permitted to profit by his own crime. Bootlegging is a crime under the laws of the United States. The Government has the unquestioned power to destroy the illegal business by taxing all the profit out of it. If there is no profit, there will be no incentive to engage in the business and there will be no money to corrupt officers of the law and to instigate murder and other crimes. If, in the new revenue bill, an income tax of 100 per cent should be laid upon all profits arising from any business, occupation, or operation conducted in violation of the antinarcotic laws and the prohibition laws, we might succeed in transferring to the Federal Treasury the income derived from those sources until they are dried up. Such a tax, combined with the inquisitorial power possessed by the Bureau of Internal Revenue, is one of the most effective weapons that could be employed to destroy the bootleggers and narcotic dealers.

It may not be possible to collect 100 per cent of the illegal income, but certainly the wholesalers, the crux of the problem, can be reached; and if they should be driven out of business, the small operator or retailer will find it difficult to ply his nefarious trade. Those who argue that the Government should not tax unlawful business, fail to realize that if incomes from illicit operations are exempted from or permitted to escape taxation while incomes from lawful operations are not, the criminal is rewarded and the honest man is punished.

I have not attempted to enter upon a full discussion of the tax problem. I submit these reflections merely for what they may be worth.

With warm regards, I am, cordially yours,

W. G. McADOO.

LETTER AND BRIEF OF WAGER FISHER

Mr. ISAAC M. STEWART,
Clerk Committee on Finance, United States Senate, Washington.

MY DEAR MR. STEWART: In accordance with my letter of request and your telegram of April 3, find inclosed brief which I desired to submit to revenue hearing.

If it should be that any questions need to be answered I could conveniently make use of special railroad rates, on Thursday, April 21, to be present during middle of day.

In preparing this brief I have excluded matter not germane to the plea of the brief.

I had anticipated taking more time to its preparation, but it will suffice.

Sincerely,

WAGER FISHER.

BRIEF FOR REVENUE READJUSTMENT ON LINES MORE CONFORMABLE WITH WELFARE OF CITIZEN-PRODUCER CLASS COMPRISING TWO-THIRDS OF POPULATION

TO COMMITTEE ON FINANCE,
United States Senate:

The citizen enmeshed in this period of contracted business and employment has need to strive mightily for removal of causes of his unemployment and to preserve saleability of property values purchased for old age and dependent's protection and is therefore greatly interested in the objects to be accomplished by the proposed revenue measure, not only for his own sake, but those of his fellows who are so situated that they can not well diagnose the origin of their trouble.

Roughly dividing the 30,000,000 families of this country into two groups, one of 20,000,000 direct producers of current wealth and revenue, and the other a group of 10,000,000 families revenue supported, it becomes evident that the interest of both groups is common in preserving the salability at somewhere near the price purchased of the various forms of property acquired by them for old age and dependent's protection, whether held in individual ownership or mass savings through fiduciaries, such as banking and life insurance companies whose very existence depends on a reasonable stability and salability of values.

It has been held that this is one object of the revenue measure.

In the continued employment and prosperity of the 20,000,000 citizen producer families depends the prosperity of the 10,000,000 revenue supported, who otherwise must return to the generally lesser emoluments of life to be found in the citizen-producer class from which they came.

Aside from these two common interests, the two groups are diametrically opposed in that each addition to the revenue-supported group, or to its revenue, contracts the employment and business of the citizen-producer class and its ability to support its public servants and public works for which it receives not one penny of pay except the satisfaction of having them.

A secondary object of the revenue measure is to continue Federal establishments and public works on the extensive scale now inaugurated, otherwise no revenue measure at all would be required on only a minor one.

It is the object of this brief to show that the balancing of the Budget can be better accomplished by collecting less taxes and to the permanent benefit of all.

It is desired to point out, on behalf of the 20,000,000 citizen producer families and also on behalf of the 10,000,000 Governmental class families, that the contraction in prices and employment and in the values of capitalized goods purchased for old age and dependent's protection, can not be checked, nor prices and general employment set on the up-grade, until taxation is reduced below its present status of confiscating more than the annual economic surplus of goods. An estimated tax reduction of 75 per cent is required.

Fortunately, there is below the collapse point in taxation a wide zone of revenue ample to provide all needed conveniences, more properly supplied by collective action.

It is thus greatly to the interest of both classes of families to assist in a readjustment, both being in a precarious economic position through expansion of governmental activities to a point where one-third of our population is sustenance and sustained by the remaining two-thirds, not voluntarily but by enactment of revenue laws.

If this enforced support of one-third by two-thirds were a voluntary overhead, economic laws would quickly and readily bring about readjustment without serious shock to the business and employment structure of the country. This, however, is not the case. The position of the citizen-producer class is daily becoming more onerous and unremunerative nor can he gain relief except by appeal to his constitutional rights established by his forefathers in their wisdom as a protection to people for all time against the encroachments of a tax-supported class. It is a debatable point just how and why too much of our annual income has been diverted into governmental services, but such being the case the situation has to be faced.

The mere fact that some 50 per cent of the family budget is drafted is evidence of the unbalanced, unhealthy condition; nor is it a healthy condition when the entire "business income of the country," all rents, interest dividends, business, and corporation profits merely equal tax expenditure; nor when the entire income of 80 to 85 per cent of those not supported by taxation only equals taxes.

It has been contended that the way to remedy things is to bolster values held in banking and fiduciary institutions by loans from taxes but as the shrinking and nonsalcability of such values is primarily due to tax confiscation of the earnings of property and of the earnings of the people, it is obvious that to correct values and employment and to permit full interchange of goods and production, the prices of Government must correspond to our lower level, otherwise, business, employment, and values can not again get on the upgrade.

As the Federal Government has run up expenditures exceeding $4,000,000,000, an amount nearly equalling the safe taxation load for the entire country (that is if prosperity and values are expected to advance), it is incumbent for all sections of Government to retrench. The unfortunate stimulation of tax supported business in the past dozen years by borrowing against future taxes has had not only a bad effect on the normal citizen business of interchange, but almost precludes much tax expenditure except for interest and repayment of existing loans, which will have to be paid back with dearer dollars.

It is, therefore, too much to expect recovery in values, business, and employment, if an additional billion in taxes is levied, the shrinkage in present tax collections being the safety value of business.

The probability is that a billion extra taxes will cause further shrinkage and suffering whereas, if it is not levied and if State and local taxation is also reduced, business may not sink much lower.

Under present conditions each billion of taxes saved doubles itself in national income restoring about 2,000,000 families to employment as fast as readjustment can be made, thus caring for any tax supported families displaced. Conversely a billion extra in taxes leaves 1,000,000 families destitute of their money earned, and their buying power, and reduces the national income two billions by withdrawal of a million families from interchange in production as they are provided for by the billion taxes taken.

The point is soon reached at which taxes are less collectible no matter how ingeniously levied, nor will it be possible to balance budgets under existing conditions by attempting to collect more taxes but only by collecting less of them and permitting business and employment to recover.

Taxes if assessed unduly on any particular form of goods or industry either the price or consumption of that goods will go down until those engaged in that industry must work for but little.

Fixed capital as represented in land, mortgages, stock, bonds, and other earning capital based on land, buildings, machinery, equipment, and so forth, such as houses, offices, buildings, factories, and railroads have so depreciated in value under direct and indirect taxation (Federal, State, and local) that those dependent on them for support and employment in either their operation or construction are greatly handicapped.

Respectfully submitted and based on intimate and personal contact with the effects of taxation and with present conditions. Figures submitted are believed to be as reasonably correct as the statistics available admit of.

WAGER FISHER.

STATEMENT OF J. A. ALBRECHT, BUFFALO, N. Y.

Mr. ALBRECHT. My name is J. A. Albrecht, attorney at law, Buffalo, N. Y., partner in the firm of Albrecht, Maguire & Mills.

The CHAIRMAN. How much time do you want, Mr. Albrecht?

Mr. ALBRECHT. Fifteen minutes.

The CHAIRMAN. You may proceed.

Mr. ALBRECHT. Mr. Chairman and gentlemen of the committee, since 1918 we have had a very wide experience in preparing tax returns and in appearing before the departments at Washington in the interests of taxpayers. From this experience we desire to call to your attention what we believe will be the effect of limiting losses

on sales to the amount of gains on sales, and to the gift tax now in the revenue bill before you. I also want to present an administrative idea for the Treasury Department.

Regarding the capital gain and loss provisions of the House bill: The applicable provisions of the revenue act of 1928 should not be changed. Before the revenue act of 1921 allowed gains to be taxed at a maximum of 12½ per cent, say, from 1917 to 1922, many sales of property and securities were not made because the profit therefrom was subject to the then normal tax and to surtax rates beyond those which the ordinary net income would have brought into play. The Government lost much revenue in those days because of the absence of the 12½ per cent provision. We know because we kept fairly busy calculating what the tax would be on the owners should they sell.

Representative Hawley, Congressional Record, volume 61, page 5201, said, in discussing the capital gain and loss provision of the revenue act of 1921:

> Under the present law the surtaxes are so high that many transactions are prevented from consumation, to the detriment of the development of the community. The owner feels it will be better for him to retain his property than to sell it and pay the very high rate of tax.

Page 5289 of the same volume of the Congressional Record, Mr. Garrett, of Tennessee, said:

> Mr. GARRETT of Tennessee. What effect will this amendment have on the amount of revenue raised under this particular provision?
>
> Mr. GREEN of Iowa. The Treasury Department thinks that the ultimate result will be to bring in more revenue. The gentleman will remember that it is often stated under the provisions of the present law a man would refrain from making a sale of land or other property constituting capital assets because he would have to pay so large a proportion to the Government that he would not realise very much out of it. It would so increase his income taxes that he would not make the sale. This amendment, of course, will reduce the rates in many instances which people will pay on sales of real estate and in some instances on sales of personal property that are capital assets, but it is quite certain that it will bring about sales which otherwise would not occur. The gentlemen is aware that a large portion of property is being held which people would like to sell but will not sell on account of the amount it would add to their surtaxes, and therefore they refrain from selling and the Government gets no return. It has been the opinion of all of the experts of the Treasury—at least of Secretary Houston and Secretary Glass—I do not remember whether Mr. McAdoo expressed an opinion or not—that the ultimate working out of this would bring more revenue into the Treasury.
>
> Senator SHORTRIDGE. Who made that statement?

Mr. ALBRECHT. Mr. Green, of Iowa, who, at that time, I believe, was chairman of the Ways and Means Committee.

Senator SHORTRIDGE. Very well.

Mr. ALBRECHT. From the same page occurs this:

> Mr. STAFFORD. I understand that the rate that is proposed is for the purpose of taxing, in many instances, unearned increments of land values.
>
> Mr. GREEN of Iowa. In many instances it would apply to that. It is not entirely for that purpose.
>
> Mr. STAFFORD. In those cases that have heretofore occurred, when property has been owned by a corporation, if the increased profits arising from the sale of real estate would take the transaction into the 30 per cent or the 40 per cent class, the owner of the property would be compelled to pay a tax to the Government of 40 per cent.
>
> Mr. GREEN of Iowa. He would if he should sell it, but the experience of the Government has been that under the circumstances he would not sell.

On page 545 of the hearings before the Senate Finance Committee in 1921:

Senator McCUMBER. Suppose property was purchased in 1914 and held until 1921 and it has increased in value 100 per cent. A dollar has decreased 50 per cent. The property has increased mainly because of the inflation and the cheaper dollar rather than from any more income that you could get out of it. It is not unjust to say that a person, because he sells it for the same number of dollars that he purchased it for in the general market, has got to pay the Government some money?

Mr. KELLOGG—

who was a witness—

Mr. KELLOGG. I think you have touched the most vital point in the whole matter.

Senator McCUMBER. The fact is that he has not made a cent if those figures are correct.

Mr. KELLOGG. I believe that is one of the strongest reasons. I am very sorry that I did not think of it myself. But it is absolutely sound, as it appeals to me now.

Senator CALDER. I know of a transaction where a man bought a piece of property that cost him $140,000 in 1913. In 1920 it would have cost him $290,000. He was offered $210,000 for the property, and he was disposed to sell it but he discovered he would have to pay $30,000 of that profit in taxes to the Government, and he did not sell the property. He could not afford to sell it.

Mr. KELLOGG. That is another experience of exactly the same kind that I have given before you came in. I had given a number of similar illustrations from my own personal experience, and I believe that they can be duplicated by nearly everybody you come in contact with.

Coming in contact with a great many taxpayers, preparing many tax returns, every year, I can say truthfully that that was my experience, and what I tell you will be the experience if the House bill is passed.

The revenue act of 1921 allowed capital gains to be taxed at a maximum of 12½ per cent and allowed capital losses to be deducted from those gains, and further allowed the individual to calculate the tax with all his capital gains and losses as part of his ordinary income and to pay the tax so calculated if it happened to be lower than when calculated under the capital gain provision. The Government must have found that that provision was a tax raiser, at least we found that those who had previously refused to sell were now willing to pay the Government one-eighth of the profit. The years up to and including 1929 were years when it was almost impossible to establish losses and the Government by this provision, in effect, lured the people to sell and got the tax. The people naturally reinvested what was left of the proceeds and naturally at costs much higher than the cost of the item sold. Had they suspected that the Government intended to change its policy as the House bill would have it do, they would not have sold at the high prices of 1922 to 1929, inclusive. It is in our opinion manifestly unfair for the Government to change its policy now, so that looking back it can be said that it looks like a trap.

During those fat years people, believing the policy of the Government regarding capital gains and losses was fixed, sold at a profit (it was difficult to make anything else during that period), and the Government must have reaped a good harvest. Since 1929 these individuals have been selling to register losses and it has been practically impossible to register anything else. The House bill provides that unless you can make one or more of these at present impossible gains, you can not have the benefit of the easily and, if you own any

money, forcibly acquired losses. Not being able to cover his loss, which he got into often because he sold something else during the boom on which the Government got the tax, his misfortune is made worse by the resultant increase in his tax. This is manifestly an unfair change of policy.

Senator CONNALLY. You recognize that Congress can change the tax laws at any time?

Mr. ALBRECHT. I do, sir.

Senator CONNALLY. You are talking about it being a trap, and because it was such in 1929 it should stay that way.

Mr. ALBRECHT. I do, sir, but there is more to the Government than to raise taxes.

Senator CONNALLY. Being wrong, you would not advocate its staying that way, would you?

Mr. ALBRECHT. I can not admit that what it was made in 1929 is wrong. It produced revenue and it has gotten the people into the position from which they can not escape.

Senator CONNALLY. If that were true we could not raise any taxes at all. It would have to stay just as it is.

Mr. ALBRECHT. I did not want to get into a discussion of the tax laws, but I do believe that Congress should have something determined as its policy.

Senator CONNALLY. I think when we get through with this bill you will think it has.

Mr. ALBRECHT. I think it is wrong for the Congress to get the people into a position from which they can not escape and then sock them. I did not mean that for the record, Senator.

Senator SHORTRIDGE. Well, there may be a changed condition——

Mr. ALBRECHT. Very true, sir.

Senator SHORTRIDGE. A change which would justify a change in taxation.

Mr. ALBRECHT. I wish I could find it so in this case.

Senator SHORTRIDGE. Necessity knows no law, it is said.

Mr. ALBRECHT. I take it the power to tax is the power to regulate, and not exactly the power to destroy, and if Congress would use the power to regulate, I think we would not be in the present position.

Just as business was held back before capital gains and losses were allowed, so will business be held back if the House bill on this item is allowed to stand. We are now in a period when one can not make a capital gain. What good is it to him to sell? Under the House bill he makes only a nondeductible loss. The Government got the tax on the transaction which allowed him to buy what he now holds, and if it refused to allow him a deduction if he sells at a loss, confidence in the stability of Government policy will be lost and people will not know which way to turn for fear that any turn may prove to be a bad one when the next revenue bill is introduced. Congress should not vacillate when by doing so it creates uncertainty as that directly retards business and consequently produces less tax.

The Congress may modify the rates and the exemptions, the people expect that, but it ought not to change a policy which has put the people, by their acceptance of it, in a vulnerable position. The law as it stands is fair, has been accepted by the people, and the Government has profited by it. To change it now in principle would make the Government subject to the same criticism that is made of the

bulls and bears shearing the lambs when their clever maneuvering get the latter in the right position for the operation.

While the Government should not change the present law regarding capital gains and losses as a matter of policy, the next point is how will the law work if passed. The stock market generally, and all other markets, for the great majority, run in periods. In one period gains can be made, in another, losses can be established, but both can not be made in the same year at one's option. How, then, can one cover his losses with gains, or, in better times, his gains with losses? The Government would be in the position, if the House bill is passed, of having refused to allow losses when they were all that could be made, and of taxing gains during the period when they were the rule. The House bill increases the tax during a period of depression and decreases it during a period of prosperity, because people will not sell when losses only can be made and don't count, and likewise will not sell when gains only can be made and do count in making up the tax.

Do you see what I am getting at, Senator?

Senator CONNALLY. I think I see what you are getting at.

Mr. ALBRECHT. The Treasury has noticed how people are now "Getting away with murder" by taking losses and presents a method of stopping it. It is up to you gentlemen to say to the Treasury Department that there are some reactions that it must stand for because it accepted the benefits of a certain policy for years, and should not now, when it finds conditions reversed, say, "Heads I win, tails you lose." Policies established and continued by a Government lend more confidence to the sum total of confidence needed to make the people go forward on a contented career than will a balanced budget made up by taxes which destroy the former policies.

(There was a signal for a vote on the floor of the Senate.)

Senator REED. This is a very important vote, Mr. Albrecht.

The CHAIRMAN. It is a very important vote, and we will suspend until the members of the committee return from voting.

(Upon the Senators returning from the floor of the Senate the proceedings were resumed, as follows:)

The CHAIRMAN. You may proceed.

Mr. ALBRECHT. Before the intermission I had just said that the policies established and continued by a Government lend more confidence to the sum total of confidence needed to make the people go forward on a contented career, than will a balanced Budget made up by taxes which destroy the former policies.

The House bill would cut down the number of transactions, limiting the return from the stock transfer tax, and reducing commissions paid on sales. This latter will cause less income tax to be paid by those who otherwise would get the commissions, and it undoubtedly would reduce the number of people employed by them. The bill has already had that effect. Our clients have refused to buy or sell since the bill was introduced, and it is our opinion that the recent stock market drop is as much the fault of the House bill as it is that of bear raiders.

The present law: To leave the law as it is will result in nearly everyone selling, taking his loss, thereby getting back indirectly part of the tax he previously paid the Government, and buying something else which has a very low cost. Soon, we hope, but certainly in the

years to come, business will improve and he will be unable to sell without registering a gain. The Government then, in the long run, will not lose under the present law. The Government had its day up to 1930, since then the people have had their day, so to speak. As they enjoy that day their costs come down, and it will soon be the Government's day again. The people understand and are willing to go along on that basis, but if the Government follows the House bill and tries to take both ways, people will do as they did before the capital gain and loss policy was established—just not sell and not selling produces no tax.

Increase the income tax rates and tax what you may to increase revenues, but don't change the established policy of the Government regarding capital gains and losses. To do so will, in the language of the street, double-cross the Treasury Department as well as the public. Pardon such language, but the shortness of the time allotted seems to justify using short common expressions that say much in a small space.

Regarding the gift tax——

Senator REED. Before you leave the capital gains I want to ask you a question or two.

Mr. ALBRECHT. Yes, sir.

Senator REED. It is a fact, is it not, that the inclusion of capital gains and capital losses tends to prevent people from selling in boom times, is that not so?

Mr. ALBRECHT. Not under the present law.

Senator REED. Do you not think that many persons refrained from selling in 1929 when prices were high because of the very high tax that they would have had to pay?

Mr. ALBRECHT. I think that the 12½ per cent tax in 1929 did seem high to a lot of people.

Senator REED. And lots of people hesitated to sell on that account?

Mr. ALBRECHT. Just before 1929 the 12½ per cent provision, for some reason, did not seem to be so high. And for a long time sales were made. But in 1929 it did happen just as you say. The people got kind of scared even of the 12½ per cent tax.

Senator REED. And if they had not been scared and had not refrained from selling, the boom would not have gone to such heights, would it?

Mr. ALBRECHT. That is one way of saying it.

Senator REED. And is it not true that at times like the present, when prices are very low, and when one can register a loss by selling at these low prices, even if he buys in again subsequently, it has a tendency to depress the level of prices in periods of panic?

Mr. ALBRECHT. I would say so.

Senator REED. It showed it last December, did it not?

Mr. ALBRECHT. Yes, sir.

Senator REED. With all the tax selling that went on in December?

Mr. ALBRECHT. Yes; but he could get his loss.

Senator REED. Yes, and that is why he sold in many cases.

Mr. ALBRECHT. Because he had bought at a high price.

Senator REED. Even as you and I, I dare say.

Mr. ALBRECHT. As you and I.

Senator REED. Yes.

Mr. ALBRECHT. If he had not sold in 1927, 1928, or 1929 he would have been able to sell in December at a loss, because the thing he

had then cost him less. The point I make is that if you had something that you bought in 1913, 1914, up to 1921 or 1922 you had a low cost, you were tempted to sell, because you only had to pay the Government one-eighth, and as the years rolled along up to 1927 and 1928 you were tempted to sell and you did, and you paid the Government one-eighth, and you bought something with that money, and you necessarily had to pay a high price for it. And because you bought in that boom period you are now able to sell at a loss. But if you had kept what you had purchased prior to 1920 you would not be in any such position. So the Government had put down a trap that lured us into the position of selling and of buying something at a high price, and now we can not get out of it.

Senator REED. Yes, we have got your point all right on that.

Mr. ALBRECHT. And therefore we sell.

Senator REED. I want you to put your mind on my point. Now is it not true that the purchasing price of the dollar has greatly risen since 1929?

Mr. ALBRECHT. Yes.

Senator REED. So that a man who sells a block of stock or a house and lot to-day for a smaller number of dollars may actually score a profit in purchasing power of the price he gets? And yet that is considered a loss because for tax purposes we consider a dollar as worth the same all the time, is that not true?

Mr. ALBRECHT. That is right.

Senator REED. And it works just the other way when the purchasing power of the dollar goes down; many a man is taxed for an apparent profit when he really incurs a loss, is that not so?

Mr. ALBRECHT. You are right. Perhaps for that reason England does not tax capital gains and losses. They just tax them all together.

Senator REED. With the present low level of prices it is apparent that most sales this year are going to result in losses, is that not right?

Mr. ALBRECHT. That is right.

Senator REED. Is not this a fine time for the United States Government to adopt the policy of excluding capital gains and capital losses entirely?

Mr. ALBRECHT. It would be a wonderful thing to do that.

Senator REED. And would we not make money by doing it?

Mr. ALBRECHT. I think we would.

Senator REED. Certainly we would in 1932's results.

Mr. ALBRECHT. Either that or reduce the 12½ per cent tax down so that people would sell, because they would consider the amount they would pay the Government as no hardship.

Senator REED. Instead of getting all the way out you would get half way out.

Mr. ALBRECHT. Yes.

Senator REED. I see.

Mr. ALBRECHT. In other words, there is a certain amount of tax that people will willingly pay. And if you find that just, keep it. The policy of the Government is one thing I am most concerned in. Do not change the policy and get us in a trap and soak us.

Senator GORE. Can you mention any particular tax that you would be willing to pay?

Mr. ALBRECHT. That I would be willing to pay?

Senator GORE. Yes.

Senator REED. Mostly a beer tax.

Mr. ALBRECHT. I am just coming to that. I have got that in here, if you don't mind. If the Congress paid strict attention to the will of the people there would be no revenue tax.

Senator SHORTRIDGE. There would be no tax at all.

Mr. ALBRECHT. You can not, of course, allow the people to tell you what they want in the way of service and also to tell you how much they want to pay for it.

The CHAIRMAN. Are you through?

Mr. ALBRECHT. No, sir. Are there any more questions on the capital gain and loss provision?

Now the policy of the taxation is an important thing in my mind, Mr. Chairman. Would you allow me to go on?

The CHAIRMAN. How long do you want?

Mr. ALBRECHT. Well, I think that it is the intermission that has taken up the time rather than my statement, because I have read this over and it took me only 15 minutes.

Senator REED. It is estimated that we are losing about $3,000,000 a day in excise taxes by every day's delay on the bill. Now every speaker ought to appraise his own importance by that.

Mr. ALBRECHT. I will quit if you want me to do so.

Senator SHORTRIDGE. You can file that, you know, and it can go into the record.

The CHAIRMAN. How much more time do you want?

Mr. ALBRECHT. I have got a couple of pages to read.

The CHAIRMAN. We have got to get on with these hearings.

Senator HARRISON. It is not fair to the other witnesses who are limited to 15 minutes to give 45 minutes to a witness.

Mr. ALBRECHT. I came down here on Saturday because I thought I would be heard on Saturday, and I have here seen other witnesses take an awful lot more time than I thought they were going to have, and while I stood out there kind of grumbling because I was being put back, I was in hopes that you would not cut me short, but would allow me to finish my statement.

Senator HARRISON. Not over 15 minutes. We will never get through with this bill if we do not expedite these hearings.

The CHAIRMAN. We are not going to get through with it unless you do cut it short.

Mr. ALBRECHT. Do you want me to stop now?

The CHAIRMAN. If you have anything else put it in the record at this point.

Mr. ALBRECHT. No, the point, Mr. Chairman, is that if you people want to ask me any questions I will be very glad to answer them. But if I do not make my statement there will not be the opportunity for answering questions that may come up in reference to it. In that way I will not have an opportunity to make my point clearly.

Senator SHORTRIDGE. You state it clearly in your brief, do you not?

Mr. ALBRECHT. I hope so.

Senator SHORTRIDGE. Yes. Submit the balance of your brief and it will be printed in the record.

Mr. ALBRECHT. I will submit it then, if you wish me to do so.

Senator SHORTRIDGE. Presumably the Senators will read it.

Mr. ALBRECHT. Very well, then, I will do so, because I have got something here that is, I think, very, very important.

(The balance of Mr. Albrecht's statement is here printed in the record in full, as follows:)

Regarding the gift tax: I understand it is and I believe it should be the aim of the Government to cause wealth to be disseminated. To this end in part it passed the income tax and the estate tax laws. The gift tax is a damper on the progress along that line that these laws have made, as it will tend to make people hold their wealth. It therefore puts the Government in the position of blowing hot and cold.

The gift tax is like keeping the missionary in a pen that he may grow fat, so you can have a better meal out of him at your desired time.

The good that comes to this Nation from a distribution of wealth before death far exceeds the good that will come from the tax raised, even granted that the gift tax only slows up the distribution.

Estate taxes should be arranged to encourage and stimulate the distribution of wealth, and to get a tax from those who die without having taken the stimulant or encouragement. The Government should consider it a greater gain to the country to have caused such a distribution of wealth that little or no tax is received. In other words, it should not count on the revenue as part of its certain and necessary income. Let such income be produced from other sources and count on the funds from the estate tax only after they have been received.

The proposed gift tax is one which will make it necessary for each giver to keep a record of his gifts from now till he dies. In this more than active country, with its roving people, romances, fires, accidents, thefts, and so forth, this will be an unsatisfactory and expensive feature.

I therefore hope you will not pass the gift tax.

Suggestion for change in administrative policy: In order to cut down the growing disrespect for law and order I wish you would incorporate a provision in the new revenue bill declaring it to be the duty of the Treasury Department to assist taxpayers to arrive at the lowest tax they should pay under the law and that it shall not take advantage of a taxpayer's mistakes.

Go into any collector's office, follow many of the field men, and you will find that they believe it is their duty to get all the tax they can get. I wish I had time to tell you about them, but next to the Volstead Act I think the way the small taxpayers are treated in most of the collectors' offices, to which he must go at the loss of a day's pay, is the second best reason for disrespect for law. Perhaps I should have put justice of the peace courts second.

For instance, why should a man and wife not be allowed to change from a joint return once filed to individual returns, or vice versa, if by doing so they can pay less tax. Has our Government got to be so hard and cold and autocratic that it says, "You made your bed, now lie in it," and then the next day, so to speak, the Government through the Treasury Department, the Board of Tax Appeals, or the courts, declares that such and such are no longer taxable. The people must abide by their choice, but the Government need not. I therefore ask you to include such a declaration of duty on the Treasury Department that the taxpayer will learn from experience with it that it can be trusted to help him produce the lowest legal tax, and that it will not take advantage of his mistakes.

Suggested sources for additional revenue: It probably is in place for me to suggest from what other source I would derive a similar amount of tax. Of course if no other source could be found, I'd rather have the country go without the income involved in my suggestions than to change the policy and in my opinion the character of our Government.

"It has been my work to tell people how to avoid taxes, so I am not very well posted on what should be taxed. I find, however, that income taxes are easiest to pay and people complain less to me about it than they do about bad Government ideas, such as the change in the capital gain and loss and gift tax provisions. The gasoline tax does not seem to be a burden, and I feel that taxes on admissions and drinks are also willingly paid.

Raising the charge for handling second-class mail matter would be a move that all but the selfish would applaud.

A tax on checks cashed to be paid by the maker and collected for the Government by either the receiving bank or the one on which drawn, without the necessity of using stamps, has always appealed to me. For instance and without knowing the amount of revenue involved, suppose the bank on which a check is drawn charged 1 cent for each check up to $100, and 1 cent for each additional

$100 or fraction thereof, to the maker's account and paid the amount monthly to the Treasury Department. It would save the cost and time of making and using stamps, prevent fraud as is the case with stamps, make it easy for the revenue department to check the correctness of the bank's reports, and put no more work on the bank than the proposed sales and admission taxes put on other taxpayers.

I would also suggest a 1 per cent or even a half per cent sales tax. We should get started on a revenue producer, the base of which is more sure or less subject to disappearance than is that of the income tax. I think the rate proposed by the House bill killed the sales tax it proposed.

Closely allied with this in my opinion is the Volstead Act and the eighteenth amendment. When they are repealed you will surely be able to pass a sales tax that will produce much revenue. I hear it from nearly every one that the depression will be over the day after the eighteenth amendment is repealed. They all know a heavy tax would be placed on the sale and yet seem willing to have it so. The kind of a sales tax the people want to pay is bound up in that amendment.

Respectfully,

JOSEPH A. ALBRECHT.

Mr. ALBRECHT. That is all.

LETTER FROM IRA A. CAMPBELL

AMERICAN STEAMSHIP OWNERS ASSOCIATION,
New York, April 21, 1932.

Hon. REED SMOOT,
Chairman Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SIR: The American Steamship Owners Association respectfully recommends an amendment to H. R. 10236 by adding to section 23 thereof, as paragraph (o'), the following provision:

(o') Mail contract compensation applied to new ship construction and reconditioning: In case of a steamship corporation receiving compensation for the carrying of mails under a contract with the United States of America, such part of said mail compensation as the corporation shall use, or shall set aside in reserve for use, in constructing new vessels or reconditioning existing vessels employed or to be employed in the performance of such mail contract, or shall use in repaying to the United States of America moneys borrowed from the construction loan fund, under the provisions of the merchant marine act, 1928, and acts amendatory thereof, which shall have been or shall be used for such aforesaid construction or reconditioning, upon the corporation giving a bond, with sureties and in such sum as the commissioner may require, conditioned upon the payment of the tax computed without the benefit of this subsection in respect of any amounts allowed as a deduction under this subsection and not actually expended for the aforesaid purposes.

The purpose of the proposed amendment is to permit the deduction of mail compensation paid by the Government from the net income of a steamship corporation carrying ocean mails under a contract with the Government which provides for or contemplates the construction of new vessels or the reconditioning of existing vessels for use in the performance of such mail contract.

Mail contracts have been made by the Postmaster General under the merchant marine act, 1928, which provides for ocean mail service on 56 different essential trade routes in the foreign trade of the United States. Many of these contracts require the construction in American shipyards of new vessels; other provide for the modernizing, through reconditioning, of existing vessels, most of which were acquired from the Shipping Board when the trade routes were purchased by the private interests holding the mail contracts. The cost of constructing vessels in American shipyards greatly exceeds that in foreign yards and a large part of the mail compensation is paid to meet such excess costs, thus helping to place the American shipowners on a parity with the foreign owner.

A large part of the costs of constructing new vessels and reconditioning existing vessels for the aforesaid purposes has been loaned by the Government to shipowners through the construction-loan fund provided by the merchant marine act, 1928. These loans are generally repayable over a period of 15 to 20 years, whereas the mail compensation covers a period of 10 years. Thus, the shipowners are required to set up during the 10 years reserves from mail compensation in amounts necessary to meet the future maturities on the construction loans.

If mail compensation applicable to such new construction and reconditioning is to be included in net income then in those years when profits from operation are earned, the effect of taking away part thereof by taxation will be the same as if the mail compensation was partially reduced.

The theory of the mail compensation provided for in the merchant marine act, 1928, is to place the American shipowner on a parity with its foreign competitor by granting mail compensation sufficient to meet the differentials in costs of construction and operation. The mail compensation has been determined by the Government on that basis. Inclusion of the full amount thereof in net income defeats the purpose of the act.

For this reason we respectfully request that your committee give consideration to the proposed amendment and incorporate it in the pending bill.

Very truly yours,

IRA A. CAMPBELL, *General Counsel.*

STATEMENT OF R. H. WHITEHEAD, NEW HAVEN, CONN.

The CHAIRMAN. I think, Mr. Whitehead, you have testified before.

Mr. WHITEHEAD. That is correct.

The CHAIRMAN. You are here at the request of the Senator from Connecticut.

Senator BARKLEY. I think you were given permission to submit a supplemental brief.

The CHAIRMAN. Is that the brief you are ready to submit?

Mr. WHITEHEAD. I am ready to submit it now. It would take me only a few minutes to read it, and I would like to.

Senator BARKLEY. Is that down in black and white?

Mr. WHITEHEAD. Yes.

Senator BARKLEY. Then we will read it.

The CHAIRMAN. It would be better to file it. There is no need of reading it, because we have to go over every one of these items.

Senator HARRISON. The only trouble, Mr. Chairman, is that a lot of witnesses' names have been put down, and some other witnesses come in now to file an additional brief.

Mr. WHITEHEAD. This brief is not in behalf of my industry; it is an attempt to solve the problem and get around the technicality in the administration of the present law; and the committee asked me if I knew how to stop it, and I have a method to stop it.

Senator SHORTRIDGE. We will give it careful consideration.

The CHAIRMAN. Every one will read it.

(Mr. Whitehead thereupon submitted the following brief:)

BRIEF OF R. H. WHITEHEAD

COMMITTEE ON FINANCE,
United States Senate.

GENTLEMEN: It is with the desire to be helpful in what the business men of the country believe to be something close to a national emergency that I offer for your consideration a plan of taxation which it is believed will avoid much of the criticism directed to tax bill H. R. 10236, now pending before your committee.

Any tax program now offered for the consideration of the country must frankly recognize and as frankly avoid certain industrial, social, and political repercussions.

1. It must not intensify the cutthroat competition which has been born of industrial desperation.

2. It must not be susceptible to the pyramiding, so costly and so despised by the customer.

3. It must not require the payment of any greater sum than that which actually goes to the Government.

4. It must not be levied on a few commodities or a few industries for the benefit of the many.

5. It must be so small and of necessity so broad in scope that neither its application nor cessation will disturb industrial and mercantile progress.

6. It must not fail to recognize the present necessity for exempting vital necessities like food and clothing.

7. It must not be merely a tax that is a revenue producing measure but a part of a constructive effort at the solution of domestic industrial difficulties.

8. It is obvious that it must produce immediate revenue. It must fit the existing methods of doing business.

9. It must be simple in operation, cheaply collected, and its operation be free from the obligation to tie up any large amounts of sorely needed working capital in business and industry.

10. That it should not subject many special commodities to double taxation.

It is therefore suggested that a tax be levied along the following lines:

ECONOMIC RECONSTRUCTION TAX

On and after the 1st day of May, 1932, there shall be levied, collected, and paid an excise tax of 1 per cent on each transaction whereby the title of any goods, wares, merchandise, or material passes from any vendor to any vendee who is within the territorial limits of the United States, to be based on the price paid or the value given therefor.

That the amount of such tax shall be plainly set forth on each and every invoice, bill, or other written evidence of each transaction and shall be paid by the vendee to the vendor and accounted for by him to the Government. Where written evidence of each transaction is impracticable, the tax may be levied on the difference between the gross receipts and gross purchases of commodities subject to tax under this law.

That there shall be deducted from any tax owing by a vendor hereunder such amount as the said vendor has either paid or become liable for as a vendor to the Government on any goods, wares, merchandise, or material taxable under this act, provided that no vendor shall deduct any tax paid by him in his capacity of an ultimate consumer.

The operation of this suggested tax is exemplified by the following:

Material to manufacturer valued $2, tax 1 per cent, or 2 cents. Billed to manufacturer at $2.02. Pays to the Government 2 cents.

Manufacturer fabricates and sells to wholesaler at $6 plus 1 per cent tax, or 6 cents, and bills at $6 plus 6 cents tax. Manufacturer receives from wholesaler $6.06 and deducts 2 cents tax heretofore paid to material supplier and pays to the Government 4 cent tax.

Wholesaler sells to retailer at $8 plus 1 cent tax, or 8 cents. Receives tax from retailer 8 cents, deducts 6 cents which he paid to the manufacturer, and remits to the Government 2 cents tax.

Retailer sells to the consumer at $10 plus 1 per cent or 10 cents tax, and receives from the consumer $10.10. He deducts 8 cents paid by him to the wholesaler and remits balance of 2 cents to the Government.

Of the foregoing 10-cent tax, on the retailer pays 2 cents, the wholesaler pays 2 cents, and the manufacturer pays 4 cents tax, and the material supplier pays 2 cents.

The foregoing may be described as a tax on "value added by manufacture" or in the case of commodities sold in the condition in which purchased a tax on "gross mercantile profits." It cares also for the numerous instances where merchants add to the value of their products by manufacturer without specially classifying them as such.

Based on the estimated normal domestic turnover of $70,000,000,000 per year, this tax will produce revenue to the amount of $700,000,000 less whatever exemptions the committee in its wisdom may see fit to make. This exemption may include certain essential commodities; or tax liability on sales by small retailers doing less than a certain amount of gross business annually, say $20,000. If such small retailers were exempted they would, however, still pay taxes on wholesaler's or manufacturer's invoices.

It takes up the slack in the income tax due to the present inability of industry to make any net taxable income, as this tax produces revenue whether or not any profit is made on operations.

It was suggested by your committee that some plan be presented which would render impossible the evasions of the pending tax bill to which your committee's attention was called. This has been found practically impossible under the provisions of the pending bill. Largely due to the fact that such terms as "fair

value," "manufacturer," etc., are so elastic as to be inapplicable to the very conditions of present day business. There is no selectivity in the levy proposed herewith, therefore no dispute as to who pays, and no loopholes for attempted evasions. Tax can not be avoided by setting up sales subsidiaries, as it is levied on each transaction. Amount of available revenue is enhanced when tax is first levied as it will cover all commodities not in possession of the ultimate consumer, and it will not slow down or speed up business to beat the tax at any point of distribution either when levied or discontinued.

STATEMENT OF HARRISON E. FRYBERGER, NEW YORK CITY

Mr. FRYBERGER. I will state to the chairman of the committee that I have lived in New York for the last year—a little more than a year. Before that my home was in Minnesota. For 25 years I have made a special study of stock ownership. I should be as familiar with that question as anyone.

Mr. CHAIRMAN. Mr. Fryberger, go right on with your statement.

Mr. FRYBERGER. You mean without anything about my personal history?

Senator HARRISON. You are taking up time with your personal history.

The CHAIRMAN. No; do not take up time with that.

Mr. FRYBERGER. I just thought you should know why I am here. It is stated that I am here for myself. That is not correct. I have been making a study of economics for the last several years, and published a book which has received more favorable comment, I think, than any other book in the last 50 years.

The CHAIRMAN. All right. We are glad to hear from you.

Mr. FRYBERGER. I am in favor of a higher inheritance tax; of a broader income tax; of a high protective tariff; of compensatory laws distributing the benefits. I am in favor of a bond issue that will carry us along until the inheritance tax can be put into full force and effect.

I am opposed to a transfer tax on stocks. I am opposed to a cut in the wages of the Federal employees, and I do not think that the Members of the Senate or the House should be making any cuts.

I think that the inheritance tax, when it can be brought into effect, should furnish something like a billion dollars a year, according to my best estimate. And a broader income tax——

Senator REED. What do you mean by a broader income tax? Do you mean higher?

Mr. FRYBERGER. No; I mean that it should include, I think, those not in the higher brackets; that they should pay a little more. That is what I mean. And I think the House is right, though, in the higher brackets of income tax.

But it seems to me that the tax on stocks does not serve any good purpose. And one reason is that in my judgment short selling is not the real objection to the present wrongs going on in the stock market. I was asked by the president of an association to look into the question, and when I looked into the question I came to the conclusion that short selling was not the real objection, although there is objection enough.

Now, speaking briefly, I am profoundly of the opinion that the concentration of wealth in the hands of a few is the real cause of our present depression, and that there are seven wrongs, more particularly, which are producing it.

First, the unlimited inheritance of unearned wealth.
Second, the chain store.
Third, stock speculation.
Fourth, corporate defects and abuses.
Fifth, the excesses practiced by banks, including especially the speculation by them in securities.
Sixth, the exploitation of individuals and sections by means of tariffs, freight rates, and so forth.
Seventh, unjust taxation.

As to the tariff, I think we must have a high tariff. I fully agree with the present law, but I think there should be compensatory laws passed distributing the benefits.

Now as to the first remedy, the inheritance tax. I am convinced that Congress should have full jurisdiction of this subject. I am convinced that a law should be passed amending the Federal Constitution, giving Congress full power over the subject of inheritance tax throughout America. At the present time the State legislatures are passing inheritance tax laws and Congress is passing inheritance tax laws, and no one to-day knows what power or right they have to pass such laws. Now that should all be cleared up by an amendment to the Federal Constitution.

Likewise a law should be passed giving Congress full and complete authority to tax out of existence the chain store, or to abolish it altogether.

Third, about stock speculation, I think we should have two remedies applied. Especially, one, we should have a department of corporations in Washington. That department should have full and complete authority to require the corporations organized in 48 States to show that they are entitled to sell their stock on the stock exchange. And then when an investor buys a stock on the stock exchange he has some reason for knowing he is getting value received. I think that would be more beneficial to the investors of American than any other law which could be passed.

One of the great causes of this depression is the fact that millions of investors have been mulcted out of everything they had, and to-day they are out of employment, and the country no longer has buying power, which, after all, is always the casue of every depression.

I think a law should be passed prohibiting the banks and trust companies from carrying on any business such as buying and selling securities or speculating in securities.

Now I think that that covers briefly my statement, and I would be glad to submit a detailed statement to the committee.

Senator HARRISON. You wanted to put that in the record, did you not?

Mr. FRYBERGER. I will furnish a complete statement to the committee.

Senator HARRISON. What is the name of your book?

Mr. FRYBERGER. The Abolition of Poverty.

Senator HARRISON. I want to read it.

Mr. FRYBERGER. I will be glad to send every member of the committee a copy of the book.

(The statement presented by Mr. Fryberger is here printed in the record in full, as follows:)

STATEMENT OF HARRISON E. FRYBERGER, OF NEW YORK CITY

A LEGISLATIVE TAX PROGRAM IN THE PRESENT CRISIS

A legislative tax program, in order to meet the present crisis, should be dictated by the causes of the present depression.

In view of the fact that America has more wealth of every kind than she knows what to do with, it is obvious that the present depression is caused by the extreme concentration of our wealth in the hands of the few and that poverty is to-day the portion of the masses.

More particularly, this depression—every depression—is caused by the fact that the masses of the people have no money with which to buy. In the first phase, the masses are the chief sufferers. In the second phase, the rich suffer, as their holdings become valueless.

Fifty years ago, Henry George criticized the economic system of England on the ground that a very small percentage of the population owned almost the entire wealth of the country. He praised the economic system of France because a very great proportion of the population (I think, 80 per cent) owned the wealth of that country. To-day England is on the verge of bankruptcy, while France has hardly felt the depression.

In this country, it is claimed that 4 per cent of the population control to-day even more than 80 per cent of the wealth. Our problem is to secure with the least possible delay the equitable distribution of our enormous wealth and income.

As intimated by my introductory remarks, in my judgment, in order to frame an intelligent program for tax legislation, it is essential to outline the particular prime causes of the present depression. In my opinion, they are seven in number, and are as follows:

(1) The unlimited inheritance of unearned wealth.
(2) The chain store.
(3) Criminal stock speculation.
(4) The frauds arising out of corporate defects and abuses.
(5) The excesses practiced by banks, including especially the speculation by them in securities.
(6) Exploitation of individuals and sections by means of tariffs, freight rates, etc.
(7) Unjust taxation.

I propose to discuss these evils in the order stated.

1. *The unlimited inheritance of unearned wealth.*—The basic principle of capitalism is found in the proverb, "As the service is, so the reward." Our present system of unlimited inheritance violates this basic principle. This is one of the chief causes of the depression.

In my opinion, there should be a sweeping amendment of the United States Constitution, which shall give Congress complete jurisdiction over the general subject of the laws of descent and distribution of property throughout the Nation.

Congress already has qualified jurisdiction. In any event, such an amendment is necessary in order clearly to authorize Congress to exercise complete jurisdiction as between the States and Federal Government and in order to exercise complete authority over the entire subject.

Even now an heir at law has no vested right to any portion of the estate of a decedent.

The rights of a widow and of adult heirs who have contributed to the accumulation of a fortune should be protected.

United States Government statistics of 1929 disclose such a law would yield about $1,500,000,000 annually. In my opinion no heir at law should be permitted to inherit more than $100,000 from a single estate. An estate should be exempt from taxation up to half a million dollars. Everything above should revert to the people to whom it belongs.

An inheritance tax of this nature is to-day an economic necessity. We are compelled to raise a huge sum of money for the support of our Government. Who shall bear the tax? The farmers are already overburdened. Likewise the wage earner. A sales tax would place too great a burden upon the masses of the people. We should not levy an excessive income tax on account of the injurious effect upon business.

How should the revenue be divided? In the first instance, the State of which the decedent was a resident at the time of his death would have jurisdiction over his property, but the National Government has always maintained that its rights are paramount. It would be a natural solution to make an equitable division of the revenue as between the State of the residence of the decedent and the United States Government.

Such a law would release billions of dollars now tied up in foolish trusts.

The decisions of the United States Supreme Court are unanimous in holding that Congress has the constitutional and paramount right to pass an inheritance tax law.

The revenue derived should be expended in enterprises which should give employment to those who are now unemployed.

Such an inheritance tax would not only permit our Budget to be balanced, but it would create a continuing reservoir for the stabilization of trade. It would serve as a fountain of youth, perpetually refreshing, revivifying our economic system and tending strongly to make it immortal.

2. *The chain store.*—This evil is converting America into a nation of clerks and economic serfs. It is causing unemployment. It is aiding in the concentration of wealth. If left alone, the chain store, in and of itself, would likely bring communism to America inside of 10 years.

The power of the States to secure relief is inadequate.

The United States Constitution should be amended by granting Congress full jurisdiction either to curb or entirely destroy this evil. It is possible that Congress even now has such power and jurisdiction, but such jurisdiction is subject to grave doubt.

If Congress were given full jurisdiction, it could destroy the chain store either by the taxing power or by direct prohibition.

3. *Criminal stock speculation.*—This evil was the prime cause of the 1929 stock crash and one of the chief causes of the present depression.

One way in which criminal stock speculation caused our present depression is that a great number of our investors were mulcted out of all their property, to be either thrown out of employment or in any event deprived of their purchasing power.

The primary objection to our present stock speculation is not simply short selling, but a criminal conspiracy to defraud.

A few months ago, if I may be pardoned for a personal reference, I was invited to meet certain business men at luncheon, and they requested me to accept the presidency of a national association, the object of which was to destroy short selling. After reflection, I declined, on the ground that this was not the real objection to the present stock speculation.

The reason for complaint lies in the fact that pools may be formed, and certain persons may conspire together to raise and lower the price of stocks in some corporation, irrespective of its actual value, and by fictitious and fraudulent means.

In 1929 we were told that the bankers and business leaders were far wiser than Congress, but they have not proved themselves to be so. Our leaders have had their way for the past 12 years and to-day the country is on the brink of disaster.

I do not agree with many persons who believe that the stock exchanges should be entirely abolished. The American people are possessed of a flair for speculation, if not gambling, and the world would be a drab place in which to live if the element of speculation were entirely removed. Stock exchanges should be regulated, not abolished. Federal laws should be passed providing rules of stock regulation.

All stock exchanges should be incorporated under Federal and very likely under State laws in all States where a stock exchange does business. A citizen should be given the right to bring suit in the State of his own residence.

Laws should be passed prohibiting the conspiracies to defraud mentioned above and providing for adequate remedies for a violation of such laws.

The rights of honest investors would be protected by laws providing for the national supervision of corporations whose stock is permitted to be listed for sale on the stock exchange. An investor has the right to know that when he buys securities on the stock exchange he is getting value received.

4. *The frauds arising out of corporate defects and abuses.*—Corporate charters are now issued by 48 States. In many cases these corporations do business in one State while they may be organized thousands of miles away in some foreign State.

One of the great causes of the 1929 stock crash was that indiscriminate mergers took place and stocks were unnecessarily split up, not for any good purpose, but simply to aid majority stockholders and officers to gain profit for themselves.

The chaotic conditions of our incorporation laws constituted one of the chief causes of the Coolidge bull market and of the 1929 stock crash. We now learn that the Coolidge bull market was in some respects essentially fraudulent.

In order to remedy the chaotic condition of our incorporation laws there should be established a national department of corporations.

Mergers and split ups should be permitted only upon a clear showing of merit and necessity.

The National Government should not permit any corporation to sell its stock on a stock exchange unless the corporation should be able to make a proper showing as to its financial condition and as to its management, including a requisite that its officers and agents were not receiving more than a reasonable compensation.

A simplified procedure should be adopted as to remedies of minority stockholders.

5. *The excesses practiced by banks, including especially the speculation by them in securities.*—This evil was one of the causes of the 1929 stock crash and of the present depression. Both banks and trust companies which are engaged in buying and selling securities or in stock speculation are disqualified from acting disinterestedly as banks or as fiduciaries. It is immaterial whether such speculation is carried on by the bank or the trust company or some subsidiary dominated by it.

Laws should be passed limiting banks and trust companies to the carrying on of their legitimate business.

6. *Exploitation of individuals and sections by tariffs, freight rates, etc.*—Our present tariffs and freight rates are apparently an economic necessity and unavoidable. But it is possible to ameliorate the present hard conditions as between the citizens of our own country.

Compensatory laws should be passed securing an equitable distribution of the benefits arising from this necessitous exploitation.

7. *Unjust taxation.*—At the present time many of our rich citizens are not paying their share of the taxes. The present apportionment of taxes is highly unjust as between various citizens and classes of citizens in this Nation.

Laws should be passed providing for much higher income taxes in the upper brackets. There should be a complete revamping and definition of the boundaries of taxes as between the States and the Federal Government.

8. There is still another remedy not yet mentioned, which is essential to tide over our economic system until such time as the remedies mentioned under the first seven sections can operate.

I refer to a bond issue in such an amount as may be necessary, whether it requires $1,000,000,000 or $2,000,000,000 for the first year, in order to give employment to all our citizens who are now unemployed.

It is possible, but not probable, that the United States Constitution might be amended and the proposed remedies put into effect within a year from date. It is more likely to be two years or even three years before the Constitution could be amended and the amendments put into full force and effect.

But this is essentially a minor consideration. The remedies provided for should be complete and adequate in a comparatively short space of time.

In my judgment the compensation of a large proportion of Federal employees should not be reduced, except in extreme cases. It seems to me it would be far more reasonable to secure the same result by a bond issue. The latter, in its essence, is one method of securing the equitable distribution of wealth, and it should be adopted.

The same reasoning applies to the adoption of nuisance taxes and other undesirable forms of taxation.

The seven evils above mentioned are national; they do not include international wrongs.

The remedies proposed herein are, in my opinion, the minimum to be adopted, and if these are not adopted, we are bound to have a recurrence of present conditions.

I am opposed to the transfer tax on securities. It would only penalize business.

Instead of salary cuts, also, I think that the income tax should be broadened in the intermediate brackets.

STATEMENT OF DAVID A. GASKILL, CLEVELAND, OHIO, CHAIRMAN THE COMMITTEE ON FEDERAL TAXATION OF THE CLEVELAND CHAMBER OF COMMERCE

The CHAIRMAN. Give your name to the reporter.

Mr. GASKILL. The name is David A. Gaskill. Appearing as chairman of the committee on Federal taxation of the Cleveland Chamber of Commerce. Representing the Cleveland Chamber.

Senator GEORGE. What section are you referring to, first?

Mr. GASKILL. Various sections, sir. The statement is rather general.

It is my purpose to state first the position which the Cleveland Chamber of Commerce has taken with reference to what might be termed the general provisions and features of the revenue bill. The reasons for and against the plan of taxation, which I shall suggest, have been discussed rather fully before your committee, and I shall not take your time to give the reasons and the wherefores and the whys for and against it. I do want to state, however, in summary fashion the measures which we approve and disapprove.

First, we believe that the balancing of the Budget of the Federal Government is imperative and necessary.

Second, we believe that sufficient revenue can not be obtained from present sources, with the result that we must turn to excise tax, which presents, as we see it, two alternatives: General manufacturers' excise tax or special excise tax. As between the two we prefer the general manufacturers' excise tax.

With reference to the income tax rates, we take the position that the surtax rate as passed by the House is high and probably taxes income beyond the point of diminishing returns.

We approve the normal tax rates as passed by the House and consider the broadening of the base of the tax affected by the decrease of the exemption as a permanently desirable feature of our income tax law.

We regard the rate applicable to capital gains as too high. We believe the rates should be not more than 6 per cent, and that the holding period should be reduced to one year.

We consider the rates adopted by the House for the Federal estate tax as un-American and confiscatory, and should be materially reduced.

We consider the tax on stock transfers, the increase to 2¼ per cent, as excessive, and believe that it will detrimentally affect our security markets, with the resultant effect upon our credit and general business conditions.

The CHAIRMAN. Have you suggestions to offer to collect the necessary amounts from other sources?

Mr. GASKILL. Yes. It is our suggestion that to whatever extent the recommendations made would reduce income that that be made up by excise taxes, preferably by a general manufacturers' excise tax. But if that can not be adopted, then by the addition of further special excise taxes.

Senator CONNALLY. What on?

Mr. GASKILL. Generally speaking, if we must have special excise taxes we would prefer a wide range of selection or articles at a low rate. In other words, approximate as nearly as possible the general manufactuers' excise tax.

Senator CONNALLY. You really prefer the general sales tax rather than the general manufacturers' tax, do you not?

Mr. GASKILL. Not a sales tax upon retail, if that is what you mean.

Senator CONNALLY. Oh, no; I mean a tax on everything that is sold?

Mr. GASKILL. With as few exemptions as possible, except, of course, bare necessities of life.

Senator REED. You would exempt food and clothing and rent, would you?

Mr. GASKILL. Yes, sir.

Senator GORE. You do not mean a turnover tax?

Mr. GASKILL. No. The turnover tax, as I understand it, is a tax upon retail turnover.

Senator GORE. It is on all sales between the manufacturer and the consumer.

Mr. GASKILL. Perhaps that might be theoretically preferable, but it seems to be difficult or impossible to collect.

Senator HARRISON. Does your organization believe that the 1924 tax on automobiles and trucks and accessories should be applied?

Mr. GASKILL. We have not given particular consideration to that. Our general statement on that—and I must confine myself necessarily to what our chamber has approved—is that a general tax upon all articles is preferable to a special tax. When you come to the matter of special taxes, as to how far you should go and what you should tax, we have not made a determination as to just the particular articles that should be selected. It amounts, as I see it, to a determination of a tax with which we are not favorably impressed.

Senator REED. What would you think of an excise tax on producers of everything except food and clothing at, say, 2 per cent?

Mr. GASKILL. We do not know enough about the fiscal measures of the Government—that is, we do not know just what the rates should be, if that is what you mean. We believe that the rate should be as low as possible and applied as broadly as possible. But just what that rate is required to bring in the needed amount of revenue to balance the Budget—with reference to that we make no recommendation.

The CHAIRMAN. In other words, you believe in a general manufacturers' tax?

Mr. GASKILL. We do, sir.

Senator CONNALLY. How low would you make the estate tax? You are against these high rates.

Mr. GASKILL. Well, we recognize that there must be an increase in all of our regular tax rates.

Senator CONNALLY. You say you are against these high rates of the estate taxes.

Mr. GASKILL. We think that the rates as adopted by the House are too high. We think that they are confiscatory and un-American.

Senator CONNALLY. How low would you put them?

Mr. GASKILL. Well, we have not made a definite recommendation as to how low it would be. We think that a reasonable increase in the rates would be justified.

Senator CONNALLY. How about income taxes and surtaxes?

Mr. GASKILL. The same is true there. We believe that the rate as fixed in the House bill is too high. We think that it will cause people to invest in tax-free securities.

Senator CONNALLY. Well, how is the Government going to sell its tax-free bonds if somebody does not invest in them?

Mr. GASKILL. If the credit of the Government of the United States is kept on a high plane we anticipate that there would be no difficulty in selling the required bonds of the United States.

Senator CONNALLY. But you say you are against anybody buying tax-exempt securities.

Mr. GASKILL. I do not know as I am against any one buying tax-exempt securities. That is up to the particular investors. I merely point out that if you take away the expected reward of those who are able to invest in business enterprise—and that it what we think that business needs—you thereby chase them into tax-free securities, if I make myself clear.

Senator GORE. What we need is a recommendation of something that will enable us to get revenue and votes both. That is the trouble.

Senator CONNALLY. About all that you really have materially considered then is that you are in favor of the manufacturers' tax?

Mr. GASKILL. Yes. With the reductions in the rates that I suggested and in the surtaxes and the individual income tax, and we also think that the one-half of 1 per cent additional increase adopted by the House——

Senator WATSON. Did you ever have anybody in your chamber of commerce sit down and find out how much revenue would be paid on the rates you are proposing here?

Mr. GASKILL. No sir. We are not proposing any definite rates.

Senator WATSON. You are against certain things then, and not particularly for something else? Just in the most general way?

Mr. GASKILL. I beg your pardon, sir. We recommend that the needed revenue be secured from a broadening of the general excise tax.

Senator BINGHAM. In other words, you are in favor of the manufacturers' excise tax as it was proposed by the Ways and Means Committee, as proposed in the House?

Mr. GASKILL. Yes.

Senator WATSON. Suppose that was out of the question, then what?

Mr. GASKILL. If that was out of the question we would broaden the range of excise taxes on particular products and services at a low rate.

We have in addition a number of miscellaneous and general provisions upon which we would like to comment. First, section 141 (c). The rate applicable to corporations filing consolidated returns. It is our position that the 1½ per cent additional increase proposed against such corporations is unfair and unwise and should not be adopted. The reasons were just stated by the man who preceded me.

On gains and losses. Provision has been made in the bill to allow losses only to the extent of the gains. Our position on that is that so long as we are having an income tax which is based upon the taxation of gains that losses should be allowed and that these losses under our system of taxation may be genuine losses and should be allowed even though they do exceed the gains.

Senator GORE. You realize there are some fictitious losses, do you not?

Mr. GASKILL. Yes, sir.

Senator GORE. Have you devised any plan to prevent that?

Mr. GASKILL. Our committee has not gone on record, but my personal preference would be to do away with all gains and losses whatsoever.

Senator GORE. In the long run, finally, yes.

Mr. GASKILL. Take them out of the revenue act, except in the case of a dealer or one who made that his professional business.

Senator GORE. Have you considered the two plans, one to eliminate them entirely, and the other the graduated plan?

Mr. GASKILL. Our committee has not considered the plan to eliminate the losses entirely. We understand that that is more or less fixed in the revenue bill. I am merely stating my personal preference on that.

Senator GORE. I thought that was your suggestion.

Senator REED. Have you ever seen the study of the graduated plan made by the Joint Committee on Internal Revenue Taxation?

Mr. GASKILL. Yes, I did. I read that a year or so ago.

Senator REED. What is your opinion on that?

Mr. GASKILL. You refer to the taxation of capital gains upon a percentage determined by reference to the period in which they were held? Is that it?

Senator REED. Yes.

Mr. GASKILL. It seemed like a good idea, to me, sir, but in application it seemed to tax at too high a rate the securities that had been held for one year or less. Or two years or slightly more than that. In other words, I thought that it did not get away from the main objection to the capital gains tax, namely, that in times of inflation it discourages people from selling and further produces an inflation, and in times of depression it accelerates the depression by giving them a higher rate than is perhaps necessary.

Senator REED. It would loosen up the market to a certain extent, however, in securities and properties that have been held, say, 15 years?

Mr. GASKILL. It would, yes.

Senator REED. And would get us away from this March, 1913, provision.

Mr. GASKILL. That is a very admirable feature. If somebody could combine that admirable feature in some way with the feature that I consider objectionable I would be in favor of it.

Senator GORE. Do you think it is better than the present plan?

Mr. GASKILL. No; I do not. Not on the whole, because of the objectionable feature to which I referred.

Senator REED. What would you say to extending the one month period for wash sales to, say, a year?

Mr. GASKILL. I have not given that any particular thought. But it seems to me that the 30-day period is long enough. You take a real gamble then in being able to buy it back at as low a price as you sold it at in 30 days. There may be quite a variation during that period. The fact that you may take losses, and I believe should take losses, if you are taxed on the gains, creates a doubtful revenue producer, and on the whole I believe presents a situation that is unfortunate.

Senator REED. Well, it is practically certain that if we include 1930 and 1931 the United States Government has lost more in revenue since 1913 by trying to take these items into consideration. It has lost more revenue than it has gained.

Mr. GASKILL. I have heard statements to that effect. I have no means of knowing whether they are correct.

Senator REED. Nobody knows what the 1931 returns show, because they have not been analyzed.

Mr. GASKILL. No. I have heard it said that the Treasury took the position that the capital gains tax as a whole had been a revenue

producer for us. I do not know whether that statement is correct, or whether the Treasury made that statement.

Senator REED. It depends on where you stop your figure. If you stop at 1929 it shows a profit, but if you take the next two years into consideration we have lost more money than we have gained.

Mr. GASKILL. I would like to point out that our recommendation which we have made calling for a rate of 6 per cent will in effect represent the collection of additional taxes from taxpayers, provided losses are allowed in excess of gains. The reason for this is that we anticipate that losses will exceed gains.

The CHAIRMAN. Your time is up.

Mr. GASKILL. I had a number of provisions, sir.

The CHAIRMAN. Have you got them so they could be put into the record at this point?

Mr. GASKILL. I have a report to our committee which includes them.

The CHAIRMAN. Put that into the record at this point.

(The report of the committee on Federal taxation, Cleveland Chamber of Commerce, presented by Mr. Gaskill, is here printed in the record in full, as follows:)

REPORT OF THE COMMITTEE ON FEDERAL TAXATION, CLEVELAND CHAMBER OF COMMERCE

The Federal taxation committee of the Cleveland Chamber of Commerce herewith submits its report with respect to the revenue bill of 1931 (H. R. 10236), which recently passed the House of Representatives and is now before the Senate.

The House of Representatives had completed consideration of the new Revenue bill. The House voted down the manufacturers' excise tax recommended by the Ways and Means Committee and submitted therefor various special excise taxes. The corporation income tax rate and the normal and surtax rates of the income tax were increased beyond the rates originally recommended by the Ways and Means Committee and the normal tax was made to apply to dividends from corporations. The House voted increases in the Federal estate tax and gift tax beyond the rates recommended by the Ways and Means Committee.

I. EXCISE TAXES—GENERAL STATEMENT

The committee has previously approved in principle the enactment of a manufacturers excise tax as an expedient of balancing the Budget and maintaining the credit of the Federal Government. The credit of the Federal Government is regarded as the keystone of the general credit situation.

It appears that special excise taxes present the only alternative to the general manufacturers' excise tax. As between these two alternatives, a general manufacturers' excise tax at a low rate is preferred. The imposition of high excise taxes on particular services and industries is unfair to the businesses selected, and will have the effect of materially reducing and curtailing the business of such industries. Such impediments will reach to other fields and will probably tend to increase unemployment. The seriousness of a general manufacturers' excise tax is recognized, but it is considered that it will be better absorbed and will not place so serious a strain upon our economic structure.

II. INCOME TAX PROVISIONS

1. *Surtax rates.*—In the bill submitted to the House of Representatives by the Ways and Means Committee, the surtax rates ranged from 1 per cent upon incomes in excess of $10,000 to 40 per cent upon incomes in excess of $100,000. In the bill as passed by the House, the surtax rates range from 1 per cent upon incomes in excess of $6,000 to 40 per cent on incomes over $100,000. Your committee is of the opinion that a reasonable increase in the surtax rates is justified as a matter of fiscal expediency, but believes that the surtax rates recommended by the Ways and Means Committee and the rates adopted by the House are excessive and are probably so high as to tax income beyond the

point of diminishing returns, with the result that the tax will be avoided through the purchase of tax-free securities by wealthy taxpayers. Those who are able will be less inclined to invest money in business ventures. Our securities markets are a part of our credit and financial structure and the reduction of the yield from taxable securities will tend further to deflate security values. The committee accordingly takes the view that the surtax rates are excessive.

2. *Normal tax rates.*—Under the present law the normal tax brackets are 1½ per cent, 3 per cent, and 5 per cent. The Ways and Means Committee recommended that these rates be increased to 2 per cent, 4 per cent, and 6 per cent. On the floor of the House the rates were changed to 2 per cent, 4 per cent, and 7 per cent. The committee has no objection to the increases voted by the House. The personal exemptions have been reduced from $1,500 to $1,000 in the case of a single person and from $3,500 to $2,500 in the case of a married person. Your committee approves this reduction in the exemption and in fact considers that the broadening of the base of the tax thus effected is a permanently desirable change in our income tax law.

3. *Application of both normal and surtaxes to dividends paid by corporations.*—The amendment adopted by the House to subject dividends to both normal and surtaxes in cases where the dividend is received from a corporation having a gross income in excess of $25,000 for the preceding taxable year will be highly unfair in its operation. The income distributed has already been taxed to the corporation. The previous exemption from the normal tax was an endeavor to relieve this income, at least in part, from double taxation. The change proposed will result in unfair discrimination against a business man who has incorporated his business. He will be called upon to pay two taxes, whereas his competitors who are doing business as unincorporated firms will pay but one tax. This burden has been added when the burden upon incorporated businesses is already disproportionately high. The policy of exempting dividends from the normal tax is deeply imbedded in our revenue system and Congress should not now depart from this plan. The committee also points out that this provision will be difficult to administer and will tend to confuse taxpayers who may have no knowledge of the statutory "gross income" of corporation in which they hold stock.

4. *Corporation income tax rates.*—(*a*) *General corporation rate.*—The Committee on Ways and Means of the House voted to increase the corporation tax rate from 12 per cent to 13 per cent. The House voted a further increase of one-half of 1 per cent to make the rate 13½ per cent. The committee considers that the tax burden placed upon incorporated businesses is already disproportionately heavy and burdensome and feels that additional revenue should be raised from other sources. The committee has been disposed to accept a reasonable increase in the corporation rate not because the increase was justified, but simply as an indication that the business interests were willing to share in the increased tax burden even though the increase was not considered as justified. The committee regards the additional increase of one-half of 1 per cent as entirely unjustified and belives that the 1 per cent increase recommended by the Ways and Means Committee should be the limit.

(*b*) *Rate applicable to corporations filing consolidated returns.*—An amendment was adopted in the House to increase the corporation rate applicable to corporations filing consolidated returns to 15 per cent. In view of the strict limitations placed upon the filing of consolidated returns in recent revenue acts (a direct control of 95 per cent being required) the election to file consolidated returns is limited to cases where the consolidated group is an economic unit. In many cases, the income of the group can not be properly determined unless a consolidated return is filed. Accordingly, there seems to be no occasion for placing a penalty upon corporations which elect to file a consolidated return. The committee accordingly makes the position that this increase is not justified.

5. *Gains and losses.*—The revenue bill as passed by the House and as recommended by the Ways and Means Committee contains provisions which deny the deduction of losses from sales, except to the extent of gains. For example, a taxpayer having gains of $10,000 and losses of $15,000, with excess of losses in the amount of $5,000, would report no gain and would not be permitted to take the excess loss. On the other hand a taxpayer who had $10,000 in gains and no losses would be required to pay a tax upon the gains. This represents a departure from the system that has been in effect for a number of years. Taxpayers have paid tax upon their gains and have been allowed deductions for their losses. The present measure is regarded as unfair to taxpayers who have already paid to the Government a substantial share of the gains which they realize during more

prosperous times. Under our system of taxation a loss from the sale of securities is considered as a genuine loss and if we are to have an income tax it should be a tax upon the net income. The committee accordingly takes the position that this provision is unfair and should be defeated, and considers that any additional revenue anticipated from this provision should be made up from other taxes.

6. *Capital gains—Rate.*—The 12½ per cent limitation upon capital gains (i. e., property held more than two years), has been continued in the present revenue bill. The committee has previously taken the position that this rate is too high and should not be more than 6 per cent. The committee adheres to this position.

7. *Capital gains—Holding period.*—Under the present law capital gains is defined as including property held by the taxpayer more than two years. The committee has previously taken the position that this period should be shortened to one year. The committee adheres to this position.

8. *Contributions by corporations.*—Charitable and other contributions, under the present and preceding revenue acts have been allowed only in the case of individuals. Your committee considers that contributions made by corporations, particularly to community funds and charitable foundations, should be allowable as deductions under the statute. It is pointed out that gifts to charities at the present time would be encouraged by the adoption of the measure suggested.

9. *Bad debts.*—Under the present and prior revenue laws bad debts are allowed only when ascertained to be worthless in whole or in part and charged off within the taxable year. In the discretion of the commissioner a reasonable addition to a reserve for bad debts may be made. Many taxpayers do not keep books and have not adopted the system of providing for bad debts through a reserve. When no reserve is maintained there seems to be no good reason for the requirement that debts must be both ascertained to be worthless and charged off within the taxable year. It is often difficult to determine just when a debt becomes wholly or partially worthless and the taxpayer is required to guess, at his peril, as to the exact time of worthlessness, and must also make a charge off of the debt. The committee believes that, except in cases where a reserve is maintained or where a partial charge off is permissibly made, the debt should be allowed as a deduction when it becomes worthless, without regard to the mechanical function employed by the taxpayer in making the charge off. The change suggested is in harmony with the rule applicable to losses from worthless securities, and the committee considers that the same rule should apply in both cases.

10. *Adjusted-cost basis.*—In section 113 of the proposed bill, provision is made to the effect that the cost basis of assets sold shall be reduced by depreciation, etc., previously sustained "to the extent allowed, but not less than the amount allowable." The present law provides that the cost basis shall be reduced "by the amount allowable." The change is intended to prevent a taxpayer from obtaining the benefits of excessive annual depreciation and then obtaining a smaller deduction from the cost basis in determining the cost of the property when sold. The provision drafted by the House appears to overlook the possibility that a taxpayer may deduct inadequate depreciation annually and the Treasury Department may then reduce the cost basis by depreciation sustained, but not claimed by or allowed to the taxpayer. This injustice has actually occurred under the present law in cases decided by the Treasury Department and by the Board of Tax Appeals. In such cases the operation of the statute of limitation does not permit a related increase of the depreciation allowable in prior year returns. The committee recommends that this provision be changed so as to require reduction of the cost basis by the amount allowed by the Treasury Department for years in which a tax was paid, and that depreciation for other years be deducted "to the extent allowable."

11. *Net losses.*—(Sec. 117.) The Ways and Means Committee of the House recommended that net losses be carried over one year only. Under the previous law it has been permissible to carry over losses for two years. The House amended this provision further so as to deny the carrying over of any net losses in determining the net income for the calendar years 1932 and 1933, the provision being that net losses for 1933 and subsequent years may be carried over for one year. The committee considers that the adoption of the practice permitting the carry-over of net losses represented a fair and equitable feature of our income tax law. As an emergency measure the committee is not adverse to the proposal made by the Ways and Means Committee to permit the carry-over for a period of one year only, but the committee regards the further restrictions made in the House amendment as unfair and disapproves the change.

III. FEDERAL ESTATE TAX

1. *Rates.*—The committee considers that the high rates proposed for the estate tax in the new revenue bill are un-American and amount to a virtual confiscation of property by the Government. The proposed rates seek to penalize thrift and success. The tendency of such an imposition is to destroy and not merely to tax property values. Financial support of the Federal Government should come from the country's income or turnover and not from its capital. It has been the consistent position of the Cleveland Chamber of Commerce that this field of taxation should be left to the States as soon as fiscal considerations of the Federal Government permit. The increased Federal estate tax as an emergency measure will not produce any material amount of revenue during the Government's fiscal year ended June 30, 1933. The tax is not payable until one year after the date of death and the tax can not apply to estates where the decedent dies prior to the enactment of the law.

2. *Section 810—Revaluation of depreciated estates—Retroactive*—(*a*) *General plan of provision.*—The bill introduced from the Ways and Means Committee made provision for revaluation of depreciated estates and provided, in effect, that the tax should be reduced retroactively in accordance with the percentage of depreciation sustained during the period of administration. The committee gives its hearty approval to this plan of relief. No one foresaw the serious deflation of property values that has come about, and estates have been called upon in effect to pay a tax much higher than was ever contemplated by Congress. The depreciation in values has been so serious that some estates will be largely, if not entirely, confiscated. The committee considers that as a matter of fairness relief should be given to estates so affected.

(*b*) *Limitation of reduction to 40 per cent voted by the House.*—The House adopted a limitation to the effect that in no case shall the tax, as recomputed under section 810, be less than 60 per cent of the tax as computed under the revenue act of 1928. The committee sees no logic in this limitation and recommends that it be eliminated.

(*c*) *Relief where closing agreements signed.*—It is stated in the report of the Ways and Means Committee that this amendment is not available to estates where the liability thereof has been finally fixed by compromise agreement or one made pursuant to the provisions of section 606 of the revenue act of 1928. Section 606 of the revenue act of 1928 makes provision for the execution of final closing agreements between the Treasury Department and the taxpayer as to the amount of tax liability. In many cases the Treasury Department solicited the execution of these agreements, and taxpayers signed them as a matter of course. According to the report of the Ways and Means Committee this provision would deny relief in cases where such an agreement was signed, but would permit relief in cases where the taxpayer did not happen to sign such an agreement. It is submitted that there is no logical distinction between the two cases. An estate may be just as seriously affected by the depreciation in security values where such an agreement was signed. It is considered that the extension of relief to such case would not constitute a precedent for setting aside such closing agreements. The purpose of this section is to grant relief from an unusual and unforseen hardship, and there appears to be no occasion for denying relief merely because of the procedural manner in which the case was handled by the department.

IV. TAX ON STOCK AND BOND TRANSFERS

(Secs. 723–724). The Committee on Ways and Means recommended that the stamp tax on stock transfers be increased from two cents to four cents per share. In the bill as passed by the House, the tax is one-fourth of one per cent of the sale price, with a minimum of four cents per share. The House added a tax on the transfer of bonds in the amount of one-eighth of one per cent of the selling price, with a minimum of two cents per $100 of face value or fraction thereof. The Committee considers that the increases made in the House are unwise, from an economic point of view. It is considered that the increased tax will tend either to deflate further or to retard recovery of securities markets, with a resulting adverse effect upon credit and business conditions. The Committee accordingly considers that the further increases in this tax voted by the House are unwise and should be defeated.

V. BOARD OF TAX APPEALS

Jurisdiction of refund claims.—Under the present law the board may take jurisdiction only after a deficiency in tax has been asserted by the Treasury

Department, but once jurisdiction is established by reason of the deficiency, the board may determine an overassessment in favor of the taxpayer. In cases where the department does not assert a deficiency the taxpayer must file suit in Federal court to obtain a refund denied by the Treasury Department. The new revenue bill does not propose any changes in this respect. The committee sees no reason why the Board of Tax Appeals should not be given jurisdiction in refund cases. The operation of the board is considered as successful. The machinery for redetermination of taxes by the board is already provided and the committee recommends that the board be given jurisdiction to determine refunds of taxes regardless of whether a deficiency has been previously asserted by the Commissioner of Internal Revenue.

VI. GENERAL EFFECT OF THE NEW REVENUE BILL AS PASSED BY THE HOUSE OF REPRESENTATIVES

The general plan and purpose of the revenue bill as passed by the House is regarded as unfortunate. The committee is in entire sympathy with measures intended to balance the Federal Budget, but the plan evolved is considered as running counter to our accepted theories of economics. The general purpose of the bill is to collect as much tax as possible from corporations and wealthy individuals. Your committee is not unsympathetic with a general plan of taxation which bases the tax upon the ability to pay and the committee considers that some increase in all income tax rates is justifiable as an emergency measure. Your committee considers, however, that some of the principles embodied in the new bill which are apparently intended to redistribute wealth will carry certain repercussions that will be immeasurably harmful to our economic structure. The committee subscribes to the belief that under our present system the nation advanced to an extent not paralleled in history and believes that this system in the future will be preferable to any that has yet been devised. The present Secretary of the Treasury recently stated to the Senate Finance Committee that "you can't help wondering if the reason for England's present prostration is not that she embarked upon a course of redistribution of wealth."

The committee considers that the cumulative effect of the various so-called "soak the rich" endeavors expressed in the new revenue bill will be a positive detriment to business and if enacted will tend to retard business recovery. As stated by Secretary Mills, the new law will tend "to discourage the normal flow of capital into industry and commerce at the time when business men are hesitant and industry stagnant. To put men to work, capital must go to work. But capital must see some chance of profit to compensate for the risk. Business men will not borrow and banks will not lend unless the enterprise offers some fair prospect of return."

The committee subscribes to this view. Our citizens, from the working man to the executive, are in business. The fortunes of our whole body of citizens go hand in hand with the fortunes of business. The committee concludes that the plan of taxation evolved by the House bill will do positive harm to our economic structure. The committee expresses the hope that a sane and sensible plan will be evolved in the Senate which will eliminate depressive and confiscatory rates and which will raise the revenue needed to balance the Budget by a wider range of low rate excise taxes, and preferably by a general manufacturers excise tax, which the committee previously approved.

Respectfully submitted.

THE COMMITTEE ON FEDERAL TAXATION,
By DAVID A. GASKILL, *Chairman.*

LETTER FROM SILAS H. STRAWN, PRESIDENT CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA

WASHINGTON, *April 21, 1932.*

THE COMMITTEE ON FINANCE,
United States Senate.

GENTLEMEN: Every member of your committee, I am sure, is conscious that it is of the utmost importance that a great revenue measure such as you are preparing should not lay any handicap that can in any way be avoided upon the country's economic activities, our mines, our industry, our agriculture, our channels of distribution, and the fields of service activity that go with them. Upon the development of our economic activities we must depend both for employment of our unemployed and for revenues to maintain our National Govern-

ment. There is no substitute. Your task is to raise from business activities an amount in revenues which proportionately exceeds even the tax levies of war times, and do it with the least possible obstruction to the development in economic activity that is so essential.

As you will understand, this is the point of view from which the chamber of commerce, its committee on Federal taxation, its committee on Federal expenditures, and its membership have approached the subject. I have already had the honor to transmit to you the report of our committee on Federal taxation and the vote of the organizations in our membership upon the committee's recommendations. I now wish to place before you some applications of the policies of our organization, determined as outlined above, to the measure which you are considering. In doing this I have the benefits of the results of recent studies of our committee on Federal taxation. In everything I have to say, I wish to be understood as being wholly sympathetic in my recognition of the problems which confront you.

BALANCING THE BUDGET

The efforts of your committee and of Congress to balance the Budget, the organizations in our membership almost unanimously support. Of 1,173 organizations casting ballots in the referendum to which I have alluded, all but 6 took the position that the Budget should be balanced. Beyond any possibility of doubt, this is the position of business men's organizations in all parts of the country.

REDUCTION IN EXPENDITURES

The first step in balancing the Budget, the business men's organizations in our membership with almost equal unanimity declared, should be reduction in Federal expenditures. But nine organizations out of the 1,173 that recorded themselves upon this question were of opinion there is any alternative.

Assuredly, when there has been a large increase in expenditures for the ordinary operations of the Federal Government, including postal deficit, but excluding all items in the nature of fixed charges and the increase between the actual figure of 1924 and the Budget before Congress for the fiscal year of 1933 stands at more than $400,000,000 there is not only opportunity but pressing need for a large reduction before the amount is reached to be met through increased taxation.

Another consideration which you will have before you is the general tax burden, now so increased by existing conditions that there can be no justification for the maintenance of [illegible] that are not demonstrated to be essential. Present [illegible] are suggested by total expenditures made by all [illegible] as well as Federal. In 1913 they were app[illegible] $96, and in 1929 were $107; the latest [illegible] r 19[illegible] much evidence that the current fig[illegible], if a[illegible]minution

INCREASED FE[illegible] TAXATIO[illegible]

The further a[illegible] there has been elimination [illegible] ons in our membership vo[illegible] by [illegible] taxation. Of the 1,157 [illegible] estion all but 54 voted fo[illegible] axation. [illegible] st with [illegible]tion that the taxation w[illegible] chiefly u[illegible]

This position [illegible] would be levied for reven[illegible] objects a[illegible] quitable distribution would [illegible] venue bill [illegible] enacted embodies taxes and [illegible] that depart [illegible] he use o[illegible]ing power to raise revenue it wi[illegible] detrimental [illegible] upon th[illegible] business situation, and thus be in[illegible] the t[illegible]on [illegible]nd the country, of aiding recovery in [illegible] I am confident I am expressing the delibe[illegible] ut our organizations in submitting the following [illegible]

The corporation income tax.—[illegible] of this tax has since the war been kept at a rate so much above the rate on individual income that there has been a penalty upon the characteristic form of business enterprise, the rate

would by the House bill be raised from 12 to 13½ per cent. Such a rate means severer taxation than was imposed upon corporations in war times and for war purposes. The increase exceeds the moderate increase which most of our members voted in our referendum to support, although no less than 294 organizations stated their conviction that this rate should not rise above 12 per cent. Thirteen per cent should be considered the maximum, and should be used only in the event of necessity.

Consolidated returns.—Upon corporations filing consolidated returns the House bill would impose a rate of 15 per cent. In view of the strict limitations now placed on the filing of returns of this character, a consolidated return can at present be used only if the corporations involved form a true economic unit. The earnings of corporations forming such a group can not be determined by the earnings or loss of one, but only by the aggregate for the group. For the guidance of officers, for the information of stockholders, for statements to be used for credit information, and for every other normal business purpose, earnings must be consolidated. The provision in the House bill would impose a penalty upon a normal and desirable business procedure. The penalty could be avoided only by additional administrative costs in allocating intercompany charges and credits. Every consideration seems to support elimination of this provision.

Corporate dividends.—The provision of the House bill which would subject dividends in the hands of stockholders to the normal income tax should have no place in a revenue bill. Its effect would be disproportionately heavy upon small stockholders and upon stockholders in small corporations, and would be far-reaching in creating an unsound financial structure in corporations, since an undue preponderance of bonds would have to be used. The Corporate financial structures which would be encouraged would lead to widespread disaster in times of business depression. The immediate effect would be substantial depreciation in the value of all outstanding stocks.

Corporate earnings before 1913.—Under existing law earnings and surplus accrued before March 1, 1913, may be distributed, under certain conditions, without being taxable to recipients. Organizations in our membership representing natural resource industries, many of which for continuance of operations have to hold reserves, as of timber and minerals, for long periods, are concerned by reason of this provision. It is submitted that the law in this respect should not be changed in an emergency revenue bill which, I scarcely need reiterate, should be limited to the purpose of raising revenue.

Life insurance corporations.—A system of taxation for life-insurance companies has been evolved that produces the same revenue to the Federal Government in bad years and in good years, and regardless of the current results of operations. The House bill, however, produces changes in the taxes for such companies which could scarcely have been intended. By increasing the rate from 12 to 13½ per cent, and by reducing the deduction in reserves from 4 to 3½ per cent, the House bill, according to figures which have now been collected, increases the tax on legal reserve life-insurance companies by approximately 112 per cent. The nature of life insurance and the public importance of the stability of life-insurance companies in times of depression would seem to make such a discriminatory increase contrary to public policy.

Individual income tax—The base.—The House bill broadens the base of the individual income tax. A large proportion of our organization members have recorded their support of this feature of the House bill.

Individual income tax—Normal rate.—The House bill increases the normal rate of individual tax. The organizations in our membership, with only 89 filing dissenting ballots, have supported an increase in the normal rate.

Individual income tax—Surtax rates.—By the same very large vote our organization members have supported a moderate increase in the surtax rates applicable to individual incomes. In this vote our members undoubtedly were contemplating rates that would increase revenues. The present maximum rate of 20 per cent would be raised by the House bill to 40 per cent. A large part of our membership would undoubtedly question this rate, on the ground that instead of producing revenue it will tend to produce a shift of capital otherwise available for the maintenance and development of business activities into tax-free securities. Of such securities there is an abundant supply. Imposition of the normal tax upon dividends, as proposed by the House bill, will accelerate the transfer of capital from business enterprise into tax-free securities. The appropriate increase in surtax rates will probably be dependent upon the other rates upon which you decide, but I can not urge too strongly that care be taken to avoid placing upon

our overburdened securities markets an additional load of securities sold in transferring funds into tax-free securities.

Transfer of stocks and bonds.—There are other provisions in the House bill which will seriously affect the resources at the disposal of business enterprise. These are the proposed new taxes upon the transfer of stocks and bonds. They are calculated to restrain a free market for securities, and thus will cause depreciation of existing stocks and bonds as well as cause obstacles for the future. These provisions can not have a revenue purpose, and should be omitted.

Capital gains and losses.—The position of our membership is that the tax rate on capital gains, and the corresponding deduction allowed for capital losses, should be reduced to a low rate. The general reduction in capital values means that for the time being capital losses in the aggregate will exceed capital gains. Consequently, a reduction in the rate would now save revenues to the Government.

Capital gains and losses—securities.—The House bill discriminates against securities as a form of property, by allowing losses from the sale of investments in securities to be deducted only from gains in transactions in securities. This discrimination against one form of capital investment can have no revenue purpose, and should be removed from the revenue bill.

Credit for taxes paid abroad.—A business in the United States can have no net income for purposes of Federal taxation until it has paid its expenses of operation, including its taxes, domestic and foreign. The House bill, however, would make a discrimination against taxes paid to other countries, permitting their deduction only in certain ways. The consequence would be that some taxes paid abroad could not be deducted. This provision would have a detrimental effect upon our foreign trade, which the public interest certainly requires should be encouraged.

Net losses.—True earnings of a business enterprise are not usually demonstrated by the result for 12 months. This has been recognized by the Federal revenue acts, in a provision allowing a loss in one year to be charged against earnings in the two succeeding years, if necessary to absorb the loss. Such a provision preserves the integrity of a business enterprise. The House bill, however, suspends the provision for two years. In view of the emergency need of revenues it may be justifiable to limit the charge of a loss to the earnings of the succeeding year, but entire elimination would mean unfair taxation of true earnings.

Estate tax.—The organizations in our membership have steadily declared that the Federal Government should leave estate and inheritance taxes to the States. In our referendum which closed on April 4, and to which I have been alluding above, they voted that by reason of needs for revenues in an emergency the estate tax should be kept as it is, without increase. The House bill, however, would raise the maximum rate 80 per cent over the highest rate used in war times. The purpose is obviously ulterior. It is respectfully submitted that the rates for the estate tax should not be increased in a measure designed for revenue purposes.

Depreciated estates.—Equity requires a reasonable measure of relief for a class of estates which are seriously affected by the rigid provisions of the present estate tax. These are estates of persons who happened to die when prices were high, whereas the tax has to be paid from the property they left at a time when the only possible realization is at low values. But for the intervention of death and the estate tax most of the property which is in question would not have been liquidated in times of depression. The result of forced liquidation is that the present law takes more of the estate than Congress could have contemplated. There are instances in which it is said the tax will take the entire estate. The high prices prevailing when death happened to occur may have been of no interest, and of no benefit, to the person whose estate has now suffered serious depletion through no fault of the decedent or of those now in charge of the property. Of the 1,156 organizations which recorded their position on this subject all but 42 were in favor of some form of relief which would cause the tax to have the approximate relation to the estate that was intended by Congress. The House bill provides that, in the event that death occurred between September 1, 1928, and December 31, 1931, inclusive, the tax may be decreased to an amount that has the same ratio to the tax determined under present law as the ratio of the value of the estate 18 months after the death to the value at the date of the death. There is a limitation that the reduction from the tax fixed by existing law may not exceed 40 per cent. The substance of this provision in the House bill is eminently fair. It is submitted that the limitation which is attached contravenes the principle recognized by the House bill, and should be removed.

A fixed period for increases.—The revenue measure which you are preparing is intended to meet an emergency. In the opinion of our members, expressed in their advocacy of increased taxation of the character I have outlined above, the emergency character of the measure should be made clear by a limitation upon the period during which the new and enlarged taxes now enacted will be levied. A period of two years would seem appropriate to existing circumstances.

In presenting these comments, I should like to repeat my earlier description of the taxes our membership has supported. Our members have urged that, after the Budget expenditures for next year has been reduced to a point consistent with the times, the amount then needed to balance the Budget should be obtained by taxes levied for revenue purposes. If there are in the opinion of Congress other matters which are within the jurisdiction of Congress and which should be subjects for remedial legislation, they should be taken up separately and dealt with upon their merits.

Very truly yours,

SILAS H. STRAWN, *President.*

LETTER OF CHANNING E. SWEITZER

APRIL 20, 1932.

Hon. REED SMOOT,
Chairman Senate Finance Committee, Washington, D. C.

SIR: On January 14, 1932, the chairman of the taxation committee of the National Retail Dry Goods Association appeared before the Ways and Means Committee and presented for that association and seven other national associations of retailers whose interests are closely affiliated with those of the National Retail Dry Goods Association the views of their membership as to necessary revision of the revenue act.

As chairman of the Finance Committee you have consented to our filing a brief in behalf of the National Retail Dry Goods Association on H. R. 10236, which when enacted will be known as the revenue act of 1932.

The opinions which we here voice in behalf of our association have been ratified by members in the annual convention held in February and by vote of the board of directors at a regular meeting in March; they express convictions in regard to the measure now before your committee for consideration, varying from our presentation before the Ways and Means Committee only as has been necessitated by the difference between H. R. 10236 in its present form in the Senate of the United States and the report of the Secretary of the Treasury to the Ways and Means Committee on January 13.

We shall touch on only those parts of the bill which, while they have an interest common to all taxpayers, possess particular interest to the members of our association.

TITLE I, SECTION 13—TAX ON CORPORATIONS

We believe the rate of 13½ per cent suggested as the tax on the income of corporations is too high, and that consideration must be given to the effect upon the thousands of stockholders to whom the increase at this time will be a matter of vital importance. In the present condition of business, while such increase may not weigh heavily upon a corporation which is earning high return on its capital, nor on its stockholders, corporations falling in this class are few, and we earnestly recommend the Treasury program of making the tax rate on corporations 13 per cent.

Believing that if we follow the sequence of H. R. 10236 our presentation will be clearer, the next point we shall endeavor to make is in regard to Title I, sec. 23—Deductions from Gross Income.

PARAGRAPH (R) LIMITATION ON STOCK LOSSES

We can not concede that equity rests in a proposal to tax all gains from the sale or exchange of stocks and bonds and to deny deduction from income of all losses in excess of balancing gains. It would seem that in the present condition of the country and particularly of investments in stocks and bonds, there should be no curtailment of the rights of taxpayers to deduct losses, regardless of the proportion such losses bear to the taxpayer's gains from similar transactions. For months, investors in a falling market have held on to such investments in stocks and bonds in the hope of an upward turn, until in far too many cases liquidation has been absolutely necessary and heavy losses have been sustained.

Possibly it may be conceded that in the future, as the Treasury Department suggests, consideration should be given to the limitation of such losses, but we can not agree that the position of the Treasury Department in recommending an exception to banks from the suggested limitation rests on any greater economic need than would the continuation of the present law which allows the deduction to all taxpayers. However necessary a change in the future may be, it is certain to us that such change should under no circumstances be effective retroactively to January 1, 1932, whcih is the effective date of Title I. Investors in securities, with no intimation of the proposed change, have handled such investments with an underlying understanding of its effect upon their income, based upon existing law. If this limitation is retained in the bill, there appears to be little justification in applying it to transactions which have already eventuated, and we believe simple equity demands, if it is retained in the bill, that it become effective after its passage. The theory of retroactive application of the income tax sections with the proposed changes of rates, can not be applied to this particular section. There was a general understanding of the necessity of raising rates and anticipation of such increases, but there was no premonition, no advance information by which taxpayers could govern their actions in regard to investment transactions.

Title I, Section 25. Credits of Individual Against Net Income

We believe there is no justification for the provision in the section by which dividends from corporations become subject to the normal tax when the gross income of the corporation exceeds $25,000 in the preceding year. In previous revenue acts the exemption of dividends from the normal tax of individuals has been a step toward the equalization of taxes on income from corporations, with other income. Complete equity has never been given the taxpayer in respect to his income from corporations. As a matter of fact, it would seem that equity demands a parity of the total normal tax with the corporation tax and exemption of dividends from the normal. In the present bill, corporate rates are increased. We believe it should not be increased beyond 13 per cent, but even that increase widens the spread between the corporate rate and the normal tax, with a consequent increase in the inequity against corporate income. To remove the normal tax exemption on dividends, is to increase the inequity and discriminate entirely and without reason against a form of business. It must be recalled that in the original income tax law the normal tax and the rate of the tax on corporations, was the same. The underlying theory of the framers of the original law was that income from a corporation having paid the corporate tax, it should not be double taxed in the hands of the individual. We are convinced that the retention in the bill of this provision, will be a departure from one of the basic principles of the income tax structure and will intensify the present difficulty in securing money for corporate enterprises. No one studying the financing of corporate business can escape the conclusion that the exemption of income from corporations from the normal tax of individuals is necessary to attract investors. Sound business reasoning urges us to recommend the elimination of this provision. The discrimination between corporations and other forms of business is already too great. Need of additional revenue does not justify an unjust tax.

The same section reduces the earned income credit from $30,000 to $12,000, and from a deduction figured at 25 per cent to 12½ per cent. In addition, the earned income credit by this same section becomes a credit against net income. Under the old law the earned income credit was a credit against tax. In other words, there are three distinct reductions made and as we interpret this earned income provision in the bill it would appear that the "tax credit" on earned income would only apply to an amount up to $1,500 (up to 12½ per cent of the maximum amount of earned income which earned income limitation is fixed at $12,000) and that the bill therefore reduces the earned income credit from $30,000 under existing revenue law to $1,500 in the bill now before your committee. Further, this change becomes a permanent fixture of the tax law, with no indicated intent that it shall be temporary in nature and restored at the end of 1934. We believe there is no equity in the proposed change. There has been a recognition in preceding acts of the principles that income from wages paid for mental or physical work, should not be taxed so heavily as income from investments—money wage. This has been evidenced by the original allowance and subsequent increases to the $30,000 allowed under the present act. To withdraw the differential allowed earned income at the present time, seems to us indefensible. Never has need for it been greater nor more just. If proper interpretation of that part of the change

which makes earned income a credit against net income rather than against tax, means that even with the present rates and present limits, the benefit to the earner of the credit is to be reduced, there is added inequity. We believe the earned income credit in its present form should be retained in the bill.

TITLE I, SECTION 117. NET LOSSES

The bill denies business the right to carry over in 1932 and 1933 net losses of the preceding year. There can be no question that such a provision may actually place a tax over a period of years upon a greater net income than business makes in those years. There may be some equity in the original report of the Ways and Means Committee, which limited the deduction of net losses to one year, denying the present right of deduction in the second succeeding year, but if such recommendation by the Ways and Means Committee is a declaration of a principle that the net loss provisions of previous acts were unsound, few taxpayers will agree with it. It must be borne in mind that most businesses are continuing businesses:—in existence for a period of years, and any revenue act which by its provisions exacts a tax on an income which does not actually materialize, must be regarded as unjust. We do not believe that three years is an unduly long period for determination of real taxable income. Further, we do not believe, if for any reason the change remains in the bill, that it should deny the right to deduct net losses for the year 1931. We believe investigation would show that in 1931, relying upon the net loss provision of the present act for relief in succeeding years, many conservative corporations developed net losses by their treatment of inventories, bad debts, investment in temporary equipment, etc., while others, just as properly deferred writing off values in order to make a showing. In the case of the conservative corporation, they will in such case be placed at a serious disadvantage by denial of the right of deduction for 1931 net losses.

TITLE I, SECTION 141. CONSOLIDATED RETURNS OF CORPORATIONS

The increase from 13½ per cent proposed by the bill as a tax on corporations, to 15 per cent when the corporation return is a consolidated return of affiliated corporations, is not a tax. It is a penalty on a form of business entirely unjustified. Never has a revenue act penalized business because it filed a certain kind of permissible return. Affiliated corporations are not illegal. They are based on sound business reasoning, and the filing of consolidated returns is a necessity for the computation of taxable income of the business as a whole. Previous acts have protected the interest of the Government by requiring very high percentages of common ownership, reaching 95 per cent in the existing law. The consolidated return filed with the Government seldom varies from the form of statement issued to banks. Only by consolidated returns can the true income of a group business be determined, and there is by consolidated returns, a simplification of examination, because it eliminates questions as to intercompany relations and makes intensive investigation of such relations unnecessary.

We respectfully refer to a conclusion of the Finance Committee when considering the revenue bill of 1928, which was to the following effect: "The committee has considered the matter very carefully and is convinced that the elimination of the consolidated return provision will not produce any increase in revenue, will not impose any greater tax on corporations, and will in all probability permit of tax avoidance to such an extent as to decrease revenue."

We strongly urge the elimination of the penalty of 1½ per cent, which the increase from 13½ per cent to 15 per cent imposes on consolidated returns of affiliated corporations.

TITLE II, SECTION 401. ADDITIONAL ESTATE TAX

We believe this section has no part in H. R. 10236, which we regard as an emergency tax measure. It is a tax running up to 45 per cent, superimposed upon an existing tax on net estates, which in its highest bracket reaches 20 per cent. Your committee is considering a bill by which it is hoped sufficient additional revenue to the Government will accrue to balance the Budget in 1933. We respectfully submit that little revenue will go to the Treasury before June 30, 1933, as a result of an increase in the rates of the present estate tax. As no immediate revenue will result from the additional tax, there is no reason for the elimination of Title II from your present deliberations. Consideration of Title

II should be unhurried. If it were removed, ample time could be given to its later consideration, which the present emergency of extreme necessity for promptly reporting the revenue measure will prevent, if it remains in the bill.

We believe this suggestion of elimination is particularly sound when it is recalled that the section extends the period of payments for years, taking it by such extension, entirely out of the class of emergency revenue to which almost all the other sections of the bill belong. We can not believe your committee will wish to impose such drastically heavy increases as the title provides, without due and deliberate consideration of the results on the economic structure of the country. The whole subject of estate taxes is one of controversy and we believe no change in the present law should be made the limited time which Congress will have for its consideration before the bill should be passed.

TITLE III. GIFT TAX

Our association has declared itself in favor of a gift tax as a necessary corollary to an estate tax, but does not agree that such a tax should run in its highest bracket to 33⅓ per cent. There must be a careful interlocking not only of the rates imposed by the gift tax, but of all the provisions of the gift tax which the rates and provisions of the estate tax. We do not believe the same objection to immediate enactment of the gift tax exists as we believe it exists in regard to the estate tax. If in the time which Congress has for its study, proper consideration can be given so that it is fair to the taxpayer and fixed at rates which will produce the greatest revenue to the Government, we believe it should be at once enacted as a necessary corollary to the existing estate tax, but its immediate effective rates should be enough less than the present estate tax rates as to give a proper differential between the two.

TITLE IV. EXCISE AND SALES TAXES

The National Retail Dry Goods Association, by a resolution unanimously adopted at its twenty-first annual convention, held in February, 1932 is vigorously opposed to every plan of raising public revenue through any and every form of sales taxation.

This resolution included within its scope opposition to the enactment of a manufacturers' general excise tax, a manufacturers' or retailers' selective or so-called luxury tax, a general retail sales tax, or a general turnover tax.

The opposition of the members of this association to any and all forms of sales taxes by whatever name known or designated is based on the following considerations:

SALES TAXES NOT BASED UPON ABILITY TO PAY

Any form of sales tax is contrary to the well established fundamental principle of taxation, inasmuch as it is not based upon ability to pay. It is a tax on sales, and not on earnings. It need hardly be pointed out that during the current period of economic depression that any form of sales tax can not be absorbed by the industrial and mercantile crafts of our country, because in most instances their profits have already reached the vanishing point, and any additional tax burdens would jeopardize the very existence of many of them. Speaking specifically for the department store craft, which is represented by this organization, according to statistics collected by the Bureau of Business Research of Harvard University, department stores with net sales of less than $2,000,000 incurred a loss of 1.8 per cent for the year 1930; while department stores with net sales of $2,000,000 and more experienced a loss of 0.5 per cent for the same year. (Statistics are not yet available for the year 1931, but it is generally conceded that these losses will be materially increased when the facts are made known.)

Similar conditions exist in almost every field of business endeavor. Furthermore, it must be remembered that these losses are incurred even though business has been compelled during the past 30 months to reduce operating costs to a minimum.

In view of these facts, any sales tax imposed upon business at this time, will be a tax not based upon ability to pay, and must of necessity be passed on to the ultimate consumer.

AS A TAX ON CONSUMPTION, THEY WILL INCREASE COST OF LIVING

As a sequence of the foregoing consideration, any form of sales tax is a tax on consumption and will increase the cost of living to the American people at a time when the purchasing power of our Nation is at a low ebb, due to the almost universal reduction in salaries and wages, further aggravated by the unemployment of eight millions of our people. The enactment of sales taxes now would prove to be not only untimely, but would impose added financial burdens on the great mass of American people when they are struggling to obtain the necessities of life.

Furthermore, it need hardly be pointed out that any form of sales tax, including within its scope all commodities, or a wide-spread range of commodities, will affect most severely those of our people in the lower income classes, who are required to spend all of their income in meeting living costs.

WILL INJURE THE INDUSTRY AND COMMERCE OF OUR NATION

Any form of sales tax will create a sales resistance against these commodities taxed, and will inevitably lead to a decline of consumer demand for the articles so taxed. This would be a most unfortunate development at a time when all business is striving to promote the consumption of goods in order that normal economic conditions may be restored as soon as possible, and our acute unemployment emergency relieved.

Even an excise or sales tax imposed upon the so-called luxuries of life would, because of the sales resistence created, further adversely affect these industries. It must be remembered that a large percentage of American labor is employed directly or indirectly in the production and distribution of so-called luxury goods, and any form of taxation which further jeopardizes these industries, or retards their recovery, will add to our present unemployment problem and make itself universally felt in the economic life of the entire Nation.

THE ENACTMENT OF ANY FORM OF SALES TAX WILL ENCOURAGE EXTRAVAGANCE IN GOVERNMENT

During the past two decades, the cost of government in the United States has mounted upward and upward. In 1913 the cost of all government, local, State, and Federal, amounted to $2,919,000,000, while in 1931 the cost of all government had mounted approximately to $14,000,000,000.

May we further point out that in 1929, the last of the so-called boom years of prosperity, the cost of all government amounted to $13,075,000,000, and despite the fact that our national income has dropped from $85,000,000,000 of that year to $57,000,000,000 in 1931, the percentage of Government cost to national income has increased from 15.4 per cent in 1929 to 24.6 per cent in 1931? The answer is evident, Government has continued to increase its expenditures in the face of the most adverse economic conditions which have ever confronted our country.

There perhaps has never been a time in the political history of our country when the American citizenry is more keenly conscious of the rising costs of operating our governmental institutions, and the resulting apparent need for new and additional tax levies, than it is to-day. Present economic conditions have forced the attention and interest of the American taxpayer to these problems. He rightfully expects his legislators to curb this upward tendency in the expenditures of public funds, and hence avert the necessity for unwarranted and unsound methods of taxation at this time.

American business and the American people regard the enactment of any form of sales taxes as a dangerous precedent. The experiences of other countries which have resorted to sales taxes, have shown that when public expenditures apparently called for additional funds, the situation was met by increasing the rate of the sales tax.

Sales taxes are not conducive to economic and businesslike conduct of government. In fact they encourage extravagance. Once the precedent is set, there is nothing to prevent future Congresses from raising the rate of the sales tax or broadening its scope to cover increased public expenditures.

Against such a possible development in the furture, our farseeing legislators, American business and the American people generally are most anxious to be protected and safeguarded, because the future economic stability of the Nation is seriously dependent on the relation between the cost of government and economically sound direct and indirect tax levies.

For these reasons, which are advanced solely in the interests of an early recovery of the economic well-being of our Nation, and for the present and future welfare of the American people generally, the National Retail Dry Goods Association stands vigorously opposed to every form of manufacturers' or retailers' excise or sales tax, either general or selective, being enacted.

TITLE VIII. POSTAL RATES

Our association believes that Title VIII has no proper place in the bill, but that, being there, its proposal is entirely unfair to business. It believes the Post Office Department should be self-supporting. It can not admit, however, that first-class postage, which is a highly profitable class of mail carrying, should be required to balance the postal deficit. The necessary levy to balance the deficit, estimated at $150,000,000, should be made on those classes of mail the carrying of which develops the deficit. First-class mail is already doing more than its share. For reasons well known to your committee, it has been in the past difficult to increase the rates on the other classes of postal matter. It would seem that now there should be no hesitancy in placing the burden of meeting the Budget exactly where it belongs. Business very properly will resent an increase of 50 per cent in the cost of a service which already is showing a profit.

The fundamental basis of postal operation from the beginning of our Government has been to make it self-supporting from the revenue derived; and not only that, the intent as service was increased was that each class of the service should be self-supporting. We feel the obligation to do this rests squarely upon Congress and that the increase on first-class matter should be eliminated. Under no circumstances, regardless as to how the deficit in the post office is balanced (if it is balanced by an increase in the rate of any class of postage), should there be any increase in the emolument or allowance of postmasters or postal employees because of the increase. Paragraph b of section 1001 should be eliminated unless the increase in rate increases the task of postal employees in handling mail. That the handling of a first-class letter, because it bears a 3-cent stamp instead of a 2, is any more difficult can not be granted, and certainly if there is an increase in rates, and particularly in first-class rates, those who pay such increase are entitled to an application of the entire amount of the increase to the postal deficit without reduction as provided in paragraph b of section 1001.

BALANCING BUDGET

The Budget must be balanced. There may be differences of opinion as to the necessity of balancing it in 1933, and in fact we ventured the opinion in our appearance before the Ways and Means Committee that such necessity did not exist, that it could be deferred for a year or two, and we are still of the opinion that if there were a reasonable certainty of even a moderate revival of business, and of business profits, there would be no danger to the credit of the United States if the balancing of the Budget were planned for 1935 rather than in 1933.

Congress itself holds the key to the balancing of the Budget, and business looks to Congress to intelligently use that key. Business is not satisfied, taxpayers in general are not satisfied with the reductions in expense which so far have been proposed. Realizing that a large part of the appropriations of the Government are caused by fixed expenses, we still believe a reduction in controllabe expenses of less than $300,000,000 for the year 1933 will not satisfy taxpayers.

In closing, we wish to thank you for the opportunity to submit this brief. The numerous courtesies which you personally have extended to our association are greatly appreciated. We believe we are in unanimous agreement with all taxpayers when we voice the opinion that never before in the history of the United States has such responsibility rested upon its Congress. The appropriations for the year ending June 30, 1934, msts be held to a minimum, with no additions of any nature whatever to the present estimates. The burden already is too great in times like this. It must be lightened.

Yours respectfully,

NATIONAL RETAIL DRY GOODS ASSOCIATION,
CHANNING E. SWEITZER, *Managing Director.*

BRIEF OF J. ANTHONY SCHWARZMANN, LL. D.

GENTLEMEN: For the second time within the last two decades the emergency has arisen to call on all resources for the purpose of raising revenue. The last emergency was in 1917 when the war had to be financed. Then the commerical and industrial structure of the United States was such that the needs of the country could nearly be covered through taxation of income, corporate and individual. This source of revenue carried the country even over the depression of 1920 and 1921 when entire pivotal industries like the textile industry and leather industry were on the brink of ruin and were entirely eliminated as income revenue producers. To-day, however, income taxes as revenue are reudced to near stagnation.

Nevertheless, in order to protect the credit of the United States, a balanced Budget must be produced. While such an accomplishment is difficult in itself, it has been rendered immeasurably more difficult by the fact that it has to be accomplished in a presidential election year.

While there is no doubt of the sincerity of both parties as such, the fundamental principles of taxation are nevertheless politically handicapped and split into two maxims, the one being "Tax the rich", the other "Tax all through a sales' tax." But the general sales tax, on the one hand, will lose the votes for its advocates and, on the other hand, the advocates of taxing the rich see empty campaign coffers.

There is, therefore, in my opinion, for the tax legislature, only one sound solution, to wit: A compromise between both principles.

1. INCOME TAXES

Individual.—The normal rates of the 1926 act of 2 per cent, 4 per cent, and 6 per cent should be restored and a surtax beginning with $6,000 and a maximum rate of 40 per cent on incomes above $100,000 should be levied.

Corporate.—A corporate tax as proposed by the House of 13½ per cent appears just and adequate, conditioned that corporate dividends are not subjected to to normal individual tax.

2. SPECIAL TAXES

As a special tax there should be considered only one item, namely, the permanent adjustment of postal rates. No branch of the Government which has been created on a business basis should be privileged to work with an accepted deficit. No citizen or resident of the United States has a right to ask or expect the Government to partly pay for the upkeep of his correspondence. The United States has to-day the lowest postal rates, although at the same time it has the vastest expansion.

We pride ourselves that a letter can be sent for 2 cents 3,000 miles, while, for instance, in Switzerland the basic rate is 3 cents and the farthest a letter can travel with this rate is 200 miles.

The proper and most just solution would be doubtless a regional zoning of rates as it was done originally with the parcel post. Local rates should remain at 2 cents, a second zone should be 3 cents and a third zone 4 cents. Thus every letter would pay adequately for its transportation. Whatever may be done in this respect, increase in postal rates is mandatory.

3. SALES' OR MANUFACTURERS' TAX

No discriminatory sales' taxes should be levied because, first of all, discrimination is unjust in itself and un-American. No industry should be singled out to carry a heavier tax burden than any other industry. Experience shows that such discriminatory taxes are usually unproductive in the long run. When France, during the war, taxed windows, the result was that windows simply were cemented up; when Germany, after the war, put a heavier tax burden on the railroads, the result was that the final revenue from railroads was considerably smaller than before the increase in rates caused by increased taxes.

The House bill singles out, above all, the automobile industry. This industry is the one industry that led us out of the slump of 1921 and it may well be again the industry that will lead the recovery out of the present debacle. But in order to prevent such leadership, the House bill provides a discriminatory tax against it.

There should, therefore, be first a basic decision that a general sales' tax will be the only solution and that from such general sales' tax only absolute necessities of life should be exempted. In such sales' tax should be included admissionn

taxes, telephone and telegraph taxes and such sales' tax would automatically include a gasoline tax.

After having taxed wealth through increased income tax and increased estate taxes sufficiently, there should be no hesitation to draw on a sales tax for the remainder of a balanced budget. Such adjustment would be also politically satisfactory because it satisfies both the "tax the rich" and the "tax all" camps. The rate of such sales tax is secondary and purely scientific. An estimate will have to be made of the revenue resulting from increased income tax, from the increased estate tax revenue, from increased postal rates, and the remainder of the deficit will simply have to be covered by such sales tax by finding the proper rate.

4. SPECIAL REMARKS

The elimination of allowing security losses as a deduction is unjust as long as security gains are taxable.

Taxation of dividends by individual normal tax is double taxation and therefore unconstitutional and should be eliminated.

The estate tax should be levied on the estate value as of the time of filing the estate tax return and such provision should be made retroactive to the 1st of January, 1930.

No tariff issue should be raised in connection with the tax bill and necessary tariff adjustments should be made a matter of special legislation in form of amendments to the present tariff law.

Ceterum censeo: Manufacture and sale of beer with a heavy consumption tax attached to it would eliminate most of the above problems.

Respectfully submitted.

J. ANTHONY SCHWARZMANN.

STATEMENT OF LAURENCE ARNOLD TANZER, NEW YORK, N. Y., REPRESENTING THE MERCHANTS' ASSOCIATION OF NEW YORK

The CHAIRMAN. Mr. Tanzer, any brief that you have you have the privilege of putting it into the record, and you need not take the time to read it.

Mr. TANZER. Thank you. I shall be brief.

My name is Laurence Arnold Tanzer. I am chairman of the committee on taxation and public revenue of the Merchants' Association of New York.

The Merchants' Association of New York, which I have the honor to represent at this hearing as chairman of the committee on taxation and public revenue, is a chamber of commerce comprising about 6,000 business concerns, corporations, firms, individual business men and professional men doing business in New York City.

I have here a copy of the yearbook of the association which indicates the character and extent of its membership and which, with the permission of the committee, I shall file with the clerk.

Our association fully supports the proposition that the Budget must be balanced during this year ending June 30, 1933, and that whatever sacrifices it is necessary to bear, should be borne.

The conclusions which I desire briefly to present to your committee with reference to the pending revenue bill, have been carefully considered by the association's committee on taxation and public revenue and its board of directors, which is composed of some 25 prominent and leading business men and industrial and financial leaders of New York City.

The CHAIRMAN. It would be just as well to put it in the record without reading, if you desire.

Mr. TANZER. What I should like to do is to state briefly our views and then file this.

Senator SHORTRIDGE. You see, there are very few members of the committee present at this time; therefore, an oral statement made by you will not be heard by many Senators, but if you put the brief into the record, it can be read by the members of the committee.

Mr. TANZER. Well, I shall confine myself simply to a few of the salient features. I do not propose to read any lengthy statement.

Senator SHORTRIDGE. Just give the outstanding points.

Mr. TANZER. Yes.

Senator SHORTRIDGE. It will be carried into the record and the other members of the committee can read what you have to say.

Mr. TANZER. The most important feature to apply to any revenue measure is the amount of taxation to be raised by it. The Ways and Means Committee of the House proposes to meet the deficit of $1,231,000,000 entirely by taxes, with the exception of some $125,000,000 which it is proposed to meet by a reduction in expenditures.

Senator HARRISON. They have revised that to $200,000,000.

Mr. TANZER. I understand the Secretary of the Treasury the other day has increased it to $200,000,000. Even the figure of $200,000,000 is, as I view it, entirely too small and inadequate. It is a budget of $4,000,000,000.

The statement that is often made that the expenditures of the Federal Government have not recently increased is contrary to the facts.

I have here some figures which I should like to file with the committee. These figures have been prepared from the latest annual report of the Secretary of the Treasury, and show the fact that the total operating expenses of the major departments, commissions, and bureaus of the Federal Government have been increased by an average of 63 per cent in the period from 1927 to 1932. They have increased for the administration and operation of the administrative departments of the Government, an average of 63 per cent in those five years, the total amount of that increase being, during that period, $1,231,100,000. So that the Government, with a return merely to the figures of 1927 could take care, practically, of any deficit, with practically no additional taxation.

Senator BINGHAM. Just a minute. I want to ask a question.

Senator REED. And repeal the soldiers' bonus bill?

Mr. TANZER. I am talking about the running expenses of the departments. That does not include the payment to the veterans.

Senator BINGHAM. Oh, yes; it does. This total shows that there was expended in 1927 the amount of $391,500,000; in 1932 there was expended the sum of $784,400,000.

Mr. TANZER. Yes, sir; but that is the expense of maintenance of the bureau, Senator, and not the amount paid to veterans.

Senator REED. Oh, yes; it is.

Senator BINGHAM. Of course, it includes the payment for hospitalization, and care of the veterans, and so forth.

Senator SHORTRIDGE. What is the increase of 1932 over 1927?

Mr. TANZER. $1,231,100,000.

Senator BINGHAM. Do you mean to say that it cost $784,400,000 to administer the Veterans' Bureau?

Mr. TANZER. Yes, sir.

Senator BINGHAM. That is preposterous.

Senator HARRISON. Mr. Witness, those figures have been presented to this committee numerous times, and the committee is familiar with the growing expenditures. And the Government is trying every possible way to cut it down. And in that you are in accord with us?

Mr. TANZER. Yes, sir. We agree with the United States Chamber of Commerce that the administration and the Congress should have the courage to do what should be done to effect a reduction in the Federal expenditures by at least $500,000,000. And I need hardly say to this committee that every dollar saved in this manner is a much greater contribution to the ending of the depression than a dollar raised by additional taxes to balance the Budget.

Senator BINGHAM. Does your brief indicate how we can save $500,000,000, in detail?

Mr. TANZER. Senator, we have not the facilities that you have, but your Treasury has. We are not presuming to transgress the province of your committee or of the Government, but the business men of the country feel that every business has been called upon to make drastic retrenchment, and certainly taking that into consideration, and taking into consideration the increased purchasing power of the dollar, a decrease of only 5 per cent in the Budget is out of all proportion to the retrenchment business has had to make throughout the country.

Senator SHORTRIDGE. What you think is that the Federal Government should reduce its expenses?

Mr. TANZER. It should reduce its expenses.

Senator SHORTRIDGE. And to do that it would have to eliminate or do away with certain departments or activities.

Mr. TANZER. In the first place, make consolidations; in the second place, the elimination of certain activities, which should be done at this time. And then you have the elimination of unnecessary places, and the recognition of the increased purchasing power of the dollar.

Senator BINGHAM. I am very much interested in this, and we are trying to do it. What do you consider the unnecessary activities.

Mr. TANZER. That would take a great deal more time than I have.

Senator BINGHAM. Just mention four or five of them.

Mr. TANZER. I am not undertaking to go into those details. I have not the facilities you have got, and that is your job, Senator. All we can do is to give you our views of it.

Senator BINGHAN. Here is the item of the Veterans' Administration and the Veterans' Bureau, $784,400,000. That is the biggest item on the whole bill. How much do you propose to cut that?

Mr. TANZER. I am not in position, Senator, to go into that in detail with figures, because I have not been furnished with them.

Senator BINGHAM. You say you want us to go back to 1927?

Mr. TANZER. I did not say that. I said the 5 per cent saving that is proposed is inadequate.

Senator BINGHAM. Do you not know that the Senate has been cutting 10 per cent right along on the appropriation bills?

Mr. TANZER. I know, but many measures have been under discussion, and we will support any proper reduction.

Senator BINGHAM. No, but you criticize us for making a reduction of only 5 per cent. The House made a reduction, but we have made a further reduction, of 10 per cent.

Mr. TANZER. I am not criticizing anybody, Senator.

Senator HARRISON. You are expressing the hope that we may cut off more than $500,000,000?

Mr. TANZER. Yes, sir.

Senator HARRISON. These suggestions you are making you have in your brief?

Mr. TANZER. Yes, sir.

Senator HARRISON. We will all read it.

Mr. TANZER. Coming now to the question of an increase in taxes, the income tax rates, and the surtax rates, we believe not only should the exemptions be reduced as proposed, but some further reduction should be made to the level which prevailed in 1919; that is to say, an exemption of $1,000 for single persons; $2,000 for married persons, and $200 for each dependent. These proposals are important from the standpoint of securing additional revenue, but it is probably more important by reason of making more people directly conscious of the tax burden and because by broadening the base of this form of tax they tend to decrease the wide range of fluctuations in the yield of the income tax.

On the other hand, we are opposed to an increase in the corporation income tax as proposed by the House of Representatives. We believe that the corporation income tax is a bad form of tax. It is not only an unfair burden, but it is a discriminatory act, because it taxes at the rate of 13½ per cent all of the net profits, and we believe that is too great a percentage even in this emergency. And it taxes the holder of stock who has $500 invested just the same as it does the man who has hundreds of thousands of dollars invested.

And for the same reason we oppose the taxing of corporations making consolidated returns at the rate of 15 per cent on the net income. That tax would simply put a penalty upon the sound reasonable method of accounting which simplifies and facilitates administrative supervision and taxation.

We oppose, also, the laying of a normal tax on dividends from corporations for substantially the same reasons.

The CHAIRMAN. And those things are all in your brief?

Mr. TANZER. Yes, sir.

Senator HARRISON. You favor the estate tax as proposed in the House bill?

Mr. TANZER. The estate tax our association have not taken a definite stand on, and I am not prepared to say anything about it.

We are opposed to the provision which would eliminate the deduction of net losses over the succeeding one or two years. We think in the present state of business that change would have a serious effect upon many organizations and is not an equalizing tax, and the assistance which the business corporations need at this time was never more needed in order to allow business to get back on its feet.

The CHAIRMAN. Your time is up in one minute, Mr. Tanzer. You may file anything else that you have that is further than that.

Mr. TANZER. Let me close, then, by saying that we are opposed to the proposed import tax on oil, and to the laying of an import tax by a revenue bill.

Senator SHORTRIDGE. Well, if it yielded good revenue—we are looking for revenue, are we not?

Mr. TANZER. We are certainly looking for revenue, but we do not think there should be any impoistion of import taxes in a revenue bill. Import taxes have no place in a revenue bill.

Let me say, further, that we believe in a system of selective excise taxes, rather than in a general sales tax.

The CHAIRMAN. Your time has expired.

Mr. TANZER. I would like leave, Mr. Chairman, to file this brief.

The CHAIRMAN. It may be made a part of your remarks at this point.

(The brief filed by Mr. Tanzer is printed in the record in full, as follows:)

BRIEF OF MR. TANZER, REPRESENTING THE MERCHANTS' ASSOCIATION OF NEW YORK

The Merchants' Association of New York, which I have the honor to represent at this hearing, is a chamber of commerce comprising about 6,000 corporations, firms, individual business men and professional men doing business in New York City. They include most of the city's leading business enterprises. The conclusions which I am presenting to this committee were reached after this matter had been carefully studied by the association's committee on taxation and public revenue and by its board of directors, which is composed of some 25 prominent business, industrial and financial leaders.

We believe that before passing any revenue bill Congress should make reductions in Government expenditures which are strictly in line with the drastic retrenchment to which all private business has been forced. We do not believe that the taxation program, as set forth in the House bill, has given sufficient recognition to the possibilities of further retrenchment.

Federal expenditures have been growing at a rate which is scarcely appreciated. As proof of this statement I desire to submit to the members of the committee figures which have been prepared from the latest annual report of the Secretary of the Treasury, showing the astounding fact that the total operating expenses of the major departments, commissions, etc., of the Federal Government increased by 63 per cent in the period from 1927 to 1932. It will be noted that several of the Government departments showed an increase of 100 per cent or more.

[Figures to nearest hundred thousands]

	1927	1932	Amount of increase	Per cent increase
Total expenditures	$3,493,600,000	$4,482,200,000	$988,600,000	28
Less interest and sinking fund payments (statutory)	1,120,500,000	1,016,800,000	[1] 103,700,000	[1] 9
Less miscellaneous, not included in budgets of major departments	409,100,000	270,300,000	[1] 138,800,000	[1] 34
Balance	1,964,000,000	3,195,100,000	1,231,100,000	63
The foregoing balance was expended by major departments, commissions, etc., as follows:				
Department of Agriculture	156,300,000	333,500,000	177,200,000	113
Agricultural marketing fund—net (Farm Board)		155,000,000	155,000,000	
Post Office deficit	27,300,000	195,000,000	167,700,000	614
Treasury Department	151,600,000	312,900,000	161,300,000	106
War Department	360,800,000	483,700,000	122,900,000	34
Navy Department	318,900,000	378,900,000	60,000,000	19
Shipping Board	19,000,000	60,800,000	41,800,000	220
Department of Justice	24,800,000	53,800,000	29,000,000	117
Department of Commerce	30,900,000	54,700,000	23,800,000	77
Other independent offices and commissions	35,400,000	57,600,000	22,200,000	63

[1] Indicates decrease.

[Figures to nearest hundred thousands]

	1927	1932	Amount of increase	Per cent increase
The foregoing balance was expended by major departments, commissions, etc.—Contd.				
Legislative Establishment	$19,700,000	$32,400,000	$12,700,000	64
Department of Labor	9,900,000	14,100,000	4,200,000	42
Adjusted-service certificate fund	115,200,000	200,000,000	84,800,000	74
Veterans' Bureau (Veterans' Administration since 1930)	391,500,000	784,400,000	[2] 392,900,000	100
Interior Department	302,700,000	78,300,000	[1] [2] 224,400,000	[1] 74
Total of major departments, commissions, etc.	1,964,000,000	3,195,100,000	1,231,100,000	63

[1] Indicates decrease.
[2] Since the Bureau of Pensions was transferred from the Interior Department to the Veterans' Bureau in 1931, in order to make a fair comparison with 1927 it is necessary to combine the expenditures of the Interior Department and the Veterans' Bureau for each period, which results in an increase in expenditures in these 2 divisions of $168,500,000 for 1932 as compared with 1927.

It is not necessary for me to burden you with reading the details of these comparative figures. Suffice it to say that the actual amount of the increase was $1,231,000,000, or almost exactly the sum of the estimated deficit for the year 1933.

In other words, if the expenditures of these departments were returned merely to the 1927 level there would be no deficit for the forthcoming year and no necessity for additional taxation.

Federal expenditures should, therefore, be adjusted promptly to a much more modest scale than has prevailed in the past 15 years. The responsibility is upon both the administrative and the legislative branches. We believe that the business community will show no tolerance toward the evasion of this disagreeable task on such pretexts as invasion of the prerogatives of one branch of the Government by the other or lack of information upon such thoroughly explored subjects as departmental reorganization. The pruning knife should be vigorously applied to excessive costs in the operation of the Government and the Government should withdraw from activities which, however desirable they may be in themselves, are not indispensable to the performance of the essential functions of that Government.

Every dollar saved in this manner makes a much greater contribution to ending depression than a dollar raised by additional taxes to balance the Budget.

If the administration and Congress have the courage to do what can be done along these lines it should be feasible to effect the reduction of Federal expenditures by at least $500,000,000 as suggested by the committee on Federal expenditures of the Chamber of Commerce of the United States.

INCREASED TAXATION

Our association believes that the interests of business and of the country will be best served if the Federal Budget is balanced by June 30, 1933. We recognize that if this is to be accomplished, even with all reasonable reduction in expenditures, a substantial sum will still have to be raised by additional taxation. It is reasonable and proper that a part of this amount should be raised by increasing the normal and surtaxr ates on individual incomes as proposed by the bill adopted by the House of Representatives.

The association also advocates a further decrease in the exemptions from personal income taxes to the level which prevailed in 1919, at which time an exemption of $1,000 was allowed for single people, $2,000 for married people and $200 for each dependent. These proposals are important from the standpoint of increased revenue, but probably more important by reason of making more people directly conscious of the tax burden and because by broadening the base of this form of tax they tend to decrease the wide range of fluctuations in the yield of the income tax.

We oppose the increases in the corporation income tax proposed by the House of Representatives. This form of taxation is the least defensible in the whole present scheme of Federal taxation. In effect it merely decreases the amount which can be distributed in dividends and which is taxed in the hands of the

recipients, by taxing at an unjustifiably higher rate the net income of corporate business as distinguished from all other business. This tax furthermore falls unfairly upon individual stockholders because it falls at the same rate upon stockholders of large means and those of small means. An increase of 8 per cent in the present corporation tax to 13½ per cent of all net profits is too great even in the present emergency.

The association is convinced that there is absolutely no justification for taxing corporations making consolidated returns at the rate of 15 per cent of net income. Such a tax would simply put penalty upon a sound reasonable method of accounting which, if anything, facilitates and simplifies the administrative supervision and taxation.

The corporation income tax is unsound in principle and we oppose any increase in the rate of that tax at the present time.

The proposed withdrawal of the exemption of dividends on corporate stock from normal income tax is one of the most unsound and indefensible provisions in the bill adopted by the House of Representatives. As the measure stands it is proposed to take from 13½ to 15 per cent of net corporation income and then to tax the remainder at from 2 to 7 per cent additional. Such a rate is not only severe in itself, but in direct violation of the basis upon which the corporation income tax was fixed in 1913, and even if the corporation income tax were not increased would still be a clear case of double taxation.

The association opposes the change in the present law, which would eliminate the provision for the deduction of net losses over the succeeding one or two years. In the present state of business the proposed change would have a very serious effect upon many organizations and would probably necessitate liquidation with further depression of prices in order to obtain funds for payment of taxes.

The proposed change in the law covering capital gains and losses does little if anything to mitigate the pernicious effects of this unsound form of taxation and should be opposed. Capital gains are not properly classifiable as income. The policy of treating them as such materially encouraged the extremes of inflation leading up to the collapse in 1929, and the corresponding treatment of capital losses has contributed very heavily to the current deficit. The sooner this form of taxation is ended the better for the equilibrium of the business community and the stability of Government revenue.

The proposed changes in the law which would permit the revaluation of depreciated estates at the election of the executor are highly desirable. Such a change is merely equitable in view of the serious shrinkage which has occurred in many cases in the past three or four years.

The proposed tax on the transfer of stocks is so heavy and badly conceived that it will defeat its own purpose by bringing in far less revenue than is estimated, and at the same time will seriously interfere with long-established methods of obtaining capital for the prosecution of business enterprises and maintaining their credit. The proposed tax would unquestionably have a tendency to curtail most seriously transactions in all securities, and in the case of some stocks of small companies would be absolutely confiscatory. This tax is ill-conceived, punitive, and would be distinctly less productive than a much lighter tax in better form.

The proposed tax of 1 cent per gallon on imports of petroleum and petroleum products should be eliminated. It is prohibitive in amount, will bring in no revenue and, while its imposition would to some extent benefit domestic petroleum producers, it would at the same time and to a far greater extent affect adversely our merchant marine and domestic users of fuel oil, asphalt, and other derived products, particularly along the Atlantic coast. It would also reverse the sound policy of conservation of indispensable natural resources by development of foreign sources of supply under American control. This proposal is furthermore essentially a tariff measure and, as such, has no proper place in an internal revenue bill.

This latter objection also applies with equal force to the proposed tax on imported coal. The tax on petroleum imports, the tax on imported coal and any other tariff proposals should be eliminated from the pending bill.

Let me conclude by saying that the association supports, in principle, the use of selective excise taxes as the most effective means of raising such revenue as may be needed in addition to that which will be provided from the other taxes in the pending bill. Such excise taxes will have the advantages of being definitely ascertainable, simple of administration and infinitely less harassing to business and industry as a whole than the manufacturers' sales tax, which was proposed by the Committee on Ways and Means.

STATEMENT OF WILLIAM H. MEREDITH, DETROIT, MICH.

Senator REED (presiding). Just state your name and address to the reporter, Mr. Meredith.

Mr. MEREDITH. William H. Meredith, Detroit, Mich.

I would like to speak for a moment or two on section 23 of the bill. I understood there was to be another speaker yesterday and I came down to hear him. So I did not come prepared to make a very elaborate talk on the subject.

Pages 29 to 31, particularly sections R to V.

Senator REED. That will be page 32 in our print. We have had a committee print made that shows the text of the old bill, too.

Mr. MEREDITH. Oh, I see. Pardon me.

Senator REED. That is the limitation of the stocks lost to the amount of the gains.

Mr. MEREDITH. Yes. This is the first time since we have had an income-tax law that losses have been eliminated or been restricted to the gains from similar transactions in the same year. Naturally, I favor the continuation of the provision in the 1928 act, with one exception: I do not think that the wash-sale provision limited to a month is the cause of a lot of avoidance of tax.

Senator REED. Are you a lawyer?

Mr. MEREDITH. No; I am a tax representative.

Senator REED. You are a tax specialist?

Mr. MEREDITH. I would not say specialist. I represent taxpayers.

Senator CONNALLY. You are the man we need here before the committee, then, if you represent the taxpayers.

Mr. MEREDITH. Well, I trust that I can do a little for them to-day.

Senator REED. All right; go ahead.

Mr. MEREDITH. I would suggest that the wash-sale provision be extended to a year, coupled with it an affidavit that they had not repurchased, either directly or indirectly, the securities, the same securities of the same company.

Senator REED. Mr. Meredith, you have had a lot of experience in tax returns. Do you know how common it is for a man to sell Union Pacific, let us say, at a loss and buy Atchison the same day?

Mr. MEREDITH. Yes, sir.

Senator REED. Feeling confident that the two will rise and fall together.

Mr. MEREDITH. About the same; yes.

Senator REED. Or if he does not do that, he sells to his wife or to his secretary. It is almost impossible, is it not, in actual practice to discover a wash sale?

Mr. MEREDITH. Generally so; yes.

Senator REED. Then are we not just pecking at the surface of things when we allow that kind of security losses to be deducted from one's income?

Mr. MEREDITH. Is there any difference in selling General Motors stock, we will say, and buying a piece of real estate with the proceeds? In other words, it is a realized loss if he sells at a loss.

Senator REED. If he really sells, yes, but if he has an understanding secretly with the purchaser that the security will be resold to him when the period has expired, that is not an actual realized loss.

Mr. MEREDITH. That is a tax evasion, Senator. It is not tax avoidance, but an evasion, and that is why I think that you might properly have every taxpayer that claims a loss sign a specific affidavit to the effect that he did not sell with an option to rebuy.

Senator REED. The option is never expressed if one sells to one's wife.

Mr. MEREDITH. Well, there are two separate taxpayers if they file separate returns.

Senator REED. What I am driving at is that no matter how we safeguard it here is a method by which a capitalist can always escape a fair share of taxation. Now, ought we to continue that?

Mr. MEREDITH. You can continue it by eliminating the separate returns or a provision in the filing of separate returns that it would be considered a wash sale if the husband sold and the wife bought.

Senator REED. As a practical matter the field agents do not discover those cases, though; isn't that so?

Mr. MEREDITH. There may be a good many cases of it; yes.

Senator CONNALLY. But could not possibly the wife or a man's brother or his uncle do the same thing? You could not avoid that by just saying to his wife. He could have any fake purchaser.

Mr. MEREDITH. I would not go so far, Senator, as to say that if a wife has got a separate estate from her husband, got separate money, she is a fake purchaser.

Senator CONNALLY. Well, it would be under these circumstances Senator Reed detailed, in order to take a loss he sells to the wife.

Senator REED. The Supreme Court of the United States has decided that it is not within our power to require husband and wife to file a joint return.

Mr. MEREDITH. That is true, in the Wisconsin case just recently. But that was predicated on saying that her income was his income and must be included in his return.

Senator REED. I have heard of a good many cases where fake sales were made by a husband to his wife; the field agent makes the examination and never discovers it or criticizes it. It seems to me it is our duty if we can to put an end to that kind of tax evasion.

Mr. MEREDITH. Have you done so—or at least has the house done so—in the present bill? I think not.

Senator REED. I do not think so.

Mr. MEREDITH. Here is an individual who has a hundred thousand dollars income from dividends, interest, miscellaneous income. He has a hundred thousand gain and he can eliminate the tax on that gain by making a wash sale. You are penalizing the party who has nothing but losses to take, has nothing that he can sell at a gain, and those are the people who in a great many cases have paid terrific taxes.

I am not here representing any particular taxpayer, but I have a client who paid a tax of $650,000 several years ago. Now, he did not bury his money in the ground after realizing that profit. He has invested it and taken a terrific shrinkage. The Government has had its tax on the rise. Now they will deny him the right to any loss, and it is quite possible, though not probable in his particular case, that he will end up with very little and that the Government will probably have more out of it than he has had, and it was a lifetime work in building up his institution.

Senator REED. I have not any use for the provisions in the tax bill. I think they are entirely unjust. They bear heavily on a person in misfortune, and they help the man who has had moderately good luck.

Mr. MEREDITH. That is true.

Senator REED. So that we are not committed to that at all. But would it not be better for us to follow the example of the British and exclude capital gains and losses entirely from the calculation of income?

Mr. MEREDITH. I agree with you, Senator.

Senator REED. And would the Government not make money in the long run by doing it?

Mr. MEREDITH. I am not prepared to say that. My personal experience extending over 10 years has been that there have been more gains than losses. Now, that is just my personal experience with numerous large clients in Detroit and vicinity.

Senator REED. Detroit has been going uphill during that time until recently.

Mr. MEREDITH. Till recently. Now we are the other way around.

I have one suggestion that I would like the committee to consider. Apparently in the House bill they have attempted to segregate income, income from salaries and rents, interest, and so forth, and income from securities. That is to say, the losses are limited to the gains from securities.

Now I make an investment in a security. I hope that I am going to gain some profit from the rise, but in many cases I make it for dividend purposes, and I buy a share of the surplus of the corporation under normal times in my price that I pay for the security. If I buy a stock to-day at a hundred and next week it declares a special dividend of $20, in reality I have got $20 return of capital, but under the present law that is classed as dividends.

Next year I sell that stock at $80. I am denied the loss of $20, though I have been taxed on the $20 dividends, unless I am fortunate enough to have a profit.

So my idea is that if you are going to segregate income you should class in with securities the dividends and allow the deductions to be taken from the dividends from securities, plus the gains from securities, and allow the losses to be taken. I think that is fair. I know of numerous instances of men that are practically bankrupt who will have large taxes under this provision, and it is possible that some of those men that I know will be wiped right out this year, can not help themselves. They owe too much to the banks, and so forth.

That is the first suggestion I would make, and I think that we ought to go at least that far with it.

There is just one instance in Detroit; the Eureka Vacuum Cleaner Co.—stock selling around $6—are declaring an ordinary dividend of $3, which will be taxed, which will immediately cut off half the value of that stock, and yet the man can not take the loss when he sells unless he has these gains. That is only one instance. I do not want to burden you with a lot of them.

Senator REED. In other words, you think that all gains realized from the ownership of securities ought at least to be offset against all losses?

Mr. MEREDITH. Yes, sir. As you said a few minutes ago, you are not reaching the speculator; you are reaching the investor. Because the speculator is in and out and he has not got in many cases very much ordinary income. So it is confined to that class.

I had a case back in 1929 of an individual who had several millions at the beginning of the year and had considerable income. He was unfortunate. He was like a babe in the woods when he got into the stock game and he ended up bankrupt. Under this law he would have had a tax of a large amount. And yet he has not got a penny in the world except that friends of his took a mortgage on his house and are not foreclosing on him. But he is bankrupt. He can not pay his debts.

I have not spoken of bonds. I am assuming that the bonds may be eliminated, regardless of whether this provision stands or not. I noticed that the Secretary of the Treasury has recommended that bonds be excluded.

If they are not, I just want to say this about it: The provision now provides that you can not take a loss on bonds issued by corporations except against gains. You can take a loss on bonds issued by individuals. Now, a great many real-estate bonds are issued by individuals on apartment houses which are owned by individuals.

Now, if I make an investment in a bond of an apartment house which is issued by a corporation and I lose, I should not be barred from taking that loss if you make a similar investment in the apartment next door which is issued by an individual.

Furthermore, you allow the losses on Government and municipal bonds. I refer more to the municipal bonds. Bonds are sold in normal times on a yield basis. So that a bond that is issued at 4½ or 5 per cent rate of interest will sell at a premium if money is at 4 per cent. So the man that pays the premium is actually making a 4 per cent investment, but he is getting 4½ annual return and takes his loss at the time the bonds were disposed of. You charge him nothing on the interest that the receives, it being tax-exempt, and then you allow him the loss which he knew that he was going to take when he bought it and he did not figure it at a loss; he just figured it at a lower rate of interest. He is favored, because he gets his loss.

So if I invest $100,000 in $85,000 worth of municipal bonds—that is probably a high ratio—but I get the interest, whatever it may be, during the life of that bond, tax-exempt, and then I get my $15,000 exempt, the loss, and the gain from ordinary income. I am not restricted to the gains from securities.

Senator REED. I think that has been so ever since we have had an income-tax law.

Mr. MEREDITH. That is true, Senator. I am not complaining about that, but I am complaining about the intent.

Senator REED. It is wholly illogical, of course.

Mr. MEREDITH. Yes. We are still taxing gains under the present bill, and I think that probably it was answered when you spoke of the British system. That would eliminate it. From a practical standpoint, though, I think that there would be some administrative difficulties as to where to draw the line.

Senator REED. Could you not draw the line where we draw it to-day, an asset held two years or more?

Mr. MEREDITH. In normal times that might be fair, but it probably would work a hardship in times like this.

Senator REED. It would prevent a lot of people from charging off losses.

Mr. MEREDITH. That is true.

Senator REED. Probably double the yield of your income tax next year.

Mr. MEREDITH. General Motors sold at 20, around 20, the first of the year, and I thought it was a pretty good buy at around 20 as an investment, not for speculation, and I paid cash for it. I did not have to borrow on it. But supposing I had brorowed $10 a share. I would have considered that a very conservative borrowing, at the bank: I am not speaking of a margin account. This week, unless I could have covered, I would probably have been sold out entirely. The bank probably would have sold it out. So I would have probably been forced to take a loss, and under your proposal it would have been disallowed.

Senator REED. No, no: because you had held it less than two years.

Mr. MEREDITH. Oh, that is right. I see now: yes. So there are many conditions that would warrant the allowance of the loss in some way.

Senator REED. The Treasury always opposes such a change in times of high prices, because they say we will be foregoing a lot of tax that we could get.

Mr. MEREDITH. Surely.

Senator REED. But now here at the bottom of the slump, certainly if we are ever going to change the system, now is the time to do it.

Mr. MEREDITH. No recognition is given to this fact, Senator, that if I buy stock at a hundred and am forced to sell at ten, and I think that most of the selling in these times is forced selling. When a man has bought at a hundred and selling at ten he is not selling for a nickel, because a good many of them have not got income to sell. They are forced out. Somebody buys that stock at ten, and unless we are admitting that the country is never coming back, that $10 stock is coming up and there is going to be a tax on it's gain, and so you are taxing the uprise always and only allowing losses in certain cases coming up.

Senator REED. That is what the House bill does.

Mr. MEREDITH. Yes.

Senator REED. That is not my suggestion.

Mr. MEREDITH. No. Of course, I am talking to the House bill. So it is quite possible, if you could trace a given stock through, that you could find taxes on all the uprises and no losses to compensate. I admit that you have a very difficult feature of the bill here and a very hard one to administer, but I do not think we should discriminate as the proposed bill does do.

Senator REED. I think we have your point, Mr. Meredith.

Mr. MEREDITH. There is just one other thought. Of course, if there is no relief in that way, losses should be allowed to be carried forward from securities. In other words, if a man has a $50,000 loss this year that he can not take, it should go forward and be applied against his capital gain, if we are going to segregate those cases.

Thank you very much.

LETTER AND MEMORANDUM OF THE AMERICAN BANKERS ASSOCIATION

THE AMERICAN BANKERS ASSOCIATION,
Washington, D. C., April 28, 1932.

Hon. REED SMOOT,
Chairman Finance Committee, United States Senate, Washington, D. C.

MY DEAR SENATOR SMOOT: Referring to the permission granted by your good self for the American Bankers Association to file a memorandum relative to section 23 with particular reference to subsections (r) and (s) of H. R. 10236 on which hearings are now being held, I am herewith transmitting to you on behalf of the association a memorandum relative to this section and subsections.

It is our understanding that you will be so kind as to have this memorandum made a part of the record of these hearings.

With assurances of our appreciation of your courtesy, I remain

Yours very sincerely,

ROBERT V. FLEMING,
Chairman Committee on Federal Legislation.

MEMORANDUM SUBMITTED ON BEHALF OF AMERICAN BANKERS ASSOCIATION AND INVESTMENT BANKERS ASSOCIATION OF AMERICA

Section 23 (r) of H. R. 10236 provides as follows:

"(r) *Limitation on stock losses.*—Losses from sales or exchanges of stocks and bonds (as defined in subsection (v) of this section) which are not capital assets (as defined in section 101) shall be allowed only to the extent of the gains from such sales or exchanges. This subsection shall not apply to a dealer in securities in respect of transactions in the ordinary course of his business with his customers."

This memorandum does not attempt to deal with the question whether the proposed limitation on the deductibility of losses is economically sound or constitutional in its general application.

But if some limitation of the deduction of losses is to be imposed, then it is respectfully submitted that the last sentence of this subsection should be changed to read as follows:

"This subsection and subsection (s) shall not apply to stocks and bonds employed in the banking business, nor to a dealer in securities in respect of transactions in the ordinary course of his business."

Section 23 (r) soundly recognizes one exception to this limitation, viz, losses on sales by dealers in securities to their customers. It is submitted that principle, fairness, and good business practice require the extension of this exception to include (1) stocks and bonds employed in the banking business and (2) all securities sold by dealers in the regular course of their business.

1. The provision should not apply to stocks or bonds employed in the banking business.

In his statement to this committee on April 6 Secretary Mills, referring to the above provision limiting the right to deduct losses on transactions in securities to the offsetting of gains from similar transactions, said:

"I think, however, that banks should be excepted. Banks, as a part of their regular business, purchase securities for investment purposes, which become an important element in their necessary secondary reserve. Speculation is not involved, nor is the question of protecting the revenue from improper deductions. It is my opinion that, particularly in the case of banks, a tax upon the gains and a denial of the losses is not necessary and can not be justified."

The report of the Ways and Means Committee, accompanying H. R. 10236, recognizes that banking institutions which underwrite securities and sell them to other banks or to their customers should be allowed to deduct their losses upon such sales without limitation. We believe that banking funds invested in securities in the regular course of the banking business should be entitled to at least the same treatment for income-tax purposes.

All banks are subject to fluctuations in their resources, due to the fact that additional deposits and withdrawals of deposits never exactly balance, and that deposits tend to rise or fall in response to general conditions of credit. Banks must necessarily employ their resources, as a part of their regular business, with a view to obtaining a reasonable return and, at the same tme, maintaining available assets to meet the swings in deposits. For this purpose banks necessarily invest a part of their resources in securities having a ready market for either purchase or sale, and it is inevitable that a bank will make losses as well as profits in the normal handling of its investments. Such losses are an unavoidable incident of the banking business, and are a proper deduction from current income. Nor are there usually gains in the same year against which such losses may be offset, since in a given year the trend is usually either up or down.

There is a clear analogy between securities employed in the banking business and the securities in which the assets of insurance companies are invested. The taxable income of insurance companies (except mutual and life insurance companies, which latter are not taxed on capital profits) is ascertained under the special provisions of section 204 and they are not subject to the restriction of stock and bond losses provided by the proposed section 23 (r). Under section 204 an insurance company, which in the course of its business sells securities, in which it has invested its premiums, is properly permitted to deduct such loss from its income. A banking institution, selling as a part of its regular business securities in which it has invested its banking funds, should clearly be permitted to deduct the precisely similar losses from its income.

2. The excepted transactions by a dealer in securities should not be confined to transactions "with his customers."

The primary source of income of a dealer in securities is from the purchase and resale of stocks and bonds. Ordinarily these securities are sold to customers of such dealer and such transactions, in the present language of the draft, resulting in a loss, would be allowable deductions against other income of such dealer. It not unfrequently happens, however, that a bona fide dealer in securities, who has acquired stocks and bonds for the purpose of resale to his customers, is unable, by reason of unfavorable change in market levels or other circumstances, to dispose of them through the usual channels of retail distribution. Under these circumstances the dealer customarily would dispose of such securities on one of the stock exchanges, if they were listed, or, if not, to other dealers or traders. Although the purchasers in such cases might not, strictly speaking, be described as the "customers" of the dealer, the loss incurred in such a sale is obviously a bona fide loss in the course of the dealer's principal business, just as is the loss incurred by a manufacturer or dealer in commodities where the latter is compelled to sell articles outside the usual channels.

It is therefore submitted that the words "with his customers" should be omitted from the provision. Since the deductible losses under our proposed amendment would still be confined to those incurred in the "ordinary course" of the dealer's business, a dealer who, aside from his business as a merchant of securities, speculated on his own account, would not be able to deduct losses so incurred, since they would not be suffered in the ordinary course of his business as a dealer.

LETTER FROM PARKE A. GALLEHER

WASHINGTON, D. C., *April 18, 1932.*

Hon. REED SMOOT,
Chairman Committee on Finance,
United States Senate, Washington, D. C.

Subject: H. R. 10236, proposed amendment of section 23, paragraphs (r), (s), (t), (u), and (v).

DEAR SIR: In behalf of the executors of various estates now in the process of administration, I desire to respectfully invite the attention of the Committee on Finance to certain sections of the bill H. R. 10236, known as the revenue act of 1932, which provisions if enacted into law will have an effect entirely beyond the purpose and intent of the proposers of the legislation.

Section 23, paragraphs (r), (s), (t), (u), and (v), of this bill provide under the heading "Limitation on stock losses" that losses from sales of stocks and bonds shall be allowed as deductions from gross income only to the extent of the gains from such sales.

Executors and administrators are required by the law governing the administration of estates to pay the debts of the decedent and to make a distribution either to the beneficiaries or to the heirs at law and next of kin. In many cases the performance of these duties is impossible without a sale of some or all of the assests of the estate. The payment of the Federal estate tax, the payment of the State inheritance taxes and the payment of general debts of the estate are essential steps in the process of administration and executors and administrators have no discretion in the matter and no control over the question as to whether compulsory sales of estate property may result in gain or loss to the estate. Under the conditions existing at this time there are very few instances in which executors and administrators can sell stocks and bonds at anything other than a loss.

There is, of course, no criticism of the purpose of the provisions of the bill or any desire to justify practices which may in the past have resulted in an unwarranted reduction in the public revenues. It is believed, however, that the problem with which executors and administrators are confronted in the administration of estates is not the situation which the statute is designed to correct. The Committee on Ways and Means in its report to the House of Representatives gave the following explanation of the purpose of these provisions of the bill:

"Many taxpayers have been completely or partially eliminating from tax their income from salaries, dividends, rents, etc., by deducting therefrom losses sustained in the stock and bond markets, with serious effect upon the revenue. Your committee is of the opinion that some limitation ought to be placed on the allowance of such losses." (H. R. Report No. 708, pp. 12 and 13.)

Executors and administrators compelled to sell in order to pay taxes and debts of the estate are not taxpayers who sell deliberately of their own free will in order to offset salaries, dividends, rents, and other taxable income. These fiduciaries can not buy and sell securities for either investment or speculation. They can only sell and if such a disposition is made necessary in order that debts of the estate may be paid, it can not be fairly said that the purpose of the sale is to offset income which otherwise would be taxable. It is suggested therefore that the following sentence be added as an amendment to sach of the paragraphs of the bill referred to (sec. 23, pars. (r), (s), (t), (u) and (v)):

"This subsection shall not apply to sales by executors and administrators in the course of the administration of an estate."

These amendments will, of course, not affect in any way the application of the provisions of the bill to the situations which they obviously were designed to correct.

Very truly yours,

P. A. GALLEHER.

LETTER FROM ARTHUR E. SUFFERN

NEW YORK UNIVERSITY,
New York, February 3, 1932.

Hon. REED SMOOT,
Senate Office Building, Washington, D. C.

DEAR SENATOR SMOOT: While you are changing the income tax law why not revise the exemption provision as applied to married men separated from their wives? They have long been subjected to an unfairness which I am surprised has not been eliminated before. Perhaps I can make my point clear by citing a case and raising a few queries about it.

For example, a married man earning $5,000 a year and living separately from his wife is obligated by a separation contract to pay the wife $1,800 a year and carry insurance in her favor.

Queries: Why should the man be allowed an exemption of only $1,500 in view of the fact that he supplies all the income for both parties and that it costs more for both parties to live separately than it would if they lived together? In view of the fact that when husband and wife are living together and file separate returns, the exemption of $3,500 may be taken by either or divided between them, why should not a husband living separately from his wife and supplying all of the income for the support of both parties be allowed to take the exemption of $3,500? If the arrangement which I have suggested in the last query is not feasible, why should not the husband living separately from his wife be allowed, when arriving at his net income, a deduction of a portion, at least, of the amount that he pays his wife? This would seem only fair as putting married men separated from their

wives on a parity with single men, in accordance with the principle of taxation in proportion to ability to pay. Why should the total exemption when the parties live separately and make separate returns be $3,000 instead of $3,500?

Since the changes involved in these queries which I have raised would not cause the Government much loss of income it would seem that they could well be made. It is well recognized that petty inequities in the law and its administration are the sources of much digruntlement and invite taxpayers to use every method possible to evade the tax. In perfecting the income tax system every effort should be made to convince taxpayers that it is the fairest possible. Doubtless the Government would then gain much more from the diminution of evasion than it would lose by being as liberal as possible in helping taxpayers to meet the exigencies of life which they face.

Hoping that these suggestions will receive careful consideration, I remain,

Yours sincerely,

ARTHUR E. SUFFERN.

STATEMENT OF GOVERNOR PAUL M. PEARSON, GOVERNOR OF THE VIRGIN ISLANDS

Senator SHORTRIDGE. You may proceed, Governor.

Governor PEARSON. I appear, gentlemen, to request that for the Virgin Islands the exemption of the income tax shall be reduced from those now appearing in the present proposed bill; that those exemptions shall be $600 for an unmarried man, and $1,200 for a married man, or heads of families.

The reasons for this proposal are that in the Virgin Islands the standard of living is considerably lower than in the United States and so that it appears to be an equitable law that this deduction shall be at the rate proposed.

Now, before the United States took charge of the Virgin Islands, they had an income tax law which made an exemption at $900 and $1,800.

Senator BINGHAM. Governor, before you proceed, may I inquire whether the receipts from income taxes levied on residents of the Virgin Islands go into the Federal Treasury or into the treasury of the Virgin Islands?

Governor PEARSON. They go into the treasury of the Virgin Islands, and the income tax which was levied before brought in about 20 per cent of the entire revenue of the Government. And the present law, which was made after the Virgin Islands were taken by the United States, with the same exemptions that we have in the United States, has gradually decreased the revenue for the Virgin Islands, so it seems fair that an exception be made and in the bill which you are now considering the proposal that we have made shall be granted. This will increase the number of income taxpayers by about 200 per cent. At present there are a large number of young men in the Virgin Islands who pay nothing toward the Government expenses, as they have no property, and their income tax exemption allows them to go without paying anything toward the support of the Government.

Senator CONNALLY. What other kinds of taxes have you in the Virgin Islands—property taxes?

Governor PEARSON. Property taxes and the customs taxes. We have a tariff on goods from other countries.

Senator CONNALLY. Who levies those; your territorial authorities?

Governor PEARSON. Yes, sir.

Senator CONNALLY. A council, or something of that kind?

Governor PEARSON. Yes; that is called the municipal council.

Senator CONNALLY. Have they got power to levy an income tax of their own?

Governor PEARSON. They dropped that, as the law provided that income taxes applicable to the United States should also be applicable to the Virgin Islands.

Senator BINGHAM. Was that at the time of the passage of the organic act?

Governor PEARSON. No; it was about three years later, Senator.

Senator BINGHAM. Was it a part of the revenue bill?

Governor PEARSON. It was a part of the revenue bill of 1920, as I recall, that was made applicable to the Virgin Islands, and they reduced our exemptions from $900 to $1,500.

Senator BINGHAM. How much do you figure that your proposal would increase the receipts of the treasury of the Virgin Islands?

Governor PEARSON. Of course, I can only guess at that, but I think about $20,000.

Senator REED. Are there any other possessions of the United States in which the American income tax law applies?

Governor PEARSON. I do not know, Senator.

Senator REED. Of course, it does in the Territories like Hawaii, and Alaska, but it does not in Porto Rico, does it?

Governor PEARSON. No; they make their own, but the legislature, now in session, is asking for a reduction to $800. That is below what is their present exemption.

Senator REED. What is your present income from the income tax?

Governor PEARSON. Last year it was $16,000 from 101 persons. But this will increase our income by 179 persons who are on the Government pay roll alone, and I do not know form how many others.

Senator SHORTRIDGE. Well, in point of dollars, how much?

Governor PEARSON. I can only guess at that, Senator.

Senator SHORTRIDGE. Approximately $20,000, you said?

Governor PEARSON. It would more than double our present income from that source.

Senator SHORTRIDGE. Is there anything further, Governor, you wish to add?

Governor PEARSON. That is all.

Senator SHORTRIDGE. Thank you.

STATEMENT OF FRANK W. MONDELL, WASHINGTON, D. C.

Mr. MONDELL. Mr. Chairman and Senators, while all the new taxes proposed in the House bill are in excess of a normal peace-time tax burden, and a number of the levies are particularly questionable, it is my opinion that none is so objectionable and so subject to criticism, from the standpoint of an equitable spread of tax burdens, and of ability to pay, as the provisions of section 25 which, for the years 1932 and 1933, assesses the normal income tax on corporate dividends.

It is proper to consider the conditions under which this tax was adopted. The House Committee on Ways and Means had submitted and the House had adopted a program which, it was understood, would practically, if not entirely, balance the Budget, taking into consideration certain anticipated economies. The Treasury was not convinced that economies could be effected to the extent estimated.

Furthermore, its estimate as to the income from certain proposed levies was less than that of the committee, and from the Treasury viewpoint additional revenue was necessary. In this situation, between adjournment and reconvening the House committee selected, proposed, and the House on reassembling accepted—reluctantly, no doubt—this further suggestion. The effect of the tax could not well have been, under the circumstances, carefully considered.

Senator HARRISON. May I ask you, Mr. Mondell, if, when the House had finished consideration of the bill the last time, and the statement had emanated from the Treasury that it was not balanced, that they lacked some $100,000,000, or $90,000,000 of balancing the Budget, that was on the estimate of the Treasury Department that there could only be economies worked out to the amount of $118,000,000. Mr. Mills yesterday testified that he believed without question now that there could be economies of $200,000,000 effected in savings. If he had made the statement at that time that we would effect savings of $200,000,000, is it your opinion that this tax on normal stock dividends would have been put on then?

Mr. MONDELL. My understanding of the situation was that it would not.

Senator HARRISON. That was one of the last things put on in order to balance the Budget.

Mr. MONDELL. Yes; in the hope that no one anywhere at any time, under any circumstances, would say that the Budget had not been abundantly balanced, and some more.

Senator REED. I understood Mr. Mills to say yesterday that those economies could be made. I did not understand him to say they would be.

Mr. MONDELL. That is the question for you gentlemen to decide.

It will be remembered that our division of the income tax into normal and surtaxes was adopted because of the corporation tax, and the income subject to the corporation tax was exempt from the normal tax, with a view of somewhat equalizing the burdens as between corporation and individual incomes. After it was all done, with a corporate tax as high as 12 per cent, there was a pronounced inequality of tax on income from a corporation as compared with that from individual or partnership activities. It is now proposed to tremendously increase and accentuate this inequality.

This proposed tax is inequitable and excessive, even as an emergency tax, from whatever angle one may view it:

First. It is double taxation;

Second. It is particularly burdensome on a taxpayer of small or intermediate income;

Third. It penalizes incomes from corporate sources as compared with individual or partnership incomes by 13½ to 15 per cent; if the corporation tax proposed by the House is adopted;

Fourth. It tempts the piling up of corporation reserves, thus withholding earnings from circulation; and

Fifth. It further hastens the flight of capital from industry to the snug harbor of tax-free securities.

That it is double taxation there can be no question, for the incomes thus proposed to be taxed are already bearing a tax burden greater than that of incomes from other sources. I have said it is particularly burdensome on a taxpayer of small or intermediate incomes. Let us see how it works.

Assuming that the normal and surtax rates were to remain as written in the House bill, the effect of the provision to which I have referred upon an income of $100,000, wholly from dividends, would be to increase the tax about 33 per cent. On the other hand, the tax on an income of $20,000, wholly from dividends, would be multiplied four times, and on an income of $10,000, wholly from dividends, would be multiplied ten times.

It would be difficult to figure out a tax proposition more fantastically inequitable in its results. I speak rather emphatically in regard to the matter, notwithstanding my high regard for the House and my belief that the House generally acts with excellent judgment. Conditions were such, as has been stated, that this tax was brought in at the eleventh hour, and never had consideration.

Mr. Chairman, the provisions of section 23, (r), (s), (t), (u), and (v), limiting stock losses to an amount equal to gains, were first suggested at a time when retoractive application of the income tax provisions of the bill to cover the calendar year 1931 was in contemplation. Under the conditions that existed during that year, and in view of the then existing provisions of the law, there was a great temptation, from the standpoint of revenue, to include such provisions, but on the abandonment of the idea of making the act retoractive, and with the adoption of various other administrative provisions in this act—including the provision with regard to wash sales—it occurs to me that this limitation is by no means justified at this time.

It is difficult at any time to justify the change in the rules of the game unless they can be defended from the standpoint of equity to all concerned. Taxpayers have been paying taxes on their gains at a time when gains were the rule. It is now proposed to limit credit for losses at a time when losses are the rule. In view of the great need of revenue, the proposed action is no doubt held to be justified, perhaps without full realization of the fact that its burdens will be upon those who have most severely suffered from the depression, while the benefits of the recognition of losses to the extent of gains will be enjoyed, in the main, or almost wholly, by the speculative trader.

I think it goes without saying that so far as the average citizen security holder is concerned, he has not been selling his securities in the present market except under pressure, and at very great loss and sacrifice. The same average citizen security holder is not likely to realize any gains from the sales of securities during 1931, at least, and perhaps not 1932. His experience in connection with securities will be wholly confined to losses unless belated prosperity advances much more rapidly than is now anticipated. On the other hand, the speculative trader will undoubtedly make some gains, and if conditions improve his gains are likely to be at least equal to his losses, and therefore he will benefit.

As an instrumentality for considerably increasing the revenue, this provision is about two years too late. As a means of adding burdens to those who have already suffered grievously, it may be said to be entirely opportune. I think it is one of the provisions of the bill which are scarcely justified from the standpoint of fair play. It is true, it sounds very well to say that we credit losses to the extent of gains, but unfortunately those who have most severely suffered from losses are not likely to have any gains. It would be much fairer and

more equitable, if the law must be changed in this regard, to eliminate all taxes upon, or credits for, capital gains and losses.

With regard to income taxes, in times like these, there is no doubt a great temptation to secure revenue by increasing income-tax rates. Within certain limits this is justified. Under conditions of expanding prosperity and large profits, very heavy burdens can be temporarily borne, but at a time when industry is as greatly depressed as at present tax rates may easily reach a point which will seriously discourage and greatly retard improvement in business. I am of the opinion that the income-tax provisions of the bill will have that effect. It is proposed to lay a surtax of 40 per cent on all incomes in excess of $100,000. With the normal tax this amounts to 47 per cent. On so much of the income as is derived from dividends, 13 per cent has been paid at the source, or a total of 60 per cent, and when to this is added the income tax of certain States the tax amounts to from 66 to as high as 77 per cent. What our opinions may be as to the theory of "soaking the rich," I assume we are all united in the hope of a revival of business. Anyone who anticipates a revival under such a burden of taxation must be optimistic indeed. If under present conditions these maximums must be temporarily established, the higher rates should at least be confined to higher brackets of incomes.

Under low or reasonable income-tax rates the effect of the existence of great quantities of tax-free securities does not consititute any serious handicap to industry, but every increase adds to the temptation to avoid the chances and vicissitudes of business by sailing into the safe harbor which such securities afford. We discourage investment in new enterprises by these high taxes, the retention of funds in established business, and not only increase the profits and benefits of tax-free securities, but we greatly encourage the increase of taxation through an increased volume of such securities brought out to meet an increased demand. Beyond all question, the income-tax rates in this bill are far beyond fair, normal rates. In my opinion they are beyond the rates that can be justified even in these days of needed additional revenue. To a very considerable extent they will not realize the hope of revenue. It is much like taxing "the pot of gold at the foot of the rainbow."

With respect to estate taxes, unless we have reached a time when we are frankly, under the pretense of taxation, attempting to embark upon a distribution of estates, the highest estate taxes in the bill can not be justified. The recommendations of the Treasury in this regard are, perhaps, under present conditions, temporarily justified. The higher rates are in the region of confiscation; a menace to estates in periods of decreasing values and particularly estates invested in going-business concerns. They add greatly to the temptation to shift investments from business to negotiable tax-free securities. High as they are, they will not go far toward increasing revenue in the period within which it is proposed to balance the budget; but they will hang over every large estate in the country invested in industry, as a menace, tempting, if not compelling, withdrawal from active participation in business enterprises.

LETTER FROM HON. PATRICK J. HURLEY

Hon. REED SMOOT,
Chairman Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR SMOOT: The Bureau of Insular Affairs of this department has received a communication from the Governor of Porto Rico relative to H. R. 10236, Seventy-second Congress, first session, stating his concern over reports which have reached him indicating the possibility of the elimination or amendment of so much of section 31 of the revenue act as permits credit to be taken against Federal income taxes, to the extent provided in section 131 of the revenue act, for the amount of income taxes and certain other taxes imposed by possessions of the United States.

H. R. 10236 (revenue act of 1932) which was passed by the House on April 1, 1932, was introduced in the Senate on April 4, is understood to be now before your committee.

The Governor of Porto Rico was probably moved to send his communication by the fact that an effort was made in the House to amend H. R. 10236 as reported (Report No. 708) as follows: "That lines 2 to 7, inclusive, on page 36, be stricken out." (Congressional Record, of March 19, 1932, pp. 6661–6662 and of March 29, 1932, pp. 7248–7253.) The specific part of the bill referred to above reads as follows:

"SEC. 31. *Taxes of foreign countries and possessions of United States.*—The amount of income, war profits, and excess-profits taxes imposed by foreign countries or possessions of the United States shall be allowed as a credit against the tax, to the extent provided in section 131."

The amendment, however, was rejected, and the above-quoted provision appears in the bill as passed by the House.

The elimination of the provision quoted above would operate to place American citizens and corporations doing business in Porto Rico and in the Philippine Islands at a serious disadvantage as compared both with their foreign competitors in the islands and with Americans doing business in the United States.

It is recommended therefore that, should any such amendment as was rejected by the House be offered in the Senate, it do not receive the favorable consideration of your committee.

Sincerely yours,

PATRICK J. HURLEY,
Secretary of War.

STATEMENT OF DONALD A. CALLAHAN, OF WALLACE, IDAHO, REPRESENTING NORTHWESTERN MINING ASSOCIATION

The CHAIRMAN. On what subject do you speak, Mr. Callahan?

Mr. CALLAHAN. The subject of mine depletion.

The CHAIRMAN. You may proceed.

Mr. CALLAHAN. Mr. Chairman and gentlemen of the committee. My name is Donald A. Callahan, of Wallace, Idaho, and I am representing the Northwestern Mining Association.

I am not appearing here in opposition to anything in the way of tax, but I am appearing here in support of an amendment which was offered by Senator Thomas of Idaho, and which would provide as the basis of depletion in metal mines a percentage rate of 15 per cent of the gross.

Now, a little bit of the history of this. Back, I think it was, in 1926, or prior to that, the percentage method of depletion was applied to oil and gas. In the bill as it comes from the Ways and Means Committee of the House that percentage method is applied also to sulphur.

A great many people have the idea that this matter of depletion of mines is a technical and involved subject, and they throw up their hands rather when we commence to talk about it. I am going to

try to show you to-day that this is not a technical question at all, but has become technical only because of the method in which depletion has been arrived at in the past under the methods now in use in the Treasury. I am going to start out with a definition, if you please, of depletion of mines, which is in language that I think conveys the idea.

Depletion of mines under our income tax laws means an annual deduction from gross income of an amount which is estimated will compensate the miner for the capital which has been used up or destroyed through the operation of his mine during the year. Obviously all the ore in his mine at the beginning of his operation is capital. Plainly, also, when he takes that ore out of the mine and sells it he has disposed of his capital. Our income tax laws have never attempted to tax him on that portion of the proceeds of his sales which may be regarded as a return of capital. The only question which has been considered in past income tax laws, and which is being considered here, is: "What is the proper method of ascertaining the amount of the proceeds of his sales of ore which may be regarded as return of capital and upon which he should pay no tax?" Looking upon it from another angle it may be said that depletion for mines represents the same element as the cost of raw materials in a manufacturing process.

The CHAIRMAN. You take the same position as when the bill was up providing for the depletion under existing law? That was not satisfactory to you at that time; to the Idaho people, I know.

Mr. CALLAHAN. No.

The CHAIRMAN. What you want is exactly what you asked for before when the bill was up for consideration?

Mr. CALLAHAN. Well, in the year 1930 we had a hearing before the Joint Committee on Internal Revenue Taxation, and in that we presented our arguments for this particular method. At that time the method that we contended for was an allowance of 33⅓ per cent of net. Now the amendment itself here is 15 per cent of gross. And the figures show from the experiences that 15 per cent of the gross income represents approximately 30 per cent of the net. Those are the figures.

Senator BINGHAM. Mr. Chairman, may we have a copy of Senator Thomas's amendment so that we can have it before us? Has it been printed?

The CHAIRMAN. Yes.

(The amendment is as follows:)

Amendment intended to be proposed by Mr. Thomas of Idaho to the bill (H. R. 10236) to provide revenue, equalize taxation, and for other purposes, viz:

On page 84, line 15, after "for" insert "metal mines,"; and beginning with the word "In" in line 16, strike out through the period in line 19 and insert in lieu thereof the following: "The allowance for depletion shall be, in the case of metal mines, 15 per cent, and in the case of sulphur, oil, and gas wells, 27½ per cent of the gross income from the property during the taxable year."

Senator REED. Mr. Callahan, looking at the figures for 1929, the only separation of income-tax payers appears to be mining and quarrying. And of course that would include some companies that are not metal miners.

Mr. CALLAHAN. Yes.

Senator REED. But I notice that their gross is 3,552,000,000. Fifteen per cent on that for depletion would amount to about 525,000,000. The depletion allowed the same companies in that year was only 242,000,000.

Mr. CALLAHAN. That is for what year?

Senator REED. For 1929.

Mr. CALLAHAN. 1929. The figures that have been compiled by the Joint Committee on Internal Revenue Taxation, and which are contained in the preliminary report that was presented, covers those very figures. It covers them not for one year but over a period of years. In which it is shown that the average of depletion allowed amounted to better than 17 per cent.

Senator REED. On gross?

Mr. CALLAHAN. Yes. Those figures are in this preliminary report which was prepared by Mr. Parker and his staff.

Senator REED. Have you a copy of that report here, Mr. Parker?

Mr. PARKER. Yes.

Senator REED. The hearings before the joint committee?

Mr. CALLAHAN. That is page 67.

Senator REED. Gives only percentage of net.

Mr. CALLAHAN. This is the gross receipts. That is for the period 1922 to 1926.

The CHAIRMAN. Well, that does not cover all classes of mining, does it?

Mr. CALLAHAN. They are all broken down. Allowance for lead and zinc ores, 17.21; iron ores, 17.74; for copper, 17.21; for gold and silver, 16.94; and the weighted average was 17.127.

Senator REED. What page is that—page 67?

Mr. CALLAHAN. Page 67.

Senator BINGHAM. Mr. Chairman, it is impossible to tell from the amendment itself where this comes in this copy of the bill which we now have before us. What paragraph are you on? What section?

The CHAIRMAN. On page 91, Senator.

Senator BINGHAM. Thank you.

The CHAIRMAN. Giving the general rules for the basis of depletion. Proceed.

Senator REED. I have not found that place, Mr. Callahan.

Mr. CALLAHAN. Page 67. Have you this preliminary report on depletion?

Senator REED. Yes.

Mr. CALLAHAN. Page 67; right down at the bottom.

Senator REED. Page 65?

Mr. CALLAHAN. Page 67. No; in this report it is page 67. I will hand you my copy.

Senator REED. I have got the table anyway.

Senator COUZENS. Do you approve of cutting out the discovery provisions if these schedules were adopted?

Mr. CALLAHAN. Yes.

Senator COUZENS. You think the discovery provision ought to be cut out?

Mr. CALLAHAN. Personally I do; yes.

Senator REED. Why, Mr. Callahan?

Mr. CALLAHAN. Because I do not believe in options in a revenue law. If this thing is right it reaches the same result as discovery,

and I think as a matter of fact discovery would in the future be absolutely eliminated if this were in vogue. Men are not going to the trouble and expense of establishing these valuations, and they are troublesome and expensive, and all that, if this method was in vogue.

Senator COUZENS. Do you believe that 27½ per cent, as provided in the Thomas amendment, is correct?

Mr. CALLAHAN. It is 15 per cent.

Senator COUZENS. I mean on sulphur and oil and gas.

Mr. CALLAHAN. I do not know anything about sulphur and oil and gas. This refers only to metal mines.

Senator COUZENS. Yes; but I mean Senator Thomas's amendment proposes a different per cent on the other.

Mr. CALLAHAN. The provision as to oil and gas is already in the law. The one as to sulphur was put in the House and adopted in the bill there. So that is really not an amendment. The only amendment here is the amendment applying to metal mines, 15 per cent of gross.

Senator REED. This committee put in 15½ per cent after a long study.

Mr. CALLAHAN. Yes. The method now in use is called a scientific method, that is the method of determining how depletion shall be arrived at. To my mind it is simply a pseudo-scientific method. Nothing is scientific that does not rest upon the actual basis of facts. And it is impossible to determine that under the present analytic appraising method.

The CHAIRMAN. Do you think that it can be definitely determined? For instance, take the veins, the lodes, the ore deposits in Idaho. They are quite different from what they are in some of the other States, and I doubt very much whether any figure can be named that would cover the whole field of mining.

Mr. CALLAHAN. By attempting to fix it upon a valuation of the units according to the actual valuation, yes, I agree with you.

The CHAIRMAN. That is a mighty hard thing to do.

Mr. CALLAHAN. Yes, sir; that is a hard thing to do. And that is the reason we suggest this method. Now we are in a different position than we were when these bills were originally written. We have back of us here a world of experience in production and all that sort of thing. We know what the percentage of depletion now would mean as related to what depletion has actually been allowed in the past, and we have purposely placed this even lower than the figure which the weighted average shows at the present time in order that there will be no decrease in revenue, and we contend that there will be an actual increase in the stability of revenue, because under the method now in use it is necessary first of all to determine how much ore you have in your mine, something which in our locality of course we have to guess at. We have to determine or estimate how much it is going to cost per unit to take that mine out of the ground. We have got to predict the price of it. We have got to estimate the metal content of all of this ore. All of those things rest upon estimates and predictions. And then when that is finally done we will figure how much profit there will be in mining that out, and then that is reduced to a formula of present worth, and then the number of units that are estimated in the beginning to be in that mine, they divide the present worth of that by the number of units,

and then arrive at a unit of depletion which is taken off year by year as the shipments are made and returns made.

Senator COUZENS. Leaving out of consideration your district, do you think that the 15 per cent is fair to all districts?

Mr. CALLAHAN. I think it is fair to all districts because it is the nearest approach to the average that we can attain. And I think it is absolutely fair. It is our opinion that it is fair. Never been denied that it was not fair.

Senator KING. How can you establish a uniform rule, Mr. Callahan, when you have different conditions in different places? For example, with respect to the copper deposits in Utah and Arizona and some parts of Nevada, and other places you have porphyry deposits, or deposits where by reason of the underground workings and the sinking of small shafts they can tell within a few hundred tons just the limits of the production. For instance, in one deposit there in Arizona they sank shafts, 40 or 50 of them, around on the periphery, and they could determine within a few tons the quantity of copper. Then they can determine also by reason of the shafts which they had run the content and they could measure the quantity of ore there. Take the Utah copper. A huge porphyry deposit. You can see by going on the mountain the limitations. That is very different from the lead and silver lodes where you have a little seam perhaps just a few inches, and it will open up into a large deposit and you take out ten or fifteen million or perhaps a few million ounces, and then the deposit would be exhausted, and you have a little seam that you can follow over an indefinite distance and then open up another deposit. It seems to me it is difficult to establish uniform plans for the purpose of applying the rule of depletion.

Mr. CALLAHAN. It is very difficult. Not only difficult, but absolutely impossible under the present plan.

Now then the experience is simply this, that there are mines which are operating and which have been valued according to this plan, and which, in an individual mine you might say might be able to be absolutely correct. Yet the range of depletion for coppers alone, according to the tables that are published and have been compiled by the Government, range from 3 mills a pound to over 8 cents a pound. As a matter of fact, there are companies operating to-day whose valuation has been determined under this method, whose valuation for depletion purposes, which represents the value of that ore in the mine discounted to present worth, is more than what they can get for the finished product shipped to-day. And, of course, they pay no tax. Now, under this amendment it would not make any difference what your conditions were, if you made no profit at all, under this provision 50 per cent of that would have to be paid upon. You could not wipe it all out as they do at the present time under the percentage depletion method.

The CHAIRMAN. Your time has expired.

Senator COUZENS. I move, Mr. Chairman, that he be permitted to go on. We have asked him a lot of questions.

The CHAIRMAN. I was going to suggest that.

Senator REED. Are there many companies that have 8 per cent depletion allowance?

Mr. CALLAHAN. I am not able to say that, because I am simply quoting from the appendix to the hearings before the Joint Committee on Internal Revenue Taxation, 1930.

Senator REED. I should not think that they would be very enthusiastic for your 15 per cent suggestion.

Mr. CALLAHAN. No; I do not think they are.

Senator REED. That is not the test, however.

Mr. CALLAHAN. That is not the test. There is no question about that.

There are three sources, of course, of opposition to this. One of them is that perhaps the department itself would oppose it, because I think you gentlemen know, as all of us know, that when anything is established and comes under the jurisdiction of experts, why the opportunity to make a change in that depends too much upon what the experts think about it, because the men in actual responsible charge of those departments, like business men, rely upon the men whom they have specially chosen to do certain things.

The CHAIRMAN. You can hardly charge that to the department.

Mr. CALLAHAN. No; I am not at all, Senator. But I am saying that that might be a source of opposition.

There is another, that certain companies may have certain allowances for depletion that would be affected if this were adopted.

There is another class that is opposed to it very strenuously, and that is the class that has grown up of experts who represent taxpayers, and who have been making a very nice thing out of it, and it is perfectly natural that they should. There is no complaint to be made about them at all. That is their business.

But we are firmly convinced that the application of the percentage method will do away with a large amount of the expense of the department. It will do away with a tremendous amount of expense to the taxpayer in first establishing his valuations and afterwards maintaining them. That it will mean a more stable revenue if it is adopted with the provision that it can not exceed 50 per cent of the net. And it will mean this, that valuations will not be established, as they have been in the past, in times of high prices, when there was a big price for a unit of ore, and then depleted at a time of lower prices. I think you gentlemen will agree that that is one of the weaknesses of income tax, that in fair weather it is a wonderful thing, and in foul weather it is no good at all. And as far as mines are concerned that is one of the things that affects us most of all, that these depletion rates for units were established when prices were high; that when the time comes when the Government actually needs the money they are able to return their income tax with a depletion that wipes out entirely all profit.

Senator COUZENS. From a competitive standpoint is it not a detriment to the man who creates his mine now as compared to the man who created it when the prices were high?

Mr. CALLAHAN. Absolutely. And let me tell you another thing from a competitive standpoint. I have shown this discrepancy as between the valuation per unit allowed for depletion in coppers. Now take the lead and zinc industries in which I am interested particularly. We have a weighted average of 30.5 per cent of depletion for the entire industry. But in the tri-State field that ratio of depletion is 43 per cent. And out in the Rocky Mountain section it is a little better than 25 per cent. Now those are competing for the same business. In the tri-State field that is largely due to the fact that they have been able to establish discovery depletion, where it is very

difficult under the law and under the rules to establish discovery depletion in our section, but that has been brought about. And they at the same time have a tremendous advantage in the matter of freight rates and nearness to market.

Senator REED. Does you ore come in the same spotty formation a theirs?

Mr. CALLAHAN. Well, theirs is more in the flat sheet formation. Ours is true fissure. And exceedingly difficult to tell under the law which provides that if the ore is continuous that it can not be regarded as a new discovery. Now it depends upon the question as to what may be considered as continuous, and it is very difficult to establish that in our section particularly.

Senator REED. All those questions would be wiped out of the law.

Mr. CALLAHAN. All those questions would be wiped out of the law, and all those entirely unnecessary. If we could arrive at something which the experience of the department itself has shown would not exceed the average weighted ratio of depletion to gross income.

Senator KING. If your plan were adopted would it inure to the advantage of your property as well as to those similarly situated?

Mr. CALLAHAN. To my property?

Senator KING. Yes.

Mr. CALLAHAN. No.

Senator KING. Then why are you interested in it?

Mr. CALLAHAN. I am interested in it because it is a method under which the mines of my district would be materially benefited. Let me give you an example of how this works with the mine owners.

Senator COUZENS. Before you get to that point. The adoption of this plan would put you all on the same basis?

Mr. CALLAHAN. The adoption of this plan would put us all on the same basis, absolutely.

Senator COUZENS. And these concerns that now have this big advantage over you would have that advantage taken away?

Mr. CALLAHAN. Yes.

Senator KING. It would inure to your advantage in a little way, but to the disadvantage of some others that you think now have an advantage?

Mr. CALLAHAN. No; I do not think it would inure to their disadvantage. No, I do not think it would. I think they imagine it would. And there is also a tendency of those going along in business to say, "Let well enough alone."

The CHAIRMAN. I can not conceive of any mine, unless it was a wild-catter, but that this amendment would be an advantage to.

Mr. CALLAHAN. I think it would. Not in the matter of taking away revenue from the Government, but in the matter of their carrying on their own business.

Let me tell you something, if I may, since you referred to my company, of what happened to my company. Back in 1924 we had a claim made against us by the Government for excess profit and additional income taxes for the year 1917. That claim was based entirely upon a difference of opinion as to the figuring of our depletion and the valuation per unit. Now mind you, that money that had been taken out that year had been distributed in dividends when this claim was made. We had that uncertainty. But we did have a surplus. We had enough money to pay this bill. It amounted to $165,000.

Our company had a general counsel—an excellent lawyer in New York—but he did not feel that he was competent to represent our company in this technical and highly involved matter before the bureau. So he recommended to us to employ a tax expert in New York to come down here to Washington to figure that out. We sent that man down here. He had never seen our property in his life; he had never seen our mine. He went down to Washington. The men before whom he appeared in the bureau had never seen our mine. They sat down in comfortable chairs here in Washington—2,500 miles away from the actual property itself—and figured valuations according to formulas; while we, who had lived and worked with that property for years, awaited their determination of our liability. As a result of their deliberations we were able to save to our company, after paying the expert fees which were not inconsiderable, a sum approximating $50,000. Now we reached the conclusion after that case had reached its conclusion and we had made final settlement, that mining in Washington was even more profitable than it was out there in Idaho.

The CHAIRMAN. Was that one of those cases where a jeopardy assessment was arbitrarily put upon the mine?

Mr. CALLAHAN. That must have been the case or they could not have reduced it $50,000. But that shows us how helpless we are. In other words, the mine operator who is able to maintain a staff of experts, who is able to first establish his valuation and then maintain it, and then represent it before these departments properly, and spend a lot of money for it, he is able to get by and get by without any injury to himself. But there are a lot of little fellows that never make any depletion claims at all.

Senator COUZENS. May I ask you what you paid your experts in that case, or is that confidential?

Mr. CALLAHAN. I think our attorney's fees and experts' fees ran up around $15,000.

Senator REED. Mr. Callahan, what would be your feeling toward basing your depletion upon a percentage of net income instead of gross?

Mr. CALLAHAN. Well, probably we would favor that. It has been figured out that 15 per cent of gross will amount to about as much as 30 per cent of net. That is the experience. And we would have no objection to figuring it on that basis.

Senator COUZENS. It seems to me that to figure on percentage of net would encourage extravagance.

Mr. CALLAHAN. Yes. This is simpler.

Senator COUZENS. Do I understand that if this plan were adopted it would be necessary to eliminate the discovery percentages?

Mr. CALLAHAN. It is not necessary to eliminate, but you gentlemen know and I know that it should be eliminated.

Senator COUZENS. Would not those who get a discovery allowance have an advantage over you if this plan were adopted and you only got the percentage?

Mr. CALLAHAN. It would be an advantage temporarily, perhaps, but it would not be an advantage that would be continuous. And what we are asking is a permanent change of policy with regard to this thing, which we feel will be to the advantage of all mines and will be tremendously to the advantage of the Government.

May I now say in conclusion that a number of the States have recently adopted income tax laws. Senator Smoot's State of Utah, after a thorough investigation by a commission, adopted an income tax law, and they incorporated in that after their investigation the percentage method of depletion.

Senator REED. Based on gross?

Mr. CALLAHAN. I do not know whether theirs is based on gross or net.

The CHAIRMAN. On net, I think.

Mr. CALLAHAN. On net. Our State of Idaho based theirs on net. The State of Oregon and the State of California—all of those that have recently enacted income-tax laws—provided the percentage depletion for mines in their laws.

Senator COUZENS. On net or gross?

Mr. CALLAHAN. Well, I think they are principally on net. I think that that was done in all of them. I know it is in our State.

Senator COUZENS. Why did they adopt net and you recommend gross?

Mr. CALLAHAN. Well, as a matter of fact there has been just a question always as to which is which.

Senator REED. As a matter of fact it is based to some extent on both where you say that it shall not exceed 50 per cent net.

Mr. CALLAHAN. Yes, it is. This, of course, has that saving provision. But, as I say, the estimate from the figures is that this amounts to about 30 per cent on net.

I am filing this statement, Mr. Chairman.

The CHAIRMAN. Very well, that may be placed in the record.

(The statement presented by Mr. Callahan is here printed in the record, in full, as follows:)

STATEMENT OF DONALD A. CALLAHAN, OF WALLACE, IDAHO, REPRESENTING NORTHWESTERN MINING ASSOCIATION

I am appearing in support of the amendment offered by Mr. Thomas of Idaho relative to the allowance for depletion in the case of metal mines.

Depletion of mines under our income-tax laws means an annual deduction from gross income of an amount which is estimated will compensate the miner for the capital which has been used up or destroyed through the operation of his mine during the year. Obviously all the ore in his mine at the beginning of his operation is capital. Plainly, also, when he takes that ore out of the mine and sells it he has disposed of his capital. Our income-tax laws have never attempted to tax him on that portion of the proceeds of his sales which may be regarded as a return of capital. The only question which has been considered in past income-tax laws, and which is being considered here, is: "What is the proper method of ascertaining the amount of the proceeds of his sales of ore which may be regarded as return of capital and upon which he should pay no tax?" Looking upon it from another angle it may be said that depletion for mines represents the same element as the cost of raw materials in a manufacturing process.

I am starting out with the assumption that the members of this committee are agreed that a suitable allowance should be made in order that mine operators may have a return of their capital, tax free, and that the tax shall only be levied upon what may properly be called "income."

The organization which I represent is of the opinion that the present method of ascertaining the proper allowance of depletion is inequitable as between taxpayers in the same industry; that it is uncertain and therefore productive of controversy; that the determination of the depletion allowance is expensive, both to the Government and to the taxpayer, and that the revenue of the Government from mining is adversely affected because of these methods. I could not appear at this time to urge upon this committee a change in the law which would result in a decrease of revenue. Despite the depressed condition of the mining industry,

due to the lowest metal prices in history, I do not feel that we should ask the approval of this committee for any change that would result in the reduction of our taxes. However, I do feel that the present economic situation, and the emergency which the Government is facing in the matter of the Budget, make it extremely opportune that we urge a change in the law which will bring about—first, a decrease in governmental costs; second, a simplification of the method of ascertaining tax liability, and third, a stabilizing of the revenue. All of these we believe will be accomplished through the amendment to which I have referred.

Simplification of governmental machinery and the lowering of the cost of government are very much to be desired at the present time. We are beginning to learn, I believe, that a popular government can not long survive if its administrative functions become too involved and intricate, and if we are obliged to rely, not upon the common sense of our legislators and administrative officers but upon the technical knowledge of experts. This is particularly true with relation to taxation. More advantage has been taken of Federal, State, and local governments by reason of technicalities in their tax laws than through any other means, and when any revenue act becomes so involved that it requires the judgment of experts to determine tax liability, inequalities are bound to result.

First of all, the present method of determining mine depletion is highly technical. It is based upon a determination of factors with which only the accountant and engineer are familiar. In order to secure a valuation for the purpose of depletion, it is necessary to have a valuation made of the units of metal in a mine. This, in itself, because of the hidden character of the metal, must very often be determined through pure guesswork, reasoning from certain known factors. For instance, under the analytic appraisal method by which valuation for depletion is now largely determined, it is necessary to make an estimate of the tons of ore in a mine at the beginning of the mining operation; to estimate the annual rate of extraction of metal; to estimate the duration of the life of the mine; to estimate the metal content per ton of ore in the mine; to estimate the production cost per unit of metal; to predict the selling price for the estimated number of years of the life of the mine, and then through a formula, to reduce the expected profit to present worth. When all this has been done and the estimated value of the plant necessary to carry on the operation has been deducted from the present worth, the vaule of the ore in the mine is fixed as the basis of depletion. This is then divided by the number of units of recoverable ore and a definite value per unit is fixed which may be deducted as depletion over the years of operation.

This is only a pseudoscientific method, but is the most common method applied in this determination, and you can readily see that the result depends upon unknown and unknowable factors. It will readily be seen that the administration of such a system depends upon expert knowledge in the Internal Revenue Bureau, and you must further realize that, as far as the taxpayer is concerned, his interest demands the employment of experts to protect his interests.

As a result of the administration of this law we find tremendous inequalities between taxpayers who are engaged in the same line of business. For instance, in the case of copper, we find that the highest unit of depletion actually allowed is a little more than 8 cents per pound, and the lowest, a trifle under 3 mills. We find further that the weighted average ratio of depletion to net income for property allowed for a 7-year period beginning in 1922 was as follows:

	Per cent
Gold and silver	37
Copper	60.5
Lead and zinc	32.5
Iron	41.2
Coal	31.6
Sulphur	45.8

(These figures are taken from the appendix to the hearings before the Joint Committee on Internal Revenue Taxation, December 9, 10, 11, and 12, 1930, at p. 162.)

Besides this we find that even in the same branch of the industry the ratio varies materially for different sections of the country. For instance, while the weighted ratio of depletion allowed to lead and zinc is 32.5 per cent, the ratio in the tristate field is 43 per cent, while that in the Rocky Mountain district is but a trifle over 25 per cent. It will be conceded, I think, that as between competitors in the same line of business, the tristate field has a tremendous advantage by reason of this difference in depletion allowance, and in addition to this, this field

also enjoys the great benefit of nearness to market and consequently lessened freight rates in an industry where freight rates play a large part in the cost of production.

Besides these inequities as between different branches of the industry and different districts in which the same metal is produced, there are also tremendous inequalities as between individual taxpayers. You will appreciate, I am sure, that the taxpayer who has a considerable amount at stake and has the means with which to fortify himself with expert assistance, can meet the Government experts upon an equal footing. In the first place, he makes his own valuation at the beginning and is able to engage the best talent available for that purpose. Then he must defend his valuation before the bureau and, again, his expert assistance is extremely valuable, and through it, and by means of it, he can be reasonably sure that at least the Government is not getting the best of him.

But what of the smaller operator, who has not the means with which to make the proper valuation in the first place, and who must accept the judgment and final determination of the Government experts when he makes his returns?

I am not charging that the technical men in the employ of the Government favor the large operator; neither do I assert that they discriminate in any sense against the smaller operator; but it is the common experience of business, as far as technical questions are concerned, that one must be thoroughly fortified in establishing claims which are involved and about which there very often are reasonable and proper differences of opinion.

Let me quote from the preliminary report on depletion made by the staff of the Joint Committee on Internal Revenue Taxation, on September 17, 1929, which report is commonly referred to as the "Parker report." I am quoting now from page 7:

"The analytic method generally employed by the bureau in the valuation of gold, silver, copper, lead, zinc, and other metal mines involves at least six important factors which are the subject of individual judgment. In many cases reliable data from which the engineer may draw his conclusions in estimating these factors are not available. Conclusions in such cases must vary according to the experience and viewpoint of the individual. Reputable mining engineers admit that it is impossible to value a mine accurately as of a specific date by this method due to many speculative factors involved."

Then follows on the same page a comparison of the separate valuation of ten companies, ranging from some of the smallest to some of the largest in the industry, which tables show as between two reputable engineers a variation in valuation of from 100 to 566 per cent.

That this method of determining valuation for purposes of depletion results in inequalities and tremendous expense. both to the Government and to the individual taxpayer, is well illustrated by an experience of my own company. About 1924 the Government presented to us a claim for additional income and excess profit taxes for the year 1917. The sum claimed was considerable and the claim grew entirely out of the depletion claimed. Our company had a general counsel—an excellent lawyer in New York—but he did not feel that he was competent to represent our company in this technical and highly involved matter before the bureau. Accordingly we, on his advice, employed an expert to represent us. The expert had never seen our mine. The men before whom he appeared in the bureau had never seen our mine. They sat down in comfortable chairs here in Washington—twenty-five hundred miles away from the ascual property itself—and figured valuations according to formulas; while we, who had lived and worked with that property for years, awaited their august determination of our liability. As a result of their deliberations we were able to save to our company, after paying the expert fees which were not inconsiderable, a sum approximating $50,000. It was rather the opinion of our directors after that case had reached its conclusion and we had made final settlement, that mining in Washington was even more profitable than it was in Idaho.

I would like to quote you in this regard a statement made by a gentleman who, I think, is recognized as an authority on income tax law and its administration. This statement was made before the Senate Select Committee on Investigation of the Bureau of Internal Revenue during 1925, by Mr. A. W. Gregg, formerly Solicitor of Internal Revenue. This is Mr. Gregg's language upon that occasion:

"If something could be done in the law to do away with the necessity for valuing mineral properties for the purpose of determining depletion, it would be the biggest help of anything that has ever been done to the Bureau of Internal Revenue. This would help the administration of the bureau tremendously and would certainly be more accurate than the present system."

Let's turn now to the matter of stability of revenue, in which I feel that this committee is particularly interested. I believe we are all convinced at the present time that the great weakness of income taxes generally is that they afford only "fair weather" revenue. When times are good and everybody is making money, income tax returns are high, and the governmental unit that enjoys them is prone to indulge in an orgy of public expenditures. Depressed business conditions arrive—as inevitably almost as the seasons—business income diminishes, our revenue is dried up at the source, but the capital structure of Government which we had built up in "flush" times still remains to be maintained. Any change in the law that will help to stabilize revenue is indeed much to be desired, and it is our opinion that this particular amendment will bring about that result.

It is easy to see that valuations of mines made at a time when business is good means high valuation per unit, and higher anticipated profits, consequently depletion valuations are fixed at a high rate per unit. Depressed conditions arrive, prices go down and mining companies are able, even though making an actual profit upon their operation and paying substantial dividends, to cover their net income entirely with a depletion allowance fixed at the time of high prices. There are companies operating to-day that have a depletion valuation per unit for their ore in the ground higher than the price which they receive for their finished product.

Under the percentage plan this could not occur, if the limitation of deduction for depletion be fixed, as it is in this amendment at 50 per cent of net income. Under the present system a taxpayer may show a profit before depletion and wipe it out completely by depletion allowance. Under a straight percentage plan, with a limitation such as in this amendment, he must, in any event, pay upon 50 per cent of that net income.

There is proposed in this amendment a plan by which, instead of the involved processes now employed, the taxpayer may deduct 15 per cent of his gross income, provided it does not exceed 50 per cent of his net income. There will be no valuations, no estimates, no predictions. It is the same principle as was applied by Congress to the oil and gas industry, with a different rate because of the difference in the nature of the two industries.

The question may be asked "Why the rate of 15 per cent of gross?" That rate has been determined as one which, according to actual experience will amount to less than the average of depletion which has been allowed in the past. These figures are given in the Parker report, heretofore referred to, at page 67. I think it is agreed as between the Bureau of Internal Revenue and the mining industry that the average of depletion allowance has been above 17 per cent of gross. The amendment here offered, therefore, will result not in a lessening, but in an increase of revenue, and because of the fact that not more than 50 per cent of net can be deducted will, in my judgment, result in a considerable increase and a much more stable income to the Government.

It is probable that there will be opposition to this change. It is probable that this opposition may come from men high in authority in certain departments of the Government. Changes, particularly when they may result in the lessening of governmental activities, have always met with opposition—and always will. That is the reason why governmental costs are constantly going upward. It is unfortunately true that we are facing a situation to-day where, while we admit that governmental expenses are throttling business, are causing honest men and women to lose their homes, are taking our capital, in addition to our earnings, still a concrete attempt to lower those costs by decreasing personnel meets with stubborn opposition.

I ask you to consider this proposal upon the merits of its application, and not upon the opinion of those who, intrenched in public positions, may be opposed to change in administrative methods. I do not mean this a criticism of our Treasury Department. The men in authority rely in technical matters upon their technicians, as business men do under similar circumstances. The technical men are committed to the present system because that is their job and they can put up a mighty stiff argument for it.

Then, again, there may be opposition from those in the industry itself who are to-day enjoying exceptional advantage by reason of depletion allowances which enable them to avoid the payment of a whole or part of the tax that would be due if this amendment were adopted and put in effect.

Then, again, we may have opposition of that class of experts which has grown up because of the technicalities of the present method, and which enjoys very substantial fees for services rendered to individual taxpayers. The administra-

tion of our income tax laws generally has built up vast armies of experts in and out of Government service who are engaged among themselves in the delightful controversy of seeing which can prevail in interpretation of laws, the administration of which involve the revenue of the Government and the earnings of the taxpayer. I personally believe we have too many experts, both within and without Government service.

I believe it is time we took some steps to so simplify our revenue laws that this tremendous burden to both the Government and the taxpayer may be removed. May I call your attention to the fact that a number of the States which have within their borders a considerable mining industry have recently enacted state income tax laws? Among these is the State of Utah, so ably represented in the Senate by the chairman of your committee. This State investigated the question of income rax through a commission, and when it wrote its law it incorporated a provision for percentage depletion. The State of California, represented here by another member of your committee—Senator Shortridge—likewise adopted the percentage method. The State of Oregon in writing its income tax law incorporated the percentage method. In my own State of Idaho—as Senator Thomas of your committee is well aware—in writing an income tax law in the last session of its legislature incorporated the percentage method of depletion. This simply shows the trend of the times and also emphasizes the fact that these States, realizing that they can not build up technical staffs to handle their revenue laws, have hit upon a method which obviates such necessity.

Then again there is the example of our neighbor, Canada. For years they have used the percentage method of depletion with success and satisfaction. Years ago our Congress adopted it as applied to the oil and gas industry. The House of Representatives extended the provision so as to apply the principle to sulphur, where it is just as applicable and will be just as satisfactory.

When we are offered a plan which will result in simplification of administration as opposed to involved and technical processes; in equality of burden as opposed to gross inequalities; in stability of revenue as opposed to serious fluctuations; in economy in government as opposed to unnecessary expense, why should we not adopt it in these days when economy and stabilized revenue are crying needs?

As a member of a special tax committee, I have during the past week visited many of the sections of my own State of Idaho, consulting with the people, who are burdened beyond their ability to pay and who are seeking a remedy for our tax situation. Wherever I went I heard the same cry: "Cut down the expenses of government. Take this load off our shoulders." Pioneer men and women—who have bowed their backs and worked their "fingers to the bone" seeking to acquire a competence for their declining years—are forced in these times of lessening income and of high governmental costs to lose their homes through lack of ability to pay their taxes.

Some one may say—and I know it will be frequently urged before your body—that if we can only find the means of raising the money from those who have sufficient income to pay it, that that is the first thing to be considered. I do not agree with that theory, unless you couple it with the determination to reduce costs, for it does not matter so much in this country what is the original incidence of taxation—all the wealth of this Nation comes from its natural products and its labor, and as they are the sources of the wealth, so inevitably back upon their shoulders will be placed the burden of taxation. It may be a long, tortuous route, but nothing can pay the costs of government except the wealth that is created, and that wealth consists of the natural products of this land and the labor of its people. It is because we believe that the amendment which we propose here will have the effect of lessening of governmental costs, a stabilization of governmental revenue, and an equalization of the burden, that we support it before your committee.

Brief Submitted by National Coal Association and District Association of Bituminous Mine Operators

Percentage Depletion Allowance for Bituminous Coal Mines

To the Finance Committee,
United States Senate, Washington, D. C.

Gentlemen: The signers of this brief urge your earnest consideration of the following statement regarding the need of the coal-mining industry for relief through appropriate modification of the present depletion provisions of the

internal revenue act. The brief is submitted on behalf of bituminous-mine operators with the indorsement of their national organization, the National Coal Association, and of the local and district associations in the industry whose signatures are appended below.

We feel that we are justified in demanding such relief on the general ground that however uniform and equitable the present depletion provisions may sound, in practice they have been applied in such a way as to amount to a serious discrimination against the coal-mining industry as compared with other mining industries.

It is a well-recognized principle of taxation that no system can be regarded as equitable under which the burden of taxation rests unequally upon different taxpayers of the same class. As will be demonstrated herein, the coal-mining industry for many years have been taxed to an inequitable extent in comparison with other mining industries. The effect of the existing inequitable tax burden might be borne with more equanimity if the condition of the coal-mining industry were one of substantial prosperity, but the effects of such inequity are grievously felt when, as in the present case, the overtaxed industry is one that to-day is, and for several years has been, passing through a period of great financial depression. The situation is made particularly unbearable in view of the fact that the petroleum industry is one of the chief beneficiaries of the present inequitable distribution of the tax burden. The encroachment of fuel oil and other petroleum products upon the market formerly supplied by the coal industry is one of the chief factors contributing to the depressed condition of that industry.

The inequitableness of the tax burden laid upon the coal-mining industry arises chiefly from the practical effect of the present provisions of the internal revenue act relating to the depletion of mining properties. Under the present law mining industries in general receive a depletion allowance based upon cost or March, 1913, value, so computed that such cost or value will be recovered during the prospective life of the mine. There is a further provision that where new mineral deposits are "discovered," such deposits shall be given a value for depletion purposes based upon the market value of the mineral at the time of discovery. For the petroleum industry there is a special section, under which a depletion allowance of 27½ per cent of gross income is made an alternative to depletion based on cost or March, 1913, value.

Apart from the petroleum industry, all mining industries seem to be treated alike in the matter of depletion so far as the wording of the statute is concerned. In the practical application of the law, however, great inequalities have arisen. These have resulted chiefly from two causes.

In the first place, the coal-mining industry in 1913 was in a very depressed condition. Consequently the values established for coal lands at that time were inadequate. There were few sales of mining properties, and those that took place were made under circumstances tending to reduce rather than maintain established values. For lack of current earnings few companies were able by the use of the analytical appraisal method to prove adequate value for their mining properties. The result was that in many cases the values which coal-mining companies were allowed bear no relation to the normal value of the mineral in place. The amounts recovered through depletion, even when the life of the property is such as to permit complete recovery of the allowed 1913 value, are far below actual values of the same property and unjustly below corresponding values established for mineral reserves by mining industries which were then in a relatively prosperous condition.

In the second place, the coal mining industry has derived no benefit from the discovery value provision of the act, while other branches of the mining industry have been able to set up current values for substantial percentages of their output through their ability to take advantage of this principle. The Commissioner of Internal Revenue has consistently maintained that coal deposits are so well mapped out that the discovery of new deposits is impossible. In only one instance has a coal mining company been allowed discovery value, and that was by a decision of the Board of Tax Appeals overruling the commissioner; and even in that case the commissioner has not acquiesced in the decision of the board. On the other hand, the metal mining industries and, before the adoption of the percentage method of depletion, the petroleum industry, were allowed to establish discovery values for substantial parts of their output and thereby to enhance greatly their depletion allowances.

The effect of these dissimilar conditions upon the amount of tax paid by the coal mining industry is shown in the analysis of taxes actually paid by the

different branches of the mining industry. Such an analysis is contained in the preliminary report on depletion, rendered to the joint committee on internal revenue taxation by L. H. Parker, chief of staff, and by that committee submitted to Congress on September 17, 1929.

In this report (see p. 8) Mr. Parker's analysis of actual tax returns filed by different branches of the mining industry shows clearly that during the years when the coal industry was fairly prosperous it paid an excessive percentage of the total tax of all the mining and quarrying industries. The percentages paid by coal mine operators, metal mine operators, and oil and gas producers for the years 1918 to 1923, inclusive, were as follows:

Year	Coal mining	Metal mining	Oil and gas	Year	Coal mining	Metal mining	Oil and gas
1918	40	12	31	1921	48	2	33
1919	24	4	51	1922	50	7	15
1920	61	2	23	1923	50	11	15

During later years the percentage paid by the coal industry has declined substantially, but that decline has been due to the rapid decrease in the earnings of the industry, a decrease which resulted in losses for the coal-mining industry as a whole in the generally prosperous years of 1928 and 1929, the latest years for which complete statistics of income have been published by the Internal Revenue Bureau.

From the table on page 10 of Mr. Parker's report it appears that in the years 1918, 1920, and 1921 the percentage of net income paid as war and excess-profits taxes by the coal-mining industry was substantially larger than that paid by any other branch of mining. Coal mining paid 35.4 per cent of its net income in 1918 as against 25.15 per cent paid by oil and gas producers, and 24.23 to 5.03 per cent by different metal-mining industries. In 1920 coal mining paid 22.8 per cent; oil and gas producers, 10.92 per cent; and metal-mining industries, from 10.35 to 0.00 per cent.

These figures constitute a striking evidence of the excessive amount of tax levied upon the coal-mining industry as compared to the tax paid by other mining industries. How that excessive tax is tied up with the application of the provisions relating to depletion of mining properties is indicated by a further statement found on the same page of Mr. Parker's report, which reads as follows:

"The low rate of tax paid by a substantial portion of the mining and quarrying industry appears to have resulted primarily from depletion allowances based upon values in excess of the cost of the properties."

As further evidence of that fact, he quotes figures from a table on page 8 of the report, from which it appears that in the years 1924, 1925, and 1926 the ratio of depletion to net income before depletion in certain specified branches of the mining industry was as follows: Coal mining, 20, 13.6, and 15.7 per cent for the three years, respectively; metal mining for the same years, 55, 40.2, and 38.3 per cent; oil and gas wells, 53.1, 35.7, and 36.5 per cent. These figures are direct and conclusive evidence of the inequitable results of the present statutory provisions relating to depletion and the administrative application of those provisions.

Another indication of the inequitable results of these depletion provisions may be briefly pointed out without comment. From the figures given in the third table on page 8 of Mr. Parker's report it is possible to compute for the single year 1924 the ratio of depletion allowances to gross sales. For metal-mining industries depletion allowances constituted approximately 14 per cent of gross sales; for oil and gas wells, 12.9 per cent, while for coal-mining enterprises the allowance was only 2 per cent. Mr. Parker emphasizes the relative tax burdens of those three branches of the mining industry in the following summary statement (see p. 11):

"For the total period of 10 years, beginning with 1916 and extending through the year 1926 (omitting 1917, figures for which are not available), coal companies paid 39 per cent of the total tax for the entire mining industry, although it received only 30 per cent of the net income. During the same period metal mines paid 10 per cent of the total tax and earned 18 per cent of the net income. The oil and gas industry paid 34 per cent of the total tax and received 34 per

cent of the net income. These computations are based on net income after depletion. If, on the other hand, we should use the net income before depletion, the differences in percentage between the subclassifications would be much greater and the inequities more glaring."

Mr. Parker's final conclusion as to the injustices resulting from the practical application of the present depletion provisions, and especially the hardship imposed by them upon the coal industry, deserves to be quoted in full (see p. 22):

"This report shows that the present system for determining depletion is neither simple in its application nor equitable in its results. The present system is not only inequitable between taxpayers in the same branch of the mining and quarrying industry, but the distribution between the different branches is unjust. For example, bituminous coal mine operators have not received the relief given other mine operators. The coal industry has been profitable only in a few years and is now in a condition as depressed as agriculture. The present system results in taking away from the bituminous coal industry a large proportion of it profits in taxes in the infrequent year of prosperity. It appears, therefore, that a substitute method is desirable."

In view of the conclusively established injustice inflicted upon the coal mining industry as the result of present rules and practices relating to mine depletion, your petitioners, speaking on behalf of the bituminous mining industry of the country, feel that they are justified in requesting relief through changes in the income-tax law so far as it relates to depletion allowances. We respectfully urge that the present provisions relating to depletion be amended by the insertion of the following paragraph (3) immediately after the present paragraph (2) of section 114 of the revenue act of 1928:

"(3) *Percentage Depletion for Coal Mines.* In the case of coal mines the allowance for depletion shall be 33⅓ per cent of net income before depletion; provided that such depletion allowance shall not be less than 5 per cent of the gross income from the sale of coal at the mine; and provided, further, that in no case shall the depletion allowance be less than it would be if computed without reference to this paragraph."

The reasons for urging the adoption of each of these alternative methods of computing depletion may be briefly stated. The net income rate of 33⅓ per cent is recommended because the results of the studies contained in Mr. Parker's preliminary report on depletion indicate that such a rate will yield from the mining industry as a whole approximately the same amount of tax revenue as is now paid. The effect of substituting this 33⅓ per cent allowance for the allowances now provided will be, according to Mr. Parker's report, not to augment to any great extent the aggregate depletion allowance of the entire mining industry but to reapportion it among the different branches of the mining industry in such a way that the tax burden will fall more equitably upon these different branches and upon the different individual companies in each branch.

Certainly in the present depressed condition of the coal-mining industry a depletion allowance of 33⅓ per cent of net income will not be excessive in amount. In the Statistics of Income for 1929, the last year for which detailed statistics have been published by the Bureau of Internal Revenue, it will be found that in that year 967 coal-mining corporations reported a net income, while 1,613 reported no net income. The losses of those in the latter group exceeded the net income of those in the former group by a substantial amount. In other words, even before paying the income tax the industry operated at a loss. Metal mining, on the other hand, during the same year showed a net gain of $165,224,000 and oil and gas wells a net gain of $29,602,000. It is evident that 33⅓ per cent of the net income of an industry showing as little net income as does the coal-mining industry can not be regarded as an excessive depletion allowance.

Finally, where the valuation on which the depletion allowance is based was arrived at by the analytical-appraisal method there should be little difference between depletion computed on March, 1913, value and depletion computed on the basis of current values. The principle involved in the analytical appraisal method is that of estimating the future profits of the mine. If those profits are correctly forecast, they will approximate actual profits during the life of the mine. In so far as they fail to agree the condition is a reflection upon the success with which the analytical-appraisal method has been applied.

The proposed amendment provides for an alternative depletion allowance of 5 per cent of gross income from the sale of coal. The immediate purpose of this provision is to take care of companies producing so-called captive tonnage. Many such companies owned by railroads, electric power plants, steel mills or other industries sell no coal in the open market but deliver their entire output to the parent company. The aggregate amount of such tonnage in the coal mining industry is very large. In many instances the price at which the tonnage is transferred from the subsidiary to the parent company is arbitrarily fixed and bears no relation to current market value. Indeed in some States utilities owning subsidiary coal mining companies are required by law to take over the tonnage of such subsidiaries at cost. In the case of the last mentioned companies there is no figure on the books representing net profit. Unless such companies are to be entirely deprived of depletion allowances provision must be made for computing such allowances on the basis of gross income from the sale of their product.

The only alternative method that can be applied to such companies is an arrangement under which the Commissioner of Internal Revenue will set up a constructive net income based upon market conditions at the time and place of the transfer of the product. Arrangements imposing upon the commissioner the duty of constructive action of this kind have never proven satisfactory. An example of such a provision is found in sections 327 and 328 of the revenue act of 1918 under which the Commissioner of Internal Revenue was empowered to determine the tax liability of an individual corporation on the basis of the amount paid by other corporations under similar conditions with respect to units of production, costs, net income, etc. This provision has led to innumerable disputes and appeals to the Board of Tax Appeals and to the courts. The construction of a theoretical net income for companies producing captive tonnage will prove equally unsatisfactory as a method of arriving at the depletion allowance of subsidiary companies of the kind under consideration.

The provision for an allowance of 5 per cent of gross income will have wider application. Without regard to the effect of the present depression upon the coal-mining industry, its financial experience in recent years has been very unsatisfactory. The period 1928 and 1929 to October of the latter year was one of unexampled prosperity for industry in general. Even during those years the coal mining industry was far from prosperous. The Statistics of Income, issued by the Bureau of Internal Revenue, show that in 1928 two-fifths of the coal mining companies reported net losses for the year and that the losses so reported exceeded the net income reported by the remaining companies by nearly $20,000,000; in 1929 nearly two-thirds of the companies reported no net income and the aggregate losses of these companies exceeded the net income of the remaining companies by nearly $9,000,000. In other words, in those two years the coal-mining industry as a whole not only had no net income but was substantially in the red.

Other branches of the mining industry had better records. Metal-mining industries reported net profits after deducting deficits amounting to nearly $95,000,000 in 1928 and of $105,000,000 in 1929; oil and gas wells showed a net profit of nearly three and one-half million dollars for the industry as a whole in 1928 and a profit of more than twenty-nine and one-half million dollars in 1929.

While undoubtly all branches of the mining industry are suffering during the present period of general depression it is safe to assume that the relative position of coal mining and other branches of the mining industry has not changed.

It is obvious that in a year in which the coal-mining industry as a whole operates at a loss a depletion allowance computed as a percentage of net income will not be a measure of substantial relief. If in such a period the industry is to be relieved from the inequitable burden of taxation under which it now suffers, its relief can not come solely from a provision giving it a depletion allowance based on net income. Only an allowance computed as a percentage of gross income can adequately meet the situation. Whether or not 5 per cent of gross income is a smaller or a larger allowance than 33⅓ per cent of net income depends upon the ratio of net income to gross income. When that ratio is what it should be to make the industry reasonably remunerative to the capital and labor engaged in it, depletion allowance computed in the two ways under discussion will be substantially alike; and whenever the gross income allowance materially exceeds that based on net income the discrepancy is due to

the unremunerative condition of the industry, and that condition itself is our justification for asking for relief from the inequitable share of the tax burden of the mining industry now resting upon the coal-mining branch.

The proposed amendment contains one more provision to the effect that in no case shall depletion computed on either net income or gross income be less than the depletion allowance now received by the company on the basis of cost or March, 1913, value. This provision is intended to take care of the relatively small number of coal-mining companies which acquired their properties at times when the coal-mining industry was profitable and the price of coal mines proportionately high, as a result of which their investment per unit of product is also high. Such companies have made large expenditures of time and money to establish their right to depletion allowances based upon the unusually high prices paid by them for their coal reserves. The industry believes that companies of this type should be protected, and accordingly is unalterably opposed to the adoption of any new depletion regulation which will deprive such companies of the right to continue to use the present method of computing depletion allowances.

To illustrate the effect of the different methods of determining depletion, let us consider the cases of three hypothetical coal-mining corporations. Company No. 1 operates a "captive mine," the production of which is passed along to a parent public utility company at cost. It has no established depletion rate per ton on the basis of original cost or 1913 value. Company No. 2 and Company No. 3 sell their product in the open market at $1.20 a ton. Company No. 2 has established a depletion rate of 3 cents per ton, while Company No. 3 has been allowed under the present law a rate of 8 cents per ton. The table below shows how the different methods of computing depletion provided for in this proposed amendment would work out in cents per ton:

	Company No. 1	Company No. 2	Company No. 3
Selling price (gross income)	$1.00	$1.20	$1.20
Cost of production	1.00	1.00	1.00
Profit (net income)	----------	.20	.20
Depletion as 33⅓ per cent of net income	----------	.0667	.0667
Depletion as 5 per cent of gross income	.05	.06	.06
Depletion on basis of 1913 value	----------	.03	.08

Under the circumstances assumed in this table it is evident that the company producing the captive tonnage would select the depletion allowance of 5 per cent on gross income; the company having a depletion allowance amounting to less than 6 cents a ton would select the allowance of 33⅓ per cent of net income, while the exceptional company that had proven its right to a depletion allowance of 8 cents per ton because of the unusually high price paid by it for its coal reserves would continue to use that rate.

The position of the coal mining industry with reference to this question of depletion is briefly as follows: The industry has always been and still is the victim of an inequitable distribution of the income tax burden. Such unequal treatment is unjustifiable under any circumstances and violates every principle of equity in taxation. Its evil effects upon the industry are most severely felt because of the economic depression through which the industry is passing. The inequitableness of the arrangement is more manifest because one of the chief beneficiaries of the present arrangement, the oil and gas industry, is an only too successful competitor in the fuel market. Its competition is itself one of the chief causes of the depressed condition in which the coal mining industry finds itself.

The tax discrimination grows directly from the method employed in computing depletion allowances. However uniform and equitable the provisions of the present law may sound, they work out in practice, as has been conclusively shown above, in such a way as to lead to an unjustly high rate of tax on the coal mining industry. As the depletion provisions are responsible for the discrimination, we are asking for such changes in those provisions as will remove that discrimination. We challenge the successful denial of the soundness of the arguments advanced by us in this brief, and in the absence of such denial we feel that we are justified in requesting such action by Congress as will afford us the relief to which we are entitled.

STATEMENT OF A. W. DICKINSON, CHIEF, TAX DIVISION, THE AMERICAN MINING CONGRESS

Mr. DICKINSON. Mr. Chairman, the tax committee of the American Mining Congress has prepared a brief on matters affecting mining which I ask to have entered in the record.

The CHAIRMAN. Yes; that will be done at this point.

(The brief of the American Mining Congress is here printed in the record in full, as follows:)

BRIEF OF THE AMERICAN MINING CONGRESS

APRIL 22, 1932.

To the honorable Chairman and Members of the Committee on Finance of the United States Senate.

GENTLEMEN: The American Mining Co., representing a broad range of the mining industry throughout the country, presents its protest against certain provisions of the now pending revenue act of 1932, H. R. 10236, as passed by the House of Representatives.

We are wholly in accord with the principle that the Federal Budget should be balanced. We recognize that this requires the raising of additional taxes, but we urge that such additional taxes should not be more than necessary after every possible economy has been made in the Government's expenses. In time of prosperity, with liberal yield of taxes, government activities and expenditures increased tremendously. This is a time for drastic retrenchment. Depressed industry can not fairly be called on for taxes for liberal Government expenditures.

The industry of the country is striving to meet conditions of depression and win recovery. Taxes should not be imposed which would cripple industry or retard recovery. Even the yield of tax revenues is dependent upon business recovery. From the revenue standpoint business recovery is important, as it is for restoration of employment and general welfare of the country. Furthermore, taxes must be fair and equitable to the taxpayers, for it is a fundamental principle of taxation that an unjust tax will in the end defeat itself.

I. There are a number of features in the bill which we believe are not fair and equitable, and we first present certain, which relate particularly to mining and other wasting industries:

1. DEPLETION

Amendment is proposed to section 23 (l) as follows:

"In any case in which it is ascertained as a result of development work that the recoverable units are greater or less than the prior estimate thereof, then such prior estimate (but not the basis for depletion) shall be revised and the allowance under this subsection for subsequent taxable years shall be based upon such revised estimates."

It seems to us quite unfair that when a basis for depletion has been duly established, it should be proposed thereafter that additional ore reserves should be recognized to be taken into account as to the unit computation without likewise taking them into account in the valuation basis. If such reserves are to be recognized as existing in the mine, it seems fundamental that they should be recognized as representing additional values to be reflected in the basis for depletion. We urge that the proposed amendment is unsound, unwarranted, and improper.

Furthermore, this provision would impose an unnecessary burden and expense upon the Government, as well as upon the taxpayer, requiring almost interminable work and expense to redetermine periodically the recoverable units in all minable reserves subject to depletion so that the expense of administration alone would materially minimize if not wipe out, the entire expected additional revenue of $1,000,000 per year which the Treasury Department estimates might be received from this source.

Few, if any, of the mining companies are now making any incomes. We believe that this proposed amendment can not be counted on to yield any material present revenue but would merely serve to raise difficulties, confusion, and uncertainties wholly unwarranted.

2. DISTRIBUTION OUT OF EARNINGS OR PROFITS ACCUMULATED OR INCREASE IN VALUE ACCRUED BEFORE MARCH 1, 1913

A change is proposed in section 115 to reverse the long-established principle that dividends should be recognized only as represent distributions by a corporation out of its earnings or profits accumulated after February 28, 1913, and that distributions should be recognized as nontaxable which were made from earnings or profits accumulated or increases in value of property accrued before March 1, 1913, except as such distributions are to be taken into account on sale or other disposition of the stock.

We believe there is no intention on the part of Congress to reverse the long-established principle that, as stated by the late Senator Underwood (see Cong. Rec., September 28, 1921, pp. 6517–6518), March 1, 1913, was "the beginning of the time when incomes or profits could be treated as such for the purpose of taxation, holding that before the time the accumulated profits and dividends were treated as the body of the estate, as principal." This was in a discussion on the floor of the Senate when the revenue act of 1921 was pending, and the Senator was raising question as to whether the wording of the bill then before the House adequately recognized this principal in its provisions as to dividends. Senator McCumber replied in part as follows:

"The committee agree entirely with the Senator that all accumulations prior to March 1, 1913, become a part of the principal, a part of the invested capital,

of the corporation, and there is no intention to take those profits which had accumulated at that time and bring them forward and levy a tax upon them as profits."

Senator Underwood further stated:

"As a matter of fact, a number of years ago we agreed in conference on this proposition. I think it will prevent future law suits and future differences if the Finance Committee will propose a simple amendment, declaring that nothing in this act shall be construed as warranting a construction that the bill taxes accumulated profits or dividends accruing prior to the first day of March, 1913."

When the revenue bill of 1928 was pending the House bill had eliminated this provision but these provisions were restored by the Committee on Finance of the Senate with the statement (p. 12) of its report:

"The provisions of the present law have been enforced except for certain amendments, since the 1916 act, and your committee believes they should continue in force."

The Senate so voted and the House concurred.

It must be recognized, of course, that some criticism might be directed against section 115 of the act in that it makes the basis of the corporation determinative of the taxable status of distributions instead of using the basis of the individual stockholder. Rarely will the stockholder's basis for his stock to him be the same as the basis of the corporation's property to it. When the shareholder buys his stock, the corporation may have a large accumulation of surplus which presumably will be reflected in the cost of the stock to a then purchaser. Accordingly, what is surplus or profits to the corporation is reflected in the invested capital of the stockholder. If the corporation should thereupon distribute its accumulate surplus this would in fact be no profit or gain to the stockholder who had paid dollar for dollar for it as reffected in the purchase price of his stock.

We have recognized in our laws the administrative difficulties which would be involved in trying to determine for each separate stockholder his own individual basis of whether or not distributions he received from a corporation represented in fact a real gain to him or were simply a return to him of his invested capital. To avoid such difficulties the law has adopted the standpoint of the corporation for determining the taxable status of distributions. This is a simpler rule aimed in the end to do fair justice. It is, however, a rule which to be fair must be consistently applied. If we are to say that any distribution made to a stockholder is to be taxable to him if it is made out of the taxable income of the corporation regardless of whether or not its amount represents dollar for dollar of a price which he paid for his stock, it should then naturally follow that distributions made otherwise than out of the taxable earnings of the corporation should not be taxable to the stockholders.

The pending bill would continue to recognize distributions which were made out of the actual capital which had been paid in to the corporation, whether such amounts has been paid in before or after Match 1, 1913. To this extent it is consistent in adopting the corporation's position in measuring the taxability of the stockholder. It also continues to recognize that the realization by the corporation of values existed at March 1, 1913, does not constitute taxable income. Yet it would propose to break down this measure or standard in its determination of the source of distributions to stockholders.

We would further call attention to the fact that almost from the beginning of our income tax legislation, this principle has been included in the law, and administrative and court decisions have been based upon it. It is hard to see how much of uncertainty and confusion will be introduced if this principle is now overturned.

We urge both as a matter of fairness to taxpayers and of consistency in the law that no change should be made in this provision.

3. DISTRIBUTION FROM DISCOVERY DEPLETION

An amendment is proposed to section 115 (d) to change the status of distributions from depletion reserves based on the discovery value of mines. This is a companion question to that of other nontaxable distributions and we believe would stand or fall accordingly.

4. COMPUTATION OF ADJUSTED BASIS

Section 113 (b) (1) (B) of the bill provides that the basis shall be adjusted "for exhaustion, wear and tear, obsolescence, amortization and depletion * * * to the extent allowed (but not less than the amount allowable) under this act or prior income tax laws."

This would impose a double standard of test as to the deduction to be made which may work very unfairly against the taxpayer. Much argument can be made for using the amount allowed and much for using the amount allowable, but we can see no sound basis for the double standard.

The amendment as now proposed might permit the bureau to reduce depreciation allowances year by year as they were deducted in computing current income and then, at a later date, if the property were sold, claim that the amounts allowed were less than the depreciation which was actually allowable, and so bring about double taxation.

If it is desired to sustain the principle of finality of decisions once made, then the amount which has been allowed should be used. If, however, it is desired to apply the principle that each year's taxes should be determined on its own appropriate basis, regardless of any errors which may have been made in the past, then the standard of the amount allowable should be used.

But there should not be a confusion of the two, with the certainty of injustice to taxpayers respecting a matter over which they have so little control as that of the commissioner's determinations of what constitute reasonable allowances for depreciation and depletion.

II. We also add our protest as to certain more general features which will likewise affect seriously the mining industry.

5. CONSOLIDATED RETURNS OF CORPORATIONS

We believe the provision of section 141 (c) of the House bill imposing a penalty rate of 1½ per cent for using a consolidated return is unjust and discriminatory. It would place a penalty upon what should be a simple right, based on sound judgment and essential fairness, as in the present law.

The present law and the pending bill limit consolidated returns to cases where there is practically complete ownership (at least 95 per cent of voting stock) by one corporation of others, so that a single financial entity exists which may be taxed accordingly. If a single corporation has numerous branch establishments and is engaged in many different lines of business, its net income considered as a whole would be reported upon a single return and subject to the ordinary corporation tax rate of 13½ per cent as proposed by this bill. Yet if this business were in every way the same excepting only that certain of its divisions or branches represented corporate subsidiaries under the same corporate ownership, the bill would make the tax rate of 15 per cent for reporting their same true net income through a consolidated return.

The present law treats affiliated corporations on an equitable basis that accords with good business practice, is sound and practicable and should be continued.

It is submitted that the consolidated return produces more nearly the true net income of the financial entity represented thereby and that there should be no penalty assessed for the use thereof.

The most that the Treasury estimates as the yield from this penalty tax is $8,000,000. Even if it would yield this relatively small amount, this would not justify all the bother, confusion, and difficulty attendant upon the changes in forms of organization and in intercompany business arrangements that would undoubtedly be made in order to avoid such an increased tax burden if it were imposed.

We agree with the findings of your committee as expressed in reporting the revenue bill of 1928 (May 1, 1928, p. 13) in part as follows:

"That the elimination of the consolidated returns provision will not produce any increase in revenue, will not impose any greater taxes on corporations, and will in all probability permit of tax avoidance to such an extent as to decrease revenues."

6. NET LOSSES

We urge the continuation of the net loss provision of section 117 of the existing law. The law has long recognized that there is a continuity in business such that the amount of gain realized in a single year may not be a true measure of ability to pay, but the real income and real ability to pay is only to be found by taking into account the losses as well as the gains. The pending bill continues to give some recognition to this principle in allowing net losses after 1933 to be deducted in one succeeding year. We believe they should be allowable for two succeeding years, as in the present law; but we particularly protest the proposed elimination of this deduction in the years 1932 and 1933. Businesses which have sustained

heavy losses in prior years are not in the same position as to ability to pay as those which have been earning profits. This should be recognized and the net loss provisions of the present law should be restored to the bill.

7. CORPORATION INCOME TAX RATE

We add our protest to the protests of others against the substantial increase in the corporation rate which is proposed in the House bill.

We respectfully bespeak on behalf of the now sorely oppressed mining industry the fullest consideration of your committee to the points here made the subject of protest. Naturally, there are in this tax bill many other points which we do not welcome, which we wish might be avoided and which we hope in more prosperous times may be eliminated or improved. We have, however, confined this protest to those matters which seem so burdensome or unfair that even under present circumstances we are entitled to ask their revision in the now pending bill.

Respectfully submitted.

THE AMERICAN MINING CONGRESS,
J. F. CALLBREATH, *Secretary.*

A. W. DICKINSON,
Chief Tax Division.

Mr. DICKINSON. I also have some copies of a brief statement or skeleton of this brief which I would like to present for distribution to the committee.

The CHAIRMAN. They can go into the record at this point.

Mr. DICKINSON. Thank you.

The CHAIRMAN. We want that to go into the record.

(Summary of protest of American Mining Congress regarding pending tax revenue bill H. R. 10236, is here printed in the record as follows:)

SUMMARY OF PROTEST OF AMERICAN MINING CONGRESS REGARDING PENDING TAX REVENUE BILL H. R. 10236

1. Eliminate amendment proposed to section 23 (1) which reads as follows:

"In any case in which it is ascertained as a result of development work that the recoverable units are greater or less than the prior estimate thereof, then such prior estimate (but not the basis for depletion) shall be revised and the allowance under this subsection for subsequent taxable years shall be based upon such revised estimate."

2. Restore prior provisions of Section 115 regarding March 1, 1913 distributions. This involves Section 115 (a), (b), (d), and (g); also Section 112 (c) (2).

3. Restore the language of the prior act regarding distribution from discovery depletion, section 115 (d).

4. In section 113 (b) (1) (B) eliminate "(but not less than the amount allowable)," so that the adjustment of basis to be made with respect to depreciation, depletion, etc., will be "to the extent allowed."

Or, if it is considered that the standard should be the amount allowable, then eliminate this parenthesis and change the word "allowed" to "allowable."

5. Consolidated returns of corporations: Eliminate the provision in section 141 (c) for the additional rate of 1½ per cent on consolidated returns.

6. Net losses: Restore the provisions of section 117 to accord with the present law allowing net loss deductions in two succeeding years.

Even if the change should be made to make net losses deductible only in one succeeding year, in any event eliminate the provisions of section 117 (b) which would make this allowance applicable only "after the taxable year 1933", and eliminate the provision of section 115 (d) which provides that a loss for 1930 or 1931 shall "*not*" be allowed as a deduction in computing net loss under this title.

7. Restore corporation income tax rate as nearly as possible to the present 12 per cent rate, instead of the 13½ per cent rate proposed by the bill.

STATEMENT OF WILLIAM S. BENNETT, CHICAGO, ILL.

Mr. BENNETT. Mr. Chairman and gentlemen of the committee, my name is William S. Bennett. I represent the National Lumber Manufacturers Association. My address is 100 West Monroe Street, Chicago, Ill.

While I represent specifically the National Lumber Manufacturers Association and various regional associations of that association, such as the West Coast Lumbermen, the Southern Pine Association, the Southern Pine Manufacturers, the Northern Hemlock and Hardwood, and one or two others, I have conferred on this subject with the officials of the American Mining Congress, and I represent their viewpoint also, so that I am, practically speaking, for all of the natural resource industries.

The subject on which I am speaking is the amendments proposed by the House, section 115 of the existing law, a subject which has been before this committee and always decided the same way, in the revisions of 1916, 1921, and 1928.

A very brief history of the legal situation——

Senator REED. Mr. Bennett, first, let us know what part of the section 115 it is. It is many pages long.

Mr. BENNETT. Yes; I shall ve very glad to do that. There is struck out, after line 11 on page 85, the words "any earnings of profits accumulated"——

Senator REED. In our print section 115 begins on page 19. Do you mean the elision in paragraph (b)?

Mr. BENNETT. I have this print, Senator. This is as it has been referred to this committee.

Senator SHORTRIDGE. As it passed the House and comes to us?

Mr. BENNETT. Yes, sir.

Senator HARRISON. It is section (d), is it not?

Mr. BENNETT. There are several sections.

Senator REED. After line 11 on page 85?

Mr. BENNETT. Yes, sir.

Senator REED. In our print that is line 3, page 96.

Mr. BENNETT. The first is subdivision (b), Senator Harrison.

The CHAIRMAN. Proceed.

Mr. BENNETT. On page 85, on line 11, there has been struck out the following.

> Any earnings or profits accumulated, or increase in value of property accrued, before March 1, 1913, may be distributed exempt from tax, after the earnings and profits accumulated after February 28, 1913, have been distributed, but any such tax free distribution shall be applied against and reduce the basis of the stock provided in section 113.

The crux of the whole matter is right there. On page 69, line 8, in order to carry that out, they have struck out the words "accumulated after February 28, 1913."

Senator REED. Page 94, line 7. They have struck out the 1913 sections?

Mr. BENNETT. They have struck out everything relating to the 1913, and prior, profits.

Senator REED. Now, Mr. Bennett, to get to the point quickly, do you not think the time must come when those accretions prior to 1913 must be disregarded?

Mr. BENNETT. No.

Senator REED. It is 19 years since that time, and that has caused great complexity in the Internal Revenue Bureau, and there is a constant quarrel on between the companies and the natural resource division of the Internal Revenue Bureau, over these administrative features.

Mr. BENNETT. Those quarrels are all over now, Senator. You are referring, Senator, to the 1913 settlements?

Senator REED. Yes.

Mr. BENNETT. They are all settled. This is a proposition to open a new quarrel. Every copper company, every lumber company, every coal company, has had its March 1, 1913, valuations fixed. Now the House proposes to reverse the situation from March 1, 1913, which have been well established, in which stocks have been bought and sold. Now they are in a situation to which the principle of stare decisis is applicable, and to revive that old law, and to go back now to any 1913 date to fix the valuation, or to go back to the date of the original incorporation and fix the cost is now the effort.

I was shown a copy of a letter this morning to Senator Smoot and also to Senator La Follette, by a gentleman from Wisconsin, who was a member of a corporation formed in 1888, which had accumulations on March 1, 1913, consisting of sawmills, land, timber—no cash—and the same thing yet. And if this provision goes through and they make these distributions, partial distributions, the Natural Resource Division has got to go back to 1888 and find out what the original cost was.

This question has been before the Senate, particularly in 1921 and in 1928. In 1921 the work of this committee developed that there were two weaknesses: First, a man might have put in $100,000 in 1900 and had a valuation on March 1, 1913, of $200,000; then in 1918, we will say, he might have sold—or between 1913 and 1918 he might have received dividends out of the accumulations prior to March 1, 1913, of $100,000, and sold his stock for $100,000 and claimed a loss. That was absolutely wrong, and this committee reported out a provision, which was modified on the floor, and it was put in the law then, that under those circumstances a man could not claim a loss.

There was also, at the same time, brought to the attention of the Senate the question as to whether when a man received those tax-free dividends they ought not to be reduced from his basis of cost, and in 1928 that was put into the law.

Now here is the situation: Let us take four mining organizations that are working on the same ore body; one owned by an individual; one owned by a partnership; and two owned by corporations. They are all organized at the same time, 1900, all with the same capital, and all made about the same progress up to March 1, 1913. Now, to-day, they have all had their values fixed by the natural resource division. All right.

Now if this House amendment stands as it is, what can happen to those four different mines? The individual, when he gets his capital and accumulations prior to March 1, 1913, gets it tax exempt, of course. The partnership gets it tax exempt. Corporation No. 1 is willing to quit. It is decided by the Supreme Court of the United States that that is not taxable income of the corporation, so they make a complete distribution to their stockholders of what they have, and that is tax exempt, under the case of Lynch *v.* Terrish.

Now there remains the other corporation. It has built up a town that has an interest in the business. There is another ore body, smaller, and they say to their legal adviser, "Here is what we would like to do: We would like to make a distribution to our stockholders 50 per cent of what we had on the 1st of March, 1913, and keep this business and this town going."

Senator KING. Distribution in kind, or distribution in cash?

Mr. BENNETT. Distribution in cash, just the same as the other people did. The individual distributed his in cash. The partnership distributed its in cash. The corporation that is completely liquidated distributed its in cash. But this corporation under the present law as it has been written in the statute three times by Congress would not have the same right of the other three people I mentioned. If this change stands, their legal adviser would have to say to them, "Well, gentlemen, you can not do that; you have got to quit totally and wind up and abandon your town, and everything else. You can do that and distribute then in cash to your people."

Of course, that is wrong. That is not proper. That is a taking of capital, because the Surpeme Court has decided several times—you referred to it, Senator Smoot, in the 1921 debate; and so did you, Senator King, that what an individual or a corporation had on the 1st of March, 1913, is capital.

But there is just this one little loophole where Congress takes advantage of it and they can tax capital. If a corporation that has the vision and the desire to keep their business going and to keep the industry going and makes a distribution of less than the total and stays in business, they pay a tax.

Senator GORE. You mean the corporation has to wind up and distribute all of its assets in order to save the payment of tax on a distribution?

Mr. BENNETT. Yes; that is it exactly, Senator.

Senator GORE. If they distribute only a part they have to pay a tax?

Mr. BENNETT. They have to pay a tax.

Senator REED. Take the situation of a large corporation, a Utah corporation, a large copper mining corporation, they distribute every three months, and it takes every kind of means to evade the tax. I am the trustee of an estate now that is a subject of constant litigation. It is a cestui que trust, and we are constantly taking the matter up with the Internal Revenue Bureau, and no sooner is the litigation over than you discover that part of what was distributed was capital and that you ought to have held it. The net result of it is, Mr. Bennett, that the mining industry pays less in Federal taxation than almost any other industry we have.

Mr. BENNETT. The mining industry, the lumber industry, and every other natural resource industry pay just as much taxes as any other industry; no more, and no less.

And, Senator, while I am not familiar with the company of which you are the trustee, if this stays in the bill everything you have had settled—and you must have had something settled—as of March 1, 1913, as to your cestui que trust, is wiped out and gone.

Senator SHORTRIDGE. That has been agreed upon, has it not?

Mr. BENNETT. Yes, sir.

Senator HARRISON. March 1, 1913, was fixed because they thought that was right?

Mr. BENNETT. Yes, sir.

Senator HARRISON. And the increase has to pay taxes on it.

Mr. BENNETT. Yes, sir.

Senator HARRISON. And they would not go behind that date.

Mr. BENNETT. No, sir.

Senator HARRISON. They had to fix some date, and they fixed that and would not go behind it. They thought that was right?

Mr. BENNETT. Yes, sir. And to do anything else is to discriminate against every lumber company, every coal company, every copper company, and everything else in the natural resource industry, and even to discriminate in the industry between the members of it. Take the people who have been more or less thoughtless about continuance and have wound up and have distributed their assets, they are tax exempt. Take the people that in the next five years get discouraged and wind up, they are tax exempt. But take the people that want to continue and build up the business of this country and keep it going, but to get back to the place where they were on March 1, 1913, any of the distributions they make have to be out of that situation, and they have to pay a surtax which, under the House bill, runs up as high as 40 per cent.

And so it has two things that I want to call attention to, first—and, Senator Reed, no one fought harder than you against it, because it is an exaction from capital, and this is an exaction from capital, and the only exaction from capital that is attempted to be made. And it is a discrimination both as between natural resource industries and other industries, and among the natural resource industries themselves.

Here is a gentleman sitting in this room, a friend of mine, connected with several organizations of this kind, and they had one they came to a time they wanted to get it liquidated. It liquidated and distributed its entire assets tax free. The others kept the business going. Now, if the present law remains unchanged, those stockholders do not pay a tax on the capital. If you change it, you put a capital exaction on them which, if you have income enough, may run up to 40 per cent.

Senator HARRISON. Mr. Bennett, let me see if I get this straight from you. Suppose in 1900 two people in my State went into an organization——

Senator KING. You mean 1913?

Senator HARRISON. No; I mean in 1900. Two people organized corporations, each with $100,000. One of them left it in there, and let it run along for a time, and then liquidated the corporation, and distributed the cash to its stockholders. The other made money, but declared no dividends, and has now practically nothing left. You tell me that if we leave this this way you can go back and tax the concern that left the money in the concern, and we can not tax the one that paid all the money out?

Mr. BENNETT. I tell you that exactly, Senator Harrison. It is an attempt to exercise stark brute power as against equity.

The CHAIRMAN. Mr. Bennett, your time has expired.

Mr. BENNETT. I want to say, Mr. Chairman, that Mr. Compton, who was to appear will not be here to be heard, but will file a brief.

The CHAIRMAN. Very well.

Senator GORE. You mentioned one or two authorities.

Mr. BENNETT. You will find the principle enunciated in four cases, Southern Pacific *v.* Lowe and Lynch *v.* Terriah. Those are the two cases that hold that what a part had on the first of March, 1913, in capital they could have distributed tax exempt.

Senator CONNALLY. What are the references?

Senator GORE. That is your contention?

Mr. BENNETT. Yes.

Senator GORE. That it was frozen in there at that time.

Mr. BENNETT. Yes, sir. These references are in 247 U. S. The four cases are all in 247 U. S. The other two cases say that Congress has the stark power, and those are Lynch *v.* Horndeeck, and Peabody *v.* Erwin, all are in the same volume.

The CHAIRMAN. All right, Mr. Bennett.

Senator REED. Before you go, Mr. Bennett, I think I should correct the statement I made as to the proportionate taxes paid by the quarry and mining industry. I have just looked at a statement for 1929, and I think you are correct. You paid your full share that year.

Mr. BENNETT. Thank you, Senator. We always pay.

The CHAIRMAN. Did I understand you, Mr. Bennett, to say that Mr. Wilson Compton would not be here?

Mr. BENNETT. Yes: Mr. Chairman.

(The brief submitted by Mr. Bennett is here printed in full.)

MEMORANDUM BY THE NATIONAL LUMBER MANUFACTURERS ASSOCIATION AND ASSOCIATED AMERICAN FORESTS PRODUCTS INDUSTRIES

In opposition to the amendment to section 115 of the revenue bill of 1928 which propose to tax distributions made by corporations to their shareholders from capital and surplus accumulated before March 1, 1913

In section 115 of H. R. 10236 (the revenue bill of 1932), as passed by the House of Representatives, section 115 has been amended by striking from subdivision (b) thereof the following:

"Any earnings or profits accumulated, or increase in value of property accrued before March 1, 1913, may be distributed exempt from tax, after the earnings and profits accumulated after February 28, 1913, have been distributed, but any such tax-free distribution shall be applied against and reduce the basis of the stock provided in section 113."

and by making corresponding changes in other subdivisions of the section and in section 112. The effect of this amendment is to tax capital and to do so in a manner both arbitrary and highly discriminatory.

PROBABLE REVENUE DURING THE FISCAL YEAR 1933 INCONSEQUENTIAL

There is no probability of any substantial amount of revenue to be derived from this amendment during the fiscal year 1933. As will be shown later, this tax will fall practically, almost exclusively, on the owners of shares in natural resource corporations, such as mining and lumber companies. The deplorable financial condition of mining, such for instance as copper and coal, and of lumber is notorious. Practically all of these companies are struggling to maintain cash balances and necessary working capital and none of them would think of declaring dividends on property accumulated prior to March 1, 1913. The tax does not fall on the corporation but on the stockholder and then only when a dividend is declared. The chief stockholders who might be called on to pay any tax during the fiscal year 1933 would be those belonging to that unfortunate class who own stock in companies which are in receivership or in bankruptcy and to whom partial distributions out of capital accumulated prior to March 1, 1913, might be made during that period. The number of these companies although as yet few is increasing; and we do not believe that the Congress intends to pass, even for the emergency, an act which makes exactions from the capital of unfortunate

shareholders who own stock in companies in receivership or bankruptcy and thus have already suffered large losses.

The amendment does not propose to tax anything that was earned subsequent to March 1, 1913, since all such earnings are already taxable under existing law both when earned by the corporation and when distributed to the stockholders.

LEGISLATIVE HISTORY

Congress has always, in its legislation, at least in every act since the 1913 act, endeavored to draw a sharp line between property accumulated prior to March 1, 1913, and property accumulated after March 1, 1913. It has recognized that property accumulated prior to March 1, 1913, is capital and in this position it has been upheld by the Supreme Court of the United States, the two leading decisions being Lynch *v.* Turrish, 247 U. S. 221, and Southern Pacific Co. *v.* Lowe, 247 U. S. 330, the court stating in the latter case:

"We are bound to consider accumulations that accrued to a corporation prior to January 1, 1913, as being capital, not income, for the purposes of the act. And we perceive no adequate ground for a distinction, in this regard, between an accumulation of surplus earnings, and the increment due to an appreciation in value of the assets of the taxpayer."

The date January 1, 1913, appears in this quotation because it was the date appearing on the books of the Southern Pacific Co. But the reasoning is based on the broad proposition that the Congress had no right, prior to the adoption of the sixteenth amendment, to levy income taxes at all except in proportion to population, and therefore everything that had been accumulated prior to the adoption of the amendment was capital and not income.

Between 1913 and 1916 the question was raised that there was a distinction between a corporation and the stockholders and the dividends ordered after March 1, 1913, were taxable to the stockholder, even though from capital accumulations prior to March 1, 1913. As soon as this contention was made the Congress promptly met it in the 1916 act and amended the definition of dividends so as to read as follows:

"*Provided*, That the term 'dividends' as used in this title shall be held to mean any distribution made or ordered to be made by a corporation, joint-stock company, association, or insurance company, out of its earnings or profits accrued since March 1, 1913."

This definition in substance has been continued in the acts of 1917, 1918, 1921, 1924, 1926, and 1928. An attempt was made in the Senate in 1921 to change this so as to make taxable dividends to stockholders out of capital in surplus earned or accrued before March 1, 1913, and the House in 1928 inserted such an amendment. The proposed amendment in 1921 was defeated on the floor of the Senate by a vote of 56 to 12, and in 1928, the Finance Committee of the Senate refused to concur in the House amendment, was upheld unanimously by the Senate, and later in conference.

It is fair to say that in 1921 the work of the Finance Committee and the discussions on the floor developed two situations in connection with such dividends, both of which merited study. The first was, to use an illustration, that a man might have invested $100 in stock of a corporation prior to March 1, 1913; that this investment might have increased until on March 1, 1913, the value of the stock was $200; that subsequent to March 1, 1913, the man might have received $100 in tax exempt dividends under the 1916 and succeeding acts and then sold his stock for $100 and attempted to claim a loss of $100 deductible from other income. It is not on record that any stockholder ever attempted to do this, but, at any rate, as soon as the matter was brought to the attention of the Senate an amendment was inserted in the 1921 act, which has been carried forward in substance in all succeeding acts, in those provisions relating to the basis of cost, which prevents any such claim.

The other question was whether the amount of tax exempt dividends received by a stockholder should be deducted from the basis of the stock. This question is not free from doubt. It can be argued with great force that, while it is clearly wrong for a stockholder to claim a loss under such circumstances, to compel him to deduct the amount of his tax exempt dividends from his basis of cost of stock will in some circumstances, result in taxing capital owned by him prior to March 1, 1913. But, be that as it may, the doubt has been resolved in favor of the Government. An amendment was adopted in the 1924 act which is carried in the 1928 act in the following language: "But any such tax free distribution shall be applied against and reduce the basis of the stock provided in section 113."

If constitutional authority exists in the decisions for the change now proposed, it is found in the cases of Lynch v. Hornby (247 U. S. 339), and Peabody v. Eisner, (247 U. S. 347). These were decisions under the 1913 act, made after there had been written into the acts of 1916 and 1917, the present provisions making dividends from accumulations from property prior to March 1, 1913, tax-exempt. Whether under the much higher taxes now in effect, and with evidence of the discriminations which would result before it, the court would adhere to these decisions is open to question. The fact is that in Lynch against Hornby the court said: "We repeat that under the 1913 act dividends declared and paid in the ordinary course by a corporation to its stockholders after March 1, 1913, whether from current earnings or from a surplus accumulated prior to that date, were taxable as income to the stockholder." If this confers constitutional authority on the Congress to adopt the proposed change, it is sufficient to say that the Congress recognizing what the opinion in Lynch against Hornby refers to as "the equity of stockholders granted in the 1916 act," has declined to make this capital exaction even within the narrow limits set on the same day by the same court in the cases of Lynch v. Turrish and Southern Pacific Co. v. Lowe.

PRINCIPAL OBJECTIONS

The outstanding faults of the proposed change are:

(a) It is a tax on capital.

(b) It discriminates between stockholders of the same kinds of corporations.

(c) It discriminates as between natural resource corporations and all other corporations.

(d) It discriminates between stockholders in corporations who have been receiving tax exepmt dividends since 1916 and stockholders in corporations which have kept their tax-exempt capital invested for the benefit of industry.

(e) It would impose upon the natural resources division of the imcome tax bureau of the Treasury the difficult task of ascertaining, as to the stockholders discriminated against, the original cost of their stock in addition to the March 1, 1913, value which already has been ascertained and established.

The facts are as follows:

IT TAXES CAPITAL

(a) It is a levy on capital. There is no doubt as to this. The Supreme Cour has decided in the cases cited that investments, earnings, accumulations, and increase in value of property prior to March 1, 1913, are all capital. What this amendment seeks to do is to distinguish between the corporation, which can not be taxed because of any earnings or accumulations prior to March 1, 1913, and the stockholders of the corporation. This is highly technical. The stockholders own the corporations as was said by Secretary Mills before the Finance Committee of the Senate on April 6:

"In dealing with the rate of the corporation income tax, it is to be borne in mind that the income which we refer to as the income of the corporation is in reality the income of a group of individual stockholders."

If the power, under Lynch against Hornby, exists to tax the stockholder upon an accumulation of capital, upon which the corporation itself can not be taxed, it is a mere stark, brutal, power based on a merely technical differentiation, and the Congress has properly repeatedly and emphatically refused heretofore to exercise the power under its oft-declared policy of refraining from taxing as income any property which had been accumulated by anyone prior to March 1, 1913.

IT DISCRIMINATES BETWEEN STOCKHOLDERS

(b) It discriminates between stockholders of the same kinds of corporations. Under the law as it stands at present if an individual, a partnership, and a corporation own property accumulated prior to March 1, 1913, all three can distribute that property as capital and as tax exempt. If the amendment made by the House is agreed to, the situation is changed. The individual can still retain his property tax exempt; the partnership can distributo its property tax exempt; but the same business if in corporate form can not. Assume two corporations, either mining or lumber, each of which acquired its property prior to March 1, 1913, and had increases in value of property and in earnings which on March 1, 1913, had doubled the value of its property. Both of the corporations have now come to a point where distribution can be made of the accumulations prior to March 1, 1913. One corporation decides to retire from business. It goes through a complete liquidation and distributes its property, either in cash or in kind, to

its stockholders pro rata. The stockholders can not be taxed. (Lynch *v.* Turrish.) The other corporation realizing possibly that it owes a duty to the community, knowing that it can acquire additional ore or standing timber, as the case may be, decides that it will make a partial distribution to its stockholders, say 25 per cent, either in cash or in kind, and devote the remaining 75 per cent to acquiring additional ore or timber. The stockholders who receive this 25 per cent distribution of capital accumulated prior to March 1, 1913, pay a surtax on it which under the terms of the bill now before the Congress may run as high as 65 per cent. This is clearly a discrimination as between individuals, partners and partnerships, and stockholders in completely liquidated corporations on the one hand, and on the other, stockholders in corporations which for some reason or other desire to continue in business and be a benefit to the community. Why, in times like these, when every effort should be made to encourage industry, should a statute be adopted which places a premium on complete liquidation and retirement from business and discriminates against those who are willing to continue in business?

IT DISCRIMINATES BETWEEN INDUSTRIES

(*c*) It discriminates as between natural resource corporations and all other corporations. While, in terms, this amendment would be applicable to all property owned by corporations prior to March 1, 1913, when distributed to stockholders in dividends, as a practical matter the only ones to be substantially affected are some stockholders in some natural resource corporations. The reason for this is that banks, railroads, and other large corporations plan to expand and continue and do not distribute the property they owned prior to March 1, 1913, unless they meet with severe reverses and distributions are made by the courts or through forced sales. Farmers who owned their farms prior to March 1, 1913, are usually not incorporated and, therefore, the proposed amendment does not affect them.

On the other hand, mining and lumbering operations are usually of considerable size and require the corporate form, and as ore and bodies of standing timber are inevitably exhausted, there comes a time when distribution must be made of the accumulations prior to March 1, 1913. As has been shown, if the corporation is fortunate enough to be so situated as to be able to make a complete distribution, its stockholders receive the distribution tax exempt. If, on the other hand, through dire misfortune they became insolvent and their assets are distributed in partial dividends through the courts; or if they desire to acquire new properties and continue in business, making only partial distributions out of property which they owned on March 1, 1913, or if for any reason they are compelled to make partial distributions out of accumulations prior to March 1, 1913, then the stockholders receiving distributions are taxed. This, of course, is inexcusable discrimination as between some natural resource industries on the one hand and the remaining natural resource and all other industries on the other.

IT DISCRIMINATES AGAINST CONTINUING BUSINESS

(*d*) It discriminates between stockholders in corporations who have been receiving tax-exempt dividends since 1913 and stockholders in corporations which have kept their tax-exempt capital invested for the benefit of industry. The proposed amendment discriminates against the carefully planned, well managed corporation whose officers have had a sense of responsibility to the community, and in favor of the corporation which has not. Take two corporations, A and B, both organized in 1900 and each in existence in 1931 with a March 1, 1913, accumulated capital: Corporation A has exhausted its ore body or cut out its timber. It has made no effort to remain in business for the benefit of the community or of the country. It has completely liquidated and its stockholders have received their distributions tax exempt. Corporation B years ago on the other hand made plans to continue. In 1930 it acquired the additional ore or timber necessary to continue its operation in the interest of its employees, its shareholders, the industry, and the country. But its expansion has made it inevitable that because of the size and the different dates of acquisition of its raw material, it will be difficult indefinitely to suspend distribution of its property acquired prior to March 1, 1913, or until a time when there can be complete liquidation. So in a few years it makes distributions out of its March 1, 1913, accumulations and its stockholders pay taxes up to 65 per cent.

Take another illustration: Corporations which exhausted their ore bodies or timber between 1916 and 1931 and made no attempt to acquire additional raw materials, liquidated and made complete distributions to their stockholders who received them tax exempt. Similar corporations relying on the statute which has received the sanction of Congress seven times, thrice against attempts to amend it, find the law, which has become in effect a rule of property, repealed and their stockholders subjected, because of the plans of the corporation for continuance, to heavy tax exactions on their capital.

It should be borne in mind that during these 16 years stocks in natural resource corporations have been purchased with the knowledge that the March 1, 1913, capital could be distributed tax exempt. Wills have been made and those making them have died and rights have been fixed, all with the same knowledge. Courts recognize this situation in their holdings that a long-continued practice either of legislation or of judicial decisions creates what is known as a "rule-of property" and the rule of property in connection with capital acquired prior to March 1, 1913, clearly is that it is entitled to be distributed tax exempt if it is owned by an individual, by a partnership, by a completely liquidating corporation, or by a corporation which through legal necessity or otherwise is compelled to make partial distribution.

IT IMPOSES DIFFICULT AND UNNECESSARY ADMINISTRATIVE BURDENS

(*e*) It would impose upon the natural resources division of the Income Tax Bureau of the Treasury the task of ascertaining as to the stockholders discriminated against, the original cost of their stock in addition to the March 1, 1913, value already ascertained and established. There is no escaping the fact that a great deal of the work that has been done by the natural resources division of the Income Tax Bureau would have to be done over again if this amendment were allowed to stand. Lynch *v.* Hornby does not allow actual investments prior to March 1, 1913, when distributed to stockholders as dividends, to be taxed. The decision is limited to distributions "from a surplus accumulated prior to that date." (March 1, 1913.)

There are many mining corporations which have been in existence for 40 years or more. There are lumber corporations which have been in existence for a similar length of time, and one is known to have been in existence for 80 years. Suppose a stockholder in such a corporation were to receive a distribution from accumulations prior to March 1, 1913, which was not the result of a complete liquidation and therefore taxable under the proposed amendment. Two questions would at once arise: First, was this distribution solely out of surplus second, if not, what was its original cost? Owing to the lapse of time how could this be ascertained? In this connection another discriminatiln arises, that is: Between the stockholder who has reently bought his stock and who sells it and whose gain or loss is based entirely on cost, while the purchaser who thought he was getting tax-exempt property finds that he has not, and the other class of stockholder who has stood by the ship, held his stock kept his investment in the natural-resource corporation only to find that the reward of his stewardship is that he is compelled to pay taxes on the difference between his original investment, even if made 50 years ago, and the March 1, 1913, increased value. Of course, all classes of stockholders have to pay a tax on earnings and accumulations since March 1, 1913.

SUBMITTAL

For these reasons, always recognized as sound and conclusive by this committee, and by the Senate, when brought to its attention, the amendments suggested by the House of sections 115 and 112 should be disagreed to and the law restored to the situation in which it has continued in substance since and including the 1916 act.

Respectfully submitted.

WILSON COMPTON,
Secretary and Manager National Lumber Manufacturers Association and Associated American Forest Products Industries.
WILLIAM S. BENNET,
Of Counsel.

STATEMENT OF R. C. FULBRIGHT, HOUSTON, TEX., AMERICAN SULPHUR ROYALTY CO., APPEARING ON BEHALF OF THE OWNERS OF VARIOUS SULPHUR PROPERTIES IN TEXAS

Mr. FULBRIGHT. Gentlemen of the committee, I appear here in behalf of the owners of various sulphur properties located in the State of Texas, representing a substantial portion of the production of sulphur.

Senator BINGHAM. May we get the section to which you are referring?

Mr. FULBRIGHT. I will give it to you in just a second, Senator. I want to refer to Judge Bennett's statement first. I also have been for some time the general counsel for the Southern Pine Association. Both the sulphur owners that I represent and the Southern Pine Association are interested in the matter presented to you by Judge Bennett with respect to the restoration to section 115 of the language which was stricken out by the House, although it had not been recommended to be stricken when the Ways and Means Committee made its report.

Senator CONNALLY. That was stricken out on the floor, was it not? An amendment from the floor?

Mr. FULBRIGHT. Well, I think there was a subcommittee acted on it. It came up after the House had rejected the sales tax and when various and sundry devices were being offered to bridge the chasm. But it was never the subject of any hearings in the Ways and Means Committee, nor did the taxpayers have any idea that such action would be taken.

I wanted to add this to what Judge Bennett said. In 1928, gentlemen, the House committee in reporting its bill did strike out this language. But they did so upon the following assumption. And I refer right now to House Report No. 2 of the Seventieth Congress, first session, at page 20, where the House committee said:

> There appears to be no reason for continuing this exemption indefinitely. Over 14 years have elapsed since March 1, 1913, and most corporations have distributed the surplus accumulated by them prior to March 1, 1913.

They also said that in the interest of simplifying the matter they were striking out the provision.

It came over to the Senate, and the Senate made an investigation and restored the language and the House receded. This affects all natural resource industries that have not exhausted their supplies that they had on hand in 1913.

I have some sympathy with the suggestion made by the Senator from Pennsylvania about the fact that we need to simplify these problems of depletion. I have been connected with the subject of depletion in various and sundry ways before the commissioner and otherwise for many years. In the case of the Calumet and Arizona, for example, the Senator is of course aware that their March 1, 1913, values have been fixed. But they have many properties. For example, the Campbell ore body was developed a few years ago. They had to fix the value of that ore body. And since they were wasting their capital they should be permitted to return that capital as they retired it. I think that is only equitable.

We have many lumber companies, close corporations and groups of individuals in the South, who for many years have had timber

resources, holding them on, paying taxes and interest on them, protecting them from fire, protecting the natural resources, as we desire them to do, and this would simply put a penalty on them and let go scot-free the man who has used up his resources and let go already. It is certainly unfair to the timber industries to put that language in. I just wanted to add that to what Judge Bennett had to say about it.

I now wish to direct your attention, gentlemen, to section 23 (1) at page 24 of H. R. 10236. On the bottom line of page 24 the following sentence occurs, which was interpolated in like manner in the House after the Ways and Means Committee had submitted its bill, and which showed no such change. The subject, by the way, is "Depletion." Depletion of mines and mineral properties. The bottom of page 24.

Senator SHORTRIDGE. Read now the language which was added to it.

Mr. FULBRIGHT. The language which was added.

Senator LA FOLLETTE. Page 27.

Mr. FULBRIGHT. No; at the bottom of page 24.

Senator LA FOLLETTE. That is a different print.

Mr. FULBRIGHT. I beg your pardon.

Senator KING. I wish the witnesses who come before us would get the print that we have, so that we could follow.

Mr. FULBRIGHT. That was my error. I beg your pardon.

Senator KING. Oh, no.

The CHAIRMAN. All of them have done it so far.

Mr. FULBRIGHT. The second sentence in section 23 (1) was interpolated by the House, and reads as follows:

> In any case in which it is ascertained as a result of development work that the recoverable units are greater or less than the prior estimate thereof, then such prior estimate (but not the basis for depletion) shall be revised and the allowance under this subsection for subsequent taxable years shall be based upon such revised estimate.

Now, gentlemen, that means simply that where the Commissioner of Internal Revenue has made an erroneous determination of the property on hand on March 1, 1913, that he may revise as to the amount of the property, but give no consideration to the value of the additional property. And I want to illustrate that.

Senator KING. Is it not intended, though, in a word, to mean this, that if a new vein is discovered of very great value, which was not taken into account when the original value of the property was fixed in 1913, that the Government may appraise that additional property and consider that in determining the question of revenue?

Mr. FULBRIGHT. Well, the principal effect of this that I complain of—as a matter of fact the Government has always followed the practice of doing that very thing, Senator, and there is nothing in the law that keeps them from doing that to-day, but the provision of this is that they shall not change the basis for depletion. For example, on March 1, 1913, you had a piece of mineral property in which the surveys indicated 2,000,000 tons of ore. The Government appraised that, but they estimated only 1,000,000 tons of ore. Now, if the Government discovers that it has made a mistake in the matter it may correct it under this amendment by taking the unexpired depletion and spreading it over pro rata the 2,000,000 tons, but not give you any value whatever for the additional million tons that they overlooked.

I will illustrate it, gentlemen, by a concrete case. For quite a few years I have been counsel for the American Sulphur Royalty Co., of Texas. They owned the first sulphur deposit developed in the State of Texas. I handled the depletion matters for that company. We came up here during the war time to get the March 1, 1913, value on our properties. Before March 1, 1913, the company had spent several hundred thousand dollars in thoroughly testing out and ascertaining that property. Our engineering estimates showed the presence of 17,000,000 tons of sulphur. The estimates as to the part of it that would be recoverable were that it would be 50 per cent recoverable. The estimates ranged from 40 per cent to 50 per cent recoverability. We made our claim for a March 1, 1913, value based on a 50 per cent recovery. During the course of the negotiations we agreed that if they would use the minimum of 40 per cent and give us the 6,800,000 tons, that would be perfectly agreeable to us. It, as I say, was during the war times, and we were trying to get things through in a pretty big hurry, and the Government had sent an Army engineer down there to estimate the amount of sulphur. That estimate was 3,400,000 tons, or only 50 per cent of the amount that under our minimum estimate we claimed. So they gave us that. As a matter of fact, we told them in the course of the negotiations that if they would give us 5,000,000 tons we would sign an agreement. We never signed any agreement, but we went ahead and took what they gave us, and went on that basis.

Now, in 1927 the Government's engineers come along and examine this property and say that there should be 1,500,000 tons added to that, making it about 5,000,000 tons, which, by the way, was the figure we wanted to agree on originally. But they did not give us any value for that. They simply took the unexpired depletion that they had given us and spread it over 5,000,000 units instead of 3,500,000 units, you see, giving us no value whatsoever for that. We protested that. When we protested it they simply canceled the finding of the engineer that there was additional sulphur there, and there we stand to-day.

Now, the purpose of this amendment is to legalize their error. That is all the purpose it is, to legalize the error made by the commissioner, so that they may spread it over the additional amount, when they find the mistake, but give the taxpayer no value whatsoever for it.

The contention on the part of the Government is that under the existing law they may so distribute it, but we are not going to argue the existing law. We simply object at this time to going into this technical subject and putting in a provision which will have the effect of legalizing the action of the Government where it has made an error. We think that if a man is to be given his March 1, 1913, value he should be given that value. And, besides, there are many cases where the estimates have been substantially correct. On the whole, though, gentlemen, the Government has been very conservative in estimating the contents of these properties as of March 1, 1913, and there are probably a substantial number of cases where similar mistakes have occurred because of their desire to be ultraconservative at the outset.

Senator KING. That claim might neutralize your claim of allowance of depletion altogether, might it not?

Mr. FULBRIGHT. Oh, yes.

Now, before I leave I want to say that this subject of depletion is technical. It is a very difficult subject. I doubt the wisdom of undertaking to revise the laws on depletion at a time when you are trying to get a bill through in a short time. I think there are some criticisms that can be made and some amendments that could be made in the law, but you are going into a subject upon which there are numerous mining interests that ought to be heard, and it ought to be gone into thoroughly.

The CHAIRMAN. Let me ask you: At the time the Government finally determined there were 3,000,000 tons reserve, had you any actual information as to whether there were 5,000,000 tons, or was that just a mere estimate that the Government made and also that you made?

Mr. FULBRIGHT. Senator, we spent several hundred thousand dollars on this. We had down numerous wells. We had logs from all of these wells. We had the best mining engineers on sulphur in the world consulted in that case, and we had definitely ascertained the location of the ore body and that part of the ore body that was commercial ore, and we could make the computation from it that was fairly accurate. Subsequent years have borne us out in it. The ore body existed just exactly where we had located it by these drillings. You do the same thing in every mining industry. The Calumet and Arizona does the same thing, as I happen to know.

Senator KING. You had no faults in the ground?

Mr. FULBRIGHT. No, Senator; the sulphur is taken out a good deal like oil.

Senator KING. Yes; I know.

Mr. FULBRIGHT. Yes; there were faults, but none that affected this particular finding, as I recall. Sometimes that becomes very important in mining.

Senator KING. But none that drained away the liquid sulphur content?

Mr. FULBRIGHT. No.

Senator REED. Mr. Fulbright, what have you to say to the change that is made by the House in section 114 where sulphur is put in with oil and gas under the 27½ per cent provision?

Mr. FULBRIGHT. Senator, that was put in at the request of the operating companies. I understand it would greatly simplify the problems of depletion of the operating companies. So far as we are concerned it would not make any difference to us.

Senator REED. On your royalties.

Mr. FULBRIGHT. And I am informed by the largest one of the companies that it would give them a lower rate of depletion than they now pay. I do not know the facts. But we have no quarrel with that. That would simplify their own problem, but does not affect ours. We had a March 1, 1913 value there. We had our properties on March 1, 1913, Senator.

Senator REED. I see.

Mr. FULBRIGHT. Before I leave I just wish to very briefly indorse two or three things that the Secretary of the Treasury has to say. One is with respect to taking out bonds from the net loss provisions where you restrict the losses to be taken on stocks and bonds to the gains on those transactions, for the simple reason that bonds are

held as investments. You can not buy them on margin and speculate on them like you do stock. And we wish to indorse what the Secretary of the Treasury has to say on that. It refers to the provisions of this same section from subdivisions (r) to (v) that refer to the word "bonds."

I also have made a computation here. You may have it. The Secretary of the Treasury referred to the discrimination involved when you apply the normal income tax on dividends of a corporation. I have here a set-up of a corporation making $100,000 taxable income owned by four stockholders equally in a partnership with the same taxable income owned by four stockholders equally.

Senator GORE. Four partners?

Mr. FULBRIGHT. Four partners equally. Under this bill, gentlemen, each individual partner would pay $1,430 normal tax and $700 surtax, or $2,130. But if it were a corporation and the earnings were distributed each individual would pay and bear $3,375 corporation tax and the same amount of other tax. Or he would be paying $5,027 instead of $2,100. In the one case, in the case of the partnership, they would pay 8½ per cent of the income to the Government. In the other they would pay over 20 per cent of their income.

The CHAIRMAN. Put the whole statement in the record.

Mr. FULBRIGHT. I will be very glad to do that, Senator.

Also, I wanted to indorse what the Secretary of the Treasury had to say about the affiliated corporations being penalized because so many of them have for years carried on their business as one concern. Under the provisions to-day as to affiliations the Government permits affiliated companies to report consolidated returns. Now it will only permit them to depart from that practice for good cause shown. But it requires them to follow a consistent practice. It is of great advantage to the taxpayers usually to report as consolidated tax returns for the reason that they avoid all of the disputes over intercompany transactions. When you make separate reports of subsidiaries you have almost interminable disputes with the department over whether a certain transaction should properly go to one company or to the other, or contentions that income or deductions should be properly prorated among the constituent companies. All of those questions give rise to a great deal of controversy. And we avoid it when we file affiliated returns, consolidated returns, and we do not feel that we should be penalized when we do that.

I thank you, gentlemen.

May I file just a brief memorandum, Mr. Chairman?

The CHAIRMAN. We would like you to file whatever briefs you want to file.

Mr. FULBRIGHT. Thank you. I would like to put this memorandum in the record.

(The memorandum presented by Mr. Fulbright is here printed in the record, in full, as follows:)

MEMORANDUM PRESENTED BY R. C. FULBRIGHT

To the Chairman and Members of the Committee on Finance:

This brief is submitted in behalf of the Southern Pine Association, a trade organization made up of owners of timber resources in the South and manufacturers of lumber from such resources and also in behalf of owners of sulphur properties located in the State of Texas representing a substantial proportion of the production of sulphur in the United States.

In behalf of these interests protest is made against changes which have been made in subdivisions (b), (d), and (g) of section 115, and in subdivision (1) of section 23 of the revenue act of 1928. These changes in the existing law affect peculiarly the natural-resource industries of the United States and particularly your petitioners. Briefly stated the changes in section 115 would have the effect of assessing income taxes upon distributions of earnings or profits and increase in value of property accrued prior to March 1, 1913, and the changes in section 23 (1) would prohibit taxpayers from getting the benefit of the basic value of their properties as of March 1, 1913. These changes will be explained more in detail as the respective subjects are discussed.

Neither of the changes was recommended by the Secretary of Treasury in his presentation of recommendations to Congress and neither was recommended by the Ways and Means Committee of the House when it reported out H. R. 10236 on the Union Calendar on March 8, 1932. No hearings were held by the Ways and Means Committee upon either subject.

I. PROPOSAL TO TAX EARNINGS OR PROFITS ACCUMULATED OR INCREASE IN VALUE OF PROPERTY ACCRUED BEFORE MARCH 1, 1913

Section 115 (b), (d), (g)

There is appended hereto Exhibit A, which shows the language of section 115 of the revenue act of 1928, with lines drawn through the provisions of such section which have been eliminated by the House in its consideration of H. R. 10236.

The first income tax act passed under the sixteenth amendment was the act of October, 1913, which undertook to tax earnings and profits accruing on and after March 1, 1913, which was approximately the effective date of the constitutional amendment. The next act was that of 1916, which was the first act definitely to recognize the principle embodied in the language now sought to be eliminated. From the beginning until the present the law has not undertaken to tax income of an individual or corporation which was realized prior to March 1, 1913, or increase in value of property where the increase took place prior to that date. There is a distinction, however, between taxing a distribution made by a corporation to its stockholders and the realization of income by the corporation, and yet the same policy has been followed since 1916 with respect to distributions for the reason that in substance the distribution of property acquired prior to March 1, 1913 by a corporation gives to the stockholders directly that which they enjoyed indirectly as stockholders on that date.

In this connection the position taken by the Secretary of the Treasury before this committee on April 6 is significant in which he stated "It is to be borne in mind that the income which we refer to as the income of a corporation is in reality the income of a group of individual stockholders." Again in his statement the Secretary referred to the concealed double taxation involved in discontinuing the exemption of dividends from normal taxes of individuals receiving such dividends. The policy of the income tax law through the war-time period of higher taxation was at all times to exempt the realization of profit or income which had accrued or accumulated prior to March 1, 1913, either by an individual, a corporation, or a stockholder receiving a distribution through a corporation. The law has also further protected the Government by requiring that cumulated earnings since March 1, 1913, be first exhausted before the stockholders could avail themselves of the benefit of the exemption. The effect of this has been to keep intact surpluses which existed on March 1, 1913.

Your petitioners own properties upon which the value was definitely ascertained as of March 1, 1913. The mere fact that this ownership was in the form of a corporation should not render your petitioners subject to additional taxes now if a liquidation should be made for the simple reason that it would create a discrimination as between them and taxpayers similarly situated.

The following concrete illustration will serve as an example. Let us suppose that three individuals A, B, and C, each purchased a tract of timberlands in 1900 for the sum of $50,000, and that each tract was reasonably worth that amount when purchased. Let us further assume that because of the building of railroads into the timbered sections of the Southwest the values of these timberlands had increased until March 1, 1913, each tract was worth $150,000.

Let us suppose that A has continued ever since then to hold his tract of timber and that in 1932 after the passage of the proposed law, he sells his timber for $150,000 net. In this case he would not be and could not be made subject to income taxes, as he has realized no additional income since March 1, 1913. This

was specifically decided by the Supreme Court in the case of Lynch *v.* Turrish (247 U. S. 221; 62 L. ed. 1087), which dealt with a similar situation.

Let us assume that B on or before March 1, 1913, formed a corporation with $150,000 capital and transferred to the corporation the timber for its stock. If this corporation should sell the timber in 1932 for $150,000 and the proceeds be distributed to B, the latter would also be free from any liability to tax. This was also decided by the Supreme Court in the authority above cited.

On the other hand, let us suppose that C formed a corporation for $50,000, which represented the original cost of the timber, and the corporation had continued since the purchase of the timber and owned and held the same. Now, if this corporation should sell in 1932 after the proposed law became effective, and distribute the proceeds, C would have to pay taxes on $100,000 net income. At the rates proposed in the House bill he would have to pay $27,160 taxes. Numerous illustrations could be given to show the manifest injustice of such a proposal. The Treasury Department has never sought such a change, and although there was a change of this character contained in the House bill passed in 1928 the report of the Ways and Means Committee set forth that this was done because it was the opinion of the House committee that "most corporations have distributed the surplus accumulated by them prior to March 1, 1913." The action had been taken without hearings, and the committee stated that it was merely done in an effort to simplify the language of the act. The Senate committee, however, investigated the matter and found that the change would substantially affect the natural resource industries and create discriminations such as are here cited. Accordingly the Committee on Finance restored the language and the House conferees accepted the restoration.

On Friday, April 8, Senator Broussard, of Louisiana, and Senator Steiwer, of Oregon, offered an amendment to restore the language stricken out by the House from section 115, and your petitioners respectfully request that the Finance Committee accept this amendment.

There are set forth in Appendix B, attached hereto, excerpts from decision of the Supreme Court in the case of Lynch *v.* Turrish, and other authorities are there cited.

II. HOUSE AMENDMENT TO SECTION 23 (l)

Section 23 (l) provides the general statutory rule for depletion of mineral properties and timber. The language of the present law is substantially the same as that which has been in effect since 1918. The Secretary of the Treasury did not recommend any change in this in his report to the Ways and Means Committee, nor did the committee suggest any change in the bill reported out by the committee last month. In the closing days of the consideration of the measure, however, the House passed an amendment inserting the following sentence in section 23 (l):

"In any case in which it is ascertained as a result of development work that the recoverable units are greater or less than the prior estimate thereof, then such prior estimate (but not the basis for depletion) shall be revised and the allowance under this subsection for subsequent taxable years shall be based upon such revised estimate." (See p. 24 of H. R. 10236.)

The effect of the above amendment is to deny to taxpayers the value of their property on March 1, 1913, as a basis for depletion where the Government has admittedly made an erroneous determination thereof. For example, the Government valued a number of mining properties in 1918 and 1919 under the stress of war-time conditions, when only hasty surveys had been made of the data supplied by the taxpayers bearing upon the value and character of the property. In an effort to be conservative there have been a number of cases where the Commissioner of Internal Revenue has realized that the determinations were in error and that the taxpayers had substantially more property or a greater value than had been allowed in the prior determination made by the commissioner. If the taxpayer had substantially more property on March 1, 1913, and he produced evidence to show that such property should have been recognized and proper value assigned thereto as of that date, the Government should not only be permitted but should be required to rectify the mistake. The effect of this amendment, however, would be to deny to the taxpayer any added value in the property not originally recognized. For example, where the surveys of the mining property showed 2,000,000 tons of ore and the original determinationof the Government fixed a value of 1,000,000 tons of ore, the effect of the amendment would be to redistribute the unused depletion as representing the remaining tons without giving it any more value than was assigned to 1,000,000 tons in the original determination.

Depletion is a technical subject and no changes should be made in the law as to depletion without taxpayers having ample opportunity to present their situation to the congressional committees. Some of your petitioners will be seriously affected by the change proposed by the House, and since there has been no demand for such a change we respectfully request that the law be allowed to stand as it is in this respect. This change also works a discrimination for the reason that in some cases the Government has recognized the full amount of the property owned by the taxpayer on March 1, 1913, and fixed its valuation thereon. In those cases where it has underestimated the amount and value of property of other taxpayers it would create a serious discrimination if such taxpayers be denied the same character of treatment that has been afforded in those cases where the original values were found to be correct.

In conclusion your petitioners respectfully represent that they are willing to bear whatever burden of taxation Congress in its wisdom may feel is necessary to meet the needs of our Government in the present emergency, but we do not believe that technical provisions of the law should be tampered with where the effect would be to create rank discriminations between taxpayers of the same class who are competing in the same line of business.

Respectfully submitted.

R. C. FULBRIGHT, *Attorney.*

NOTE.—There is also attached an exhibit marked "C," illustrating the discrimination involved in assessing the normal income tax on corporate dividends.

EXHIBIT A

SECTION 115 OF THE REVENUE ACT OF 1928 AS CHANGED BY H. R. 10236 (PORTION OF LANGUAGE IN BLACK BRACKETS IS PORTION WHICH HAS BEEN ELIMINATED IN H. R. 10236)

SEC. 115. *Distributions by corporations.*—(a) *Definition of dividend.*—The term "dividend" when used in this title (except in sec. 203 (a) (4) and sec. 208 (c) (1), relating to insurance companies) means any distribution made by a corporation to its shareholders, whether in money or in other property, out of its earnings or profits accumulated after February 28, 1913.

(b) *Source of distributions.*—For the purposes of this act every distribution is made out of earnings or profits to the extent thereof, and from the most recently accumulated earnings or profits. [Any earnings or profits accumulated, or increase in value of property accrued, before March 1, 1913, may be distributed exempt from tax, after the earnings and profits accumulated after February 28, 1913, have been distributed, but any such tax-free distribution shall be applied against and reduce the basis of the stock provided in section 113.]

(c) *Distributions in liquidation.*—Amounts distributed in complete liquidation of a corporation shall be treated as in full payment in exchange for the stock, and amounts distributed in partial liquidation of a corporation shall be treated as in part or full payment in exchange for the stock. The gain or loss to the distributee resulting from such exchange shall be determined under section 111, but shall be recognized only to the extent provided in section 112. In the case of amounts distributed in partial liquidation (other than a distribution within the provisions of section 112 (h) of stock or securities in connection with a reorganization) the part of such distribution which is properly chargeable to capital account shall not be considered a distribution of earnings or profits within the meaning of subsection (b) of this section for the purpose of determining the taxability of subsequent distributions by the corporation.

(d) *Other distributions from capital.*—If any distribution (not in partial or complete liquidation) made by a corporation to its shareholders [is not out of increase in value of property accrued before March 1, 1913, and] is not out of earnings or profits, then the amount of such distribution shall be applied against and reduce the basis of the stock provided in section 113, and if in excess of such basis, such excess shall be taxable in the same manner as a gain from the sale or exchange of property. [The provisions of this subsection shall also apply to distributions from depletion reserves based on the discovery of value of mines.]

(e) *Distributions by personal service corporations.*—Any distribution made by a corporation, which was classified as a personal service corporation under the provisions of the revenue act of 1918 or the revenue act of 1921, out of its earnings or profits which were taxable in accordance with the provisions of section 218 of the revenue act of 1918 or section 218 of the revenue act of 1921, shall be exempt from tax to the distributees.

(f) *Stock dividends.*—A stock dividend shall not be subject to tax.

(g) *Redemption of stock.*—If a corporation cancels or redeems its stock (whether or not such stock was issued as a stock dividend) at such time and in such manner as to make the distribution and cancellation or redemption in whole or in part essentially equivalent to the distribution of a taxable dividend, the amount so distributed in redemption or cancellation of the stock, to the extent that it represents a distribution of earnings or profits [accumulated after February 28, 1913,] shall be treated as a taxable dividend.

(h) *Definition of partial liquidation.*—As used in this section the term "amounts distributed in partial liquidation" means a distribution by a corporation in complete cancellation or redemption of a part of its stock, or one of a series of distributions in complete cancellation or redemption of all or a portion of its stock.

EXHIBIT B

MEMORANDUM RELATIVE DECISION OF SUPREME COURT IN THE CASES OF LYNCH *v.* TURRISH (247 U. S. 221); SOUTHERN PACIFIC CO. *v.* LOWE (247 U. S. 330); AND LYNCH *v.* HORNBY (247 U. S. 339)

The substance of the above decisions is that income accumulated prior to March 1, 1913, is not subject to Federal tax and that distributions in the nature of liquidated dividends of corporations were not so subject to tax under the revenue act of 1913, but that ordinary dividends paid by corporations after March 1, 1913, became subject to surtax against the stockholder under that act but not under subsequent acts. The most important of these cases is that of Lynch *v.* Turrish. The following excerpts and comments show the effect of that decision. The following quotation was taken from the statement of facts by the court:

"The reassessment was based upon certain sums received by the plaintiff in the year 1914 as distributions from corporations subject to the income tax law and held by the commissioner to be income derived from dividends received by the plaintiff on stock of domestic corporations, of which the sum of $79,975, received as a distribution from the Payette Lumber & Manufacturing Co., and without which no tax could have been levied against the plaintiff, is here in dispute.

"Prior to March 1, 1913, and continuously thereafter until the surrender of his stock as hereinafter mentioned, plaintiff was a stockholder in the Payette Co., which was organized in the year 1903 with power to buy, hold, and sell timberlands, and in fact never engaged in any other business than this except minor businesses incidental to it. Immediately after its organization this company began to invest in timber lands, and prior to March 1, 1913, had thus invested approximately $1,375,000.

"On March 1, 1913, the value of its assets was not less than $3,000,000, of which sum the value of the timberlands was not less than $2,875,000. The increase was due to the gradual rise in the market value of the lands. At that date the value of Turrish's stock was twice its par value, or $159,950, and about that time he and all the other stockholders gave an option to sell their stock for twice its par value."

The statement of facts further shows that instead of selling their stock the terms of the trade were changed so that the corporation sold its assets for cash, distributed the cash to the stockholders upon the surrender of their certificates, and wound up the business, as a result of which Turrish received $159,950, being double the par value of his stock. The following excerpt recites the action taken by the lower courts in the case:

"The district court and the circuit court of appeals decided that the amount so distributed to Turrish was not income within the meaning of the statute, basing the decision on two propositions, as expressed in the opinion of the circuit court of appeals, by Sanborn, circuit judge: (*a*) The amount was the realization of an investment made some years before, representing its gradual increase during those years, and which reached its height before the effective date of the law, that is, before March 1, 1913, and the mere change of form of the property 'as from real to personal property, or from stock to cash,' was not income to its holders because the value of the property was the same after as before the change; (*b*) the timberlands were the property, capital, and capital assets of their legal and equitable owner, and the enhancement of their value during a series of years 'prior to the effective date of an income tax law, although divided or distributed by dividend or otherwise subsequent to that date, does not become income, gains, or profits taxable under such an act.'"

The supreme court concurred in both propositions of the lower courts and affirmed the case. It is unnecessary to repeat the reasoning of the supreme court, but the following sentence from the opinion is significant:

"If increase in value of the lands was income, it had its peculiar time, and such time must have been within the time of the law to be subject to the law; that is, it must have been after March 1, 1913. But, according to the fact admitted, there was no increase after that date, and therefore no increase subject to the law."

In Southern Pacific Co., *v.* Lowe, the Southern Pacific Co., a corporation, received dividends in 1914 from a subsidiary corporation, the Central Pacific Railway Co., which dividends were paid out of a surplus that had accrued to the Central Pacific Co., prior to January 1, 1913. The following excerpts are pertinent:

"Certainly the term 'income' has no broader meaning in the 1913 act than in that of 1909 (see Stratton's Independence *v.* Howbert (231 U. S. 399, 416, 417, 58 L. ed. 285, 293, 34 Sup. Ct. Rept. 136)) and for the present purpose we assume there is no difference in its meaning as used in the two acts. This being so, we are bound to consider accumulations that accrued to a corporation prior to January 1, 1913, as being capital, not income, for the purposes of the act. And we perceive no adequate ground for a distinction, in this regard, between an accumulation of surplus earnings and the increment due to an appreciation in value of the assets of the taxpayer.

"That the dividends in question were paid out of a surplus that accrued to the Central Pacific prior to January 1, 1913, is undisputed; and we deem it to be equally clear that this surplus accrued to the Southern Pacific Co., prior to that date, in every substantial sense pertinent to the present inquiry, and hence underwent nothing more than a change of form when the dividends were declared.

"It is true that, in ordinary cases, the mere accumulation of an adequate surplus does not entitle a stockholder to dividends until the directors, in their discretion, declare them. * * * But this is not the ordinary case. In fact, the discretion of the directors was affirmatively exercised by declaring dividends out of the surplus that was accumulated prior to January 1, 1913; it does not appear that any other fair exercise of discretion was open; and the complete ownership and right of control of the Southern Pacific, at all times material, makes it a matter of indifference whether the vote was at one time or another. Under the circumstances, the entire matter of the declaration and payment of the dividends was a paper transaction to bring the books into accord with the acknowledged rights of the Southern Pacific; and so far as the dividends represented the surplus of the Central Pacific that accumulated prior to January 1, 1913, they were not taxable as income of the Southern Pacific within the true intent and meaning of the act of 1913."

In the case of Lynch *v.* Hornby, dividends were paid out in 1914, part of which were from the current earnings of that year and part from the conversion into money of property which the corporation owned on March 1, 1913. This was not a case of a liquidation of the company but merely the result of its ordinary current operations. The court distinguished between this and the cases cited above and also called attention to the change in the congressional policy in 1916, having in mind the equities of the situation. The following excerpts are significant:

"The fact that they resulted in converting into money, and thus setting free for distribution as dividends, a part of its surplus assets accumulated prior to March 1, 1913, does not render Hornby's share of those dividends any the less a part of his income within the true intent and meaning of the act, the pertinent language of which is as follows (38 Stat. L. 166, 167, ch. 16):"

* * * * * * * *

"It is evident that Congress intended to draw and did draw a distinction between a stockholder's undivided share or interest in the gains and profits of a corporation, prior to the declaration of a dividend, and his participation in the dividends declared and paid; treating the latter, in ordinary circumstances, as a part of his income for the purposes of the surtax, and not regarding the former as taxable income unless fraudulently accumulated for the purpose of evading the tax."

* * * * * * * *

"In the more recent income tax acts, provisions have been inserted for the purpose of excluding from the effect of the tax any dividends declared out of earnings or profits that accrued prior to March 1, 1913. This originated with the act of September 8, 1916, and has been continued in the act of October 3, 1917.

We are referred to the legislative history of the act of 1916, which it is contended indicates that the new definition of the term 'dividends' was intended to be declaratory of the meaning of the term as used in the 1913 act. We can not accept this suggestion, deeming it more reasonable to regard the change as a concession to the equity of stockholders, granted in 1916 act, in view of constitutional questions that had been raised in this case, in the companion case of Lynch v. Turrish, and perhaps in other cases. These two cases were commenced in October, 1915; and decisions adverse to the tax were rendered in the district court in January, 1916, and in the circuit court of appeals September 4, 1916."

EXHIBIT C

DISCRIMINATION INVOLVED IN APPLYING NORMAL TAX ON DIVIDENDS

Thousands of small business organizations have for convenience operated as corporations although they are in fact closely owned by a small group of individuals who are actively identified with such organizations. They are in competition with other thousands of partnership organizations run in very much the same way.

To illustrate the discrimination involved in the proposal to levy the normal income tax on the dividends received from corporations let us take the hypothetical case of two concerns each of which is owned equally by four individuals who depend upon the business for their principal income. Assuming that each concern earned $100,000 net income subject to tax during the taxable year the difference in the tax paid by the individuals would be substantially as follows:

1. Taxes upon individual member of partnership:

Partnership taxable income	$100,000
Individual partners one-fourth share	25,000
Normal tax on $25,000	1,430
Surtax on $25,000	700
Total tax paid by each individual partner	2,130

2. Income tax paid directly or indirectly by individual stockholder of corporation:

Taxable income of corporation	100,000
Corporation tax	13,500
Proportion of tax borne by individual stockholder owning one-fourth interest	3,375
Normal tax of individual on his share	1,194
Surtax of individual	458
Total	5,027

In the above case it will be noticed the individual partner with an income of $25,000 will pay 8.5 per cent of his income as taxes to the Federal Government while the individual stockholder with the same income (if the corporation distributes its income) will have to pay and bear 20.1 per cent of his income as taxes to the Federal Government. In addition to this, the corporations have to pay franchise taxes and various other governmental fees which are not assessable against partnerships.

STATEMENT OF HON. V. S. K. HOUSTON, DELEGATE IN CONGRESS FROM HAWAII

The CHAIRMAN. You may proceed, Mr. Houston.

Mr. HOUSTON. Mr. Chairman and members of the committee, I appear here in support of an amendment to section 116 (b), which is on page 96.

Senator REED. What is it, Mr. Houston, you are calling attention to?

Mr. HOUSTON. Section 116 (b). The section is headed, Teachers in Alaska and Hawaii, and undertakes to carry on the existing exemp-

tion, or the exemption which existed in the previous revenue bill on the payment of income tax, and the income tax exempts only the school-teachers in the Territory of Hawaii.

In 1930, not further back than April 12, 1930, this Congress passed an amendment to the Hawaiian organic act, which is the nearest thing we have to a State constitution, which reads as follows [reading]:

(b) The salaries or wages paid by the Territory of Hawaii, or any of its political subdivisions, for services rendered in connection with the exercise of an essential governmental function of the Territory or its political subdivisions, shall not be taxable by the United States in the administration of the income tax laws.

Now this section, as passed in the House, not only undertakes to repeal this section of our organic act without having been considered in the Committee on Territories, or without having given me an opportunity to be heard, but reintroduces in Hawaii the income tax of the governmental officers there, so that you have in the Territory of Hawaii—and the same thing holds good in Alaska, and the Delegate from Alaska joins me in this appeal—there you have officers and employees who are taxed on their incomes, not only by the Federal Government, but by the Territorial government.

In the Territory of Hawaii the income tax of the Territory begins at 2 per cent on salaries below $5,000, with only $1,000 exemption, and that is even now being revised so as to increase the percentage in the lower brackets. The amendment which I suggest and which I attempted to have adopted on the floor of the House, is to strike out in line 1 of that section, the words "teachers in," so that the heading of the subsection would read "Alaska and Hawaii." And then on the third and fourth lines, strike out the words "a teacher in any educational institution," and insert the words "an officer or employee," so that the exemption would then apply to the officers and employees of the Territory or its political subdivision who are in receipt, either directly or indirectly, of Federal moneys.

Senator WATSON. Did you present your argument to the Committee on Ways and Means of the House?

Mr. HOUSTON. I did not have an opportunity of appearing there, and, furthermore, this proposition was carried in our organic act. I had no idea it would be repealed in a revenue bill. As soon as I found out about it I asked the privilege of appearing, but the hearings were closed, and the only matters that were debatable were the ones that came up subsequently.

Senator KING. You do not deny the power of Congress, notwithstanding that organic act, to impose an income tax on the employees in Hawaii, just as we impose an income tax on the employees of the District of Columbia? Do you claim that because we do not tax employees or the salaries of employees in the States and within the municipalities within the States, that we should not impose any tax on the employees of Hawaii?

Mr. HOUSTON. That is it.

Senator BINGHAM. A law was passed putting the employees on the same basis as State employees.

Senator KING. I know, but I wondered whether he denied the power of the Congress to impose a tax?

Mr. HOUSTON. Oh, no. In fact, in the original law, there was such a tax. And Mr. Timberlake made this statement in a hearing held in April, 1926, before the Committee on Ways and Means of the

House, on a bill exempting from the payment of Federal income taxes certain employees of the Territories of Hawaii and Alaska, when the question was asked as to whether it was thought that the committee desired to single the teachers of Hawaii and Alaska out and make an exception of them in the payment of tax, Mr. Timberlake said this:

> Because I believe it was the desire of the committee to have all teachers throughout all of the States pay an income tax, except for the constitutional provision which makes that impossible in the case of appointees of a State.

In other words, it was the exercise of a right of might, so far as the Territories are concerned only. They would have liked to have applied it to the employees of the States, but because of the decision of the Supreme Court they were not able to do it.

Now, may I invite your attention to the decisions of the Supreme Court. The decisions are based on what you might call reciprocal relations. The Supreme Court has said that—

> As the States can not tax the powers, the operations or the property of the United States, nor the means which they employ to carry their powers into execution, so it has been held that the United States have no power under the Constitution to tax the instrumentalities or the property of a State.

It would appear that there is a matter of reciprocity that entered into this decision, and inasmuch as the Territory may not tax the employees of the Federal Government in the Territory, it would seem that reciprocity should enter into the picture to some degree. And we have a large number of Federal employees in the Territory, of course, when you consider the Army and Navy, which number almost 20,000, but we do not allow the taxing of them upon the Federal income.

Senator KING. Do you have an income tax in Hawaii?

Mr. HOUSTON. We have an income tax which begins at 2 per cent on salaries below $5,000, with only $1,000 exemption, and, of course, with higher rates in the higher brackets.

Senator KING. Of course, you must admit there is a difference between the States and a Territory. A Territory is the recipient of Federal money, in the way of salaries paid by the Federal Government for the governor, and many of your officers. It is not a question of reciprocity at all, because you are not a sovereign State.

Senator BINGHAM. But, Senator, since you have spoken of that, it is only fair to remember that the Federal Government takes out of the Territory nearly $10,000,000 a year in taxes received and not returned. So it is not like one doing them a favor. We take a great part of the $10,000,000, and we do give them a small part in that we pay the salaries of the officers.

Senator KING. The United States furnishes a market for the sugar barons over there.

Senator BINGHAM. So we do for the sugar barons from Cuba, and the Cuban refiners.

Senator KING. It is a question of what you conceived it to be, just a right, instead of a power.

Mr. HOUSTON. Congress has the right or power to do it, of course.

The provision which the Congress, in its wisdom had found desirable to apply to Hawaii has been repealed in this legislation by indirection without a hearing and without our having a chance to be heard.

Senator SHORTRIDGE. You would have the law remain as it is?

Mr. HOUSTON. I would have the law remain as it is, and for that viewpoint we hope that there will be adopted the subsequent language of that section wherein that particular provision is repealed, and we ask that that should be stricken out also. That is all. I thank you very much.

Senator BINGHAM. Just one question to straighten that out. If we acted in accordance with the law, and did not change the organic law, the entire paragraph (b) should come out, should it not?

Mr. HOUSTON. No; because Alaska then would suffer, and it is my thought that Alaska and Hawaii, carrying on about the same functions, should be treated in the same way. Senator King referred a while ago to the employees in the District of Columbia. There is this difference between the Territories and the District of Columbia, that a certain proportion of the salaries of the teachers and employees in the District of Columbia are paid indirectly by the Federal Government, through a contribution. So, to that extent, it is not quite the same thing.

Senator KING. But the Federal Government makes a contribution to your Territorial government.

Mr. HOUSTON. In a minor way. The governor and the judges are the only ones who are paid by Federal appropriations. The others are all paid by Territorial appropriations. And the function by which the Federal Government undertakes to pay throughout the country, and from which we should have a certain benefit, are not applied. For instance, in the care of leper dependents, the legislation is general and provides that the Federal Government shall care for these dependents. Yet we have, notwithstanding the commissioners have recommended in their original report that the United States should care for these unfortunates, unfortunately we have to carry a large budget for the care of these unfortunate dependents.

The CHAIRMAN. Mr. Houston, your time is up.

Mr. HOUSTON. Yes; Mr. Chairman. I thank you.

Senator BINGHAM. And yet every State that has any of these unfortunates, can have them cared for at the Federal sanitariums.

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 12, 1932.

Hon. REED SMOOT,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: Referring to the testimony that I gave to-day before your committee with reference to the exemption of Territorial officers and employees from payment of Federal income tax on their official earnings.

The last available data with respect to the amount involved in Hawaii shows that for the year 1928 the payments were about $3,000. It is reasonable to assume that the amounts for Alaska would be about half that sum, so that the amendment I suggested would involve a sum somewhat less than $5,000.

Very sincerely yours,

V. S. K. HOUSTON,
Delegate in Congress from Hawaii.

115102—32——18

STATEMENT OF JOSEPH J. WECHSLER, CERTIFIED PUBLIC ACCOUNTANT, NEW YORK, N. Y., REPRESENTING THE PEOPLES LOBBY

Senator SHORTRIDGE. For whom are you speaking?

Mr. WECHSLER. I am speaking for the peoples lobby.

Senator HARRISON. He appears for the people.

Mr. WECHSLER. One of the previous speakers mentioned the fact that we have reached about the limit of productivity on the surtax rate. I want to put myself on record as disagreeing with that point to Great Britain and the high surtax rate that she imposes on her subjects.

Senator REED. There are no tax-exempt securities in Great Britain.

Mr. WECHSLER. There are no tax-exempt securities in Great Britain.

Now the Secretary of the Treasury, on December 31, 1930, estimated that there were about $18,000,000,000 worth of totally tax-exempt securities. I have computed the interest roughly and figure that the interest would be about $850,000,000, and the tax thereon, based on 25 per cent, since our surtaxes run to 45, would be $200,000,000. There was in addition about $12,000,000,000 that were exempt from normal taxes. The interest on that, roughly, is about $480,000,000, and 5 per cent on that would be about $24,000,000. That is just the normal tax, and that is the amount that is exempt. It is all subject to the surtax, with the exception of a small amount.

Senator REED. Do you not realize that all of those are subject to the exemption of the corporation tax without depreciation, at 12 per cent? It is going to be higher. That $12,000,000,000 of securities are totally exempt when held by corporations.

Mr. WECHSLER. Yes; that is why I figured averaging the corporation rate that way all along.

It is estimated that the exemption of various Federal, State, and municipal bonds from income taxation results in a loss of from $120,000,000 to $300,000,000 in taxes each year. As far back as 1922 it was estimated by the Federal Trade Commission that approximately half of the total interest-bearing tax-exempt bonds were held by individuals whose taxable incomes were below $10,000, and by charitable and other tax-exempt organizations. If that is so, the exemption privilege has little effect upon the rates of interest borne by these securities, and, therefore, the State and local governments are not in fact saving interest by reason of these privileges.

Wealthy individuals owning such securities, however, largely escape both these normal and surtaxes. This is evident from the fact that the average holdings of tax-exempt securities was $7,500 of principal in the $10,000 to $25,000 income group, and $3,080,000 in the $500,000 to $1,000,000 income group.

Fears that the taxing of securities now exempt would hurt the borrowing power are, therefore, unwarranted.

Many investors choose Government securities from the consideration of safety of principal, the yield being of secondary consideration. Besides, trust companies and individuals acting in a fiduciary capacity are practically limited by law to the purchase of these securities.

Under the present conditions taxpayers feel that as a result of the tax-exempt situation the burden of taxation is inequitably spread and that many are carrying the burden of the few who are blessed with tax-exempt securities and who pay very little, if at all, for enjoying the privilege this country affords them. The old arguments must be carefully considered in the light of economic changes that have occurred and action taken to correct existing conditions.

Now, the brief I have prepared contains an argument regarding the constitutional phase of tax-exempt securities, and I would like to submit it.

Senator SHORTRIDGE. I was about to ask that question. There is now outstanding a vast amount, in value, of tax-exempt securities. Is it your position that we have the power to levy a tax on such securities?

Mr. WECHSLER. Yes, sir.

Senator REED. That is what his brief states?

Mr. WECHSLER. Yes, sir.

Senator SHORTRIDGE. You undertake to show that?

Mr. WECHSLER. Yes, sir.

Senator SHORTRIDGE. That the Federal Government has constitutional power to levy a tax on a State security that, by the law of the State, is made tax exempt?

Mr. WECHSLER. That is right.

Senator SHORTRIDGE. I understand your point.

Mr. WECHSLER. Now, a brief review of the brief that I will file is presented herewith as follows:

There is no express provision in the Constitution prohibiting the taxation of securities now tax exempt. In its earlier decision the Supreme Court has held that by implication our Federal and State Governments may not tax each other's obligations.

In 1894 the famous case of Pollock *v.* Farmer's Loan & Trust Co. was decided, wherein the income tax was declared to be unconstitutional for the reason that it was an attempt to levy a direct tax without an apportionment as provided for in the Constitution—Article I, section 9.

The decision was a close one and it was later shown that the court had made an error by looking at the source of the income and coming to the conclusion that the tax being on the source was a direct tax.

To correct this error Congress was obliged, at great expense and with a considerable loss of time to adopt the sixteenth amendment which provided "Congress shall have the power to lay and collect taxes on income, from whatever source derived, without a portionment among the several States and without regard to any census or enumeration."

The courts have since held that income taxes belong to the class of excise taxes and the purpose of the amendment was merely to restore them to this class from the direct taxes which the courts' decision in the Pollock case had erroneously place them. The words "whatever source derived" were therefore disregarded, and it was construed that under the amendment the taxing power of Congress did not extend to new subjects.

The Supreme Court decisions since the amendment are more or less confusing. This is apparent from a consideration of the opinions in some of the leading cases, viz:

In the State of Missouri *v.* Gehner (281 U. S. 313) the court held that the value of Government bonds should be disregarded in making up the estimate of taxable values. Justices Stone, Holmes, and Brandeis dissented. In his opinion Justice Stone states:

A taxpayer having no tax-exempt securities and legitimately bearing the burden of a State tax on net worth may put off the burden completely by the simple expedient of purchasing on credit Government bonds equal in value to his net taxable assets. The success of a device so transparently destructive of the taxing power of the State may well raise doubts of the correctness of the constitutional principles supposed to sustain it. So construed, the Constitution does more than protect the ownership of Government bonds from the burden of taxation. It confers upon that ownership an affirmative benefit at the expense of the taxing power of the State by relieving the owner from the full burden of taxation on net worth to which his taxable assets have in some measure contributed.

In the Indian Motor Cycle Co. *v.* U. S. the Government sought to collect an excise tax on motor cycles sold to a municipality. Justice Van Devanter held that by implication both by Federal and State Governments can not tax each other's instrumentalities. Here again Justice Stone dissented, stating:

The implied immunity of one Government from taxation by the other should not be enlarged. The practical effect on enlargement is commonly to relieve individuals from a tax at the expense of the Government imposing it without substantial benefit to the Government for whose theoretical advantage the immunity is invoked.

In MacAllen *v.* Mass. the Court decided that income from Government bonds were not includable in determining the annual franchise tax where the State amended the laws to reach such income.

After writing a strong dissenting opinion in the MacAllen and Gehner cases, supported each time by the concurrence of Justices Holmes and Brandeis, Justice Stone wrote the prevailing opinion in Educational Films Corporation of America *v.* Ward (282 U. S. 379), wherein a tax on a corporation for the privilege of doing business, computed on a basis of corporation's entire net income for preceding year, was held not void as tax on Federal instrumentalities, though authorizing the inclusion of income from copyrights.

While this court, since McCulloch *v.* Maryland (4 Wheat. 316), has consistently held that the instrumentalities of either government, or the income derived from them, may not be made the direct object of taxation by the other, it has been held with like consistency that the privilege of exercising the corporate franchise is no less an appropriate object of taxation by one government, merely because the corporate property or net income, which is made the measure of tax, may chance to include the obligations of the other, or the income derived from them. The constitutional power of one government to reach this permissible object of taxation may not be curtailed because of the indirect effect which the tax may have upon the other.

The decisions of the Supreme Court since the Sixteenth amendment was passed, it will be seen, are often hairsplitting and are not always consistent. The theory of the implication that taxation of each other's obligations would destroy the borrowing power may well be questioned

Investors have learned a great lesson in the past few years and there are an increasing number who would be willing to sacrifice a little of the income in order to safeguard the principle. The attractive feature to the investor being safety, government must increase revenues and decrease expenses in order to present sufficient inducement for investors. The increase yielded from tax-exempt securities would

by its same economy attract investors so that interest rates instead of going up as predicted may actually decrease.

The rate of increase in State and municipal obligations has been steadily gaining and the question of tax exemption if not solved now will assume alarming proportions in the near future. It is in the power of the Senate to amend the House bill striking out the exemption of State and municipal obligations to bring in the revenues and income that will grow larger each year and will lighten the burden of taxpayers who are not fortunate enough to own tax-exempt securities.

Senator SHORTRIDGE. Just a question. As I understand your position, it is this: Let us suppose that in a given State, under its laws, there is outstanding, let us say, $1,000,000,000, par value, of State exempt bonds. Now the State collects no tax on the income derived by the holders of those bonds. Now your position is that under the Sixteenth amendment, properly interpreted, the Federal Government may impose a tax on those incomes?

Mr. WECHSLER. Yes, sir.

Senator SHORTRIDGE. I see. It is a very, very interesting question. You have elaborated it, as I see, in your brief.

Mr. WECHSLER. Yes; and the brief goes into it at a great deal more length and detail.

Now, if I may, I will read my brief.

The CHAIRMAN. That may be made a part of the record in connection with your remarks.

Mr. BENJAMIN C. MARSH. May he say something and present an amendment for an excise tax?

The CHAIRMAN. Yes.

(The brief presented by Mr. Wechsler is printed in the record in full, as follows; also the proposed amendments presented by Mr. Wechsler are printed in the record in full, as follows:)

BRIEF OF JOSEPH J. WECHSLER

AN INCOME TAX ON FEDERAL, STATE, AND MUNICIPAL SECURITIES IS CONSTITUTIONAL

Why is it that Great Britan, with one-third of the population of the United States, raises a much larger revenue from the taxation of incomes and profits? Because, principally, the rates in the high brackets are much greater than those imposed by our Government. Then why, when Congress is eagerly seeking for new sources of revenue with which to balance the budget do we not tax large incomes as much as Great Britain does? The answer is that if we attempt to do so, those large incomes will be withdrawn from productive enterprises and invested in tax exempt securities issued by Federal, State, and municipal governments. If Great Britain can get along without exempting its own obligations from taxation (as she does) why can not we do likewise? As shown in this brief, there is no express provision in the Constitution (including the Sixteenth amendment) prohibiting such taxation. Why then is it prohibited? Not because of any act of the Congress, which under the Constitution is the Government's only law making branch, but because of judicial legislation by the Supreme Court.

This brief will concisely sketch the decisions of the majority of that court upon this point and call attention to dissenting opinions which may some day be adopted by a majority of that court as then constituted.

POINT 1

There is no express provision in the Constitution of the United States prohibiting the taxation of securities now tax exempt.

It is an established principle of our constitutional system of dual government that the instrumentalities, means and operations, whereby the United States exercises its governmental powers are exempt from taxation by the States, and

the instrumentalities, means and operations whereby the States exert governmental powers belonging to them are equally exempt from taxation by the United States. This principle is implied from the independence of the national and State government within their respective spheres and from the provisions of the Constitution which look to the maintenance of the dual system. (McCulloch *v.* Maryland, 4 Wheaton 316; Collector *v.* Day, 11 Wall. 113.)

By resorting to this "implication," the Supreme Court held that a State did not have the constitutional right to tax the instrumentalities of the Federal Government (McCulloch *v.* Maryland, supra) and that bonds of the United States issued to raise money for governmental purposes, and the interest thereon, are immune from State taxation because such a tax, even though inconsiderable in amount and imposed only on holders of the bonds, would burden the exercise by the United States of its power to borrow money (Weston *v.* Charleston, 2 Pet. 449), and the salary of an officer of the United States is immune from State taxation because the salary is the means by which his services are procured and retained and its taxation by the State would burden the exertion by the United States of powers belonging to the latter (Dobbins *v.* Commissioners of Erie County, 16 Pet. 435), and, for like reasons, it has been held that the salary of a State officer is immune from Federal taxation (Collector *v.* Day, 11 Wall. 113); and this immunity has been held to induce bonds of a municipal corporation, in a Territory, issued to raise money for municipal purposes, the decision being put on the ground that such a corporation is an instrumentality of the United States, exercising delegated governmental powers (Farmers Bank *v.* Minnesota, 232 U. S.), and finally in Pollock *v.* Farmers Loan & Trust Co. (157 U. S. 429), the court held "bonds of a municipal corporation in the several States issued to raise money for public municipal purposes, and the interest thereon are immune from Federal taxation, and this on the ground that such corporations are representative of the State and exercise some of their powers, and that under the implications of the Constitution, the governmental agencies and operations of the State have the same immunity from Federal taxation that like agencies and operations of the United States have from taxation by the States."

In the last-mentioned case, however, the Supreme Court covered much more ground. By tracing the incomes from the municipal securities, real estate rentals, and the like to their sources, the court found the attempt to tax these incomes to be an attempt to tax their sources and to fall into the class of direct taxation, which, according to the Constitution (Art. I, sec. 9) could be imposed only by apportionment among the States in proportion to population.

As a result of the courts' decision in the Pollock case above, the people of the United States adopted the sixteenth amendment which reads:

"Congress shall have the power to lay and collect taxes on incomes, from whatever sources derived, without apportionment among the several States, and without regard to any census or enumeration."

POINT 2

The sixteenth admendment does neither expressly nor impliedly prohibit the taxation of tax-exempt securities.

According to one view the purpose of this amendment was to make an exception to the general rule that direct taxes might be imposed by the Federal Government only by apportioning them among the States in proportion to population, namely, by conferring upon Congress the power to impose this particular variety of direct tax without such apportionment and without regard to any census or enumeration.

The other view is that additional power is conferred upon Congress to tax incomes, namely, "from whatever sources derived." In this view, the amendment might be considered as extending the taxing power of Congress to those fields denied by the Supreme Court in Collector *v.* Day (above) and the other decisions limiting by judicial interpretation the Federal Government's power to tax the instrumentalities of the States, or conceivably as doing away for the future with the application of the principle upon which the decisions in these cases rested.

Without adopting either view, the court has consistently held that the sixteenth amendment did not extend the taxing power of Congress to new subjects. It has not, however, considered the amendment as having amended the provision in the Constitution that required all direct taxes imposed by the Federal Government to be apportioned among the States in proportion to population (Art. I, sec. 9). It has rather held that income taxes belong to the class of excises, customs, and

imports, and that the purpose of the amendment was to restore them to this class from the class of direct taxes in which the court's decision in the Pollock case had erroneously placed them (Brushaber *v.* Union Pacific R. R., 240 U. S. 1). In other words, it was necessary to amend the Constitution because the Supreme Court erred in the Pollock case.

Having properly classified income tax as an excise tax, we find that the only limitations in the power of Congress to levy excise taxes are that they must be for the public welfare and must be uniform throughout the United States; they do not have to be apportioned (Flint *v.* Stone Tracy Co., 220 U. S. 107). Thus in the case last cited, the Supreme Court held that a corporation tax is not a direct tax within the enumeration provision of the Constitution, but is an impost or excise which Congress has the power to impose under Article I, section 8, of the Constitution. The court went further and held that franchises of corporations are not governmental agencies of the State and the tax is not invalid as an attempt to tax State governmental instrumentalities; not being direct taxation, but an excise, the tax is properly measured by the entire incomes of the parties subject to it, notwithstanding a part of such income may be derived from nontaxable property.

POINT 3

Congress has the constitutional power to levy a tax on the total income, including any income from State and local government securities.

The Supreme Court, having adopted the view that the income tax is an excise tax (Brushaber *v.* Union Pacific R. R., 240 U. S. 1), upheld the imposition of a tax on the entire income, part of which income was derived from non-taxable property (Flint *v.* Stone Tracy Co., supra), and it has been held that Congress may tax State banks upon the average amount of their deposits, although deposit of State funds by State officers are included (Manhattan Co. *v.* Blake, 148 U. S. 412).

The real question at issue arose in Macallen *v.* Commonwealth of Massachusetts (279 U. S. 620), wherein the State of Massachusetts sought, by means of an amendment to the taxing statute to reach the income from tax exempt national and municipal bonds, which had previously not been included in the measure of the tax. The Supreme Court, by a divided vote, held the act void, Justice Stone writing a dissenting opinion concurred in by Justice Holmes and Justice Brandeis.

In the State of Missouri *v.* Gehner (281 U. S. 313) the Supreme Court held that the value of government bonds should be disregarded in making up the estimate of taxable net values. Again, Justice Holmes, Stone and Brandeis dissented. Justice Stone wrote a most illuminating opinion wherein he states on page 328:

"A taxpayer having no tax exempt securities and legitimately bearing the burden of a State tax on net worth may put off the burden completely by the simple expedient of purchasing on credit Government bonds equal in value to his net taxable assets. The success of a device so transparently destructive of the taxing power of the State may well raise doubts of the correctness of the constitutional principles supposed to sustain it. So construed, the Constitution does more than protect the ownership of Government bonds from the burden of taxation. It confers upon that ownership an affirmative benefit at the expense of the taxing power of the State by relieving the owner from the full burden of taxation on net worth to which his taxable assets have in some measure contributed."

The next case was that of Willcuts *v.* Bunn, 282 U. S. 216 (Chief Justice Hughes wrote the prevailing opinion concurred in by all members of the bench), wherein it was held that the profits on sale of State or municipal securities constituted gains, profits, and income from sales or dealings in property within the statute, revenue act of 1924, section 213, and hence are taxable, although the said act expressly exempted interest on obligations of State, Territory, or any political subdivision. The court further held that the power of Congress to lay excise taxes can not be denied as imposing burden on State's borrowing power unless it appears that that burden is real and substantial, and that the power to tax is no less essential than the power to borrow money; and in preserving the latter, it is not necessary to cripple the former by extending the constitutional exemption from taxation to those subjects which fall within the general application of nondiscriminatory laws, and where no direct burden is laid upon the governmental instrumentality and there is only a remote, if any, influence upon the exercise of the functions of government.

Again, it must be remembered that we are dealing not with any express constitutional restriction, but only with an asserted implication. The constitutional provisions authorize the Congress to lay taxes (Art. I, sec. 8, and sixteenth amendment), and before we can restrict their application upon the ground of a burden cast upon the State's borrowing power, it must clearly appear that a substantial burden upon the borrowing power of the State would actually be imposed.

The history of income-tax legislation is persuasive if not controlling upon the question of practical effect. Before the power of the Congress to lay the excise tax in question can be denied in the view that it imposes a burden upon the State's borrowing power, it must appear that the burden is real, not imaginary; substantial, not negligible.

After writing a strong dissenting opinion in the Macallen and Gehner cases, supported each time by the concurrence of Justices Holmes and Brandeis, Justice Stone wrote the prevailing opinion in Educational Films Corporation of America *v.* Ward (282 U. S. 370), wherein a tax on a corporation for the privilege of doing business, computed on a basis of corporation's entire net income for preceding year was held not void as tax on Federal instrumentalities, though authorizing the inclusion of income from copyrights.

"While this court, since McCulloch *v.* Maryland (4 Wheat. 316), has consistently held that the instrumentalities of either government, or the income derived from them, may not be made the direct object of taxation by the other, it has been held with like consistency that the privilege of exercising the corporate franchise is no less an appropriate object of taxation by one government, merely because the corporate property or net income, which is made the measure of the tax, may chance to include the obligations of the other, or the income derived from them. The constitutional power of one government to reach this permissible object of taxation may not be curtailed because of the indirect effect which the tax may have upon the other."

Justice Stone distinguishes the Macallen case by holding that the opinion rested the decision on the distinguishing fact that the tax exempt securities were included in the measure of the franchise tax, by virtue of an amendment to the taxing statute which, it was held, was specifically intended to reach the income from tax exempt national and municipal bonds, which had previously not been included in the measure of the tax. The amendment was adopted for the very purpose of subjecting it pro tanto to the burden of the tax.

The latest case on this subject is The Indian Motorcycle Co. *v.* U. S., decided May 25, 1931 (283 U. S. 570). wherein the Supreme Court held that the sale of motor cycles to a State agency, such as a municipal corporation, for use in its police service, is not subject to taxation by the United States. Justice Stone wrote a dissenting opinion concurred in by Justice Brandeis. He says in the course of his opinion:

"The implied immunity of one government, either national or state, from taxation by the other should not be enlarged. Immunity of the one necessarily involves curtailment of the other's sovereign power to tax. The practical effect of enlargement is commonly to relieve individuals from a tax, at the expense of the government imposing it, without substantial benefit to the government for whose theoretical advantage the immunity is invoked. * * * The court has many times held, as recently as in Educational Films Corporation of America *v.* Ward (282 U. S. 379), that an excise tax, imposed directly on the individual, is not invalid because indirectly it may buredn either the state of the national government."

POINT 4. CONCLUSION

Wherefore it follows that the fine distinctions made by the courts, on the one hand, in upholding in Brushaber *v.* Union Pacific (240 U. S. 1) the imposition of a tax on income part of which is derived from nontaxable property, or in upholding a tax on State bank deposits which include State funds Manhattan Co. *v.* Blake (148 U. S. 412), and on the other hand denying right to tax values made up of Government bonds, as in State of Missouri *v.* Gehner (281 U. S. 313), are arbitrary and not altogether consistent with the sixteenth amendment which grants express power to tax income from whatever sources derived. The strong dissenting opinions of Justices Holmes, Brandeis, and Stone seem to be, as they often subsequently become, the better and more logical view.

Little can be said for a view which holds that income from municipalities is exempt but general income which includes income from municipalities is not exempt.

Respectfully submitted.

Dated April 21, 1932.

FREDERICK CYRUS LEUBUSCHER,
Counsel at Law.
JOSEPH J. WECHSLER,
Certified Public Accountant.
H. STEIN,
Counsel at Law.

With Mr. Leubuscher on the brief.

PROPOSED AMENDMENT OF H. R. 10236, NOW PENDING IN THE SENATE, TO TAX THE INCOME FROM PRESENT TAX-EXEMPT SECURITIES

Strike out at the top of page 18, being section 22 (b) (4) the following words: "(a) The obligations of a State, Territory, or any political subdivision thereof, or the District of Columbia; or."

Change (B) to (A) in line 4.

Change (C) to (B) in line 6.

In line 9 insert the word "or" between (A) and (B), strike out the words "or (C)."

TITLE—EXCISE TAX ON THE PRIVILEGE OF OWNING GOVERNMENT OBLIGATIONS

SEC. —. In addition to any other tax imposed by law there shall be imposed an excise tax on the privilege of owning obligations of a (A) State, Territory, or any political subdivision of a State or Territory and of the District of Columbia; and of (B) securities issued under the farm loan act and amendments thereof; and of (C) the obligations of the United States or its possessions. Every person, corporation, or association owning any of the obligations or securities enumerated in clauses (A), (B), and (C) shall, in the return required by Title I of this act, submit a statement showing the number and amount of such obligations and securities owned by him and the income received therefrom, in such form and with such information as the commissioner may require.

SEC. —. There shall be levied, collected, and paid for each taxable year an excise tax of 20 per centum of the interest paid on such obligations and securities held by individuals, corporations, and associations in excess of interest aggregating $500.

SEC. —. All provisions of law (including penalties) applicable in respect of the taxes imposed by Title I of this act, shall, in so far as applicable and not inconsistent with this act, be applicable in respect of the taxes imposed by this title.

STATEMENT OF ROWLAND STEBBINS, OF LAURENCE RIVERS, INC., NEW YORK CITY

Mr. STEBBINS. I wish to speak very briefly regarding the proposed taxation of the theater, but from a different angle from that which Mr. Brady and others have spoken to you.

In 1928 I formed a small corporation called Laurence Rivers (Inc.), for the purpose of producing plays in the theater.

My first two productions occurred in 1929 and resulted in a net loss to the corporation of something over $80,000. My 1930 production, "The Green Pastures," resulted in a net profit to the corporation during that year amounting to something over $95,000. In 1931 I produced two plays, resulting in a net loss of over $54,000, but due to the fact that "The Green Pastures" was still successful the net loss to the corporation was $30,000.

The net result of my three years of productive effort is, therefore, or was as of the 1st of last January, a deficit of $15,000. But under

the proposed corporation tax law, eliminating the right of the taxpayer to carry over a net loss sustained in one year in his return to the next two succeeding years, I should be obliged to pay a tax on $95,000, even though in one year only I made a profit.

And it has now been proposed to superimpose upon this a tax of 10 per cent on theater tickets. The temptation to seek shelter in the haven of tax-exempt securities is very great, as you will see. It was my hope to produce two and possibly three plays next year, but I have temporarily given up all thought of doing so, at least until such time as I can feel assured that they might have some chance of success.

It is practically out of the question for me to continue in business under such handicaps as have been proposed, and should they become law a legitimate and praiseworthy organization, which in the short time it has been in existence has paid out over $1,500,000 in salaries and other production costs, will have to be wound up, which will certainly not aid in removing the depression or in decreasing unemployment. A nonexistent theatrical business yields neither an income tax nor an admission tax.

I should like to ask that this letter, written by my counsel, to the two Senators from New York, be read into the record [reading]:

APRIL 9, 1932.

Hon. ROYAL S. COPELAND,
United States Senate, Washington, D. C.

MY DEAR SENATOR COPELAND: This letter is written in connection with the proposed amendment of the income tax law eliminating the right of the taxpayer to carry over a net loss sustained in one year to his return for the next two succeeding years.

As an example of the hardship and injustice of this elimination we would like to submit to you the actual facts and figures of a client of this office, Laurence Rivers (Inc.), of which the writer is also secretary, director, and counsel. Laurence Rivers (Inc.) is a theatrical producing corporation the stock of which is owned almost entirely by Mr. Rowland Stebbins. It is the producer of "The Green Pastures," which, as you are possibly aware, aroused unusual commendation upon its presentation in New York and elsewhere.

However, not unlike other businesses, for every successful venture there is apt to be an unsuccessful venture, and in the theatrical business the ratio is frequently as low as one success for every five ventures. The following facts and figures are taken from the Federal income-tax returns of Laurence Rivers (Inc.) for the past few years.

In 1929 Laurence Rivers (Inc.), sustained a net loss of $80,732.02 from the production of two plays "Merry Andrew" and "Maggie, the Magnificent." The expenditures that year, salaries of employees, actors and production costs, not including any officers' salaries, royalties, or theatrical rental, exceeded $100,000.

In 1930 due to the production of "The Green Pastures," the corporation reported a net income of slightly over $95,000 on which it paid a Federal income tax of $11,417.50. The loss of the previous year was not carried over to 1930 as it had been written off. In the year 1930 the corporation paid in salaries of actors alone the sum of $239,676.59, the highest salary paid to any actor being $13,000, and the average salary being about $2,500. Theatrical rental amounted to $334,000, and royalties and other expenses, not including officers' salaries, to over $200,000.

In 1931 in spite of the continued success of "The Green Pastures" the corporation sustained a net loss of $54,600.64 through the production of two plays "Philip Goes Forth" and "Mr. Whistler" winding up the year with a deficit of over $30,000 Salaries paid to actors and employees during 1931 not including any officers were approximately $300,000. Theatrical rental was about $310,000, with miscellaneous production expenses not including officers' salaries, of over $200,000.

In 1932 it is hoped that the loss of $54,000 sustained in 1931 will be offset by continued income from "The Green Pastures." Mr. Stebbins had also contemplated the production of two or three further plays this year of distinguished American authors on the same high plane as the previous productions of Laurence Rivers (Inc.).

However, even a casual consideration of the foregoing figures will reveal the dire effect of the amendment to the tax laws eliminating the carrying over of net losses from one year to the two succeeding years, which will undoubtedly deter Mr. Stebbins from attempting any future productions whatsoever.

Under the proposed law, when the corporation sustains a loss one year it must merely endure it and the stockholder under another section of such law is even prohibited from offsetting his capital loss on his investment against his other income. The very next year, through the production of a play probably conceived and commenced in the year of the previous failures, the producers are able to show a profit offsetting their previous loss, yet they can not carry over the previous loss but must pay the full corporation income tax thereon, and in addition the stockholder must pay the full normal and surtaxes on any dividends.

It is practically out of the question for Mr. Stebbins to continue the business under such a handicap and we believe that his situation is not an isolated one among theatrical producers. Coupled with the additional tax on theatrical admissions, it can have only the one effect of dissolving a legitimate and praiseworthy organization which in the short space of four years has paid out over a million and a half dollars in salaries, wages and production expenses.

While the effect of the proposed tax legislation may be particularly disastrous for theatrical producers in comparison with other business enterprises, it must be apparent that many other businesses will be similarly affected. The dissolution of the organizations and the abandoning of their enterprises will certainly not aid in removing the depression, or in decreasing unemployment. A nonexisting theatrical business yields neither an income nor an admission tax.

Respectfully yours,

BAILEY & MULLER.

STATEMENT OF E. J. JONES, BRADFORD, PA.

Senator WATSON (presiding). Just state your name and address and whom you represent for the record, Congressman Jones.

Mr. JONES. E. J. Jones, Bradford, Pa. I presume in justice to the committee I might say that I am simply representing myself, because of a case that came to my attention as a lawyer, and I often gave wrong advice because in the meantime Congress had been in session and changed what I thought was the law.

By way of diversion, because it has nothing to do with balancing the Budget, I want to call attention of the committee to a provision of the revenue act of 1928 and carried in the bill as approved by the House which is working very serious hardship.

Senator WATSON. What section is that?

Mr. JONES. It will be section 44 of the act of 1928, and I presume it will be section 44 of the present bill. It is carried on page 38 of the House bill as reported to the House. I do not know what page it will be on.

Senator CONNALLY. What is it about?

Mr. JONES. It is about installment basis.

Senator CONNALLY. That is section 44, page 44.

Mr. JONES. The revenue act of 1926, and possibly prior revenue acts, made provision by what has been headed "Installment basis" in determining gain or loss on capital sales to be reported as income. Section 212 (d) of the act of 1926 recognized the right of a seller of property (if the cash payment did not exceed 25 per cent of the purchase price) to return as income in any taxable year that proportion of the installment payment actually received in that year which the total profit realized or to be realized when the payment is completed, bears to the total contract price.

Section 44, paragraphs (a) and (b), of the act of 1928 carry the same thought or principle. The only substantial change that was made

in the act of 1928 was in raising the cash payment to 40 per cent but the act of 1928 added a new paragraph to section 44, known as paragraph (d), which reads as follows:

(d) *Gain or loss upon disposition of installment obligations.*—If an installment obligation is satisfied at other than its face value or distributed, transmitted, sold, or otherwise disposed of, gain or loss shall result to the extent of the difference between the basis of the obligation and (1) in the case of satisfaction at other than face value or a sale or exchange, the amount realized; or (2) in case of a distribution, transmission, or disposition otherwise than by sale or exchange, the fair market value of the obligation at the time of such distribution, transmission, or disposition. The basis of the obligation shall be the excess of the face value of the obligation over an amount equal to the income which would be returnable were the obligation satisfied in full.

Now, under section 212 (d) of the act of 1926, the Treasury Department held that the basis for determining gain or loss in the case of installment notes originally received by decedent and collected by the estate of the decedent, or by his next of kin, after the distribution of the notes to them by the estate, is the same as it would have been had the decedent not died and the notes had been collected by him. In other words, if A sold property to B and received, under the act of 1926, 25 per cent or less in cash (under the act of 1928, 40 per cent), and the balance of the purchased price was evidenced by installment notes, either secured by a mortgage or the deed to be delivered upon the payment of the last note, the seller would allocate the profit in that transaction through the deferred period, putting in as income each year the proportionate amount of profit on the installment received during the year.

The Treasury Department held the same position after the act of 1928 until a case reached the Court of Claims, and they held that a decedent taxpayer and an estate were two separate entities and that when a taxpayer died, all of the installment notes, at their fair market value, became subject not only to the estate tax on that value but also that the entire profit not accounted for in the installment notes not paid became income for the year in which the decedent died. This decision forced the Treasury Department to reverse itself and overrule its solicitor's opinion heretofore followed. The opinion of the Court was based upon the interpretation of 44 (d) of the act of 1928.

It is obvious that this has created a very serious hardship to many widows and is confiscatory in many instances. For instance, a case in point is that of Mr. A, who died September 26, 1929. I will say frankly that it was this case that came to my attention and brought me to the position of asking the committee, first over in the House, to remedy what apparently was not the intention of Congress at the time the act of 1928 was passed.

Senator HARRIS. In other words, you are applying a different rule to a man after he is dead, because even then the installment provision applies?

Mr. JONES. Yes, sir. In other words, the estate is penalized by a debt.

Senator REED. The provision was for an estate tax upon the estimated value of these deferred obligations?

Mr. JONES. That is right.

Senator REED. That is, soon after the death?

Mr. JONES. That is right, and that is not asked to be changed, of course.

Senator REED. And next they say for their purposes of the income tax the death changes the rule provided by section 44 and all of the face value of those deferred notes is to be treated as if it were actually received in the year of the death?

Mr. JONES. Yes. Only to the extent of the profit.

Senator REED. I understand.

Mr. JONES. Yes.

Senator REED. But the whole thing is treated as if received and that proportion that represents an imaginary profit is taxed for that year?

Mr. JONES. Income of that year in which he died.

Senator HARRISON. What you meant to say, Congressman, was that the note of the estate in that respect would be on the same basis as an individual?

Mr. JONES. That is right; and I suggest the wording of paragraph D of the act so that it will not apply to installment transmission in case of death and in order to protect the department, the department may require a bond from the executor or the administrator or the next of kin that they will make a return of the profit as these installment notes are being paid.

Senator HARRISON. I do not think that question was ever raised when the Senate considered it in 1927 and 1928.

Mr. JONES. I do not think it was considered, Senator. And I looked up the reports very carefully and I do not think it was the intention at that time to affect the transmission by the death. It was the contention that where these installment notes passed to the estate or to the next of kin the basis of the notes was to be the same as it would have been had the decedent not died. This would be confiscatory and discriminatory in great measure. That is the reason I suggest the amendment that I have.

To come back to the illustration that I myself was particularly interested in, this man held interest in nine mortgage installment notes, dated June 7, 1929, which nature serially one each six months, beginning one year after date. The face value was $61,750. It represents practically the widow's whole estate. The Internal Revenue Department placed a market value thereon of $54,732,84. Letters from 10 bankers placed the market value as questionable at any value, inasmuch as long-time paper not acceptable for discount, not listed, and no market value. Yet the Revenue Department insists that the fair market value is as given above and requests an additional tax under section 44 (4) of $6,787.88. The widow can not discount these notes; can not sell them. The maker can not pay the principal; in fact, has asked for an extension of time on part-principal. Had Mr. A lived, he would have reported as income the proportional profit on the tansaction as each payment made bears to the whole profit, but because he died the installment notes are appraised at a fair market value and the whole profit becomes income for that year. It must be observed the taxes are on profit not yet earned and there may be default, in which event the installment notes would be wiped out and the balance of the profit likewise.

Section 44, as it was embodied in the act of 1928, is carried in full and with the same wording in H. R. 10236.

As I say, I made a careful study of the reports made by the committee of the House when this new paragraph (d) was inserted in

the act of 1928 and am led to the conviction that it was not the intention of Congress to effect the transmittal of installment notes by death; that where these installment notes passed to the estate or to the next of kin, the basis of the notes was to be the same as it would have been had the decedent not died and the notes had been collected by him. I therefore believe that I am simply asking Congress to do what it intended to do, clarifying paragraph (d) by inserting an amendment at the end of paragraph (d), reading as follows:

The provisions of the preceding paragraph shall not apply to the transmission on account of death of installment obligations if the executor or administrator or the beneficiaries of the decedent file with the commissioner, at such time as he may, by regulation, prescribe, a bond in such amount and with such sureties as he may deem necessary, conditioned upon the return by them as income in any taxable year of the same proportion of the installment payments actually received in such year which would be returnable as income by the decedent were he living at the time of their receipt.

It is the contention of the taxpayers seeking this relief through your committee that a law which provides that "gain or loss resulting from the transmission of installment obligations should be included in the decedent's return for the taxable year in which his death occurred," where such transmission is merely that of the passage of his property upon his death to his executors, is discriminatory, and may be confiscatory.

Article 863, Regulation 74, relating to the income tax under the revenue act of 1928 provides:

No taxable income is realized from the passage of property to the executor or administrator on the death of the decedent even though it may have appreciated in value since the decedent acquired it.

It is discriminatory to deny the benefits of article 863 in the case of transmittal or passage of installment obligations by death to the executor or administrator or to next of kin.

It is discriminatory to deny the decedent, his executors, or administrators or next of kin the rights which the decedent had under the law while he lived. Section 44 (a) and (b), revenue act of 1928, provides that:

The taxpayer may return as income therefrom in any taxable year that proportion of the installment payments actually received in that year which the gross profit realized or to be realized when payment is completed, bears to the total contract price.

It is discriminatory inasmuch as it imposes an income tax on an involuntary transmission of property through death. An "involuntary conversion of property" while living would not under conditions prescribed by the commissioner result in taxable gain or loss.

It is discriminatory to exact a tax because of the transmittal of installment obligations when any and all other forms of property may be transmitted by death without taxable gain or loss.

It is confiscatory inasmuch as an income tax payable in cash is exacted as a result of an involuntary transmission which does not convert the property into cash or its equivalent.

It is confiscatory because it exacts an income tax on a profit which has not been realized and can not be realized until the deferred payments fall due.

It is unreasonable to cause an estate undue hardship by compelling the sacrifice of installment obligations in order to pay an income tax

exacted because of the mere passage of such installment obligations from the decedent to the executors or administrators.

I urge you therefore to give consideration to the suggested amendment, as above, or such other phraseology as, in your opinion, will carry out the purpose and intent.

STATEMENT OF GEORGE F. Von KOLNITZ, JR., NEW YORK CITY

Mr. VON KOLNITZ. Mr. Chairman and gentlemen of the committee, I appear specifically on behalf of H. H. De Loss, of Bridgeport. I ask the consideration of the committee to the end that the following provision may be included in the revenue bill.

Senator HARRISON. What section is that?

Mr. VON KOLNITZ. Section 117.

Senator HARRISON. Page 101.

Mr. VON KOLNITZ. Yes, sir. And I ask that it be included either in section 117 or a separate section, as the draftsman might think best. The section is as follows:

Net loss for 1920. If for the taxable year 1920 a taxpayer sustained a net loss, the amount of such net loss shall be allowed as a deduction in computing net income for the two succeeding taxable years in the same manner as a net loss sustained for one taxable year is, under the Revenue Act of 1921, allowed as a deduction for the two succeeding taxable years; and any tax paid in respect of income for either or both of said succeeding two years which would not have been payable had the said net loss or any part thereof been so deductible under existing law shall, subject to the statutory period of limitations applicable thereto, be credited or refunded.

Senator KING. You want to carry that loss forward for two years?

Mr. VON KOLNITZ. Yes, 1920 being the only year since the act of 1918 that the taxpayer is not permitted to carry forward his net loss.

Senator KING. Then people who have sustained enormous losses on the Stock Exchange could carry them forward for two years and offset any gains they may make in their speculations hereafter?

Mr. VON KOLNITZ. That has been the law since 1918, on the theory that there is no net income. Where a man has a loss of $100,000 this year and a gain of a like amount the next year, he has sustained no income.

Senator BINGHAM. I think, Senator King, this is not an attempt to make a general change in the law. I understood you to say that it applies only to 1920?

Mr. VON KOLNITZ. That is true; and 1920 is the only year since 1918 in which a taxpayer has not been permitted to carry over a loss.

Senator BINGHAM. The only change you are proposing is for a year, affecting 1920?

Mr. VON KOLNITZ. Yes, sir.

Senator BINGHAM. The fiscal year 1920?

Mr. VON KOLNITZ. Yes, sir.

Senator KING. It has not any relation in future?

Mr. VON KOLNITZ. No; it applies to the year 1920.

Senator REED. Let me ask you, how much did your client get back in refund?

Mr. VON KOLNITZ. About $25,000. Frankly, my client sold some stock in 1920 at a substantial loss. He took his loss in 1921. He had a slight carryover in 1922. The commissioner audited it in his reports and determined that the stock had, in fact,

become worthless in 1920, and although he sold the stock in 1921 and actually closed the transaction in that year, the commissioner held the tax, and the Board of Tax Appeals sustained the commissioner, and the court of appeals sustained the Board of Tax Appeals, the court saying that a man is not compelled to be an incorrigible optimist with reference to his securities. At any rate, the courts held that because this stock became worthless in 1920 that that was the year in which the taxpayer could have taken his loss, and not in the year 1921, the year in which the stock was sold. Now that having been the case, and the loss having been determined to have been sustained in 1920, there is no provision in the law which permits such a loss to be carried over into 1921.

Now inasmuch as 1920 is the only year since the Revenue Act of 1918 in which taxpayers are not permitted to carry over net losses, I ask the inclusion of this provision in the act.

Senator CONNALLY. Let me ask you, everyone else settled on the 1921 law as written?

Mr. VON KOLNITZ. I do not know.

Senator CONNALLY. You want us to make an exception in the case of your client?

Mr. VON KOLNITZ. My client, and everyone else who is in the same situation.

Senator BINGHAM. He is asking that it apply generally to the year 1920.

Senator CONNALLY. He is here representing a man who has exhausted his resources in the courts, and he wants us to give him $25,000.

Senator REED. The provision would be general.

Mr. VON KOLNITZ. The provision would be general, and where there is an offset one against the other, I do not ask any favors.

Senator CONNALLY. This bill does not permit that, so why should we go back and permit it where we are going to sock all these fellows in this law?

Mr. VON KOLNITZ. Because I say that during the entire period from 1918 down to date, it was allowed, except in the year 1920.

Senator CONNALLY. I know, but that does not change the law, if it was the same law since Adam and Eve. Now you want to change this so as to make an exception for your client.

Senator BINGHAM. He is not asking us to make an exception simply for his client, but the provision would be a general provision.

Senator REED. Let me ask you, Would the statute of limitations bar you?

Mr. VON KOLNITZ. No, sir. I have a very short memorandum for the committee, in which I set out the proposed section, and in which I say that any tax paid in respect of income for either or both of said succeeding two years which would not have been payable had the said net loss or any part thereof been so deductible under existing law shall, subject to the statutory period of limitations applicable thereto, be credited or refunded.

Senator REED. Your case has been closed so recently that you could still come in?

Mr. VON KOLNITZ. Yes; in the last four years, so I could still get a refund.

Senator REED. Would it be square to give you that without opening up the statute of limitations and not let everybody else come in?

Mr. VON KOLNITZ. Everybody else under the same circumstances.

Senator GEORGE. As it was then.

Senator REED. I am told by one of the experts that if we opened that up and gave everybody the same right that you are asking it would cost the United States $50,000,000.

Senator KING. We had better make an appropriation for you of $25,000.

Mr. VON KOLNITZ. I do not know the Treasury figures on it. But I would say that you have some precedent for this, in that this section 1003 as passed by the House contains substantially the same thing, at least in principle; not in the same situation, of course, but there it opens up years that have been closed.

Senator BINGHAM. You do not mean 1003?

Mr. VON KOLNITZ. 1003.

Senator BINGAHM. There is no section 1003 in this bill.

Senator REED. I do not find any section 1003 in the bill.

Senator BINGHAM. It is 1103.

Mr. VON KOLNITZ. I do not have a copy of that before me. The title is, Refund of Taxes for Taxable Year 1918.

Senator REED. That is section 1104.

Senator LA FOLLETTE. What page is that on, Senator?

Senator REED. Page 304 of our print.

Mr. VON KOLNITZ. The report of the hearings before the Ways and Means Committee disclosed a situation not unlike mine in principle, where a specific taxpayer was involved. I think the amount of his refund was some $40,000.

Senator KING. We shall have to study that.

Senator CONNALLY. That is a joker that helped some individual case, is it not?

Mr. VON KOLNITZ. Yes; apparently it is.

Senator CONNALLY. And you are invoking that joker to help you through.

Senator REED. We are very much obliged to you for calling attention to it, anyway.

Senator KING. Yes; you have earned $25,000 for that.

Mr. VON KOLNITZ. I do not know whether mine would be called a joker, or not.

Senator GORE. You figured it is a tragedy, instead of a joke?

Mr. VON KOLNITZ. At the time of the passage of the revenue act of 1921 the law with respect to making a deduction for stock which became worthless in a given year was, at least, doubtful, The first regulation of the Treasury on it provided that a taxpayer could take a loss for worthless stock which was ascertained to be worthless, and charge it off in a particular year. That regulation was subsequently amended by providing that you may take a loss for stock which was ascertained to be worthless, but which actually became worthless in a given year.

The CHAIRMAN. Your time is up, Mr. Von Kolnitz.

Mr. VON KOLNITZ. I have a short statement, Mr. Chairman.

The CHAIRMAN. You may put that in the record.

(The statement presented by Mr. Von Kolnitz is here printed in the record in full, as follows:)

STATEMENT SUBMITTED BY GEORGE F. VON KOLNITZ, JR., ESQ., ON BEHALF OF H. H. DELOSS, OF BRIDGEPORT, CONN.

In every revenue act since that of 1918 Congress has consistently followed the policy of permitting a taxpayer who has sustained a net loss in one year to recover such loss from income in the succeeding year or years, before subjecting the latter income to taxation. This policy is based on the sound legal, economic and moral ground that nothing should be taxed as income unless and until the taxpayer has in truth and in substance experienced a net gain. Where a taxpayer suffers a loss of $100,000 this year and a gain of a like amount next year, clearly he has merely made himself whole. He has become possessed of no net income which should be taxed.

Due to the peculiar provisions of the revenue act of 1918, which was enacted at a time of great national stress and therefore could not be drawn with the care which subsequent acts evidence, taxpayers who sustained a net loss in 1920 were not permitted to carry over such a loss and offset it against positive income for 1921 and 1922. A taxpayer who sustained a net loss for 1919 was permitted to offset it against income of 1918 and/or 1920. For 1921 and subsequent years net losses were allowable deductions from income in the two succeeding years. The injustice of this situation with respect to taxpayers having net losses in 1920 is obvious, and it is accordingly sought to remedy the same by including in the present revenue act the following section:

NET LOSS FOR 1920

If for the taxable year 1920 a taxpayer sustained a net loss, the amount of such net loss shall be allowed as a deduction in computing net income for the two succeeding taxable years in the same manner as net loss sustained for one taxable year is, under the revenue act of 1921, allowed as a deduction for the two succeeding taxable years; and any tax paid in respect of income for either or both of said succeeding two years which would not have been payable had the said net loss or any part thereof been so deductible under existing law shall, subject to the statutory period of limitations applicable thereto, be credited or refunded.

STATEMENT OF FAYETTE B. DOW, WASHINGTON, D. C., REPRESENTING THE AMERICAN PETROLEUM INSTITUTE

Mr. Dow. Mr. Chairman, the other day I yielded my time to Judge Ames. We had not reached the point of this tax, and I have a statement which I will put in the record.

The CHAIRMAN. Put it in the record either following his testimony or at this point, if you wish.

Mr. Dow. I will put it in the record at this point.

(The statement presented by Mr. Dow is here printed in the record in full, as follows:)

STATEMENT OF FAYETTE B. DOW, REPRESENTING THE AMERICAN PETROLEUM INSTITUTE

Members of the Finance Committee of the Senate:

The American Petroleum Institute, representing the oil industry of the United States, desires to call your attention to the change in the existing law relative to credit for foreign taxes incorporated in section 131 (b) (1) of the proposed revenue act of 1932 (H. R. 10236), and to give you our reasons for believing this change unsound and inequitable.

As you know, the present law (sec. 131 of the revenue act, 1928) provides that American concerns engaged in foreign trade are entitled to claim credit, in part, for the income taxes which they are required to pay to foreign countries on their income earned abroad. This credit is limited to an amount not in excess of the tax levies in the United States on the company's total foreign income. This provision of the law has been in continuous existence for the past 14 years, and has been consistently recognized by Congress as not only just and

proper, but as vital to the development and security of American foreign trade. In other words, Congress has repeatedly said to American industry in every revenue law enacted since 1918: If you will develop and promote American foreign trade, we will assure you that to the extent you have already paid in income tax abroad on the income derived from such trade, we will not levy a further tax against such income in the United States, unless the total amount of such foreign tax payments is less than the tax levied in the United States on your total foreign income.

The House bill, H. R. 10236, in its present form, however, by section 131 (b) (1), changes the existing law so that American concerns engaged in the promotion of American foreign trade will have to pay not only the total foreign taxes levied on their foreign income by the foreign countries but, in addition, pay to the United States Government a tax on any part of such income as has not already borne a tax abroad equal to that levied in the United States, despite the fact that, as a whole, the company's foreign income may have already been subjected to foreign income taxes in excess of the American tax rate.

If this proposed change should become law, it would result in American companies operating abroad being in a much more unfavorable position than foreign companies operating outside of their respective countries. For instance, the French income tax law exempts entirely from commercial profit or income tax earnings derived from operations outside of France. This is true of practically all of the major foreign countries, either as a result of statutory provisions or various reciprocal trade treaties entered into. The purpose of the original enactment in 1918 was, without question, to foster foreign trade and commerce by enabling American individuals and corporations to engage in business on an equality as to taxation with their competitors. Thus, an American corporation establishing a foreign, necessarily subjected to at least the same local taxes as its competitors, even in the absence of discriminatory burdens, could not ordinarily carry on business in the foreign country profitably if the income from such business were to be further subjected to an additional tax in the United States; and no doubt this exemption from double taxation has been, in a large measure, the cause of the tremendous growth of American foreign trade in the last 14 years. The United States has lost nothing by exempting the foreign income from American taxes, because without the exemption there would have been no such income. The United States, however, has been the gainer, both from the additional wealth brought into this country and from the surtaxes on this income when distributed to shareholders of American corporations.

At the present time American enterprise abroad is contending with unprecedented burdens and discriminations which make their continuance both difficult and problematical. To add to these burdens by what is, in effect, a new tax, will certainly discourage and probably prevent any extension of foreign business and may even prove the last straw to many already overburdened and struggling enterprises. If American trade carried on by Americans is to continue, it must have some reasonable assurance of permanence and not be subject to unexpected tax burdens and changes.

Foreign trade, like domestic trade, should be considered as a whole. The bitter must be taken with the sweet and the United States should be glad if a company which makes earnings in one country is willing to use its earnings in carrying on at a loss in other countries in the hopes that more trade will develop and more American goods be sold in the future, rather than penalize the companies doing business in a number of foreign countries by driving them out of the countries where the business is being carried on at a loss or at a bare margin of cost.

If foreign trade develops, it should develop geographically rather than by the boundaries of countries. Moreover, in any widespread foreign business there are nearly always disastrous conditions in some part of the world, such as the Smyrna fire, the Japanese earthquake, wars, extensive and local, and the like, and an exporter to survive in such countries must be able to balance the loss in one country against better conditions in less distributed countries. The important question is not so much whether American trade should be promoted in a particular country as it is that American goods should be exported from the United States, keeping up industry in the United States; and the distribution should be as wide as possible, averaging unstable conditions in one locality against temporarily stable conditions in another part.

The provision of section 131 (b) (1) of H. R. 10236 are not only unsound and particularly dangerous at this time but they are discriminatory and inequitable. Instead of encouraging the expansion of our foreign markets, it places a premium on their restriction. This is illustrated by the following example of the cases of taxpayers A and B:

	A		B	
	Amount	Foreign tax paid	Amount	Foreign tax paid
Source of income:				
Great Britain	$1,000	$250	.....	.....
Argentine	1,000	None	.....	.....
Union of South Africa	.....	.....	$2,000	$250
United States	1,000	.....	1,000	.....
Total	3,000	.....	3,000	.....
United States tax, before credit (at 13½ per cent)	$405	.....	$405	.....
Proportion of foreign income to total income	⅔	.....	⅔	.....
Credit for foreign taxes under sec. 131 of H. R. 10236	$135	.....	$250	.....

Thus B, who develops and promotes American foreign trade in only one foreign market, is permitted to receive almost twice as great credit as A, although A has the same amount of foreign income as B, has paid the same amount of foreign taxes, and is engaged in developing and promoting American foreign trade in twice as many foreign markets. This result, of course, is just the reverse of what it should be. It is, moreover, directly contrary to the policy and provisions of the existing act (sec. 131 of revenue act 1928), in accordance with which the taxpayer who develops and promotes American foreign trade in the greatest number of foreign markets receives the greatest credit. It seems clear that A, who is engaged in developing and promoting American foreign trade in twice as many foreign markets as B, who has the same amount of foreign income as B, and has paid the same amount of foreign income taxes, should receive credit for foreign taxes at least equal to that received by B.

H. R. 10236, in changing the present credit provisions of the 1928 act for foreign taxes, would operate to prolong the present depression and increase its intensity. Our foreign markets are already prostrate, almost paralyzed, both as to export and import business. We must revive these markets. Until that aim has been achieved, surplus products will continue to pile up, commodity prices will remain low, and business recovery will be deferred.

As advised by the United States Department of Commerce in 1928:

"Our total volume of exports translated itself into employment for 2,400,000 families, while its increase in the last seven years has interpreted itself into livelihood for 900,000 additional families in the United States. And in addition to these, millions more families find employment in the manufacture of imported raw materials. The farmer has a better market for his produce by reason of their employment."

If the Department of Commerce was right in 1928 in attributing the livelihood of 2,400,000 families to a thriving export trade, the present status of this trade explains why wage earners in 1,500,000 families now lack work. This is confirmed by the further statement of the United States Department of Commerce made only this month (April 15, 1932), namely:

"The significance of our export trade to American labor is clear when one realizes that more than 1,400,000 workers, receiving more than $1,500,000,000 in wages, were directly engaged in producing goods for export in 1931. Furthermore, there was probably an equal additional number employed indirectly to serve the activities and to supply the needs of those engaged directly."

Presumably the House of Representatives thinks that by further limiting the present credit for foreign taxes, thereby placing on American foreign trade an increased tax burden, the United States will be able to collect additional income taxes equivalent to the amount of the reduced credit. The fallacy of this assumption is self-evident. If Congress is not willing to permit American concerns to compete on an equal footing with foreign concerns, the American concerns will not only cease to have foreign profits against which a United States tax could be levied, but, in addition, failure of American concerns to find outlets for their surplus products will depress domestic markets, will increase the cost of the production of goods made for domestic consumption, and, as a result, decrease the profits from domestic operations. If American industry has an outlet abroad for its surplus products, it is enabled thereby to spread the fixed charges, such as depreciation, taxes, maintenance, and general overhead over a larger number of units, whereas if such surplus production can not be sold, these total fixed charges

must be added to the cost of the domestic production, and thereby decrease the domestic profits.

It is apparent, therefore, that this proposed change in the law defeats its own purpose. Instead of increasing income it operates to decrease both the foreign profits and the domestic profits. At the same time it would only serve to prolong the depression and would, in accordance with the statement of the Department of Commerce, keep millions of people out of work.

As stated above, the provisions of the present law, section 131, allowing credit for foreign income taxes have been in continuous existence since 1918 (with slight modifications made in the 1921 and 1928 acts), and during that time American foreign trade has progressed and developed as it has never done at any other time in the history of this country. If 14 years' progress in the furtherance of foreign trade is not to be jeopardized, and if American business abroad is to be permitted to compete with foreign enterprizes, it is imperative that American companies doing business abroad be given at least the same protection at home that they have had under the present revenue act. At a time when American foreign trade is most in need of encouragement, and at a time when burdens of depreciated currency and retaliatory tariff walls make it most difficult, almost impossible in some cases, to carry on foreign trade, it would be a pity if Congress should show so little concern for the welfare and furtherance of our country's foreign trade as to take away from that trade (so vital to the well-being and prosperity of our country) the relief which past experience has shown was a paramount need, and the worth of which has conclusively been proven by the record of the past 14 years. Certainly it is not wise to choose the worst period of the worst depression that we have ever experienced as the time to disrupt that part of our commercial machinery on which we most directly rely for the furtherance of our foreign commerce. Rather than decrease the benefits to be granted American foreign trade, Congress should exempt such earnings from all tax in the United States. Such exemption was proposed and seriously considered by Congress at the time of the passage of the revenue act of 1928.

To sum up: If this proposed change in the law should become effective—

1. It would cause American companies operating abroad to be in a much more unfavorable position than companies of other countries with which they have to compete.

2. It would operate to restrict our foreign trade to the boundaries of individual countries, and this at a time when the development of world-wide markets is most needed.

3. It would result in discrimination and inequality between American concerns engaged in promoting foreign trade.

4. It would tend to prolong the present depression in the United States and increase its intensity.

5. Instead of increasing taxable income it would operate to decrease both the foreign profits and the domestic profits.

In view of the vital importance of this matter to the prosperity and well-being of our Nation, the American Petroleum Institute respectfully urge you to give this proposed change in the law your careful consideration. The institute recommend that section 131 (b) (1) be stricken from the bill, thereby making the provisions of section 131, of the proposed new revenue act, accord in substance with the existing provisions of the revenue act of 1928.

Members of the Finance Committee of the Senate:

In your consideration of the new revenue act, in the form passed by the House, I desire to call your attention to the possible harmful results of the proposed changes in the provisions of the existing act, which were originally enacted to relieve foreign trade and commerce from the burdens of double taxation.

Under these provisions, by a system of credits and deductions, since the revenue act of 1918 became effective, corporations and individuals trading abroad, either directly or through subsidiary foreign corporations, have not been required to pay additional American taxes on their foreign income where it has already been subjected to foreign taxes greater in amount than the American tax.

They have, in addition, been afforded further relief, where the foreign taxes have exceeded the American tax on the foreign income, by being allowed to deduct the excess from their American income.

The bill in its present form, by section 131 (b) (1), limits the exemption to the foreign income which has been actually taxed. The result of this change is that if business is done in several foreign countries, in some of which the tax rates are heavy, and in others of which the income taxes are light, or where they

tax on the enterprise is not in the form of an income tax, a large American income tax may also be imposed on a part of this foreign income, despite the fact that as a whole, it has already been subjected to taxation in excess of the American tax rate.

In its present form, the act also, by section 23 (c) (2), in effect does away with the right to deduct the excess of the foreign tax.

These amendments, although in form restricting a privilege as a practical matter, impose an additional tax on income from foreign trades and businesses which were embarked upon in reliance on the continuance of the existing law.

At the best, the change will work a hardship. At the worst, it may, under present adverse conditions and the increasing discrimination of foreign governments against American trade, render our foreign commerce so unprofitable as to cause it to cease, with the resultant loss of the investment involved and the attendant diminution in the revenue heretofore brought here from foreign countries.

The purpose of the original enactment in 1918 was, without question, to foster foreign trade and commerce by enabling American individuals and corporations to engage in business on an equality as to taxation with their competitors. Thus, an American corporation, establishing a foreign branch, necessarily subjected at least to the same local taxes as its competitors, even in the absence of discriminatory burdens, could not ordinarily carry on business in the foreign country profitably if the income from such business were to be further subjected to an additional tax in the United States; and no doubt this exemption from double taxation has been in a large measure the cause of the tremendous growth of American foreign trade in the last 14 years.

The United States has lost nothing by exempting the foreign income from American taxes, because, without the exemption, there would have been no such income. The United States, however, has been the gainer both from the additional wealth brought into this country and from the surtaxes on this income when distributed as dividends to the stockholders of American corporations.

From the standpoint of the United States, it is immaterial that some part of the foreign income has not been subjected to income tax, where the tax on the balance of the foreign income has exceeded the American tax on the whole; and in many instances, it will be found that where a foreign country has imposed no income tax as such, that the income has been in fact subject to a heavy taxation in the form of turnover taxes (France), or other business taxes, which are not construed to be income taxes and which, therefore, can not be allowed as a credit under the terms of the existing law.

At the present time, American enterprises abroad are contending with unprecedented burdens and discriminations which make their continuance both difficult and problematical. To add to these burdens by what is in effect a new tax, will certainly discourage and probably prevent any extension of foreign business and may even prove the last straw to many already overburdened and struggling enterprises.

The amount of revenue which might be derived from these changes in the law, even if they have no ill effect on foreign trade and commerce, can be but small in the aggregate, however burdensome and harmful the additional tax may be in any individual case.

If, on the other hand, these changes have the effect of diminishing the amount of foreign income brought into this country, they will further retard recovery from the existing financial depression and defeat their own purposes by diminishing the income of American corporation, which distributed in dividends, would have been subject to surtaxes.

It is even possible that American corporations having foreign subsidiaries, might transmit income to this country only from the countries where the income tax rate is greater than the American tax, allowing the subsidiaries in other countries to accumulate their income until such time as the burden of taxation in the United States decreases, with the immediate result of diminishing the usual flow of their income into this country.

The taxation of foreign commerce or business is, in principle, similar to a tax on exports and open to the same objection. Each tax represents an obstacle or an obstruction to the outflow or unusable surplus—in the one case of commodities, and in the other of business activities or capital which can not be profitably employed in this country.

On the other hand, the income resulting from each represents an increment to the wealth of this nation, whereas the income from domestic business is frequently merely an exchange of wealth from one hand to another.

The history of the supremacy of the great commercial nations of the world, from Carthage to Rome and from Venice to England, demonstrates the close relation between the growth of the nation's foreign trade and the increase in its material prosperity. That any obstruction or hindrance should be placed on the continuance of growth of our own foreign commerce is deplorable and unthinkable.

MEMORANDUM CONCERNING CERTAIN REQUIRED CHANGES IN THE REVENUE ACTS RESPECTING THE JURISDICTION OF TAX SUITS AND THE STATUTES OF LIMITATIONS

The absurdities which now exist in connection with the jurisdiction of the courts of the United States Board of Tax Appeals in suits involving internal-revenue taxes and in connection with the statutes of limitations respecting refunds and deficiencies make it manifest that some changes should be made in the sections of the statute relative thereto. A few illustrative cases will adequately present these absurdities.

Case No. 1: In this case the taxpayer in 1927 paid certain additional taxes. He filed a claim for refund in 1928 in which he claimed that the Commissioner of Internal Revenue had failed to allow sufficient depreciation on assets. The claim was rejected and suit duly filed in the Court of Claims upon the grounds stated in the claim. After the case was tried by the Court of Claims, but while the statute of limitations was still open for filing further claims for refund, new facts came into existence which had the effect of entitling the taxpayer to an additional refund upon another and entirely different ground. The statute of limitations was still open for filing claims for refund, which claim was filed. The Treasury Department and the Department of Justice now claim that no relief whatever is possible on this claim. They say (1) that the suit before the Court of Claims definitely disposes of the entire taxable year involved. The absurdity arises from the fact that the new issue could not be raised in the suit before the Court of Claims because it had not been expressly stated in the first claim for refund. (2) The filing of the second refund claim was entirely legal and within the statute of limitations, but the government contends that the question there presented has been res adjudicata in a suit in which the issue therein contained could not even be raised.

Case No. 2: In this case a taxpayer paid his income taxes in 1922. Within the statute of limitations he filed a claim for refund claiming an additional credit for foreign taxes determined subsequent to the time the return was originally made. The Commissioner of Internal Revenue waited until the statute of limitations for filing new claims had [illegible] allowed in full the credit claimed for foreign taxes, but [illegible] issues not theretofore raised and disallowed all the [illegible] alties claimed in the return. The taxpayer [illegible] bring a suit to test this action because [illegible] cate that [illegible] ely claim. In other words, the statu[illegible]ed the com[illegible]ate all claims for refund simply b[illegible] until [illegible] statute of [illegible]n for filing new claims and the [illegible] adverse [illegible]ons u[illegible] questions which will wipe out [illegible] and.

Case No. 3: In [illegible] the return [illegible] taxes paid [illegible] in March, 1921. Waivers [illegible] extended waivers [illegible] ich ext[illegible] time for making additio[illegible] Under [illegible] filing such waivers au[illegible] ling claim [illegible] and until April 1, 1928. [illegible] deficiency in which he disa[illegible] full notice, and disallowed [illegible] of these issues had not be[illegible] and he had failed, therefo[illegible] taxpayer du[illegible] properly filed petition befo[illegible] he board will be authorized by law to consider all [illegible] and [illegible] tax of t[illegible]le year in which the decision [illegible] overpayment or refund. Despite [illegible] is worthless because the refund can not be made.

Many other cases could be cited showing the [illegible] which might arise under the statutes [illegible] These difficulties are due to the fact that the sections of the [illegible] upon refunds and deficiencies and to the jurisdiction of the [illegible] courts have just grown up piece by piece without any attempt to [illegible] a uniform, comprehensive system dealing with the whole subject of tax litigation. Thus the jurisdiction of

the Board of Tax Appeals dealing only with deficiencies has been imposed upon the preexisting limitations provisions relating to both refunds and deficiencies, and both of these have been superimposed upon the rules of law applicable to the jurisdiction of the courts in suits for the recovery of internal revenue taxes. I will consider first the statute of limitations.

Some basic thinking is necessary in connection with the statute of limitations rather than the present tendency to add a phrase here and a section there. There are no morals connected with a statute of limitations. Its sole and only purpose is to finally dispose of cases. If the statute of limitations itself does not finally dispose of the case, it accomplishes no purpose whatever. It is manifest that the statute of limitations as it now is written regarding tax returns does not accomplish this basic purpose. For example, there is the provision as to waivers being filed. This keeps open the case for the purpose of determining an additional tax, but other sections of the statute close the case for the purpose of refunds. As long as the case is pending at all it is utterly impossible for the taxpayer to file claims for refund and prophesy all the grounds which might arise during the audit of the case before the department and thus protect himself by filing claims which state the grounds upon which the refund is to be made. If the case is open for any purpose, it should be opened for all purposes, because if it is open at all there is no justification whatever for a statute of limitations which does not have the effect of finally disposing of the case. Thus, no State legislature would ever think of passing a statute of limitations which entitles the purchaser in a contract to five years within which to bring his suit for the goods and the seller only three years within which to sue on his half of the contract for the sales price.

In addition, it should be borne in mind that the basic reason for a statute of limitations is to bar a suit in court, not to affect the rights of the parties after they get into court and obtain the judgment. The vagaries of the present statute of limitations have the effect of entirely vitiating certain judgments of the Board of Tax Appeals in cases where the case is validly and legally before the board for trial. The statute of limitations should be directed against the determination by the Commissioner of Internal Revenue which forms the basis for jurisdiction by the Board of Tax Appeals. If his determination is validly made and the case timely filed before the board, the entire case should be open for whatever determination the board may make upon the merits. In other words, if the statute permits a suit to be litigated before the board at all, it should permit it to be fully litigated.

RECOMMENDATION No. 1

The second sentence of subdivision E of section 284(a) of the revenue act of 1926 as amended by section 507 of the revenue act of 1928, should be repealed as to cases still pending or hereafter instituted. This would leave only the first sentence of that subdivision, which provides:

"If the board finds that there is no deficiency and further finds that the taxpayer has made an overpayment of tax in respect of the taxable year in respect of which the commissioner determined the deficiency, the board shall have jurisdiction to determine the amount of such overpayment and such amount shall, when the decision of the board has become final, be credited or refunded to the taxpayer as provided in subdivision (a)."

Under this section as thus amended no other cases could be brought before the board than those which may now be brought, in other words, there would be allowed no litigation which is not now allowed. The elimination of the second sentence, however, would base the jurisdiction of the board upon the broad general principle outlined in section 274, which is to redetermine the entire amount of tax shown by the return in dispute. The second sentence of section 284 (e), which it is recommended be eliminated, provides:

"Unless claim for credit or refund or the petition was filed within the time prescribed in subdivision (g) for filing claims, no such credit or refund shall be made of any portion of the tax paid more than four years (or, in the case of a tax imposed by this title, more than three years) before the filing of the claim or the filing of the petition, whichever is earlier."

This sentence does not serve the primary purpose of a statute of limitations because it does not finally close a case nor prevent litigation. It merely places a restriction upon the effective right of the board to fully redetermine the correct tax due after it has the case validly before it. Similar adjustments should be made of the estate tax provisions and of section 322 (d) of the revenue act of 1928.

The second great weakness of the present statute lies in the restrictions upon the jurisdiction of the courts to hear suits for the recovery of internal revenue taxes.

Section 3226 of the Revised Statutes as included in section 1113 of the revenue act of 1926 requires that no suit shall be brought until a claim for refund or credit has first been filed with the Commissioner of Internal Revenue. The purpose of this requirement is to give the commissioner an opportunity to allow the refund before going into court. It is a wise provision. However, the courts have injected into this section of the statute a further restriction which produces the absurdities noted in the above illustrative cases. The courts have held that the precise ground upon which the suit is based must be stated in the claim for refund or the court will have no jurisdiction to consider the case.

This rule is a heritage from the simple conditions existing prior to the enactment of the complex income tax acts since the War. It may have served very well where a return was capable of producing only a few simple questions which could be foreseen by all the parties and protection taken. It does not, however, wrok satisfactorily under statutes so involved and so complex that it is humanly impossible for the taxpayer to foresee all the questions which may raise during the pendency of the suit before the Commissioner of Internal Revenue. As has been shown in case No. 3 above, the commissioner has a perfect right under the statute to delay the consideration of a valid claim for refund until after the statute has expired for filing further claims, and then arbitrarily disallow many of the reductions claimed in the return, thus precluding the taxpayer from any consideration of those deductions in the courts. Nor is the purpose of Section 3226 of the Revised Statutes applicable, because in raising new questions and disallowing further deductions after the time for filing refund claims has lapsed, the commissioner does consider those new questions, which is the purpose of section 3226, but precludes the taxpayer from his legitimate rights.

Here must be noted an important distinction between the Board of Tax Appeals in suits involving additional taxes and the courts in suits involving refunds. The board is given the broad general jurisdiction to consider the whole tax return and redetermine the correct taxes due. The courts are given jurisdiction only to consider the precise questions raised in the claim for refund. There should not be this lack of uniformity. A tax case is a tax case and inevitably involves the entire tax return from which it arises. The jurisdiction of the courts should, therefore, be made analagous to that of the Board of Tax Appeals in that they should be authorized to consider the whole tax return once a suit comes before them. The courts should consider the entire return and determine the correct tax due upon that return regardless of how it affects the parties. The tax return upon which the tax is computed, not the issues, should govern the jurisdiction of the court.

Recommendation No. 2

It is therefore recommended that the existing statutory provisions be changed where necessary to conform to the following provision:

"Where the taxpayer has within ——— years after the payment of taxes imposed by this title, filed a claim for refund or credit, the commissioner shall, after consideration of such claim, mail to the taxpayer by registered mail a notice of determination of the total tax upon the return in respect of which such claim is filed.

"(a) If such determination results in a deficiency, such notice of final determination shall be deemed to be a notice of deficiency as defined in Section 274(a), and the taxpayer shall have the same rights and privileges to file a petition with the Board of Tax Appeals as provided in section 274, 283, etc.

"(b) If such determination finds an overpayment or finds that there is no overpayment or deficiency, thus resulting in a rejection of the claim in whole or in part, the taxpayer may within six months from the date of such notice of determination bring suit for the recovery of any taxes paid upon the return in respect of which the claim was filed.

"In any case in which a suit for the recovery of internal revenue taxes is pending before the courts at the time of the enactment of this act and in which final decision is not rendered until after the enactment of this act, and in any cases hereafter brought for the recovery of such internal revenue taxes, the court before which such suit or proceeding is brought shall have jurisdiction to determine the correct tax due upon the return filed in respect of which such suit is brought. If the court finds that there is due a deficiency, the amount thereof shall be assessed and collected. If the court finds that there has been an overpayment of taxes in respect of the return, the amount thereof shall be refunded without the necessity of filing further claims."

The foregoing provisions will have the effect of placing the courts and the board on the same basis. In other words, if a suit is legally instituted it will be a suit based upon the return which has been filed, and the judgment of the board or the court will be to finally determine the taxes due on that return for all purposes. It is manifest that the jurisdiction of any court should be based upon the instrument out of which the litigation arises—in this case, the income tax return. The mere issues which might be raised should be a matter of pleading.

One other worthless section will be considered. Section 608 (b)2 of the revenue act of 1928 provides that the taxpayer and the commissioner may enter into an agreement to suspend the statute of limitations for bringing suit "to the date of final decision in one or more named cases." The purpose of this section is to prevent litigation when there is a case pending before some court which will decide the question in dispute. The trouble with the section lies in the fact that the statute can only be suspended until the date when the final decision in the pending case is rendered. In other words, the statute provides that you may suspend the statute of limitations in order to find out what the decision will be in some pending case, but that after the decision has been rendered, you can't do anything about it.

RECOMMENDATION No. 3

It is therefore recommended that the phrase "to the date of final decision in one or more named cases" be amended to read "to a date agreed upon not more than six months after the final decision in one or more named cases." This will allow the parties to agree to suspend the bringing of the suit, find out what the decision of the court is in the pending named case, and then have time to bring the suit.

Respectfully submitted.

R. KEMP SLAUGHTER.
HUGH C. BICKFORD.

STATEMENT OF E. G. BUCKLAND, NEW HAVEN, CONN., PRESIDENT OF THE RAILROAD CREDIT CORPORATION, CHAIRMAN OF THE BOARD OF DIRECTORS OF THE NEW YORK, NEW HAVEN & HARTFORD RAILROAD CO.

Mr. BUCKLAND. Mr. Chairman, my name is Edward G. Buckland. I am president of the Railroad Credit Corporation; chairman of the board of directors of the New York, New Haven & Hartford Railroad Co.

I appear in behalf of the Association of Railway Executives, which represents substantially all of the class 1 railroads of the United States, whose revenues aggregate a little over 98½ per cent of the total revenues.

I shall only advert to two points in this tax bill, and will call attention to section 141, subparagraph (c), page 109, adding to the rate of taxation upon the net income of corporations an additional 1½ per cent tax in case such corporation makes a consolidated return.

I wish to point out that this addition of 1½ per cent tax is not likely to result in substantial additional revenue, excepting in the cases of corporations like interstate common carriers by rail, a change in whose corporate organization is subject to the prior approval of the Interstate Commerce Commission.

Corporations other than those subject to such regulation are at liberty to change their form of organization and to absorb into themselves affiliated corporations and thereafter make a return for the reorganized corporation, upon which the 1½ per cent additional tax would not be assessable. In the case of interstate common carriers by rail, subject to the provisions of the interstate commerce act, corporate mergers or consolidations may be made only with the prior

approval of the Interstate Commerce Commission. For years, many railroads have been, through subsidiary companies, operating properties, the operation of which they would discontinue because of the losses sustained were it not that the public interest requires such operation, and that they may not abandon such operation excepting with the approval of the Interstate Commerce Commission.

I quote very briefly from section 1 of the interstate commerce act, subparagraph (18):

* * * No carrier by railroad subject to this act shall abandon all or any portion of a line of railroad, or the operation thereof, unless and until there shall first have been obtained from the commission a certificate that the present or future public convenience and necessity permit of such abandonment.

That is the law to-day.

Senator SHORTRIDGE. Whether it is profitably conducted or not?

Mr. BUCKLAND: Whether it is profitably conducted or not.

The reason for this is that the character of transportation has materially changed with the advent of improved highways. There are many tap lines and logging railroad companies which have for years been operated at a loss, but the operation of which must be continued in the public interest. There are many interurban railways which are being currently operated at a loss—that is, street railways, trolley lines, electric railroads—due to the improved highways and the advent of the motor bus, the motor truck, and the privately-owned automobile. Railroads owning such properties, as affiliated lines, are continually confronted with the necessity of either abandoning these lines or continuing to operate them at a loss because their operation is necessary in the interest of the public. The effect of penalizing consolidated returns is to impose upon railroad systems additional taxation, because of losses which they can not avoid. It is not believed that the Congress intended to throw a special burden upon railroad systems, but this is the effect of section 141 (c). Apparently, the proviso was inserted in the thought that the consolidated return gives some corporations, like chain stores and branch banks, an advantage over their local competitors. It is submitted that this provision will not accomplish the intended result. These enterprises can be just as readily conducted by a single corporation or through agents, as by means of subsidiaries. The process of merging or consolidating private corporations is so easy and so quick—any lawyer that has had anything to do with it knows that—that undoubtedly the corporations intended to be taxed would no longer file consolidated returns, but would file one return which would include all the business previously included in the consolidated return.

It seems to us as if that 1½ per cent penalty will not accomplish what was intended. If, however, in the opinion of this committee the 1½ per cent penalty on consolidated returns should remain, then we suggest as a constructive suggestion that section 141 (c) be changed to read as follows:

In any case in which a consolidated return is made by a corporation not subject to the provisions of the interstate commerce act—

That is what I have inserted in there. The rest of the section is substantially as it is, and I will not take the time to read it.

The CHAIRMAN. Do you agree with the amendment on page 121, line 10?

Senator REED. No; that is what he is objecting to.

The CHAIRMAN. You are objecting to that?

Mr. BUCKLAND. I am objecting to section 141 (c) as it at present reads.

Senator REED. Was that put in on the floor of the House or was that recommended by the Ways and Means Committee?

Mr. BUCKLAND. I think that was put in on the floor of the House. It is my recollection that it was.

Senator WALSH of Massachusetts. Will you state your amendment again?

Mr. BUCKLAND. My amendment is—if you have section 141 (c), and if you will just follow the first two or three lines:

In any case in which a consolidated return is made by a corporation not subject to the provisions of the interstate commerce act, * * *

The CHAIRMAN. That is your proposed amendment?

Mr. BUCKLAND. That is my proposed amendment. Down to—if you wish to get the exact language—down to the end of the line, reading "a rate of 1½ per centum."

Then in order to make the language conform to the requirements there would have to be a new sentence in which the language would be:

In any case in which a consolidated return is made only one specific credit, computed as provided in section 26 (b), shall be allowed in computing the tax.

I will give this to the clerk, so he will understand. (The paragraph, as amended, is as follows:)

In any case in which a consolidated return is made by a corporation not subject to the provisions of the interstate commerce act, the tax shall be determined, computed, assessed, collected, and adjusted in accordance with the regulations, under subsection (b) prescribed prior to the date on which such return is made; except that there shall be added to the rate of tax prescribed by sections 13 (a), 201 (b), and 204 (a), a rate of 1½ per cent. In any case in which a consolidated return is made, only one specific credit, computed as provided in section 26 (b), shall be allowed in computing the tax.

Mr. BUCKLAND. There is one other very short matter to which I direct your attention. Section 725, on page 259, provides a tax on conveyances of "any lands, tenements, or other realty" of 50 cents for each $500 of the consideration or value of the interest or property conveyed, exclusive of the liens and encumbrances thereon. Stamp tax to apply to conveyances. Is my time up?

The CHAIRMAN. It is pretty close to it now.

Mr. BUCKLAND. I only want to call your attention to the fact that this may be a very serious deterrent to the conveyances of very large amounts of property involved in railroad consolidations. It is quite likely that in the process of the consolidations already authorized by the Interstate Commerce Commission there may be conveyances of property aggregating over a billion dollars. And the stamp tax I think was not intended to apply to matters of that sort.

I have made a suggestion, which I will file with the clerk here, as to exempting intercorporate conveyances given to effect a railroad consolidation approved by the Interstate Commerce Commission. It is suggested that there be added to the last sentence of section 725 the following clause:

* * * nor to intercorporate conveyances given to effect a railroad consolidation approved by the Interstate Commerce Commission.

With the permission of the committee, I will file my statement with the clerk to be inserted in the record.

The CHAIRMAN. That may be done.

(The statement presented by Mr. Buckland is here printed in the record in full, as follows:)

STATEMENT OF E. G. BUCKLAND

(1) Section 141 (c), page 109, adding to the rate of taxation upon the net income of corporations an additional 1½-per cent tax in case such corporation makes a consolidated return.

I wish to point out that this addition of 1½-per cent tax is not likely to result in substantial additional revenue, excepting in the cases of corporations like interstate common carrier by rail, a change in whose corporate organization is subject to the prior approval of the Interstate Commerce Commission.

Corporations other than those subject to such regulation are at liberty to change their form of organization and to absorb into themselves affiliated corporations and thereafter make a return for the reorganized corporation upon which the 1½ per cent additional tax would not be assessable. In the case of interstate common carriers by rail subject to the provisions of the interstate commerce act, corporate mergers or consolidations may be made only with the prior approval of the Interstate Commerce Commission. For years many railroads have been, through subsidiary companies, operating properties the operation of which they would discontinue because of the losses sustained were it not that the public interest requires such operation, and that they may not abandon such operation excepting with the approval of the Interstate Commerce Commission. See interstate commerce act, section 1 (18).

"* * * no carrier by railroad subject to this act shall abandon all or any portion of a line of railroad, or the operation thereof, unless and until there shall first have been obtained from the commission a certificate that the present or future public convenience and necessity permit of such abandonment."

The reason for this is that the character of transportation has materially changed with the advent of improved highways. There are many tap lines and logging railroad companies which have for years been operated at a loss, but the operation of which must be continued in the public interest. There are many interurban railways which are being currently operated at a loss, due to the improved highways and the advent of the motor bus, the motor truck, and the privately owned automobile. Railroads owning such properties, as affiliated lines, are continually confronted with the necessity of either abandoning these lines or continuing to operate them at a loss, because their operation is necessary in the interest of the public. The effect of penalizing consolidated returns is to impose upon railroad systems additional taxation, because of losses which they can not avoid. It is not believed that the Congress intended to throw a special burden upon railroad systems, but this is the effect of section 141 (c). Apparently, the proviso was inserted in the thought that the consolidated return gives some corporations, like chain stores and branch banks, an advantage over their local competitors. It is submitted that this provision will not accomplish the intended result. These enterprises can be just as readily conducted by a single corporation or through agents, as by means of subsidiaries. The process of merging or consolidating private corporations is so easy and so quick that undoubtedly the corporations intended to be taxed would no longer file consolidated returns, but would file one return which would include all the business previously included in the consolidated return.

If the 1½ per cent penalty is to remain in the bill at all, it is suggested that section 141 (c) be changed to read as follows:

"In any case in which a consolidated return is made by a corporation not subject to the provisions of the interstate commerce act, the tax shall be determined, computed, assessed, collected, and adjusted in accordance with the regulations under subsection (b) prescribed prior to the date on which such return is made; except that there shall be added to the rate of tax prescribed by sections 13 (a), 201 (b), and 204 (a) a rate of 1½ per cent. In any case in which a consolidated return is made, only one specific credit, computed as provided in section 26 (b), shall be allowed in computing the tax."

(2) Section 725, page 259, of the bill provides a tax on conveyance of "any lands, tenements, or other realty" of 50 cents for each $500 of the consideration

or value of the interest or property conveyed, exclusive of the liens and encumbrances thereon.

This wording might be held to apply to intercorporate conveyances in the process of effecting a railroad consolidation. If so, it is directly opposed to the policy of consolidations favored by the transportation act, since it imposes a heavy financial burden upon them. If the bill could be amended so that the tax would not apply to intercorporate conveyances when the capital stock of one of the conveying companies is owned by one of the other companies in the system, the effect of the tax, as a deterrent to consolidations, would be removed. Otherwise the railroads are going to be slow to consolidate when they have to pay a transfer tax of $1 a thousand on the value of the property conveyed.

It is suggested that there be added to the last sentence of section 725 the following clause:

"* * * not to intercorporate conveyances given to effect a railroad consolidation approved by the Interstate Commerce Commission."

BRIEF OF JOHN S. PRESCOTT, GENERAL FOODS CORPORATION

APRIL 21, 1932.

Mr. ISAAC M. STEWART,
Secretary Committee on Finance,
Senate Office Building, Washington.

DEAR SIR: I inclose herewith a brief which we respectfully request to have incorporated with the committee record of hearings upon the revenue bill of 1932.

Very truly yours,

JOHN S. PRESCOTT.

To the Committee on Finance, United States Senate, Washington:

We have not asked this committee for time to present an oral argument in opposition to that part of section 141 (c) of the revenue bill of 1932 as passed by the House of Representatives, imposing an extra tax of 1½ per cent upon the net income of affiliated corporations for the privilege of filing consolidated returns, but would like to have our views made a part of the committee record through the medium of this brief and taken into account by the committee in its final consideration of the testimony offered during the course of the hearings.

We respectfully urge the committee to recommend that the provision referred to be eliminated from the House bill for the reason that we believe it to be discriminatory in principle and in all probability unproductive of revenue. Its elimination has been recommended by a number of witnesses who have testified before the committee, including the Hon. Ogden L. Mills, Secretary of the Treasury, and Mr. J. A. Emery, counsel for the National Association of Manufacturers. A review of press reports of the hearings fails to disclose that any witness has recommended its retention in the bill.

It appears that the House of Representatives inserted this provision in the bill as a substitute for the abolition of consolidated returns which have, in cases of corporations affiliated through intercompany stock ownership been permitted for a period of 15 years. Enactment of the provision would be tantamount to prohibiting consolidated returns in all cases involving an affiliated group for a taxable year in which the total net loss of members having net losses is less than 10 per cent of the total net income of members having net incomes. In other cases of affiliated corporations it would represent inherently the assessment of an excess tax upon a wholly aritificial basis. There is no warrant for this distinction. If the assessment of the tax of affiliated corporations upon the basis of consolidated returns were unsound such returns should be abolished outright in all cases. If not unsound they should be permitted in all cases.

The effect of consolidated returns is to render intercompany transactions between affiliated corporations immaterial to the determination of their tax liability. The effect of the foregoing provision would be to lend an artificial but material importance to such transactions, and it is evident that in the event of its enactment affiliated corporations throughout the country will endeavor through such transactions to minimize or avoid a net loss on the part of any member of an affiliated group.

Published estimates of the Treasury Department and of the Ways and Means Committee of the House of Representatives forecast a revenue of $8,000,000 from the extra levy of 1½ per cent upon corporate net income reported in con-

solidated returns. In so far as these estimates are based upon statistics derived from consolidated returns heretofore filed we suggest that they are wholly illusory, and that it is extremely likely that such small amount of actual revenue as may be derived from this source will be more than offset by the additional cost to the Government of the extra burden of administration and litigation.

Assessment of the tax of affiliated corporations upon the basis of consolidated returns, which alone serve to reflect the net income of the business unit, represents the only sound fiscal policy whether considered from the viewpoint of equity in taxation or production of revenue. This has been the position of the Committee on Finance since the year 1918. In its report upon the revenue bill of that year the committee stated, in part, that:

"While the committee is convinced that the consolidated return tends to conserve, not to reduce, the revenue, the committee recommends its adoption not primarily because it operates to prevent evasion of taxes or because of its effect upon the revenue, but because the principle of taxing as a business unit what in reality is a business unit is sound and equitable and convenient both to the taxpayer and to the Government."

In considering the revenue bill of 1928 the committee had before it a situation similar to the present one. The Joint Committee on Internal Revenue Taxation had for reasons of simplified administration recommended that the consolidated return be abolished, but with a proviso that the operating loss of any member of an affiliated group might be offset against the net income of any other member. The report of the joint committee contained the following statement with respect to its recommendations on this point:

"The treatment of the corporations as separate corporate entities in the above manner appears to eliminate the most troublesome features of the present law, and at the same time retain what would appear to be the meritorious principles, namely, the right to offset operating losses in the case of companies operated as a business unit."

The Ways and Means Committee had followed the recommendation of the joint committee, but the bill had been changed by House amendment to eliminate the proposed substitute for consolidated returns.

The action of the Committee on Finance in restoring the provision to permit the filing of consolidated returns of affiliated corporations is reported at page 13, et seq., of its report on the revenue bill of 1928, reading, in part, as follows:

"From the discussion it appears that the action by the House was based upon the fact that additional revenues would be derived. Your committee has considered the matter very carefully and is convinced that the elimination of the consolidated returns provision will not produce any increase in revenue, will not impose any greater taxes on corporations, and will in all probability permit of tax avoidance to such an extent as to decrease revenues."

It has been suggested that depriving affiliated corporations of the privilege of offsetting corporate net losses against corporate net incomes without payment of the additional tax affords a means of equalizing in some measure competition between chain store organizations and independent merchants. Whatever the merits of equalizing such competition may be it will not be accomplished or aided by this provision due to the fact that the several stores of a chain are in virtually no case whatever owned or operated each by a separate corporation. An examination of Moody's Manual of Industrials for 1931 reveals data for 45 chain organizations having for the year 1930 aggregate sales of more than $3,320,000,000 and an aggregate net income of approximately $134,000,000, and employing during that year some 285,000 persons. These data indicate that 118 corporations owned or operated a total of 45,404 separate stores, an average of 355 stores for each corporation. It is manifest that the prohibition of consolidated returns would not operate in any appreciable degree to prevent offsetting the loss of one or a number of stores against the income of others in the same chain.

We suggest our own case as representative of those in which the provision referred to would result in an unreasonable burden. General Foods Corporation and its wholly owned domestic subsidiaries comprise an affiliated group of 42 corporations engaged in the competitive manufacture and sale of food products throughout the United States. A chart showing the organization and relation of the principal corporate units of the group is attached.[1] The existence of certain of the subsidiaries is absolutely required for the ownership of property the title to which can not under State laws be held by a foreign corporation.

The affiliated group has resulted for the most part from the acquisition of operating units through a number of reorganizations effected during the past

[1] Chart on file with the committee.

seven years. These acquisitions and the resulting structure of the affiliated group have been designed and carried out with a view to full compliance with all provisions of the various revenue acts and with all regulations promulgated thereunder with respect to consolidated returns. We suggest that the assessment of a penalty upon such compliance at this time would represent an unfair burden upon a group of taxpayers arbitrarily classified.

The great majority of our corporate competitors in the food products industry consists of corporations having either no subsidiaries or a much smaller number thereof than has General Foods Corporation, and to the extent that the difference in tax rate on account of filing consolidated returns might result in a burden upon the stockholders of General Foods Corporation it would operate unfairly against them in favor of the stockholders of competing concerns. The outstanding capital stock of General Foods Corporation consisting of some 5,270,000 shares is held by approximately 53,000 stockholders, of whom more than 42,000 or some 80 per cent, own less than 100 shares each. We believe our situation in this respect to be typical of numerous large corporations owned by many thousands of small stockholders.

We appreciate that the chief consideration of the committee and of the Congress is the balancing of the Budget. For the reasons given, however, it is our belief, based upon several years of experience with consolidated returns, that this provision will not increase the net revenue of the Government.

Respectfully submitted.

GENERAL FOODS CORPORATION,
By J. S. RRESCOTT,
Vice President and General Counsel.

NEW YORK, N. Y., *April 21, 1932.*

STATEMENT OF B. C. MOISE, FRICK BUILDING, PITTSBURGH, PA.

Mr. MOISE. Mr. Chairman and gentlemen of the committee, I am here to call attention to the serious results to beneficiaries of trusts created as part of a stock bonus payments or profit-sharing plan, if the provisions relating thereto of section 165 of the revenue act of 1928 are reenacted as proposed without change in the act of 1932. That section in effect provides that stock held in trust is taxable, at the time the stock is delivered at the expiration of the trust, on the basis of price at which put into the trust. I am an employee of a subsidiary of the United States Steel Corporation, and I am here on behalf of myself and many other employees of that corporation and other corporations.

In 1926 stock was allotted to us on the basis of $106.36 per share. Such stock was delivered at the expiration of the trust in 1932, the market value being at the time of delivery $36 or $40. Under the present law, we will be required to pay a tax based on a value of $106.36, whereas the stock actually has a value of about $40. The tax thus imposed would be more than two and a half times what it would be on its actual value to the recipient. For example, it would be at the rate of 21 per cent on its actual value, instead of 8 per cent, as proposed in the first surtax bracket of the 1932 act.

We submit that the tax should be based upon value at the time of receipt, instead of value at the time of creating the trust, years previous.

In order to save the time of the committee, I am submitting without reading a detailed memorandum of my position.

(Mr. Moise submitted the following memorandum:)

MEMORANDUM OF PROTEST AGAINST CONTINUANCE OF THE PROVISIONS CONTAINED IN SECTION 165, REVENUE ACT OF 1928, RELATING TO EMPLOYEES' TRUSTS, EXCEPT IN A MODIFIED FORM

The revenue act of 1928 contains the following provision in section 165 relating to employees' trusts:

"A trust created by an employer as a part of a stock bonus, pension, or profit-sharing plan for the exclusive benefit of some or all of his employees, to which contributions are made by such employer, or employees, or both, for the purpose of distributing to such employees the earnings and principal of the fund accumulated by the trust in accordance with such plan, shall not be taxable under section 161, but the amount contributed to such fund by the employer and all earnings of such fund shall be taxed to the distributee in the year in which distributed or made available to him. Such distributees shall for the purpose of the normal tax be allowed as credits against net income, such part of the amount so distributed or made available as represents the items of dividends and interest specified in section 25 (a) and (b)."

The above provision, if continued in the revenue act of 1932, would be grossly inequitable, under the conditions existing at the present time, for the reason that the tax would be imposed upon a valuation existing five years prior to the date when an employee obtained unrestricted title to the securities received by him under a typical profit-sharing plan. This may be illustrated by the situation confronting the employees of the National Tube Co. and employees of other subsidiary companies of the United State Steel Corporation who are participants in the profit-sharing plan of the United States Steel Corporation. For example, in 1926 the employees of the National Tube Co. and other subsidiary companies of the United States Steel Corporation were allotted conditional interest in certain shares of common stock of the United States Steel Corporation having a market value at that time (after giving effect to the 1927 stock dividend and 1929 "rights") of $106.36 per share. Early in 1927 this stock was turned over, under the provisions of an irrevocable trust, to the profit-sharing committee of the United States Steel Corporation under an agreement that the stock would be held by the trustees for a period of five years and at January 1, 1932, would be distributed to those employees then living and still in the employ of the United States Steel Corporation and its subsidiary companies if, in the meantime, such employees had rendered faithful and continuous service.

On January 2, 1932, the market value of this stock ranged from $36 to $40.37½ per share, or say, $40 per share.

While the common stock above referred to was acquired by the trustees in February, 1927, unrestricted ownership did not pass to the participating employees until January 2, 1932. Therefore, to say that the participating employees received on that date shares of stock having a value of $106.36 per share, when as a matter of fact, the market value of this stock was only $40 per share, and to require the participating employees to pay Federal income tax on basis of a valuation of $106.36 per share would, to say the least, be grossly unfair and would be inequitable in that it would compel them to pay an absurdly high rate of taxation calculated at the true value of the stock at the date when it was received.

The following summary shows the rates of tax which would be imposed upon the participating employees of the United States Steel Corporation and its subsidiary companies, calculated on the market value of the stock if the present provision of the law, as contained in section 165 of House bill 10236, is enacted. The rates shown are for individuals paying a normal tax of 7 per cent and surtaxes at the rates specified below:

Surtax rates	Total tax per share which would be assessed on the value of $106.36	Per cent the foregoing tax would be of the true market value of $40
		Per cent
1 per cent	$8.50	21
5 per cent	12.76	32
10 per cent	18.08	45
15 per cent	23.40	58
20 per cent	28.72	72
25 per cent	34.04	85
30 per cent	39.35	98
35 per cent	44.67	112
40 per cent	49.99	125

From the above it will be noted that if section 165 is not changed in the revenue act of 1932, it might result in imposing a tax upon the shares of stock received by participant employees under the profit-sharing plan of United States Steel Corporation in excess of the market value of such stock at the time unrestricted title to the stock passed from the trustee to the employees and even in cases where employees were subject to tax at the lower surtax rates, they would still have to pay abnormally high tax as compared with the tax which would be paid by individuals receiving cash income in the same taxable years. This gross inequity could be corrected by changing section 165 to read as follows:

"A trust created by an employer as a part of a stock bonus, pension, or profit-sharing plan for the exclusive benefit of some or all of his employees, to which contributions are made by such employer, or employees, or both, for the purpose of distributing to such employees the earnings and principal of the fund accumulated by the trust in accordance with such plan, shall not be taxable under section 161, but all earnings from the fund and the cash value of any distribution made therefrom on the date made available to the distributee shall be taxed to the distributee in the year in which distributed or made available to him. Such distributee shall for the purpose of the normal tax be allowed as credits against net income such part of the amount so distributed or made available as represents the items of dividends and interest specified in section 25 (a) and (b)."

Another feature which makes the above provision doubly inequitable, under present conditions, comes about by reason of the proposed revision of section 23 (r) (s) (t) of the pending revenue act of 1932, relating to "limitation of stock losses." Under the revenue act of 1928, claim might be made that if a participating employee were required to initially pay a tax on a stated value of $106.36 per share in a year when the actual value of the stock received by him was only $40 per share, this would ultimately be corrected by reason of the fact that when he sold the stock he would be permitted to deduct the loss from his gross income in the year when sold. But under the provisions of H. R. 10236, deductible losses would be limited by an amount not exceeding profits realized from the sale of stock in the same year. Accordingly, under the pending bill, if an employee paid tax on basis of the valuation of $106.36 when the true value of the stock received by him was only $40 per share, he would in all probability never have an opportunity to recoup this loss and by reason of the fact that during the 5-year period when his interest in the stock held by the trustees consisted of nothing more than a conditional interest, he was not in a position to sell the stock during such 5-year period.

In future years participating employees in the profit-sharing plan of the United States Steel Corporation will be confronted with a situation which is far worse than the one described in this memorandum of protest, for the reason that in certain years subsequent to 1926 the acquirement value of the common stock delivered by the United States Steel Corporation to the profit sharing trustees greatly exceeded $106.36 per share. These prices in the various years were as follows:

1927	$141.41
1928	177.91
1929	177.00
1930	142.00

It is believed that the situation which exists under the profit-sharing plan of the United States Steel Corporation, as herein described, also exists in the profit-sharing plans of many other corporations. It is therefore apparent that the request to correct this inequity is fair and reasonable.

This protest is presented by the undersigned, who is an employee of one of the subsidiary companies of the United States Steel Corporation, and as such, received in January, 1932, certain shares of stock of United States Steel Corporation under their profit-sharing plan. In addition, the undersigned holds certain certificates of conditional interest of United States Steel Corporation common stock, which stock is deliverable in future years provided the conditions therein stated are complied with.

The attached circular describes in detail the profit-sharing plan of the United States Steel Corporation.

B. C. MOISE,
Frick Building, Pittsburgh, Pa.

APRIL 13, 1932.

UNITED STATES STEEL CORPORATION,
New York, February 8, 1927.

To the Officers and employees of the United States Steel Corporation and of its Subsidiary Companies:

In accordance with and under the provisions of the profit-sharing plan adopted by the stockholders on April 18, 1921, the Board of directors of United States Steel Corporation has set aside from the net profits for the calendar year 1926, as ascertained and declared by the board, the fund for the year 1926 under such profit-sharing plan at the rate fixed therein.

As provided and authorized by the plan, the committee elected by the stockholders to administer the same has designated the employees of the corporation and its subsidiary companies qualifying for participation in the fund and has allotted the amount of the fund to such designated employees in the manner provided by the plan.

The committee has decided that the allotment to the respective participating employees shall be distributed to them as follows: Sixty per cent in cash and 40 per cent in common stock of the United States Steel Corporation at the rate of $154 per share on the conditions herein stated. Awards for less than $385 and all fractional parts of the stock proportion of awards will be paid in cash.

The payments in cash in accordance with the foregoing will be made forthwith without deduction of Federal income tax or any State income taxes. But payments made in cash to all employees participating in the distribution will be reported by their respective employing companies to the United States Internal Revenue Department and to States, as may be required by laws, as a part of the compensation for services paid such employees during the year 1927. In case the employing companies are required to withhold any tax from these payments, the employees receiving the same will be notified by their respective companies that they will be obliged to pay to such companies any amounts of tax which may be required to be withheld and paid in connection with such distributions.

The distribution of interest in common stock will be made in the form of non-assignable certificates of conditional interest providing for the distribution of shares of common stock under and upon certain conditions set forth in said certificates, which will provide, among other things, as follows:

First. That if the participant remains continually in the service of the corporation or of one or another of its subsidiary companies until January 1, 1932, and shall during all of such time have rendered faithful and satisfactory service to such corporation or to one or another of its subsidiary companies, then, as soon after January 1, 1932, as may be, and upon surrender of such certificate, there will be delivered to him as his property, the shares of stock referred to in the certificates issued to him as aforesaid.

Second. That until the delivery of such shares and while the employe remains in the service of the corporation or of one of its subsidiary companies, he shall receive the dividends, if any, declared upon the shares of stock referred to in such certificate.

Third. That if before January 1, 1932, the employee shall voluntarily quit the service of the corporation or of a subsidiary company, or shall be discharged or removed for cause by his employer, then, in either case, he shall thereby lose all interest in the said certificate and in the shares of stock referred to therein; and thereupon such shares of stock shall be held in a fund, which at the end of the period above named will be divided pro rata among such officers and employees as shall then be entitled to the delivery of the shares of stock referred to in the certificates of conditional interest held by them respectively; provided, however, that retirement under any general pension scheme at the time in effect shall not of itself cause such loss of interest.

Fourth. That if before January 1, 1932, the employee dies or becomes totally and permanently disabled while in the employ of the corporation or of one or another of its subsidiary companies, or retires under any general pension scheme then in effect, the shares of stock referred to in the certificate issued to him shall be delivered to his estate (or to him, if so disabled or retired), together with a pro rata amount of the fund, if any, which has accrued up to the time of his death, disability, or retirement, by reason of any loss of interest as specified in the preceding paragraph.

Fifth. That all questions relating to the interests, rights, and claims of any officer or employee in, or growing out of, the proposed distributions and fund above specified shall be finally determined and disposed of in its discretion by the committee of stockholders of the United States Steel Corporation, elected

from time to time to administer the profit-sharing plan, as said committee may be constituted when and as any questions arise.

By order of the committee of stockholders referred to in the foregoing.

UNITED STATES STEEL CORPORATION,
GEO. K. LEET, *Secretary.*

STATEMENT OF JAMES LEE LOOMIS, PRESIDENT OF THE CONNECTICUT MUTUAL LIFE INSURANCE CO., HARTFORD, CONN., REPRESENTING THE ASSOCIATION OF LIFE INSURANCE PRESIDENTS

Mr. LOOMIS. My name is James Lee Loomis. I am president of the Connecticut Mutual Life Insurance Co., Hartford, representing the Association of Life Insurance Presidents. I will confine myself, I think, to less than 15 minutes. The Presidents' Association is comprised of 60 United States companies, with about 85 per cent of the resources in the life-insurance business.

I want to take just a moment to express our appreciation for this hearing, because this is the first time that we have had an opportunity to have this cause heard upon its merits, and also because I appreciate the responsibility that rests upon me, representing the Association of Life Insurance Presidents, and also to bring some intelligent discussion to your committee to help solve this most difficult problem.

We have no objection to the increase of the rate from 12 to 13½ per cent. I need to waste no time upon that. However, by the bill as it has come over from the House the base rate is changed. The reserve deduction, which I will explain in a moment, is cut down from 4 to 3½ per cent. The result of that reserve change is to almost double the base rate, and when the 13½ per cent figure is substituted for the 12 per cent the net result is that the tax upon the life-insurance companies is more than doubled. In fact, the aggregate payment we estimate to be about 212 per cent, and that, we submit, sir, is more than the life-insurance companies, even in the face of the emergency that the Government is faced with, should be called upon to bear.

We appreciate the necessity of sustaining the credit of the Government. I think no one more than a life-insurance executive appreciates the necessity of credit and faith and confidence. I think that we may well say that the life-insurance business is a great reservoir of public faith and confidence at the present time.

I need to take a moment to explain the method by which this tax is arrived at. It is by a special formula quite technical. I will try to make it simple. We start with the gross income, which I will call the investment income, made up of interest, dividends, and rents. We then make a deduction of various items, two important ones of which are the tax-exempt interest and investment expenses, and then a deduction under the law as it now stands of 4 per cent of the amount of the legal reserve, and what remains is the taxable income, and upon that income the income tax applicable to other corporations is laid.

The result of this is—I might phrase it this way—that the companies are in a sort of a strait-jacket. It makes no real difference to the Government what our mortality losses may be. Premium income, other expenses than those of the investment expenses, capital gains and losses do not in any way enter into the picture. And the result is that the life-insurance companies are having and probably

will have many occasions when under this law as it now stands—and in substance it probably will continue—it makes no difference whether they have made a profit or a loss. The tax to the Government will go along with the great consistency. In fact I think that I can say without being challenged that there is probably no revenue that the Government receives from any source that can be so accurately estimated and that will with such fidelity live up to its estimate as the tax upon the life-insurance companies.

Senator SHORTRIDGE. Under existing law.

Mr. LOOMIS. Under existing law. Whether we are in a period of depression or whether we are in a period of prosperity. Because the investment income will remain substantially constant. The deductions will remain substantially constant. There are no capital gains and losses, and our mortality losses and these other factors do not enter. Therefore the Government is very highly favored, Senator, by that method of taxation. That is one reason why we feel and I would urge upon your committee to seriously consider the advisability of retaining the law as it now is so far as the reserve deduction is concerned, allowing us, if you please, to accept the rate of 13 or 13½ per cent, whatever rate is applied to the other corporations to the tax. It seems as if that might fairly be considered. We have many capital losses that under these times must be absorbed. The policyholders need consideration. And I do believe that as a matter of sound public policy that position should very carefully be weighed and considered.

However, that brings me to the discussion of what is called the National Life decision. The National Life decision cut out of the law the tax-exempt interest that by a method that I will explain to you was really included in the taxable interest. Again we will start with the investment income and deduct the investment expenses and the tax-exempt interest which had to be deducted, and then from the reserve deduction was subtracted an amount equal to the tax-exempt interest, the result of which was to nullify the tax-exempt interest, and the United States Supreme Court said this can not be done. The result was that the Government lost from four to five million dollars a year, as a result of that decision.

This is an administrative change that is suggested here.

Senator HARRISON. Let me ask you, was that in the 1928 act?

Mr. LOOMIS. 1928, Senator Harrison.

Senator HARRISON. We had changed the 1924 act in the act of 1928 with reference to this matter.

Mr. LOOMIS. The result of the National Life decision has not been taken care of in any bill, so far as I know of, up to this point. But this bill eliminates that feature that the Supreme Court found unconstitutional.

Senator SHORTRIDGE. Which action was commenced by the insurance companies?

Mr. LOOMIS. It was commened by one of the insurance companies.

Senator SHORTRIDGE. Yes.

Mr. LOOMIS. And I might say parenthetically, Senator, that some of the companies employed counsel in the person of Charles E. Hughes to assist the Government in attempting to preserve that revenue to the Government. That is all a matter of record, sir. Now we submit that if any change in the law is made at all, that it

should be confined to a recovery on the part of the Government by only so much as the National Life decision took away. And this being an administrative change I assume that that is the desire of this bill. However, the rate as changed here from 4 to 3½ per cent would give the Government about twice as much as is necessary to restore the loss of the National Life decision.

Senator SHORTRIDGE. How much was the loss, you say, by virtue of that decision?

Mr. LOOMIS. About $4,000,000 or $5,000,000. Half way, or somewhere between. And this bill as it has come over from the House will, according to the best estimates that we can make, nearly double that amount from the life insurance companies. So we submit that it should not be extended beyond what is necessary to restore that amount. Therefore we would suggest to you that the rate of 3¾ be substituted for 4, if it is the desire of Congress to increase the tax upon the life insurance companies at all at this time in excess of the rate of 13½ per cent. If that is the intent and desire of Congress, to recover that $4,000,000 or $5,000,000 as the result of that decision, then we would suggest that that base rate be 3¾ instead of the 3½ as it comes over in this bill. And also to preserve another principle——

Senator HARRISON. How does the 4 per cent affect these reserves? And does it endanger the policyholders anything?

Mr. LOOMIS. The 4 per cent, Senator Harrison, does not trespass upon any company reserve. I would like to discuss that just a moment, if I may. Have I as much as five minutes, Mr. Senator?

Senator SHORTRIDGE. Yes. Proceed.

Mr. LOOMIS. I would like to discuss that just a moment. There are two basic principles that we believe should be carefully observed. The first is that there should be an equal and uniform and, as far as possible, equitable distribution of the tax burden over the various companies. It is very important in competition and as a matter of fairness that that should be disturbed as little as possible.

The next is that the tax should not trespass upon the companies' reserves. That the Government should not reach in and take any portion of the investment income necessary to discharge our policy obligations.

That these two principles should go along together: Equality of distribution of the burden, and that the reserve should not be in any way affected, otherwise it might be difficult to discharge our policy obligations.

Senator HARRISON. Well, the reserves are fixed by law, are they not? You have got to maintain certain reserves?

Mr. LOOMIS. We have to maintain certain reserves. The companies are now operating, part of them, on a 3 per cent reserve basis, and in part on a 3½ per cent reserve basis. There may be 3 per cent companies of course, where the law would not permit a company to operate on any lower reserve than 3½. And that is our proposal, that if the Congress is desirous to recover the amount lost by the National Life decision, that the rate be changed from 4 to 3¾, with the added provision, which I will read merely as a suggestion, Senator, to put into the record in case this thought should be adopted (reading):

Reserve funds.—An amount equal to 3¼ per cent of the mean of the reserve funds required by law and held at the beginning and end of the taxable year (but, if any such reserve funds are held on a higher-interest assumption rate than 3¼ per cent, then such higher per cent shall be substituted for 3¼ per cent in computing the amount of deduction with respect to the reserve funds actually held on such higher-interest assumption rate).

I think that is about our story, Senator.

Senator SHORTRIDGE (presiding). Thank you.

Senator BINGHAM. Mr. Chairman, unfortunately I was out while Mr. Loomis, of Hartford, Conn., was testifying and, in view of the fact that we have only a very few witnesses to be heard at this time, I would like to ask, as a favor, that Mr. Loomis might be recalled so that I might ask him one or two questions.

Senator SHORTRIDGE. Is Mr. Loomis present?

Mr. LOOMIS. Yes, Senator.

Senator SHORTRIDGE. We are attempting to limit the time, Senator.

Senator BINGHAM. I know.

Senator SHORTRIDGE. Proceed, however.

Senator BINGHAM. Mr. Loomis, I am sorry I was not here when you were speaking. I wanted to ask you particularly whether you agreed with the other witnesses testifying with reference to insurance taxes under sections 201 to 203?

Mr. LOOMIS. The position, as I see it, Senator Bingham, is about this: The suggestion of the substitution of the actual reserve required plus one-half does not meet, as I see it, three essentials. The first is that it does not make for equality and evenness of distribution of the burden; the second is that it adds materially to the problem of competition, because as between companies it is a question of how much we pay out in taxes in the final analysis; and the next is from the Government standpoint purely and simply it fails to produce the revenue that has been allowed by the National Life decision.

I would like to comment, and I will not spend much of the committee's time. But I would like to comment just a moment, if I may, on what Mr. Cleary said about the 3 per cent distribution. He belongs to a 3 per cent company, and so do I. Perhaps we speak more feelingly on the subject. But if the plan of actual plus one-half were substituted, the 3 per cent companies would take up the entire burden.

I have made up some figures, with the assistance of our actuarial authorities—and this is rather an involved subject, as you know.

Out of 53 companies for which we have the figures, 20 companies whose average reserve basis is less than 3½ per cent, under the present law using 4 per cent deduction at 13½ per cent would pay a tax of $4,870,135. If the plan of the basis of actual requirement plus one-half per cent were used, they would pay $7,148,091, an increase of $2,277,000.

Thirty-three 3½ per cent companies, including, by the way, our two largest 3½ per cent companies, under the 4 per cent reserve deduction, using 13½ as the rate, would pay in taxes, $4,921,971. On the basis of actual requirement plan plus one-half per cent, they would pay $4,732,639, or $189,000 less.

In other words, the first group of companies, which contains 3 per cent companies, would take the entire increase of $2,088,000, lifting $189,000 off the shoulders of the 3½ per cent companies. That is what results in the redistribution of the burden.

And if it will not take too long, I would like to comment just a moment about the 3 per cent company. And I can not resist speaking feelingly on that subject.

Senator SHORTRIDGE. You represent a 3 per cent company?

Mr. LOOMIS. I represent a 3 per cent company.

We are permitted to use the ledger assets of two companies, as of January 1, 1932. The one is the New England Mutual Life Insurance Co.; and the other is the Provident Mutual Life Insurance Co. One is a 3 per cent company, and othe other is a 3½ per cent company. The ledger assets as of January 1, 1932, of the New England Mutual Co. were $259,000,000. That is the 3 per cent company. The ledger assets of the Provident Mutual, as of the same date, were $246,000,000. That is the 3½ per cent company. The mean of reserve of the New England Life Insurance Co. was $224,000,000. Of the Provident Mutual Life Insurance Co. it was $218,000,000. That is the 3½ per cent company.

Their surplus is substantially the same, $18,000,000. Under the present law, using the 13½ per cent rate of taxable income—not the tax, but the taxable income of the New England Mutual Life Insurance Co., is $1,704,000. Of the Provident Mutual Life Insurance Co. it is $1,942,000.

If we take the actual interest required, plus one-half of 1 per cent of mean reserves, the taxable income of the New England Mutual Life Insurance Co. goes from $1,704,000 to $2,243,000, or an increase of $539,000. The taxable income of the Provident Mutual Life Insurance Co. would go from $1,942,000 to $1,737,000, or a decrease of taxable income of $205,000, a complete redistribution of the tax burden.

Senator BINGHAM. Are you suggesting how this apparent unfair redistribution should be best met?

Mr. LOOMIS. Our suggestion was, Senator Bingham, that we use the 3¾ per cent level, instead of the 4 per cent of the present law, and evenly as possible—there is no such thing as actual justice—but substantial justice in that fashion would be more equitably met than by any other method, using an added rate of reserve for any companies that had higher rates on portions of their reserves than 3¾ per cent.

Senator SHORTRIDGE. How could that be administered?

Senator REED. That is easy enough.

Senator SHORTRIDGE. You need not answer. My friend says it is easy enough.

Mr. LOOMIS. Probably it is where reserves, Senator, are divided into groups and classes, and where the reserve was at a higher rate than 3¾.

Senator CONNALLY. What would be the increase in taxes over the present law? Have you figured that out in those cases there?

Mr. LOOMIS. No, I have not, Senator. Inasmuch as it would increase the whole tax substantially 50 per cent that, I assume, would be about the average increase for the companies generally. It would vary in individual companies. There is no way of avoiding some variation.

Senator CONNALLY. I mean your company, under 3¾, would pay substantially more than you have been paying under the present law?

Mr. LOOMIS. We would pay something more than 50 per cent more.

Senator CONNALLY. Fifty per cent more?
Mr. LOOMIS. Using 13½, the rate here.
Senator BINGHAM. Your company is a mutual company?
Mr. LOOMIS. Yes, and I would like to develop that idea just a moment. All of the 3 per cent companies are mutual companies. Their policyholders, of course, are scattered all over the United States, and the policy holder must bear the burden.
I would like to throw in this illustration. It will take but a moment, and I believe it is strictly in line with the investigation. Take two companies, a 3 per cent company, and a 3½ per cent company having exactly the same insurance in force, distribute the same by classes, if their investments were the same, their expenses the same, their mortality the same, and they distribute all of their surplus to the policyholders, then carrying the policy through to maturity, the net should be precisely the same to each company.
Senator BINGHAM. How many policyholders have you in your company?
Mr. LOOMIS. About 200,000.
Senator BINGHAM. What is the average amount of insurance carried?
Mr. LOOMIS. About $3,500 to $4,000 per member.
Senator BINGHAM. You say you have 300,000 policyholders?
Mr. LOOMIS. About 200,000.
Senator BINGHAM. And about 100,000 of them have less than $3,500 insurance?
Mr. LOOMIS. Well, I do not know that we have made any estimate on that basis. The average policy is about $3,800, as I recall.
Senator BINGNAM. The average?
Mr. LOOMIS. The average.
Senator BINGHAM. So that half of your policyholders must have less than the average?
Mr. LOOMIS. Oh, yes; the greater number are small policyholders, of $2,000 and $2,500.
Senator BINGHAM. So that this tax would come directly out of their receipts and dividends?
Mr. LOOMIS. It must.
Senator BINGHAM. That is all.
Senator REED. Mr. Loomis, do you sell annuities?
Mr. LOOMIS. Yes; we do.
Senator REED. And, of course, you sell endowment policies?
Mr. LOOMIS. Yes; we do.
Senator REED. Some of them mature a considerable time after they are taken, and some a shorter time?
Mr. LOOMIS. Some are written for 10 years, some for 15 years, some for 20 years, and some for 25 years.
Senator REED. Of course, an endowment policy is very much like an annuity in its effect. Now we are confronted with the necessity of raising money by taxation from those who are best able to bear the burden. I have been wondering whether our present laws dealing with annuities and with matured endowments is just to other taxpayers of the country. I know some rich men—I have one case in mind of a man who paid $1,000,000 for an annuity on the joint lives of himself and his wife, and with any reasonable expectation of life he will go through all of his life, and so will his wife, and never pay one

penny of income tax, although they receive a very substantial income from that policy every year that they live. Have you ever considered the justice of putting some kind of a tax on the annuities?

Mr. LOOMIS. No; I have not, Senator Reed. The annuity side of our business, and any business, is such a small portion of our total that we do not pay much attention to it.

Senator REED. Have you sold any large annuities in recent years?

Mr. LOOMIS. Very few.

Senator REED. Did you sell many after the war, when income-tax rates were higher?

Mr. LOOMIS. Well, I do not recall that we sold enough to make any impression on our minds at the time. I think you may have an interesting point there, Senator.

Senator REED. It is just as obvious a method of evasion of taxation as buying municipal bonds.

Mr. LOOMIS. Yes.

Senator SHORTRIDGE. Thank you, Mr. Loomis. Have you anything further, Mr. Loomis?

Mr. LOOMIS. I have concise statements here, Mr. Chairman, that I would like to offer for the record, as follows:

Effect of pending Federal revenue bill on life-insurance companies.

Reserve deduction of actual interest requirement plus one-half of 1 per cent would inequitably redistribute Federal income tax as between various life-insurance companies.

Effect of various possible reserve deductions on different life-insurance companies under Federal revenue bill.

Possible working bases for an amendment to paragraph (2), subsection (a), section 203 (lines 22 to 25, page 137), pending Federal revenue bill to provide life-insurance reserve deduction at flat rate of 3¾ per cent with higher rate for such reserves as are held on a higher interest assumption basis.

Senator SHORTRIDGE. Without objection, they will be received.

(The statements are as follows:)

EFFECT OF PENDING FEDERAL REVENUE BILL ON LIFE INSURANCE COMPANIES

Under the pending Federal revenue bill (H. R. 10236) the income tax rate on life insurance companies is increased from 12 per cent to 13½ per cent, as on corporations generally. In addition the method of computing net taxable income is changed so as to materially increase net taxable income as determined under the act without any corresponding increase in earnings. This is accomplished by reducing the present deduction of 4 per cent of the reserves to 3½ per cent. In other words, this change artificially increases net taxable income although the corporation enjoys no actual increase in net income. We are not objecting to the payment of the same income tax rate to be paid by other corporations, but we do protest against this proposed broadening of the tax base.

PROPOSED CHANGES WOULD DOUBLE LIFE-INSURANCE TAXES

This change in base (coupled with the increase in the rate) would more than double the aggregate income tax on life insurance companies on the basis of 1931 returns. Under the measure as passed by the House life insurance companies would pay 212 per cent of what they now pay. Appreciating the necessity of balancing the Federal Budget, and the desire of Congress to secure revenue sufficient for this purpose, there is no thought on our part to avoid our fair share of the necessary increase of taxes. The present law, by segregating just one portion of a life company's business, and requiring the payment of tax whether or not the company actually earns a net income, puts the busines in a straight-jacket such as is applied to no other business. For this reason, we submit the proposed change will result, even in the face of the present emergency in a disproportionate and unfair increase in the tax on life insurance policyholders.

PRESENT METHOD OF TAXING LIFE INSURANCE COMPANIES

The net taxable income of a life-insurance company is determined by a formula, which produces a tax regardless of whether or not the year's operations result in net earnings in the ordinary sense. In this respect the treatment of life-insurance companies differs from that of other corporations, the net taxable income of which has a relation to the net income actually earned. Under the present act, a life-insurance company may be required to pay a heavy tax in a year, or in a series of years, when the company actually earns no net income. Since the present method of ascertaining net taxable income was enacted in 1921, some companies have paid taxes in years when they earned no net income. This fundamental difference should be borne in mind in any consideration of the taxation of life-insurance companies. The present method does not favor life-insurance companies, but rather the Government.

GROSS INCOME DEFINED AS INVESTMENT INCOME

Interest, dividends, and rents constitute the gross income of a life-insurance company under the present act. Premiums are not included in income since they are in the nature of capital deposits to be subsequently returned to policyholders or beneficiaries. No deduction is allowed for ordinary expenses of doing business (other than investment expenses) nor for payments under policy contracts. No deduction is allowed for investments losses or bad debts, neither is gain from investments included as a part of gross income. If such items were allowed, the next taxable income would be materially altered from year to year and reduced for some years to come. The Government is highly favored by this exclusion.

PRESENT PLAN AVOIDS WIDE FLUCTUATION IN REVENUE

The purpose of Congress in 1921 in adopting this method of establishing the net taxable income of life-insurance companies was to avoid the wide fluctuations in net taxable income experienced in previous years, when the method of determining net taxable income was that applied to other corporations. This result has been achieved.

PRESENT PLAN AND TAX-EXEMPT INTEREST DECISION

The present formula, as enacted in 1921, provided for the deduction of 4 per cent of the mean of the reserve funds required by law (less tax-exempt interest) from gross income. This deduction was arrived at by the Ways and Means Committee after careful consideration of all factors involved, such as the elimination of capital gains and losses, and disregard of whether or not the year's operations actually result in net income. It was the purpose not only to adopt a formula producing a dependable net taxable income, but also one of simple nature and easily checked by the Government. This avoided many troublesome questions which had resulted in litigation under former acts. It was necessary to permit the deduction of interest on tax-exempt securities from gross income. To nullify this deduction, the act of 1921 provided that the deduction of 4 per cent of the mean of the reserve funds should be decreased by the amount of such tax-exempt interest. This nullification of the benefits accruing from the ownership of tax-exempt securities was found unconstitutional by the United States Supreme Court (277 U. S. 508). That decision struck from the act the provision for the deduction of tax-exempt interest from 4 per cent of the mean of the reserves.

PURPOSE OF CHANGE TO OVERCOME SUPREME COURT DECISION ONLY

It is understood that the purpose of the Ways and Means Committee in making the change in the reserve deduction from 4 per cent to 3½ per cent, was to overcome the reduction in Government revenue on account of the United States Supreme Court decision in 1928 (277 U. S. 508). The effect of this decision was to give life-insurance companies the benefit of ownership of tax-exempt securities which previously had been denied.

CHANGE FAR MORE THAN OVERCOMES COURT DECISION—WOULD RETURN MORE THAN TWICE AMOUNT

Reports from 53 companies holding 84.8 per cent of the assets of all United States legal reserve life-insurance companies show that the reduction in revenue to the Government on account of the Supreme Court decision—at the new 13½

per cent tax rate—aggregates $4,993,000 annually. (At the present 12 per cent tax rate it aggregates approximately $4,438,000 annually.) Reports from these same companies reveal that under the present law and the existing 12 per cent rate, these companies will pay in 1932 on 1931 business, $8,704,000 in Federal income taxes. The same companies would have paid $18,456,000 if the present bill with the 3½ per cent reserve deduction and the 13½ per cent rate had been in effect, or an additional tax of $9,752,000. In other words, the proposed change, instead of merely recouping to the Government the reduction in revenue on account of the Supreme Court decision, would actually more than double the tax on life-insurance companies and thus recoup to the Government more than twice such reduction. It is submitted, therefore, that the change from 4 per cent to 3½ per cent in the reserve deduction should not be allowed to stand in the bill.

If, however, in view of the expressed purpose of the Ways and Means Committee, it is intended that life-insurance companies be made to recompense for the reduction in Government revenue on account of the Supreme Court decision, some change in base is to be made, it is urged that such change be not more than necessary to restore such an amount. Inasmuch as the change in the reserve deduction from 4 per cent to 3.5 per cent, as proposed by the pending bill, would result in a grossly excessive tax—an increase for the 53 companies from $8,704,000 to $18,456,000—it is respectfully urged that the present 4 per cent deduction be not reduced lower than to 3.75 per cent. On a basis of 3.75 per cent reserve deduction, the 53 companies referred to would pay an additional tax of $5,344,000 or more than the amount of the reduction in revenue from the Supreme Court decision.

Following are given income taxes of these companies under the present law and under the various bases herein discussed:

Data of 53 life-insurance companies which have 84.8 per cent of the assets of all United States legal reserve companies. (Based on 1931 business)

Taxes on present basis, 4 per cent deduction, 12 per cent rate	$8,704,000
Taxes that would have been incurred:	
At 4 per cent deduction, 13½ per cent rate	9,792,000
At 3¾ per cent deduction, 13½ per cent rate	14,048,000
At 3½ per cent deduction, 13½ per cent rate	18,456,000

JAMES LEE LOOMIS,
President Connecticut Mutual Life Insurance Co., Hartford, Conn.;
Chairman Federal Tax Committee Association of Life Insurance Presidents.

RESERVE DEDUCTION OF ACTUAL INTEREST REQUIREMENT PLUS ONE-HALF OF 1 PER CENT WOULD INEQUITABLY REDISTRIBUTE FEDERAL INCOME TAX AS BETWEEN VARIOUS LIFE INSURANCE COMPANIES

The proposal that the life-insurance provisions of the pending Federal revenue bill be so amended that there would be allowed a deduction of the actual rate of interest required to maintain reserves plus one-half of 1 per cent of mean reserves be substituted for the 4 per cent allowed by present law, would cause a material and inequitable redistribution of the tax burden, as clearly demonstrated by the attached illustrations. The additional taxes imposed as a result of such a change would fall entirely upon companies operating upon a 3 per cent reserve basis (those with an average rate under 3½ per cent) and such burden must, therefore, be borne by their policyholders throughout the United States. Such proposal, in addition, would decrease the taxable income of companies holding over six and one-half billions of assets.

Table A shows approximately how 336 companies would be affected.

Table B shows actually how 53 companies would be affected.

Table C is a simplified hypothetical illustration indicating the taxable income and the tax at 13½ per cent as between a 3 and a 3½ per cent company.

Table D indicates how a 3 per cent and a 3½ per cent company, selected for their similarity in size, would actually be affected.

The proposal, as explained by these illustrations, thus would make a most inequitable redistribution of the tax burden. Such increased burden would fall upon the policyholders of the 3 per cent companies. It would thereby raise a serious question in the matter of competition. It would but partially restore the additional revenue the Government desires to raise from life insurance.

TABLE A

To change the deduction of 4 per cent of mean reserves, as provided for in present law, to a deduction of actual interest required to maintain reserves plus one-half of 1 per cent of mean reserves would violently redistribute the aggregate tax burden among the companies. It is obvious that, under such a plan, a company with its business on a 3.5 per cent basis would be allowed exactly the same deduction (3½ per cent plus one-half of 1 per cent) as the 4 per cent under present law. The net taxable income of such a company would, therefore, not be changed. A company with a rate higher than 3½ per cent would be allowed a greater deduction than at present and its net taxable income would be less than under present law. A company with an interest requirement of less than 3.5 per cent would be allowed a smaller deduction and its net taxable income would be increased.

It has been possible, from published reports, to aggregate the assets and compute the average interest required to maintain reserve for 336 of the 410 legal reserve life-insurance companies. The aggregate results are as follows:

UNITED STATES LEGAL RESERVE LIFE-INSURANCE COMPANIES

Effect on net taxable income that would result by changing reserve deduction from 4 per cent to actual plus one half per cent:

47 companies with total admitted assets of $8,950,660,913 (47.4 per cent of total assets of all United States companies) would have their net taxable income increased.

223 companies with total admitted assets of $3,308,374,995 (17.5 per cent of total assets of all United States companies would have no change in their net taxable income.

66 companies with total admitted assets of $6,591,525,146 (34.9 per cent of total assets of all United States companies) would have their net taxable income reduced.

TABLE B

Fifty-three member companies of the association of Life Insurance Presidents which hold 84.8 per cent of the assets of all such United States companies, for which the net 1931 taxable income is available, would show the following redistribution of tax at the 13½ per cent tax rate now in the bill:

	Average requirement	Present basis (4 per cent deduction)	Basis of actual requirement plus one-half of 1 per cent	Increase (+) or decrease (−)
20 companies	Less than 3½ per cent.	4,870,135	7,148,091	+2,277,956
33 companies	3½ per cent or over.	4,921,971	4,732,639	−189,332
Total (53 companies)		9,792,106	11,880,730	+2,088,624

Result: Twenty companies holding reserves at less than 3½ per cent would take entire increase of tax burden plus $189,000 relief which would accrue to the 33 companies on basis of 3½ per cent and over.

TABLE C.—*Illustration of effect on a 3 per cent company and on a 3½ per cent company of a deduction from investment income of actual interest required to maintain reserves plus one-half of 1 per cent of such reserves*

	3 per cent company	3½ per cent company
Required reserves	$100,000,000	$100,000,000
Investment income	[1] 5,000,000	5,000,000
Investment expenses and exempt interest, etc	500,000	500,000
	4,500,000	4,500,000
Deduction of actual interest required to maintain reserves plus one-half of 1 per cent of reserves	[2] 3,500,000	[3] 4,000,000
Taxable income	1,000,000	500,000
Tax at 13½ per cent	135,000	67,500

[1] 5 per cent. [2] 3.5 per cent. [3] 4 per cent.

TABLE D.—*How it would work in the redistribution of the tax burden in two individual cases*

[Based on 1931 business]

	New England Mutual Life Insurance Co. (3 per cent company)	Provident Mutual Life Insurance Co. (3½ per cent company)
Ledger assets, Jan. 1, 1932	$259,000,000	$240,000,000
Mean of reserve	224,000,000	218,000,000
Surplus funds (about)	18,000,000	18,000,000
Taxable income (present law)	1,704,000	1,942,000
Taxable income at actual interest required plus one-half of 1 per cent of mean reserves	2,243,000	1,737,000
Taxable income would increase	539,000	
Taxable income would decrease		205,000

EFFECT OF VARIOUS POSSIBLE RESERVE DEDUCTIONS ON DIFFERENT LIFE INSURANCE COMPANIES UNDER FEDERAL REVENUE BILL

A level rate of interest credit for all companies, such as the present rate of 4 per cent, does not operate in favor of the companies which assume a lower interest rate for valuation purposes.

This is best seen by considering two model companies, each with the same amount of insurance in force and with the same distribution of business, according to plan, age, and year of issue. These two companies are to be identical in all respects except that one company, Company A, chooses to value its business on the American Experience Table with 3 per cent interest while the other company Company B, selects for its valuation basis the American Experience Table with 3½ per cent interest. In other words, each policy in force in one company is duplicated in the other company, being on the life of the same person. Provided that each company earns the same net interest rate on its funds, experiences the same mortality and is subject to the same operating expenses, the two companies will show the same cost per policy (before payment of Federal tax) and will therefore be on an equal footing. Calculations have been made for two such model companies, the results being shown in Schedule I. The assumed distribution of business as between plan, age, and year of issue, as set out in this schedule, it is believed is a reasonable approximation to actual facts. It has been assumed that total funds in each case include surplus of 6 per cent of the reserve which is about the average at the present time. In this schedule the tax is computed on three different bases:

1. Four per cent deduction and a 13½ per cent tax rate.
2. Three and three-fourths per cent deduction and 13½ per cent tax rate.
3. Deduction of actual valuation interest rate plus one-half of 1 per cent and 13½ per cent tax rate.

This schedule shows that in the aggregate the policyholders under Company A (3 per cent company) pay a tax 6 per cent higher than that paid by Company B (3½ per cent company) under method 1. Method 2 retains this differential; method 3 would impose a 46 per cent higher tax on the policyholders in Company A.

Method 2 would increase the tax for both companies by approximately 19 per cent over method 1.

Method 3 would increase the tax for Company A by 38 per cent without any increase for Company B.

While these are aggregate figures, the assets that earn investment income with respect to different policies are proportionate to the reserve on such policies. Therefore, the same relation would hold with respect to different policies as holds in the aggregate; as set out in Schedule I.

The taxable income for Company B under methods 1 and 3 being the same it follows that, due to the change in tax base, method 3 would place all of the additional tax on companies valuing their policies on a rate lower than 3½ per cent.

In order to test the effect on individual policies two representative companies have been selected, one with reserves on the American Experience 3 per cent basis, called Company A, and one with reserves on the American Experience 3½ per cent basis, called Company B. A 20-year endowment policy has been chosen for this comparison because the entire transaction is completed in the period covered by the illustration. The net cost is based upon the published dividend scale for 1931, and the illustration for age 20 at issue. The tax payable each policy year has been calculated both for the 3¾ per cent deduction and for a deduction of 3 per cent plus one-half per cent for Company A and 3½ per cent plus one-half per cent for Company B, and then this tax has been put in ratio to the net cost for the year. The results are shown in Schedule II.

SCHEDULE I.—*Model life insurance office*

Amount of insurance in force, $81,000,000, distributed as follows:

L. 55 5/9 per cent—one-third in sixth calendar year.
20 P. 33 3/9 per cent—one-third in eleventh calendar year.
20 E. 11 1/9 per cent—one-third in sixteenth calendar year.

100 per cent.

One-third at age of 25; one-third at age of 35; one-third at age of 55.

	Company A (3 per cent)	Company B (3½ per cent)
Reserve	$20,824,370	$19,696,940
Surplus (estimated at 6 per cent of reserve)	1,249,462	1,181,816
Funds; reserve; surplus	22,073,832	20,878,756
Income at 5 per cent on funds	1,103,692	1,043,938
Less deduction (4 per cent on reserve)	832,975	787,878
Taxable income	270,717	256,060
(1) Tax at 13½ per cent	36,547	34,568
Income at 5 per cent	1,103,692	1,043,938
Less 3¾ per cent deduction	705,914	738,635
Taxable income	322,778	305,303
(2) Tax at 13½ per cent	43,575	41,216
Income at 5 per cent	1,103,692	1,043,938
Less 3½ per cent deduction:		
3 per cent plus ½ per cent	728,852	
4 per cent (3½ per cent plus ½ per cent)		787,878
Taxable income	374,840	256,060
(3) Tax at 13½ per cent	50,603	34,568
	Per cent	*Per cent*
Increase (2) over (1)	19	19
Increase (3) over (1)	38	0
Increase (A) over (B):		
(1)	6	
(2)	6	
(3)	46	

SCHEDULE II.—*Ratio of tax to net cost*

[Company A holds reserves on American 3 per cent basis. Company B holds reserves on American 3½ per cent basis]

Year	Net cost to policyholder, Company A	Net cost to policyholder, Company B	Deduction of 3¾ per cent		Deduction of actual valuation rate plus ½ per cent	
			Company A	Company B	3½ per cent (3 per cent plus ½ per cent), Company A	4 per cent (3½ per cent plus ½ per cent), Company B
					Per cent	*Per cent*
First	41.66	38.84	0.21	0.20	0.24	0.18
Second	41.13	38.56	.34	.34	.41	.28
Third	40.57	38.26	.49	.49	.57	.39
Fourth	40.00	37.97	.64	.64	.77	.52
Fifth	39.40	37.65	.81	.80	.97	.64
Sixth	38.80	37.33	.99	.98	1.17	.77
Seventh	38.15	36.96	1.17	1.15	1.41	.91
Eighth	37.50	36.58	1.37	1.35	1.65	1.07
Ninth	36.81	36.20	1.59	1.55	1.92	1.23
Tenth	36.10	35.81	1.83	1.77	2.20	1.40
Eleventh	35.36	35.41	2.08	1.99	2.51	1.58
Twelfth	34.60	35.00	2.37	2.24	2.87	1.78
Thirteenth	33.81	34.61	2.65	2.50	3.21	1.97
Fourteenth	32.99	34.20	2.97	2.76	3.60	2.19
Fifteenth	32.13	33.78	3.33	3.12	4.03	2.46
Sixteenth	31.24	33.35	3.72	3.40	4.51	2.68
Seventeenth	30.32	32.92	4.14	3.74	5.03	2.94
Eighteenth	29.36	32.48	4.61	4.10	5.60	3.22
Nineteenth	28.36	32.02	5.14	4.49	6.23	3.52
Twentieth	27.32	31.55	5.73	4.89	6.94	3.85
20-year total	705.61	709.48	2.11	2.04	2.54	1.61

Possible working bases for an amendment to paragraph (2), subsection (a), section 203, (lines 22 to 25, page 137) pending Federal Revenue bill to provide life insurance reserve deduction at flat rate of 3¾ per cent with higher rate for such reserves as are held on a higher interest assumption basis

(1)

(2) *Reserve Funds.*—An amount equal to 3¾ per centum of the mean of the reserve funds required by law and held at the beginning and end of the taxable year (but, if any such reserve funds are held on a higher interest assumption rate than 3¾ per centum, then such higher per centum shall be substituted for 3¾ per centum in computing the amount of deduction with respect to the reserve funds actually held on such higher interest assumption rate), plus * * *

(2)

(2) *Reserve Funds.*—An amount equal to 3¾ per centum of the mean of the reserve funds required by law and held at the beginning and end of the taxable year, provided in the case of any such reserve funds held on an interest assumption basis at a rate higher than 3¾ per centum, the amount as to such reserve funds shall equal the interest assumptions per centum of the mean thereof, plus * * *

(3)

(2) *Reserve Funds.*—An amount equal to 3¾ per centum of the mean of the reserve funds required by law and held at the beginning and end of the taxable year, except that in the case of any such reserve funds held on an interest assumption basis at a rate higher than 3¾ per centum, the amount as to such reserve funds shall equal the interest assumption per centum of the mean thereof, plus * * *

(4)

(2) *Reserve Funds.*—An amount equal to the following per centum of the mean of the reserve funds required by law and held at the beginning and end of the taxable year—

(A) Four per centum in the case of such funds held for reserves computed at any interest rate in excess of 3¼ per centum, and (B) 3¼ per centum in all other cases, plus * * *

(These various phrascologies are submitted for consideration as possible working bases and preliminary drafts for the purpose of expressing the thought intended.)

LETTERS FROM W. F. KIRK AND JOHN C. ROBINSON

APRIL 19, 1932.

Hon. REED SMOOT,
Chairman Senate Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I am inclosing for the committee record in the committee hearing re proposed tax on imported petroleum and petroleum products statements from Walter F. Kirk, master of the Ohio State Grange, and John C. Robinson, president of the Kentucky Farm Bureau Federation.

This is in accordance with the request which I made on Saturday, April 16, which was conditionally granted by the committee.

It was manifestly impossible to secure these statements on Monday, as Mr. Kirk and Mr. Robinson were at their homes at the time the matter was presented to the committee and it was not possible to receive replies to telegrams sent to them in time to file on Monday. I am hastening to send these to you the first thing this (Tuesday) morning.

Yours respectfully,

A. M. LOOMIS.

PORT CLINTON, OHIO, *April 16, 1932.*

In harmony with the action of the National Grange and its own general policy of conservation and economy, the delegate body of the Ohio State Grange adopted the following resolution at its Fifty-ninth annual sesson at Sandusky, Ohio, December 10, 1931, thereby making it a part of the policy and program of our State organization representing 830 subordinate granges:

"We oppose a tariff upon crude petroleum, rough lumber, and any other natural products, because such tariff would unjustly increase costs to the general public and would hasten the depletion of the natural resources of the United States."

W. F. KIRK,
Master of Ohio State Grange.

Senator M. M. LOGAN, *Washington, D. C.*

MY DEAR SENATOR: The articles before your Finance Committee that are under consideration for increased tariff would vitally affect agriculture. One in particular, I want to call your attention to, is the tariff on petroleum products.

Increased tariff on these products would increase expense of agricultural operations of farm machinery, trucks, cars, and road building.

Being a farmer and a taxpayer, I am sure that the farmers of Kentucky are more interested in economy of Government than in increased tariffs.

Agriculture's present perilous condition, any increase in this tariff would be fatal.

Trusting that after due consideration you will vote against this tariff and stand four-suqare for more economy in Government.

As a representative of the taxpayers and agricultural interests, I would like to know what decision you may reach on this matter.

Very sincerely,

JOHN C. ROBINSON.

FRANKFORT, KY., *April 14, 1932.*

Mr. A. M. LOOMIS,
Washington, D. C.

DEAR MR. LOOMIS: Sorry to have disappointed you, but the secretary of our State taxpayers league, of which I am president, had scheduled two meetings which make it impossible for me to come.

I have written to both of Kentucky United States Senators and am sending you a copy of the letter.

Very sincerely,

JOHN C. ROBINSON.

STATEMENT OF FRANK W. McALLISTER, KANSAS CITY, MO., GENERAL COUNSEL OF THE KANSAS LIFE INSURANCE CO. AND CHAIRMAN OF THE TAXATION COMMITTEE OF THE AMERICAN LIFE CONVENTION

Mr. MCALLISTER. Gentlemen, as chairman of the taxation committee of the American Life Convention, which is an organization of 135 legal reserve life insurance companies domiciled in 35 States and the District of Columbia, we have some suggestions to make with reference to this bill.

Mr. Loomis has already explained to you the result of the decision of the Supreme Court known as the National Life decision, under which about $4,500,000, I believe, of revenues theretofore paid by life insurance companies was not collectible because it included income on tax-exempt securities. We have no fault to find with the effort of the Treasury Department to replace that revenue. But, as said by Mr. Loomis, the bill in the form in which it came over from the House will more than double that, in addition to the increase from 12 per cent to 13½ per cent.

If I may I would like to spend just a moment—and I hope you will call me if I overstep the bounds—in explanation, as an understanding of the accumulation of the reserves is necessary to understand this tax and what we are really driving at. The reserve on a life-insurance policy does not belong to the life insurance company. It belongs to the policyholder. Under practically any life insurance policy that is issued to-day and in most of the States such provisions are necessary under the law. The policyholder can walk into the office any day in the week and take down the reserve on this life insurance policy, either by a policy loan or by a surrender value of that policy. So that to all practical purposes the reserves belong to the policyholder and not to the company, and therefore it is generally conceded that the reserves are not taxable to the company. And, of course, if the reserves themseves are not taxable to the company the income is not taxable, because to tax the income is really to tax the reserves.

Now what I am driving at is to try to explain the basis upon which this tax is levied against life insurance companies. The reserves must be improved or increased at a specified rate of interest, 3, 3½, or 4 per cent. I know of no policies issued by any company on any other than one of these three rates. That means that at the end of every year there must be added to the reserves a sum which equals the reserve basis rate, or the reserve rate, as it is generally called.

Now, the ability of the company to meet the obligations in the policy depends upon this addition to the reserve on that policy, because it is fundamental in the theory of legal reserve life insurance that from the very minute the obligation is assumed provision must be made

for its payment. So that as the policy goes on the fund is gradually accumulated, so that at any time in the history of that policy, from the day it is issued until it is matured by death or otherwise, the company must have in these sacred reserve funds the money with which to meet that obligation, and to do that it must add to it and increase it at these rates.

Now the present law and this bill proceed upon the theory that a deduction is granted from income from these three sources, which is the basis to meet these reserve requirements—what the company must add to the reserve year by year.

Senator HARRISON. General, may I ask you this question in that connection. Taking all the insurance companies in America, what is the surplus that is carried over their reserve?

Mr. MCALLISTER. I do not understand you, Senator.

Senator HARRISON. There is a surplus carried over the reserve by some companies, is there not?

Mr. MCALLISTER. Oh, yes. I will get to that in a moment. The purpose of this is to devise a formula that will levy the tax upon the part of the income which comes to the company and does not go to the policyholder. It is generally called free interest. Or it is free earnings. And is the difference between the earnings the company actually has and the reserve basis upon which its policy is based. For instance, taking a 3 per cent company and it earns 4½ per cent on its reserve assets. Then its free interest is 1½ per cent. If it is a 3½ per cent its free interest is 1 per cent. If it is a 4 per cent company its free interest is one-half of 1 per cent. Now that is the basis of this tax. And our companies think that the fair way to do the thing and the equitable way to do it would be to base the deduction in proportion to the free interest the company has, which is the difference, as I said, between the reserve rate upon which its policies must be accumulated, and what is actually earns on these reserves.

The present law has a flat deduction of 4 per cent. The bill proposes a flat deduction of 3½ per cent. This is not as between companies, because many companies will have business on all three of these reserve bases. Many of them on two of them. Now, we think it is fair to base that thing on the actual reserve basis the companies' policies are on. For instance, you take it under this bill a 3 per cent company has a one-half of 1 per cent free interest. One-half of one per cent of its free interest is not taxable.

Senator SHORTRIDGE. Under existing law?

Mr. MCALLISTER. Yes; and under this bill just the same.

Senator SHORTRIDGE. Yes. Very well.

Mr. MCALLISTER. With the result now under this bill that a 3 per cent company has free interest represented by the difference between 3½ per cent and its earning rate, or the difference between 3 per cent and 3½, which pays no taxes and is not included in the basis upon which the tax is levied or based. The 3½ per cent companies will have none. And a 4 per cent company—its reserves are invaded thereby, because it is a simple matter of calculation.

Senator HARRISON. General, have you some estimate there of how much the Government will realize on the basis of taxing the free interest, as you say, instead of on this basis?

Mr. MCALLISTER. Well, that is what this is driving at, really. That is the whole excuse for it. Yes; the best available figures we

could get are that putting it, as we figure it, at the actual reserve basis, plus one-half of 1 per cent, which I will explain the reason for, the Government ought to get 25 to 40 per cent more out of it than it is getting under the existing law. I would say around 33⅓ per cent more.

Senator SHORTRIDGE. Do you carry in your mind in point of dollars what that would amount to, General?

Mr. MCALLISTER. That would amount to around $5,000,000, I think. Is that right, Mr. Parker?

Mr. PARKER. Thirty-three and one-third would only be about $3,500,000.

Mr. MCALLISTER. Well, our figures run about $5,000,000 as the estimate of what that would attain. But we are vitally interested, if you please, not only in the amount of revenue it would attain, but we think this puts the tax on a fair basis as between policies of the various classes on the 3, 3½, and 4 per cent basis. And, of course, the increase from 12 to 13½ per cent will produce considerably over a million dollars, I believe, in addition. And, by the way, I think it is worthy of your consideration that that represents the increase in taxes of corporations generally, whereas this other provision will greatly increase the taxes of life insurance companies in addition to the increase from 12 to 13½ per cent.

Now we think in the first place that the reserves should not be invaded, and that is fundamental and, we think, necessary to the future of legal reserve life insurance. To accomplish that it is absolutely necessary to make an additional allowance.

Now there is a provision in the law—and, as I understand, it remains there—a deduction allowed on account of administration expenses and costs, and so forth. But if you took a fund that must yield 3½ per cent annually, anybody knows that you can not loan it at a flat 3½ per cent and meet the requirements at the end of the year. There will be some loss in time in investment, in the shifting, there will be some capital losses, and there will be some income losses. We think a deduction of the reserve rate plus one-half of 1 per cent will make allowance for that situation. It will enable every life-insurance company to maintain the integrity of its reserves, and we think will bring to the Government what has been said it had in mind to recover in lieu of the loss in the National Life case.

In that connection I have here a letter from Hon. Charles D. Livingston, insurance commissioner of the State of Michigan, and he is president of the National Convention of Insurance Commissioners, in which he explains the importance of maintaining these reserves, and also explains that something above the reserve basis is necessary for them to be maintained.

(The letter is as follows:)

STATE OF MICHIGAN,
DEPARTMENT OF INSURANCE,
Lansing, April 9, 1932.

FINANCE COMMITTEE,
United States Senate, Washington, D. C.

GENTLEMEN: There is nothing more important to the prosperity of the country at this moment than to maintain the soundness and solvency of the institution of life insurance, one of the principal media of savings for more than 68,000,000 of our citizens.

It is absolutely necessary for life-insurance companies to maintain the integrity of their legal reserves in order to carry out the contracts which they issue. The legal reserve system which requires such reserves is the very foundation of the strength and solvency of the companies.

It is absolutely vital to the public interest that the income from the investment of these reserves should not be taxed in any event beyond the interest earning required to maintain them, and in my judgment, a margin above the reserving rate on each class of business proportionately should be granted to take care of possible capital losses which might encroach from time to time upon the integrity of the reserves themselves.

Insurance companies can not carry out their contracts unless their reserves remain intact and are increased each year by the interest rate assumed in their calculations. In my judgment, therefore, it is of vital interest to the vast multitude of policyholders that the deduction now permitted for interest earnings upon their reserves should not in any event be reduced below the interest rate required to maintain them, and in my judgment, as an element of safety, a margin above such reserving rate should be allowed.

Respectfully,

C. D. LIVINGSTON,
Commissioner of Insurance, State of Michigan.

Senator REED. May I interrupt you a moment, Mr. McAllister?

Mr. MCALLISTER. Yes.

Senator REED. Before I came in did you touch on the subject of capital gains and losses?

Mr. MCALLISTER. No; I have not.

Senator REED. Will you tell us in a word, if it is not interrupting the thread of your argument, why in your opinion insurance companies alone of all corporations should not have to take into account their capital gains and losses?

Mr. MCALLISTER. Senator, I believe both the companies and the Government are interested in avoiding that basis for taxation.

Senator REED. Personally I do not believe that any corporation or individual should take account of capital gains or losses of permanent investments in calculating income, but as long as we make every individual take it into account, and every corporation, why should insurance companies alone be excepted?

Mr. MCALLISTER. Well, Senator, it is the difficulty involved in correctly ascertaining what the actual profit or income of the company is because of the relationship between the reserve funds which they hold as trustees and income which belongs to them and may properly be charged to them. It is a very difficult proposition. And I should think that the Government would be better satisfied with the tax on this basis, because on this basis it is not affected much. It is not a question of whether we make money or lose money. These reserves must be carried and the tax is based upon income from those reserves; not whether we make money or whether we lose money. It does not make any difference. And many companies—I think unquestionably on a basis that measured them fairly with other corporations they would be paying much less tax than they are now.

Senator REED. Well, if it is not sound policy to tax capital gains of life-insurance companies why should we tax capital gains of savings banks?

Mr. MCALLISTER. Well, I do not know much about that subject, Senator. I have not gone into it from that angle. But I believe a careful study will convince you that both the Government and the companies are better off on this special basis, because they have a peculiar business, wholly unlike any other line of commercial activity. The structure is entirely different. I am not talking about the bill as based on that. I am just discussing it from that angle.

Senator REED. I think the Government would be better off if it ignored capital gains and ignored capital losses entirely in all corporations and in all individuals. But as long as we tax them and everybody else in the country why should not life-insurance companies go along with the rest?

Mr. MCALLISTER. Well, they ought to go along with the rest. But our theory is that on this basis they should go along with the rest, with this exception——

Senator REED. Well, why should there be an exception?

Mr. MCALLISTER. Well, I say that it should go along with other corporations, except our taxes from year to year are not so fluctuating or affected so much by whether you lose money or make money, or what you gain or do not gain. They had that in 1918 to 1921, and it apparently was unsatisfactory to everybody. For that reason there was constant irritation over computing these taxes. I knew nothing about the matter at that time, but that is my understanding of why this formula was adopted in place of the formula of computing the tax of all corporations.

Senator REED. I had a strong suspicion that the man who wrote the formula forgot to put in capital gain.

Mr. MCALLISTER. Well, I do not know about that. But it is a tax on income. You can not deny that. It can not be made to correctly reach income.

Now, one other suggestion and then I expect I will have overstepped the time. This bill—and I think it is a serious matter—this bill would increase the income taxes of many insurance companies, and especially companies domiciled in the Middle West and the southern and southwestern part of the country, and even some in other parts of the country. It will greatly increase them. One reason is that those companies carry very little tax-exempt securities in their investment portfolio. They have practically none. So that all the income they get is subject to the tax. The taxes of the company I represent will be about two and one-half times, under this bill—would have been this year—what we pay under the present law.

Senator REED. What is your company?

Mr. MCALLISTER. The Kansas Life Insurance Co. of Kansas City, Mo. The taxes of some of them will be increased four, five, six, even ten fold because of peculiar situations that increase the taxes on them.

Our suggestion in the matter is that the basis of the tax ought to be the reserve rate plus some percentage that will cover these inevitable losses, whatever the reserve rate is, and in such an amount that the Government will get what revenue it ought to have from life insurance companies.

I have a memorandum which I am going to file, which I will supply you with. I believe that states about as well as I can the position of the companies.

Senator REED. You figure it would work an injustice if we would base the income tax upon the net increase in surplus during the year—I am not talking of reserves—net increase in surplus, plus the dividends paid, if it is a stock corporation?

Mr. MCALLISTER. Yes.

Senator REED. You think that would be unfair?

Mr. McALLISTER. Yes, I do. I think it would be bad policy. I think the life-insurance companies, above all other corporations, ought to be encouraged to increase their surplus all they can.

Senator REED. And so with banks.

Mr. McALLISTER. Well, I have not studied banks. But the effect of that sort of a tax would be to penalize a company that likes to add up a large surplus and add to it every year.

That is all I have to say. Thank you.

(The memorandum presented by Mr. McAllister is here printed in the record in full, as follows:)

OBJECTIONS OF THE AMERICAN LIFE CONVENTION, AN ORGANIZATION OF LEGAL RESERVE LIFE INSURANCE COMPANIES WITH 135 MEMBERS, DOMICILED IN 35 STATES AND THE DISTRICT OF COLUMBIA

The American Life convention objects to the provisions of (a) (2) section 203 of H. R. 10236 (the pending revenue bill) for the following reasons:

1. It includes and taxes income necessary to maintain policy reserves.
2. It discriminates against policyholders whose policies are on a 3½ per cent and a 4 per cent reserve basis.
3. It imposes an excessive and unfair tax burden on legal reserve life insurance.

PROPOSED AMENDMENT

(a) *General rule.*—In the case of a life insurance company the term "net income" means the gross income less—

(1) * * *

(2) *Reserve funds.*—An amount for the maintenance of policy reserves to be ascertained by computing the percentage of the mean of the reserve funds required by law and held at the beginning and end of the taxable year at a rate one-half of 1 per cent above the rate at which the reserves are maintained, plus (in case of life insurance companies issuing policies covering life, health, and accident insurance combined in one policy issued on the weekly premium payment plan, continuing for life and not subject to cancellation) 3¼ per cent of the mean of such reserve funds (not required by law) held at the beginning and end of the taxable year, as the commissioner find to be necessary for the protection of the holders of such policies only.

I. POLICY RESERVES

(a) A brief explanation of the character and significance of policy reserves will be helpful in considering the objections urged.

Policy reserves are vital in the plan of legal reserve life insurance and their maintenance without depletion or impairment is imperative. The legal reserve system requires that from the inception of the policy, from the very date the obligation is assumed, the accumulation of the fund required to meet the obligation must begin. By policy reserves is meant a special fund set apart and continuously increased and maintained during the life of the policy to meet the policy obligations, and at maturity the reserve must equal the benefits promised in the policy. Policy reserves are determined with mathematical certainty and the amount of the reserve required on any policy of legal reserve life insurance at any time is a fixed, definite sum and is not a matter of discretion, estimate, or speculation. Roughly speaking, the reserve on a life insurance policy is a sum made up of premium payments which, if put at interest on the reserve rate basis at which the policy is carried, will equal the amount payable to the policyholder at any time. Policy reserves can be legally used solely and exclusively for the purpose of meeting the obligations of the policy to the policyholder, and substantial depletion or impairment of the policy reserves inevitably falls on the policyholder.

The rate at which the policy reserves must be annually increased or improved is referred to as the reserve basis and policies are classified accordingly. Practically all legal reserve life insurance is on either 3 per cent, 3½ per cent, or 4 per cent reserve basis.

The excess of actual earnings on reserves over the amount necessary to maintain and improve the reserves is commonly referred to as "free interest" or "free earnings." If a company is on a 3Q per cent reserve basis, and it actually earns on its reserves 5 per cent annually it has what is called "free interest" or "free

earnings," that is earnings over and above the requirements for its reserves, of 1½ per cent.

Printed at the conclusion hereof, is a letter marked "A," addressed to the committee by Hon. Charles D. Livingstone, insurance commissioner of the State of Michigan, and president of the National Convention of Insurance Commissioners, in which he very forcibly directs attention to the importance of policy reserves and their maintenance.

(b) So completely are the policy reserves set apart for the exclusive payment of policy obligations that in effect they are the property of the policyholder and the company is merely the custodian. The actual status is made apparent by the loan and surrender value provisions, available at the option of the policyholder, found in all legal reserve policies. Any charge or burden of any kind imposed on reserves or on income necessary to maintain them is necessarily borne by the policyholder in the reduced value of their policies and would certainly be contrary to sound public policy. Accordingly, it is generally agreed that policy reserves are not taxable, and as it is axiomatic that to tax the income from property is to tax the property itself, it follows that to tax the earnings from policy reserves would be to tax the reserves themselves.

The present law recognizes that income from the reserves necessary to maintain them is not taxable and allows an income deduction to meet reserve requirements. It is true that the amount of the deduction is fixed arbitrarily, and not in accordance with actual reserve requirements, but undoubtedly the deduction is for the sole purpose of avoiding the taxation of income necessary to maintain the reserves.

A deduction from reserve income of less than the amount required to maintain the reserves necessarily imposes the tax on a part of the policy reserve income, which really belongs to the policyholder.

With a flat deduction of 3½ per cent, as provided in the pending bill, it is apparent that the income from a part of all policy reserves carried on the 4 per cent reserve basis are directly subject to the tax, and, as hereafter explained in practical effect, the same is true of policy reserves on the 3½ per cent reserve basis.

II. DISCRIMINATION

It is fundamental in taxation that the burden shall be equitably distributed among tax payers and without discrimination against any. Exact equality between classes is largely a matter of speculation, but discrimination between numbers of the same class can be avoided and can not be justified.

The purpose of the reserve deduction, both in the present law and in the pending bill, is to exclude income required to maintain policy reserves, leaving the "free interest" or "free earnings" as the basis for the tax, but it fails to accomplish that result, as may be clearly demonstrated. If a company with the three classes of policies in force, that is, on the 3 per cent, 3½ per cent, and 4 per cent reserve basis actually earns 5 per cent on its policy reserve funds, the "free interest" or "free earnings" on the reserves held on the 3 per cent reserve basis is 2 per cent, on the reserves held on the 3½ per cent reserve basis is 1½ per cent, and on the reserve held on the 4 per cent is 1 per cent. Or, to state it differently, the "free interest" or "free earnings" on the reserves on policies on the 3 per cent basis is approximately 39.9 per cent of the actual earnings, on the reserves on policies on the 3½ per cent reserve basis the "free interest" or "free earnings" is approximately 30.1 per cent and on the reserves on the policies on the 4 per cent reserve basis, the "free interest" or "free earnings" is 20 per cent of the actual earnings.

With a flat deduction of 3½ per cent as provided in the pending bill 75 per cent of the "free interest" or "free earnings" on policies on the 3 per cent reserve basis will be taxable, 100 per cent of the "free interest" or "free earnings" on policies on the 3½ per cent reserve basis, while 150 per cent of the "free interest" or "free earnings" on the reserves on the policies on the 4 per cent reserve basis will be taxable.

This is not only discriminatory against policyholders whose reserves are on 3½ per cent ad 4 per cent basis, but directly taxes the income from policy reserves held on 4 per cent reserve basis.

It is apparent, therefore, that the present law does, and the pending bill in its present form would, require the payment of a proportionately greater amount of tax on the "free interest" or "free earnings" on reserves on policies on the 3½ per cent and 4 per cent reserve basis than on the "free interest" or "free earnings" on the reserves on policies on the 3 per cent reserve basis. As the tax is measured by the "free interest" or "free earnings," this is clearly discriminatory against policyholders whose policies are on the higher reserve basis. The effect is exactly the same as it would be if the difference was in the rate of the tax, and, of course, any discrimination in the rate of taxation within the class would be purely arbitrary and indefensible.

The following table clearly shows the percentage of "free interest" or "free earnings" which will be subject to the tax under various deductions of income for policy reserves.

Ordinary life policy; amount, $1,000; age at issue, 40; tenth year tax payable under various reserve interest rates and deductions

	3 per cent	3½ per cent	4 per cent
Legal reserve	170.22	160.14	150.70
Net income at assumed rate of 5 per cent thereon	8.51	8.01	7.54
Interest income required to be set aside to maintain legal reserve	5.11	5.60	6.03
Difference representing free interest income	3.40	2.41	1.51
(1) Deduction of 4 per cent of legal reserve:			
Taxable income	1.70	1.60	1.51
Tax at 13½ per cent thereon	.23	.22	.20
Percentage of free income subject to tax	50.0	66.4	100.0
(2) Deduction of 3½ per cent of reserve:			
Taxable income	2.13	2.00	1.89
Tax at 13½ per cent thereon	.29	.27	.26
Percentage of free income subject to tax	62.6	83.0	125.2
(3) Deduction at reserve rate plus one-half of 1 per cent:			
Taxable income	2.55	1.60	.76
Tax at 13½ per cent thereon	.34	.22	.10
Percentage of free income subject to tax	75.0	66.4	50.3
(4) Deduction at reserve rate plus one-fourth of 1 per cent:			
Taxable income	2.98	2.00	1.14
Tax at 13½ per cent thereon	.40	.27	.15
Percentage of free income subject to tax	87.6	83.0	75.5
(5) Deduction of 3½ per cent of legal reserve:			
Taxable income	2.55	2.41	2.27
Tax at 13½ per cent thereon	.34	.33	.31
Percentage of free income subject to tax	75.0	100.0	150.3
(6) Deduction at reserve rate:			
Taxable income	3.40	2.41	1.51
Tax at 13½ per cent thereon	.46	.33	.20
Percentage of free income subject to tax	100.0	100.0	100.0

The purpose being to exclude income required to maintain policy reserves from the tax, to actually accomplish that some deduction in addition to the actual reserve basis must be allowed, because in practice a fund required to be annually improved at a fixed rate can not be invested at the required rate and meet the requirement. Reference is not made to the necessary administration or investment expenses incident to the administration of the funds, but to the fact that as an incident to the investment of funds there will necessarily be some capital losses and some income losses, which must be made up, and that it is impossible to keep the entire fund constantly invested and earning every day in the year. Losses of this character will vary and can not be estimated with a strict degree of accuracy, but it is thought that a deduction of one-half of 1 per cent in addition to the reserve rate would in a large measure cover such losses, and that with such deduction in addition to the reserve rate there will be no appreciable invasion of the policy reserves of any company.

Furthermore the companies very generally credit the policy holder with annual earnings substantially in excess of the actual reserve basis, so that the deduction allowed in the proposed amendment will be much less than is actually passed on to the policyholder.

A careful detailed computation will show that with the reserve deduction determined in accordance with the actual reserve basis, plus one-half of 1 per cent, as provided in the proposed amendment, the three classes of life insurance policies, those on the 3 per cent, 3½ per cent, and 4 per cent reserve basis will be taxed on the same percentage of their "free interest" or "free earnings," and tax payments will be equally and fairly distributed between them.

Various exhibits have been submitted by the representatives of the Life Presidents Association.

One of these exhibits contains various proposals for changing the present deduction of 4 per cent to 3¾ per cent, but it will be noted that an exception is made to that in fixing the deduction for reserve funds held on a higher reserve rate than 3¾ per cent, which can only refer to 4 per cent reserves, the actual legal reserve interest rate 4 per cent shall be substituted for the proposed 3¾ per cent deduction. This exception in the proposal of the Life Presidents Association recognises the contention of the Ameridan Life Convention that the legal reserve rate is the proper basis for fixing the deduction. Life Presidents Association wishes this recommendation to be limited only to 4 per cent policies while American Life Convention contends that it should be recognized for all classes of policies, 4 per cent, 3½ per cent, and 3 per cent alike.

Another exhibit presented by the representatives of the Life Presidents Association discusses the tax exempt interest decision on the suit which was brought by the National Life of Vermont, a company on the 3 per cent interest reserve basis. The Life Presidents Association contends that if the purpose of the Government in reducing the reduction allowed on policy reserves is to recover the loss arising from the National Life case, this can be accomplished by changing the deduction from 4 per cent to 3¾ per cent. This same purpose would be better accomplished if the change is made from 4 per cent to the interest reserve rate, plus one-half of 1 per cent. That would be to 3½ per cent on 3 per cent business and 4 per cent on 3½ per cent business, and 4½ per cent on 4 per cent business, and the larger amount of the recovery would thereby be made from the 3 per cent companies, and valued rightly so, as it is the 3 per cent companies which carry the larger amount of tax exempt securities.

Another exhibit presented by the Life Presidents Association purports to show that the use of a level rate deduction for all companies does not operate in favor of the companies which assume a lower interest rate for valuation purposes. This is directly contrary to the belief of the representatives of the American Life Convention. In this diversity of views lies the only difference among the company representatives. A company which only accumulates its policy reserves at 3 per cent has a greater amount and proportion of "free interest income" available for taxation purposes than a company which guarantees to its policyholders to accumulate the reserves at an interest rate of 3½ per cent or 4 per cent. The use of a level rate of interest credit has in the past unduly favored companies which reserve on the 3 per cent rate.

This discrimination has, during the period of operation of the present law, extending over a period of more than 10 years now, been a continual source of dissatisfaction to member companies of the American Life Convention maintaining reserves on 3½ per cent and 4 per cent. The American Life Convention freely admits that the use of the reserve rate as the basis of exemption will change the established level of the tax burden and will place the greater part of the increase on the 3 per cent companies. It is with that actual object in view that the change is recommended.

For the past 10 years at least, 3 per cent companies have failed to pay their proper proportionate share of taxes and it is because of this unfair distribution in the past that the correction to the equitable basis of the reserve rate will cause an unequal; but not an unfair distribution of the increased tax.

Life Presidents Association presents an exhibit of two model life insurance companies, the reserve of A on a 3 per cent rate and of the other, B on a 3½ per cent rate. This exhibit shows a very substantial increase in the amount of tax that will be paid by the 3 per cent company with no increase on the part of the 3½ per cent companies, if the reserve rate plus one-half of 1 per cent is used for the deduction.

The second table as presented by the Life Presidents Association is intended to show the ratio of tax to net cost in the case of two companies, one reserving on a 3 per cent basis and the other reserving on a 3½ per cent basis, but it will be

noted that both policies are participating, and the dividends according to the 1931 published dividend scale have been taken into account. There is no guarantee that dividends will be paid in accordance with the illustration, but the 3 per cent company guarantees only to accumulate reserves at 3 per cent interest and the 3½ per cent company guarantees to accumulate its reserves at 3½ per cent interest. Again let it be stated 3 per cent companies have the larger "free interest" income, and should properly pay the larger tax.

A fourth exhibit is presented by the Life Presidents Association for the purpose of showing that the use, as the reserve deduction, of the actual interest requirements plus one-half of 1 per cent would inequitably redistribute the tax as between various companies. As has already been stated, it has been the view of the American Life Convention that redistribution of the tax is necessary to remove a discrimination that has existed, ever since the present law became effective, in favor of the companies reserving on a 3 per cent basis, and the increased taxes which the 3 per cent companies would be called upon to pay under such redistribution are only large as compared with the taxes they have paid in the past because these past taxes have represented less than these companies' proper share.

This exhibit shows that 47 companies would have their net taxable income increased. This is the group of companies reserving on the 3 per cent basis and we contend should bear the largest proportion of any increase because of the unfair advantage they have enjoyed in the past at the expense of companies reserving on a higher interest rate.

The 223 companies cited as showing no change in their taxable income are companies which reserve on a 3½ per cent basis, and if the deduction is fixed at the reserve rate, plus one-half per cent these companies will continue to receive a deduction of 4 per cent, the present rate.

The third group of 66 companies mentioned would have their net taxable income reduced. This group can only represent the companies which have business of which reserves are accumulated on the basis of 4 per cent interest rate. The amount of this business is insignificant, and to allow on the whole of this 4 per cent business a deduction equal to the 4 per cent reserve rate, plus one-half of 1 per cent, that is 4½ per cent, as compared with the 4 per cent provision of the present law, would result in a reduction in taxes on this account of something less than $200,000 for all of these 4 per cent companies combined. A somewhat different impression of this situation might be gained from reading of the statement presented by the Life Presidents Association, showing that the 66 companies which each have some 4 per cent business have total admitted assets of over six and a half billion dollars. A very insignificant portion of this total is represented by business on the 4 per cent reserve basis.

Table B of this exhibit shows that 20 companies with an average reserve requirement of less than 3½ per cent would have their taxes increased over two and a quarter million dollars. If the basis of the addition is fixed at their reserve rate, plus one-half of 1 per cent, this two and a quarter million dollars represents the measure of discrimination in favor of the 3 per cent companies which has existed during each of the past 10 years.

That there are 33 companies with average reserve requirements of 3½ per cent or over which on the same conditions would have their taxes reduced by $189,000 is doubtlessly explained by the fact that these are the companies which have a small proportion of their business on the 4 per cent reserve basis.

Table C of this exhibit clearly shows the reason for the greater tax on model 3 per cent company as compared with model 3½ per cent company, though enjoying exactly the same investment income, and incurring exactly the same investment expenses the 3 per cent company guarantees to its policyholders only 3,000,000 in interest reserve accumulations, and is allowed three and a half million as a deduction, whereas, the 3½ per cent company guarantees three and a half million dollars interest accumulation, and is allowed a deduction of 4,000,000. The difference of $500,000 represents the additional amount of interest guaranteed by the 3½ per cent company.

The following computation is based on the illustration submitted by Life Presidents Association of two model life insurance companies "A" and "B," and shows the percentage of "free income" which would be actually taxable at the various percentages of reserve deduction.

	"A"	"B"
Income at 5 per cent on funds	$1,103,692	$1,043,993
Income required to maintain reserves	624,731	689,393
Amount of free income	478,961	354,545
(1) Reserve deduction at 4 per cent:		
Taxable income	$270,717	$256,060
Tax at 13½ per cent	$36,547	$34,568
Percentage of free income subject to tax	56.5	72.2
(2) Reserve deduction at 3¾ per cent:		
Taxable income	$322,778	$306,308
Tax at 13½ per cent	$43,575	$41,316
Percentage of free income subject to tax	67.4	86.1
(3) Reserve deduction at reserve rate plus one-half per cent:		
Taxable income	$374,840	$256,060
Tax at 13½ per cent	$50,603	$34,568
Percentage of free income subject to tax	78.3	72.2
(4) Deduction at reserve rate plus one-fourth per cent:		
Taxable income	$426,900	$305,302
Tax at 13½ per cent	$57,631	$41,216
Percentage of free income subject to tax	89.1	86.1
(5) Deduction at 3½:		
Taxable income	$374,840	$354,545
Tax at 13½ per cent	$50,603	$47,864
Percentage of free income subject to tax	78.3	100.00
(6) Deduction at reserve rate:		
Taxable income	$478,961	$354,545
Tax at 13½ per cent	$64,660	$47,860
Percentage of free income subject to tax	100.00	100.00

Table D shows how the proposed change would work in the case of the New England Mutual and the Provident Mutual, the former a 3 per cent company, and the latter a 3½ per cent company. It is interesting to note from the figures presented that under the present law the taxable income of the 3 per cent company is actually $240,000 less than the taxable income on the 3½ per cent company. Under the present law the two companies combined pay on a taxable income of $3,600,000, and on the proposed change the combined taxable income would be $4,000,000, but the tax is redistributed in an equitable manner, placing the higher tax on the 3 per cent company where it properly belongs. It may be said that there must be some special factors applicable to one or both of these companies, such as a disproportionate amount of tax-exempt securities which result in the distorted figures shown as the taxable income under the proposed change.

Those who favor the continuance of a flat exemption rate for all companies contend that a change to the reserve basis plus one-half of 1 per cent is open to the following objections:

1. It shifts the established level of the tax burden.
2. It adds materially to the difficulty of computing the tax.
3. It fails to produce the required amount of revenue.

It may be freely admitted that the use of the reserve rate as the basis of exemption will change the established level of tax burden. It is with that actual object in view that the change is recommended. The companies reserving on the 3 per cent basis have for the past 10 years at least had an unfair advantage over the 3½ per cent and 4 per cent companies, and have failed to pay their proper proportionate share of tax burden on life-insurance companies. It is because of this unfair distribution in the past that the correction to the equitable basis of the reserve rate will cause an unequal but not an unfair distribution of the increased tax burden.

If the 3 per cent companies had been paying during the past 10 or 12 years their equitable share of the tax they would have been paying very much greater taxes than they actually have paid. These greater taxes that they would have been paying would have little more than offset the loss which the Government suffered from the National Life decision relating to tax-exempt securities, and as these tax-exempt securities were largely held by 3 per cent companies, the loss to the Government would have been recouped largely from the companies responsible for it.

The objection that the use of the reserve rate plus one-half of 1 per cent will add materially to the difficulties of computation has no merit. All companies are required in their reports to the State insurance departments to separate their 3, 3½, and 4 per cent reserves, and the Government requires each company to file with its income-tax return a copy of the statement it files with the State insurance department.

The third objection raised that the use of an exemption based on the reserve rate plus a percentage fails to produce the necessary revenue is also without merit, as the use of the reserve rate itself will produce more revenue than the Government seeks, and this can be modified to a greater or less degree by the addition to the reserve rate of a specified percentage fixed by the needs of the Government, but in no event must the exemption fall below the reserve rate.

III. THE TAX IS EXCESSIVE

The pending bill will seriously affect the business of many of the medium sized and smaller life insurance companies of the Middle West, Southwestern, Southern, and Western parts of the country, their taxes being largely increased, in many instances, three, four, five and even ten fold. This is to some extent due to the fact that their policy reserves are invested largely in real-estate mortgages, with but little or none in tax-exempt securities.

The increase of the general corporate rate from 12 go 13½ per cent represents the extent of the increase of the tax burden on ordinary corporations under the pending bill. The rate applied to life-insurance companies is also increased from 12 to 13½ per cent and is within itself a substantial increase in the amount of income taxes they will be required to pay. In this connection it should be kept in mind that by reason of the different basis upon which the tax against life insurance companies is levied, net profit or net income not being a factor, the taxes paid by life-insurance companies do not fluctuate to the same extent as other corporations. If the tax were on the net-income basis many life-insurance companies paying substantial amounts would, along with hundreds of business corporations, escape the tax entirely, as they would have no taxable income. Life-insurance companies have paid, under the present law, especially in the years 1930 and 1931, much more taxes than they would have paid under the law of 1918, and much more than they would have paid if the basis of the tax had been net income or net profit, as in the case of business corporations generally.

We appreciate the contention of the Government that provision should be made to replace the revenue lost as the result of the National Life decision, but the present bill goes far beyond that. Estimates based on the most complete actual figures obtainable indicate the pending bill would increase the amount of taxes paid by life insurance companies by approximately 125 per cent, while the increase on ordinary business corporations, will be 12½ per cent. From the most reliable figures available, for the year 1931, it is estimated that under the amendment here proposed the tax paid by life insurance companies would be increased approximately 25 per cent over the taxes paid by them in the year 1931. It is submitted that under present business and economic conditions such increase is very substantial and that it more than replaces the loss in revenue resulting from the National Life decisions.

The companies of the American Life Convention are not adverse to paying such equitable additional taxes as the Government considers necessary.

If the general increase in the corporation rate from 12 to 13½ per cent is not adequate for this purpose the American Life Convention will not oppose further taxation derived from a change in the 4 per cent deduction provided due recognition is given in the change to the principle that the deduction must be based on the reserve rate plus a specified addition such as ½ per cent which would make the deduction 3½ per cent for 3 per cent companies, 4 per cent for 3¼ per cent companies, and 4½ per cent for 4 per cent companies.

If this last suggested change is objected to on the grounds that it does not produce enough additional revenue the American Life Convention will not object to a change in the deduction rate from 4 per cent to the reserve rate plus one-fourth of 1 per cent as a temporary expedient in the present emergency. This would make the deduction 3¼ per cent for 3 per cent companies, 3¾ per cent for 3½ per cent companies, and 4¼ per cent for 4 per cent companies. This change will produce fully as much additional revenue as the change in the deduction as set out in the new bill from 4 to 3½ per cent, and has the great merit of recognizing the principle of equality of distribution of the tax among companies.

Respectfully submitted.

AMERICAN LIFE CONVENTION.

"A"

LANSING, MICH., *April 9, 1932.*

To the SENATE FINANCE COMMITTEE:

There is nothing more important to the prosperity of the country at this moment than to maintain the soundness and solvency of the institution of life insurance, one of the principal media of savings for more than 68,000,000 of our citizens.

It is absolutely necessary for life-insurance companies to maintain the integrity of their legal reserves in order to carry out the contracts which they issue. The legal reserve system which requires such reserves is the very foundation of the strength and solvency of the companies.

It is absolutely vital to the public interest that the income from the investment of these reserves should not be taxed in any event beyond the interest earning required to maintain them and in my judgment a margin above the reserving rate on each class of business proportionately should be granted to take care of possible capital losses which might encroach from time to time upon the integrity of the reserves themselves.

Insurance companies can not carry out their contracts unless their reserves remain intact and are increased each year by the interest rate assumed in their calculations.

In my judgment therefore it is of vital interest to the vast multitude of policyholders that the deduction now permitted for interest earnings upon their reserves should not in any event be reduced below the interest rate required to maintain them and in my judgment as an element of safety a margin above such reserving rate should be allowed.

Respectfully,

C. D. LIVINGSTON,
Commissioner of Insurance, State of Michigan,
President National Convention of Insurance Commissioners.

STATEMENT OF M. J. CLEARY, VICE PRESIDENT, NORTHWESTERN MUTUAL LIFE INSURANCE CO., MILWAUKEE, WIS.

Mr. CLEARY. I want to express, also, Senators, our appreciation of this opportunity to be heard.

I think I might urge on you Senators the logic of treating a corporation, the sole business of which is life insurance on a purely mutual basis, on a somewhat more preferential basis than a corporation that is engaged in the general business for gain and profit. However, we, too, are appreciative of the fact that you gentlemen are confronted with the fact of a necessity of finding revenues to meet the Government's needs.

And, together with the other two men who have appeared, and speaking for our company, we are entirely content to go along with the rate that you ultimately determine to apply to corporations generally, whether that be the present 13½ per cent or some other rate.

I should like to make this point, also, that the depression has brought to life insurance some very important problems, problems that are going to continue with us after general business has readjusted itself and found its new road.

The field of investment for the life-insurance company is a prescribed and a limited field.

Senator REED. Except for Canadian companies.

Mr. CLEARY. Well, that is true. I meant the American companies, Senator. Generally speaking, the most liberal provision is a certain amount of preferred stock.

In connection with a point or two I would like to make, I would like to refer, in round figures, to the portfolio of our own company. At the end of the year just closed we had, in round figures, $216,000,000 invested in farm mortgages, 30,000 of them. We had $192,000,000

invested in city mortgages. We had, in round figures, $200,000,000 invested in railroad and utility bonds. And something in excess of $100,000,000 in Federal, State, and municipal securities. That represents about the range permitted to us.

We have already had a measurable number of foreclosures in the farm field. And some losses. Happily, from our viewpoint, the losses are comparatively small. I am sure it is not necessary to urge upon you gentlemen the fact that in that portfolio there are still problems. We will be most fortunate, indeed, if there are not losses of material proportions.

Now, in connection with the point that Senator Reed made when General McAllister was talking, I do not know why, in the 1921 bill, the Congress and those engaged in its drafting determined to eliminate investment gains or capital gains, and capital losses, but the fact is that under the present law we are not permitted to take into account capital losses in determining our tax basis. It is true enough that we are not required to include capital gains. But, again, I feel that it is perfectly clear, restricted to the field of investments that we are, our opportunity for capital gain is relatively small, while, in the light of conditions such as now prevail, our chances of capital losses, the mortgage field and the bond field, is altogether too apparent.

I do not want to go over things that other men have touched upon, but I do wish to again refer to the fact that the tax upon life insurance is stabilized in a degree that no other tax imposed by the Federal or other governments, I think, is stabllized, because of its imposition upon this item of investment income.

Safety and solvency in life insurance is of outstanding importance to the individual, to society, and to the companies as well, of course. Having in mind the condition that confronts life insurance, Mr. Loomis said, in fields of mortaility and investment, as well as in other fields, we believe that it is entirely sound to contend that the margin of safety to-day is none too great. The excess of interest over the 4 per cent allowed as a margin of safety to absorb those losses that may occur and are occurring in capital investment, is none too great.

We believe, further, that the bill as it is before you Senators imposed upon life insurance an unfair—I might say a discriminatory—increase as compared with the great majority of other corporations that are taxed.

Senator REED. What is your company, sir?

Mr. CLEARY. The Northwestern Mutual Life, of Milwaukee.

Senator REED. Would you mind telling us how much refund you got from the Treasury on the basis of the National Life case decision?

Mr. CLEARY. I can not give you the exact figure, Senator, but in the neighborhood of $2,250,000. That was over a period of 2 years.

Senator REED. How much was your tax last year?

Mr. CLEARY. Last year?

Senator REED. Yes.

Mr. CLEARY. $618,000.

In the bill as it stands to-day you are increasing the rate from 12 to 13½, or just 12½ per cent increase.

Senator SHORTRIDGE. What is that?

Mr. CLEARY. The increase of the rate from 12 to 13½ is just 12½ per cent increase.

We believe, in view of the character of the business, and the conditions confronting us, that that increase is all that should be imposed upon life insurance. We believe that to enact the bill as it stands would impose upon life insurance an increase that is out of proportion to the increases that would be imposed upon other corporations. We believe that the bill as it now stands would result in a tax upon life insurance that would be out of proportion to the tax imposed upon other corporations.

On the 1931 business the Northwestern Mutual Life Insurance Co. paid the Government $618,210. If this bill as it now stands were in force we would have paid the Government $1,264,439.

Senator REED. What was your increase in surplus during that period?

Mr. CLEARY. A shrinkage of $3,500,000, Senator. That is not pleasant to admit, but that is a fact.

Senator SHORTRIDGE. That is temporary?

Senator REED. It would not be that much if we placed a tax as we have it here?

Mr. CLEARY. I do not know, Senator.

Senator SHORTRIDGE. That is not permanent; that is temporary, is it not?

Mr. CLEARY. A very material part of that resulted from an adjustment in values, but there seemed to be a reason for the adjustment.

But this bill would have increased our taxes $614,000, or 104½ per cent. We feel that that is an excessive increase to impose upon us. As I said before, the increase in rate alone would result in an increase of 12½ per cent.

Now I want to join the other men in saying that if, in the opinion of Congress, the losses that the Government suffered in the so-called national life decision should be recaptured, we will accept that as having a background of justification.

You do not, however, need to make the radical change that is proposed here from a deduction of 4 per cent of the mean reserve to 3½ per cent; a change of 3½ to 3¾ per cent will more than make the Government whole.

Senator REED. What rate do you use in your own company for calculating your reserve?

Mr. CLEARY. Three per cent. We have a little old business, away back that is, possibly, 4.

If the bill as it now stands were changed only to the extent of substituting a 3¾ deduction for the proposed 3½ deduction and applied to the business of the Northwestern in 1931, instead of $618,000 we would have paid $980,000, in round figures, or 58½ per cent more than we actually paid. It is our view that that is as great an increase as can be justified under the present-day conditions, and to the end that equity, as between ourselves and other corporations, should be done.

Senator SHORTRIDGE. You would have 3¾ instead of 3½?

Mr. CLEARY. Yes. And I would like, also, to join in Mr. Loomis's suggestion that the qualification of covering the company that may perchance be reserving on the basis or higher than 3½ per cent be covered. For instance, a 4 per cent company be permitted to deduct its actual values.

Now, I do not want to argue this, but it was touched on before and it has force. While the tax that is proposed here will be levied

upon the corporate entity, in our case it is actually levied upon the 700,000 men scattered in every State in the Union who own that company. Every dollar of its assets is a trust fund. We hold the legal title, yes; but only that. And of course it is true that the life insurance business, totaling in excess of $100,000,000,000, is owned by more than 60,000,000 people, the vast percentage owning but a small amount.

Now, I want to touch on one point made by Mr. McAllister, representing the taxation committee of the American Life Convention, and that is as to the equity of the basis of the deduction. Regardless of the differences that exist in company plans and methods; regardless of the differences that do exist in the basis upon which reserves are set up; and the differences in the standards of valuation—and I do not attempt to go into that; I am not an actuary, and they are complicated, and time would not permit anyhow—notwithstanding those differences, a level rate of deduction such as that now prevailing, to change 4 per cent available to all companies, does produce a substantial equality and equity in the tax burden levied upon the companies. To change that to permit a deduction of the amount actually required to maintain the reserve plus a percentage—one-half or one-fourth, or some other percentage—would result in inequality of burden; it would result in a shifting from the established level of burden.

Assume that you change to the actual reserve required, plus one-half of one per cent, what would it mean? It would mean that the entire increase in the tax burden would be shifted to a relatively small group of companies. The company that would be operating on a 3½ per cent reserve basis would have exactly the same deduction that it has to-day. The company that would be operating on a reserve basis in excess of 3½ per cent would have a larger deduction than it has to-day. It would be only those companies that are operating on a reserve basis that is the equivalent of less than 3½ per cent who would be burdened with an increase in taxes.

Now the actuaries of the Association of Life Insurance Presidents have made some computations in connection with that. They have assumed, for instance, if that principle were applied, and if the actual reserves plus one-half of 1 per cent was permitted as a deduction, they have made an investigation of 336 out of the 410 legal reserve life insurance companies in the country, and they find these results. Again, let me say that thesse are actuarial compilations. I assume they are accurate. Forty-seven companies out of the 336, with assets of $8,950,000,000 would have their taxes increased. Two hundred and twenty-three companies out of the 336, with assets of $3,300,000,000 would stay where they are under the present law. Sixty-six companies, with assets of $6,590,000,000, and 35 per cent of the assets of the American companies, would have an actual decrease in the amount upon which they would pay taxes, as compared with that existing under the present law.

Senator SHORTRIDGE. Assuming those facts as they are stated to be correct, what would be the result as to Government revenue?

Mr. CLEARY. I have a computation on that, also, Senator, from the actuarial unit connected with the Association of Life Insurance Presidents, the same men who made the previous one. And I find this statement: The amount that would be returned to the Govern-

ment under a 13½ per cent rate with deduction for the required interest plus one-half of 1 per cent, the tax accruing to the Government would be $11,880,000 in round figures. On the other hand, the amount which would accrue to the Government if the rate was 13½ per cent with a 3¾ deduction and 4 per cent wherever the company reporting was using a 4 per cent basis, the amount returned to the Government would be $13,896,000, or, in round figures, $2,000,000 more under the level deduction of 3¾ per cent, with a saving clause to cover the 4 per cent company, than it would be if you used the actual reserve plus one-half of 1 per cent.

Thank you, gentlemen.

LETTER FROM FRED A. HOWLAND, PRESIDENT NATIONAL LIFE INSURANCE CO.

APRIL 20, 1932.

Hon. REED SMOOT,
Chairman United States Senate Committee on Finance,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR SMOOT: Taking advantage of the kind permission granted at our brief interview this morning, I will summarize below as briefly as possible the status of the pending tax measure as relating to the proposed increase in the tax on life insurance companies.

Some 10 years ago, the special provisions of the Federal law taxing life insurance companies were adopted with the understanding that the net income as therein provided furnished a taxable base which in fairness would place the life companies on a parity with other corporations. That taxable base was undisturbed till the decision in the so-called National Life case in 1928 reduced the amount of the base (and, therefore, the amount of the tax) by holding that it was unconstitutional to treat the income from Government, State, and municipal securities as a part thereof.

It is understood that the House bill, now before the Senate committee, which fixed the deduction from gross income at 3½ per cent of the mean reserves, instead of the 4 per cent deduction in the present law, was intended to restore the taxable base of life companies to substantially the same status as it was prior to the decision in the National Life case and again place life companies, as to taxable net income, on a parity with other corporations.

It has developed, however, that this proposed change in the law would much more than make up for the loss of revenue resulting from the National Life decision, and that a 3¾ per cent deduction (instead of the 3½ per cent now in the bill) will more nearly bring the taxable base back to its original status and fairly and equitably allow to life companies the application of the 13½ per cent tax proposed to be levied on other corporations.

There seems to be no serious objection on the part of any of the life companies to a change in the taxable base to make up for the loss of taxes due to the National Life decision, but there is a difference of opinion between the companies of the American Life convention group (practically all of which compute their reserves on a 3½ per cent basis) and the Association of Life Insurance Presidents' group (many of which compute their reserves on a 3 per cent basis) as to the method of determining the new taxable base.

The former group suggests that the rate actually used in determining reserves plus one-half of 1 per cent be utilized in fixing the new taxable base, while the latter group advises that 3¾ per cent of the mean reserves be the amount to be deducted.

The companies in the Association of Life Insurance Presidents' group urge that the 3¾ per cent deduction for all companies is the fairer test because it applies an equal ratio of deduction to all companies. On the other hand, the suggestion of the American Life convention would not increase the taxable net income of the companies figuring their reserves on a 3½ per cent basis, but would require the companies computing their reserves on a 3 per cent basis to pay the additional tax.

This is not only inequitable in itself, but is precisely contrary to the logic of the situation, because the 3 per cent companies are practically all mutual companies, while the 3½ per cent companies of the American Life convention are largely stock companies, and it is the policy of the Federal tax laws to at least

treat mutual companies as considerately as stock organizations. In fact, the Government exempts altogether from taxation under the income tax law mutual savings banks and many other mutual and cooperative organizations.

The 3 per cent mutual life companies do not ask for exemption, but do protest against discrimination against themselves and in favor of the stock companies such as would result from the proposed amendment of the American Life convention companies.

In fact, this discrimination is so obviously unfair, that various stock companies in the presidents' association, and all the 3½ per cent mutual companies in the presidents' association (representing together in volume of business, more than all the companies in the American Life convention group) recognize the equity of, and favor, the 3¾ per cent reserve deduction to determine net income, although it would cost them more than the American Life convention proposal.

To-day it has come to my attention that the American Life convention group has tentatively proposed a new modification which fixes the rate of reserve deduction for all life companies at the rate actually used by each company in computing its reserves, plus one-quarter of 1 per cent.

This would even more discriminate against the 3 per cent companies of the presidents' group, and throw a still heavier burden upon them.

Regretting my limited time in Washington has not permitted me to reduce this letter to briefer form, and appreciating your indulgence in allowing me to submit it, believe me,

With great respect,

FRED A. HOWLAND,
President National Life Insurance Co.

STATEMENT OF HENRY B. FERNALD, MONTCLAIR, N. J., REPRESENTING AMERICAN INSTITUTE OF ACCOUNTANTS

Mr. FERNALD. Mr. Chairman, and gentlemen of the committee, my name is Henry B. Fernald, of Montclair, N. J. I am chairman of the committee on Federal legislation of the American Institute of Accountants, a national organization of professional accountants throughout the country.

In part, from a technical accounting standpoint, and, in part, as we see in our accounting practice the actual working of income tax laws, we urge for your consideration the following:

I shall only summarize the points here and ask your permission to cover them more fully in a brief to be filed.

(The brief referred to appears at the conclusion of Mr. Fernald's testimony.)

CONSOLIDATED RETURNS

Mr. FERNALD. We believe the additional 1½ per cent tax proposed, if consolidated returns are used, is quite unwarranted and should not be imposed.

We believe consolidated returns are the best means of presenting fairly and equitably the true net income of a group of affiliated corporations. Such returns should be encouraged rather than discouraged.

Long before any income-tax legislation, the accountants had adopted the principle of the consolidated statement, as necessary to give a true picture of the affairs of an affiliated group. Taken separately the accounts of individual corporations might show, properly for each, profits or losses from intercompany transactions, which, however, represented no true income or loss to the group as a whole.

Intercompany sales or other transfers may be made, service or other contracts entered into, all quite legal and valid, but which will show gains or losses for the separate corporations which represent no real

gain or loss to the entire group. So in our consolidated statements we eliminate them. There is no more profit or loss to the group from the passage of goods from one corporation to another than there is from the transactions of one branch with another or the same corporation. To show the true facts for the entire group, and to minimize opportunity for evasion and concealment, the consolidated statement was adopted and is generally used in the business and financial world.

In 1917 the American Institute of Accountants urged the adoption of similar consolidated income-tax returns.

For 15 years these provisions have been in effect. Many corporations have never submitted anything but a consolidated return. Others have done it so long that the statement and audit of separate returns will call for practically a new basis from that now established. Great difficulty, confusion, and uncertainty, probably years of disputes and litigation, will result if consolidated returns are now practically discontinued because of an excess tax imposed for their use.

We doubt if there would be any material addition to the revenue, with a distinct probability that, in a period of depression at least, there would be a reduction in the revenue from separate as compared with consolidated returns.

Consolidated returns are not a device to give an affiliated group some special-tax advantage, but represent sound accounting and business procedure. We urge they be continued without any increased rate therefor.

NET LOSSES

We urge continuance of the present net loss provisions.

Each taxable year of a business does not stand by itself unassociated with the results of other years. Business activities overlap from one period to another. There is much artificiality in year-to-year cut-offs, as our income tax laws have long recognized by the "net loss" provision.

Moreover, a business which has been losing money is not in an equal position for payment of taxes with one which has had a consistent record of profits.

We believe, in fairness to the taxpayers, the net loss provisions should be continued for present as well as future years.

TAX ON DIVIDENDS

We believe the bill wrongly departs from our long-established recognition that dividends received by the stockholders have already been subjected to tax as corporate earnings and so should be exempt from normal tax to the stockholder.

The bill would made clear discrimination of 13½ per cent against doing business in corporate form.

A man subject to the 47 per cent individual tax, with the 13½ per cent corporation tax, a total of 60½ per cent tax, would have to receive a 12⅝ per cent business profit to have it equivalent to a 5 per cent tax-exempt bond; or 11⅓ per cent to be equivalent to a 4½ per cent tax-exempt bond.

To make business investments unprofitable by heavy taxes, will naturally limit the amount of such investments and the amount of employment which business enterprises can give the people.

TAX-FREE DISTRIBUTIONS

The bill recognizes the tax-free status to stockholders of distributions from actual paid-in capital of a corporation but fails to recognize distributions from March 1, 1913, surplus or values, which are generally recognized as having a capital status for income-tax purposes.

If we were trying to measure the taxability of distributions to each stockholder by his own investment in the stock and what he had individually paid for an interest in the corporation's earning and distributions, we could well ignore the corporation's basis. But we are not trying to do this, and so long as we use the corporation's basis in determining the taxable status of distributions to stockholders we should use it consistently and recognize the March 1, 1913, basis where it exists.

CREDIT FOR FOREIGN TAXES

We believe the bill does less than justice in its allowance of credit for foreign taxes, because of the drastic formula which it proposes. This is a technical matter which I shall not try here to enlarge upon, but ask your consideration to the discussion in our brief.

SURTAX RATES

We believe the surtax rates of the bill are passing the point of productivity.

A simple example will illustrate this. A man with an income of over $100,000 would be subject to a 47 per cent tax rate. To him a tax-exempt 5 per cent bond gives a net yield equivalent to a taxable bond which yields a 9.4 per cent; or a 4½ per cent tax-exempt is equivalent to a taxable 8½ per cent yield.

A 6 per cent, 20-year taxable bond yields approximately 9.4 per cent if selling at 70, or yields approximately 8.5 per cent if selling at 76.

High surtax rates will certainly tend to retard recovery in our bond markets and make it more difficult for our railroads and industries to obtain the additional funds they may require.

A high income-tax rate may help the market for tax-exempt securities, but only as it passes the point of productivity as a revenue measure and discourages investment in commercial enterprises.

EARNED INCOME

From a personal standpoint, as professional men, we urge that a more substantial allowance for earned income should be made as fair recognition that the professional man in his comparatively few years of substantial return is simply realizing upon his reserves of accumulated thought, energy, and experience, which are practically his capital.

We urge economy in Federal expenditures. We believe in balancing the Budget, but not by what we think are unfair or unsound income-tax provisions.

I have tried to be concise, and have omitted some things I should like to have said, but would ask your further consideration to the brief which, with your permission, we will file.

Senator HARRISON. Let me ask you one question. That is a very fine discussion. But have you figured what the loss of money would be if the changes were made according to your suggestions?

Mr. FERNALD. Most of them would be comparatively small amounts.

Senator HARRISON. In the aggregate, however, it would be quite large?

Mr. FERNALD. Only one is of any considerable size, the normal tax on dividends—that is $89,000,000. The others run, I think, in no case over $8,000,000. I think the other items would not run over $25,000,000 or $30,000,000.

Senator HARRISON. It would go around $139,000,000?

Mr. FERNALD. Somewhere around there.

Senator REED. What alternative do you suggest for that loss?

Mr. FERNALD. I am not trying to suggest an alternative. I am simply trying to say that the income tax is limited in its possible productivity. You can not work a willing horse to death. I think it will have to come from some other source.

(The brief of Mr. Fernald is printed here in full:)

BRIEF OF HENRY B. FERNALD

To the COMMITTEE ON FINANCE OF THE SENATE OF THE UNITED STATES:

The committee on Federal legislation of the American Institute of Accountants, a national organization of professional accountants throughout the country, makes the following presentation to your committee with respect to certain features of the proposed revenue act of 1932 now pending before your committee:

There are certain accounting matters of which we speak from the technical standpoint. There are other matters of which we speak from the standpoint of practicing public accountants who see in a rather wide range of practice the actual working of income tax laws as they affect business affairs and as business matters are reflected in the tax returns submitted.

We urge for your consideration the following:

1. CONSOLIDATED RETURNS

The bill as it stands before your committee contains in section 141 the provision for consolidated returns of corporations, but imposes an added rate of tax of 1½ per cent on consolidated net income if consolidated returns are used. We believe this additional tax is quite unwarranted and should not be imposed.

The American Institute of Accountants has consistently urged the principle of consolidated statements as best adapted fairly and equitably to reflect true net income. Long before the matter was raised through income-tax legislation the accountants had adopted the principle of the consolidated statement.

In 1917 the institute urged the adoption of consolidated income tax returns. In 1928, when it was proposed to eliminate them, the institute joined with others in urging their continuance.

We believe that consolidated returns are proper and should be encouraged rather than discouraged. They are in accord with sound business principles and good accounting practice.

The consolidated balance sheet and consolidated income statement were really forced upon accountants as the best means of giving a true picture of the affairs of a group of related corporations. If we have simply the separate accounts of each member of an affiliated group, we may find that, taking them corporation by corporation, the accounts may, by accident or design, show profits or losses for the separate corporations on intercompany transactions which, however, represent no true income or loss to the affiliated group. Sales or other transfers may be quite legal and appropriately made from one corporation to another at wholly proper prices, with resulting gain or loss computations. Service or other contracts

may be entered into by one corporation with another. There may be no question as to the good faith and business honesty of such transactions, yet they may show gains or losses to the separate corporations which represent no real gain or loss to the entire group.

We do not question that each member of an affiliated group considered as a separate corporation is entirely free to deal with any other member of the affiliated group in a wide range of wholly legitimate transactions which will involve no fraud or wrong to anyone. Without criticizing or objecting to such transactions, we simply say that such items of gain or loss on transactions between individual members of the group must be eliminated in the consolidated statement, so that it will show the true gain or loss of the group in its dealings with outsiders.

There is no more profit to the group from the passage of goods from one corporation to another than there is by the transactions of one branch with another of the same corporation. To show the true facts as to the group as a whole and to minimize the opportunity of evasion and concealment, the consolidated statement was adopted and now has general recognition among accountants, lawyers, bankers, business men, and stockholders.

In the income tax laws from 1917 on, this principle has been incorporated as representing the fair and equitable principle of taxing true income. Such affiliated groups have accordingly been left free so far as the income tax law was concerned to conduct their affairs under such corporate forms as they might wish without having these various subdividions materially affect taxable net income. To such a group it is generally immaterial from an income-tax standpoint whether one corporation shows a loss while another shows a gain. It is not necessary for such a group to make various changes and rearrangements of its affairs which it would certainly do if there were an advantage to be derived from having each corporation show as earnings some income and no corporation operating at a loss unless all corporations in the group were sustaining a loss.

Consolidated Federal income, tax return provisions have now been in effect for 15 years. Great difficulty, confusion, and uncertainty will result if they are now to be practically discontinued because of an excess tax imposed for their use.

Many corporations have never submitted anything other than a consolidated Federal income-tax return. Other corporations have so long had their Federal income-tax returns stated and audited on a consolidated basis, eliminating intercompany transactions, that the statement and audit of separate returns will call for practically a new basis from that to which they have been accustomed. It may take years to straighten out the disputes and litigation which would result.

Under the present provisions relating to consolidated returns there has developed greater simplicity than in prior acts. Many of the controversies have been settled and the complications eliminated so that at the present date the preparation and auditing of consolidated returns is not a very difficult matter.

One point is certain, and that is that none of the difficulties regarding consolidated returns which may exist in the future will compare with the difficulties which would result from trying now to unscramble the affairs of corporations which for years have been making their consolidated returns.

As to the revenues, we doubt if there would be any material addition to the revenue, with a distinct probability that, in this period of depression at least, there would be a substantial reduction in the revenue from separate returns as compared with that from consolidated returns. Statistics of the results shown by consolidated returns will not be reliable because the very principle of the consolidated return is to make unimportant the question of whether there may be losses in one corporation at the same time that there are profits in another so long as the true income of the consolidated group is reported. If consolidated returns are penalized it will be to the interests of such groups to equalize the income of their respective separate members. As already stated, there are wholly legitimate, proper, and valid means by which this may, to a large extent, be done.

We believe that any gain which might arise from the corporations that might pay additional taxes on account of consolidated returns would be more than offset by the reductions which could be made by others who under separate returns could do what would not be permissible under consolidated returns.

The accountants of the country have consistently urged the consolidated-return principle which has also been urged by the Bar Association, the Chamber of Commerce and others. The principle of consolidated statements is in general use

in business. It is not a device intended to give to affiliated groups some particular tax advantage. We urge that it be continued without any increased tax rate therefor.

2. NET LOSSES

The pending revenue bill continues in section 117 the provision for the deduction of a business net loss of one year in the next or subsequent year, excepting that the right to this deduction is limited to one year instead of two years as in existing law and that no such deduction is to be allowed in computing income for the years 1932, 1933, and 1934.

The net loss provision is recognition that each taxable year of a business does not stand entirely by itself unassociated with the results of other years. We, as accountants, well recognize the difficulty of trying to determine the exact income of a particular period. There is a continual overlapping from one period to another of business transactions and business activities. The only reason why business men are in many cases continuing their operations to-day, standing their expenses and accepting their losses, is for the future benefits which they believe will be given by the continuity of the business. We fully recognize that for income-tax administration it is necessary to adopt fixed periods for determination of net income realized, but business men know and our income tax laws have long recognized that there is much artificiality in these cut-offs from year to year.

The business which can show a consistent record of profits from one year to another can well pay a fair tax on each year's results as determined. The business which has been losing money for one year or two years is far from being in an equal position as to the payment of taxes. In effect, because of overlapping transactions, the elimination of the net loss provision will mean that a business which can less afford to pay a tax will actually be paying at a higher rate than one which is prosperous and stable.

Under the existing law it is not important to strive for meticulous accuracy in the computation of business income. A statement of business income at best represents many features of estimate to be determined by opinion and judgment. The matter is not serious if a loss shown for one year may be carried forward and applied as against income of another. These matters may, however, become subjects of serious disputes and difficulties between taxpayers and the Treasury, if this provision is changed, so that each year must stand wholly separate from any other year.

We believe, in fairness to the taxpayers, this net loss provision should be continued.

3. TAX ON DIVIDENDS

Section 25(a) of the pending bill would make dividends for the taxable years 1932 and 1933 subject to the normal tax. This is directly contrary to the policy of all our prior income tax laws.

Originally, under the 1913 and 1916 acts, dividends carried to the stockholders exemptions equal to the full rate of the corporate tax which had been paid. During the war years and the postwar years as the tax rates of corporations and of individuals were from time to time changed the full exemption has not been maintained. Nevertheless, all of these laws recognized the principle that since dividends were paid from earnings on which the corporate tax had already been paid, an allowance should be made to the stockholder accordingly. The present bill continues to recognize this principle excepting only for the years 1932 and 1933.

We believe, in fact, that dividends when distributed to the stockholders should carry to him the exemption for the full amount of tax which has been paid by the corporation. We do not, however, urge at this time an attempt to restore this principle fully, but we do believe it is unfair to eliminate the recognition of this principle because this would be a clear case of double taxation. It makes a clear discrimination of 13½ per cent against doing business in corporate form. It will tend to discourage investments in stocks. It will decrease the value of stock investments and it will discourage the doing of business in corporate form.

What this will mean is readily seen if we note that the bill proposes a 40 per cent surtax and a 7 per cent normal tax on individual incomes of over $100,000. Adding to this a 13½ per cent tax will make a total tax of 60½ per cent to be paid on business incomes earned by a corporation and distributed to stockholders if their incomes are over $100,000. This means that such business incomes would have to amount to 12.658 per cent on the investment in order that after

tax they might be equivalent to the yield of a 5 per cent tax-exempt bond; or they would have to amount to 11.392 per cent to be equivalent to a 4.5 per cent tax-exempt bond.

A tax on income may not be an item which is directly included in the cost of goods sold or services rendered, but certainly it is an item which directly affects the capital which will be invested in business enterprise. If business investments are made unprofitable by heavy taxes, this will naturally limit the amount of such investments and the amount of employment which business enterprises can give to the people.

Not merely is it right in theory that business investments should yield fair and reasonable returns without attempt to impair or recapture these by heavy taxation, but it is moreover a practical necessity that business investments must continue to be attractive and productive if we are to expect a return of prosperity and a recovery of business.

4. TAX-FREE DISTRIBUTIONS

The income tax laws since 1916 have adopted the principle that the taxable status of distributions to stockholders should be determined by the fact of whether or not such distributions were out of corporate earnings accumulated since March 1, 1913. Any distributions which were made out of the actual capital of a corporation or which were made out of March 1, 1913, surplus or values (which for income tax purposes are generally recognized as having a capital status) were not considered as taxable dividends to the stockholders, but rather they are to be taken into account as reducing the basis for computing gain or loss on the sale or other disposition of the stock.

It is, of course, recognized that to each stockholder his capital investment is what he has paid for his stock, but it would be impracticable to try to measure whether or not each distribution made was or was not a return to each stockholder of a part of his own particular investment in that corporation. The law has, accordingly, adopted as an accounting basis the capital status in the corporation as determinative of the tax status of the distributions to the stockholders.

It is quite possible that the capital basis of its assets to a corporation may only be equivalent at any date to $50 a share for the stockholder. When a stockholder pays $50 for his stock he will have the same capital basis for his stock as the corporation has for its assets. However, the stockholder who pays $100 for his stock at a subsequent date, while the corporate basis still remains fixed at the equivalent of $50 a share has a capital investment which is twice that of the corporation.

We grant that it is impracticable to try to figure the separate capital basis of each individual stockholder in measuring the status of distributions, but the least justice that can be done is to allow to such a stockholder whatever benefit may come from the adoption of the corporation basis.

The bill continues to recognize this fact as to distributions from actual capital of the corporation. It fails, however, to give such recognition to the surplus or values which existed at March 1, 1913, which have their quasi capital status.

Some question may be raised as to why corporations have not after all these years fully distributed all March 1, 1913, surplus or values. The reason is found in the law which prohibits such distributions until after all subsequent earnings have been distributed. There is no question that if it were not for this provision of the law, practically all such March 1, 1913, surplus and values would long since have been distributed in the form of free tax distributions. The law itself has prevented doing this.

As an accounting matter it is certainly sound and equitable that where a corporate basis is adopted as a standard for determining the taxable status of distributions such basis should be consistently followed, including the recognition of the nontaxable status of accumulations or values prior to March 1, 1913.

5. CREDIT FOR FOREIGN TAXES

The bill in section 131 continues the allowance for credit for foreign taxes which we believe should be continued, but it imposes certain technical limitations which, to some extent at least, we believe to be quite unwarranted. Commerce among the nations may represent business conducted in part in one country, perhaps in part in another, and perhaps with ownership and management in a third. If each country in which the business is conducted, owned, or managed,

endeavors to levy the maximum possible tax on the entire income derived from this international business, there will be international double taxation or even treble or quadruple taxation which would mean the breakdown of international business and commerce.

This question of international double taxation is one to which a committee of the American Institute of Accountants has been long devoting its study in cooperation with other committees and organizations who are studying it and endeavoring to find the best practical solution. We must recognize the right of each country to impose income taxes upon incomes earned within its boundaries. Our own country imposes such a tax on all incomes of foreign individuals, partnerships, or corporations derived from sources within the United States. The United States also asserts its right to tax all incomes received by its citizens or residents even though they are derived from sources without the United States. We have, however, under our revenue acts for some years been giving a certain recognition to the principle of avoidance of international double taxation by our allowances of the credit for foreign taxes. This has never gone as far as some of us have felt it should go, but it has been distinctly a step in the right direction and was intended to work fair justice.

A formula was written into the law intended to prevent, and which reasonably did prevent, the deduction of foreign taxes at rates higher than the income tax imposed by our Government. There has been some criticism of this formula on the ground that under certain conditions it might work out so as to make the net tax collectible by the United States somewhat less than the full tax rate on that part of the income of the corporation which was derived from sources within the United States. Perhaps there was reason for amendment of the wording of the law in that particular and the bill makes such amendment in section 131 as to insure that the total credit for foreign taxes will not reduce the tax payable on the taxpayer's income derived from sources within the United States. We do not criticize this feature of the bill as expressed in section 131 (b) (2).

We believe, however, that an injustice is done in applying a further limitation in section 131 (b) (1) which would make a separate limitation to be applied as to the credit in respect of the tax which may be paid to each separate country in which a taxpayer may be doing business.

Take, for example, (A) the case of a corporation having $100,000 income from sources within the United States and $100,000 of income from a foreign country which imposes a 20 per cent rate of tax. The formula of section 131 (b) (2) would provide that credit may not be taken for more than $13,500 (of the $20,000 paid to the foreign country) so that the net tax payable to the United States should not be less than the 13½ per cent on the $100,000 income from sources within the United States. This seems not unreasonable.

Next take example (B) of a corporation having $100,000 income from sources within the United States, $100,000 of income from a foreign country imposing a 20 per cent rate, and $100,000 of income from a foreign country imposing a 7 per cent rate—the foreign taxes it will be required to pay will be $27,000, an average of 13½ per cent on its foreign income. It might receive credit for the full amount of these foreign taxes it has paid and still not reduce its tax payable to the United States below 13½ per cent on its income from sources within this country. It could then, under the limitation of section 131 (b) (2), receive this full credit.

The bill, however, would impose the further limitation of section 131 (b) (1) which, applied country by country, would work out as follows:

On the $100,000 income on which a 20 per cent foreign tax was paid, the credit allowable would only be $13,500. On the $100,000 income on which the 7 per cent foreign tax was paid the credit allowable would only be $7,000. This would make a total credit of $20,500: In figuring the total tax on $300,000 of income at 13½ per cent, making a total of $40,500, credit would be given of $20,500, leaving a tax to be paid to the United States of $20,000. This would be $6,500 more than the amount of a 13½ per cent tax on its income from sources within the United States. This amount of $6,500 additional taxes to the United States would result from denying to the taxpayer credit for $6,500 foreign taxes actually paid by it.

We do not criticize the formula of section 131 (b) (2) intended to provide that the foreign tax credit should not be allowed to reduce the tax on incomes derived from sources within the United States. Our criticism is directed particularly against what seems the wholly unnecessary and unwarranted limitation of section 131 (b) (1) which may result in the United States collecting more than

the amount of tax on incomes earned within this country because by a segregation of payments it would deny credit for foreign taxes which have actually been paid.

We believe that fairness and every requirement for safeguarding the revenues will be met by the limitation of section 131 (b) (2) and that the separate limitation of section 131 (b) (1) should be eliminated from the bill.

6. SURTAX RATES

The surtax rates proposed in the bill are very high. We believe they are passing the point of productivity.

A simple example will illustrate this. The bill proposes in Section 12, a surtax rate of 40 per cent on net incomes in excess of $100,000, which with the 7 per cent normal tax of Section 11 will make a total tax of 47 per cent. For a man subject to this 47 per cent tax, a tax-exempt 5 per cent bond will give a net yield equivalent to that of a taxable bond which yields 9.434 per cent. A 4½ per cent tax-exempt bond becomes equivalent to a taxable 8.49 per cent yield.

A 6 per cent 20-year taxable bond will yield approximately 9.4 per cent if it is selling at 70, or it will yield approximately 8.5 per cent if it is selling for 76.

Different rates of interest and different maturities would naturally give different prices, but the fact still stands that a 47 per cent income tax will mean a very much higher interest rate or a very much lower price for taxable than for tax-exempt bonds.

It is perfectly true that the bond market is not wholly confined to the individuals with large incomes, but nevertheless they constitute a very important factor, and much of our business recovery depends directly on obtaining a reasonable bond market for industrial and railroad securities. If our tax laws practically eliminate all persons of large incomes as investors in industrial and railroad bonds at reasonable rates of interest or reasonable prices, we can hardly hope for any very satisfactory market for such securities.

Even for a $50,000 income, for which the normal and surtax rate would aggregate 28 per cent, a 5 per cent tax-exempt bond becomes equivalent to practically a 7 per cent taxable yield.

Certainly we can not expect that any man free to pick and choose his investments to his best advantage will select taxable securities which will yield him net after payment of the tax less than the yield obtainable from tax-exempt securities of equal grade. A high tax rate certainly gives every inducement to those of large incomes to withdraw from the taxpaying class and place their investments in tax-exempt securities. A high tax rate such as that proposed in this Bill will certainly tend to retard recovery in our bond markets. It will make a much more difficult proposition for the railroads and industries to obtain the additional funds they may require and, to a substantial extent at least, it will pass the point of productivity as a tax measure.

The effect of these high income tax rates is readily seen in the case of bonds, but they will likewise have their effect on other sources of taxable income. An investment in construction of new buildings must be measured no less from the standard of net yield after allowing for payment of the income tax as compared with the yield which might be obtained from tax-exempt securities.

Undoubtedly a high income tax rate will tend to help the market for tax-exempt securities, but it will do this as it passes the point of productivity as a revenue measure and as it discourages investment in commercial enterprises.

7. EARNED INCOME

This is a matter on which we speak from the standpoint of professional men who are directly affected by this.

The professional man usually spends many years of work, thought, and study before he reaches his best earning power. During the early years of professional life his income is usually not large. Later he may reach a comparatively few years of maximum return when he realizes on the reserves of accumulated thought, energy, and experience. We grant that it is quite impossible for him to express in figures year by year the possible allowance for his wasting of himself. Yet we generally recognize that such professional earnings are not the same as the income derived from interest on capital, where the income leaves the capital unimpaired.

The principle that earned income should be taxed at a less rate than other income has been recognized for several years and the present bill allows a credit

on account of earned income. We believe, however, that the present law has reduced the credit to an amount that is negligible and we, as professional men, personally believe that a more substantial allowance should be made.

We are entirely in accord with the policy of balancing the Federal Budget but we can not subscribe to changes in the law and provisions which we believe violate the fundamental principles of income taxation which have been developed over a period of many years.

We believe that there is a limit to the revenue which income taxes can produce and, if rates are arbitrarily increased and unsound and unscientific provisions enacted, that there will not be a material increase in revenue but that in many cases these provisions will have the effect of seriously handicapping business operations with a resulting loss in income tax revenue.

Respectfully submitted.

WILLIAM R. MAIN,
LEON E. WILLIAMS,
HENRY B. FERNALD, *Chairman.*

Federal Legislation Committee American Institute of Accountants.

APRIL 20, 1932.

ESTATE TAXES

LETTER FROM FRANKLIN W. JOHNSON

UNITED STATES SENATE, *April 7, 1932.*

Hon. REED SMOOT,
Chairman Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SENATOR SMOOT: I inclose a letter which I have received from President Johnson of Colby College, Waterville, Me., in regard to section 807 of the revenue bill. I wish you would have the committee look into the matter carefully and see if there is merit in his contention.

Sincerely yours,

FREDERICK HALE.

COLBY COLLEGE,
Waterville, Me., April 4, 1932.

Hon. FREDERICK HALE,
United States Senate, Washington, D. C.

MY DEAR SENATOR HALE: My attention has been called to section 807 of the revenue bill (H. R. 10236) reading as follows:

"Section 303 (a) (3) and 303 (b) (3) of the revenue act of 1926 are amended by inserting after the first sentence of each a new sentence to read as follows:

" 'If the tax imposed by section 301, or any estate, succession, legacy, or inheritance taxes, are, either by the terms of the will, by the law of the jurisdiction under which the estate is administered, or by the law of the jurisdiction imposing the particular tax, payable in whole or in part out of the bequests, legacies, or devises otherwise deductible under this paragraph, then the amount deductible under this paragraph shall be the amount of such bequests, legacies, or devises reduced by the amount of such taxes.' "

A highly qualified legal expert has said that in a concrete instance the bill will operate in the following manner:

"Suppose a will contains but two bequests, a gift of $500,000 to the testator's widow and a gift of the residue of the estate to your college. Suppose after payment of debts, the estate consists of $750,000. Were no taxes payable, the gift to your college would be $250,000. Under the law as it now reads, this amount is deductible from the gross estate as a gift to charity, leaving a taxable net estate of $500,000. If the tax rate on an estate of this size is 10 per cent, there is payable a tax of $50,000. Now, unless the will otherwise directs, the estate tax is payable out of the residuary bequest. Consequently here the executors, having $750,000 in their hands, will pay $500,000 to the widow, $50,000 to the Federal Government, and the residue ($200,000) to your college. Thus, notwithstanding the fact that only the net estate is taxed and that the gift to your college was deducted from the gross estate in ascertaining the net estate, the gift to your college has been reduced by reason of the fact that taxes are payable on the estate.

"The proposed change in the law makes deductible from the gross estate as a gift to charity the sum which the charity will actually get after the payment of taxes rather than the larger sum which the charity would get were there no taxes payable. To compute this amount in the case put above would require the use of a very complicated formula. At any rate it is clear that with a smaller deduction, the net estate will be larger; this will mean a larger tax; the tax being payable out of the residuary bequest, the final result is that your college will get less than it would get under the present law. In the above case, the tax under the proposed statute would be more than $55,000, so that your college would get less than $195,000.

"There are many situations other than that which I have used as an illustration (a residuary bequest to charity with the Federal estate tax payable out of it) where inheritance taxes (State or Federal) are payable out of a gift to charity

with a consequent reduction of the amount payable to the charity below that which would have been payable had no taxes been imposed. The proposed amendment to the Federal estate tax law is phrased broadly enough to cover all of these situations and would make the reduction greater in each case."

With full understanding of the difficulty which confronts Congress in securing a balanced Budget, I wish to express the hope that this may be done without enacting laws which will tend to diminish the support of our colleges. I will appreciate anything that you may do to prevent this.

Yours very truly,

FRANKLIN W. JOHNSON.

STATEMENT OF HENRY P. VELTE, NO. 43 CEDAR STREET, NEW YORK CITY

Mr. VELTE. Gentlemen of the committee, I appear before the committee with reference to section 811, in regard to the revaluation of estates.

Senator REED. Section 811?

Mr. VELTE. Yes, sir.

Senator HARRISON. Page 298 of our print.

Mr. VELTE. Now this section provides in the case of the death of a decedent who died on or after September 1, 1928, and before January 1, 1932, that at the election of the executor of any estate affected, he may petition the Commissioner of Internal Revenue. I take it it means to have the value of the estate revalued, to take effect as of the period of 18 months from the date of the death of the decedent.

This section is very broad, but I do not think it is broad enough to cover a particular case which I have in mind.

I represented the estate of Lysander W. Lawrence, and we filed our tax return and the estate was assessed at a valuation of something like $4,500,000.

Senator REED. You were counsel for the estate?

Mr. VELTE. Yes, sir.

Senator CONNALLY. When did he die?

Mr. VELTE. He died July 18, 1929.

Subsequently, after filing our return a compromise was effected with the Commissioner of Internal Revenue by which there was a reduction along the whole line of securities, of about 10 per cent, and we were then asked to enter into an agreement with the Commissioner of Internal Revenue, in writing, in which it was stated—

that said taxpayer and said Commissioner of Internal Revenue hereby mutually agree that the said tax of said $——— shall be final and conclusive.

Under this present section as proposed, we might be barred from taking advantage of this new law, and not be able to go before the Commissioner of Internal Revenue and have our securities revalued.

Senator SHORTRIDGE. You did enter into that agreement, did you?

Mr. VELTE. We entered into that agreement, yes; at that time under the assumption that the law which was then in effect and is now in effect would remain that way. Had we had any inkling of Congress forbidding us at some subsequent date to revalue our securities, we certainly should not have entered into any compromise; and if the present section is enacted into law as it is proposed here, why, we will probably be barred and suffer a penalty, whereas other people who have not paid their taxes and simply waited, or else paid their taxes and had

some provision in the receipt that they paid it under protest, will be able to have a revaluation.

What I come down here for is to ask if the committee in its good judgment would insert some provision in this section 811 permitting those estates which have compromised the amount of taxes to nevertheless come in with the others and have a revaluation made.

Senator HARRISON. What about those estates that have not compromised it, but have paid the taxes?

Mr. VELTE. I assume under this present section they would be able to come in anyway.

Senator HARRISON. It is only in those cases where you have entered into a complete understanding with the commissioner that you think you would be left out?

Mr. VELTE. Yes; but that complete understanding was based on the law being on the statute books at that time.

Senator CONNALLY. Well, have you figured as to whether or not under this 60 per cent clause here, you would be benefited by the new provision? You got a reduction of how much?

Mr. VELTE. About 10 per cent.

Senator CONNALLY. About 10 per cent?

Mr. VELTE. Yes, sir. But I have not figured what it would be under this clause.

Senator REED. You are exactly in the same position as the man who settles his taxes, either by agreement or under protest, and then the Supreme Court comew along a week or two later and decides that his liability is not a liability.

Mr. VELTE. Yes; but if you please, we settled this thing on the theory that this law would not be changed or made retroactive.

Senator REED. Surely.

Mr. VELTE. Now bringing in a new law——

Senator REED (interposing). You are like all the people who have settled their taxes and then discovered, under a ruling of the Supreme Court, that they need not have paid so much. It is the same thing, is it not?

Mr. VELTE. I do not think so.

Senator REED. The subsequent law has changed by this happening. Now should we allow all the people who have paid before the decision of the court to get the benefit of the decision to which they were not parties?

Mr. VELTE. I know, but, on the other hand, if we went forward and paid our taxes, even though there was no agreement, why, should those who paid the taxes be permitted to come in, and those who unfortunately made an agreement with the Commissioner of Internal Revenue be barred?

Senator REED. Yes, but suppose subsequent events had happened to increase the taxes that had not been paid, you would certainly assert your compromise and say the Government could not make any further claim on you.

Senator SHORTRIDGE. Could he?

Senator REED. Surely.

Senator SHORTRIDGE. Could he rely on the agreement with the Government?

Mr. VELTE. I think we could.

Senator SHORTRIDGE. I am asking the question.

Senator REED. In other words, the settlement is binding on the Government, but not on you if we afterwards change the law so that it would benefit you.

Tell me, Mr. Velte, how much tax did you pay?

Mr. VELTE. We paid three hundred and forty thousand odd dollars. I have a copy of the compromise agreement here.

Senator REED. That is close enough. Has distribution been made of the remaining assets of the estate?

Mr. VELTE. It is a trust estate. We have not distributed the remaining assets.

Senator REED. The trustee was an executor?

Mr. VELTE. Yes, sir.

Senator REED. What was the value of the residue of the estate at the time it was turned over to the trustee?

Mr. VELTE. At the death——

Senator REED (interposing). No; at the time of the distribution of it.

Mr. VELTE. Well, the trustees immediately went into possession of the assets jointly with the executors. There has not been any actual physical transfer from the executors over to the trustees, because, as I said before, it is a trust estate, and the executors and trustees are bound to hold the assets of the estate until a certain party arrives at a certain age.

Senator REED. The executors are the trustees?

Mr. VELTE. Yes, sir.

Senator REED. What is the present value of the estate?

Mr. VELTE. The present value of the estate is about, roughly, $1,500,000.

Senator REED. Roughly, you have paid a tax of 16 or 17 per cent?

Mr. VELTE. More than that.

Senator SHORTRIDGE. As of the time of the death?

Mr. VELTE. Yes.

Senator SHORTRIDGE. The estate was valued at what?

Mr. VELTE. About $4,100,000.

Senator SHORTRIDGE. But by your compromise you reduced it to what?

Mr. VELTE. About 10 per cent, in round figures.

Senator CONNALLY. You realize, of course, that this bill will increase the tax on the estates of people who die after its enactment and probably tax them more heavily than you have already paid.

Mr. VELTE. That might be, but I claim we should be put in the same position as any other estates that have either paid their taxes or have not paid them. It would be in the nature of a penalty for us to have to suffer, thinking at the time we made the compromise that that law would remain in effect. Of course, at that time I raised the question, and I was told there would not be any change in the law, and we did not have to put in any clause which would protect us, therefore, I move for a revaluation, because they assured us practically, that there would not be any change in the law.

Senator SHORTRIDGE. How would you be affected by this proposed change in the law?

Senator REED. He would not be affected; he wants to be affected.

Mr. VELTE. We might be affected this way: That the law as it is proposed now would reduce the value of our estate beyond the amount at which we compromised.

Senator SHORTRIDGE. I thought you said you might rely on the compromise with the Government to prevent that. I understood you to say—I do not want to argue the matter—but I understood you to say that you might rely upon this agreement entered into with the Government.

Senator REED. He did rely on it, but now he wants us to open it up and let him have the benefit of this further reduction.

I think we have got your point, Mr. Velte.

Senator SHORTRIDGE. Have you got it in short form there?

Mr. VELTE. Yes, sir.

Senator SHORTRIDGE. You might file that for the record.

Senator HARRISON. It is your opinion, then, that if the law can not be changed to meet your case, that the whole thing should be stricken out?

Mr. VELTE. No, sir; I do not claim that, but I think we should have as much right as those people who have not paid their tax, or have paid it.

Senator HARRISON. I think there is a good deal of point in what you say.

Senator SHORTRIDGE. Yes.

Senator REED. We are not deciding it now.

If you have a brief, you may leave it with the shorthand reporter for the record.

Mr. VELTE. Thank you.

(The brief filed by Mr. Velte is printed in full, as follows:)

MEMORANDUM OF HENRY P. VELTE, OF NEW YORK CITY, IN REFERENCE TO SECTION 811, REVALUATION OF DEPRECIATED ESTATES—RETROACTIVE

Annexed is a copy of the proposed section 811 in regard to the revaluation of depreciated estates. This section is expressly made retroactive. This section refers to the estates of decedents who died on or after September 1, 1928, and prior to January 1, 1932, and gives to the executor the election to have the gross estate and the net estate computed based upon values as of the dates of 18 months after the decedent's death. It further provides that such election is to be exercised by the filing of a statement under oath "which shall set forth all the necessary information and shall be filed not later than one year after the date of the enactment of the revenue act of 1932." It is to be noted that the section is very general and it might be argued that it applies likewise to estates where a compromise was entered into between the representative of the estate and the Commissioner of Internal Revenue. However, this undoubtedly is not the intention of the legislators, since a compromise agreement signed both by the estate and the Commissioner of Internal Revenue provides "that said taxpayer and said Commissioner of Internal Revenue hereby mutually agree that the said tax of $——— * * * shall be final and conclusive * * *." Therefore in order that estates in which a compromise agreement has been signed may benefit by this proposed section 811 a specific reference should be made to such estates in this section.

That estates in which a compromise agreement was signed should also be entitled to the benefit of this revaluation is undisputable. The representative of such an estate entered into an agreement of compromise having only before him the law as it then existed and only by reason of that law did he enter into the compromise agreement fixing the valuation of the securities. To now prevent him from receiving the benefit of the provisions of the new section would be decidedly unjust and would constitute preferring those estates where no compromise had been attempted or effected. Certainly the Senate should not countenance the enactment of the section as now drawn.

STATEMENT OF PAUL B. BARRINGER, NEW YORK CITY

Senator REED (presiding). Your name and address first, Mr. Barringer?

Mr. BARRINGER. Paul B. Barringer, jr., 15 Broad Street, New York.

I would like to speak, gentlemen, on behalf of the same amendment as the gentleman who has last spoken.

We represent the estate of the late John F. Archbold, of New York, who died on January 5, 1930, and in the regular course, after audit, and so forth, we signed a closing agreement with the Federal Government, I think, in November last.

Senator REED. How much reduction did you effect under the value at the date of the death?

Mr. BARRINGER. The maximum difference between our figures and our return and what the Government had ever at any time asked for, I think was less than 4 per cent. The adjusted figures, as I have figured it roughly—I was just doing it while you were talking here—was 2 per cent. In other words, the adjustment was approximately 2 per cent.

Senator REED. That is, the value of the estate was 2 per cent less, or the tax was 2-per cent less?

Mr. BARRINGER. The value of the estate was approximately 2 per cent less.

Senator REED. How much tax did you pay?

Mr. BARRINGER. We paid slightly over $2,000,000.

Senator REED. What is the present value of the revenue of the estate?

Mr. BARRINGER. The present value of the revenue of the estate, down to the last figures I have, were from February 29, Senator Reed, and they are much off to-day.

Senator REED. We have noticed that.

Mr. BARRINGER. The gross estate at the date of death was $15,000,000, and the value as of February 29 was $4,500,000.

Senator CONNALLY. Had you distributed any of it?

Mr. BARRINGER. We sold and transferred—I am glad you brought that to my attention, sir. The gross value of the estate was $15,000,000. We have sold and transferred $1,800,000, so we have not checked up the value to date on that. The value of what we have sold and transferred and the value on hand to-day is $6,600,000. And the stocks that are now on hand, which comprised the bulk of the estate, their value at time of death was $13,200,000, and that value to-day is $4,500,000. On the stocks we have a depreciation of 65.28 per cent.

Senator REED. So that the tax that you paid represents slightly less than 25 per cent, based on present values, or values at February 29.

Mr. BARRINGER. No, sir; our values on February 29—what we have on hand is $4,500,000, and we paid upward of $2,000,000, or nearly 50 per cent.

Senator REED. Oh, yes; but you transferred $1,800,000.

Mr. BARRINGER. We transferred $1,800,000, and what we realize on is $6,600,000.

Senator REED. Now add to that your tax, and that is $8,600,000.

Mr. BARRINGER. Oh, no, sir; that is not after deducting the tax.

Senator REED. The $6,600,000 is before deducting the tax, you say?

Mr. BARRINGER. Yes, sir.
Senator REED. So that you paid $2,000,000 out of $6,600,000.
Mr. BARRINGER. Yes, sir.
Senator REED. Is that a correct statement?
Mr. BARRINGER. Yes, sir.
Senator REED. That makes your tax around 30 per cent.
Mr. BARRINGER. 30 per cent—the tax would be around 35 per cent, or thirty-odd per cent.
Senator REED. And yet if Mr. Archbold were to die after the passage of this act, the tax would be even higher on an estate of $6,600,000.
Mr. BARRINGER. I was under the impression that we paid more than we would pay on to-day's taxes.
Senator CONNALLY. Senator Reed, I was going to suggest, would this gentleman be willing that this reappraisement come under the terms of this bill?
Mr. BARRINGER. I think we would.
Senator CONNALLY. I think that would be fair; if they are willing to take the rates in this bill, we are willing to give them the shrinkage.
Mr. BARRINGER. I think our taxes would be less.
Senator REED. You would pay about $700,000 on the rates stated in the House bill.
Mr. BARRINGER. That is on the gross estate?
Senator REED. On the net estate of $6,600,000.
Mr. BARRINGER. Of course, you realize that a good many of those are stocks that have sold—of course, we can not complain—but stock that were turned over at a much higher price than they are to-day.
Senator REED. Surely, you do not want us to compensate you for anybody else's loss?
Mr. BARRINGER. No; I do not.
Senator SHORTRIDGE. Well, what is your point?
Mr. BARRINGER. Well, we are requesting that this law be amended to include in the provisions of this section estates which have settled their liability under a closing agreement under the 1928 act.
Senator REED. It seems to me your case is a harder one than that which Mr. Velte has given us. With his agreement he seems to have gotten 10 per cent left off. You seem to have gotten less.
Mr. BARRINGER. I am perfectly frank to state that the settlement was not——
Senator REED (interposing). Like most of us, you settled to get rid of the wretched thing.
Mr. BARRINGER. We settled to get rid of the thing, and not have the Government change its mind, and then have the Board of Tax Appeals upset the whole thing.
Senator REED. I have been through it several times myself.
Senator SHORTRIDGE. This proposed law would upset, so to speak, or disturb the agreement you entered into; is that right?
Mr. BARRINGER. Well, we would be perfectly willing to reopen it, so far as we are concerned. All we would ask is that the same remedy, which was not in the contemplation of anybody at the time we entered into the agreement, that this same relief be applied to our case for revaluation. In other words, when we go into the Court of Claims for a refund, that we would not be met with the plea of a closing agreement which, in one case, has been held to bar you where the statute was held unconstitutional.

Senator HARRISON. I was just noticing the rates in the House bill which is now before us. You would pay around $7,000,000. You would not have enough to pay it with under these deflated stock market prices, if the bill that is now before us were passed. If Mr. Archbold had died after the passage of this act, you would pay around $7,000,000.

Mr. BARRINGER. I dare say, based on the values at the time of his death there would not be enough to pay it.

Senator REED. Thank you, Mr. Barringer. I think we have your point. If you have a brief we would be glad to have you put it into the record.

Mr. BARRINGER. Yes, I will.

(The brief filed by Mr. Barringer is as follows:)

MEMORANDUM WITH RESPECT TO AMENDMENT OF SECTION 811 OF THE REVENUE ACT OF 1932. (H. R. 10236.)

To the Finance Committee of the United States Senate:

The undersigned, on behalf of an estate which will be adversely affected by the bill as at present drawn, respectfully urge that section 811 of the revenue act of 1932 as passed by the House of Representatives providing for the revaluation of depreciated estates be amended so that it will include within the relief afforded by that section the estates of decedents (otherwise entitled to relief) which have settled their tax liability prior to the passage of the act by the execution of a closing agreement under section 606 of the revenue act of 1928.

General purposes of the proposed statute: Section 811 of the proposed act is remedial in its nature and its general purposes are highly to be commended. The position in which the estates of decedents who have died within the past three years find themselves due to the terrific decline of all values in this period is one which calls for legislative relief if a taxing statute is not to be made a means of of wholesale confiscation. The executors of such estates have been placed in a most difficult position. In many cases, almost before their appointment had been confirmed the market values of the securities comprising the estate had declined to a point where it was almost impossible to raise money to meet the Federal taxes which were due and payable within one year after the death of the decedent. Where realization was possible, the decline in values were so utterly unprecedented that few people believed that they could be permanent, and executors were inclined to postpone the sacrificing of securities until payment was actually due. If they sold securities to provide for the payment of the tax at the time it was due meant, in many cases, the practical destruction of the entire estate, a step which any executor would hesitate to take. If, on the other hand, believing that the decline in values was not permanent, they borrowed money for the payment of the tax, the subsequent decline invalues has caused even greater financial embarrassment. We heartily indorse the general purpose of this section, and nothing in this memorandum is intended to detract from the desirability and necessity of the relief which it affords.

Section 811 as drawn applies only to pending cases: The section as drawn, however, seems to apply only to pending cases and does not seem to include within the relief afforded by its terms the estates of decedents who died within the period covered by the section which have settled their tax liability by so-called closing agreements entered into pursuant to section 606 of the revenue act of 1928.

The portion of section 811 with which we are here concerned reads as follows:

"SEC. 326 (a). In the case of the estate of a decedent who died on or after September 1, 1928, and prior to January 1, 1932, and at the election of the executor, the value of the gross estate and of the net estate shall be computed based upon values as of a date eighteen months after the decedent's death (hereinafter referred to as 'subsequent value'), and the tax to be paid under this title shall bear the same ratio to a tax computed without reference to this section as the subsequent value of the net estate bears to the value of the net estate computed as of the date of the decedent's death, but in no case shall the tax be less than 60 per centum of the tax computed without reference to this section. Such election shall be exercised by the filing of a statement under oath which shall set forth all the necessary information, and shall be filed not later than one year

after the date of the enactment of the revenue act of 1932. Any amount of tax refundable by reason of this section shall be refunded where such statement is filed within the prescribed time, but the amount refunded shall be without interest."

The language of this section is plain and unequivocal and contains no exceptions and it might well be argued that under it the estates of all decedents who died within the period covered by the act should be entitled to relief afforded by this section regardless of whether their cases were still pending or whether they had settled their tax liability pursuant to a closing agreement or otherwise. Were it not for the statement of the Ways and Means Committee upon the subject we might be inclined to rest upon this assumption. The Ways and Means Committee, however, in their report to the House of Representatives made the following statement with respect to this section:

"The relief afforded by this amendment is confined to pending cases by which is meant that it is not available to estates where the liability thereof for Federal estate tax has been finally fixed by a compromise agreement or by one made pursuant to the provisions of section 606 of the revenue act of 1928."

This statement leaves no doubt as to the intention of the committee which originally framed this section, and in view of it we believe that an amendment is necessary in order to bring such estates within the relief afforded by this section.

Effect of section: The effect of such a construction is to work a grave discrimination between the estates of decedents who died within the period covered by the act which is based upon purely artificial distinctions and to discriminate against estates which have settled their tax liability by the most expeditious method possible and have paid their tax without a controversy in favor of estates which are still in process of settlement either because the decedent died at a later date or because settlement has been prolonged by litigation or other dilatory tactics. In the ordinary course of events the estates of decedents who died during 1928 and 1929 would be wound up and the tax paid by the present time. It is only in cases where an appeal was taken due to some controversy having arisen that the cases would still be pending. The law in existence during all of this time was plain and unequivocal and required that the tax be based upon valuations at the time of the decedent's death. Certainly the taxpayer who made a settlement and paid his tax upon the basis of the existing law, without controversy, should not be prejudiced with respect to this relief.

Nature of closing agreement: A closing agreement is an expeditious method by which the tax liability of an estate can be fixed so that the taxpayer may know his liability and the Government may be paid its tax promptly. The use of such agreement is distinctly encouraged by the department as it makes for expedition and certainty in the payment of taxes. By the terms of the statute such an agreement can not be set aside except for fraud or misrepresentation, and it has even been held that a closing agreement would bar a claim for refund by the taxpayer where the law under which the tax was paid should subsequently be held to be unconstitutional, the court stating that the taxpayer should look to Congress for his relief. (Bankers Reserve Life Insurance Co. v. United States, 42 Fed. (2d) 313.)

We appreciate that a closing agreement is supposed to effect a final settlement of all questions entering into the amount of the estate tax in a given case and such settlements should not be lightly disturbed. Such an agreement, however, is of necessity entered into by both parties having in mind the statute dealing with the basis of valuation. A change of the entire basis of valuation and theory of taxation such as is permitted under the proposed section 811 can not be said to have been within the contemplation of the parties at the time such an agreement was entered into and this section being remedial in its nature we respectfully urge that to exclude such estates from the benefits of its provisions simply because their cases have been settled would be to defeat its evident purpose.

The only objections which could be urged to giving such cases the benefit of the statute would be that a closing agreement is presumed to be in the nature of a compromise in which both parties have made concessions and received benefits and that the taxpayer should not be heard to reopen such a settlement in which he doubtless received benefits. To this it can be replied, in the first place, closing agreements are not necessarily compromises. They are frequently entered into simply to give finality to a settlement in which there were no disputed questions and, on the part of the taxpayer, to prevent the reopening of the whole case due to subsequent changes of rulings on the part of the department such as occur only too frequently. Secondly, if this agreement was in the nature of a compromise

it was entered into in the light of the existing statute with respect to the method of valuation and the proposed amendment completely changes the whole basis of such understanding.

While there has been general discussion during the past year with reference to proposed legislation for the relief of depreciated estates, the taxpaying public and the members of the bar generally had no information as to the details of such relief and it was generally assumed that any such relief would necessarily apply without discrimination to the estates of all decedents who died within the period in which the extraordinary conditions existed which called for legislative relief. The reliance on the part of the taxpayers and their attorneys that such relief, if granted, would apply to all estates equally and that the settlement of their tax liability would not prejudice them with respect to any such relief, if granted, was, no doubt, one of the factors which led them to execute such closing agreements.

A situation has recently come to our attention which emphasizes the discrimination which will result under the statute as passed. In the case of the estate with which we are principally concerned a closing agreement was executed by the taxpayer on November 13, 1931. It was forwarded to Washington and was executed by the Commissioner of Internal Revenue and was approved by the Acting Secretary of the Treasury on February 1, 1932, at which time the proposed legislation was no doubt under discussion by the committee of the House of Representatives. We are now informed by the Commissioner of Internal Revenue that he is powerless to open this settlement agreement so as to grant the relief to the taxpayer under the proposed legislation. Another case has recently come to our attention of the estate of a decedent who died shortly after the decedent with whom we are concerned. In this case a settlement was arrived at between the executor and the Treasury Department with respect to the estate taxes and a closing agreement was executed by the executor of that estate on February 15, 1932. The agreement was in the hands of the commissioner when the present bill was passed by the House. We understand that the commissioner, without any request on the part of the taxpayer, has returned the original closing agreement to the taxpayer unsigned with a new form of agreement, which he has requested the taxpayer to execute, in which a clause has been inserted reserving to the taxpayer the benefit of the relief granted under Section 811.,

In both of these cases the department and the taxpayer had arrived at a settlement of all outstanding questions concerning the estate under the law as it then stood. In both cases the taxpayer had executed and forwarded to Washington a formal closing agreement containing no reservation with respect to any amendment to the law. In the one case the commissioner and acting secretary in the ordinary course had affixed their signatures; in the other they had not done so, when the new legislation came under consideration. Certainly both of these cases are equally entitled to relief.

It must not be overlooked that the effect of this law, as now proposed, works an inequity and hardship on those who have signed closing agreements, not only with respect to their Federal taxes but with respect to their State taxes, for the reason that the States ordinarily settle their taxes on the basis of the settlement of the Federal estate taxes. From this it follows that, where a closing agreement is entered into and the Federal tax paid on the basis of it, it is impossible to get any readjustment of the State taxes.

Recommendations: We recommend the following amendment, which we believe will afford the relief which we are seeking:

Section 811, in paragraph 326 (a), on the twelfth line of page 279, after the words "prescribed time," insert "although a closing agreement may previously have been entered into fixing the amount of such tax pursuant to section 606 of the revenue act of 1928."

As an alternative to the above amendment, add at the end of section 326 (a) the following sentence:

"A taxpayer shall be entitled to the benefits of this section and to the refund of any estate tax paid in excess of the tax as determined under this section although a closing agreement may previously have been entered into fixing the amount of such tax pursuant to section 606 of the revenue act of 1928."

Respectfully submitted.

JACKSON, FULLER, NASH & BROPHY,
Attorneys for Taxpayer.
PAUL B. BARRING, JR., *of Counsel.*

LETTER FROM RUSSELL L. BRADFORD

NEW YORK, *April 9, 1932.*

Hon. REED SMOOT,
Senate Office Building, Washington, D. C.

DEAR SENATOR SMOOT: I have given some consideration to the revenue bill of 1932 (H. R. 10236). The following observations concerning the bill, I think, deserve and merit the consideration of your committee and of the Senate.

Section 811 of the bill having to do with the revaluation of depreciated assets limits the relief, as indicated by the report of the chairman of the Ways and Means Committee, to those estates that have not paid the tax or attempted to settle with the United States Government. But those estates that did pay the tax and undertook to settle with the Government under the provisions of section 606 of the revenue act of 1928 are penalized for their prompt cooperation with the Government. If the act is to apply to estates of decedents dying after September 1, 1928, and prior to January 1, 1932, in fairness it seems to me the remedial benefits should be applied to all estates whether they have agreeably settled with the Government or have opposed and fought the Government.

Section 802 of the bill amending section 301 (b) of the revenue act of 1926 extends the period for actually paying to the several States inheritance, legacy or other death taxes, and claiming the credit for the payment of such taxes against the Federal estate tax to a period of four years, instead of three years, as provided in the act of 1926; and extends the time similarly for making refund claims in respect of such credits. However, it specifically excepts from this extension those estates in which the overpayment was made prior to the enactment of the act of 1932. Again, why should the Congress undertake to go out of its way to penalize those estates that have cooperated with the Government and paid the tax, and favor those estates that have not paid the tax?

If the extension of one year to make claims for refund is to be granted in respect of decedents dying after the revenue act of 1926, then it should be appropriate to extend the period another year in respect of refund claims under the revenue act of 1924. Under the 1924 act there was no time limit in respect of the payment of State taxes and the claiming of the credit. On the other hand, a claim for refund based upon such credit could not be made after a period of four years from the date of payment of the Federal estate tax. If the time limit is extended under the 1926 act one year it also should be extended a year under the 1924 act.

I am doubtful whether any limit at all should be placed upon the claiming of such credit and the filing of claims for refund in respect of such credit. The purposes of the Congress in the enactment of the 1924 act, as well as the 1926 act, was to collect only that portion of the full tax as calculable under either of the two laws not paid to a State within the limits of the credits. If because of litigation or for other reasons an estate was not able to pay the tax within 3 years or 4 years or 5 years, but eventually did pay the tax to the States, the purpose of the Congress would be served if proofs of such payment could be made at any time, and a refund of the taxes held by the Government should be made regardless of the times. (Of course, this refund should be made without interest where any unusual time was taken in the payment of the State taxes.) It seems to me harsh and unjust that an estate, because it has been forced into litigation (or for any other substantial reason) should lose the benefit of the credit, while an estate the cost of administration of which has been quite small would be the favored taxpayer. This would be doubly harsh as the cost of litigation, plus the necessary doubling of the tax to the extent of 25 per cent or 80 per cent, as the case may be (whether under the 1924 act or the 1926 act), would seem to be a more severe penalty on such an estate than it ought to be made to bear.

Certainly the minimum limit in which claims for refund could be made in respect of credit for the payment of State taxes ought to be six years. Hardship, I have understood, because of the limitation has been worked upon several estates. I represent an estate in which the State taxes were paid prior to the rendition of the Federal estate tax return, and claim for the credit was made in and by the Federal estate tax return. The formal proofs of such payment, as required by the technical rules of the commissioner, however, had not been submitted. A formal claim for refund was subsequently filed, but the commissioner has claimed it was filed more than four years after the payment of the tax. This case is now pending in the courts (1) as to the issue of fact of whether the claim for refund was timely filed; and (2) whether or not the commissioner and the Government were on notice that the State taxes had been paid and the

credit claimed before the filing of the formal claim for refund; and (3) whether or not the informal claim for refund should not have been honored by the commissioner; and (4) whether or not the statute of limitations did not begin to run after the final payment. The injustice in this case is striking. The tax was duly paid to the Federal Government. In the return the claim for credit for the payment of State taxes was made. The Government refused to allow the credit until the proofs were filed. There was no time limit under the 1924 statute for the filing of proofs. The Government was on notice that claim had been made for these taxes and that these taxes had been paid and credit was to be taken therefor, and yet the mere filing of a formal claim for refund more than four years after the payment of the Federal tax (assuming the Government's contention of fact be correct) bars this estate and taxpayer from recovering a sum of money that ought never to have been collected by the Government and, in good conscience, ought not now to be held by the Government.

If the purpose of the Federal estate tax law, as enacted in the 1924 act and again in the 1926 act, was that it should receive as death taxes only the sum of money indicated by the death rates less the credits for taxes paid the states and claimed as such credits, then in fairness there should be no limitation upon the recovery of this money. Certainly, the limitation ought not to be a period of 3 years, 4 years or even 5 years. I say this because in many large estates not only may there be a great deal of litigation, but if the will be at all complicated and contain provisions for the setting up of trusts and future estates, the necessary state proceedings may take many more than 3, 4 or 5 years. Of course, in small estates this may be done with a great deal of rapidity but in small estates (that is those under $100,000, under the proposed bill $50,000), the Federal Government does not impose any tax at all.

I take the liberty of suggesting that under the 1924 act and the 1926 act, so far as claims for refund of taxes paid to the Federal Government based upon credits by reason of the payment of death duties to the several States are concerned, the minimum limitation upon such claims for refund should be six years from the payment of the Federal tax. Personally, I lean to the view that the period should be at least 10 years (if there be any limitation at all), the period indicated in the 1928 act and the present bill in respect of the lien upon the transfer of such estates.

Such a provision should apply retrospectively so as not to penalize those estates that have paid the tax the use of which tax the Government has enjoyed, and favor those estates that have not paid the tax and withheld from the Government the use of the money representing the tax.

I very earnestly recommend the serious consideration of this matter and the whole draftsmanship of section 802 of the proposed bill by your committee.

I have given consideration to the gift-tax provisions of the law and had occasion during the pendency of the 1924 act to give consideration to the effect of this class of legislation.

I raise these points for your consideration.

Under the provisions of section 504 (b), of the gifts (except of future interests in property) made to any one person by the donor during the calendar year to the extent of the first $3,000 of such gifts to such person shall not, for the purposes of subsection (a) of section 504 be included in the total amount of such gifts made during such year. But the gifts from the date of the adoption of this statute, throughout the period of its operation, are taxable to the extent that the total of those gifts exceeds $50,000. The statute does not undertake to define gifts nor does the report made by the chairman of the Ways and Means Committee of Congress. I take the liberty of inquiring whether a gift of a man to his wife for the purpose of operating their establishment (or home, as the case may be) is a gift. As an illustration, we will say a member of Congress has an income of $10,000 in addition to the $10,000 compensation from the Government. We will assume that he turns over to his wife yearly the sum of $20,000 for the purpose of operating the establishment or home; $3,000 of this sum, of course, is exempt; $17,000 may not be, and an account must be kept of that sum. After a period of approximately three years $50,000 would be reached and from that time on if the letter of the statute is followed every such gift in excess of $3,000 to the wife or child or anyone else must be reported and a tax thereon paid. This might be peculiarly so in a case where a husband and wife kept joint accounts to the extent that the wife draws upon the joint account. (See p. 28 of the report of the Committee on Ways and Means.)

However, it may be assumed and, no doubt, appropriately, that the statute would not apply to a gift from a man to his wife, for the purpose of conducting the establishment or home. The statute, however, draws no such distinction.

But assuming that the administrative department and the courts would construe the statute as not applicable to such gifts, nevertheless, the following would be the result, and necessarily so: Assume the wife, out of the $20,000 so given to her each year, spent only $10,000 in the operation of the house and that the $20,000 is construed to be not a gift by the husband but an expenditure by his agent, his wife, in his behalf. Nevertheless, the remaining $10,000, if the wife should prove to be a good housewife and had saved the money or invested it for herself and concluded it belonged to her, would come within the gift-tax provisions; $3,000 of such sum would be free from the tax; $7,000 would be subject to the tax or must be applied against the $50,000 exemption. After a period of approximately seven years the $50,000 exemption would be exhausted, but even during the period of seven years (in the illustration given) it would be necessary under any intelligent administration of this law to require of the housewife a strict and accurate account of the money she has expended, because how may the Government in the administration of this law know how much of the $20,000 per year is a gift to the wife and how much is expended for the support of the family, unless a definite detailed account is kept of every expenditure for the benefit of the family?

It may be answered that the husband need not give his wife anything for the payment of the expenses of the household, but pay them himself. Is the revenue of the Government so urgent and exigent that it must change the whole normal course and conduct of the family life in America? Clearly, the Congress does not mean to impose upon every family in the United States that spends more than $3,000 per year in the operation of its household the necessity for keeping a detailed bookkeeping account of such expenditures.

Personally, and I say this without meaning to be critical at all, I think a gift tax based upon cumulated gifts is meretricious in the extreme and is or ought to be foreign to our political economy as well as the genius of our Government. I can conceive of nothing that will so fully prevent and preclude the breaking up of large fortunes as a gift tax of this nature. Few men would dare, under such a statute, to make gifts to their daughters who had married or to their sons who were going into business, or to other relatives who might be in need of money, or to others of any substantial sum. Personally, I very definitely doubt that the amount of Federal-estate tax or income taxes that would be safeguarded to the Government compensates for placing on the statute books a law that in the end has as its result (regardless of what may be its purpose) the building up of large fortunes and the entrenchment of those fortunes in single hands.

I think in this day that the division of fortunes is the desirable thing than by statutory enactment the retention of fortunes should be fostered and encouraged.

I have written at some length but my reason for doing so is that I feel very keenly that the bill should be amended in the respects to which I have above referred so that these serious defects may be corrected to the end of a fair administration of the tax laws of this country. I can see that a gift tax with progressive rates imposed cumulatively may be very harmful. If the Congress wishes to tax gifts either as a preventive of the avoidance of income taxes or of death taxes it could, it seems to me with almost the same effectiveness, impose a tax similar to that imposed under the 1924 act with a specific exemption for the amount of gifts given each year. If, as is suggested, a person would spread his gifts over a period of years and thus always remain in the lower, instead of the higher, brackets, the answer is readily at hand: (1) Reduce the amount of the exemption per year from, say, $50,000 to $25,000 or $20,000 or such other figure as may be thought appropriate, and (2) increase the rate of the gift tax not progressively over years but starting at a higher rate and having progressive rates applicable only to gifts made within the year. Personally, I can not see the force of the desire of Congress by legislative enactment to place a barrier against the distribution of wealth by those who possess it, and the necessary legislative act of building a wall around fortunes that they may be kept intact. This to my mind is bad economy. It would make for a nation of a few rich and many poor. Such a nation is composed of an unhappy people, and the Government that fosters such a policy necessarily will become an unsuccessful Government. The actual backbone of every progressive and sturdy people rests upon no division between the poor and the rich, but upon a class of medium well to do.

The breaking up of large fortunes by excessive or extortionate death taxes (which are in the end nothing more nor less than capital levies, regardless of what name may be applied to them) not only will not bring about social reform in the United States, but will have a tendency seriously adversely to affect the support of business and commercial enterprises in the United States.

Of course, I take it for granted that the excessive Federal estate tax rates as are included in the bill that passed the House and is now before your body may be, in all probability, reduced, but even if not reduced, are intended to be temporary only. Even so, should the few people who may die during the pendency of a high death tax rate alone bear the brunt of furnishing the Government with sufficient revenue to balance its Budget, or should an equitable and reasonable death tax rate be applied over a period so that all may appropriately bear the burden, rather than the few?

I shall take the liberty of sending a copy of this letter to Senator Pat Harrison, to Senator David Reed of Pennsylvania, to Senator Robert Wagner, and Senator Royal S. Copeland, of New York

Again, with my apology for writing at such great length, I am

Yours sincerely,

RUSSELL L. BRADFORD.

STATEMENT OF W. C. HUSHING, NATIONAL LEGISLATIVE REPRESENTATIVE AMERICAN FEDERATION OF LABOR, ON ESTATE TAX

It is the belief of the American Federation of Labor that a just form of taxing great wealth is through the estate tax, as there is no question of the ability to pay. And it can not be denied that in many cases the owners of great fortunes fail during their lifetime to pay their fair proportion of taxes. Because of that it makes the estate tax a fair tax. Besides, it is a direct tax.

In 1906 the American Federation of Labor unanimously declared for "an inheritance tax that would increase with the inheritance." In 1918 it approved the levying of taxes on "War profits and swollen incomes." In 1919 it declared that there should be provided a "progressive increase in taxes upon incomes and inheritances," and in 1921 it demanded "that the Government promptly levy a rapidly progressive tax upon large estates." This was reiterated in 1922.

You have been told by the Secretary of the Treasury that 98 per cent of the population in 1930 paid no Federal income taxes whatever. Nevertheless, the 2 per cent who did pay Federal income taxes had previously passed them on to the 98 per cent in whole or in great part. But the estate tax can not be passed on.

During the war the American Federation of Labor approved of all taxation laws enacted, as the only thought was to win the war no matter what the sacrifice. It has not asked for any reduction of taxes that bear upon those least able to bear them.

Those who favor the repeal of the Federal estate tax insist on the retention of what are termed "nuisance" taxes, otherwise sales or buyers' taxes. The argument is that the estate tax was a war-emergency tax. The "nuisance" taxes also were war-emergency taxes. The estate tax is more easily paid by the few than is the "nuisance" taxes by the many.

Those who accumulate fortunes great enough that their estates pay the Federal tax obtain their wealth through the good will of the whole American public. And good will has been declared by the Supreme Court to be property. If the accumulators of great fortunes have a property right in the patronage of the people it is no more than right that they pay for that good will in an estate tax. Besides, all the forces of government are freely given to the protection of these fortunes both before the death of the owners and after they have been passed on to the heirs.

There is nothing more dangerous to our country than the accumulation of enormous wealth in the hands of a few, and the fact that a steadily decreasing number of persons pay an income tax is an added indication that the wealth of the country is being concentrated in the hands of a few.

Thousands and thousands of homes and farms at present are being sold for nonpayment of taxes and mortgages and this is accelerating greatly to the concentration of wealth just mentioned.

It has been truly said that "none are so blind as those who will not see." In our opinion it is time for the few who are holding the wealth of this country, to see the light and change their attitude toward taxation, as a matter of self-preservation for things can not continue on as they are headed. The estate tax results in its distribution for the benefit of the whole people.

Legacies received by the heirs of great estates have been justly called unearned income, for few of the heirs had anything to do with their accumulation.

Andrew Carnegie became one of the richest men of his time in the United States. He knew where his fortune came from and the reasons for its growth, as evidenced by the following statement made by him:

"Now, who made that growth? The American public—that is where that wealth came from, and that is the partner in every large enterprise where money is made honorably; it is the people of the United States."

He reasoned undoubtedly that the good will of the American public made the people a partner. Why then should not the people demand through an estate tax a squaring of accounts?

Mr. Carnegie also said:

"The growing disposition to tax more and more heavily large estates left at death in a cheering indication of the growth of a salutary change in public opinion Of all forms of taxation this seems the wisest. By taxing estates heavily at death the State marks its condemnation of the selfish millionaire's unworthy life. It is desirable that nations should go much further in this direction. Indeed, it is difficult to set bounds to the share of a rich man's estate which should go at his death to the public through the agency of the State, and by all means such taxes should be graduated, beginning at nothing upon moderate sums to dependents, and increasingly rapidly as the amounts swell."

Who is more entitled to a share of such fortunes than the people who made them possible? Few, if any, of the heirs of these estates had anything to do with their accumulation. It is what might be called a "windfall" for them. Although these legacies came without any effort on their part they are among the persons who are crying for a repeal of the estate tax law as well as the State inheritance taxes.

Dr. Thomas S. Adams, the famous authority on taxation and formerly financial adviser for the United States Government, declared "that if we must tax it is better to tax him who merely receives than him who earns."

It should be the American policy to demand that this tax be levied to prevent in the future the perpetuation and further accumulation of immense fortunes in the hands of those who did little, if anything, to create them.

Theodore Roosevelt in a message to Congress in December, 1907, said:

"A heavy progressive tax upon a very large fortune is in no way such a tax upon thrift and industry as a like tax would be on a small fortune. No advantage comes either to the country as a whole or to the individuals inheriting the money by permitting the transmission in their entirety of the enormous fortunes that would be affected by such a tax."

In his inaugural address in 1909 President Taft declared:

"Should it be impossible to do so by import duties, new kinds of taxation must be adopted, and among these I recommend a graduated inheritance tax as correct in principle and as certain and easy of collection."

On March 23, 1909, Chairman Payne, of the Ways and Means Committee, made this statement on the floor of the House:

"What easier tax to pay than this? A man gets a legacy, a stranger perhaps to the testator, a clear gain to him; why should not he pay a part of that to the support of the Government? * * * It is a fair tax; it is a tax easily collected; and it is a tax that this class of people ought not to hesitate to contribute for the support of the Government and the protection of the law."

One of the most conservative of Republicans was Senator Cullom, of Illinois. In his Fifty Years of Public Service he said:

"An income tax is the fairest of all taxes. It is resorted to by every other nation. It falls most heavily on those who can best afford it. The sentiment in the Republican Party has changed, and I believe that at no far distant day Congress will pass an income tax, as well as an inheritance tax law."

In 1914 the American Federation of Labor presented to both political party conventions a demand for the inclusion of the following plank in their platforms:

"Labor favors graduated income and inheritance taxes and opposes the sales tax as well as all other attempts to place excessive burdens on those least able to bear them."

In a letter to the Iowa Legislature in February, 1927, William Green, who was then chairman of the Ways and Means Committee of the House, stated that the estate tax is a just tax. He added:

"It is a reasonable tax. The exemption is $100,000, and it is very light up to $500,000, and then moderately increasing.

"It is a fair tax, because the great fortunes upon which it is levied have not paid their fair proportion during the lifetime of the owners."

Mr. Green also said:

"It is a tax that is not easily evaded and is the only tax which everybody agrees can not be passed on to those who ought not to bear this burden."

He also referred to the aggressive campaign of various persons to repeal the estate tax by saying:

"The purpose of those who have raised an enormous fund which has been and is now being spent for the repeal of the Federal estate tax, is to repeal all State inheritance taxes, and they admit it."

Organized labor has no quarrel with those who honestly accumulate great wealth, but it does insist by all that if fair and right that at death a just portion of those fortunes should go to the people who helped to accumulate them and to the States to prevent them from growing larger and larger and becoming too dangerous to the welfare of our Republic. The power that could be exercised by their owners might be disastrous.

If the Federal estate tax is abolished it would create extensive competition between the States that do not collect an inheritance tax to induce rich men to locate in them. It would encourage States with inheritance tax laws to repeal them for the same purpose for self-protection.

Organizations have been formed by professional lobbyists to fight all inheritance taxes, and there is no doubt that if the Federal estate tax is repealed their efforts will be continued to repeal all State inheritance taxes, and there is no doubt that if the Federal estate tax is repealed their efforts will be continued to repeal all State inheritance tax laws. On the payment of $10 or more an expectant heir of an estate can be made a member of some of these self-constituted organizations whose organizers make a living on the cupidity of the selfish overly rich. Through misrepresentation they have sought to induce the State legislatures to pass resolutions calling upon Congress to eliminate the estate tax. Some have done so while others have refused.

I heard an insurance actuary one day say that more than 80 per cent of the people who died did not leave a dime. Nevertheless, everything they bought while alive went to pay some of the taxes of those who accumulated great fortunes in financial or commercial life. What labor fears is that taxes will be gradually taken off of the well to do and finally placed through a consumption tax upon those least able to bear them. The sales tax—or, rather, the buyers' tax—on the necessaries of life is the most vicious of all methods of taxation.

In 1922 there was quite a campaign to establish the sales tax. At that time Senator Smoot publicly declared:

"While the manufacturers' or sales tax is not embodied in the revenue laws of our country at this session of Congress, it will be in the very near future just as sure as God lives."

The argument in favor of the sales tax that was passed about among Members of Congress at that time was this:

"If you tax the people so they do not know it, they can not object; but if they know they are being taxed they will object."

At that time the owner of a large department store in Washington in a newspaper interview said:

"I am not only in favor of the sales-tax plan for raising funds for the soldiers' bonus, but I would like to see it adopted as a permanent plan for raising Government revenues to replace the present taxation system."

We believe that this plan is being followed: First, stock dividends were declared nontaxable; then excess profits were abolished, and now there is an attack on the estate tax.

We believe that the proposal to retain the "nuisance" taxes is part of the program to eventually bring about the desire of those who advocate the consumption tax on the necessities of life. The effort to repeal the estate tax, a direct tax, and continue the "nuisance" tax, an indirect tax, seems to us to be sufficient proof of this.

Estate taxes should not be considered war measures. They are becoming a permanent tax in many countries and should be continued permanently in the United States. There is no other tax that is more directly levied or is easier to pay.

The statement of the Secretary of the Treasury that less than three-tenths of 1 per cent of our population paid 95.5 per cent of our total income tax should warn us that wealth is getting into fewer and fewer hands. It is also an argument that a portion of those great fortunes should be given back to the people who helped to accumulate them to conduct the affairs of government, which did so much to protect the interest of the owners.

We hear much of prosperity, but apparently this applies only to the 2 per cent who pay income taxes. The more than 119,000,000 other people in the United States must have accumulated very little money to be absolved from paying any income taxes at all.

It might be well to quote another economist of great renown. Dr. Edwin Robert Anderson Seligman, of New York. In a hearing held in 1925 before the Ways and Means Committee of the House, he said:

"If the States keep for themselves the inheritance tax, they can not and will not * * * ever succeed where they have a situation like the one in Florida. You will never succeed, no matter how model a tax law you have; no matter how many hundreds or thousands of reciprocal laws you pass among the States, because unless you get every single one of the States to come in and agree you will not have solved the problem, because you will always have a Botony Bay to which the rich man will of course repair, if he is at all a wise man. Therefore, I say the States themselves can not, will not, and never have in any country abolished those evils of multiple taxation. Secondly, as Congressman Green and others have pointed out, they will not be able to tap to the full the rightful revenues which ought to come in a country like this from inheritance taxation."

The American Federation of Labor insists that the welfare of our Government demands that the estate tax be made a permanent feature of our taxation system

LETTER AND MEMORANDUM OF HON. AMOS L. TAYLOR

APRIL 18, 1932.

Hon. REED SMOOT.
Chairman Senate Committee on Finance,
Washington, D. C.

DEAR SENATOR: I am sending you herewith correspondence which I have received from Hon. Amos L. Taylor, the chairman of the Massachusetts Republican State Committe, which outlines a stiuation which has arisen under the present revenue laws. It would seem to me that there should be legislation to prevent the recurrence of such a case and I shall greatly appreciate any attention your committee may give his letter during its consideration of the tax bill.

With kindest regards, I am

Very sincerely yours,

FREDK. W. DALLINGER.

BOSTON, *April 13, 1932.*

Hon. FREDERICK W. DALLINGER,
Member of Congress, Washington, D. C.

DEAR FRED: I have a matter which is bothering me a good deal in behalf of one of my clients. It is specific and concerns the estate of Edward C. Donnelly, late of Boston, Mass., deceased, the billboard man. The Massachusetts legacy taxes were settled in full and the Federal estate taxes were settled in full after his death. Under the statute the Federal Government allowed the estate, as a reduction from the Federal tax, 80 per cent of the amount of the legacy taxes paid the Commonwealth.

After these matters had been adjusted and the tax questions closed in both the Federal office and the State office, as we supposed, the State tax commissioner's office reopened the matter and assessed an additional tax of $24,041.18. Apparently, there is some basis for this additional tax. We then immediately filed a petition with the Federal department for refund of that amount of money as we would still be within the allowance of 80 per cent under the Federal statute. In other words, this amount should be refunded to the Donelly estate and the Donnelly estate then should pay it to the State.

The Federal estate tax department has given a ruling that they can not allow this refund because the Federal statute provides that a petition for such refund must be made within three years after the tax return has been filed with the Federal department.

In other words, if this ruling stands it will cost the Donnelly estate the full amount of this additional tax, which otherwise should be allowed to the estate and refunded from the Federal Government to pay the additional State tax.

The matter is till pending before the Federal estate tax department and there may be some possible way out of it. Such condition, however, should not arise

and there should be a change in the Federal law making it impossible for such a situation to occur.

I inclose, herewith, a memorandum of the proposed changes. These have already been sent to Mr. Ballantine, Assistant Secretary of the Treasury, and some others, and should be carefully considered in the revision of the tax act which is now being considered in the Senate.

Will you kindly see what you can do to bring this about and also to make it retroactive so as to apply to existing cases.

Yours respectfully,

AMOS L. TAYLOR.

MEMORANDUM AS TO ALLOWANCE ON ACCOUNT OF FEDERAL ESTATE TAXES OF 80 PER CENT CREDIT FOR TAXES PAID TO THE STATES

The revenue act of 1926, as amended by the revenue act of 1928, provides in section 301 (b) as follows:

"The tax imposed by this section shall be credited with the amount of any estate, inheritance, legacy, or succession taxes actually paid to any State or Territory or the District of Columbia in respect of any property included in the gross estate. The credit allowed by this subdivision shall not exceed 80 per centum of the tax imposed by this section, and shall include only such taxes as were actually paid and credit therefor claimed within three years after the filing of the return required by section 304."

A taxpayer may file a claim for refund for estate taxes illegally or improperly collected within three years from the date of payment of the tax, and may correct the tax in an action at law in all cases except in the case where the taxpayer has failed to take or has been unable to take within three years from the filing of the return a deduction on account of State inheritance taxes as provided in section 301 above set forth.

The above provision may operate to prevent a taxpayer from getting the benefit of the 80 per cent credit, which, it would seem, the law expressly grants. The period of three years from the date of filing the return may elapse before the amount of the Federal estate tax is finally determined. In such case it is impossible in many States (such as Massachusetts) to determine the amount of the tax to be paid to the State until the Federal tax has been finally adjusted. It would seem improper for the law to tender a credit of 80 per cent with one hand and then to snatch it back with the other because the complete tax liability was not determined within a given period.

The Treasury Department apparently recognizes this hardship and has included in the new law a provision for the evident purpose of correcting the situation. This appears in Senate bill H. R. 10236 which provides in section 802 (c) as follows:

"The tax imposed by subdivision (a) of this section shall be credited with the amount of any estate, inheritance, legacy, or succession taxes actually paid to any State or Territory or the District of Columbia in respect of any property included in the gross estate (———). The credit allowed by this subdivision shall not exceed 80 per centum of the tax imposed by subdivision (a)(———), and shall include only such taxes as were actually paid, and credit therefor claimed within four years after the filing of the return required by section 304, except that

"1. If a petition for redetermination of a deficiency has been filed with the Board of Tax Appeals within the time prescribed in section 308, then within such four-year period or before the expiration of sixty days after the decision of the board becomes final.

"2. If, under subdivision (b) of section 305 or subdivision (i) of section 308, an extension of time has been granted for payment of the tax shown on the return, or of a deficiency, then within such four year period, or before the date of expiration of the period of the extension.

Refund based on the credit may (———) be made if claim therefor is filed within the period above provided, etc."

Section 802 (b) provides as follows:

"If any return required by section 304 of the revenue act of 1926 was filed more than three years before the enactment of this act, the credit for estate, inheritance, legacy or succession taxes shall be determined as if this section had not been enacted."

It is apparent from subsection (b) that the suggested relief is not to be given in any cases where the return was filed more than three years before the enactment

of the 1932 law. Cases arising more than three years before the enactment of this legislation are just as deserving of consideration and relief as those cases arising within said period. It, therefore, seems that subsection (b) should be eliminated from the law.

Subsection (c) provides for relief during a period of four years and thereafter under certain circumstances. The extension from three to four years is, of course, helpful and will give relief in many cases, as will also the additional provisions, but I suggest that all such cases be provided for and that the 4-year period be extended to six years. Such an extension would, I believe, cover most cases. If the law was amended in this manner it would give the relief which is desired, but there must be some better and simpler provision which would cover all cases.

If the law should provide that the period within which the 80 per cent credit could be claimed should coincide with the period within which claim for refund might be filed, both the Government and the taxpayer would be adequately protected. Such a period is not unduly long for the final settlement of taxes, and it gives the taxpayer reasonable time in which to make corrections, not only in values, but also in credits.

The present period of limitation permits the tax to be corrected, if it is in error, by filing a claim for refund within three years from the payment of the tax. I believe that the law should likewise provide for the correction of the tax by granting proper credit for State inheritance taxes if claim therefor is made within the same period.

I have never known the reason for providing a period of limitation from the filing of the return within which credit for inheritance taxes must be claimed, when the limitation period within which other corrections in the tax runs from the payment of the tax. Unless there is some necessity for distinction between these cases with which I am not familiar, I believe that the two periods should coincide.

STATEMENT OF HON. CLYDE L. KING, SECRETARY OF FINANCE, STATE OF PENNSYLVANIA

Mr. KING. Mr. Chairman and gentlemen of the committee, I am here representing the Board of Finance and Revenue of Pennsylvania, and ask for the elimination of the retroactive provision of section 811 of the revenue act now before the Senate. Its enactment would lead to arbitrary class legislation, and it would mean practically bankruptcy at the present time to the Commonwealth of Pennsylvania.

The Board of Finance and Revenue of Pennsylvania is composed of the State treasurer, Hon. Edward Martin; of the auditor general, Hon. Charles A. Waters; of the attorney general, Hon. William A. Schnader; and myself, as head of the department of revenue. This request is put before the Finance Committee of the Senate because of the financial situation that would result. I shall not go over at this time the provisions of this act, as I am sure you all understand it.

Section 811 of the revenue act of 1932, as passed by the House, provides that the executor or administrator of a decedent who died on or after September 1, 1928, and prior to January 1, 1932, may elect to have the estate valued for purposes of the Federal estate tax as of a date 18 months subsequent to the date of death. It is then provided that the amount to be paid as the tax shall be an amount which bears the same ratio to a tax computed without reference to the section as the value 18 months after death bears to the value at the date of death, but in no event is this amount to be less than 60 per cent of a tax computed without reference to the section.

Under the Pennsylvania constitution, as interpreted by the courts, there can be no exemptions and no graduation in inheritance or estate taxes except for a flat rate for direct heirs now fixed at 2 per cent and a flat rate for collateral heirs and charities now fixed at 10 per cent.

Pennsylvania collects taxes from about 35,000 estates per year, whereas the Federal taxes about 7,000 estates per year. Most of the Pennsylvania estates are in amounts less than $100,000. All of the Federal estates are over $100,000 in value.

During the period covered by this proposed section over 100,000 Pennsylvania estates that have already paid inheritance taxes to Pennsylvania can secure no redress whatsoever from this legislation, whereas 7,000 estates taxed under the Federal law, all of them very large, will receive back $40,000,000.

Senator HARRISON. Let me get this straight. You are not addressing yourself to the so-called Ramseyer proposition on the estate tax? The proposition you are addressing yourself to is where we seek to give some relief to estates where at the time of the death of the decedent the values of their securities were high, but the values of which securities have gone down recently?

Mr. KING. Yes.

Senator HARRISON. By opening up the proposition the State of Pennsylvania, having made great collections, they may have to cough up too?

Mr. KING. Yes.

Senator HARRISON. That is your proposition?

Mr. KING. We have two problems before us. First, we now have in the State treasury $12,107,000 of estate taxes already paid which we would be normally expected to refund. In addition there is now around $14,000,000 still to be derived from known estates of Pennsylvania decedents who died during this period, on which the tax has not yet been paid. And to take from Pennsylvania at this time $26,000,000, or anything like $26,000,000, means that we will not be able to pay our subsidies to our common schools, welfare institutions, and so forth, and which can not be maintained unless the State legislature is called in immediate session and new revenue is raised to this amount, which in Pennsylvania we think would be ruinous at this time.

The CHAIRMAN. All right. Proceed, Mr. King.

Mr. KING. This proposed action would reduce the Federal income by $40,000,000. The States will lose another $150,000,000, and Pennsylvania alone stands to lose about $25,000,000.

It seems to this board that if tax legislation is to be retroactive, it should be made uniformly retroactive to all taxpayers throughout all parts of Pennsylvania as in every State in the Union. There are now long lists of farms and homes being advertised for sale by the sheriff because general property taxes can not be paid. This is true not only in Pennsylvania but throughout the country. To relieve all such taxpayers retroactively would be a serious matter to every county, city, and State in the country. To relieve some but not all is a matter of doubtful public policy. The States can not be expected to follow this precedent for retroactive tax legislation set in this provision for Federal estate taxes.

This proposed section presumes to reduce the hardship on the heirs of wealthy decedents who died when securities were high. But this principle has not been recognized by the Federal Government in taxing either the incomes of individuals or corporations, many of whom are still struggling to pay delinquent taxes on incomes earned during the years 1928, 1929, and 1930. This same shrinkage in assets that besets

the rich man's estate has also depleted the capital of many individuals and corporations so that their ability to pay the Federal and State taxes when due now becomes a very heavy burden as compared with their ability to pay the tax when the incomes were being earned.

Since the Federal estate tax is imposed by the Federal Government and not by the States, the same authority that imposes it may unquestionably amend its provisions and provide refunds. Nevertheless there is a serious question whether the Federal Government can compel, or ought to compel, States through such retroactive legislation to reimburse revenues which have already been paid. In the event that the States neglect or refuse to pass legislation conforming to the retroactive clause of this section, the result would be that the estates of those who died within the statutory period on which the tax was paid would find it impossible to recover moneys paid to such States, whereas the estates of those who died during the statutory period but had not not yet paid the tax at the time this revenue bill becomes effective could insist on the benefits of this section. And that represents about $8 out of $10 of all the Federal tax moneys collected.

Pennsylvania alone stands to lose about $25,000,000 in this biennium from this proposed retroactive legislation, for the reasons stated, that $8 out of $10 go to the States.

Senator HARRISON. That is provided that in these cases where agreements have been made and they have been closed they are reopened?

Senator REED. No; not at all.

Mr. KING. Not at all.

Senator REED. We have got $12,000,000 in which probably the State could retain because it was a valid tax when the money was collected. But if we pass this section 811 it means that those estates that have not yet paid up will be able to say, "Well, the Federal tax has been reduced. You get only four-fifths of it." Consequently you lose $14,000,000 of expected revenue.

Mr. KING. In the unpaid estates alone. And then we would be confronted with a number of the States that in the same statutory period have paid, and of course they would come to the legislature and say, "Well, the other folks got it. We want it refunded."

Senator HARRISON. Would that include the Archbold estate?

Senator REED. That is not Pennsylvania. That is New York, I think.

Mr. KING. Prior to the drawing up of the present tax bill Secretary Mellon, and, subsequently, Secretary Mills and their assistants, according to the newspapers, expressed themselves very clearly as to the desirability of not disturbing the quota of estate-tax money now turned over to the States. Their view was stated as being that any additional estate tax should be raised for the Federal Government without curtailing in any way the amount of estate tax at present paid over to the States.

We are not in here in any sense complaining of the additional taxes put on at this time. We feel that it is not our province. But the effect of this retroactive provision is that the States will be denied their fair quota under the past laws.

It may be said that Pennsylvania need not follow the proposed Federal legislation, but Pennsylvania, like some other 16 States at least, has based her inheritance tax law on the Federal estate tax

law. Other States, which have their own inheritance tax legislation, need not follow at least materially the changes made in the Federal legislation. But not so with Pennsylvania and with some of the other States.

In effect our law says that the inheritance-tax returns shall be 2 per cent for direct heirs and 10 per cent for collateral heirs provided that in any given estate the tax is equal to 80 per cent of the Federal estate tax. Hence, if the Federal legislation falls all that part of our act falls. And that is true not only of Pennsylvania but several States in the Union.

Senator REED. How many?

Mr. KING. Certainly to our knowledge 16, and we think more, have legislation by reference. Now in some of the States that do not have legislation by reference, but have their own tax schedule set up, this provision would not be as harmful as it would be to Pennsylvania and some of the other States.

I submit that Pennsylvania, as other States, in common justice ought to give to its small and more heavily burdened taxpayers the same advantage offered to the large estates. This Pennsylvania can not possibly do without a loss of revenue that will be ruinous to many of the essential services of this State.

For these reasons we respectfully urge the members of the Senate to refrain from placing this burden on State treasuries and take this retroactive provision out of the bill.

Senator HARRISON. Let me see your brief. You are going to file it?

Mr. KING. Yes.

Senator REED. It just comes to this, does it not, Doctor King, that section 811 in being generous to these depreciated estates is being generous with State money and not Federal money?

Mr. KING. To the tune of $8 out of every $10.

Senator REED. To the tune of 80 per cent?

Mr. KING. Yes.

Senator REED. Now within the class of cases covered by section 811 in Pennsylvania alone you have collected $12,000,000 of taxes which on the principle of section 811 ought equitably to be refunded?

Mr. KING. Yes. sir.

Senator REED. And you are expecting and there is already due to you $14,000,000 more, which you will never be able to collect if section 811 is passed?

Mr. KING. That is exactly right, sir.

Senator REED. And there are 16 States—fifteen others besides Pennsylvania—that will be similarly affected?

Mr. KING. All of them will be affected, Senator. There will be 16 at least that have legislation by reference and will not be able to collect the sums of money that are involved at all.

Senator REED. When you speak of legislation by reference you mean that they have expressed their tax as being eight-tenths of the Federal tax?

Mr. KING. Yes, sir. That is what Pennsylvania has done.

Senator REED. What are some of those other States that have done that?

Mr. KING. California, Colorado, Delaware, Georgia, Iowa, Kansas, Maine, Maryland, Massachusetts, Michigan, Missouri, Montana,

Nebraska, North Carolina, Ohio, Rhode Island, Tennessee, Vermont, and Virginia are among those that we have checked.

Senator WALSH of Massachusetts. What was the statement, Senator?

Senator REED. He is protesting against section 811, which allows a reduction of tax to these depreciated estates, and he is pointing out that 80 per cent of that reduction will fall upon these states whose names he read.

Mr. KING. It will fall on all of them, Senator, but particularly heavy on these that have legislation by reference.

For instance, New York's law is practically the same as the Federal law, but it is expressed in New York statute and not by reference to legislation.

Senator REED. I see.

Mr. KING. It will cost the States $150,000,000. Of that we are very sure.

Senator REED. Now, if it is going to give real relief to the estates of these people who have died it will have to bring about a reduction of the State taxes?

Mr. KING. Absolutely.

Senator REED. If the States stand pat then this section 811 does not give any substantial relief to those taxpayers?

Mr. KING. To those taxpayers that have already paid. There will be relief only to those taxpayers, to those estates whose decedents died in this period but for which the tax has not yet been paid.

Senator WALSH of Massachusetts. And those who have delayed making payments.

Mr. KING. And those who have delayed making payments, yes.

The CHAIRMAN. And those that have made payments will no doubt ask for refund.

Mr. KING. Those who have made payments will no doubt ask for refund. And Pennsylvania and the other States will be in a mighty uncomfortable position if they refuse.

Senator REED. I think that is very clear. Thank you, Doctor.

Mr. KING. I will file this statement.

The CHAIRMAN. It may be placed in the record at this point.

(Statement presented by Mr. King is here printed in the record in full, as follows:)

STATEMENT IN RE SECTION 811, REVALUATION OF DEPRECIATED ESTATES—REVENUE ACT OF 1932

(By Clyde L. King, Secretary of Revenue of Pennsylvania)

I come to you to-day to ask that the Senate strike out Section 811 of the revenue act now before it, because the effect of that retroactive provision will be of very serious consequence to the revenues flowing into the treasury of Pennsylvania, and because its enactment will lead to arbitrary class legislation in giving to large estates exemptions and privileges which the small estates can not possibly be given at this time either by the Federal Government or by the States.

I come as a committee of one representing the Board of Finance and Revenue of Pennsylvania. This board is composed of the State treasurer, Hon. Edward Martin; of the auditor general, Hon. Charles A. Waters; of the attorney general, Hon. William A. Schnader; and myself, as head of the department of revenue. This board is the official representative of all the fiscal affairs of the State in its various ramifications. I am asked to state definitely in their behalf by unanimous vote that this legislation would be ruinous in its fiscal effects on Pennsylvania.

Section 811 of the revenue act of 1932, as passed by the House on April 1, 1932 provides that the executor or administrator of a decedent who died on or after September 1, 1928, and prior to January 1, 1932, may elect to have the estate valued for purposes of the Federal estate tax as of a date 18 months subsequent to the date of death. It is then provided that the amount to be paid as the tax shall be an amount which bears the same ratio to a tax computed without reference to the section as the value 18 months after death bears to the value at the date of death, but in no event is this amount to be less than 60 per cent of a tax computed without reference to the section.

The provisions of this section operate retroactively so as to include estates in which the tax has already been paid. The amount refundable shall be refunded, but without interest, if the election is evidenced by a statement properly filed not later than one year subsequent to the enactment of the revenue act.

This section, if enacted, will prove of very serious consequences to the Commonwealth of Pennsylvania and to other States. The Federal estate tax applies only to estates valued at $100,000 or more. Estates of less than this amount are taxed only by the States.

Under the Pennsylvania constitution, as interpreted by the courts, there can be no exemptions and no graduation in inheritance or estate taxes except for a flat rate for direct heirs now fixed at 2 per cent and a flat rate for collateral heirs and charities now fixed at 10 per cent.

Pennsylvania collects taxes from about 35,000 estates per year, whereas the Federal Government taxes about 7,000 estates per year. Most of the Pennsylvania estates are in amounts less than $100,000. All of the Federal estates are over $100,000 in value.

During the period covered by this proposed section over 100,000 Pennsylvania estates that have already paid inheritance taxes to Pennsylvania can secure no redress whatsoever from this legislation, whereas 7,000 estates taxed under the Federal law, all of them very large, will receive back $40,000,000. Relative to ability to pay, these smaller estates are harder hit now than the larger ones whether the estates have their value in real estate or in stocks and bonds. Such class legislation has but little to be said in its behalf. To relieve the wealthy and to tax the poor is not good legislation, especially when retroactive.

If tax legislation is to be retroactive, it should be made uniformly retroactive to all taxpayers throughout all parts of Pennsylvania as in every State in the Union. There are now long lists of farms and homes being advertised for sale by the sheriff because general property taxes can not be paid. This is true not only in Pennsylvania but throughout the country. To relieve all such taxpayers retroactively would be a serious matter to every county, city, and State in the country. To relieve some but not all is a matter of doubtful public policy. The States can not be expected to follow this precedent for retroactive tax legislation set in this provision for Federal estate taxes.

This proposed section presumes to reduce the hardship on the heirs of wealthy decedents who died when securities were high. But this principle has not been recognized by the Federal Government in taxing either the incomes of individuals or corporations, many of whom are still struggling to pay delinquent taxes on incomes earned during the years 1928, 1929, and 1930. This same shrinkage in assets that besets the rich man's estate has also depleted the capital of many individuals and corporations so that their ability to pay the Federal and State taxes when due now becomes a very heavy burden as compared with their ability to pay the tax when the incomes were being earned.

Since the Federal estate tax is imposed by the Federal Government and not by the States, the same authority that imposes it may unquestionably amend its provisions and provide refunds. Nevertheless, there is a serious question whether the Federal Government can compel or ought to compel States through such retroactive legislation to reimburse revenues which have already been paid. In the event that the States neglect or refuse to pass legislation conforming to the retroactive clause of this section, the result would be that the estates of those who died within the statutory period on which the tax was paid would find it impossible to recover moneys paid to such States, whereas the estates of those who died during the statutory period but had not yet paid the tax at the time this revenue bill becomes effective could insist on the benefits of this section.

Pennsylvania alone stands to lose about $25,000,000 in this biennium from this proposed retroactive legislation. It must be remembered that as much as $8 out of every $10 of the Federal estate tax is now being paid into the State treasuries of all the States that have taken advantage of this opportunity, and that includes all but about three. If I am correctly advised the Federal Treasury

will lose but $40,000,000 by this legislation. That means the States will lose another $150,000,000.

In recent years the tendency of Federal estate tax legislation has been to fix the tax with the proviso that there be a certain proportion turned over to the States. So well established had this become that practically all the States have arranged their tax legislation to dovetail into this system. Their budgets have also been adjusted with this in mind.

One of the most objectionable results of section 811 of the revenue bill would be to shatter this confidence and establish a counter trend.

Prior to the drawing up of the present tax bill Secretary Mellon and, subsequently, Secretary Mills and their assistants, according to the newspapers, expressed themselves very clearly as to the desirability of not disturbing the quota of estate tax money now turned over to the States. Their view was stated as being that any additional estate tax should be raised for the Federal Government without curtailing in any way the amount of estate tax at present paid over to the States. Section 811 goes directly counter to this idea, especially as it would take from the States from existing Federal estate legislation practically four times as much as the amount lost by the Federal Government.

We have carefully checked the tax returns of every estate that has been settled in and for Pennsylvania during the period covered by this proposed legislation. We find that $12,107,139.59 in taxes which have already been paid into the State treasury, would have to be refunded should the Pennsylvania law and practice conform to the Federal proposal. More than this, we estimate that an additional $14,000,000 is still to be derived from known estates of Pennsylvania decedents who died during this period on which the tax has not yet been paid. This is a total of $26,107,139.59. Possibly the total taxes actually to be lost to Pennsylvania may not be $26,107,139.59 because of the 60 per cent provision in the proposed legislation but we believe that it may amount to $25,000,000.

To deprive the State of Pennsylvania of anything like that amount at this time means practical bankruptcy. It means that without new tax legislation immediately, the needs of our welfare institutions, State subsidies to our common schools and salaries for essential State services can not all be paid when due and some of them not at all.

It may be said that Pennsylvania need not follow the proposed Federal legislation but Pennsylvania, like some other 16 States at least, has based her inheritance tax law on the Federal estate tax law. Other States, which have their own inheritance tax legislation, need not follow at least materially the changes made in the Federal legislation. But not so with Pennsylvania and with some of the other States.

In effect our law says that the inheritance tax returns shall be 2 per cent for direct heirs and 10 per cent for collateral heirs provided that in any given estate the tax is equal to 80 per cent of the Federal estate tax. This latter provision covers all of our larger estates, and all of these would fall under the proposed provision. Our tax losses would therefore be about $14,000,000 even though we refused to make any refunds for taxes already paid. For Pennsylvania to take this tax from some and not from others under identical conditions would be unfair and unjust.

I submit, however, that Pennsylvania, as other States, in common justice ought to give to its small and more heavily burdened taxpayer the same advantage offered to the large estates. This Pennsylvania can not possibly do without a loss of revenue, that will be ruinous to many of the essential services of this State.

For these reasons we respectfully urge the members of the Senate to refrain from placing this burden on State treasuries and take this retroactive provision out of the Federal revenue act now before you.

MANUFACTURERS' SALES TAX

STATEMENT OF B. H. LERNER, EXECUTIVE DIRECTOR OF THE BUREAU OF TRADE RELATIONS OF THE CREDIT CLEARING HOUSE OF NEW YORK, NEW YORK CITY

Senator WATSON (presiding). Give your name to the committee and whom you represent and where you live.

Mr. LERNER. B. H. Lerner; executive director of the Bureau of Trade Relations of the Credit Clearing House of New York.

We have in our organization a little more than 1,100 of the 1,500 dress manufacturers and wholesalers in New York City. What brings me down here is as a result of a meeting of our advisory board, who are fearful of the bringing up again of the proposed manufacturers' sales tax. I have a brief here and with your permission I will file it later. I did not want to read from it; I just wanted to talk informally for a few moments.

I merely wanted to bring to your attention that the dress industry particularly is in a very, very bad condition at the present time. Coming down on the train I took some statistics from a booklet issued by the National Credit office. There has been in the past two years a 20 per cent turnover in manufactures in the dress industry. The failures in the dress industry during the past two years have run about 45 per cent of those who have gone out of business, and the other 55 per cent are firms who have liquidated because they have lost their capital.

The reason for that is this: Dresses, while they are a necessity with women, are essentially a style article, and with the 1,500 very small units we have in our industry there is a very keen and intense competition to match whatever business there comes to-day from the retail field, which, as you well imagine, is rather small. Buying has been very piece-meal and hand-to-mouth. There has been a terrific price competition because of organized retailer aggression, and these weak unit men foolishly, because there are no trade regulations that can be sustained or maintained, have been giving their products away. When one fellow upstairs takes a $10.50 dress and sells it for $10 the fellow downstairs sells it for $10, and he does not do any real business.

That has resulted in this: The dress manufacturers are not the most profitable clientele of banks to-day, and our industry is rapidly losing its financial resources through banks. I do not have to tell you that when a dress manufacturer turns over a financial statement to a dress-goods house, if he does not show a solvent condition he is not going to get a great deal of favor.

An industry that used to do a volume of $800,000,000 a year wholesale, that runs at retail approximately $1,200,000,000, is quite an industry. Now, if an industry in that weakened economic and financial position is forced to absorb a tax of 2¼ per cent, it is definitely

confiscatory, and it just takes the man and his capital. They go out of business. That is the situation with reference to the dress industry.

One of the reasons that we are suffering in our industry is this, if I may have a few minutes more time: We sell to a retail store, and you gentlemen know that retail stores have really been giving merchandise away. I hold no brief for the retailer. Some of them, again, made a profit. But now they want us to absorb some of their losses in dealings. We have done that. How much further can an industry that used to do $800,000,000 a year, a successful industry in New York City, employing about 175,000 people—how long can they keep it up?

This is what happened: We have reduced salaries in our industry from 10 to 25 per cent in the last six months. Manufacturers who had large lofts are occupying only a quarter of that space to-day, either by arrangement with the landlord or by liquidating and starting over again in a smaller space.

Senator WATSON. Now apply all this to the tax bill.

Mr. LERNER. If the dress industry or the garment industry is forced to adopt that 2¼ per cent manufacturers' sales tax, then the industry is going to be in a pretty bad shape, because we can not absorb it.

Senator HARRISON. You do not favor it then?

Mr. LERNER. Not a manufacturers' sales tax as applied to clothing.

Senator REED. If manufacturers excise tax were made general but exempted rent and food and clothing it would not touch your afflicted industry, would it?

Mr. LERNER. No; I would take the train back to New York.

Senator REED. You would approve of such a tax as that, would you not?

Senator HARRISON. You would be with that strong, wouldn't you?

Mr. LERNER. You do not want me to answer that, Senator.

Senator WATSON. We evidently will not get you to.

Mr. LERNER. May I say this, that the men comprising the garment trades in New York are men who came to this country in the last generation or two. They have built up their successes in their businesses on a shoe string, as you know. Nobody put a silver spoon in their mouth, and they are just as patriotic as anyone else, and they certainly want to support the Government. We had a mass meeting of them on March 17. They are not trying to dodge anything, but they do not want to go out of business.

Senator CONNALLY. They are not all Irish, are they?

Mr. LERNER. That is a fair question. I think we have two that are Irish.

Senator CONNALLY. They met on the 17th of March, you say.

Mr. LERNER. They did meet on St. Patrick's Day. I am not lobbying for anything.

Senator REED. Quite seriously, I do not know anybody that is urging the manufacturers tax that would apply to clothing or foods.

Mr. LERNER. Would you say to me, Senator, that I could go back to my 1,100 people and indicate to them that there is every possibility of an exemption on clothing?

Senator REED. So far as I am concerned I should not ask a tax on either clothing or food.

Mr. LERNER. I want to thank your for your time.

Senator REED. But I call your attention to the fact that the House bill, the bill as we get it from the House, does tax at the rate of 10 per cent any article of clothing that includes a bit of fur.

Mr. LERNER. The dress industry is not disturbed by that.

Senator REED. Don't they use fur?

Mr. LERNER. No, sir.

Senator HARRISON. You ought to be happy.

Senator WATSON. You ought to accept Senator Reed's dictum on this thing and go home perfectly satisfied.

Senator CONNALLY. I think he can be excused.

Mr. LERNER. If there is no provision for my fare back, I will pay it out of my own pocket. [Laughter.]

STATEMENT OF M. D. MOSESSOHN, NEW YORK CITY, EXECUTIVE CHAIRMAN ASSOCIATED DRESS INDUSTRIES OF AMERICA, UNITED WOMEN'S WEAR LEAGUE OF AMERICA.

The CHAIRMAN. You are here to talk upon the question of sales the tax?

Mr. MOSESSOHN. I am here to talk primarily against any manufacturers sales tax if there is any talk of revising it, and generally against the sales tax.

The CHAIRMAN. Well, is that all that you are here for?

Mr. MOSESSOHN. Yes.

The CHAIRMAN. There is no need of taking any time then. Did you testify before the House?

Mr. MOSESSOHN. No. I did not have the opportunity, sir. The organizations which I represent are absolutely opposed to any sales tax for fear it is going to retard business. Business is having a hard enough time as it is to get on its feet. And we are, of course, particularly opposed to any sort of a manufacturers' sales tax because of the condition of the industries at the present time.

The CHAIRMAN. Whom do you represent?

Mr. MOSESSOHN. I represent the Associated Dress Industries of America and also the United Women's Wear League of America, and we have an output of $1,250,000,000 worth of products.

The CHAIRMAN. You are opposed to a general sales tax, and you are opposed to a special sales tax if it takes in articles manufactured by you and the concerns represented by you?

Mr. MOSESSOHN. That is correct, sir.

The CHAIRMAN. In other words, you are opposed absolutely to the sales tax?

Mr. MOSESSOHN. We are.

The CHAIRMAN. Is there any other information you want to give to the committee?

Mr. MOSESSOHN. I have a brief here that I can leave with you.

The CHAIRMAN. We will be glad to have you file it right now. Put it in the record at right this point. And we thank you for it.

(The brief presented by Mr. Mosessohn is here printed in the record in full, as follows:)

BRIEF OF M. D. MOSESSOHN

NEW YORK, *April 18, 1932.*

The SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: Industry must be encouraged and not taxed out of existence.

It is mainly through the efforts of the manufacturers that the depression will be overcome. Adding burdens on the manufacturers' shoulders will certainly prevent a revival of business.

The proposed manufacturers' sales tax will be obviously a burden on manufacturers and not a tax on manufactures. If it is intended that a sales tax is to be paid by the consumer then it should be so stated. If, on the other hand, it is the object of the proponents of the sales tax to have the manufacturers absorb the tax, the sooner they so inform the manufacturers plainly, the better it will be for all concerned. In so far as the ready-to-wear industries are concerned, it may definitely be put down that if they should attempt to do so it would mean commercial suicide.

As executive chairman of the Associated Dress Industries of America and executive chairman of the United Women's Wear League of America, national organizations, located in New York City, I represent several of the industries that manufacture women's, misses', and children's ready-to-wear. The largest of these is the dress industry which has the preponderance of production in all of the women's ready-to-wear. The dress manufacturers produce over $800,000,000 worth of dresses a year, or, to be exact, in 1931 they produced $805,183,000 worth of dresses. It is the largest yardage consumer of any single cutting unit in the textile industry and the primary market for silk piece goods. To-day it is daily consuming more cotton yardage than any other industry.

The children's wear industry produces $115,256,251 a year. The underwear and negligee industry has an annual production of $153,533,041. The corset industry has a production of $110,000,000; the blouse industry has a production of $11,000,000; the infants' clothing industry has a production of $15,695,876 annually; the neckwear industry has a production of a little over $11,000,000 annually. This makes a total of $1,221,068,768 annually, which is the factory value of the products of the industries which I represent. Adding on the salaries of the white collared employees, rent, taxes, sales cost, interest on investment, etc., one can readily appreciate the tremendous sales volume of these industries. They employ over 150,000 wage earners. All of these would be vitally affected if a manufacturers' sales tax is passed.

These are fashion industries. In its very nature, the harnessing of fashion and industry is a decidedly hazardous undertaking. This, added to the fact that the past few years have seen a buyers' market, tends to add materially to the chaotic condition in which the industries now find themselves. Competition has been so keen that it is commonly referred to as of a cut-throat variety. Over 90 per cent of the manufacturers of these great industries have been losing money during the past few years; and the very small percentage that has made a profit show the same to be a possible 4 or 5 per cent on volume of sales. Thus, in the latter class, is the manufacturer, for instance, who does a volume of $500,000 a year. His profit on this volume is about $20,000 to $25,000. Under the original provision of a 2¼ per cent manufacturers' sales tax on the volume of sales, he would practically contribute one-half of his profits to the Government. This does not take into consideration the other taxes that he has to pay out of his profits. What about the 90 per cent who have lost and are losing money in their respective businesses? If the manufacturers' sales tax is passed, they apparently will be called on by the Government to add to their losses.

There are standard prices in the entire ready-to-wear field. For instance, the manufacturer sells dresses to the retailer at stipulated prices, such as $6.75, $10.75, $16.50, etc., per dress. The retailer will still call for the same dresses at these prices. He will expect the manufacturer to absorb the tax. This the manufacturer can not do as he has not a bit of margin on which to work. Manufacturers making this merchandise are at present producing same in order to keep their factories running and their workers occupied. In doing so they are lending their decidedly material aid in checking an increase in the unemployment situation. If the manufacturer will be called on to pay a manufacturers' sales tax, he will either be forced out of business completely with a resultant increase in the ranks of unemployed, or, if he remains in business, he will be compelled to curtail his help. In either case the results will be disasterous.

To-day the dominant industry in ready-to-wear is dress manufacturing. The turnover in the number of manufacturers in 1930, according to reliable statistics, was 25 per cent. In other words, 504 concerns out of 2,072 in the dress manufacturing industry went out of business in one year. In fact, 50 per cent of the total number of concerns now in business have been operating only since 1928. There were more failures in this industry in the first nine months of 1931 than in the whole of 1930. It is particularly important to remember that 78.6 per cent of the production of dresses in the United States is confined to New York City, although but 66.4 per cent of these manufacturers are located here.

The effect of any undue burdens laid on the manufacturer will naturally be felt by those dependent on him, and there is hardly a line of business in New York City that is not dependent directly or indirectly on the ready-to-wear manufacturer.

The manufacturers in our industry to-day are practically flat on their backs. Not only are they suffering from the inherent weaknesses of the industry and the effects of the depression, but they are not receiving the necessary support from their banks, with the result that they are being hurt from all sides.

What applies to the dress industry is also applicable to the other women's and children's wear industries, in proportion. Clothing is a necessity and should be excluded from any tax.

As other patriotic citizens, our manufacturers are only too anxious to assist in balancing the Budget, but they feel that loading burdens on them in their present condition will create more havoc than can be measured in the amount that may be received from any tax that may be levied on them.

Respectively submitted.

M. D. MOSESSOHN,
Executive Chairman Associated Dress Industries of America;
United Women's Wear League of America.

STATEMENT OF W. A. DOWER, INDUSTRIAL SECRETARY OF THE MANUFACTURERS' ASSOCIATION OF CONNECTICUT

Mr. DOWER. By the circumstances of location, the specific 14 excise taxes in the present bill apply particularly to the members of this association. Among those are three paragraphs which I will mention as samples.

No. 602, the one referring to toilet preparations and cosmetics, includes a number of items which are not luxuries. It applies to soaps, for example, which is the necessary cleaning material of the man who toils in the factory.

Paragraph 604, the jewelry paragraph, so called, includes a number of items which, while bearing a luxury tax of 10 per cent, could hardly be classed in that category. Clocks that retail at $1, electric clocks, are not distinguished from the large hall affair.

Another item is silverware, that is, silver-plated ware, which is the ware of the man in the street.

Another refers to paragraph 606, boats, bearing a luxury rate of 10 per cent. I have in mind one which was produced at $125,000 in our State.

These are mentioned not for the purpose of exclusion but the inclusion in the excise tax.

I refer especially to the broad inclusion of jewelry of all kinds.

In conclusion, I would suggest that if the general sales tax goes back before the passage of the bill, the $20,000 exemption originally provided in the House should be lowered, which will afford an added advantage to the producers of many of the articles, many outside of Connecticut, in competition with Connecticut, in so far as they refer to some of the things which were exempted in the original bill.

I thank you, gentlemen.

STATEMENT OF BENJAMIN BERMAN, VICE PRESIDENT CROWN OVERALL MANUFACTURING CO., AND REPRESENTING THE UNION MADE GARMENT MANUFACTURERS ASSOCIATION OF AMERICA, CINCINNATI, OHIO

Mr. BERMAN. Mr. Chairman and gentlemen of the committee, it is not our intention to discuss the theory of the sales tax, nor to repeat the arguments already advanced against this method of taxation. We are opposed to a general sales tax, but we are more concerned with apprising this committee of the situation as it affects the wearers and manufacturers of overalls. To the workingman and farmer the overall is a vital necessity. Next to food and shelter, the overall is indispensable to those who keep the wheels of industry turning and raise the produce that feeds our people. No picture of a worker is complete without the blue denim overall that is symbolical of productive labor. It is, therefore, easy to appreciate how necessary the overall is to those who till the soil, those who fashion the mechanisms of industry, those who form an integral part of the transportation systems, in fact, to all who perform the manual labor of the country.

These men constitute the majority of our population, the backbone of our civilization and of our economic existence. Many of them are now idle, many are working but part time, and those who are fortunate enough to have employment are on a smaller wage basis. All are in reduced circumstances and are living from hand to mouth, with the better part of their meager savings already absorbed in the attempt to maintain themselves and families.

Any proposal to add to the living expense of the workman and farmer by means of a sales tax on absolute necessities such as overalls is unfair. It saddles them with an additional load which will retard, that much more, their financial recovery. It would be an unpopular tax, falling on an item almost as necessary as a job itself, and will create a long-remembered resentment.

And the poor overall wearer would have to pay the tax. The manufacturers are virtually selling overalls at cost and in some cases below cost. The merchants likewise sell them without profit. Overalls have never carried a proportionate mark-up and the majority of stores have used them for loss leaders. Overall manufacturers are operating at about 25 per cent to 35 per cent capacity. Almost all have lost money during the past several years, and most of them have not been able to earn their fixed charges. Only the hope that better times will enable the manufacturers to improve their positions gives them the tenacity to hold on. A tax on overall sales could not be other than ruinous. It would therefore have to be passed on through the retailer to the poor workman and farmer.

This tax would not mean much to the Government. Department of Commerce census figures show the value of overalls produced to be less than $100,000,000 per year. This will net in taxes less than $2,000,000, 2¼ per cent tax, a very small sum indeed. Certainly, not much considering that its collection will likely help to ruin already distressed industry and bring hardship to those least able to pay.

The laborer and farmer spends, as you well know, most of his time in overalls, and to many the overall is even a Sunday garment. Conditions to-day make it impossible for many of these poor folk to buy new overalls. Tattered, patched, and worn-out garments in

general use serve as silent testimony to existing poverty. Surely, when our workmen and farmers must wear their overalls until they fall apart, it is not difficult to understand their condition and that of the overall industry. It would be most unfair to add to the staggering burden of the poor and hopeless workingman, farmer and laborer. Taxes should come from those items which produce a superfluity of profit—certainly not from those persons unable to earn enough to buy the mere necessities of life for themselves and their families.

LETTER FROM W. W. BALDWIN

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE COMMERCE,
March 18, 1932.

Hon. REED SMOOT,
Chairman Senate Finance Committee, Washington, D. C.

MY DEAR SENATOR: I am inclosing herewith a letter which I have to-day from Mr. W. W. Baldwin, of Millersville, Md., in which he proposes an amendment to the pending revenue bill.

I shall appreciate it very much if you will place Mr. Baldwin's letter in the hands of the subcommittee to consider this phase of the bill, in order that his proposed amendment may be carefully considered in connection with the bill when it comes to the Senate.

Thanking you in advance, I am,

Very truly yours,

M. E. TYDINGS.

MILLERSVILLE, MD., *March 17, 1932.*

Hon. MILLARD E. TYDINGS,
United States Senate, Washington, D. C.

DEAR SIR: Permit me to call your attention to a matter relating to the new proposed sales tax which will, it seems to me, unless corrected, be the cause of an immense amount of difficulty in collecting the tax, as well as endless confusion among those manufacturers who will be held responsible for accounting to the Government for the money. As the bill now reads, it will also undoubtedly involve a great deal of pyramiding of the tax, which, as I understand it, is not the intention of the bill.

To prevent these difficulties, the bill itself should plainly prescribe the means which will defeat su h a result, and to this end should prohibit inclusion by manufacturers of the tax in the selling price. If this is done, the tax can and will be passed on down to the consumer as a single levy of 2¼ per cent. If, on the other hand, manufacturers and others include the tax in their selling prices for goods and so invoice them to customers, others rehandling the goods will base their selling prices upon their gross cost with the sales tax again included in the price.

To prevent this, I would suggest for your consideration that section 616 of Title IV be amended by substituting therefor the following:

"SEC. 616. *Regulation.*—The commissioner, with the approval of the Secretary, shall by regulation require those liable to pay the taxes imposed by this title to list and bill the said taxes as separate items on all invoices, bills, statements, or like evidences of sale or transfers of title, and not as part of or included in the selling price of the said article taxed, and he shall prescribe and publish such other and further regulations as he may deem necessary for the enforcement of this title."

I think it will be quite clear to you that if the tax is kept separate on each invoice as rendered, duplication and pyramiding will be prevented and the collection of the tax and accounting therefor enormously simplified.

Hoping that you can see your way clear to give this matter your most serious and careful consideration, I remain,

Yours very truly,

WILLARD A. BALDWIN.

STATEMENT OF HAROLD R. YOUNG, WASHINGTON REPRESENTATIVE OF THE NATIONAL RETAIL DRY GOODS ASSOCIATION

Mr. YOUNG. Mr. Chairman, I have a very short statement.

The CHAIRMAN. And you desire to speak on the sales tax?

Mr. YOUNG. Very briefly.

The CHAIRMAN. Proceed.

Mr. YOUNG. My name is Harold R. Young. I am the Washington representative of the National Retail Dry Goods Association, a voluntary organization composed of some 3,700 retail dry goods and department stores, located in every State in the Union.

My purpose in appearing before your committee is to express to you, at the direction of my board of directors, opposition of the membership of the association to every form of sales tax including a manufacturers' excise tax, a selective or so-called luxury tax, a general retail sales tax, or turn-over tax, for the following reasons:

1. Any form of sales tax is contrary to the fundamental principle of taxation, inasmuch as it is not based upon ability to pay.

2. Any form of sales tax will increase the cost of living to the American people and will affect most severely those in the lower-income class, because a greater percentage of their income is spent in living costs.

3. It is a tax on consumption, which will create a sales resistance against those commodities taxed, it will inevitably lead to a falling off of consumer demand for the articles taxed, and will therefore affect adversely the industry and commerce of our Nation.

4. It will encourage extravagance in government. Once any form of sales tax is enacted there is nothing to prevent succeeding Congresses from increasing the rate of taxation when confronted with the problem of raising additional public revenue.

That concludes my statement, Mr. Chairman.

The CHAIRMAN. Have you any suggestions to make to the committee on where to raise this money?

Mr. YOUNG. I am not directed by my board of directors to offer any alternative suggestions, Senator; they feeling that is the committee's function.

The CHAIRMAN. All right. You said you had concluded your statement?

Mr. YOUNG. Yes.

STATEMENT OF MAXWELL COPELAF, REPRESENTING THE MERCHANTS LADIES GARMENT ASSOCIATION, NEW YORK CITY

The CHAIRMAN. You may proceed, Mr. Copelaf.

Mr. COPELAF. My name is Maxwell Copelaf, 225 West Thirty-fourth Street, New York City. I represent the Merchants Ladies Garment Association, of New York City, and also the American Cloak and Suit Manufacturers' Association. Those two groups produce and distribute what is probably a major portion of women's coats and suits in this country.

The House bill has definitely excluded the tax on clothing, so I only appear here in the event that the committee should reconsider the inclusion of a tax on clothing, and to call your attention to the

fact that our industry is not in a position to absorb that tax. Our industry is made up of a number of small units——

Senator COUZENS (interposing). Mr. Chairman, may we not assure the witness that we will not put on a general sales tax, and save his time and ours?

Senator REED. Mr. Chairman, I hope we will assure him we will try to.

Senator HARRISON. Why could we not take a vote on that subject and settle it now?

The CHAIRMAN. We have almost exhausted our list of witnesses for to-day.

Senator COUZENS. We are not going to put on a sales tax, and why take up the time of the witness and our time?

Senator REED. The House bill does include some articles of clothing; anything with fur on it.

The CHAIRMAN. Yes; anything with 10 cents worth of fur on it is taxable.

Senator REED. Do you think that is fair, Mr. Copelaf?

Mr. COPELAF. No, sir.

Senator REED. You do not approve of the House bill as it stands?

Mr. COPELAF. Not entirely. I feel that fur, as far as it applies to coats, is not a luxury; it is a necessity. We have a great many coats trimmed with fur, and if you consider that fur—it does not pay to put 10 per cent on fur particularly, and if it is interpreted that the fur is the greatest component part of the coat, we may be taxed on the fur part, whereas the coat is only a small proportion of it. That will add to the cost tremendously.

Now, if you care to have me go along——

The CHAIRMAN (interposing). Yes; go on.

Senator REED. The men and women both wear a great deal of fur, in the northern part of the country.

Mr. COPELAF. Yes.

While the industry is one of the largest in the United States, it is composed of a very large number of small units, each firm not too heavily capitalized and not in a position to dictate or control selling policies or prices.

The organized buying groups representing either individual stores through a buying representative resident in New York, or the buying offices maintained by powerful chain organizations, dictate, in the main, the wholesale prices which are needed to fit into their set retail prices, and such prices as will yield to them a satisfactory mark up.

A manufacturer's sales tax, if applied to our trade, would mean a practical compulsory absorption of the tax by the wholesalers or manufacturers, and if it is to be 2¼ per cent, it will, in most instances, wipe out a firm's entire profit, the average capital being about one-tenth, or less, of the yearly turnover, and the net profits on the volume, when there is a profit, is usually under 5 per cent, and in most instances only 2 per cent or 3 per cent.

Therefore a manufacturers' sales tax, as originally included in the House bill, if applied to women's clothing, would mean a serious unbearable imposition on the industry, and a definite direct loss to the Government in other ways of taxation through the further depletion of business firms, decreases in employment, and so forth.

If, in the judgment of the Government, this tax must be passed, then there must be definitely provided a provision in the law that the tax be passed on to the retailer, in segregated form, from the charge for the garment sold, and while it is to be collected from the manufacturer, it is actually to be paid openly by the ultimate consumer, the retailer being, in the main, in no position either to absorb 2¼ per cent of additional charge in his markup.

Now, I heard it mentioned this morning about the Canadian tax. In discussing this question with women's clothing manufacturers in Canada, they passed the tax on to the retailer there, and I am informed that the retailer makes a profit. And unless it is marked up, it means that the consumer does pay it.

Senator REED. Where do you suggest that we get the money to balance the Budget?

Mr. COPELAF. Well, my own opinion is that there should be a tax distributed generally; you might call it a sales tax, but openly paid by everybody in that way. Everybody would have to pay.

The CHAIRMAN. Thank you, Mr. Copelaf.

STATEMENT OF SAMUEL L. DEITSCH, REPRESENTING THE INDUSTRIAL COUNCIL OF CLOAK, SUIT, AND SKIRT MANUFACTURERS (INC.), THE MERCHANTS LADIES' GARMENT ASSOCIATION, AND THE AMERICAN CLOAK AND SUIT MANUFACTURERS' ASSOCIATION, NEW YORK CITY

Senator WATSON (presiding). Mr. Deitsch, give your name and city, and tell us whom you represent.

Mr. DEITSCH. Samuel L. Deitsch, New York City. I represent the Industrial Council, which comprises the——

Senator WATSON. Is that the same organization that this last man represents?

Mr. DEITSCH. No; it is not, Senator. It is an organization that represents the coat, suit, and wrap department of the industry. It does not handle dresses at all.

Senator CONNALLY. But do you handle furs?

Mr. DEITSCH. We handle furs; yes, sir. I would like to tell you how we understand furs to mean in relation to our industry, if you will permit me. It is a small statement. Furs are not luxuries in our industry. They are a component part. The industry uses one hundred and twenty-five to one hundred and fifty million dollars worth of fur. It uses it in a sense that it is a part of the garment and not as a luxury; as a necessity. It is used as a necessary article to the garment, as, for instance, on the collar. We recognize that a coat that is two-thirds fur and the rest cloth would be a fur coat. We are not interested in that. We are only interested with furs that are to-day a component part of the garment that your wife would wear, or any man's wife would wear.

Senator WATSON. In the summertime—the women all wear these furs in the summertime.

Mr. DEITSCH. Well, the furs that are worn in the summertime, Senator, are a decorative part of the garment. They are not a necessary part of the garment. But the furs that are worn in the wintertime are worn for warmth, and that is the part I would like to read, if you will permit me. It is just a small statement.

Senator WATSON (presiding). Yes; very well.

Mr. DEITSCH. I have prepared here a statement along the lines of the——

Senator HARRISON. Any part of your statement you do not want to read and want to put in the record you can do so.

Mr. DEITSCH. I would like to read it all. I have heard the previous gentlemen. I also heard the reaction of the Senators in relation to the tax on our industry.

Senator WATSON. That section has reference to a tax on furs alone. That is section 603, page 248.

Mr. DEITSCH. Yes. Gentlemen, I will read that part of it.

Our association is a spokesman body of the manufacturers in the New York coat and suit market. Our field comprises about 1,800 firms, employing 25,000 factory workers and 10,000 other employees and produces and distributes approximately $350,000,000 worth of merchandise annually, sold to the public through upwards of 20,000 retail stores.

Having heard that there was a likelihood that the Senate would revive the manufacturers' sales tax feature of the revenue bill, we requested an opportunity of presenting our views against that provision, because we sincerely believe that its enactment would acutely aggravate an already critical situation in our industry; that it would add an intolerable burden upon a trade that is already weighted down by more than five years of continuous adversity. We were not beneficiaries of the period of prosperity that preceded the present era of general recessions. Drastic competition due to the multiplicity of units in our field and rigorous pressure for price exerted by solidly welded groups of retailers deprived our individual enterprises of all semblance of profit during those years when other industries were booming. With the decrease in public purchasing of even so basic a commodity as apparel, due to a psychology of fear as well as to reduced income, the forced liquidations in our trade have risen at an alarming rate.

According to statistics of the national credit office, 8.3 per cent of the coat and suit firms became insolvent in 1929, 10 per cent in 1930, and 11.3 per cent in 1931—in other words, one in every three concerns in an industry engaged in the vital task of preparing apparel for the millions of American women encountered insurmountable financial difficulty in the past three years. This does not include the considerable number of concerns that, reaching the end of their resources, averted bankruptcy by withdrawing from business. In this connection, permit me to cite the fact that in August, 1929, the industrial council had a membership of 291 as compared with 203 at present. You must visualize, in the passing of each of those firms, the loss of employment for office and factory workers and the loss of customers for the textile, fur, and other trades from which we purchase our supplies.

Our industry should be exempt from any manufacturers' sales tax not only because of the demoralization that it would engender among us but also because we are dealing with a fundamental necessity. The average family to-day does not budget apparel as a decorative luxury. Expenditure for attire is invariably held down to minimum requirements despite our efforts to accelerate consumption through

the creation of fetching fashions. It is interesting but not encouraging to note that 75 per cent of the merchandise sold by us is priced at less than $30.

A manufacturers' sales tax of 2¼ per cent would cost our industry approximately $9,000,000 a year. It would take $12,250 from the firm doing an annual volume of $500,000. We say with all the emphasis at our command that this assessment would mean the difference between solvency and insolvency for scores of firms. The units in our trade operate on small capital and frequent turnover. The volume often seems great when compared with the capital, but that is due to the peculiar character of this field and not to overextension. A $12,250 tax on a $500,000 turnover would consume one-third or more of the capital of many of the concerns.

The question may be asked, "Why isn't the tax computed as a legitimate item of cost and thus passed along to the retailer?" Our answer is that we are faced with the most decisive buyer's market ever experienced in the history of our industry. We are, individually, small and ineffectual when contrasted with the powerful retail entities who comprise our patronage. We believe that any endeavors on our part to pass along the tax to the retailers would be successfully resisted. Some of the more strongly entrenched manufacturers and wholesalers might attempt to do this, but eventually they would be compelled to absorb the tax by reason of the fact that their less hardy competitors had already done so.

Were we able to compute the tax as an item of cost, the consuming public would be required to defray an amount from 30 to 40 per cent greater than that which we turned over to the Government. This would be brought about through the addition of the stores' mark-up upon the manufacturers' tax item. It would mean a tax of almost 4 per cent as far as the public was concerned and would evoke infinitely more potent sales resistance than is now encountered by the purveyors of apparel, despite the fact that current garment values are superlatively attractive. We have eliminated every semblance of inflation, having radically curtailed our overhead and enhanced our efficiency. We have avoided the costly waste of overproduction by operating conservatively, and we have been purchasing our supplies as thriftily as possible. In short, a tax levy would gnaw deeply into the very vitals of our enterprises with disastrous results.

The limited time allotted to us does not permit of the amplification of the premises we have briefly outlined. We have, however, endeavored to accord you some conception of our reasons for urging that our product be exempt from any manufacturers' sales tax measure that may be recommended by your committee.

Permit me at this time to voice our views on the impost on furs which has been approved by the House of Representatives. We understand that this has been designated as a "luxury tax." Our industry consumes, on a conservative estimate, between $125,000,000 and $150,000,000 worth of furs annually. In the fall and winter season about 80 per cent of the coats and suits manufactured are trimmed with furs.

Senator REED. Does fur constitute the component of chief value?

Mr. DEITSCH. I will show you, Senator, how it does.

In the vast majority of instances they serve, not as a luxurious embellishment but as a warmth-giving and health-protective medium. Being more costly than woolens and silks, they are the major component of the garments on which they are used. A 10 per cent tax on fur trimmings—as we understand it, it is trimming, it is not a fur—will appreciably increase the price of even the most inexpensive coats and suits as much as 4 per cent.

Senator WATSON. Of course, that is all you use the fur for, is it, as trimming?

Mr. DEITSCH. As trimming, yes; and that is what we are interested in.

On higher quality merchandise the fur trimming tax of 10 per cent will advance the cost of the entire garments by upwards of 6 per cent. When a similar tax was in effect in 1920 the garment producer included the levy in the computation of his selling price. The tax was listed separately in the fur manufacturers' sales to the apparel firms. In attempting to pass the tax along to the retailer under present conditions, we shall encounter a stern resistance. They will make us absorb that. In fact, a situation will be created similar to that which would follow the enactment of a manufacturers' general sales tax in our industry.

Senator WATSON. How many of you manufacturers are there?

Mr. DEITSCH. In my former statement which I read I believe that was set forth.

Senator WATSON. You can tell us that.

Mr. DEITSCH. Yes; I can tell you. The industry does a business of $350,000,000 worth annually.

Senator WATSON. But how many of you are in the business in New York City, or wherever you are in business?

Mr. DEITSCH. Manufacturers, you mean?

Senator WATSON. Yes.

Mr. DEITSCH. About 2,000. There are 25,000 factory workers; there are 10,000 other employees, producers, and distributors. We sell annually, at the present figures, $350,000,000 worth of merchandise, and we sell it to 20,000 retail stores.

Senator WATSON. And you could not pass the tax on if it were imposed?

Mr. DEITSCH. We could not very well, because the retail stores would have to take that tax and add it to the price of their garments and then figure a profit on that total amount. They would, in fact, make a profit on the tax.

Senator CONNALLY. Furs are cheaper now than they were formerly, are they not?

Mr. DEITSCH. Sir?

Senator CONNALLY. You are getting furs much more cheaply now than you did formerly, are you not?

Mr. DEITSCH. Yes, sir; we are getting them cheaper.

Senator CONNALLY. Would not you try to increase your price on the furs?

Mr. DEITSCH. Yes.

Senator CONNALLY. Telling the retailer that you are simply adding on the tax and sell to him in that way, wouldn't you?

Mr. DEITSCH. He would not stand for it.

Senator CONNALLY. That is what you would do, is it not?

Mr. DEITSCH. We would try to do that, but I don't think he would stand for it. He would insist on our absorbing it.

Senator CONNALLY. I mean, if you would fix a price at which you would sell to the retailer, a flat price, he would either have to pay that or not get the goods.

Mr. DEITSCH. Not if he knew there was a tax item on that.

Senator CONNALLY. He would not?

Mr. DEITSCH. He would not; no.

Senator CONNALLY. I don't see how he could find out.

Mr. DEITSCH. He could find out through his strength of position.

Senator HARRISON. Is it your contention that as manufacturers of these goods you would have to pay a tax, and then the retail merchant who bought from you would have to pay a tax if he sold the goods, and the consumer pay it again?

Mr. DEITSCH. The consumer would pay the tax in the last analysis.

Senator HARRISON. Finally.

Mr. DEITSCH. Finally. At the same time we are afraid of it because of our weakened condition. There is a strong buyer's market. If he would get a bill for $100, with 10 per cent taxes, he would not accept it that way.

Senator WATSON. Is fur the principal component part of all of these dresses?

Mr. DEITSCH. It is not. It is only one part of it.

Senator WATSON. This says, "Articles made of fur on the hide or pelt or of which any such fur is the component material of chief value."

Mr. DEITSCH. Exactly so.

Senator WATSON. More than 50 per cent of the value of a dress of that kind is not fur, is it?

Mr. DEITSCH. That is exactly what we are trying to make you understand, that woolens and silk are so cheap to-day in relation to fur that there will be very few garments where fur is used where the fur would not exceed the amount of those two items. In fact, fur is the only thing that seems to sell these garments to-day.

Senator REED. So you think the bill as passed by the House would just about put you out of business?

Mr. DEITSCH. There is not any question about it, sir.

Senator REED. Then the Senate will have to try to help you.

Mr. DEITSCH. Thank you.

STATEMENT OF W. C. HUSHING, NATIONAL LEGISLATIVE REPRESENTATIVE AMERICAN FEDERATION OF LABOR, ON SALES TAX

Almost every tax now imposed is passed on to the consumers, who, to a large extent, are wage earners.

The taxes on property are passed on to the tenant and the taxes of the manufacturer are included in the sale price of his finished product.

To add a sales tax puts an additional tax on the consumer and in effect is double taxation.

During the spring and summer of last year certain influential public officials declared that in order to raise sufficient funds to pay Government obligations that the sales tax must be established. They told how much could be raised by an overturn sales tax of one-half of 1 per cent on all sales including food, wearing apparel, household utilities, restaurants, and other necessaries of life. Furthermore, it was pointed out that exemptions of married and single persons should be lowered.

The executive council alarmed at this crusade to relieve the well-to-do from taxation and place the burden on those least able to bear it, made a report to the convention of the American Federation of Labor in Vancouver, British Columbia, October 5–15, 1931. In corroboration of the report to the convention it is only necessary to refer to the recommendations of the Secretary of the United States Treasury to the President. He proposes to increase the tax on all incomes up to $4,000 from 1½ per cent to 2 per cent, decrease the exemption of single men from $1,500 to $1,000, and married men from $3,500 to $2,500. These increases and the reductions in exemptions were foretold in the executive council's report.

The plan of the Treasury Department proposes that those who have suffered the most during this depression must pay the taxes of those who have neither hungered nor wanted for any of the necessaries of life.

It must be understood that 8,000,000 of our wage earners are out of employment and that they, with their families numbering approximately 25,000,000, have had to exist more or less upon contributions from relatives and friends who, despite their own sufferings from the depression, divided the incomes they received or their savings in order to save thousands of sufferers from starvation.

Then there are millions of farmers who have suffered the greatest privations during the depression who will also be overburdened by the sales tax. There are hundreds of thousands of families none of whose members are at work. In hundreds of thousands of other families they rely on the wages received by one of the members. Therefore it is plainly understandable that those who have been fortunate enough to have had employment have already divided up their wages and savings to help those in need. The wage earners can not be expected to suffer the entire burden of unemployment.

Another important feature of the taxation problem is the fact that every public man who has advocated the sales tax on all sales has been very well to do and propaganda undoubtedly was spread by them in the hope that they will eventually succeed in lowering the income tax they will have to pay.

In protesting against the sales tax or any increase that will bear down upon those struggling for existence the American Federation of Labor herewith submits evidence proving that those who advocate the sales tax do it with the sole purpose of reducing their own taxes. Much is said about the Canadian sales tax. It is said the people pay it with pleasure because they do not know they are paying it.

In 1922 the Canadian Manufacturers' Association submitted to the Government a brief asking that certain taxes should be repealed and the loss made up by increasing the sales tax. It is as follows:

"Last year a special committee of the Canadian Manufacturers' Association, in cooperation with other organizations, investigated the problems of taxation, not only in Canada but also in the United States, Great Britain, France, and other countries. This committee submitted the following recommendations to the Dominion Government:

"'(*a*) That the business profits war tax shall not be reenacted.

"'(*b*) That the income war tax act as regards corporations shall be repealed.

"'(*c*) That the present sales tax shall be adjusted so as to provide the additional revenue needed by the Dominion Government.'"

Then, listen to this:

"At the last session of Parliament the business profits war tax act was not reenacted, the sales tax was readjusted so as to provide additional revenue, but the income war tax as regards corporations was not changed.

"As we believe that the general policy outlined in these proposals is sound, we respectfully beg to submit the following similar representations to the present Government of Canada in the hope that Parliament will see fit to act favorably on them at the coming session:

"(*a*) That duplication of taxation be avoided as much as possible.

"(*b*) That the income war tax act as regards corporations shall be repealed.

"(*c*) That the present sales tax shall be adjusted so as to provide additional revenue."

Does that not prove our contention that the well-to-do will benefit by the sales tax?

Then to secure greater protection the Canadian Manufacturers' Association requested the following safeguard to their profits:

"In regard to the sales tax we beg to advocate: That as the sales tax is a tax payable by the purchaser, manufacturers and wholesalers should not be

held liable for any taxes which they can not collect owing to the purchaser becoming insolvent or refusing to pay, even though the manufacture or wholesaler has in the meantime advanced the amount of the tax to the Government when making his monthly returns."

This proves effectually that the consumers pay the "sales" tax.

There is no denial of the fact that at least 50,000,000 people, consisting of wage earners and farmers and their families, have expended practically all their savings in endeavoring to keep the wolf from the door. There could be no more cruel method of adding to that suffering than to force them to bear a tax on all purchases they make. Those who advocate such a proposition undoubtedly base their argument on the Biblical injunction:

"For unto everyone that hath shall be given, and he shall have abundance, but from him that hath not shall be taken away even that which he hath."

The last convention of the American Federation of Labor held in October, 1931, reaffirmed its position on the "sales," estate, and gift taxes and adopted the following declaration on all taxation:

"Although defeated year after year in every attempt to saddle the 'nuisance tax' under the name of 'sales tax' upon the people, another campaign has been launched to bring about that legislation in the next Congress.

"High public officials also have advanced the idea that the best way in which income taxes could be increased would be by increasing the exemption of married men to $2,000 and single men to $1,000. The objective of those who pay high taxes is to relieve the well-to-do from taxation and place the burden upon those least able to bear it.

"The argument used in advocating the sales tax has been:

"'If you tax the people so they do not know it they can not object; but if they know they are paying a tax they will object.'

"We pay an indirect tax on every purchase we make. In 1927 only 2.2 per cent of our then 114,000,000 population paid income taxes and three-tenths of 1 per cent paid 95.5 per cent of the total income tax. For 1930 2 per cent of the population paid all the income taxes. These are Treasury figures.

"The only persons to be benefited by the consumption tax are the 2 per cent of the population who pay an income tax. On the other hand, the burden of taxation would fall upon the 98 per cent who do not pay an income tax. Besides they now pay an indirect tax on everything they buy. The sales tax will increase that tax load.

"In all the statements given out in reference to taxation none suggests, that estate taxes should be increased. The greater part of many estates was created without paying any taxes as the taxes were passed on to the consumers. The Federal Government collects an estate tax before the estates are distributed to the heirs. Then those States where the descendants live that have inheritance taxes are credited with 80 per cent of the Federal estate tax collected. The heirs pay the inheritence tax to the States in which they live where such laws are in effect and operative. States that have no inheritance tax laws do not receive the 80 per cent collected by the Government.

"Mr. Andrew Carnegie, one of the richest men in the United States at one time, said that 'the American public is a partner in every large enterprise where money is made honorably.' He added:

"'The growing disposition to tax more and more heavily large estates left at death is a cheering indication of the growth of a salutary change in public opinion. Of all forms of taxation this seems the wisest. By taxing estates heavily at death the States marks its condemnation of the selfish millionaire's unworthy life. It is desirable that nations should go much further in this direction. Indeed, it is difficult to set bounds to the share of a rich man's estate which should go at his death to the public through the agency of the State, and by all means such taxes should be graduated, beginning at nothing upon moderate sums to dependents, and increasing rapidly as the amounts swell.'

"In a message to Congress in 1907, Theodore Roosevelt said:

"'A heavy progressive tax upon a very large fortune is in no way such a tax upon thrift and industry as a like tax would be on a small fortune. No advantage comes either to the country as a whole or to the individuals inheriting the money by permitting the transmission in their entirety of the enormous fortunes that would be affected by such a tax.'

"It always has been the belief of the American Federation of Labor that the most just forms of taxing great wealth are through the estate, gift, and inheritance taxes as there is no question of the ability to pay.

"Dr. Thomas S. Adams, the famous authority on taxation and formerly financial adviser for the United States Government, declared that, 'If we must tax it is better to tax him who merely receives than him who earns.'

"The executive council is alarmed at the persistent agitation of the well to do to relieve themselves of taxation. Because of that fact we urge upon all State federations of labor, city central bodies and local unions to urge their respective United States Senators and Representatives to vote against the enactment of a sales tax. They should also insist upon an increase in the estate tax and the restoration of the gift tax as they are the fairest taxes collected by the Government.

"Forty-five States have inheritance tax laws. Alabama, the District of Columbia, Florida, and Nevada have neglected this source of revenue. The State federations of labor in those States and the District of Columbia should urge the enactment of inheritance tax laws. It is generally believed that the three States and the District of Columbia have not enacted inheritance tax laws because they wished to induce persons of great wealth to become residents. Representatives of these States named also appeared before the House Ways and Means Committee in 1929 and urged repeal of the estate tax. This was to still further encourage wealthy people to go to those States and become residents. Congress, however, refused, declaring that no more just tax could be collected. The exemption provided for in the estate tax law are $100,000 and the cost of administration. This cost is sometimes as high as $50,000.

"Few, if any, heirs of a large estate have had anything to do with its accumulation. Their legacies can be termed gratuities. Therefore, there is no doubt of the ability to pay the inheritance tax, which is paid to the States having such laws. We, therefore, recommend that more stringent State inheritance tax laws be enacted so that the great sums accumulated from the consuming public will be more equitably distributed.

"A tax that should not have been repealed was the Federal gift tax. The executive council, therefore, believes that before considering an increase in any other taxes, the estate and inheritance taxes should be increased and the gift tax restored. In these three taxes there is no doubt of the ability to pay.

"If the sales tax is established and exemptions are reduced, then the taxes of the well-to-do will be greatly reduced and the burden placed on those least able to pay.

"Members of Congress should not forget that while wages were increasing from 1923 to 1929 only from $11,000,000,000 to $11,421,000,000, corporation dividends were increasing during the same period from $930,648,000 to $3,478,000,000. Net additions to profits of banks were increasing from $279,000,000 to $550,000,000, and interest paid to bondholders was increasing from $2,469,000,000 to $7,588,000,000.

"Congress, therefore, will find a fertile field from which to garner more income tax, if needed, among those who are well able to pay."

The report was referred to the committee on legislation, which unanimously approved of the recommendations of the executive council and called especial attention to this statement made in that report:

"Members of Congress should not forget that while wages were increasing from 1923 to 1929 only from $11,000,000,000 to $11,421,000,000, corporation dividends were increasing during the same period from $930,648,000 to $3,478,000,000. Net additions to profit of banks were increasing from $279,000,000 to $550,000,000, and interest paid to bondholders was increasing from $2,469,000,000 to $7,588,000,000.

"Congress, therefore, will find a fertile field from which to garner more income tax, if needed, among those who are well able to pay."

STATEMENT OF DANIEL R. FORBES, REPRESENTING THE NATIONAL PRESERVERS ASSOCIATION, WASHINGTON, D. C.

The CHAIRMAN. You may proceed, Mr. Forbes.

Mr. FORBES. Mr. Chairman and gentlemen of the committee, I represent the National Preservers Association. The National Preservers Association represent approximately 85 per cent of the fruit production, in the terms contained in the production of fruit for preservation.

In event this committee goes back to a serious consideration of a general sales tax, we would like to say that we are generally in favor of a tax on fruit products or tax none of them under a general sales tax.

When the Ways and Means Committee brought out this bill, you remember it exempted certain fruit products. We suppose that was predicated upon the idea of a separation of certain things that were necessities from those that were luxuries. As a matter of fact, I think there is a great deal of canned products that should be taxed absolutely, such as canned fish and canned meats, and which do not bear a tax and sell up to 50 cents a pound, whereas peanut butter, selling for 8⅓ cents a pound, would be subject to a tax.

There is another thing to consider: In many sections of the United States jams and jellies selling under 20 cents a pound are used by people who can not get butter or where it is inconvenient for them to get it. We do not see how Congress can work up a list of exempted food products without doing injustice to a large number of products that are daily necessities of the people.

I would like to direct the attention of the committee to the fact that the human stomach is only so large, can contain only so much food, and that every food product competes with every other food product.

So we say that if food products are to be taxed and the taxing power is to be invoked we want ours to be taxed along with others; we want to do our share, but we do not think that it is proper and we think it is unfair competition between necessities of life if they are not taxed equally.

The CHAIRMAN. Thank you.

MANUFACTURERS' EXCISE TAX

PROPOSED TAX ON OIL

STATEMENT OF HON. MILLARD E. TYDINGS, UNITED STATES SENATOR FROM THE STATE OF MARYLAND

Senator TYDINGS. Mr. Chairman and gentlemen of the committee. In order to be as brief as possible, I have reduced what I desire to say on the oil question to writing.

This tariff was injected into the revenue bill in the House by tariff proponents. It had been excluded from the bill on its merits by the committee after full hearings, when proponents were heard twice, to one hearing for the opposition. The Treasury had reported the tariff of 1 cent a gallon on crude, fuel and gas oil and 2 cents a gallon on gasoline, would being no revenue, being prohibitive.

Oil tariff proponents then led the committee to infer that a gasoline tax of 1 cent a gallon would not diminish imports and, in return for a promise of 40 votes to support the sales tax, secured committee approval of a tax of 1 cent on imported crude oil, per gallon, 1 cent on imported fuel and gas oil, per gallon, which the Treasury reported would produce no revenue at all—and of 1 cent per gallon on gasoline which, by some unexplained calculation, is estimated to bring $5,000,000 into the Treasury. Secretary Mills, before this committee, passed responsibility for this estimate to another department of Government.

It is certain that in this tariff [illegible] bill, you have three items—the tax on crude, the [illegible] on gas oil—that will produce no revenue [illegible] ght. The tax is 70 per cent ad va[illegible], and we import mo[illegible] oils and their products than we export.

In 1931 the figures were as follows:

	Barrels
Exports for 1931:	
Crude oil	[illegible] 000
Refined products	[illegible] 000
Bunker fuel oil, foreign bound	[illegible] 000
Total	[illegible] 000
Imports for 1931:	
Crude oil	[illegible] 000
Refined products	[illegible] 000
Total	[illegible] 000

The total imports [illegible] 86,0[illegible] barrels as against 168,229,000 barrels exp[illegible]

But the tax of 1 cent [illegible] on gasoline also will be barren of revenue. It is 25 per cent of the [illegible] (4 cents a gallon) at American refineries. Besides, [illegible] only 13,621,000 barrels, and exported 45,332,000 [illegible] three times as much.

Those 1931 imports will naturally go to European countries where there is no discriminating tax and back up just that amount of gasoline ordinarily exported from here, into the American market. Or, the oil may be imported here as crude, the gasoline and fuel oil extracted, and all exported, receiving the drawback.

However it works out, those four items will produce no revenue at all.

But even assuming they will produce the one-half of 1 per cent of the total needed revenue calculated; the net result is a deficit.

And mark what I am about to say, gentlemen, as something exceptionally worthy of consideration.

The American Government is the largest consumer of all oils. In fuel oil, gasoline and lubricants, the Government uses, according to the Oil Conservation Board, 20,000,000 barrels a year or 840,000,000 gallons. Our Government buys in the open market. It pays the price the public pays. Proponents of this tax admit prices will go up, by the amount of the tariff for crude and fuel oils. Their argument that gasoline will not also rise is baseless and is belied by the rise in gasoline price that has already been posted since this schedule was passed by the House.

On the 840,000,000 gallons of all oils our Government uses, it will pay an increased price of at least $8,400,000 every year—an addition to the deficit. If by an economic miracle the gasoline schedule produces $5,000,000 as estimated, we still have a deficit of over $3,000,000 as a result of this section of the revenue bill. What additional tax can we impose to make up this deficit?

We are therefore considering, in a bill intended only to produce revenue, a measure to create a net deficit, however, we look upon it. This should go into some bill for outgo, not for income for our Government.

So much for the propriety of this measure as a revenue producer. It simply is not that kind of a measure with reference to fuel oil, or gasoline or crude.

It is also because of the sure effect of this measure on the American public that I oppose it. It should be opposed by all members of the committee.

The increased cost to the industrial, motoring, house owning, and farming public will be—if the effect admittedly desired and predicted by the proponents, and already indicated by higher fuel oil and gasoline prices, eventuates—over $300,000,000 every year.

Increased cost of gasoline, 1 cent on 15,853,000,000 gallons	$158, 853, 000
Increased cost of fuel oil, 1 cent on 14,642,960,000 gallons	146, 429, 000
The total increased cost, therefore, is (per year)	305, 282, 000

Right now, when all industry is stagnant and prices are at the lowest for years, when the 25,000,000 motorists are put to it to get the small change needed to buy their daily gasoline supply, when our farmers can not pay their taxes, is no time to penalize them all for the supposed benefit of the one industry that has enjoyed a price increase from depression low, an increase of from 90 to 800 per cent. Oil is going up—has been going up since last August, and every other commodity, especially farm produce, is down to bedrock. Why further penalize all of us for the sole benefit and privilege of the sole industry on the upgrade. and still going up? The oil man's

prices are up. This tariff would tax us all for the further enhancement of his prices.

But it is not the producer in the mid-west who would benefit. The record of hearings in the House contains a presentation by Congressman Nelson of Maine, which you should all read, and which shows:

Twenty major companies own 97 per cent of the 623,000,000 barrels of oil in storage, and the stored oil is 70 per cent of one year's supply. The $300,000,000 tribute on the public this measure imposes, will go direct to those companies in unearned increase in inventory values. No wonder they do not oppose this measure.

The tariff umbrella will enable them to raise their prices, as they have already done. They control the pipe-line transport, the refining and the service station outlets, and produce about half of all the oil. They need no help; but the proceeds of the tribute set up by this measure goes right to them, and not to the so-called independent who, however innocently, are here working for further privilege for the major oil companies.

What wonder Mr. Gallagher, the new president of the Consolidated Sinclair and Prairie companies stated publicly:

> That he favored the proposal to levy a duty on foreign oil and thought that if it went through the oil market would benefit temporarily at least. (New York Sun, March 23, 1932.)

And what wonder that Mr. Sinclair himself has publicly stated:

> I voted for the tariff on crude oil importations and am definitely in favor of a high protective tariff on oils. A tariff would help, as anything that would reduce the supply would naturally strengthen prices and create a greater demand for American-produced oils. (New York Sun, November 19, 1931.)

There is frankness. The majors want the public forced by a tariff to pay higher prices so they may profit. We all would enjoy that privilege, but it is the expense to the public to which I object and to which I believe the committee will or should object.

The State of Maryland alone will lose or pay up $10,000,000 of this tribute—twice the maximum of so-called revenue estimated.

The farmers of the country will pay $38,000,000 of this gross tribute on the 3,800,000,000 gallons of gasoline alone that they consume.

We all will pay. The major companies will profit, the Government will lose, and our oil supply, now estimated as good for a scant 19 years if intensively produced, will be the sooner depleted, leaving us to the tender mercies of European and Asiatic oil enterprises for our most important fuel.

To summarize—this tariff in a revenue bill will, then, produce no revenue, according to our Government agents and experts; it will increase the national deficit, according to our own revenue experts; it will burden the public—conceded to do so by those who advocate the measure; it will enrich the major companies that need no help. The facts prove this point; it will hasten the depletion of our own oil resources; a fact that needs no further argument; it will stir up a maelstrom of tariff haggling when we can least afford delay in the important matter of balancing the Budget.

In the few moments that remain, I would like to insert in the record book valuation and estimated quantities of crude and refined oil inventories, which shows that the 32 large companies have now in

storage and in their pipe lines nearly a year's oil supply, and that they will be the beneficiaries of this increase in price.

(The tabulation of book valuation and estimated quantities of crude and refined oil inventories is here printed in the record in full as follows:)

Book valuation and estimated quantities of crude and refined oil inventories, showing approximate distribution of oil stocks among companies listed below

[Data as of December 31, 1930, unless otherwise noted]

Company	Actual valuation as per balance sheets	Percentage of 32 companies	Estimated barrels in storage
		Per cent	
Standard Oil Co. of New Jersey	$233,845,360	19.6	130,144,000
Standard Oil Co. of New York	136,707,056	11.5	76,083,000
The Texas Corporation	123,461,068	10.4	68,711,000
Standard Oil Co. of Indiana	117,198,969	9.8	65,220,000
Prairie Oil and Gas Co	69,978,535	5.9	38,940,000
Gulf Oil Co. of Penna	65,029,844	5.5	36,192,000
Standard Oil Co. of California	55,125,383	4.6	30,670,000
Vacuum Oil Co.[1]	48,342,115	4.1	26,904,000
Shell Union Oil Corp	47,471,046	4.0	26,420,000
Union Oil Co. of California	38,066,112	3.2	21,185,000
Tidewater Associated Oil Co.[2]	36,070,844	3.1	20,412,000
Ohio Oil Co.[1]	29,379,042	2.5	16,351,000
Atlantic Refining Co.[1]	28,132,843	2.4	15,658,000
Sinclair Consolidated Oil Corporation	24,085,948	2.0	13,405,000
Continental Oil Co	22,652,985	1.9	12,607,000
Sun Oil Co.[2]	13,720,660	1.2	7,636,000
Phillips Petroleum Co	13,394,754	1.1	7,455,000
California Petroleum Co	13,204,494	1.1	7,349,000
Pure Oil Co.[3]	12,334,602	1.0	6,864,000
South Penn Oil Co.[1]	9,897,629	.8	5,508,000
		95.7	
Richfield Oil Co. of California [1]	8,322,377	.7	4,631,700
Mid-Continent Petroleum Co	7,825,223	.66	4,355,000
Standard Oil Co. of Ohio [1]	7,318,768	.61	4,073,000
Pan American Petroleum & Transportation Co.[4]	6,850,949	.57	7,310,000
Standard Oil Co. of Kentucky	5,730,423	.48	3,189,000
Barnsdall Oil Corporation [1]	5,388,516	.45	2,982,000
Rio Grande Oil Co	4,474,067	.37	2,490,000
Simms Petroleum Co	2,683,065	.25	1,493,000
Standard Oil Co. of Nebraska [1]	1,047,374	.08	583,000
Standard Oil Co. of Kansas	858,029	.07	477,000
Amerada Petroleum Co	688,618	.06	383,000
Wirt Franklin Petroleum Co	293,407	.02	163,000
		4.3	
Total of 32 companies above	1,190,156,002	100.00	665,870,000

[1] Includes merchandise inventories.
[2] As of June 30, 1931.
[3] As of Mar. 31, 1931.
[4] Figures for Pan American represent actual valuation and quantities of oil stored in United States, but not stocks held in foreign countries.

NOTE.—Valuations are actual figures as per balance sheets from Poor's Manual. Calculation of barrels in storage is on the assumption that these companies held 100 per cent of all stocks as reported by United States Bureau of Mines at December 31, 1930. Actual barrelage figures are in most cases unavailable. The figures in the third column may therefore be greater or less than the actual stocks held by many of the companies listed.

Oil in storage in the United States at December 31, 1930

[U. S. Bureau of Mines]

	Barrels
Crude oil	512,797,000
Gasoline, including natural	41,119,000
Other refined products	111,954,000
Total liquid stocks	665,870,000

Senator TYDINGS. Also a table showing in the United States the crude petroleum production by districts, which shows the amount the production has dropped off during the depression. The greatest decrease is 17 per cent in the California district from the year 1927 to date. While the imported oils have dropped off 19 per cent. So that the importation has declined more than our local production.

(The table showing in the United States crude petroleum production by districts is here printed in the record in full, as follows:)

United States crude petroleum production, by districts

[Barrels of 42 gallons]

Year	Eastern [1]	Mid-Continent [2]	Gulf coast [3]	Rocky Mountain [4]	California [5]	Imports (all oil) [6]
1927	40,448,000	546,987,000	52,069,000	30,429,000	231,196,000	71,736,000
1928	40,748,000	553,027,000	46,689,000	29,199,000	231,811,000	91,557,000
1929	47,136,000	584,280,000	57,106,000	26,267,000	292,534,000	108,710,000
1930	46,058,000	531,447,000	60,676,000	23,501,000	227,329,000	105,618,000

[3] Off 17⅛e per cent in 1930-31.
[4] Off 13 per cent in 1930-31.
[5] Off 17 per cent in 1930-31.
[6] Off 19 per cent in 1930-31.

Figures from Bureau of Mines.

Senator TYDINGS. I would also like to insert a table showing a comparison of domestic production of crude petroleum with imports of crude petroleum and refined petroleum products from 1929 to 1931. This shows that in the United States last year the percentage of decrease was 5.32, while the percentage of decrease of imported crudes was 18.50—over three times as much.

(Statement showing comparison of domestic production of crude petroleum with imports of crude petroleum and refined petroleum products, 1929–1931, is here printed in the record in full, as follows:)

Comparison of domestic production of crude petroleum with imports of crude petroleum and refined petroleum products, 1929-1931

[Barrels of 42 gallons]

Year	Total domestic production of crude petroleum	Percentage decrease under preceding year	Percentage decrease under 1929	Imports crude petroleum and refined petroleum products	Percentage decrease under preceding year	Percentage decrease under 1929
1929	1,007,323,000			108,565,000		
1930	898,011,000	10.85	10.85	105,618,000	2.71	2.71
1931	850,261,000	5.32	15.59	86,082,000	18.50	20.71

Figures from Department of Commerce.

Senator TYDINGS. I would also like to put in the tank-wagon prices of gasoline for various cities in the country, which table is self-explanatory and which I will not detail further here.

(Statement of tank-wagon prices is here printed in the record in full, as follows:)

Tank-wagon prices of gasoline (exclusive of tax) [1]

[Prices in effect January 4, 1932, as posted by principal marketing companies]

Senator TYDINGS. And finally, to read several lines from the hearing yesterday in the testimony of the Secretary of the Treasury [reading:]

Secretary MILLS. Senator Hull, you have no illusions—I know some people have, but you have none—as to the character of the two items in this bill.

Senator HULL. I was just hoping that I had not.
Secretary MILLS. I certainly have not. They are not revenue measures. They are protective tariff measures.
Senator SHORTRIDGE. Would not they raise some additional revenue, Mr. Secretary? We are framing a bill for the purpose of securing additional revenue.
Secretary MILLS. Not carfare, though, Senator.

That shows what the Treasury Department thinks of this provision as a revenue measure.

I thank you.

Senator GORE. Mr. Chairman, I ask leave to insert at this point an estimate prepared by the Independent Oil Producers Association, showing that the House rates would raise revenue amounting to $42,000,000.

The CHAIRMAN. It may be put in the record at this point.

(The estimate prepared by the Independent Oil Producers Association, presented by Senator Gore, is here printed in the record in full, as follows:)

Potential revenue from imports of petroleum and its products based on average for the three years 1929, 1930, and 1931

Crude oil, 2,636,367,888 gallons at 1 cent	$26,363,678
Fuel and gas oil, 1,002,734,334 gallons at 1 cent	10,027,343
Gasoline, naphtha and other finished light products, 551,349,414 gallons at 1 cent	5,513,494
Total	41,904,515

The United States Tariff Commission reports a differential of $1.03 per barrel between domestic and foreign production costs. The addition of an excise tax of 42 cents per barrel, therefore, would not consititute an embargo and should not decrease these estimated revenues in any marked degree.

The sections of the present revenue bill providing for the excise tax on foreign petroleum products should be amended to include the following which would prevent evasion through false declarations and would also add a substantial amount to the revenue receipts.

Tops and other refined distillates, 2,717,534 gallons at 1 cent	$27,175
Kerosene, 5,873,994 gallons at 1 cent	58,739
Lubricating oil, 1,339,548 gallons at 4 cents	53,581
Paraffine and petroleum wax products, 46,928,711 pounds at 1 cent	469,287
Natural asphalt, and petroleum asphalt and bitumen, 73,770 long tons at $2	147,540
Total	756,322

Amendment of the bill to impose a tax of 3 cents per gallon on gasoline would produce a total revenue of $16,540,482 instead of only $5,513,494.

STATEMENT OF C. B. AMES, REPRESENTING THE TEXAS CO.

Mr. AMES. Mr. Chairman, and gentlemen of the committee, I am one of the directors of the American Petroleum Institute, and also a director of the Texas Co.

Senator REED. What is the American Petroleum Institute?

Mr. AMES. I will state that in a moment, Senator.

There are three proposed taxes on domestic petroleum before your committee. Two of them are embodied in the bill as it passed the House and the other in the Treasury proposal. In the bill which passed the House there is included a tax of 4 cents per gallon on lubricating oils, estimated to yield a revenue of $35,000,000; a tax of 8 per cent on the transportation charge of oil transported by pipe

line, estimated to yield $20,000,000; and in the schedule submitted by the Treasury for your consideration there is included (according to the press) an item of 1 cent a gallon on the domestic consumption of gasoline, estimated to yield $165,000,000. These three items involve a total additional tax of $220,000,000 or approximately 22 per cent of the entire amount which it is proposed to raise by the emergency levies. This enormous burden upon an already overburdened industry is a threat which has aroused the entire industry.

The American Petroleum Institute believes that it speaks the unanimous voice of the entire industry in opposing these taxes, or any of them. The institute is a national organization with a membership of about 3,700 individuals who are connected in important positions with practically every producing, pipe line, refining, and marketing company in the United States. This membership includes many of the important executives of local or regional associations such as the Independent Producers Association of America, the Mid-Continent Oil & Gas Association, the Rocky Mountain Oil & Gas Association, the California Oil & Gas Association, and others. We, therefore, in speaking for the institute believe we speak for the entire industry.

We wish, first, to point out some general objections which apply to all three of the proposed taxes. After this, we will state some particular objections applying to each one. At the outset, we make the bold statement that the petroleum industry at present is burdened with excessive taxation and pays taxes both beyond its ability to pay and beyond its fair share of the cost of government. The three great oil-producing States are Texas, Oklahoma, and California. Of these three States, Texas is the greatest and produces approximately 40 per cent of all the crude oil produced in the United States during 1931. We therefore take the taxation of the industry in Texas as typical of the tax burdens which we bear. In that State we pay the following taxes:

(*a*) A tax of 2 per cent of the gross value of the crude oil at the mouth of the well.

(*b*) An ad valorem tax on all the physical property used in producing this oil.

(*c*) An ad valorem tax on the leasehold interest of the producing company whether the lease is producing oil or not.

(*d*) Ad valorem taxes on all refineries, pipe lines, terminals, bulk stations, and filling stations. In addition, in many of the States which are passing chain-store legislation, our filling stations are included in the chain-store tax. That is not true, however, in Texas.

(*e*) The volume of this taxation in Texas was recently stated by a contributor to the Texas Oil Weekly as follows [reading]:

> It is probable that few States or nations derive so large a proportion of their public revenue from perhaps any product of one business as Texas draws from those in the oil industry. Ad valorem State taxes paid by the oil industry last year amounted to $4,768,000, which was more than one-sixth of all State ad valorem taxes. Its production tax totaled $6,371,000, which was more than one-half of all gross receipts and occupation taxes collected by the State. In addition, the oil industry paid $807,000 in miscellaneous State taxes, bringing this total contribution to State tax revenue to $11,946,000, without counting the gasoline tax. It also paid $15,000,000 in local taxes, including city, county, and school taxes. The gasoline tax of 4 cents per gallon on gasoline sold within the State amounted to $32,208,000, bringing the total of State taxes produced by oil

to $44,154,000, and the total of State and local taxes to $59,154,000. Counting the gasoline tax the oil industry paid 56.8 per cent of the total State revenue from taxation.

When one industry in a great State like Texas, with such vast and diversified resources, pays 56.8 per cent of all the cost of State and local government, no further argument is needed to show that this industry is already overburdened with taxation. And Texas is typical. Other oil-producing States do not have exactly the same system of taxation, but they do not differ in many particulars.

One other thing we wish to say by way of objection to any further discriminatory taxation against this industry. The impression seems to prevail that the petroleum industry is so prosperous that an additional tax of 50,000,000 or 200,000,000 is immaterial. We would be delighted if this were true, but, unfortunately, we are losing money instead of making it. The following table contains a brief statement of the 1931 operations of a number of petroleum companies which were available up to the first of this month.

I am tempted to read that list, if you will bear with me while I do it, because it is illustrative of the general condition of the petroleum industry. [Reading:]

PETROLEUM INDUSTRY EARNINGS, 1931, COVERING MAJOR COMPANIES, FROM REPORTS ISSUED TO APRIL 1, 1932

Amerada Corporation, with an invested capital of $45,778,212, lost $1,701,648.

Atlantic Refining Co., with an invested capital of $190,889,723, showed a profit of $516,453.

Barnsdall Corporation, with earnings adjusted for crude and refined oil stocks to lower of cost or market, with an invested capital of $91,050,415, lost $3,332,727.

Buckeye Pipe Line Co., with an invested capital of $25,331,724, showed a profit of $915,243.

Continental Oil Co., with an invested capital of $277,337,209, lost $10,683,313.

Empire Gas & Fuel Co.—earnings adjusted for crude and refined oil stocks to lower of cost or market—with an invested capital of $215,105,968, lost $2,986,592.

Gulf Oil Corporation, with an invested capital of $599,940,431, lost $23,670,052.

Houston Oil Co., with an invested capital of $58,449,971, lost $356,484.

Humble Oil & Refining Co., with an invested capital of $283,023,766, showed a profit of $2,765,092.

Ohio Oil Co.—earnings adjusted for crude and refined oil stocks to lower of cost or market—with an invested capital of $367,952,707, lost $9,334,138.

Pacific Western Oil Corporation, with an invested capital of $21,120,475, lost $903,124.

Phillips Petroleum, with an invested capital of $241,467,506, lost $5,576,409.

Rio Grande Oil Co., with an invested capital of $51,268,357, lost $2,476,499.

Standard Oil Co., Kansas, with an invested capital of $12,004,343, lost $618,616.

Standard Oil Co., Ohio, with an invested capital of $69,051,348, showed a profit of $2,359,173.

Sun Oil Co., with an invested capital of $107,165,983, showed a profit of $3,107,147.

The Texas Corporation, with an invested capital of $653,401,809, lost $9,954,478.

Texas Pacific Coal & Oil, with an invested capital of $35,806,417, lost $1,413,235.

Union Oil Co. of California—earnings adjusted for crude and refined oil stocks to lower of cost or market—invested capital $327,174,803, lost $4,363,835.

Simms Petroleum Co., invested capital, $26,309,136, lost $2,651,222.

H. T. Wilcox Oil & Gas Co., with an invested capital of $24,347,554, lost $1,069,783.

Skelly Oil Co., with an invested capital of $83,272,811, lost $2,117,110.

The total of these listed shows that they have an invested capital of $3,807,250,668 and that their consolidated earnings showed a loss of $73,546,157, or 1.93 per cent.

Senator COUZENS. Might I ask you at that point how you arrive at your capital invested?

Mr. AMES. Capital, surplus, and reserves.

Senator COUZENS. All put in in cash?

Mr. AMES. All put in in cash, in the case of my own company. I can not speak for the others.

The CHAIRMAN. That is not the case, though, generally, is it, Mr. Ames?

Mr. AMES. I beg your pardon?

The CHAIRMAN. That is not the case generally.

Mr. AMES. I think it is the case quite generally with these companies named. I think this invested capital represents actual money invested in the corporation, part of which, of course, would be out of earnings, not all paid in by the stockholders.

Senator REED. You mean cash contribution, the accumulated earnings?

Mr. AMES. The accumulated earnings.

Senator REED. Accumulated in the business.

Mr. AMES. Yes; plus the amount paid in for the capital stock of the corporation. This is a cross section of the industry, and there is no doubt in my mind but when all 1931 statements are available, it will show a consolidated loss for the entire petroleum industry that reports earnings statements. It is obvious if you add anything to this you are imposing a tax on capital. It can not be anything else but a capital tax, when the industry as a whole is losing money.

Senator COUZENS. You do not know of any company that had any write ups in these capital accounts, do you?

Mr. AMES. There are some companies—I do not know which they are—which at one time wrote up discovery value when they found producing oil on a lease which had cost them little or nothing. That is not true, however, of the principal companies here. It is not true, for instance, of the Texas Co.

Senator COUZENS. They never write up anything at all?

Mr. AMES. Never wrote up a cent for discovery value or anything else. The invested capital is the money invested, in our case, by the company.

Senator COUZENS. Does that include adding to the capital all the money put into dry holes?

Mr. AMES. That is expense. That is deducted from earnings.

Senator COUZENS. That is not put into capital account?

Mr. AMES. That is not put into capital account at all.

Passing now from these general objections which apply to any further taxation on this industry which is not applicable to all industry, I take up the subject of the gasoline tax, and assign the following reasons why there should be no Federal tax on domestic gasoline. My remarks are not addressed to the excise on imports, but purely to the tax on domestic products.

The gasoline tax is an important and necessary source of State revenue and the States have already imposed a tax on gasoline far beyond all reasonable bounds. The highway program of the States rests on

the gasoline tax. There are more than $1,000,000,000 of State highway bonds, the payment of which is predicated on the State gasoline tax.

There is no possible excuse for a gasoline tax except for highway uses. The gasoline tax was originally intended to improve the roads and it was thought that as the automobile uses the roads, a gasoline tax for road purposes was just. The soundness of this principle has never been challenged but the gasoline tax has increased so rapidly and in recent times, the tendency to impose a gasoline tax for other purposes has become so noticeable that the public is beginning to demand an end of gasoline tax increases, a beginning of reductions, and the exclusive use for highway purposes.

At present the gasoline tax in the various States ranges from 2 cents to 7 cents a gallon. The average is slightly in excess of 4 cents a gallon. During 1931, the average refinery price for gasoline in the mid-continent area was less than 4 cents per gallon. The gasoline tax, therefore, is now equal to 100 per cent of the value of the product in the hands of the manufacturer.

I passed around for the consideration of the members of the committee a chart which will show the growth of the gasoline tax. The top line shows the price of crude oil over a period of years; the bottom shows the price of gasoline, and the space between the two lines shows the growth of the gasoline tax.

Senator GORE. That is the price of the gasoline at the refinery or the filling station?

Mr. AMES. At the refinery; and vast quantities of gasoline in Oklahoma were sold by the refineries last year for less than 4 cents a gallon.

Senator GORE. And some a good deal less; some less than three.

Mr. AMES. Some about two and a half.

Senator GORE. Yes.

Mr. AMES. I have distributed also to the members of the committee a pamphlet showing the statements that were made to the House Ways and Means Committee, on pages 22 and 23 of which you will find a history of the gasoline taxation.

In 1919 the first gasoline tax was passed, and by 1931 there was a gasoline tax everywhere, going up as high as 7 cents in two States. I would like to have that table shown on those two pages inserted in the record, if the committee will permit.

The CHAIRMAN. Without objection, it will be done.

(The table presented by Mr. Ames is printed in the record in full as follows:)

United States Department of Agriculture, Bureau of Public Roads—Gasoline tax rates by years and dates of rate changes

[As reported by State authorities]

[2] And District of Columbia.

Senator GORE. Judge, did casing-head gas get down below 2 cents?
Mr. AMES. Casing-head gas got down below 1 cent.
Senator GORE. That is what I thought.
Mr. AMES. It got down to a point where they could hardly give it away.
Senator COUZENS. As I understand the position you are taking, it is that the gasoline tax reimburses the States for all the capital they invested in good roads.
Mr. AMES. Yes, sir.
In 1931 the total gasoline tax paid in the United States was $549,150,000. During the same period the total crude oil production was 850,275,000 barrels. The average price received by the producer for his crude oil was 67 cents per barrel.
The CHAIRMAN. Is that net?
Mr. AMES. That was the weighted average gross that he received at the mouth of the well.
Senator GORE. That aggregated how much in dollars?
Mr. AMES. I have not it figured, Senator.
Senator GORE. It would be about two-thirds of your total?
Mr. AMES. About two-thirds of the 850,000,000 or about five or six hundred million dollars.
Senator GORE. Yes.
Mr. AMES. The gasoline tax, therefore, when related back to the crude production, was equal to 64.5 cents per barrel, with 67 cents a barrel for his crude.
Senator GORE. That makes the point.
Mr. AMES. Put in another way, the oil industry received 67 cents per barrel for its crude production, and by the time the refined product was put into consumption, there was added to it 64.5 cents per barrel, under the name of a gasoline tax. The States, therefore, receive a net revenue from the petroleum industry of 64.5 cents per barrel on the total crude produced as against a gross revenue received by the producers of 67 cents.
Senator GORE. And a good deal of that was produced at a loss?
Mr. AMES. It was practically all. The average cost of producing crude, according to the Tariff Commission, was $1.09 per barrel at the mouth of the well, so that the average producer lost 40 cents a barrel on his crude during the year 1931, on all of it, on an average. The only producer who made any money in 1931 was the man who had the flowing wells, the flush pools.
Senator GORE. The prices down in east Texas got as low as 10 and 15 cents a barrel.
Mr. AMES. Got down to 10 cents?
Senator GORE. Yes.
Mr. AMES. In Oklahoma got down to 10 cents. Thirty-six gravity crude in Oklahoma got to 18 cents. When other taxes are added to the gasoline tax, the oil industry paid, during 1931, more than 100 per cent of the total value of its crude oil production.
Senator COUZENS. I hardly see how those figures have much relation to each other, when it is considered the gasoline tax is for roads and other activities and for the use of motor cars.
Mr. AMES. It shows the burden on the oil industry as a whole has gotten to the point where it is almost confiscation. It has certainly

reached a point where taxation has taken from the industry more than the gross value of its crude product.

The CHAIRMAN. You lost 40 cents a barrel last year, you say?

Mr. AMES. Crude was produced on an average of 40 cents less than cost.

The CHAIRMAN. Less than cost?

Mr. AMES. Yes.

The CHAIRMAN. And how many barrels were produced?

Mr. AMES. Eight hundred and fifty million. That is a loss of over $320,000,000 on the average.

The CHAIRMAN. What did you do; borrow money?

Mr. AMES. Senator, I heard a question asked at lunch that in a way answers your question. I do not mean to introduce levity into this discussion, but the question was asked of an oil producer, what is the difference between a major company and an independent? His answer was that the major company is broke, but the banks do not know it, while the independent does not know he is broke, but the banks do. [Laughter.] The simple fact is that there is not anybody in the oil industry making any money. They are hanging on by their teeth. There are more than 50 oil companies in the hands of receivers to-day.

The CHAIRMAN. It seems to me that if you lost $320,000,000 last year you, at least, would not produce any more than there was a demand for, at a reasonable price.

Mr. AMES. I wish I had time to discuss that subject, Mr. Chairman.

The CHAIRMAN. Never mind, if it is going to take any time.

Mr. AMES. The only reason oil is being produced as abundantly as it is is because when a man has got a 10-acre lease in a pool and drills a well in it, everybody else has got to do the same thing or see their oil taken from under their land by what is beginning to be thought in the industry as theft.

The CHAIRMAN. I would rather have it taken than lose 30 per cent.

Mr. AMES. That is the only oil that is being produced at a profit. The oil from wells that are flowing is the only oil that is being produced at a profit.

Senator COUZENS. Then you do not charge any of this gasoline tax to the motor-car industry at all; you charge it all up against the oil industry, is that it?

Mr. AMES. If you look at that chart you will see that while the user or consumer pays the tax, the price, plus tax, has been going down, and it is now cheaper with the tax than it was without the tax a little while ago.

Senator COUZENS. You assume then that the gasoline tax influenced the low price on the crude?

Mr. AMES. Yes. I assume that it does, to this extent: The crude is being crowded into an unwilling market. Taxes are being piled up on it. The producers of the gasoline, in order to sell their product, keep cutting the price, and the result is that while the purchaser pays the tax, the gasoline plus tax is being sold for less than the gasoline without a tax a few years ago. If the price of gasoline was as high now, with the tax, as it was in 1919, without the tax, there would not be half as much consumed. So it is the low price which makes the consumption possible.

Gasoline consumption is already on the decline. It would be declining much more rapidly were it not for the fact that gasoline itself is so cheap that the exorbitant taxes still leave it selling so reasonably.

Senator GORE. A year ago, if you remember, Judge, when crude oil was selling at less than a dollar, gasoline was selling at about the same level at which it sold when crude oil was $3.

Mr. AMES. No. In 1920 when crude was selling for $3, gasoline was selling for 32 cents. (See chart.)

Senator GORE. It was 18 cents.

Mr. AMES. Yes. A year ago; 18 cents including tax.

Senator GORE. I do not know what the figures show now.

Mr. AMES. Now the gasoline is a little over 13 cents on an average of 50 cities, not including tax.

Senator GORE. It sold at 18 plus when crude oil was $3 a barrel.

Mr. AMES. No, it sold, Senator, at that time for—well, the average was 32 cents in 50 cities in 1920.

The CHAIRMAN. What? Gasoline?

Mr. AMES. Gasoline.

The CHAIRMAN. What time was that?

Mr. AMES. That was in the year 1920. You will see it on the chart before you. The average price in 50 cities was 32 cents.

Senator COUZENS. Then your assumption is that if there had been no tax on gasoline, the levels of the crude would have been higher?

Mr. Ames. Yes.

The CHAIRMAN. I never paid that much for gasoline in my life.

Mr. AMES. That is the record, Senator. That is the average of 50 cities.

I am going to read a list of the States in which the consumption of gasoline declined last year and give you the tax in each State:

Alabama, 5 cents; Arizona, 5 cents; Arkansas, 6 cents; Georgia, 6 cents; Idaho, 5 cents; Mississippi, 5½ cents; Montana, 5 cents; New Mexico, 5 cents; North Carolina, 6 cents; North Dakota, 3 cents; Oklahoma, 5 cents; South Dakota, 4 cents; Tennessee, 7 cents.

It is rather significant that the States in which the gasoline consumption is declining are the States where the taxes are high. Another thing to bear in mind in considering whether you are going to impose any additional burden on this industry is the prospect for the future. The industry estimates a sharp decline in consumption of gasoline this year. The figures of automobile registration for the year 1932 are not yet available in any accurate form, but we have assembled the registration figures for the State of Texas. In that State the following figures are shown:

On March 25, 1931, there were 858,137 passenger cars; on March 23, 1932, there were 776,131, or a decrease of 82,006.

Of trucks, on March 25, 1931, there were 135,897; on March 23, 1932, there were 118,795, or a decrease of 17,102.

Trailers, on March 25, 1931, there were 11,956; on March 23, 1932, there were 11,782, or a decrease of 174.

Motor busses, on March 25, 1931, there were 1,011; on March 23, 1932, there were 569, or a decrease of 442.

Motor cycles, on March 25, 1931, there were 1,965; on March 23, 1932, there were 1,519, or a decrease of 446.

Therefore, in total, on March 25, 1931, there were 1,008,966; on March 23, 1932, there were 908,796, or a decline of 100,170.

Senator GORE. That means from the 1st of January up to those respective dates.

Mr. AMES. Yes. That is the total registered for that 3-month period. So there is a decline in registration in Texas of 10 per cent this year.

I have a tabulation here which shows what it would cost a number of States to add a tax of 1 cent on gasoline. This table indicates for the States named the present gasoline tax, the estimated 1931 gasoline consumption, and the cost to each State of an additional tax of 1 cent. [Reading:]

State	Present tax	1931 consumption (estimated)	Extra cost	State	Present tax	1931 consumption (estimated)	Extra cost
	Cents				*Cents*		
Utah	4	61, 175, 000	$611, 750	Washington	5	272, 608, 000	$2, 726, 080
Indiana	4	481, 471, 000	4, 814, 710	Rhode Island	2	98, 157, 000	981, 570
Pennsylvania	3	1, 062, 602, 000	10, 626, 020	Mississippi	5½	115, 224, 000	1, 152, 240
California	3	1, 401, 544, 000	14, 015, 440	Georgia	6	221, 893, 000	2, 218, 930
Michigan	3	521, 584, 000	8, 215, 840	Massachusetts	3	577, 197, 000	5, 771, 970
New Hampshire	4	68, 305, 000	683, 050	Kentucky	5	176, 203, 000	1, 762, 030
Connecticut	2	248, 927, 000	2, 489, 270	Texas	4	826, 107, 000	8, 261, 070
Wisconsin	4	455, 649, 000	4, 556, 490	Oklahoma	4	300, 357, 000	3, 003, 570
Idaho	5	59, 753, 000	597, 530	Colorado	4	176, 494, 000	1, 764, 940
				Tennessee	7	214, 369, 000	2, 143, 690

Another thing about the gasoline tax which is a real problem in the industry and which is causing very great and serious concern throughout the United States is the problem of tax evasion. Where a man can evade the tax and save 7 cents a gallon there is a premium put on evasion and it has incited a new racket that we call "bootlegging" in the petroleum industry. It has resulted in criminal prosecutions in a number of States. The industry is up in arms about it. It is doing everything possible to cooperate with the State officials to stop the evil. Any addition to that tax accentuates the evasion.

I now pass to some specific objections.

Senator GORE. Mr. Chairman, I would like to reserve the right to insert at that point, and exercise it later on if I decide to, a report by an associate of Judge Ames, Mr. Hill of the Texas Co., after a survey made in the various States, indicating the extent to which this "bootlegging" prevails and how it has developed into a racket.

The CHAIRMAN. That may be done.

Mr. AMES. The House Ways and Means Committee heard us on the gasoline tax and did not vote it. The statements that were made before the Ways and Means Committee have been reprinted by us and placed on the desks of the Senators. Would it be possible, Mr. Chairman, to have these printed in your record?

The CHAIRMAN. We have the House hearings.

Mr. AMES. I would like, in all events, to have pages 22 and 23 put into your record.

The CHAIRMAN. That has been done, I believe.

Mr. AMES. And if any of you are interested in the House hearing on the subject, it has been reprinted here in convenient form for your use.

The petroleum industry had no opportunity for a hearing before the House on the tax on lubricating oils. That was put in after the hearings closed, and, therefore, this is the first time we have been able to present our objections to a tax on lubricating oils to the Congress.

The tax imposed by the House committee is 4 cents a gallon on lubricating oils falling within ranges 20 to 70 of the Society of Automotive Engineers' grades. The Society of Automotive Engineers, as its names indicates, is a society of engineers representing the automobile industry. It is not a society representing the petroleum industry. These viscosity numbers 20 to 70 simply mean so many different grades of oil, 20, 30, 40, 50, 60, and 70, indicating greater or lesser viscosity. Twenty years ago there were no such grades. Of the lubricating oils made by the refining industry at that time none would fall within these classifications. So these ranges are arbitrary, advisable, and constructive, so that the oil industry can make an oil which the maker of the automobile wants for his particular machine. They are suitable in different seasons of the year, for different classes of cars, trucks, and so forth.

This tax of 4 cents a gallon on lubricating oils, as defined by the House committee, is one which simply invites people to avoid its payment. In the process of refining lubricating oils, in the main, in order to get these particular grades, oils outside of those grades are first manufactured and then blended, so that your original manufacturer is not subject to the tax. If a consumer wants to do his own blending, all he has to do is to buy the higher and lower viscosities and mix them. If any one of the 200,000 service stations in the United States wants to evade this tax, all it has to do is to buy the product of the refinery outside of these grades, and then mix them at the filling station and pay the tax if you catch it. But you are not going to police 200,000 service stations.

Senator REED. The service-station man does not even need to do that, does he? He can put in a pint of one and then a pint of the other and call it a grade.

Mr. AMES. Certainly; he can mix it in the crank case of the car. He does not need to violate the law at all. The estimated revenue from this tax is $35,000,000. There were about 20,000,000 barrels of lubricating oils made in 1931. You can use almost any sort of oil for lubrication. Of that 20,000,000 barrels, approximately 5,000,000 were used in the arts, for printer's ink, and things like that, not used for lubrication. Of the remainder, about 9,000,000 as made by the manufacturers fell outside of those ranges. So that it would not be subject to the tax unless the man blends it, and why blend it when you are penalized 4 cents a gallon for blending? That leaves about 6,000,000 barrels made at the refineries which would fall within these ranges under normal processes of manufacture, and your revenue is 4 cents on 6,000,000 instead of $35,000,000.

Another thing in connection with this tax is that great quantities of lubricating oils are used in industry and are sold at from 8 to 12 cents a gallon. I imagine that the House in passing this tax was thinking about the 25 cents a quart product at the filling station. They were probably not thinking about industry at all. But the tax on industrial oils will increase the cost from one-third to one-half.

Typical examples of the effect of the tax upon manufacturers or particular industries are as follows:

Railroads are large consumers of car oils and black oils for which they pay approximately 10 cents a gallon. The tax, therefore, is an addition of 40 per cent.

Street railroads are likewise large consumers of such oils costing from 8 to 10 cents per gallon.

Cement companies, lumber mills, coal companies, automobile manufacturers are all consumers of large quantities of lubricating oils, and the 4-cent tax would increase their burden approximately 50 per cent.

Senator COUZENS. Would they all come within these viscosities you mention?

Mr. AMES. Some of them would.

The ordinary farm tractor uses a large quantity of lubricating oil. It is estimated by some of the oil companies that 25 per cent of their potential market is found in the farm trade.

Every industry uses lubricating oils and this tax is not only directed against these industries but aganist the automobile user, the farm tractor, and the petroleum industry as a whole.

A lubricating oil is an oil which when placed between two surfaces, one or both of which are in motion, eliminates or reduces the friction. In this machine age it is a vital necessity and enters into every phase of industrial life. Without modern petroleum lubrication practically the only kind of work that could be accomplished in any industry would be that performed by manual operation of the most simple devices. In the arts there are hundreds of purposes for which oils are used that have nothing to do with lubrication, such as ink oil, cable oil, leather oil, rust-proofing oil, pipe-threading oil, electrical-insulation oils, medicinal oils, wood-preserving oils, wool oil, soap oils, putty oils, and many others too numerous to mention, all of which have qualities almost identical with certain grades of lubricating oil. Thus lubricating oil does not have any set properties which distinguish it from these other oils.

Many so-called black oils are sold for lubricating purposes. These are cheap residual products, large quantities of which are used by railroads, mining companies, and so forth. There are many high grade fuel oils produced which have almost the identical qualities and characteristics that are possessed by these black oils. A tax evader could readily purchase one of a number of these high-grade fuel oils and by reselling it as black oil would not only deprive the Government of the revenue but would take the business away from the legitimate source of supply. Similarly a tax evader could purchase oils intended for use in the arts and divert them into lubricating trade.

The proposal to tax lubricating oils having viscosities in the range of S. E. A. 20–70 presents an additional difficulty in that it will encourage the blending by the consumer of oils having viscosities outside the taxable range thus avoiding the payment of any tax. It is quite possible for the bulk of the lubricating oil produced to have viscosities entirely outside the range of the 20-70 specified, and it is also possible by blending oils made outside the range of the proposed law to produce products entirely satisfactory for most uses.

We all know that the evasion of gasoline taxes throughout the country has become a major nation-wide racket, and with the tremendous increased possibilities of evasion which would be possible

under this proposed law it would be difficult to make even a crude estimate as to how much money the Government would collect.

During the year 1929 the total sales in the United States of oil for lubricating purposes and of similar oils for the so-called use in the arts amounted to approximately 20,000,000 barrels. Of this quantity 21 per cent was consumed by commercial motor cars, busses, trucks, etc.; 22 per cent by the automobile; 4 per cent miscellaneous uses; and 53 per cent by industry for commercial lubrication and for the arts. Of this latter 53 per cent we have estimated that slightly less than one-half was used in the arts. I have quoted these figures from a survey made by the McGraw-Hill Publishing Co., which agree substantially with other studies that have been made. There are no figures available as to the exact quantity of oil produced outside the 20–70 viscosity range in the proposed bill but I am told that at least 50 per cent of the refinery production falls outside of this range. The tax under the bill as now written would yield the Government, if you could eliminate the tax evader, a return on one-half of the lubricating oil produced—7,500,000 barrels—of $12,600,000.

There is practically no element of luxury and no nuisance use connected with any grade of lubricating oil. Its consumption is well nigh universal in the work-a-day world. It makes of industry a going concern. Fast transportation, by land, by sea, by air, would be impossible without it. With the tractor, the combine, the electric generator and other mechanical devices in such general use on the farm, the oil companies estimate that 25 per cent of their potential market is found in the farm trade. Our statisticians estimate the refinery value of lubricating oils produced in 1931 at $150,000,000, of which $15,000,000 or 10 per cent was purchased by the railroads. At this time when agriculture and transportation by rail and water are on the verge of collapse it does not seem economically sound to place so heavy a tax on such an essential commodity.

The average price at which one refinery sold its lubricating oils during the month of February was 7.7 cents per gallon. This special excise tax of 4 cents per gallon would be an average tax of 50 per cent. On the higher grades of lubricating oils it would be much less, but on the large volumes of black oils it would be from 100 to 150 per cent. There is no industry in the United States which is taxed so heavily or in so many devious ways as is the oil industry. But no tax heretofore assessed or even proposed had been so obnoxious to the large majority of the industry who carry on their business in a legitimate way or so welcome to those few who would evade the law as the tax on lubricating oil which Congress now proposes.

Reasons why paragraph (D) (1) of section 601, the special excise tax on lubricating oils, should be eliminated.

1. The effect of the proposed tax.

The proposed 4 cents per gallon tax would increase the cost of the 55-gallon barrel of lubricating oil $2.20.

The provisions of the House bill apply to all lubricating oils, as classified in the bill, used by industry and in manufacturing operations and for motor car lubrication. A heavy hand is laid on the large industrial users, manufacturers, and transportation agencies of the Nation, among which are steam and electric railroads, lumber mills, steel mills, textile mills, automobile manufacturers, cement mills, electric and other power plants, coal mining, paper and pulp

manufacturers, manufacturers of food products, cotton gins, cotton seed oil mills, grain elevators, rubber companies, farm tractors, harvesters and farm machinery of all character, box factories, furniture factories, planing mills, ice plants, irrigation plants, packing plants, mines and smelters, fertilizer plants, sulphur plants, and every other industry which uses lubricants.

The proposed special excise tax of 4 cents per gallon will in many instances equal the full wholesale price of the industrial oil and will amount to 30, 40 or 50 per cent of the cost price to the manufacturer or industrial user.

Typical examples of the effect of the tax upon manufacturers or particular industries are given below:

Railroads are large consumers of car oils and black oils. A barrel of oil in this classification to-day costing $5.50 would, under the 4 cent tax provision, cost $7.70, or an increase of 40 per cent. A typical Class 1 railroad, for example, in one of its main divisions has an annual requirement of 1,400,000 gallons of lubricating oil valued at $178,000, of which 76 per cent would fall within the viscosity limits of the proposed bill. The tax which this railroad would pay at 4 cents per gallon would amount to $41,900.

Street railroads are large consumers of oils, costing 8, 9, and 10 cents a gallon delivered. Their cost would be increased 40 to 50 per cent on the largest item of their lubricating consumption.

Analysis of the lubricating contract of one cement company shows that on a purchase of $4,710 worth of lubricating oils the additional cost would be $2,040.

Lumber mills are large consumers of lubricating oils delivered to them at a price range of 8 to 12 cents a gallon. The cost of these particular items would be increased 33⅓ to 50 per cent.

Coal mines are large consumers of cheap low-grade lubricaitng oils. This large part of their lubricating cost would be increased 33⅓ to 50 per cent.

Automobile manufacturers buy lubricating oils on a specification basis at the lowest possible figure. Many of their specification items would be increased in cost approximately 30 to 35 per cent. They would use quantities of taxed oil.

The ordinary tractor farmer uses as much lubricating oil as a small manufacturing plant. Practically all of the oil used on a farm would be increased in cost $2.20 a barrel. Oil companies generally estimate that 25 per cent of their potential market is found in the farm trade.

Lubrication is an important item of cost with rice mills, cottonseed-oil mills, manufacturers of food products, textile mills, ice plants, packing plants, fertilizer plants, and irrigation pumping units. Steel mills will be adversely affected.

Every industrial center must pay a disproportionate tax upon this commercial necessity.

A survey by a leading farm publication shows 42 per cent of the automobiles are to-day on the farms and in towns of under 1,000 people. The greater part of the lubricating oil consumed on the farm to-day is bought in quantity at wholesale prices, and a 4 cent tax will represent a substantial percentage increase in the cost of this necessary commodity.

There is practically no element of luxury and no nuisance use connected with any grade of lubricating oil. Its consumption is as universal as any necessary commodity could be. Its use is more generally devoted to industrial, manufacturing and commercial operations than any other purpose. (See 1929 Lubricating Oil Survey, by McGraw-Hill Publishing Co., attached hereto.) There is no social, economic, or political reason why any manufacturer or user of this product should be singled out and penalized to bear the burden of a special tax for the maintenance of general governmental budgets.

It should not be overlooked that in 1931 the motor-car owners of the Nation paid an aggregate tax—because they were motor-vehicle owners—of $1,030,000,000 which amounted to almost 20 per cent of the combined value of all motor vehicles and which was about 10 per cent of all the taxes of all kinds collected in the United States by all Government divisions, and that all element of fairness disappears when additional special excise taxes in any form or however slight are added to their burden.

2. Fundamental difficulty of attempting to tax lubricating oils.

An almost insurmountable difficulty in taxing a product like lubricating oils is that they can not be defined adequately except in terms involving their use. Lubricating oils vary greatly in their properties both as to viscosity and other characteristics. A lubricating oil does not have any set properties which distinguish it from other petroleum products. Oils which may be used for lubrication are also used for—

(*a*) Transformer oils.
(*b*) Electric-switch oils.
(*c*) Heating systems using oil as the heating medium.
(*d*) Quenching oils for steel, etc.
(*e*) Leather oils for tanning and preparation of hides.
(*f*) Textile oils used in the manufacture of textiles such as rayon.

Lubricating oils can not be separately distinguished by any degree of refinement. Transformer and turbine oils must be very highly refined. So-called black oils used for very crude lubrication such as in lumber mills and on railroads go through the same general process of refinement as in the production of fuel oils. Products generally known as fuel oils could, if of proper viscosity, be used for very crude lubrication.

There is no way for the oil refiner to ascertain whether the oil he sells is used for a lubricant or for other industrial needs as the same oil may be used for either purpose. Neither the manufacturer nor the Treasury Department without elaborate and complicated administration machinery, can possibly trace the oil to its ultimate use.

Further, the proposal to tax lubricating oils having viscosities in the range of S. E. A. Nos. 20–70 presents an additional difficulty in that it will encourage the blending by the consumer of oils having viscosities outside the taxable range, thus avoiding the payment of any tax.

It is at present common practice to blend an oil of high viscosity with one of low to produce whatever viscosity is required in the finished product. Either or both of the blending oils may have viscosities outside the proposed limits. It is logical to expect that the imposition of a 4-cent tax upon a certain group of oils will result in a rapid increase in the number of consumers who will purchase tax-free

oils and blend them to produce the viscosity required in their operations.

If this 4-cent tax should be adopted, it is fair to say that it is entirely possible the method of manufacture and sale of lubricating oils, at least for industrial purposes, may be completely revolutionized to no good purpose except to evade lawfully the payment of the tax.

Senator REED. Before you leave this subject, Judge, is it not a fact that this tax would bear with particular hardship on the Pennsylvania oils, because they run so much higher than the oils of the Gulf States?

Mr. AMES. Mr. Pew can answer you that question, really, Senator, much better than I can.

Mr. J. HOWARD PEW. What the Senator says is quite right. Most all of the Pennsylvania lubricating oils, Pennsylvania crude oils, are manufactured into lubricants. That is to say, there is only about one-third of the crude in the United States which is run for lubricating oil, and most all of the Pennsylvania crude is so run.

Mr. AMES. I will now take up the 8 per cent tax on pipe-line transportation.

Senator HARRISON. Just a minute. Was there any hearing in the House on that proposition?

Mr. AMES. Not on this. The only hearing in the House was on the gasoline tax.

Senator GORE. And after the hearing, they declined to put it on?

Mr. AMES. Yes. By the act which passed the House, a tax is imposed of 8 per cent of the amount paid for transportation by pipe line to be paid by the shipper and collected by the pipe-line company.

There are two objections, either one of which is so convincing that it is unnecessary to elaborate the opposition to this tax.

(*a*) The tariff rate on crude oil by pipe line from Oklahoma and North Texas to the Atlantic seaboard is 96¾ cents per barrel. The tax, therefore, would be 7.74 cents per barrel. Oil can be shipped from Venezuela to the Atlantic seaboard by water, or from any other foreign country by water, for that matter. Not only is water transportation cheaper than pipe-line transportation, but, in addition, oil shipped in from Venezuela would escape this tax of 7.74 cents per barrel, which would have to be paid on oil shipped by pipe line from Kansas, Oklahoma, or Texas. The tax, therefore, is a direct discrimination against the entire mid-continent area.

(*b*) The following table shows the production of crude oil in the United States in 1931, the per cent produced in the important producing States, and the amount of the proposed tax allocated on the basis of 2½ cents per barrel. This basis may not be right but both the Treasury and the House committee estimated that this tax would yield a revenue of $20,000,000. If this sum be applied to the total production of the United States, it would amount to approximately 2½ cents per barrel, and the table is, therefore, prepared upon that basis; 2½ cents per barrel, obviously, is an arbitrary figure, because on shipments for longer distances, as I have just pointed out, the rate would get up to 7¾ cents per barrel.

Senator REED. What is the pipe line rate from Oklahoma to the Gulf?

Mr. AMES. From Oklahoma to the Gulf, I believe, is about 40 cents. I wonder if anybody here can give me that rate. As I understand, it is approximately 40 cents. As I recall the tariff rate from New

Mexico, for instance, which is coming into very great importance as an oil production State, to Houston and Port Arthur it is 60.5 cents. The rate from east Texas, which is close to the Gulf, to Houston and Port Arthur is in the neighborhood of 25 cents, may be 22½. I do not keep these rates with accuracy in my mind. I am told, however, now, that it has been reduced to 20 cents.

But assuming an overall charge on the oil producers of only 2½ cents per barrel, here is where the tax would fall, based on 1931 production:

	Production	Per cent of total	Proposed tax
Texas	331,544,000	38.99	$8,288,600
California	188,830,000	22.21	4,720,750
Oklahoma	180,900,000	21.26	4,520,225
Kansas	36,885,000	4.34	922,125
All other States	112,207,000	13.00	2,805,175
Total United States production	850,275,000		

It will be observed from a glance at this table that of this total tax, Texas producers would pay 38.99 per cent, California producers 22.21 per cent, Oklahoma producers 21.26 per cent, and Kansas producers 4.34 per cent. In other words, this tax, supposed to be levied by the Nation upon a fair basis, would force four States to pay 86.4 per cent.

The table above is correct on the basis figured, but, as a matter of fact, crude oil in California is not transported to such great distances as the crude oil in Kansas, Oklahoma, and Texas; so that these three States would really have to pay more than is indicated by these figures, and this tax, which is for a national purpose, for general revenue, is a burden upon only three States, or four, and is obviously an unfair burden to impose upon those States.

Senator COUZENS. Are you going to suggest any substitute taxes for these taxes you want eliminated?

Mr. AMES. Yes, sir.

Senator HARRISON. How many pipe lines are there, Mr. Ames?

Mr. AMES. Senator, there are probably 50, not very far from that. I should guess, offhand, that there were 50 pipe lines of considerable importance, not counting small local lines.

Senator HARRISON. Could you put into the record or will you put into the record a list of the pipe lines and who controls them and dominates them?

Mr. AMES. I can put in a list of pipe lines. I am not sure that I can——

Senator HARRISON. I have understood that the big companies, generally speaking, own the pipe lines, or most of them, and that a large per cent of the big companies' production goes over the pipe lines. I would just like to see the figures.

Senator CONNALLY. This tax does not reach them, though. It is supposed that it is paid by the producer.

Mr. AMES. Paid by the shipper.

Senator HARRISON. It is paid by the shipper?

Mr. AMES. Yes.

Senator HARRISON. But some of the big companies produce themselves, don't they?

Mr. AMES. Yes.

Senator HARRISON. And to that extent they would pay it themselves?

Mr. AMES. Yes, sir.

Senator HARRISON. Could you put into the record those facts?

Mr. AMES. I will put in what I can get on that. I can not say, for instance, who controls a number of these eastern pipe lines, which are pure transportation companies and not connected with any producing or refining company. They are merely transporting agencies, common carriers. My company has some six or seven thousand miles of pipe line through which we transport our own production and through which a great many other people transport their oil. We are common carriers.

There was this tax during the war period, but at the time that tax was in effect producers were getting $3.50 a barrel for their oil, part of the time. Toward the end of that time the price declined to about $1 a barrel, and the tax was repealed. Now $1 is the top price. The average is possibly 80 cents, 83 cents.

Senator REED. Speaking of mid-continent oil?

Mr. AMES. Yes. Mr. Boyd, I wish you would make a memorandum of the information requested by Senator Harrison.

(The list of pipe lines requested by Senator Harrison appears at conclusion of Mr. Ames's testimony.)

There is one other feature of the tax bill that is not related directly to the oil industry, but to which we have a peculiar relation and which I wish to mention merely in passing.

In 1906 you passed a law requiring the pipe lines to become common carriers. Prior to that time they were owned in the main by companies which were likewise refiners and marketers.

Senator CONNALLY. What was that date again?

Mr. AMES. I think it was 1906. That was the pipe line bill, so-called. As a practical result of that legislation, you forced us to disassociate our pipe lines and our producing and refining operations and organize pipe-line companies. Now because they are affiliated and embodied in our consolidated returns, you penalize us by this bill 1½ per cent for filing a consolidated return, when it was your own act, so far as the pipe lines are concerned, which compelled us to do so. So that we are penalized by you for doing what you required us to do.

Senator CONNALLY. You have the option, though, have you not, of filing a separate return?

Mr. AMES. Yes. But sometimes the only money we make is in our pipe lines. Take our statement for last year. The Gulf, for instance, lost $23,000,000 on a $600,000,000 investment, which included its earnings on pipe lines. We lost $10,000,000 on a larger investment, and that included our pipe-line earnings.

Senator COUZENS. So you took the loss in the oil industry and deducted it from your pipe line earnings?

Mr. AMES. We took a consolidated statement, of course.

Senator COUZENS. Yes.

Mr. AMES. And the earnings on the pipe lines generally depend, of course, on the volume.

We do not content ourselves merely with opposing the burdensome taxes which have been proposed and which we think will unfairly

and oppressively injure our industry, but we propose a constructive tax in the payment of which we will share equally with others, namely, a manufacturers' tax applicable without any exceptions to all manufacturing plants in the United States. The following table gives the available figures of factory output:

Wholesale value of manufacturers—combined summary for all industries in the United States, factories only

[Establishments having value of products of $5,000 or over]

Year	From biennial census of manufactures	Estimated by National Industrial Conference Board	Year	From biennial census of manufactures	Estimated by National Industrial Conference Board
1914	$23,974,957,468		1925	$62,713,713,730	
1919	62,041,795,316		1926		$63,800,000,000
1920		$65,800,000,000	1927	62,718,347,289	
1921	43,653,282,833		1928		65,400,000,000
1922		49,400,000,000	1929	70,137,459,352	
1923	60,555,908,200		1930		59,700,000,000
1924		57,000,000,000			

Source: 1914 from biennial census of manufactures, 1927, p. 15; 1919-1929 (odd years) from Biennial Census of Manufactures, 1929, preliminary summary; 1926-1930 (even years) are estimates of National Industrial Conference Board.

There may be later figures available in the Bureau of the Census. The latest figures shown on the table are those of the National Industrial Conference Board for 1930 when the total was approximately $60,000,000,000. If we assume that the reduction in value in 1931 as against 1930 was approximately the same as the reduction in 1930 against 1929, we would have a total output in 1931 of $50,000,000,000. A tax of 1 per cent without exceptions would, therefore, yield a revenue of $500,000,000.

The House voted down the sales tax, and then it voted $444,000,000 of taxes on sales. We propose a manufacturers' tax, applicable to everybody who manufactures anything for any purpose in the United States. And we pay our share of it. We will do that gladly. Not that we like to pay taxes, but we recognize the problem that confronts the Congress and the necessity for our country paying its debts.

The total output of all of the refineries in the United States is somewhere between a billion and a half and two billion dollars. We will pay our share of that tax and it will not be passed on; and if you limit it to 1 per cent, very little of it will be passed on. It is too small to pass on. But it is worth 15 or 20 million dollars to the oil industry of America to have you balance the Budget on a sound basis. We will make it back in the increased prosperity which follows statesmanlike action by this great body.

Senator REED. Did you testify to that effect in the House, Judge?

Mr. AMES. I made a statement in the House, which is on the last page of the pamphlet which I have distributed, and I made this point in the House, too. I said to them, describing the gasoline tax: "You are proposing to put a cent tax on gasoline. That means that you are putting 25 per cent on the manufacturers of one commodity. A tax of 1 cent on gasoline is 25 per cent of the value of the gasoline at the factory. If you are going to collect a tax of a cent a gallon

on gasoline, you are going to have to collect it at the refinery. You can not collect it at 200,000 filling stations. It would cost you more to get it than you would get out of it. Therefore, when you propose a gasoline tax, you are proposing a manufacturers' tax, and you are proposing a 25 per cent manufacturers' tax."

We advocated at that time a general manufacturers' tax, and we advocate it now.

I say to you it is my candid opinion that a 1 per cent manufacturers' tax imposed upon the oil industry would not be passed on to the consumer in any way except as prosperity results to the industry as a whole from an improvement in our national situation.

Now, if I may, I want to ask permission to file this chart showing the price of crude oil and the price of gasoline. Statements have been made in the Congress that the price of crude oil has nothing to do with the price of gasoline; that no matter what the price of crude oil is, the price of gasoline stays up. It is not true, and the figures demonstrate it, and I want you gentlemen to know that that picture of prices shows a direct relation between the price of crude and the price of gasoline.

(The chart offered by Mr. Ames is on file with the committee.)

Mr. AMES. I also want leave to file with your committee a statement from Successful Farming, showing the automobile ownership by population groups.

Senator GORE. Is that Successful Farming?

Mr. AMES. Yes.

Senator GORE. What is that? A picture or something? [Laughter.]

Mr. AMES. Yes, that is a novel, a detective story. [Renewed laughter.]

Senator GORE. Go ahead.

Mr. AMES. This chart shows that 42.06 per cent of the automobiles, passenger cars, are owned by people living on farms and in towns under 1,000 population, and shows by towns and classes where the people live who own the passenger cars.

(The chart furnished by Mr. Ames is on file with the committee.)

Senator REED. So the House drafted a 2¼ per cent sales tax to protect the poor man, and then they put on a 25 per cent sales tax on the gasoline that he is using.

Mr. AMES. No: they did not put on a gasoline tax in the House.

Senator HARRISON. No; that was in the recommendation of the Treasury. [Laughter.]

Senator REED. The Senator has scored one on me there, all right. The point remains anyway that somebody proposes a 25 per cent tax, 42 per cent of which will be paid by people in little towns and on the farms.

Mr. AMES. Yes, and the House did put on a 4-cent tax on lubricating oil, which is 50 per cent of the manufacturing price.

Senator REED. And being Democrats, they treated soap as a luxury and put 10 per cent on that.

Mr. AMES. I yield to Senator Harrison. When you and I were boys in Mississippi, Senator, we used soap, didn't we?

Senator HARRISON. We are not putting a tax on cheap soap either.

Mr. AMES. I also want to file for the record another page from that same mystery story, Senator Gore, of the successful farmer, showing farm machinery and the kind of classification of it and the average

operating season of a tractor, for instance, and the annual grease needed and the annual oil needed.

(The tabulation referred to is here printed in the record in full, as follows:)

Farm machinery

	Average operating season	Annual grease needed	Annual oil needed	Oil can needs		Average operating season	Annual grease needed	Annual oil needed	Oil can needs
	Hours	*Pounds*	*Quarts*			*Hours*	*Pounds*	*Quarts*	
Tractor	500	107	1.50	Yes.	Balers	120	4	.....	No.
Plows	160	6	.....	Yes.	Hay rakes	100	1	.....	No.
Disk harrows	160	1	.....	Yes.	Planters	60	2	.....	Yes.
Mowers	150	3	.....	Yes.	Cultivators	300	2	.....	Yes.
Corn picker	100	31	.....	No.	Pump jacks	300	1	.....	No.
Spreaders	140	1	.....	No.	Power jacks	60	1	.....	No.
Threshers	200	47	.....	No.	Seeder	120	10	.....	Yes.
Grain binders	100	13	.....	Yes.	Wagons	800	1	.....	No.
Corn shellers	150	11	.....	No.	Windmill	.....	2	.....	No.
Silo fillers	80	2	.....	No.					
Ensilage cutters	80	2	.....	No.	Total	.....	251	150	
Rotary hoe	80	3	.....	No.					

Mr. AMES. Mr. Chairman, I thank you very much.

(The information requested by Senator Harrison is here printed in full.)

Pipe lines in United States

Name of company	Controlled by—
Ajax Pipe Line Co	55 per cent Standard Oil Co. (New Jersey), 25 per cent Pure Oil Co., and 20 per cent Standard Oil Co. of Ohio.
Arkana Transit Corporation	Atlantic Refining Co.
Arkansas Pipe Line Corporation	Cities Service Co.
Arkansas-Louisiana Pipe Line Co	Do.
Associated Pipe Line Co	33⅓ per cent Standard Oil Co. of California, 33⅓ per cent Tide Water Associated Oil Co.; other interest unknown.
Atlantic Pipe Line Co	Atlantic Refining Co.
Atlas Pipe Line Co. (Inc.)	Shreveport-El Dorado Pipe Line Co.
Barnsdall Oil Co	Barnsdall Corporation.
Bartex Pipe Line Co	Phillips Petroleum Co.
Bradford Transit Co	50 per cent Tide Water Oil Co. and 50 per cent South Penn Oil Co.
Buckeye Pipe Line Co	Independent.[1]
Central Pipe Line Co	Unknown.
Continental Pipe Line Co	Continental Oil Co.
Cosden Pipe Line Co	Mid-Continent Petroleum Corporation.
Crown Central Pipe Line Co	Crown Central Petroleum Corporation.
Crusader Pipe Line Co	Unknown.
Cumberland Pipe Line Co	Independent.[1]
DeLeon Pipe Line Co	Unknown.
Derby Oil & Refining Co	Derby Oil & Refining Co.
Empire Pipe Line Co	Cities Service Co.
Eureka Pipe Line Co	Independent.[1]
General Pipe Line Co	Socony-Vacuum Corporation through General Petroleum Corporation of California.
Grayburg Pipe Line Co	Indiana Southwestern Gas & Utilities Corporation.
Gulf Coast Pipe Line Co	Atlantic Refining Co.
Gulf Pipe Line Co. (Texas)	Gulf Oil Corporation.
Gulf Pipe Line Co. of Louisiana	Do.
Gulf Pipe Line Co. of Oklahoma	Do.
Healdton Pipe Line Co	Atchison, Topeka & Santa Fe R. R. Co.
Hill Pipe Line Co	Unknown.
Humble Pipe Line Co	Standard Oil Co. (New Jersey) through Humble Oil & Refining Co.
Illinois Pipe Line Co	Ohio Oil Co.
Imperial Pipe Line Co., (Ltd.)	Standard Oil Co. (New Jersey) through Imperial Oil (Ltd.).
Independent Pipe Line Co	Independent.
Indiana Pipe Line Co	Do.[1]
Inland Waterways Pipe Line Co	Do.
Liberty Pipe Line Co	Do.
Los Angeles-Midway Pipe Line Co	Richfield Oil Co. of California.

[1] Controlled by Standard Oil Co. (New Jersey) until the dissolution ordered by United States Supreme Court on May 15, 1911.

Pipe lines in United States—Continued

Name of company	Controlled by—
Magnolia Pipe Line Co	Socony-Vacuum Corporation, through Magnolia Petroleum Co.
Maryland Pipe Line Co	National Transit Co.
Mid-West Refining Co	Standard Oil Co. (Indiana).
National Transit Co	Independent.[1]
Natrona Pipe Line & Refining Co	Mid-West Oil Co., which is subsidiary of Salt Creek Producers Association.
New Mexico Pipe Line Co	50 per cent Continental Oil Co. and 50 per cent in hands of public.
New York Transit Co	Independent.[1]
Northern Pipe Line Co	Do.[1]
Oklahoma Pipe Line Co	Standard Oil Co. (New Jersey).
Panhandle Pipe Line Co	Producers & Refiners Corporation through Southwest Development Corporation.
Panola Pipe Line Co	Independent.
PasoTex Pipe Line Co	Standard Oil Co. of California.
Pecos Valley Pipe Line Co	Independent.
Pierce Pipe Line Co	Sinclair Consolidated Oil Corporation.
Pure Oil Pipe Line Co. of Texas	Do.
Pure Oil Pipe Line Co. of Ohio	Pure Oil Co.
Pure Oil Pipe Line Co. of Pennsylvania	Do.
Pure-Van Pipe Line Co	Do.
Rusk County Pipe Line Co	Independent.
Sabine Pipe Line Co	Do.
Shell Pipe Line Corporation	Shell Union Oil Corporation.
Shreveport-El Dorado Pipe Line Co. (Inc.).	Holding company for Atlas Pipe Line Co. (Inc.).
Sinclair Prairie Pipe Line Co	Sinclair Consolidated Oil Corporation.
Skelly-Burford Pipe Line Co	Skelly Oil Co.
Southern Pipe Line Co. (operates in Pennsylvania).	Independent.[1]
Southern Pipe Line Co. (operates in Texas and Arkansas).	Standard Oil Co. (Indiana) through Pan-American Petroleum & Transport Co.
South West Pennsylvania Pipe Lines	Independent.[1]
Standard Pipe Line Co. (Inc.)	Standard Oil Co. (New Jersey).
Stanolind Pipe Line Co	Standard Oil Co. (Indiana).
Sun Oil Line Co	Sun Pipe Line Co. (Delaware).
Sun Pipe Line Co	Sun Oil Co.
Sun Pipe Line Co. (Inc.)	Sun Pipe Line Co. (Delaware).
Sun Pipe Line Co. (Delaware)	Affiliated company of Sun Oil Co.
Sun Oil Line Co. of Michigan	Sun Oil Co.
Sun Yount Lee Pipe Line Co	50 per cent Sun Oil Co. and 50 per cent Yount Lee Pipe Line Co.
Tidal Pipe Line Co	Tide Water Associated Oil Co., through Tide Water Oil Co.
Tide Water Pipe Co. (Ltd.)	Tide Water Oil Co.
The Texas-Empire Pipe Line Co	50 per cent Texas Corporation and 50 per cent Empire Gas & Fuel Co.
The Texas Pipe Line Co	The Texas Corporation.
The Texas Pipe Line Co. of Oklahoma	Do.
The Texas-Empire Pipe Line Co. of Texas	37½ per cent Texas Corporation, 37½ per cent Empire Gas & Fuel Co., and 25 per cent Tidal Refining Co.
The Texas Co. (California)	Texas Corporation through California Petroleum Corporation (Virginia).
Thurber Pipe Line Co	Texas Pacific Coal & Oil Co.
Toronto Pipe Line Co	British American Oil Co. (Ltd.).
Tyler Pipe Line Co	Independent.
Union Gulf Pipe Line Co	Union Gulf Corporation, which is owned 45 per cent by Gulf Oil Corporation of Pennsylvania and 55 per cent by certain Gulf Oil Corporation stockholders.
Union Pipe Line Co	Independent.

[1] Controlled by Standard Oil Co. (New Jersey) until the dissolution ordered by United States Supreme Court on May 15, 1911.

Gasoline pipe lines in United States

Name of company	Controlled by—
Atlantic Pipe Line Co	Atlantic Refining Co.
Great Lakes Pipe Line Co	Barnsdall, Continental, Mid-Continent, Phillips, Pure and Skelly.
Keystone Pipe Line Co	Atlantic Refining Co.
Phillips Pipe Line Co	Phillips Petroleum Co.
Susquehanna Pipe Line Co	Sun Oil Co.
Tuscarora Oil Co. (Ltd.)	Standard Oil Co. (New Jersey).

STATEMENT OF HON. JOHN E. NELSON, A MEMBER OF CONGRESS FROM THE STATE OF MAINE

Mr. NELSON. Mr. Chairman and gentlemen of the committee, there are four Members of Congress here appearing in opposition to this tax on oil, Congresswoman Rogers of Massachusetts, Congressman McCormack and Congressman Martin, and I think they are all willing that I should present roughly their views on this matter. So that will dispose of at least four witnesses.

The CHAIRMAN. Proceed, then, Congressman.

Mr. NELSON. I became interested in the situation of the oil industry about a year ago, when representatives of the independent producers from the mid-continental fields appeared before the House committee of which I am a member, that on Interstate and Foreign Commerce. They were appearing in behalf of a law which would divorce the pipe lines from transportation—that is, that would impose on the pipe lines the same prohibition as now applies to railroads against transporting their own products—and it is my humble opinion that the enactment of that law would go much farther toward remedying the conditions of which they complain than any so-called tariff or excise tax.

The evidence given at that time by the experts of the independents furnished a rather illuminating background against which perhaps we might view the testimony that is produced here in behalf of this tariff.

The evidence showed, and I have it here embodied in the hearing and it never has been questioned, that while there are thousands upon thousands of persons and individuals and companies producing oil, yet nearly all of that oil passes immediately out of the hands of the producers into the hands of a comparatively few refining companies.

I think it was in 1911 that the Supreme Court dissolved the various holdings of the Standard Oil Co. into 34 groups, and I say without hesitation that there is to-day an oil monopoly in this country as complete and uneconomic and destructive as ever there was in the past.

This evidence shows that out of the thousands of oil companies in this country less than a hundred absolutely dominate the industry and fix the prices of both crude and refined products.

Senator REED. Fix them pretty low, if that is the case.

Mr. NELSON. Yes. This is accomplished by owning the pipe lines, the refineries, the storage facilities, and the distribution outlets.

You can select 20 companies out of the thousands of companies, 10 of them the Standard companies, 10 of them the non-Standard companies, and those 20 companies will represent 80 per cent of the capitalization of this oil business, which is $12,000,000,000. Those 20 companies will produce a half, or 48 per cent, of the oil. They own perhaps 95 per cent or 90 per cent of the pipe lines. They transport practically all the oil. They own 73 per cent of the refining process, 93 per cent of the cracking process, so-called, more important than the other perhaps, nearly a hundred per cent of the storage facilities, and about 85 per cent of the distribution outlets.

That means this: That when a territory is opened up this parent company goes into it with its subsidiary companies, its purchasing company, its pipe line, its refinery. The independent producer is in this situation: He has no storage facilities. He has but one

purchaser and that is the purchasing company of the parent corporation. He has but one means of transportation, and that is the company's pipe line, and he has but one customer, and that is the company's refinery.

I have here figures which have not been disputed, taken from a petroleum magazine, which show that when oil was selling in Texas for 10 cents a barrel one of these great integrated companies, through its purchasing company, its pipe line and its refinery, was making 84 cents on every barrel of oil for which they paid the producer 10 cents, and that was before they had begun to refine it.

The CHAIRMAN. Eighty-four cents profit?

Mr. NELSON. Eighty-four cents a barrel charges on every barrel of oil that they were paying the producer 10 cents for.

The CHAIRMAN. That is not what I mean. After paying the transportation cost, was the 84 cents the cost of transportation?

Mr. NELSON. No; it could not have been that, Senator.

The CHAIRMAN. Or was it 84 cents per barrel profit?

Mr. NELSON. It was made up in this way: It was not the profit. The posted price as of a given date would be 10 cents. The gathering charge—and this happened in the case of the Humble Pipe Line Co.——

Senator BARKLEY (interposing). Is that an imaginary illustration or is it an actual fact?

Mr. NELSON. This was given to the oil people from the oil journal, and I think it is correct.

Senator BARKLEY. Where and when did crude oil sell for 10 cents a barrel?

Senator CONNALLY. Texas, last year.

Mr. NELSON. Posted price for 41 degree—you know what that means—oil 1931 to producer, 10 cents; gathering charge 12½ cents; trunk-line charge to tidewater 40 cents; ship-loading charge 2½—65 cents.

Then it gives a charge here of a service charge, or premium of 20 cents, and figured out they made 84 cents charges on the barrel of oil for which they paid 10.

Senator CONNALLY. You mean after they refined it?

Mr. NELSON. Before it had got to the refinery or been refined.

Senator CONNALLY. You mean it cost that to the consumer; is that what you mean, 84 cents?

Mr. NELSON. I do not think I am very clear. I simply say this, that for the barrel of oil for which they paid 10 cents these affiliated companies had accumulated a charge of 84 cents before they had begun to refine it.

Senator CONNALLY. Well, certainly it cost them that, in other words.

Mr. NELSON. I can give some idea of the profits that the pipe lines made, and I will.

Senator REED. How much did the Humble Co. lose last year, do you know?

Mr. NELSON. It stated in this magazine—and I do not think it would have stated it unless it was correct, as it was broadcast to the companies—that the Humble Oil & Refining Co. in three years down there in Texas lost $20,000,000, but that the Humble Pipe Line Co. in the same time made $79,000,000. By owning the purchasing company, the pipe line, the refinery, these integrated companies can

make the money wherever they want to and where it will best serve to put the other fellow out of business; and in this conflict which they had there in Texas they made a net profit in that time of $59,000,000.

Senator REED. During this time when you say they made 84 cents on a barrel of oil my impression is that they lost money.

Mr. NELSON. I will give you the figures on what those pipe lines made.

Senator REED. I meant the enterprise as a whole.

Mr. NELSON. Yes.

Now, these pipe lines, according to the returns filed to the Interstate Commerce Commission during the year 1930, the Humble Pipe Line made 40 per cent; the Magnolia line, 46 per cent; the Gulf Pipe Line Co., 338 per cent; the Gulf Pipe Line Co. of Oklahoma 400 per cent; the Texas Pipe Line Co., 93.4 per cent; and the Texas Pipe Line Co. of Oklahoma, 100 per cent.

Senator CONNALLY. What year was that?

Mr. NELSON. 1930.

To me the evidence given at that hearing was interesting. It was to this effect, and it showed that apparently there is some money being made in the oil business, and suggests that if it was properly distributed it might be sufficient.

It seems that in the whole oil industry of the United States they have invested about $12,000,000,000, and in that production represent $6,000,000,000. I do not put my hand on the other figures. I think transportation was about $1,500,000,000; and so on. But the significant fact is this, that production, represented largely or in part by these independents, with an investment of $6,000,000,000, received for the entire product approximately $1,000,000,000, and when that product went into the hands of the public it cost them about five and a half billion dollars.

The CHAIRMAN. Do you know what their rate is now on a barrel of oil? I should not say the rate—what do they pay for a barrel of oil in Texas now?

Mr. NELSON. That I do not know, Senator. I have not looked at the figures lately.

The CHAIRMAN. Is it only 10 cents a barrel now?

Mr. NELSON. Oh, no; it is much more. The oil business has been going up for some months. I think I have the figures, if I can find them.

Mr. Ames was asked in regard to what the company had made or lost.

Senator BARKLEY. I am informed that the price is a dollar a barrel now in Texas.

Mr. WIRT FRANKLIN. Mr. Chairman, I can give you that information.

The CHAIRMAN. Yes.

Mr. FRANKLIN. The price last July went to the lowest point in all history, and it reached 10 cents a barrel for the lowest grade. Since then there have been three raises in price, the last of which was the 1st of this month. The low price now is 76 cents a barrel for 28 gravity and below, and for 40 gravity and above it is a dollar a barrel.

Mr. NELSON. The matter came up as to whether the companies were making or losing money, and the previous witness suggested that on the basis of the average cost of oil they had made or lost so

many million dollars during the year, but that did not cover the question as to whether or not his company had made money.

Now, this $1.09 standard which we have here may be confusing. This $1.09 is the average cost of the production of crude oil throughout all the fields in the United States as found by the Tariff Commission, covering I think the years 1927 to 1930, inclusive, and that included interest at 6 per cent and depreciation.

Now, Mr. Franklin, who is to appear here, stated before the House committee that of the 330,000 wells in the United States 300,000 produced on an average of but a barrel and a half a day, and that by pumping, and some of them 40 years old.

In the last 40 years they have made great strides in the methods and processes in the oil business. It does not seem proper that the American consuming public should be charged the price of the highest cost well. The free flowing wells out in Oklahoma or Texas produce many thousands of barrels of oil, of course, in a day. Even the wells of east Texas, I am informed, flowed as much oil in one day as these 300,000 wells combined, plus 100,000 barrels.

Senator CONNALLY. They are shut down, though, now by law.

Mr. NELSON. Well, if you would shut down some of those wells that pump—the average wells in Pennsylvania, New York, and West Virginia only averaged as a group four-fifths of a barrel a day by pumping. If you take off your proration and give your wells a chance and shut down these uneconomic and inefficient wells, you can produce oils in Texas at a figure, according to the Tariff Commission, of less than 46 cents a barrel.

Senator CONNALLY. Who is going to shut down these wells in Pennsylvania?

Mr. NELSON. Well, I do not know; but that condition is an economic defect in the business for which the American public ought not to be made to pay. If you are going to say that the consuming public must pay a dollar and nine cents a barrel, which would be the average of these inefficient and uneconomic wells, for all time, although the proponents of this measure tell us that the reserves of oil here in this country are inexhaustible, and that there are great reserves as yet unexplored and unopened, that is not equitable. And, on the other hand, if our reserves are, as I believe they are, insufficient and questionable, why, then, the importation of this small amount of oil on the Atlantic seaboard, which is the only part of the country not supplied with oil, which takes 95 per cent of all the imports and none of which goes into the interior in any way, why, then, that is a proper conservation measure.

Senator Tydings, it seems to me, very intelligently and conclusively showed that this item, this oil tax, is a tariff item in a revenue bill; that it was put in there not for the purpose of raising revenue, but for the purpose of shutting out imports, and the proponents of this measure in the House were very frank in their statements that that was the object which they sought.

The first proposition was 2 cents a gallon on crude, 2 cents a gallon fuel, and 4 cents a gallon on gasoline, and the evidence showed conclusively that that would be prohibitive and that there would be no revenue.

The committee then took up with the Treasury experts the proposition of 1 cent on crude, 1 cent on fuel oil, and 2 cents on gasoline, and I have here the report from those experts.

Now, suggestion is made—I do not know upon what it can be based—that we might get $40,000,000 but the evidence of the experts of the Treasury Department and of the Commerce Department and the mature judgment of the Committee on Ways and Means which listened to this evidence for days, is entirely to the contrary.

Senator HULL. Will you put in the record the detailed bases on which the Treasury officials computed their estimates?

Mr. NELSON. The basis on——

Senator HULL (interposing). I want the detailed facts on which this $5,000,000 will be derived.

Mr. NELSON. Well, I give you that to the best of my knowledge, and that is a guess, but I think I can guess pretty near to it. Here is what the Treasury said——

Senator CONNALLY (interposing). Right there—the Treasury did not estimate it at all. The Treasury called on the Department of Commerce and took their figures, and Secretary Mills testified here that the Treasury made no estimates whatever on the subject.

Mr. NELSON. The Treasury evidently concurred in the findings of the Commerce Department experts, and the head of the Treasury Department now says that this would mean simply car fare or chicken feed.

Here is the report:

> In the opinion of experts of the Department of Commerce such a tax (1 cent and 2 cents per gallon on imported oil) would yield no revenue, since the levy which would be added to the import price exceeds the margin of advantage under which oil is imported into this country, and would therefore exclude the products affected.

In other words, according to the best opinion of the experts—and anybody can make a fantastic guess—but according to the experts, there would be no revenue from such a proposition.

Then the committee put up this proposition: 1 cent a gallon on crude, 1 cent a gallon on fuel oil, and 1 cent a gallon on gasoline, and I have here the exhibit submitted by a member of the Ways and Means Committee of the House giving the estimates, the estimates of the Treasury Department and the estimates of the committee, and the estimate of the Treasury Department is a blank, and the estimate of the committee is $5,000,000.

Senator Tydings has already called your attention to the fact that the increased cost to the Government from the petroleum products used in our national defense department alone for a year would exceed that by some $3,000,000.

Now, I was asked how the committee arrived at an estimate of $5,000,000. I can only say this, that in 1931 we imported 13,000,000 barrels of gasoline. Multiplying that by 42, the number of gallons in a barrel, and you have 546,000,000 gallons, which would figure $5,640,000, and it is evident that that is the method by which the committee arrived at that guess.

Senator HULL. Of $5,000,000?

Mr. NELSON. $5,000,000; and it is very doutbful if there would be any revenue or tax paid from imports of gasoline more than a few weeks, until they could obtain it from other sources.

Senator HULL. Mr. Nelson, would it interrupt you if I should ask you to state where the facts or figures which tend to offset that estimate have been offered?

Mr. NELSON. I do not know of any, except various persons who are very much interested in an oil tariff would put it anywhere from forty million up. I think revenues of some $138,000,000 were suggested before the House Ways and Means Committee.

Senator HULL. On what theory do they estimate that?

Mr. NELSON. Well, I do not know. That is a mystery.

Senator CONNALLY. Nobody has estimated it would bring in two or three hundred million?

Mr. NELSON. I think in the House they came pretty near that.

Senator CONNALLY. Not on 1 cent a gallon.

Mr. NELSON. Yes. I can not remember, but it was a very large figure.

Senator CONNALLY. The oil people themselves do not claim over forty million.

Mr. NELSON. Oh, no; I think they have claimed considerably more than that.

It seems to me that a revenue measure—in the first place, this item has no place in a revenue measure unless it is intended to raise revenue, and according to the best evidence, very little if any would be raised, and that would be more than offset and a deficit would be incurred by the purchases which the Government itself must make.

It seems to me that a revenue bill should bear equally and equitably upon every part of the country. If this measure is passed, you lay upon the Atlantic seaboard not only the general taxes provided by the bill and which the people are glad to pay to balance the budget, but you lay upon one particular section of the country an additional tax of 70 per cent on its fuel bill, which affects all the shipping of the Atlantic coast, all our industries, agriculture, and many other industries of that kind.

Now, in order for this committee or for the House Committee to impose a tariff on oil both the Democratic and Republican Members must reverse absolutely their previous historical stand on this proposition.

Senator BARKLEY. You do not think that is very hard for members of either party to do, do you?

Mr. NELSON. I do not suppose so; no. Still, this is a rather vital matter. No Republican Ways and Means Committee have ever countenanced or advocated a tax on oil or on fuels of any kind. No Republican administration, believing as we do in proper protection to all industries, has ever levied such a tax.

Oil is different from almost any other commodity. It is a prime necessity in the production of practically every article in industry and in agriculture. It is essential to the economical life of this machine age. It is vital to our national defense and it is a great natural resource which once destoryed or wasted can never be supplied.

Senator REED. There is no lubricating oil made out of this imported product, is there?

Mr. NELSON. Well, the gentleman referred to—he and I have no quarrel—but he is referring to the inequality of this lubricating-oil tax from the fact that oil would be imported, and as a matter of fact the amount of lubricating oil imported into this country is relatively insignificant. It is not worth considering. I think it is about 64,000 barrels out of perhaps 68,000,000 barrels produced here in this country, nearly, perhaps, one-quarter of which is exported.

Senator BARKLEY. How many did you say imported?
Senator CONNALLY. Are you talking about lubricating or crude?
Mr. NELSON. Lubricating.
Senator BARKLEY. What are the imports of crude?
Senator CONNALLY. One hundred and eight millions.
Mr. NELSON. I am going to take that up briefly. I will say advisedly that there never was a time that the imports of crude or its derivatives into this country were of so little singificance or importance as compared with production, consumption, and exports, as they are to-day. Back in 1922 the imports of crude oil into this country were 130,000,000 barrels, and last year they were 47,000,000, but with the derivatives they amounted to 86,000,000 barrels. In 1922, 130,000,000 barrels. Last year 86,000,000.

Now, in 1922, as you know, there was no tariff placed on petroleum and its products. In 1929, when you gentlemen were considering the tariff bill, the imports of crude and refined oil were 108,500,000 barrels. That was in 1929. In 1930 they were 3,000,000 barrels less. No tariff was placed on petroleum or its products, although an effort toward that end was made.

Last year the imports decreased about 20,000,000 barrels. They decreased 24 per cent, something like 85,000,000 barrels, against 130,000,000 in 1932.

Last year they decreased 24 per cent, and the imports from Venezuela decreased 28 per cent. We have proration in this country, and we prorated down 5½ per cent, and Venezuela prorated down 14 per cent.

The crude oil and its derivative constituted the second largest item in our foreign trade last year. We exported about $270,000,000 of products and imported $93,000,000. Most of this comes, as you know, from Venezuela. Venezuela's trade is increasing by leaps and bounds in normal times, and 55 per cent of all her goods she buys from us.

Now this oil business—the question was aked of me as to the price of oil. All our industries are prostrated. The principal industry in my State is paper and pulp, the principal industry both as regards the money invested and its product, and the number of its employees, and it is absolutely unprotected. They are working in the red. The next six months when the contracts are made is liable to see many of them absolutely fail. And those industries are using 600,000 barrels of oil per year.

Senator REED. Mr. Nelson, was the proposal to the House that there be a tariff put on wood pulp or pulp wood?
Mr. NELSON. I would say that this matter of a tariff on oil in the House passed beyond the bounds of economics and got into politics.
Senator REED. Was there such a proposal?
Mr. NELSON. Well, I think not, because—I think there would have been. I have in mind a man who I think intended to offer the motion, but apparently there was a combination between the coal men and the oil men, and after a tariff was placed on coal and oil the books were closed.
Senator CONNALLY. Mr. Chairman, I raise a point of order. I do not think it is proper for the Senate or any of its committees to reflect upon the House or its membership. I do not know anything about what happened in the House.

The CHAIRMAN. That is a rule of the Senate.

Senator CONNALLY. It is a rule of the Senate and I am invoking the rule.

Senator HULL. This is a part of the current legislative history of the measure.

Senator CONNALLY. The rule is also a part of the current legislative history.

Mr. NELSON. If I said anything objectionable——

Senator CONNALLY (interposing). I do not know anything about it, but I do not think it is proper for a Member of the House to come over here before the Senate and libel his own body, and the rules of the Senate prohibit it, and I invoke the rule.

Senator BARKLEY. The rule only applies to the Senate. It does not apply to Members of the House.

Mr. NELSON. Senator, if you read in the proceedings of the House, had at the time, comments by a prominant Democratic leader, I do not think——

Senator CONNALLY (interposing). That is the House business and he made those remarks in the House, but they are not appropriate here.

Senator REED. What I am driwing at, Mr. Nelson, is whether you favored the tax on pulp wood and wood pulp.

Mr. NELSON. I think it is vital to the life of that industry in my State.

Senator REED. Did you support it?

Mr. NELSON. We had no opportunity.

Senator REED. Would you have voted for it?

Mr. NELSON. Well——

Senator CONNALLY. I think that is an unfair question.

Mr. NELSON. I am hesitating, Senator, not on the proposition of protection or otherwise, but there are some mills in my State on the line, on the northern border, which own woods in Canada, and there are others who are buying some baled pulp, and before I voted I should have assured myself definitely as to what would be for the welfare of my State. That is all.

Senator REED. But you would not have been deterred by any prejudice about this being an internal revenue bill?

Mr. NELSON. Well, I will say this—no; that does not disturb me, Senator. I did not ask for it before the Committee on Ways and Means, not believing that it was a proper item in a revenue bill. We did ask for a countervailing duty, and I was interested in what a preceding witness said. In my State, in the paper business, and in other States in other lines of industry, where there was no protection, or where there was what we believed inadequate protection, we were working alohg just keeping going, sometimes operating in the red, but as soon as these countries—the Baltic countries and England—went off the gold basis, immediately those countries had over us, and I speak particularly now in regard to the pulp and paper business, an advantage of at least 33 per cent, and the mills which had formerly been just staggering can no longer run. And I am informed since September the imports from those countries have increased something like 35 per cent, with a similar reduction in price.

Senator GORE. Mr. Nelson, you seemed to have an impression that there was a sort of an entente in the House between the oil tariff people and the coal tariff people.

Mr. NELSON. Well, that was my impression, but if I am interpreted as libeling the House, as you say——

Senator GORE (interposing). And the combination was strong enough to insert those two items?

Mr. NELSON. Now you ask me if I believe that?

Senator GORE. I say, those two elements in combination were strong enough to write those two provisions in the bill?

Mr. NELSON. They were written, and that was my interpretation of the action, Senator.

Senator GORE. Do you think that they would probably be strong enough to keep it in?

Mr. NELSON. In the House?

Senator GORE. Yes.

Mr. NELSON. Well, I think if we had had a little more time it would have come out. We came within about 16 votes of beating it on the final vote.

Senator GORE. Which one?

Mr. NELSON. On a vote which embodied the question as to whether coal and oil should remain in the bill.

Senator GORE. On that clear-cut issue?

Mr. NELSON. Well, as clear-cut as you would get, Senator.

The CHAIRMAN. All right, Mr. Nelson, if you have anything more to say.

Mr. NELSON. I do not want to weary the committee too long.

The CHAIRMAN. We have a lot of witnesses.

Mr. NELSON. I will say just a word and close.

We use 180,000,000 barrels of fuel oil along the Atlantic seaboard. We never have used the domestic oil. The cost of transportation was too much. When they developed these fields of cheap oil in Mexico, gradually we began to build up our industries on the basis of that cheap oil. On the coast we have and should have the natural advantage of water transportation, and all along the Atlantic coast are built up industries based on the cheap foreign fuel oil. When the Mexican wells began to play out, we got this oil from Venezuela.

Now, these contracts which we have in New England contain a provision that, in case a tariff is placed on oil, that extra cost shall be borne by the purchaser. You can now buy fuel oil—or could within a few weeks at least, the last time I informed myself as to the price—at about 60 cents. If this tax goes into effect, of 42 cents a barrel, immediately you have an increase on the fuel cost on the Atlantic seaboard of 70 per cent.

Senator GORE. You think that would all be added to the price, Mr. Nelson?

Mr. NELSON. Well, let's take the other end of it, Senator. Let us assume it would not.

Senator GORE. I just wanted your opinion as to whether or not it would be added to the price.

Mr. NELSON. My opinion is that it will be, because it is in the contract, and if there is a tariff of 42 cents and the contract says that the purchaser shall pay it, he has got to pay it. Now, whether that is in all the contractors, I do not know.

Senator GORE. What I had in mind was, I was in Michigan yesterday and the tariff on beans is 3 cents a pound and they were selling it at a cent and a half.

Mr. NELSON. Well, let us assume that the cost will not come up at all. Here on the Atlantic seaboard the Tariff Commission found these figures, Senator: They found that the average transporation costs of a barrel of oil to the Atlantic seaboard for the years 1927 to 1930 were in round numbers as follows: From Venezuela, 24 cents; from all domestic sources, 81 cents; from California, 64 cents; from Oklahoma, 84 cents.

Senator REED. That is by pipe line you mean, Mr. Nelson?

Mr. NELSON. That would be the way the oil naturally comes. From Oklahoma I think it goes by pipe line and then tankers, and then up around by sea.

Senator REED. Have you the figures of cost by tank steamer from Houston or Port Arthur?

Mr. NELSON. Those are the figures. They took the whole territory of the United States and figured out the way the oil comes, and those were their figures taken from the commission's report. So there is a difference of from 40 to 60 cents a barrel on oil which is selling for 60 cents. That is, you would have an increase on our fuel bill, if the tariff had no effect, of from 66 to 100 per cent, and that would go to the transportation companies, and to these pipe line companies which do not seem to need very much help, and would be in my opinion of no benefit to the independent producers.

Senator REED. Can you tell us how much of that 180,000,000 consumption of fuel oil was used for bunkering?

Mr. NELSON. Well, I can say this; In 1930, and this is important—in 1930 we turned over to foreing-going vessels about 51,000,000 barrels of bunker fuel.

Senator REED. That answers my question.

Mr. NELSON. Well now, it is more than that. You have got a tariff on fuel oil and petroleum here. It is not in the tariff bill. It does not help that item in the tariff bill which provides that where articles are imported, manufactured, and the manufactured goods shipped out, and there can be a rebate. That does not apply to this bunker oil.

There is no country in Europe that has a tariff on oil but that has a provision that it may be stored, and when it is shipped out as bunker fuel it goes free. By this bill you are placing a tremendous burden on the shipping of this country, a burden I do not believe they can bear.

Senator REED. The bill is capable of amendment, is it not?

Mr. NELSON. I hope so, considerable amendment.

Senator BARKLEY. Are you able to give an opinion as to what the effect of this tariff would be on the production of oil in this country?

Mr. NELSON. Well, I can only say this, that, according to the evidence taken out last year, and some of it before this committee, I think, and it has been corroborated since and has never been disputed, we have in this country to-day a potential capacity, kept back and kept off the market to-day only by proration and by the militia, of from five to eight times the consumptive needs of this country, and I think no man can successfully deny that.

And I would say further that to my mind there are two economic evils inherent in the oil industry such that no tariff of 1 cent a gallon or no import tax can bring about right economic conditions, or if

once restored can preserve them against this uneconomic and unfair attack of these integrated companies, and in the second place that the industry is overproduced. It seems to me that by an artificial raise in price through a tariff, if that is what you accomplish, you are seriously complicating the one tremendous problem of the oil industry, and that is keeping down overproduction. But I speak out of a vast ignorance, and of course I know but little about the oil business.

Senator HULL. Mr. Nelson, have you made any computation to see what would be the effect of this proposed tariff on road materials and road construction?

Mr. NELSON. Yes. I ought to say this—when you are talking about Venezuelan crude and American crude you are talking about two things that are almost as different as black and white. American crude is run, as you know, for gasoline, paraffin, and lubricating oil, and this Venezuelan crude which comes in here is run for asphalt and fuel oil, and there is where we get 93 per cent of all the asphalt we use on the eastern seaboard and 54 per cent of all we use in the United States.

Now, according to the former report of the Interstate Commerce Commission—

Senator GORE (interposing). A good deal of the mid-continent oil, though, is asphalt?

Mr. NELSON. They say only that from California. That is all I can tell, Senator. I have an official report which I think substantiates that.

Now, American crude runs about 44 per cent gasoline and 30 per cent fuel oil, while Venezuelan crude runs about 9 per cent gasoline and 82 per cent fuel oil. Suppose we are importing a considerable quantity of this Venezuelan oil into this country, which runs, say, 9 per cent gasoline. Most of it goes for fuel oil, used right on the Atlantic seaboard, and the rest for asphalt. If you stop that importation and some other portion of this country, either midcontinental field or the California field, is to furnish those millions of barrels of fuel oil that we are using on the Atlantic seaboard, you have got to distill a barrel of oil that produces not 9 per cent gasoline but 40 per cent gasoline. If I had time I could give you the figures of what that would mean.

The oil experts say that the proper reserves of gasoline in this country is 36,000,000 barrels. This year we had about 40,000,000 barrels and you had the lowest price on gasoline, owing, perhaps, or possibly in part, to that surplus that you ever had, which caused it to go down 29 per cent.

Now, if you add to that natural oversupply the tremendous amount of gasoline that would have to be produced from 40 per cent crude to furnish that fuel oil which we need, you would absolutely destroy the price structure of the oil industry throughout the United States. The mid-continent field has its own zone and the California field has its own zone, and they need in California for their industrial progress all the oil they have there and they used last year practically the same amount there that they produced in that field.

The CHAIRMAN. From what you have already said I judge that you are against this duty on oil.

Mr. NELSON. Yes, sir: I was going to mention that before I got through. I beg the pardon of this committee for taking so much time, but I have not covered many things that I should have liked to.

STATEMENT OF HON. EDITH NOURSE ROGERS, A CONGRESSWOMAN FROM THE STATE OF MASSACHUSETTS

Mrs. ROGERS. Mr. Chairman and members of the committee, I am going to take only a moment of your time, because I realize how extremely vital time is in balancing the Budget. I also realize now vital it is to us who live on the Atlantic seaboard to remove if possible any possibility of any tariff on imported oil. The Commerce Department told me this morning that already the price of imported oil or oil on the Atlantic seaboard had increased 10 cents a barrel.

I see Senator Hull is here, and I just want to read one or two sentences from yesterday's record:

Senator HULL (speaking to Secretary Mills). Have you considered in here the matter of the tariffs?

Secretary MILLS. Senator Hull, you have no illusions—I know some people have, but you have none—as to the character of the two items in this bill.

Senator HULL. I was just hoping that I had not.

Secretary MILLS. I certainly have not. They are not revenue measures. They are protective-tariff measures.

Senator SHORTRIDGE. Would not they raise some additional revenue, Mr. Secretary? We are framing a bill for the purpose of securing additional revenue.

Secretary MILLS. Not car fare, though, Senator.

Senator SHORTRIDGE. But we are seeking additional revenue. And, speaking for myself, if we can secure a large additional revenue by imposing a tariff on some imported articles, there is no reason on earth, no logical reason that I now see, which would preclude us or prevent us from including it in this revenue-raising bill.

Senator HULL. Even if it takes until October.

I know a witness has no right to ask a question of any member of the committee, but I am very much troubled by that "even if it takes until October," the statement made by Senator Hull.

STATEMENT OF HON. JOHN W. McCORMACK, A CONGRESSMAN FROM THE STATE OF MASSACHUSETTS

Mr. MCCORMACK. I just wanted to expedite matters. I will just take a few minutes, because I realize what the members of the committee are going through, because I went through it for eight weeks as a member of the Committee on Ways and Means when we had this bill under consideration.

The Senator from Pennsylvania a moment ago asked a question about lubricating oil, and while that is not relevant to the purpose that I had in appearing before this committee, I might call to the attention of the committee that we never intended to impose a 4-cent tax on lubricating oil used in industry; and I am also frank in saying that my impersonal opinion of this latter remark is that the same thing should apply to tractors on the farm, because in a sense they are to the farmer just what machinery is to the industrialist.

If you will read the debate in the House, you will note that the acting chairman of the committee, Mr. Crisp, in response to an inquiry that I made of him, stated on the floor that they never intended to have the tax of 4 cents per gallon on lubricating oil apply to such

lubricating oil used in industry, and my impersonal opinion is that the same thing might reasonably extend to the tractor on the farm.

In the original bill as reported by the committee we obviated that by the use of the licensing system, as provided under the provisions which created the manufacturers' excise tax, and of course when that was stricken out that brought every field of activity within the purview of the 4-cent tax on lubricating oil. However, that is for you gentlemen to consider, and I hope you will not misunderstand my gratuitous reference to that.

So far as the tariff is concerned, I am opposed to a tariff in any form in a revenue measure. That is the position I take. It is not a question of what section of the country will be benefited or which section of the country will be affected. I believe it is wrong in principle and unsound and unwise in practice. I took that position as a member of the subcommittee that considered the various methods of raising sums in addition to the changes in the internal revenue laws and the administrative changes, and I opposed it in the full committee. It appealed to me as being an improper place to inject tariff provisions, because the Committee on Ways and Means and I know I did not as a member consider many of the elements which go into the consideration of a tariff measure. The only question before the committee so far as I was concerned was: What was the estimated deficit for the fiscal year of 1933? That information was given to us by the Treasury Department. And then the question of whether or not we should balance the Budget. That was a committee question, and I felt it was of extreme importance to the best interests of the country that we should.

Then the next question as to the best means of raising the revenue necessary to balance the Budget. In considering the latter question it was my opinion, and I advance it on this occasion, that the use of a revenue bill for tariff purposes is absolutely wrong in principle. The indirect effect of this will undoubtedly be to increase the price of oil, and in the case of coal increase the price of coal to the consumer. That is the purpose of putting this provision in the bill.

Now, so far as revenue is concerned, the committee estimated that the oil provision would bring into the Treasury $5,000,000. The Treasury Department recommended that it would bring into the Treasury nothing. The committee reported to the House that that provision would bring in an estimated revenue of $5,000,000. Later they revised that upward to $25,000,000, after the excise provisions were stricken out of the bill, and another subcommittee was appointed to bring in other provisions as a substitute therefor.

There is nothing further I desire to say except that I take the position that it is absolutely wrong to use a revenue bill for tariff purposes, and I say frankly as a Democrat that I hesitate and I dislike this form of advocating the results of the Hawley-Smoot bill and at the same time undertaking to defend the injection of tariffs into a revenue measure.

Senator HULL. Have you any other facts there on which this $5,000,000 estimate was based?

Mr. MCCORMACK. Guesswork, pure guesswork, Senator.

Senator GORE. Did you discuss this in the House?

Mr. MCCORMACK. I did. I led the fight against it in the House. I made the motion to strike both provisions out. That was when

the roll call was 204 to 288. In the Committee of the Whole, where there was no roll call and a teller's vote, it was one hundred and ninety-odd.

Senator GORE. You presented the arguments in the House?

Mr. MCCORMACK. Absolutely. Of course, in the House we did not have a direct question on the elimination of the oil and coal and wort. It was a part of the so-called Crisp amendment which brought into the Treasury a revenue of $81,000,000. We could not get a direct vote. After we came from the committee of the Whole into the House I had to demand a separate vote on the Crisp amendment, which included not only coal and oil but included wort and libricating oil, which some of us wanted to keep in because of the revenue which it would bring into the Treasury, although personally I voted against wort in the committee and I would again if I had a separate opportunity.

Senator GORE. They were voted on separately in the first instance?

Mr. MCCORMACK. Here is the way it developed——

Senator GORE (interposing). Wasn't there one vote on the oil and another on coal?

Mr. MCCORMACK. Oil came out of the committee.

Senator GORE. Yes; and there was a vote on it alone?

Mr. MCCORMACK. No. The only place we ever had a vote on oil alone was in the Ways and Means Committee.

Senator GORE. Oh. Did they amend that proposition by attaching coal before they were both voted on?

Mr. MCCORMACK. Here is what happened, if I might—I do not like to take up the time.

The CHAIRMAN. I do not see what that has got to do with this.

Mr. MCCORMACK. When the excise tax was stricken out—at least the manufacturers' excise tax provided a 2¼ per cent base. That applied to imports as well as domestic manufactures, finished articles, in the form that they would ultimately get to the consumer, and all sorts of finished manufactured forms.

When that was stricken out another motion was made which also took out of the bill the domestic tax on lubricating oil and on wort and leaving the import tax, which of course was ridiculous, because the money that we were going to get into the Treasury was from the domestic tax or the tax on this operation internally, because wort, of course, is not imported, and very little lubricating oil is imported, very, very little. It is all of domestic production.

But it happened to develop that one motion followed the other and the result was that we had left wort in the bill and we left lubricating oil in the bill, but we only left them in the bill so far as an import tax was concerned, and eliminated the domestic tax. Therefore, we were in a parliamentary situation that we had to get that tax back into the bill so far as the domestic production is concerned.

Mr. Crisp moved a substitute to the provision remaining in the bill providing for the import tax on wort, lubricating oil, and on oil, the oil which you refer to which was originally an import tax. That substitute was pending the Committee of the Whole and these various amendments were offered, several of which were for the purpose of tariff, tariff on additional articles imported into America, and coal was one of them and, of course, it got voted on and because oil was in. Oil is really the whole thing around which this bill is centered.

The whole history of this bill and its troublesome journey throughout the House in the main can be attributed to oil, because certain Representatives from certain sections when they put oil in, in their opposition to it, did everything they could, naturally to make the journey of the bill harder and harder through the House.

And coal was put in, in a sense, to embarrass oil, upon the theory that many said, "Well, if oil is in, why not an import duty for everything? If you take up one, take it up all the way through."

The CHAIRMAN. Both of them are in the bill. So let us go on.

Mr. MCCORMACK. So when we came out of the Committee of the Whole we had the Crisp substitute as a separate amendment, and under the rules of the House you know you can demand a separate vote on any amendment, also the Committee of a Whole, and a separate vote had to be demanded and everything that was included in the Crisp amendment, which was not only coal, which had been moved in as an amendment, but oil, lubricating oil, and wort, and that was what the vote was, on striking out the Crisp amendment.

Well, now, if that had been successful I was going to move on a motion to commit to put back wort and lubricating oil and strike out the import tax on oil, which would have still been in the bill, because, while it was a part of the Crisp amendment, it is still a part of the original bill.

So we had to make two motions in order to get in oil.

Senator GORE. Yes.

The CHAIRMAN. Is there anything further that you wanted to say, Mr. McCormack?

Mr. MCCORMACK. No; nothing further that I wanted to say.

STATEMENT OF WIRT FRANKLIN, PRESIDENT OF THE INDEPENDENT PETROLEUM ASSOCIATION, ARDMORE, OKLA.

Mr. FRANKLIN. Mr. Chairman and gentlemen of the committee, there has been a good deal of confusion created as to whom we represent. So at the inception of my remarks, I desire to make that clear.

I appear before you as president of the Independent Petroleum Association of America, having branches in each of the oil-producing States. The subject which I desire to present has been by resolution approved by all the oil and gas associations and marketing associations in the United States, including the American Petroleum Institute, of which I am a member of the board. That includes the California Oil and Gas Association, the Mid-Continent Petroleum Corporation, and Oil and Gas Conservation Association of the States of Texas, and many others too numerous to mention.

In addition to that, the business and banking interests and the farming interests of the oil-producing States have spoken in no uncertain terms upon this question of a tax on imported oil.

I would like to hesitate right now to say that while much has been said about the cost to the farmers of the oil and gas which they buy, there no interest so vitally interested in the domestic production of oil as is the farmer. He owns one-eighth of all the oil produced and he receives a dollar an acre rental upon all the lands, amounting to millions and millions of acres, which are under lease.

Now, I would desire to make clear, in view of what has been said at this meeting also, those who oppose this tax on imported oil. Let

us make the issues clear. That branch of the American Petroleum Industry which is engaged in importing oil is the only part of the petroleum industry which opposes a tax on imported oil. And who are they? The Royal Dutch Shell group, two companies of the Standard Oil group, the Pan-American Petroleum & Transport Co., a subsidiary of the Standard of Indiana, the Standard of New Jersey being the other one.

Senator CONNALLY. And the Gulf.

Mr. FRANKLIN. And the Gulf, or the Mellon company. Those are the interests which have opposed a tariff on oil in the past and which now appear to oppose this revenue measure, and before I am through I do not think there is a man on this committee who will doubt that this is a revenue measure as it is written.

Now, I presented this matter to the Ways and Means Committee rather fully, and I refer for much of the statistical information, which I will refrain from introducing here, to page 925 to 960, and pages 1116 to 1132, of the hearing before the Ways and Means Committee.

First, I wish to address myself to this as a revenue measure and to refer briefly to the reports, two of them, made at the request of Congress by the Tariff Commission on the difference in cost of foreign oil and domestic oil. The Tariff Commission's report made in February, 1931, found that there was a difference in cost between Gulf-coast and mid-continent oil delivered at Atlantic ports and foreign oil delivered at Atlantic ports of $1.19 a barrel.

The more recent report, made in December, 1931, said there was a difference of cost of $1.03 a barrel. The more recent report said that the cost of mid-continent oil delivered at Atlantic ports, including a cost of $1.09 a barrel at the well, and that includes all the oil-producing States of the Union, the weighted average cost of the oil at the well $1.09, delivered at the Atlantic seaboard was $1.90; that the cost of refining that oil was 73 cents a barrel, making $1.63 a barrel for mid-continent oil refined at Atlantic-coast refineries.

Senator REED. $1.63 or $2.63?

Senator GORE. $2.63, is it not?

Mr. FRANKLIN. Yes, $2.63; you are correct. Total cost of this oil refined ready for the market in its refined state $2.63. The value of those products was $2.74 a barrel, or a profit per barrel on domestic oil of 11 cents.

The cost of Venezuelan oil—and we are talking about Venezuelan oil, because that is the principal source of imported oil at the present time—delivered at Atlantic ports is 87 cents a barrel. That is the report of the Tariff Commission, although we could show it is very much less actually, as has been admitted by some of the opposing witnesses.

The cost of refining that oil by the methods now in use is 30 cents a barrel, or a total cost refined of $1.17 a barrel, while the value of the products as reported by the Tariff Commission is $1.71, which makes a profit of 54 cents per barrel on foreign oil as against 11 cents a barrel profit on the domestic oil.

Senator REED. These are the figures found by the Tariff Commission?

Mr. FRANKLIN. These are the Tariff Commission's figures.

An analysis of that report from the refining standpoint as to present-day conditions and profits, made by Dr. W. W. Holland,

now one of the chief refiners of the Pure Oil Co., but who built the plant for the Pan American on the island of Aruba off the coat of Venezuela and operated it as superintendent for more than nine months, until his health failed and he had to return to the United States, shows that the present-day profit on that oil is 94 cents a barrel. That report of Doctor Holland is a part of the record in the Ways and Means Committee hearing in full.

These figures show, gentlemen, a profit of 5.29 per cent on domestic oil and 62.4 per cent on foreign oil, on Venezuelan oil.

Now right at this point, while I have said that the Venezuelan oil is the principal source of imported oil, we are also confronted with the very serious situation which has grown worse in the last year, and that is the situation with reference to Russian and Rumanian oil. Russia is increasing its production of oil by leaps and bounds, and using the American experts who have built for them the latest refineries, they are in a position soon to commence dumping Russian gasoline upon the American market.

Senator REED. Haven't they already done it?

Mr. FRANKLIN. They have already dumped that gasoline on the American market, four tankers of it and the declared valuation of that gasoline at the port of Baltimore was 1.96 cents a gallon. It has reached as far inland as Detroit, where it was advertised in 23 issues of the Detroit Evening Press to sell for 5 cents a gallon below the price of domestic gasoline [exhibiting advertisement], declaring it to be "Zip, a premium motor fuel oil the equal of any premium gasoline in the United States."

Senator REED. That was taken up the St. Lawrence River, was it not, by tanker?

Mr. FRANKLIN. This one was, this particular tanker. But this company, the Sunny Service Oil Co. of Detroit, bought 15,000,000 gallons of this gasoline for delivery over the coming year, enough to demoralize the market of the mid-continent district for more than a year. And they bought it on a contract payable in sterling just before England went off of the gold standard, and even at the price bought they are only paying about 66⅔ per cent of their contract price, due to their depreciated currency.

Senator REED. That would seem to be a joke on the Russians, would it not?

Mr. FRANKLIN. A joke on the Russians, but a very serious joke on us also.

Now, gentlemen, you have heard considerable about the price of fuel oil on the Atlantic seaboard and in New England. The present low price is 60 cents a barrel by contract in large quantities. If you added all the tax of a cent a gallon or 42 cents a barrel to that cost you would have fuel oil at $1.02 a barrel, and up until the 1st of last April New England or the Atlantic seaboard never had fuel oil for less than $1.05 a barrel. So it would be no new thing to them if all of that cost should be added.

But it is well known that in the case of any imported article—and the experience of the past will bear me out; I have here a sheet of such figures—that the full tariff is not added to the price. Take wheat, for instance. Has the full amount of tariff on wheat been added to the price? It has not. Nor on a vast number of other articles.

Senator HULL. Mr. Franklin, is there any purpose to increase the price of oil and avail yourself of this tariff? Is that what you mean to be understood as saying, or not saying?

Mr. FRANKLIN. Senator, the purpose of the domestic oil industry in advocating this tax—we might as well speak frankly—is to bring about an ameliorated condition of the American petroleum industry.

Senator HULL. That was not exactly what I first asked you.

Mr. FRANKLIN. That would be brought about by an increase in the price.

Senator HULL. Undoubtedly. Then your suggestion, if I understood you, is to exclude this oil that is imported, which would being about an increase of employment of about 300,000 persons? That is what you have in mind, is it, as a part of it?

Mr. FRANKLIN. If the oil business gets back on its feet so that it can supply the American market at a fair price, as it has over a period of years before these imports became so large as to demoralize the industry, then these men could be reemployed. The Department of Labor figures show that there are 359,000 men now out of work in the oil-producing States formerly engaged in the producing branch of the industry.

Senator HULL. What I was getting at was, how do you reconcile your statement, as I understood you, that this would be a large revenue or a substantial revenue producer, which would mean that a large amount of oil would have to be imported, but at the same time you would make leeway here for this resumption of employment?

Mr. FRANKLIN. I will get to that, Senator. That is the next thing I have to discuss here, and I have the figures.

Senator BARKLEY. Will you also discuss at the same time what your judgment is as to the effect that this tariff would have on the increase in production in the American oil fields.

Mr. FRANKLIN. I will be glad to.

Senator BARKLEY. That is one thing that bothers me. If, by shutting out a certain amount of oil, we encourage an increase in our own production that would offset that, it may have a pertinent bearing on whether the industry would be benefited by the tariff or not.

Mr. FRANKLIN. To answer the first question, it is my opinion—and I think the figures will bear me out—that the tax of 1 cent a gallon will not keep out any oil from importation. The Tariff Commission having found that the difference in cost of production here and abroad is $1.03 a barrel, how in the world could a tax of 42 cents a barrel, which is only about 40 per cent of the difference in cost, keep out any oil? Before I am through I want to suggest a correction by this committee of the measure as it passed the House, in order to make it fair to all interests involved. Does that answer your question?

Senator HULL. You are making headway. I want to hear you a little further.

The CHAIRMAN. Is that correction an increase?

Mr. FRANKLIN. Not in oil.

I have before me, gentlemen of the committee, a statement showing the average imports of petroleum and refined products for the years 1929, 1930, and 1931. I have taken the three years, and these figures are from the Bureau of Mines, the Government figures, in order that it might be absolutely fair. I have not taken a year of

high imports or a year of low imports, but the average of the last three years.

Senator BARKLEY. Is that a fair period? I mean by that, does that sufficiently represent an average normal period, so as to be fair to both sides of this question?

Mr. FRANKLIN. Absolutely, in my opinion.

It has been brought out already that imports last year declined from 105,000,000 barrels in 1930 to 86,000,000 barrels for 1931. That was not due to the desire of the importers to curtail their imports, but it was brought about as a cooperative measure on the part of certain of the importers to do their fair share toward the curtailment movement which was in process in the United States.

Senator BARKLEY. Do those figures of 109,000,000 and 87,000,000 represent crude?

Mr. FRANKLIN. One hundred and five million. That is crude and refined products combined.

Senator BARKLEY. What percentage would be crude?

Mr. FRANKLIN. About 46,000,000 barrels of crude and about 13,000,000 barrels of gasoline; the remainder fuel oil.

Senator BARKLEY. Which year are you taking now?

Mr. FRANKLIN. That is 1931.

Senator BARKLEY. For 1930 how much would it be?

Mr. FRANKLIN. For 1930, it was 16,000,000 barrels of gasoline and 69,000,000 barrels of crude, if I remember correctly; and the balance fuel oil.

Senator REED. How does that compare with the situation 10 years ago, when we were getting in the oil from Tampico?

Mr. FRANKLIN. It is about the same situation we had 10 years ago. If you gentlemen will remember, a large delegation of oil men from the mid-continent district appeared before Congress when this condition was the same—and I was with them—and tried to get a tariff on oil to protect us from that flood of Mexican oil. You will probably hear some of the gentlemen appearing in opposition to this say that they reduced their imports from Mexico. I know the statement was made by one of their number in another hearing before the Federal Oil Conservation Board. Until recent years they reduced their imports, from 1922 on, because the production of Mexico declined and they could not get it until they developed Venezuela. Then they commenced their imports again, which have increased steadily until last year, that reduction being brought about through the intervention of Secretary Lamont, of the Department of Commerce, to bring about a ratable importation compared, as nearly as might be, with the curtailment of production in the oil-producing States.

Senator BARKELY. How did the——

Mr. FRANKLIN. Pardon me. Let me finish my statement, please, Senator.

Congressman Nelson said the curtailment in the United States has been only a little over 5 per cent. The curtailment of the oil fields in the United States, the fields of flush production, has been about 98 per cent of their potential production. Kettleman Hills, Calif., Oklahoma City, Okla., and east Texas have been producing during the last year not to exceed 2 per cent of their potential production. Gentlemen, they are shut in, with hundreds of millions of

dollars of American capital invested, and not producing enough oil to pay the labor, in consequence of which the labor has been discharged.

Senator BARKLEY. How much of that restraint, or how much of the restrained oil, would be released by the passage of this tariff on oil?

Mr. FRANKLIN. It would not be released, except to furnish the market demand. In each of those States mentioned, California, Oklahoma, Texas, and also Kansas, there are conservation laws giving State commissions authority to determine how much oil may be produced without waste, and it has been conceded that the excessive storage of oil is waste, because of the large amount of evaporation which takes place.

Senator BARKLEY. May I ask one question there? At the time of the Tampico importations 10 years ago, which you say were about the same as the average for the last three years, how did domestic production compare with the average domestic production for the last three years?

Mr. FRANKLIN. Domestic production at that time was very much less. You have heard a great deal about overproduction of oil in the United States. As a matter of fact, there has not been an overproduction of oil in the United States in the last 13 years. During that period there have been imported into the United States 1,010,000,000 barrels of oil. During that period the United States lacked 686,000,000 barrels of producing as much oil as it consumed.

Senator CONNALLY. Are you deducting exports from that?

Mr. FRANKLIN. No. That resulted in the excessive storage of 341,000,000 barrels of American oil, due solely to importations, and that is the storage oil which you hear so much about, which is a burden on the American petroleum industry.

While I am talking about this question of overproduction, I wish to give you some more figures of more recent date. I want to give these figures to show you what the American petroleum industry, through cooperative efforts, with the assistance of State regulatory bodies, has done to put its own house in order.

Congressman Nelson said that all the troubles of the industry were internal, and I offer this in refutation of that statement.

In 1930 domestic oil production was reduced 109,000,000 barrels as compared with 1929, and during the same period there was imported 105,000,000 barrels of oil, which nullified our curtailment. During that year, 1930, there was taken out of storage over 23,000,000 barrels of oil to supply the demand in the United States; and in 1931 that curtailment continued, so that we produced in 1931 48,000,000 barrels less than in the year 1930, while the imports in 1931 were only reduced, as I have said, to 86,000,000 barrels, again nullifying the efforts of domestic operators in the way of stabilizing the domestic oil industry.

Senator HARRISON. What happened during that period to the exports? Did they fall off, or remain steady?

Mr. FRANKLIN. Yes; the exports fell off, too. I will give you that later.

In 1931 there was taken out of storage 45,000,000 barrels of domestic oil. In all previous history of the American petroleum industry when as much as three or four million barrels a month was being drawn out of storage the price of oil went up by leaps and bounds, but last year we had this strange condition, that with the removal of as much as

200,000 barrels daily of oil from storage, the price went down last July to the lowest point in all history, as has already been stated, the low price being 10 cents a barrel and the high price 22 cents a barrel, for oil of Pennsylvania grade in the mid-continent field.

That condition was brought about by the importation of this cheap oil. You can not understand this question and how this foreign oil acts unless you know the whole story. Reference has been made to the control of production in the United States and its marketing through the ownership of pipe lines by a few. Those same interests that own the pipe lines and control the transportation of oil, and which receive these high rates of tariff for the transportation of oil are the interests which import this oil. Therefore, through the importation of oil at will, as much as they desire, they control the price of oil at the well in the United States.

While this tariff, or tax, rather, of 42 cents a barrel will not keep out any oil, it will form a cushion on price, below which oil can not go. If they have to pay 42 cents tax, they can not reduce the price of oil in the United States to 10 cents a barrel, as they did last summer.

Senator HULL. Would it interrupt you to ask about this trade situation? For instance, the exports of petroleum and petroleum products for 1930 were $494,339,000, while the imports were $145,116,000, or a favorable trade balance of $350,000,000. For 1931 the exports were $270,293,000 and the imports $92,746,000, or, for those two years, a favorable trade balance of $528,000,000. I am trying to see how you work out a situation here where you can get tariff benefits, really, if you have imposed any kind of a tariff, unless you abandon the antitrust law so as to peg your prices in some manner.

Mr. FRANKLIN. That story about these imports and exports, Senator, is only a part of the story. The facts are, in relation to exports and imports, that the bulk of the exports of oil from the United States are from the Pacific seaboard to Asia and the Orient.

Senator BARKLEY. Are they refined products?

Mr. FRANKLIN. Refined products in large measure. And the large part of our exports that appears in these figures, as totals, goes to Canada, across the line. When you deduct the exports from the Pacific coast and the exports to Canada from the total exports, you will find that there is a large excess of imports to the Atlantic seaboard over exports.

Then there is another feature whichI desire to impress, and that is that it is not the same oil which is exported that is imported—far from it. The exports from the Atlantic seaboard are largely of Pennsylvanian grade lubricating oil, which is the best in the world, and this foreign oil that is imported is in the form of gasoline and fuel oil, which displaces oil produced in the United States in the markets of the East. The oil that is exported is not the same oil that is imported, and will not be, because the oils are of a different grade.

Senator BARKLEY. Are there any refineries in Canada?

Mr. FRANKLIN. Yes; there are refineries in Canada. These same companies import oil to Canada from South America.

Senator HULL. What I was getting at is this: I notice a great many nations, as soon as they see us run a tariff up on anything, immediately run theirs up against us on any particular items we have.

We have now employment for labor here to produce a favorable balance of oil exports of $520,000,000 for the last two years, and I would like to have you, Mr. Franklin, before you conclude——

Mr. FRANKLIN. Before I conclude, I will show you that our export market is lost, that it has been steadily declining for the last three years; that last year we lost, as compared with the preceding year, 21 per cent of our exports.

Senator HULL. I did not make myself entirely clear, if you will pardon me. A country that sees us run our tariffs up, will run theirs up, if not against one item we are trying to sell, then against another.

Mr. FRANKLIN. We lost 21 per cent of our export market last year in volume, and in value we lost 45.3 per cent of our export market of oil—45.3 per cent in one year.

Senator BARKLEY. How does that compare with our loss in exports in everything?

Mr. FRANKLIN. This is very much greater than it is in everything. That is due to the condition I said a while ago, in the world development of oil. While the United States has been curtailing its production, Rumania and Russia have been increasing their production by leaps and bounds, and they come in competition with our exporters in the markets of Europe. Russia and Rumania are taking away the export market for oil of the United States. It will be retained in some degree for several years, due to the fact that our large exporting companies control certain outlets in Europe which they can retain if they are willing to meet the competition in price with Russia and Rumania. That has been another factor in reducing the price of oil in the United States—the desire of these large interests with the export business to compete in the markets of the world with Russia and Rumania, putting our labor and our oil, and the United States, so far as oil is concerned, on a level with the labor of Russia, to a large extent.

Senator HULL. Is it your plan, if you get a tariff high enough, to fence in our oil situation here and depend on domestic consumption for whatever it could take care of, and dump the balance, or not undertake to sell systematically outside?

Mr. FRANKLIN. We are forced, by the very conditions I have described, to rely upon the domestic market for domestic oil. In the end, that is the answer, because, as I have said, and as the figures show, which the Senator has quoted, we are losing our export market, but the domestic market of the United States is 70 per cent of the market of the world. If we can retain our domestic market for domestic oil, and we have ample supplies of domestic oil to supply that market, it is all we need.

We have lost our export market, anyhow, all but a small part of it, and the line between exports and imports has already been crossed. The exports to-day are less than imports.

Senator BARKLEY. In value?

Mr. FRANKLIN. In volume.

Senator HULL. What level of prices do you seek here through the tariff situation?

Mr. FRANKLIN. Only the chance to live and compete with this imported oil. Under present conditions, if they are continued, gentlemen, the American oil-producing industry will be destroyed. It can not live another year. Judge Ames gave you the figures on

the profits and the cost last year, which show conclusively that the American petroleum industry can not live unless this condition is equalized in some measure, unless some protection is given to the American oil industry, and that means the prosperity of States west of the Mississippi covering a third of the area of the United States, with over 22,000,000 people, nearly one-fifth of the population of the United States, whose purchasing power has been completely destroyed in the last three years, and who are now unable to buy any of the goods from the eastern and northern manufacturing States which they formerly did.

The depression in the oil industry commenced three years ago. We were up here two years ago asking for protection, which we did not get, and we predicted this condition would be brought about if we did not get the protection. This depression in the oil industry and the distressed conditions in the oil-producing States occurred prior to the general depression and had a great deal to do with bringing about the depression generally in the United States, because we are purchasers from the Eastern States, from these very New England States which now deny to us the protection which they have always enjoyed. We buy hundreds of millions of dollars' worth of goods in normal times.

Last year the price of oil in Oklahoma, the average price, as Judge Ames told you, was 67 cents a barrel for the entire year. The average price of oil in the mid-continent field for 10 years prior to that, taking in two years of low prices, was $1.60 a barrel. We lost nearly a dollar a barrel on every barrel produced, which amounted to over $200,000,000 for Oklahoma alone, over $300,000,000 for Texas, and over $300,000,000 for California, leaving out the other 16 oil-producing States which suffered in like manner to the extent of their production.

Senator HULL. If you had your choice, Mr. Franklin, which would the industry, in your judgment, prefer, an entire suspension of the antitrust laws, or tariffs, as high as you want them?

Mr. FRANKLIN. I am not one of those, Senator, who believes in the suspension of the antitrust laws. I am one of those who believes that the antitrust laws should be kept as they are, or improved, if possible. I am not more in favor of combinations in restraint of trade and monopoly than the humblest citizen in this land. In fact, I believe monopoly should be suppressed, and I want to say to you that that is one of the reasons I am here before Congress fighting for the protection of the domestic oil industry from the four great companies who form the monopoly, and if this protection is not granted, the imported oils will be used for the purpose of recreating and reestablishing a complete monopoly of oil in the United States, when these four companies can tell you how much you will pay for every gallon of oil or oil products which you buy; and after that monopoly has been reestablished, I might say, through the destruction of all the independent producers, refiners, and marketers, the people of the United States will pay through the nose, and those losses now being sustained by those companies can be made up from the people in less than a year, and they will squeeze out every interest in this country. The only protection the American people have now in the oil industry is the competition offered by the independent producer, refiner, and marketer of oil. That competition keeps the price level with the amount of oil produced in the United States, which these independents are able to produce, and they have produced over 50 per cent

of it. If they had the protection, they could refine a greater part of it than they have been refining. The only safety of the American people so far as the price of oil is concerned is that you enable them to live so that there will be some competition in the industry in the United States.

Senator HULL. I am very much interested in your opinion. I agree with you. I was trying to see that really is the way out for the oil people, because we all recognize the distress we are in, and I wanted to see what your views were on that question.

Mr. FRANKLIN. Of course, the way out is to put this tax on, which, at 42 cents a barrel, will not keep out any oil, but will enable the price to be somewhat equalized.

Senator HULL. We told the wheat grower that some time ago, and put 42 cents a bushel on his wheat.

Mr. FRANKLIN. The price of wheat has never gone below 42 cents a bushel.

Sdnator HULL. Almost.

Mr. FRANKLIN. It almost went to that.

Senator BARKLEY. It went below that to some of the farmers out in the mid-Western fields.

The CHAIRMAN. We produce more wheat than we consume.

Senator BARKLEY. We have been doing that for years.

Mr. FRANKLIN. That is the answer to it.

Senator CONNALLY. The tariff on wheat did not hurt anybody.

Mr. FRANKLIN. The tariff on wheat did not hurt anybody, and if we do not get a benefit from the tax of 42 cents on oil, it will not hurt anybody.

Senator BARKLEY. Probably the oil producer will get more benefit from this than the wheat grower got from the same amount on his product.

Let me ask you this; I do not know whether you said it, or whether someone else said the profit on the imported oil per barrel amounted to something above 60 cents a barrel, after paying the cost of production and transportation; it was landed in this country at a price at which it brought a profit of some 60 cents a barrel.

Mr. FRANKLIN. After refining. The refiner realized a profit of 54 cents a barrel, accordiing to the report of the Tariff Commission.

Senator BARKLEY. Could the oil importers pay this 42-cent tariff, and at the same time sell their imported oil at the same price they now sell it for, or would they be compelled to add that, or some substantial portion of it, to the price of the imported product? I am referring to crude oil.

Mr. FRANKLIN. The imported oil is refined in a refinery of the same company which imports it, in large measure. There are some exceptions to this rule.

Senator BARKLEY. That is true where it is refined; but where it is used as fuel oil, or for purposes for which crude oil may be used, of course it is not refined. What is the average price of that imported product at the shore?

Mr. FRANKLIN. The lowest contracts made at the present time are on a basis of 60 cents a barrel; but in past years the price of fuel oil at New York, commencing in 1927, was $1.52 a barrel. In 1928 it was $1.18 a barrel; 1929, $1.05; in 1930, $1.09 a barrel; in 1931, 84 cents a barrel; in 1932, 60 cents a barrel. So that if you added,

as I said a while ago, the full tax to the 60 cents price of fuel oil at New York, it would then be 3 cents less than the lowest price ever paid for fuel oil at New York up to April 1, 1931. Since that time we have had this demoralized condition. We all recognize that the last year does not represent normal conditions, and I take it that no Member of Congress would desire to freeze conditions as to prices on any commodity—oil, farm products, manufactured products, or anything else—at the present low level. No industry can recover, and we can never have any prosperity in the United States, in any part of it, if we are to seek to freeze prices at the present level, because they are all below the cost of production, not only in oil, but in everything else. As Judge Ames showed to you in his presentation, oil sold all last year at some 40 cents below the average cost of production.

Senator BARKLEY. Leaving out of consideration for a moment the companies that produce oil in South America and import it and refine it in their own refineries, of course, they would all have to pay the 42-cent tariff on oil. Leaving them out of it, where oil is imported for sale in this country, my question was whether the profit on the imported oil for sale, and not for refining, is now sufficient to enable them to absorb the 42 cents, or would they add all of it, or a considerable portion of it, to the price?

Mr. FRANKLIN. Perhaps some part of it would have to be added to the present prices, but, as I say, the present prices of oil are entirely too low.

Senator BARKLEY. I agree with you about that. I know something about that myself. Do you know what proportion of the world's known supply of reserves of oil we have in this country?

Mr. FRANKLIN. That question has fooled a great many eminent experts in the oil industry. Back in 1925 the experts of the Federal Oil Conservation Board reported that there were only 5,000,000,000 barrels of recoverable oil in the United States. Since that time we have produced more oil than those experts said existed, and we now have in sight a greater expanse of oil territory than ever before in history, and a greater production developed, ready to produce, than ever before.

Senator GORE. The Senate committee in 1923 reported that gasoline, before a great while, would be selling at a dollar a gallon.

Mr. FRANKLIN. Yes. That was based upon these reports of these so-called experts.

Senator GORE. Yes.

Mr. FRANKLIN. They were unable to see much deeper into the ground, or make much more accurate estimates of the future oil reserves of the United States, than the average citizen.

Senator BARKLEY. My question was based on the statement I saw recently, that Russia had 35 per cent of all the known oil reserves in the world at this time—regardless of the amount of those known oil reserves, that Russia had 35 per cent of them. Of course, looking over this question from the standpoint of not merely a year or two, but looking at it over a period of years, I was wondering whether we would deplete our own resources so rapidly by any artificial stimulation that we might give to domestic production, as to put us, in the course of a few years, at the mercy of Russia, if she does hold 35 per cent of the world's oil reserves at this time, and if the known reserve

in our own country are such as to forecast their depletion within any reasonable length of time.

Mr. FRANKLIN. I will say in answer to that, Senator, I have already partially answered it, but in addition, let me say that one of the best known experts on oil in the United States, or in the world, for that matter, is Ralph Arnold, who testified before a committee of the Senate last year that we had enough oil in the United States to last us for 500 years at the present rate of consumption.

Senator BARKLEY. Perhaps that is true.

Mr. FRANKLIN. In a vast territory extending from the Canadian border east of the Rocky Mountains to the Gulf of Mexico, even embracing the States of Mississippi and Alabama. That territory is all probably productive oil territory. I do not mean that it is all oil land, but scattered across that territory will be pools of oil.

For instance, these same experts who made the misleading reports in past years, said there could be no oil found in Oklahoma County, Okla., or east Texas; geological conditions were not favorable. And still, since that report was made by these gentlemen, there have been discovered in these places where the experts said oil could not exist, the two greatest oil fields the world has ever known, Oklahoma City and east Texas. That shows how uncertain it is.

I would like to say that we have oil, according to the present developed state, and the present known probably productive territory, to last us anywhere from 300 to 500 years.

Senator BARKLEY. I am not going to worry beyond that.

Mr. FRANKLIN. The statisticians and experts of the Standard of New Jersey admit that to be correct. This propaganda which has been put out in the past about the exhaustion of our petroleum reserves has been put out by these very importing companies for the purpose of getting the market of the United States for these imported oils, and I say that advisedly. They paid for the propaganda—a press sheet which has gone out weekly for nearly three years.

The CHAIRMAN. It reminds me of the situation back in 1908, when Mr. Pinchot and certain people believing in conservation had us all scared to death that there would not be a pound of coal left in the United States by the year 1928. It would all be consumed.

Mr. FRANKLIN. A similar condition, exactly.

The CHAIRMAN. We have more coal now than we can possibly use for the next 500 years, anyhow.

Mr. FRANKLIN. Let me say, Mr. Chairman, that this is the oil age. It is valuable now. It brings great wealth to the citizens of the United States. The oil consumed in the United States should be produced in the United States, and that great wealth retained at home to employ labor and capital of the United States. It is newly created wealth. It takes nothing from anybody, but brings great wealth to the people of this country. Who knows but that to-morrow some scientist may discover a substitute for oil which will entirely supersede its use? Let us use it while it is valuable. Let us get the benefit of these resources while we may.

You heard a while ago a gentleman say that these imports were decreasing. Let me show you what has happened. This year, since the Committee on Ways and Means reported to the House and recommended the passage of a tax of 1 cent a gallon on the imported oil, this is what has happened:

The imports for January averaged 206,161 barrels a day; for February, 253,827 barrels a day; and for the four weeks of March on which reports are in, 256, 393, 307,429, 252,280, and 266,857 barrels a day. For the last week on which we have an authentic report, April 2d, the imports averaged 590,143 barrels a day, of which 662,000 barrels during that week was gasoline, or nearly 100,000 barrels a day of gasoline imported.

Senator REED. That always happens when you begin to talk about a tariff.

Mr. FRANKLIN. They talked about how they were cooperating, and reduced their imports. I just want to show that that is not taking place, and it is natural that they should increase their imports, but in the next six weeks, at the present rate of imports last week, they will import 25,000,000 barrels of oil or more into the United States, which will escape this tax, even though Congress passes it.

Senator REED. It has been the same way with copper in the last two or three months, and with coal.

Mr. FRANKLIN. I would like to put the sheet showing the imports into the record.

(The statement referred to is as follows:)

1932 oil imports

[American Petroleum Institute reports]

Week ending	Crude	Gasoline	Kerosene	Gas oil	Fuel oil	Total	Daily average
Jan. 2	973,000	104,000	.....	106,000	561,000	1,743,000	249,000
Jan. 9	527,000	435,000	.....	.....	367,000	1,329,000	189,857

Mar. 26 [1]	1,000,000	[2] 158,000	.....	56,000	648,000	1,862,000	266,857
Apr. 2	2,705,000	662,000	.....	21,000	743,000	4,131,000	590,143

[1] Corrected totals for March not available.
[2] 55,000 barrels gasoline imported in Norwegian S. S. Raila, from Constantza, Rumania, arriving Mar. 20, 1932.

1931 oil imports

[U. S. Bureau of Mines statistics]

Crude	47,250,000
Gasoline	13,621,000
Kerosene	10,000
Gas oil and fuel oil	24,998
Lubricants	31,000
Wax (pounds)	37,084,000
Liquid imports daily average	166,951

Senator REED. May I ask you one question? I would like to get an answer before we conclude, and we are almost at the end of the hour.

Mr. FRANKLIN. There is one matter I would like very much to get in to-night.

Senator REED. Let me direct your attention to two items. You can answer them to-morrow morning if you want to.

The first is the question of exempting bunker oil from the general language of this tax.

Senator CONNALLY. By a drawback, you mean?

Senator REED. By a drawback, or some such method.

The next is the question of differentiating between products of refining and crude oil itself—whether there ought not to be some difference in the amount of the tax on the refined product.

Mr. FRANKLIN. Your second question is the one I wished to present to you to-night. I will reserve the other one until to-morrow.

Senator GORE. I have an amendment that has been prepared on that.

Mr. FRANKLIN. The second question is the one I did wish to present to you to-night, to show where this revenue is coming from.

I have in my hand a sheet, which I desire to make a part of the record.

(The statement referred to is as follows:)

Imports of petroleum and its products, 1929, 1930, and 1931, average for the three years

Crude oil, 2,636,367,888 gallons, at 1 cent	$26,363,678
Fuel and gas oil, 1,002,734,334 gallons, at 1 cent	10,027,343
Gasoline, naphtha, and other finished light products, 551,349,414 gallons, at 3 cents	16,540,482
Tops and other refined distillates, 2,717,534 gallons, at 1 cent	27,175
Kerosene, 5,873,994 gallons, at 1 cent	58,739
Lubricating oil, 1,339,548 gallons, at 4 cents	53,581
Paraffine and petroleum wax products, 46,928,711 pounds, at 1 cent	469,287
Natural asphalt, and petroleum asphalt and bitumen, 73,770 long tons, at $2	147,540
Total	53,687,825

Mr. FRANKLIN. The average imports for the last three years are shown, on the basis of which I would recommend these taxes.

This is to correct some of the inequalities, which I later desire to explain, in the bill as it passed the House.

Crude oil, based upon these average figures, would bring, in revenue, $26,363,678 at 1 cent a gallon. Fuel and gas oil, at 1 cent a gallon, would being in $10,027,343. Gasoline, naphtha, and other finished products would bring in, at 3 cents a gallon—and that is the rate which this committee should fix in this bill for gasoline, to make it it equal with the tax of 1 cent a gallon on crude—$16,540,482. The other liquid products would bring in—tops and other distillates, $27,175; kerosene, $58,739; imported lubricating oil, at 4 cents a gallon, $53,581; paraffin and petroleum wax products, $469,287, at 1 cent a pound.

Natural asphalt, and petroleum asphalt and bitumen, at 10 cents a pound, would bring in $147,540.

Senator HULL. I could not catch all those figures. What is the total amount of the imports of petroleum and its products that you have down there?

Mr. FRANKLIN. These are the average imports for the last three years, based upon the average imports for the last three years.

Senator HULL. Do you figure they will continue to come in?

Mr. FRANKLIN. I do, because the tax suggested is only about 40 per cent of the difference in cost of production here and abroad, and with this tax paid, the refineries of this oil in the United States can sell and make more profit on it at the refinery than they can by refining domestic oil.

Senator HULL. You do not agree, then, with the Department of Commerce in its estimates?

Mr. FRANKLIN. Absolutely, I do not agree with the Department of Commerce about this bringing in revenue—or the Treasury, either—of only $5,000,000, and these figures completely refute that. The total revenue this would bring in, at these rates, is $53,687,825.

With reference to the statement from the Treasury Department that it will only bring in a revenue of $5,000,000, one of the witnesses who preceded me said that was only guesswork; and it was only guesswork, as anybody with a lead pencil can prove, knowing that there were 86,000,000 barrels of oil imported last year.

Senator CONNALLY. If that will bring in $5,000,000, it means they would bring in some oil. If it is probitable to bring in some, why would it not be profitable to bring in a lot of it?

Mr. FRANKLIN. They will bring in just as much as they have in the past, and they will bring in more, because the agreement to restrict imports will no longer be in force.

I want to quote Mr. Morgan Sanders, who was a member of the Ways and Means Committee, and who stated on the floor of the House—and it is in the Congressional Record—that the committee asked the Treasury experts to figure out the revenue this would bring in at 1 cent a gallon on all these products, and the Treasury experts reported to the committee that it would bring in $44,000,000. That is the statement made by Mr. Sanders on the floor of the House, as coming from the Treasury experts, in executive session with the committee—that is, at one cent a gallon.

Senator REED. The estimates of the revenue seem to compare with the estimates of the total reserves of oil. It seems to be anybody's guess.

Mr. FRANKLIN. These figures which I have given completely agree with these Treasury experts, except that at 3 cents a gallon on gasoline it would increase the revenue up to $53,000,000.

Senator REED. Mr. Franklin——

Mr. FRANKLIN. I want to say just a word about why this should be 3 cents.

Senator REED. Let me interrupt you. I asked you to direct your attention to the matter of bunker oil. One of the gentlemen from the Treasury Department tells me that the present provisions for the drawback on exported materials would apply to oil, so you need not bother about that.

Mr. FRANKLIN. I want to emphasize why this committee should raise the tax on gasoline to 3 cents a gallon in this provision. This provision of the bill, as it passed the House, is a gross discrimination

against the refiners in the United States on the Atlantic seaboard using foreign oil, and I know that this committee does not want to discriminate against capital and labor in the United States.

Senator REED. This bill, as it comes from the House, would shut up all the refineries around Bayonne and Marcus Hook, would it not?

Mr. FRANKLIN. Yes; it would discriminate against domestic refineries. Therefore the tax on gasoline should be raised to 3 cents a gallon. The average recovery of gasoline from a barrel of Venezuelan oil—and off the coast of Venezuela there are two refineries belonging to the Royal Dutch Shell and the Pan American Co., with a capacity of 325,000 barrels a day, which obtain from Venezuelan oil 12 gallons of gasoline to the barrel.

Senator REED. That is by cracking.

Mr. FRANKLIN. Yes; and they are cracking plants. The remainder of that is fuel oil. They could sell that fuel oil in other parts of the world, not importing the fuel oil to the United States, but importing the gasoline and bringing in the gasoline from a barrel of oil for 12 cents tax, while the Mellon Co., the Gulf Co., and the Standard of New Jersey, with their refineries in the United States, to get the same amount of gasoline per barrel of oil, would have to pay a tax of 42 cents. That is the reason that should be corrected, without any doubt.

Senator REED. Of course, if it was not corrected, they would simply have to establish refineries down in Venezuela.

Mr. FRANKLIN. It might cause these refineries in the United States to move down to South America, and nobody desires that.

Senator HULL. How much oil is brought up here and refined and then sold to merchant fleets of this and other countries, and exported, together?

Mr. FRANKLIN. I can not answer that question offhand. As I said awhile ago, most of our exports are from American produced oils, because of their higher grade and their lubricating content.

Senator HULL. This application has brought about one new term in tariff nomenclature. We are now calling a tariff a tax for the first time.

Mr. FRANKLIN. I would call the attention of the Senator, however, to the fact that up to the year 1913 the principal revenue bill prepared by Congress was a tariff bill, and that the first income tax ever passed by Congress was put on a tariff bill as an amendment; so that we are not violating any precedent. If, perchance, you should call this a tariff and put it in the revenue bill, it will produce revenue.

Senator HULL. I am very much interested to see what will be the effect of a tariff rate here on oils that we have been bringing up here and refining and then distributing in some way, on the seas or abroad—whether that would be diverted to refineries in Europe and elsewhere and sold to the merchant fleets of the different nations over there instead of being brought here and refined and distributed.

NOTE FROM MEXICAN AMBASSADOR

DEPARTMENT OF STATE,
Washington, April 15, 1932.

The Hon. REED SMOOT,
Chairman Finance Committee, United States Senate.

SIR: I inclose translation of a note dated April 6, 1932, from the Mexican Ambassador containing a suggestion made by some of the companies exporting

petroleum from Mexico to the United States. The department transmits this communication merely for the information of the committee, as requested by the Mexican Ambassador, and without having examined into the merits of the suggestion or the propriety of embodying it in legislation.

Very truly yours,

W. R. CASTLE,
Acting Secretary of State.

[Translation]

EMBASSY OF MEXICO,
Washington, D. C., April 6, 1932.

Mr. SECRETARY: Without intending to meddle in matters which are exclusively within the competence of the legislative power in this country, and solely because of considering this procedure more honorable than that of exerting private influence or dealing directly with the Sentors of the Republic, I venture to request your excellency kindly to bring to the knowledge of the appropriate committee of the Senate, by way of information, if there be no objection to so doing, the following argument, which has been submitted to me by some of the companies exporting petroleum from Mexico to the United States:

"The Mexican crude petroleum which is imported into the United States is used almost exclusively in the manufacture of asphalt and does not come into competition in any way with American crude oils on the Atlantic coast. There is, therefore, ample justification, even if the tariff should be adopted, for excluding Mexican petroleum from the action of said tariff. It goes without saying that it would not be feasible to exclude Mexican petroleum as such, but this could easily be obviated by stating in the law, for example, that crude petroleum of more than 13° Baume could be imported free of duty. The United States exported 400,000 tons of asphalt in 1931, which shows its need of heavy Mexican oils, not only for domestic consumption, but for exportation."

I request your excellency kindly to accept my thanks for whatever you may do in this matter, and I take advantage of this opportunity to repeat the assurances of my highest and most distinguished consideration.

PUIG.

LETTER FROM ED. R. MAYER

JOHNSON RANCH ROYALTY CO. (INC.),
Amarillo, Tex., April 9, 1932.

Hon. SENATOR SMOOT,
Chairman Senate Finance Committee,
Capitol Building, Washington, D. C.

DEAR SIR: Inclosed herewith please find report, on the above subjects, which I am respectfully requesting that you present to the committee and have introduced in the record by having same read on the floor of the Senate.

Yours very truly,

ED. R. MAYER, *President.*

AMARILLO, TEX., *April 8, 1932.*

Hon. SENATOR SMOOT,
Chairman Senate Finance Committee,
Capitol Building, Washington, D. C.

DEAR SIR: At this time, while you have the House revenue bill before you for consideration and reconstruction, it is proper that any citizen and business man, who will be seriously affected by your decision, should write you and disclose to you, in advance, the effect that your decision is going to have on his business, which is expected to pay taxes for the support of this Government.

Also what effect your decision will have, as it pertains to his line of business, on the city, county, and State in which he lives, and upon the general business condition of the Nation.

I fully realize that you gentlemen have been selected as statesmen and because of your knowledge of economic conditions, and I have no desire to occupy your time with an uninvited perusal of my personal opinion, which may add nothing to the fund of knowledge which you have already accumulated relative to the above bill. But I feel charged with the responsibility of placing before you a short and concise report covering the facts pertaining to the line of business in

which I am engaged, both as developed in the past and the conditions under which we are now doing business.

In the House revenue bill you are asked to vote an excise tax on what is now tax-free imported oil and its refined products. Your action in this matter will influence not only my lines of business, but the welfare of the entire South and West.

The taxing of what is now tax-free imported petroleum oil and its products involves a vital economic issue which, so far, has been the controlling factor in the failure of Congress to grant a protective tariff to the oil industry of the United States.

This issue has, so far, been viewed only from the standpoint of the relation of exports to imports, and the major oil companies have furnished data showing that exports have exceeded the imports.

Congress has, in the past, decided that there was no issue, and as a result the prosperity of the oil industry of this country has been practically annihilated, to the sole profit of the importing oil companies doing an international business.

The real issue before Congress is whether the great oil industry of the United States shall be sacrificed for the benefit of some half dozen importing and exporting companies engaged in international trade, and whether these companies shall take the American markets (which constitute 70 per cent of the world market) through the medium of tax-free imported oil from which the United States Government has been obtaining not one cent of revenue to replace the revenue formerly obtained from thousands of tax-paying and prosperous domestic businesses.

The present prolonged business depression now brings this matter forcibly to your attention, and in viewing the situation a statement of the following facts is pertinent at this time:

The present depression has been brought about through a number of economic causes, developing over the past 15 years, to some of which I think it is necessary to call attention, as they have a direct or indirect, bearing upon the present situation and general depression of the oil business. They are as follows:

First. The World War and the hysterical and tremendous expenditure of money and extension of credit to the European countries, reported to be about $10,000,000,000.

Second. The reparations agreement, under the terms of which foreign countries agreed to repay foreign loans.

Third. In anticipation of the repayment of these foreign loans, together with interest, Congress has yearly made appropriations of large amounts of money for various purposes.

Fourth. American bankers doing an international business, and anticipating the wealth that would accrue to this country through the repayment of foreign war debts, floated many private bond issues for innumerable foreign countries among private investors in the United States, such bond issues poorly secured, and to a reported amount of approximately $18,000,000,000.

Fifth. Now, 14 years after the war, European countries have plainly indicated that they are not even able to pay interest on their war debts, and every indication points to the fact that the principal and interest to date may be repudiated.

Sixth. From an economic standpoint, $18,000,000,000 of wealth has been swept out of this country (the savings of 25 years), without the economic balance of the anticipated reparations payments, and to-day the United States Government faces a current indebtedness of over one billion dollars and a bonded debt of over $30,000,000,000.

Seventh. During the above term, blue-sky laws have been actively lobbied in every State in the Union, by interested parties, the effect of which was to "outlaw" local domestic securities and to promote those issues handled by the New York Stock Exchange by providing liquid collateral to the loans of local State bankers.

In this way those stocks handled and promoted by New York Stock Exchange members, with 1,600 branch wirehouses scattered throughout the nation, have sold to American investors in many instances at the high price of fifty times the annual earnings of those companies. The stock-market crash of October 17, 1929 represented the culmination or saturation point of the sales of these inflated eastern stocks and foreign bonds to the American investing public.

We find, upon investigation, that a number of these international bankers own or control the stocks of oil companies doing an international business, and that the securities of these companies have not only been favored by promotion

through the New York Stock Exchange, but that these large oil companies, having favorable intervention on the part of these international bankers, have obtained large oil concessions in other countries (principally in South America) and have thereafter proceeded to import to this country an every increasing amount of tax-free foreign oil, ranging to so high a volume as over 100,000,000 barrels per year.

During the past 30 days these imports have been coming in at the rate of over 200,000,000 barrels a year, which clearly demonstrates the ability of these importing companies, by transportation facilities already in existence, to take control of the oil market in the United States.

This tidal wave of tax-free foreign oil landing on the eastern seaboard of this country has necessarily affected the posted price of crude oil throughout the Nation by being used as a club to beat down prices through influencing the eastern markets and export trade, both of which have been the largest factors in the American oil market.

This tidal wave of foreign oil has moved from the Atlantic coast to the Pacific coast, and by wrecking prices, has supplied all of the major oil companies' requirements for refineries and oriental export trade by taking over domestic oil at ruinous posted field prices.

Major oil purchasers have ruthlessly enforced proration rulings to cut down the production of old established fields, while these same companies took an active part in the development and acquisition of such new fields as Seminole, Oklahoma City, Hobbs, New Mexico, Van Zandt, many fields on the Gulf Coast, Kettleman Hills, and the giant new east Texas field.

A tremendous volume of domestic oil and innumerable domestic properties were acquired at ruinous prices based on the low price of 10 cents a barrel. In the Panhandle fields the posted price was 11 cents per barrel in the months of July and August, 1931, which meant the extermination of independent producers landowners in this area.

In the hearing before the Ways and Means Committee of the House of Representatives the fact was brought out that in 1930 the exports from this country were 145,870,000 barrels of crude oil, or its equivalent in refined products, having a sale value of $404,243,000, or $3.39 per barrel. The posted field price for crude oil in the United States was based upon the price of tax-free imported oil, and was far below the actual cost of production. In 1931 the shrinkage of exports was 20.2 per cent in barrels with a shrinkage of 45.3 per cent in value, and the major oil companies, in maintaining their usual profits, posted for us a price of 10 cents per barrel for crude oil in the Mid-continent fields.

They could do this with perfect safety, because we find that these companies, which are the major purchasers, transporters, refiners, and distributors of oil in this country, are also the importers of foreign oil, exporters of oil and that, working together, they actually own and control 80 per cent of the transportation, refining, and distribution facilities of this country.

So Congress, when it considers only the relation of imports to exports, does not decide the issue which has confused everyone with regard to the effect of importing tax-free foreign oil upon the domestic oil industry of the United States.

The facts are that the five or six companies which import tax-free foreign oil to the United States own the transportation facilities for the ocean transportation of oil and its refined products. They, together with allied companies, also own the transportation facilities which export crude oil and its refined products from the United States (and from foreign fields) to foreign countries. In other words, when our United States Senators discuss the relation of imports and exports, they are merely discussing the private business affairs of these importing oil companies.

The facts are that these importing companies produce oil in the Western Hemisphere, from South America and elsewhere, and transport this foreign oil to the eastern seaboard of the United States where it is dumped (tax free) upon the American market. The facts are that these same importing oil companies have a tremendous market in the Orient, but do not produce any oil in the Eastern Hemisphere to supply this oriental market.

In the conduct of their business heretofore referred to as "imports" and "exports," what they in fact accomplish to the advantage of their private business is that sufficient tax-free imported oil is dumped on the eastern seaboard to set the price and smash the entire oil industry throughout the United States.

These importing companies are also producers, refiners, and distributors throughout the entire length and breadth of this Nation. They have oil-purchasing departments, pipe-line gathering systems, refineries, sales-distribution

points at strategic locations (with relation to the oil production and markets) in every oil-producing State of the Union.

As there is plenty of domestic oil, the effect of dumping this tax-free imported oil on the eastern seaboard has been to create a condition of oversupply of crude oil in the United States to the point where these companies could post a low price for crude oil in every field in every State in the Union, thereby demoralizing the oil industry, and thereby obtaining the United States domestic supply at their own price.

Thus they have carried this tidal wave of foreign oil across the entire United States to the Pacific coast. In this manner over $53,000,000 worth of foreign oil was transported across the United States for shipment from the western coast to the Orient.

California is the second largest oil-producing State in the Union, and by this depression in the price of oil these same companies have been able to load their exporting tankers with cheap California oil. It is notorious that these big companies have, for the past three or four years, obtained the flush production of the State of California, at ridiculously low prices and at a tremendous loss to that State.

With exporting tankers thus loaded with cheap domestic oil (below 50 cents a barrel) these exports have gone out into the Orient to return a price in 1930 of $3.39 a barrel.

So it is easily comprehended, when this situation is scrutinized, that the effect of importing tax free oil to the eastern seaboard which brings about a condition of oversupply of oil in this country, accomplishes the following beneficial rewards to those companies doing an international business:

First. Rewards these importing companies with a saving of tax on all of the oil imported to this country.

Second. This saving gives them a club with which to cut crude oil prices and still maintain a profit in competition with domestic producers, and also delivers into their hands the special privilege of creating, at will, a condition of oversupply of crude oil, the threat of which demoralizes the entire industry and its lines of credit. Ten per cent surplus of any national commodity will control the price.

Third. By such price cutting and by forcing a condition of oversupply, our domestic production has become forcibly "prorated," or curtailed, to the point where the business of domestic producers and refiners has been demoralized and these importing companies, as major oil purchasers, have been able to acquire domestic oil at their own price in any quantity which they have required to meet the demands of their business, both for their domestic refineries and their export trade.

What the domestic producers have been doing is to furnish oil for export trade on the Pacific Coast at the destructive price set by the importation of tax free foreign oil. Also for the same reason domestic oil producers and refiners have been delivering all of the oil needed to meet all of the requirements of the major oil companies' refineries (strung out across the United States) and to meet the storage requirements of those companies at confiscatory prices.

What the major importing and exporting companies have been really doing is producing sufficient cheap oil in foreign countries (South America and Mexico), transporting it to the Eastern seaboard, tax-free, and demoralizing the price structure of the industry.

Theoretically, they transport this same oil entirely across the continent (4,000 miles) without any transportation charges and thereafter load this oil on the Pacific coast into tankers for shipment into the Orient, leaving a condition of destruction and disaster in the wake of this tidal wave of oil entirely across the United States and in every State in the Union.

The result has been extremely gratifying to them from a business standpoint, as they rate this tax-free foreign oil at 89 cents a barrel on the eastern seaboard, while they load their tankers on the West coast with domestic oil at 25 cents a barrel and have obtained mid-continent oil for their refineries at so low a posted price as 10 cents a barrel.

Fourth. By this monoply, created only through the sufferance of the Federal Government, domestic competitors are either controlled or ruthlessly put out of business, and their property bought in at 10 cents on the dollar.

Fifth. By this monoply it is now known that the major companies have come into control of all the ocean transportation, and approximately 80 per cent of the land transportation, pipe lines, refining and distribution facilities of the entire domestic oil industry, even to the invasion and the ownership and development of oil lands in the oil fields throughout the various States in the Union.

Thousands of long established, tax paying domestic companies have been ruthlessly put out of business, the stocks of those companies being owned by local citizens in various oil producing States of the Union.

All lines of business in the cities of the Southwest have been paralyzed and demoralized by the ruin of the oil industry on which the civilization of the entire Southwest has been built and has prospered. Railroads have suffered tremendous losses of business, due to the discontinuance of a major industry and its collateral lines of business in the South and West. Innumerable bank failures and business failures testify to the changed condition to what is now an unprofitably conducted industry.

That is the reason why governors and railroad commissions of various oil-producing States have been nonpulsed and confused by a situation which they found no way to remedy, except to curtail local production and enforce proration rulings at the point of a bayonet and by military police power, in the vain hope that by doing their share to curtail production they would thereby raise the price of oil and benefit the citizens and businesses within each oil-producing State.

That this hope and these efforts have proved futile is clearly evidenced, because the companies doing an export and import business have merely increased the ratio of imported oil to press the advantage which this curtailment of domestic production gave them, and because of their control of refineries, transportation and distribution facilities, they have continued to sell lubricating oil to the American consuming public at a price of over $50 per barrel and to obtain such a sufficiently high price for gasoline in those nonproducing oil States as would give them a good profit when they sold gasoline in the nonproducing States to meet the prices offered by local distressed refiners.

So it has developed that such action upon the part of governors and railroad commissions of the various oil-producing States without any action upon the part of the Federal Government to curtail the importation of tax-free foreign oil (by tariff embargo or excise tax), has placed the oil industry squarely into the hands of the importing and exporting companies by forcing military control, proration rulings and what is in effect "unitization" of oil fields upon all of their tax paying domestic competitors, to the destruction of their business and to the loss of taxes for the support of the schools, cities, counties, and States in over 20 oil-producing States of the Union. Also the destruction of a tremendous market in those 20 States, for the manufactured supplies formerly furnished by the Northern and Eastern States.

Domestic producers and refiners were told that there was a condition of overproduction in this country and that for the good of the industry they must shut in their fields and submit to proration rulings by major oil purchasers. These rulings were later enforced by military control.

After five years and after the demoralization of their business they have learned that there was a condition of overproduction in this country, but that the economic balance in the industry had been upset by a well-conceived and well-financed scheme to take advantage of the present tariff schedule, under which $1,000,000,000 worth of tax-free foreign oil has been imported to this country.

From an economic standpoint, there is no advantage whatever for the people of our Nation to maintain (through a political set-up) this sort of condition in the oil industry to the destruction of the prosperity of some 20 great sovereign States. For, while it may be pointed out with pride that these major companies have made tremendous profits at the expense of domestic competitors, the fact remains that these profits so made have been invested in foreign lands for the development of foreign oil fields in other nations, with the economic result that this money has been taken out of the United States, disaster brought to the oil industry, destruction to thousands of prosperous domestic companies which represented the taxable property of 20 oil-producing States of the Union, and a tragic condition of unemployment brought about, which not only represents an economic loss but for the past two years has become a tremendous burden.

Nor can it be claimed that this condition should be maintained under the cloak of a so-called "pleasant foreign relations policy," when the so-called foreign relations are merely American firms producing and exporting tax-free foreign oil for the extremely profitable conduct of their private businesses, simultaneously with the flotation of foreign bond issues among American investors to finance the development and equipment of those foreign fields.

With due respect to all foreign countries, our Government is not required to continue a policy which has now actually proven to be destructive to the economic welfare of this country.

I am now going to speak to you directly for myself and the business which I represent.

In the month of January, 1929, the intrinsic value of these businesses, all successful, going concerns, was $9,337,728.26.

The total taxes paid from this office, being city, school, county, State, and Federal, were $214,647.93, of which the Federal Government received $133,830.84 as Federal income tax.

Dividends and interest paid to the stockholders and others was $1,051,681.25, out of which the Federal Government received income taxes not herewith recorded.

The foregoing represents the former prosperous condition of the businesses of which I am president, and from which hundreds of stockholders, employees, and local beneficiaries received support.

To-day, since the failure of Congress to protect these businesses and other similarly situated, by placing a tariff, embargo, or excise tax on tax-free imported oil, with the disastrous results heretofore set forth, the properties of the companies which I represent, if liquidated on the open market would bring only about $560,263.60—most probably being paid for with long-term paper instead of cash. This represents a destruction of national wealth which it has taken a lifetime to build up.

To-day the stocks of these companies, which were formerly held by the stockholders on the open market at a premium of 100 per cent above par, are offered at 5 cents on the dollar, representing a capital loss to the stockholders of $1,812,600.

During the past year of 1931 our business not only did not make any money, but operated at an actual loss in revenue of about $100,000, so that the Federal Government will receive no income tax from any of the companies, nor from thousands of individuals who were former beneficiaries of the companies.

Money has been borrowed to pay school, city, county, and State taxes.

Our business is typical of thousands of others. It is a travesty on justice and a political paradox indeed, that the United States Government should not only forfeit over a quarter of a million dollars of income taxes from these little companies which I represent in the Southwest, but should at the same time fail or refuse to collect taxes on the very oil imported to this country which has brought about the above-described disastrous condition to our American businesses.

From an economic standpoint, this situation is intolerable, as it represents the welfare of this entire Nation in contradiction to the profits of four or five large corporations, gracing this country with their presence and subjecting it to the ramifications of their business.

We have conceded to the "regulation" of the oil business in every oil-producing State of the Union, but the above facts clearly disclose that such regulation should not be enforced to the extinction of every domestic producer, refiner, and landowner, and for those few companies doing an international business at the expense of this country, without the Federal Government stepping in and by placing an excise tax on what is now tax-free imported oil, thereby restore the economic balance and protect the various oil-producing States of the Union.

The tax on foreign imported oil should be not less than $1 per barrel, and no concern need be felt by the Federal Government that such tax will defeat the purpose of the tax, as restored domestic business will immediately respond to this protection and again become a substantial source of revenue to the Federal Government.

Yours very truly,

JOHNSON RANCH ROYALTY CO. (INC.),
By ED R. MAYER,
President, Capitol Hotel, Amarillo, Tex.

P. S.—Attached hereto please find copy of Congressional Record, House of Representatives, Friday, February 1, 1929, speech of Hon. E. B. Howard, which contains report which I submitted on January 12, 1929, and in which the present condition of the oil industry was predicted.

AMARILLO, TEX., *January 12, 1929.*

Congressman E. B. HOWARD,
Tulsa District of Oklahoma, Washington, D. C.

DEAR SIR: It is my understanding that you are preparing a bill providing for a tariff on oil and that you now have this bill or will have this bill before the present session of Congress.

Notice that you are working on this matter should be interesting to independent oil producers, royalty companies, landowners, and even States throughout the entire oil-producing districts of the United States.

A disastrous condition has occurred and been maintained for the past two years, which has adversely affected every investment in or contingent to the oil-producing business, save and except those investments which are so organized that they represent a vertical line of business, having production, transportation, refining, and marketing. The last-mentioned interests have benefited largely and comprise large corporations only, and actually represent but a small fraction of the commonwealth of this country, and should not be permitted to maintain a condition and special interest which operates adversely and disastrously to the vested rights and the welfare not only of individuals but of counties, towns, cities, and even States.

An examination of producing-oil areas and geographic surveys of the Nation shows that there are millions of acres of proven, semiproven, and potential oil lands. This land is the vested property of individuals, States, or of the Nation. The act of proving this land to contain great mineral wealth immediately enhances the value of such lands far above that for which it could be valued for any other purpose. The finding of oil in any community or State represents an increase in local and national wealth; that is, providing such increase in wealth accrues to those to whom it rightfully belongs.

It is a common fallacy for the public at large to think and believe that the discovery and production of oil confers benefits only upon that particular landowner and that particular oil company which is so fortunate as to enjoy the direct benefits of such discovery. However, a most casual investigation will show that this is not correct.

Railroads haul immense tonnage to such oil fields and generally invest much capital in extensions, switch tracks, terminal facilities, etc.

Supply houses, material men, lumbermen, and countless lines of manufacturers are at once interested, investing capital in warehouses, labor organizations, and untold millions of dollars of storage supplies.

Adjacent towns and even cities are at once made famous by the fact that new sources of national wealth are found at their doorsteps, and generally reflect an immediate expansion and growth in the way of new industries, new office buildings, jobbing houses, and untold millions in investments in real estate, home building, and countless other lines affecting the welfare of that entire community. Because of this added population and contingent lines of business, cities expand and grow and counties undertake bond issues for paving highways.

The State in which this community is located immediately becomes the beneficiary of increased taxes, and even the income-tax men of the Federal Government at Washington find this new community of sufficient interest to send special agents to check the income of the Government, which is a beneficiary from income taxes in these new and flourishing districts.

When it is considered that not only thousands of small towns, hundreds of thousands of individuals, and the welfare of countless counties of various States throughout the Union are affected by the possibility of production and the oil industry, but also that great cities, such as Los Angeles, Austin, Dallas, Shreveport, Beaumont, Fort Worth, Amarillo, Tulsa, Oklahoma City, and numberless other large cities throughout Indiana, Pennsylvania, Louisiana, Wyoming, Montana, Colorado, and other States, can suffer and do suffer tremendous losses in wealth, population, and shrinkage in business due to the violent fluctuations in the revenue received from the production of oil without any local power or machinery to prevent these disasters, then it is time for the people or their constituted authority to investigate the conditions that permit such a situation to exist and reoccur from time to time.

The marketing of the products of petroleum oil is a well-organized and profitable business, the bulk of the business being conducted by about 200 powerful corporations throughout the entire United States.

The refining of these oil products is a highly technical and well-organized business, also largely under the control of these same corporations.

The transportation of oil is also a well-organized business, allied with and largely under the control of the above-named corporations.

It will be noted that the sales price of petroleum products which the public at large obtains is well regulated and suffers no violent fluctuations that would cause disastrous losses and disorganization to either the transportation, refining, or marketing companies in the petroleum industry.

It is only in the production department of the industry, which has the most to do with the welfare of the greatest number of individuals, small corporations, allied industries heretofore mentioned, and the taxable value of cities, counties, and States that boom conditions are enjoyed or disaster suffered which wipes out the investments of literally hundreds of thousands of people, either in the oil-producing business or in allied lines of industries and community activities.

This situation is brought about by the violent fluctuations in the price of crude oil, which is arbitrarily set from time to time by those corporations which are primarily interested in the transportation, refining, and marketing of crude oil and its products.

The law of supply and demand governs the actions of this last-named group. When the production of crude oil shows to be in excess of current refinery demands and at the same time new crude oil discoveries are encountered, the posted field price for crude oil is ruthlessly put down, thereby paralysing smaller producing companies in all allied lines of industry and depreciating property values through the entire district, adjoining cities, States, and the Nation.

This disastrous shrinkage may occur overnight upon the discovery of one or two new potential oil fields which show promise of furnishing sufficient additional oil to warrant safety in such procedure to the transporters, refiners, and marketers of crude oil.

Although this new strike may be in a far western State, yet every field throughout the Nation and every community in which such fields exist immediately suffer by this general marking down in the price of crude oil.

There appears to be no proportional relation whatever between the price which the public at large pays for refined products and the price which producers and marketers receive for the production of crude oil.

When the posted price of crude oil was $3.60 a barrel throughout the mid-continent field, the public paid from 20 to 30 cents per gallon for gasoline and 20 to 40 cents per quart for lubricating oils.

With the posted field price at an average of 80 cents per barrel in the Panhandle oil fields, the price of refined products still hovers around 20 cents per gallon for gasoline and a good fair price for lubricating oils.

It then can not be stated that a fair profit to independent oil producers, which affects the welfare and taxable values of landowners and property owners in adjoining cities and communities, is the yardstick by which the petroleum industry is operated and that the public at large in buying the refined products are gainers through the fact that the producers are suffering such losses.

There are too many intermediate stations between the production and valuation of crude oil and the ultimate purchase of its products for such condition to exist.

The oil industry and its allied lines of business is to-day the biggest industrial business in the United States. Its ramifications affect more people than any other line of business. As such, it is the only line of business that has been marshaled, organized, and controlled by a relatively few closely allied corporations without any endeavor on the part of the commonwealth to intelligently comprehend and better regulate this industry.

Great credit should be given to those corporations who have developed this tremendous industry, and in writing you this letter it is not to be construed as a disparagement or attack upon any of them in the conduct of their business.

It is most likely that this condition would exist in any other line of business which affected the public largely if no protective tariff were obtained to safeguard the vested interests of this country.

If it were possible for a great merchandising corporation, such as Montgomery Ward or others, to obtain an unlimited supply of cheaply manufactured articles from Europe and import same to this country and distribute into a vast organization of retail stores owned and controlled by it, you would immediately note the same depression in business in countless towns and cities, due to the fact that tens of thousands of small merchants would be forced to close their doors, thousands of allied lines of industry would close down, and untold millions of dollars of wealth would be wiped out solely to the benefit of this one big merchandising corporation.

In the universal interest of landowners, tens of thousands of small independent oil producers, communities, counties, cities, and States, some sensible and flexible tariff should be considered and adopted which will protect and safeguard the vested rights and interests of all those directly connected with or whose business depends upon the production of crude oil through this Nation.

Trusting that you will give this matter the serious thought and earnest work which it deserves, and believing that the very act of making a comprehensive effort to stabilize this industry will meet the approval not only of the people to be benefited but also the sympathetic cooperation of transporters, refiners, and marketers of crude oil and its products, I remain.

Very truly yours,

JOHNSON RANCH ROYALTY CO. (INC.),
By ED. R. MAYER, *President.*

STATEMENT OF PAUL H. HARWOOD, REPRESENTING THE PAN AMERICAN PETROLEUM & TRANSPORT CO.

Mr. HARWOOD. Mr. Chairman and members of the committee, a tariff on oil is unprecedented. This so-called revenue measure is a tariff.

The proponents of an oil tariff in advocacy of their demands allege:

1. That it will bring in great revenue.
2. That foreign producers enjoy an advantage over domestic producers, and this this tariff would tend to "equalize" costs.
3. That this advantage comes from the use of cheap peon labor.
4. That gasoline prices will not go up, although they admit fuel and crude prices will advance.

These arguments have been used repeatedly. They have all been answered in open hearings. They will be answered briefly here.

The CHAIRMAN. That is, in testimony before the House?

Mr. HARWOOD. I have not been before the House, Mr. Chairman.

The CHAIRMAN. You say, they have been answered, In what way?

Mr. HARWOOD. Before the House.

As my time is so short, Mr. Chairman, if I might continue without interruption, I should appreciate it.

The CHAIRMAN. I will not interrupt you at all.

Mr. HARWOOD. Thank you.

First, that this will bring in any revenue is most improbable.

The Treasury Department is reported to have estimated that it may bring $5,000,000. As the department reported a tariff on imported oil of 1 cent a gallon on crude and 2 cents on fuel oil and 1 cent on gas oil would bring no revenue, it must be that the revenue expected by the Treasury Department comes only from gasoline imports, now proposed to be taxed one cent per gallon. Calculated at 1 cent a gallon on the imports of 1931, 13,000,000 barrels or 546,000,000 gallons, would bring that amount if imports should remain undiminished. But the tax on gasoline is 25 per cent of its cost at refineries to-day; and is therefore unproductive, unless prices increase to a degree burdensome on the 25,000,000 automobile users, and our farming population.

Second. The proponents' contention that foreign producers and importers enjoy an advantage in production and transportation costs to the Atlantic coast is based on a reading of the first two pages only of the report of the Tariff Commission. There are 205 pages of this report, and the report shows the opposite of the contention that foreign oil is cheaper. They also ignore the supplemental report which shows still lower costs for domestic oil for 1931.

An analysis of the Tariff Commission's reports covering the comparison of costs on basis of like or similar products, as provided by the tariff act between foreign and domestic crudes for the years 1930 and 1931, clearly shows that there is no differential in cost between foreign crude oil and domestic crude oil to the advantage of the foreign oil, but on the contrary, if there be any differential at all it is distinctly in favor of the domestic product. The commission's report is admittedly indefinite for ——— the report does state that there was a decline in domestic cost of at least 22 cents a barrel for 1931 and the statements of the commission indicate that if this report were made accurate for 1931 the differential would be strongly

in favor of the domestic petroleum largely because of the tremendous new production of cheap oil in the East Texas fields and the large reduction in pipe-line charges.

The Tariff Commission, in its report for the years 1927–1930, reports not a difference in cost of $1.03 per barrel, as alleged by Mr. Franklin, but of 46 cents, on the basis of "like or similar products" as required by the tariff act (p. 3), but calls attention to three disparities in its calculation to the disadvantage of the Venezuelan product, each of which would, when properly determined and taken into account, reduce this difference in cost.

1. It admits that in figuration of cost to produce crude it has applied to the foreign oil the same rate of interest and depreciation as applied to the domestic crude. It admits (p. 59) an adjustment of interest charges would increase the cost of foreign crude 5 cents per barrel.

Adjustment of depreciation, recognizing that foreign crude is produced in tropical climates where destruction is rapid, would another 5 cents per barrel.

These items, properly taken into account, would lower the difference of 46 cents per barrel to 36 cents per barrel.

2. It calls attention (p. 2, last paragraph) to the fact that while actual bare cost of transportation has been used to calculate the cost of landing Venezuelan oil on Atlantic seaboard, 49 cents per barrel has been used in calculating cost of landing domestic crude oil here, this being an average, not of cost of pipe-line transport, but of actual published pipe-line charges. Interstate Commerce Commission's reports show that for 1930, the last year covered by this report, the ratio of operating expenses, taxes, and 6 per cent interest, to operating revenue, is 60 per cent.

May I here put in the Tariff Commission's analysis?

The CHAIRMAN. Certainly.

(The Tariff Commission analysis referred to and submitted by the witness is here printed in full as follows:)

Pipe-line companies (common carriers), 1930

[Financial and operating data published in Interstate Commerce Commission, Bureau of Statistics, Statement No. 3170, dated Washington, June, 1931, of all common carrier pipe-line companies filing report, and includes not only the transportation of crude oil, but also of refined products]

Miles operated:	
Trunk lines	45,922
Gathering lines	42,806
Pipe-line operating revenue	$237,910,083
Pipe-line operating expenses (including depreciation)	$90,363,742
Income and other taxes	$16,730,653
Investment in pipe lines	$772,710,908
Accrued depreciation	$329,110,719
Investment less depreciation (a return of 6 per cent annually would amount to $26,616,111)	$443,600,189
Ratio of operating expenses to operating revenue.....per cent	41.8
Ratio of operating expense plus taxes to operating revenue..do	48.8
Ratio of operating expenses, taxes, and 6 per cent on depreciated value to operating revenue.....per cent	60.0

Mr. HARWOOD. In other words, that the full cost of pipe-line transportation is only 60 per cent of the tariff rates. Reducing the domestic cost of transport to this amount, we must take 19.6 cents per barrel from the remaining 36 cents difference shown, leaving a differ-

ence in cost between Venezuelan and domestic crude of only 16.4 cents.

3. In its figuration of comparative values of yields from the two crudes, the commission admits that the value of the gas and fuel oil yield out of Venezuelan crude is much below that of the higher quality gas and fuel oil yields out of domestic crudes. (It admits value of foreign yield is only 2.55 cents per gallon while domestic yield is worth 2.93 cents per gallon, a difference of 0.38 cent per gallon.) But it states that nevertheless it applied the higher domestic value to both crudes in calculation of total value of yields of both oils. The report states (p. 54):

> The significance of any overvaluation of the gas and fuel oils from foreign crude is evident from the fact that these oils constitute considerably over 30 gallons of the product obtained from each barrel of crude (42 gallons) * * * there may be an overstatement of the value of the products from foreign crudes due to the method used, amounting to 10 to 15 cents per barrel, or even more.

The overvaluation of gas and fuel oil derivatives in each barrel of foreign crude might then, amount to 15 cents per barrel, which, subtracted from the remaining 16.4 cents, practically wipes out the remaining apparent advantage for Venezuelan crude oil.

Therefore the correct interpretation of the Tariff Commission's report for the year ending in 1930, is that there is no appreciable advantage in cost of Venezuelan crude, as compared with like or similar domestic products.

The supplemental report of the commission to the Ways and Means Committee, covering year 1931, shows still lower domestic costs due to the development of the cheaper but highly valuable crude of east Texas; and that the average domestic delivered cost at Atlantic points, without adjustment for lowered pipeline rates, has fallen 22 cents per barrel, or from $1.90, average for three years, to $1.68 per barrel.

Therefore, on the face of the two Tariff Commission's reports, there is no advantage in foreign crude costs but on the contrary, domestic crudes are deliverable at Atlantic ports, value for value, at at least 20 cents a barrel under the foreign costs.

A tariff on the more expensive foreign oil is not justified.

Furthermore, the Treasury and Commerce Departments of the United States, which have studied these matters, are correct in their report that a tariff of 1 cent a gallon or 42 cents a barrel on imported crude oil would produce no revenue as it is prohibitive.

On page 6 of the printed report appear the figures for "excess of domestic costs" of gasoline, gas, and fuel oils. It is to be borne in mind that these were based upon the crude prices used elsewhere in the report for 1930, and unadjusted for the three items above, and naturally did not take into account the lower cost of American crude in 1931; nevertheless they show an "excess of domestic costs" of less than 1 cent a gallon for gasoline and of less than half the proposed traiff as to gas and fuel oil. These figures of "excess of domestic costs," corrected by the use of the proper values for the foreign and domestic crudes above referred to, would be still further reduced. The tariff rate of 1 cent per gallon at all events is highly excessive and will bar any importation of crude, fuel, gas oil, or gasoline.

Therefore there is no case for a tariff to equalize costs, because already the domestic product is cheaper. Oil tariff proponents base

their appeal for equalization on a report covering only the year before last.

Senator HULL. Would it interrupt you if I were to ask you a question or two?

The CHAIRMAN. Senator, he has asked that he be not interrupted.

Senator HULL. Oh, I beg your pardon.

Mr. HARWOOD. In this connection it is interesting to note that while the importations of foreign petroleum products fell off 20,000,000 barrels in 1931, as compared with 1930, the production for the mid-continent field increased over 2 per cent, and the production in Texas increased by 41,000,000 barrels, or twice as much as the decrease of imports. In other words, the "cheap crude" which is "swamping the American markets" is not the foreign product which the tariff proponents wish to tax, but the east Texas field forming part of the territory sought to be protected by the proponents of a tariff.

The fancied advantage of American producers abroad, through the use of cheap native labor, which constantly recurs in all statements of the proponents, is simply a fiction, and has been refuted many times in open hearings. They went so far as to allege before the Ways and Means Committee that the American companies in Venezuela employ 100 natives for every American. The fact, put into the record of the Ways and Means Committee at the request of Congressman Saunders, is that in the case of our company less than one native is employed for every American, the figure being 1,005 Americans to 916 natives, in oil production and handling, and the average compensation is $298 for Americans and $74 per month for natives.

The American employees are paid at least the American base wage, and in addition are furnished by the companies with housing, hospitalization, schools, and all the facilities furnished by taxation in the United States. In addition to this expense, there is necessary work like clearing jungle, building and maintenance of roads and harbors, unknown in domestic oil fields.

There is no advantage to the American oil producers abroad in cheaper wages, though the tariff proponents persist in so stating in spite of the facts of the case.

The contention that gasoline will not increase in price under a tariff is unfounded. A tariff is now proposed on gasoline itself, and with the purpose of raising its price. Gasoline prices in fact went up last month one-half to 1 cent immediately after the approval of this tariff by the House of Representatives.

You have heard or will hear, in support of this strange argument, a statement of prices of crude and gasoline in February, 1926, and in February, 1929, alleging that when crude was lower, gasoline was higher. The American Petroleum Institute in its last yearbook specifically proves that this statement is false, and that gasoline was lower instead of higher in February, 1929.

The Federal Trade Commission reported in 1928, on page 3 of its report, as follows:

> Gasoline prices were promptly advanced throughout the country whenever there was an advance in crude prices.

And on page 175:

> (1) * * * advances in crude petroleum have been followed by gasoline price increase.

For full discussion and supporting figures of the facts of this matter, see hearings before the Ways and Means Committee on revenue revision 1932, page 972.

What will it cost the American people?

Mr. Wirt Franklin, principal proponent of this tariff, admitted that the price to the public of fuel oil would be advanced by the amount of the tariff, or 42 cents a barrel. American consumers use 184,000,000 barrels of fuel oil per year in Atlantic coast and Gulf States. The price advance might well reach $77,000,000 every year, to be paid by our industrial and domestic fuel users to the major companies.

If gasoline increases in price only by the amount of the tariff, it will cost the American public, east of the Rocky Mountains, $143,000,000 additional for the enrichment of the major companies.

Witnesses from districts and industries affected can tell the committee the effects on their industries of this unjustified tribute. The total charge on the American public might well, and probably would, exceed $200,000,000 every year, of which a large part would be paid by the farmer.

Who would profit?

As Senator Tydings has stated to this committee the small independent producer can not possibly profit from this tariff, but the 20 major oil companies will profit as they will receive most of the $200,000,000 tribute imposed on the people and industries of the United States by this tariff.

Senator REED. Would you permit an interruption?

The CHAIRMAN. He asked not to be interrupted.

Mr. HARWOOD. The time is so limited, Senator.

Senator HULL. These gentlemen are experts, and I would like to have the privilege of asking him some questions.

The CHAIRMAN. That can be done afterwards.

Senator HULL. I understand; but I want to get it before the committee.

Senator CONNALLY. Why not wait until he gets through on his own time, and then we can ask him questions on the committee's time. I want to ask him some questions, also.

Senator HULL. I do not want to see this rushed through without any chance to develop some of the main facts, if we are going to take it up at all.

The CHAIRMAN. They were given each an hour and a half and they have divided up the time.

Senator REED. I will wait until he has finished.

Senator CONNALLY. I want to ask him two or three questions, myself.

Mr. HARWOOD. May I proceed?

The CHAIRMAN. Yes; go ahead.

Mr. HARWOOD. At whom, then, is this tariff aimed?

Since the days of the Wilson administration successive administrations have urged and encouraged American capital and enterprise to go forth to secure and develop foreign oil fields, against the day when our own resources fail.

These American companies saved the day in the oil shortage of the years of the Great War. Their contribution in the shortage of 1920–21 tided us over that period of lack.

There follows here, Mr. Chairman, quotations of Secretary Lane, the Bureau of Mines, the Federal Oil Conservation Board, and President Coolidge.

These quotations extend over the period 1920 to 1931. In all of them Americans are urged to explore and develop petroleum in foreign countries, and most of these quotations point out the danger to the United States in the fact that it possesses only about one-fifth of the oil reserves of the world and is, nevertheless, supplying two-thirds of the world's demand for crude oil and the products resulting therefrom.

The democratic platform of 1920 stated the policy of Secretary Lane and the Wilson administration:

The Democratic Party recognizes the importance of the acquisition by Americans of additional sources of supply of petroleum and other minerals, and declares that such acquisition both at home and abroad should be encouraged.

In 1925, the President, alive to the fact that the United States was producing, consuming, and exporting 70 per cent of the world's oil production while only 18 per cent of the known oil resources of the world are here, organized the Federal Oil Conservation Board.

It reported in 1926:

* * * that our companies should vigorously acquire and explore such fields (in Mexico and South America) is of first importance not only as a source of future supply but supply under control of our own citizens. Our experience with the exploitation of our consumers by foreign-controlled sources of rubber, nitrate, potash and other raw materials should be sufficient warning as to what we may expect if we shall become dependent upon foreign nations for our supplies.

In a public address in New York, in April, 1927, President Coolidge defined the country's policy in unequivocal terms. He said:

Our country consumes vast quantities of oil and gasoline. * * * If these products are to be kept within a reasonable price, which is very important to a great body of our citizens, our people who go abroad to develop and to increase our supply ought to have the encouragement and support of our government. The person and property of a citizen are a part of the general domain even when abroad.

Again in 1920 the Federal Oil Conservation Board reported:

Roughly, the United States is producing more than two and one-half times and consuming nearly twice as much petroleum as the rest of the world * * *. Neither the high rate of domestic consumption nor the balance of exports over imports would be disquiting if the petroleum resources of the United States bore anything like the same ratio to the world's resources as the production ratio of 68 per cent. According to the present opinion of our best petroleum geologists, our total resources, instead of being 68 per cent of those of the whole world, are not more than 18 per cent. If our petroleum reserves are not to be drawn upon at a faster rate than those of all other countries, our resources should be several times larger.

The obvious reference is that the United States is exhausting its petroleum resources at a dangerous rate. If the international comparison is made, this country is depleting its supply several times faster than the rest of the world. The depletion rate of our resources can be brought more into accord with that of foreign resources only in one way—by importing a greater quantity of crude petroleum. The present imports of Mexican and South American crude oil come largely from American operators and, while not obtained from United States oil sands, they are the product of American engineering and enterprises. Cooperation in the development of foreign oil fields, through technical assistance and the further investment of American capital, would seem to be a logical conservation measure.

And in 1931, the Bureau of Mines reported through the Secretary of the Interior to the Committee on Commerce of the United States Senate:

> Foreign crude which is being imported into the United States is predominantly the output of American-owned and operated companies.
> * * * these American companies consistently receive the assistance of the United States Government in their efforts to explore and develop oil lands in foreign countries * * *. Discussing foreign oil sources in its first report, the Federal Oil Conservation Board advised "that our companies should vigorously acquire and explore such fields is of importance not only as a source of future supply, but supply under control of our own citizens."
> Having thus encouraged American oil companies to develop foreign oil production, in order that other nations would not control an undue share of the world's oil resources, it might be considered that there has been established an implied obligation to continue in the assistance of American companies engaged in foreign oil production and that the restriction or refusal of admission to the United States of the oil so produced would be contrary to the encouragement which these companies have received while engaged in foreign oil exploration and development work.

The Government was unqualifiedly right in all these appeals for foreign oil development in the hands of Americans. The best recent appraisals of our known natural oil resources agree that they will last a scant decade. You are referred to the report of the geologist Garfias, Ways and Means Hearings, page 1075. This has never been disputed.

American companies which obeyed the official urge to hazard their fortunes in securing for America its share in the oil wealth of the world, desire to continue their work. The believe they have the right to sell their products in the markets they created in the United States. They are as American as any company or person proponent of this tariff. Their American tankers represent a heavy investment and are 21 per cent of all shipping under the American flag.

The last three years have seen an apparent plethora of oil, temporary as always before, caused by too rapid drilling, especially in our mid-continent fields. It is important and a matter of justice to note how the American companies producing oil abroad have comported themselves. To the appeal of the Secretary of Commerce in April, 1931, to restrict domestic production and imports, they responded. Their imports decreased by the end of the year 14¼ per cent, while the domestic production increased 5¾ per cent. Domestic producers meantime brought in the devastating east Texas field, produced without restraint, and the militia had to be mobilized to keep their production in check.

The producers of American oil abroad have done their part. Had the domestic producers—the ostensible proponents of this tariff on oil—done as well, their problem would be solved, our oil would have been conserved in the only rational way, and the price situation would have been regularized accordingly.

It is against this American industry in foreign fields that this tariff is directed. Search as one will for another American tariff aimed at American industry, it will not be found. Ninety per cent of all imported oil is produced by these American companies.

A fair examination of the facts shows that the proposed tariff will, as Senator Tydings has already said—

(1) Cause a deficit rather than create revenue.

(2) Create a privilege for the major companies that need no help.
(3) Raise the price of oil and gasoline to all consumers.
(4) Penalize that branch of the American oil industry that has heeded repeated official admonition and urging to save the day for American living standards by securing oil reserves in other lands.

Mr. Franklin stated yesterday that Mr. Sanders—and that the Congressional Record reported him as saying—that the Ways and Means Committee asked the Treasury Department for a report of what this tax would bring in at 1 cent a gallon on all these products, and that the Treasury experts reported to the committee that it would bring in $44,000,000. I hand you a page of the Congressional Record covering this statement, which is quite different. Mr. Sanders only states that he personally had an opinion from the Treasury Department. The Treasury Department and Secretary Mills have since reiterated to you that the outside return would be $5,000,000.

Senator JONES. What is the number of that page from the Congressional Record?

Mr. HARWOOD. Page 6287.

(The excerpt from the Congressional Record of March 15, 1932, page 6287 thereof, referred to and submitted by the witness, is here printed as follows:)

Mr. NELSON of Maine. As I understand the gentleman, he does not agree with the experts from the Treasury Department?

Mr. SANDERS of Texas. I can answer that yes and no, because they have been on both sides of the creek. I will admit that Mr. Mills stated that it would not produce any revenue. I can also say that I had an opinion from the Treasury Department that it would produce $44,000,000. If you are importing something, you can take a lead pencil and state whether it will produce revenue. Now, I have the figures here of the collections under this bill. It will produce something over $58,000,000. If you will read the testimony before our committee and the evidence submitted on this, you will come to the conclusion, I believe fairly, that it will produce not less than $40,000,000 of revenue.

Mr. HASTINGS. Will the gentleman give us the total, the aggregate of the sums that he says will be produced by the importations?

Mr. SANDERS of Texas. I have already given it, but I will give it again—$102,571,198.72.

Senator CONNALLY. Mr. Harwood, you represent the Pan-American Co., do you not?

Mr. HARWOOD. Yes, sir.

Senator CONNALLY. That is a Standard Oil subsidiary, is it not?

Mr. HARWOOD. Yes, sir; the Standard of Indiana.

Senator CONNALLY. It is all Standard. It is a subsidiary of the Standard of Indiana, and that is one of the Standard chain?

Mr. HARWOOD. Yes.

Senator CONNALLY. You say it is part of the——

Mr. HARWOOD. I do not know that you ought to put in the record, Senator, the word "chain," because my experience with them is that they do a great deal of fighting between themselves.

Senator CONNALLY. Anyway, your company is a subsidiary of the Standard of Indiana?

Mr. HARWOOD. Yes, sir.

Senator CONNALLY. Do you think this tariff would raise the cost of oil and gasoline to the American people $200,000,000?

Mr. HARWOOD. I think it is easy to calculate that, Senator.

Senator CONNALLY. What proportion of the Standard Oil business is in the United States?

Mr. HARWOOD. Of the Standard of Indiana?

Senator CONNALLY. All the Standard companies.

Mr. HARWOOD. I can only speak as to the Pan American Co., of which I am an officer. I would be guessing if I spoke of the Standard of Indiana. I know practically nothing about the other Standard companies. But what you are getting at is the percentage of production in foreign countries?

Senator CONNALLY. Oh, no. Does not the Standard Oil Co. do more business in the United States than any other oil company?

Mr. HARWOOD. As a group?

Senator CONNALLY. Yes.

Mr. HARWOOD. I do not know.

Senator CONNALLY. If that raises the cost of gasoline and oil $200,000,000, would not the Standard Oil Co. make more money out of it than anybody else?

Mr. HARWOOD. I think they would.

Senator CONNALLY. And therefore you as a Standard man are fighting it?

Mr. HARWOOD. I am fighting it as a Pan-American Petroleum and Transport Co. officer.

Senator CONNALLY. How do you reach this figure of $200,000,000?

Mr. HARWOOD. It is on fuel oil and gasoline, Senator. I exclude California, because the freight rates are so heavy that oftentimes the market in California is quite independent of the market east of the Rocky Mountains.

The CHAIRMAN. Will you give the plan by which you arrive at that in your statement?

Mr. HARWOOD. It is based, Senator, on 184,000,000 barrels of fuel oil at an increased price of 1 cent a gallon, and $143,000,000 on gasoline.

Senator CONNALLY. You figure that 3 cents a gallon?

Mr. HARWOOD. One.

Senator CONNALLY. So you figure that the tariff would be 100 per cent effective?

Mr. HARWOOD. Yes, sir; I do.

Senator CONNALLY. If the fields are opened up that are now prorated, in the event of necessity for increased production, would not that have any effect on the price at all?

Mr. HARWOOD. I think it might for a short time, Senator. But the best geological advice that I can get on this east Texas field is that in 18 to 20 months it will be pumping and the crude oil which is derived from the Oklahoma field is from extremely deep production. The wells may cost upwards of $100,000 a well; and I doubt whether either field is going to have cheap oil very long; and the proponents of this bill must have more money for their oil, or else there would be no point to the bill. They believe they will get an increase in crude. If they get an increase in crude, an increase in gasoline follows almost automatically.

Senator CONNALLY. It does not necessarily follow that they would prefer to sell their oil even at the same price than for you to bring it here from abroad and sell your oil?

Mr. HARWOOD. Not if it costs more to produce it than they get for it.

Senator CONNALLY. If they have a well that is shut down and they can open up the valves and let the oil come out, they figure they would get more for their oil than for you to bring in this Venezuelan oil even at the same price that they are getting now?

Mr. HARWOOD. I think there is a limited amount of oil like that that can be produced at a profit.

Senator CONNALLY. What have you to say about the Tariff Commission figures showing a differential between the cost of producing your oil and American oil? Do you deny those findings?

Mr. HARWOOD. Yes; as they were presented. You came into the hearing a little late, did you not, Senator? I read an analysis of it. It is in the transcript. It is rather long.

Senator CONNALLY. There is not a differential of $1.03 on all grades, but only on certain grades, is there not?

Mr. HARWOOD. No; when properly analyzed the Tariff Commission finds no difference at all in the average crude oil produced in the United States as against the average crude oil produced abroad or in Venezuela, after taking into consideration the values of products. In other words, Senator, I am told that in the Kettleman Hills field in California you can put gasoline directly into the tank of your motor car and the engine runs very well on it. In the northern field in Mexico the prolific production there is of oil that is of about the consistency of molasses. In the Kettleman Hills oil you would probably get 90 per cent gasoline out of it. Of the Mexican oil that I refer to you would get 6 per cent gasoline.

Senator CONNALLY. On your oil you only get 9; do you not?

Mr. HARWOOD. You can get a little higher than that through cracking; but cracking is very costly. You have to have a fairly good price or else you can not afford to crack.

Senator BARKLEY. Is there any real relationship between the price of crude oil and the price of gasoline?

Mr. HARWOOD. Yes; it is very distinct.

Senator BARKLEY. When oil was at its lowest price in Texas, several months ago, was the reduction in the price of crude reflected in a proportionate reduction in the price of gasoline?

Mr. HARWOOD. Yes, it was; to the extent that that production was coming from the east Texas field; but these figures are made up from all the different producing fields and 52 cities in the United States.

Senator BARKLEY. The low price of oil was not limited to Texas. In Kentucky our best grade of oil went down to 35 cents a barrel.

Mr. HARWOOD. Quite so.

Senator BARKLEY. And it is an oil that has a high gasoline content. It grades along with certain Pennsylvania oils. Of course, the price has gone up since somewhat, but I wondered to what extent the price of gasoline refined out of these high gasoline oils would be reflected to the public by that ridiculously low price of crude oil.

Mr. HARWOOD. Well, at that time, along about the second quarter of last year, the average price that the refiners were getting for gasoline was only slightly over 2 cents a gallon. There is a chart prepared which shows the curves of gasoline prices and crude oil prices, and they have followed each other for the last nine years, to my own knowledge, excluding State taxes——

Senator BARKLEY. There was no loss involved in selling that gasoline at 2 cents a gallon, was there?

Mr. HARWOOD. Yes, sir.

Senator BARKLEY. How much?

Mr. HARWOOD. I am told that none of the refiners made any money.

Senator BARKLEY. I know. Nobody has made any money recently, anywhere. But what is the average cost of producing a gallon of gasoline?

Mr. HARWOOD. At the refinery?

Senator BARKLEY. Yes, including all the things that go into it.

Mr. HARWOOD. Senator, that is a difficult question to answer, because every crude oil is likely to be different.

Senator BARKLEY. But there ought to be an average, even at that.

Mr. HARWOOD. I should hesitate to venture just what the cost of refining the average barrel of crude oil is. It might be, if it is just a matter of topping, just skimming the gasoline off—it would probably not be over 8 or 9 cents a barrel. If it is cracked, the price may go up to 25 cents a barrel, or more than half a cent a gallon just for the refining operation.

Senator HULL. I wanted to ask some questions. I did not hear much more than a third of what happened.

The CHAIRMAN. If the committee wants to run into Monday, you may ask some questions.

Senator CONNALLY. I think Senator Hull ought to be allowed to interrogate the witness.

Senator HULL. I was the first person to raise the question that if we brought up these matters in this emergency bill we would be delayed. I do not want to take up any great amount of time.

The CHAIRMAN. It was agreed yesterday that we would give this time and it would be divided up; and the witness has kept within his time, which was 30 minutes. If you are going to ask questions we will discard this program entirely.

Senator HULL. I move to strike it out of the bill now, Mr. Chairman, if we are to proceed in this fashion so that we can not get at any of the technical facts when these technicians are on the stand.

The CHAIRMAN. He has made his statement.

Senator CONNALLY. The chairman used a lot of Mr. Franklin's time asking questions. Why should not these gentlemen take some of their time? We gave them an hour and a half extra time.

The CHAIRMAN. Mr. Harwood, Senator Hull wants to ask you some questions. I will say that this program is set aside.

Senator HULL. I will take just as little time, Mr. Chairman, as possible. I do not usually consume much of the time of the committee in an ordinary proceeding.

Are you familiar, Mr. Harwood, with the figures and the bases on which they compute the revenue from this?

Mr. HARWOOD. No, sir; I am not. I tried to deduce it, and I judge, as they have stated that there was no revenue to be expected from crude oil, that it must rest on the gasoline.

Senator HULL. If the full 1 cent a gallon results in an increase of price, what would that amount to to the general public?

Mr. HARWOOD. I do not know. I have not made that calculation.

Senator HULL. You have not gone into those things?

Mr. HARWOOD. No, sir.

Senator HULL. I notice here in the report of the Tariff Commission, in computing the cost in the American mid-continent field that they have down for depletion of leasehold 11 cents a barrel; amortization of the tangible development, 15 cents a barrel; intangible development, 24 cents a barrel. There is 50 cents out of a total cost of $1.04 of actual expenses. That is allocated to depletion of the leasehold and tangible and intangible development. This is nearly 50 per cent of the total cost as computed by the Tariff Commission.

In the Venezuelan field the corresponding allowances are about one-fourth of the cost of producing as computed by the Tariff Commission. For instance, depletion 0.01, tangible development 0.06, intangible development 0.09.

Mr. HARWOOD. The reason for those lower figures in Venezuela is a very large proven production which is used as the divisor in establishing those figures. The proven oil in the Venezuelan field, in Lake Maracaibo alone, is very large. It probably runs between 400,000,000 and 500,000,000 barrels.

Senator HULL. With reference to these three items, I take it that this method of accounting corresponds to the accounting method for purposes of income taxation here in this country; 11 cents for depletion of the leasehold, for instance?

Mr. HARWOOD. I am not sure of that, Senator, because the Treasury Department has certain arbitrary rules that they insist on for handling matters of depletion and that sort of thing, and the companies' accounting practices may vary from the Treasury Department's rules.

Senator HULL. So these figures here, then, do not signify anything in particular as they relate to no profits computed for purposes of taxation. Here is what I mean. I notice that the oil and gas companies return for purposes of income taxation a gross income of $780,000,000 and a net income of $104,000,000. Is it or not true that our depletion allowances in the income tax system are more liberal than any other system of taxation?

Mr. HARWOOD. I do not think that the oil companies would agree with you, Senator, on that. You mean, that they are more liberal?

Senator HULL. Yes.

Mr. HARWOOD. That we are allowed to take higher depletion rates?

Senator HULL. Yes.

Mr. HARWOOD. No. We have disputes all the time with the Treasury Department with respect to depletion rates.

Senator REED. Since the 27½ per cent provision was adopted?

Mr. HARWOOD. I am not familiar with that particular provision, Senator.

Senator HULL. One more question. I notice that since 1925, of petroleum and petroleum products we have exported and sold to other countries something over two and a quarter billion dollars' more than had been brought into this country. In that situation on what sort of theory do you predicate a proposal to ask the Government to vote authority to impose a subsidy of $130,000,000 or $140,000,000?

Mr. HARWOOD. I can not see the reasonableness of it.

Senator HULL. Why should not agriculture and other groups who would be called upon to pay this $130,000,000 or $140,000,000 to this $12,000,000,000 industry come here and make demands, if we are going to parcel out great subsidies of one or two hundred million dollars to the most powerful industries we have in this country?

Mr. HARWOOD. I am given to understand that they are very sympathetic in their opposition to this bill, I can not tell you——

Senator HULL. I am just as sympathetic with one industry in this country as another, and just as anxious in every practicable way to cooperate, but I can not possible see where we would get to if we just baldly and brazenly authorized the levy of $130,000,000 or $140,000,000 in the way of a subsidy, off of the general public, for the most powerful industry, almost, that we have in this country. That is all.

Senator CONNALLY. Just a question. I will be very brief.

The CHAIRMAN. Take all the time you want, Senator.

Senator CONNALLY. Thank you, Mr. Chairman.

You have a cracking plant down in Venezuela, at Oruba?

Mr. HARWOOD. In the Dutch West Indies.

Senator CONNALLY. You crack oil in that refinery and get about 30 per cent out of it?

Mr. HARWOOD. We both crack and top oil in that refinery.

Senator CONNALLY. What percentage do you get?

Mr. HARWOOD. We can get up to 25 per cent for cracking. When the prices are very low it leaves very little profit.

Senator CONNALLY. From the Dutch West Indies do you bring that oil and gas into the United States?

Mr. HARWOOD. Yes, sir.

Senator CONNALLY. A while ago you referred to foreign-produced American oil. Do you call oil that is produced in the Dutch West Indies and in Venezuela American oil?

Mr. HARWOOD. I consider oil which is produced by American companies in Mexico or in Venezuela as very little different from oil produced in Texas.

Senator CONNALLY. You have strange ideas of geography.

Mr. HARWOOD. There is not any difference except that the oil happens to be located there.

Senator CONNALLY. Does it not cost you anything to pay these lease people in Venezuela?

Mr. HARWOOD. Yes; you pay royalty in Venezuela and Mexico.

Senator CONNALLY. The four large companies that bring in this oil are the Pan American Petroleum—that is your company?

Mr. HARWOOD. The Pan American Petroleum and Transport Co.

Senator CONNALLY. That is the old Doheny company, is it not?

Mr. HARWOOD. Yes, sir.

Senator CONNALLY. And who else?

Mr. HARWOOD. The Gulf.

Senator CONNALLY. That is the Mellon interests. Who else?

Mr. HARWOOD. And the Creole, which is the Standard of New Jersey.

Senator CONNALLY. And then the Dutch Shell?

Mr. HARWOOD. Yes, sir.

Senator CONNALLY. The Dutch Shell is a foreign company, is it not?

Mr. HARWOOD. Of course it has American companies also; but I think that the property down there is owned by the foreign company.

Senator CONNALLY. Do you call that American oil?

Mr. HARWOOD. There is only 10 per cent of their oil that is imported; only 10 per cent of the imports into the United States brought in by the Dutch Shell.

Senator CONNALLY. That is not American oil?

Mr. HARWOOD. No, sir.

Senator GORE. Is there any reason why the users of oil should not pay a tariff as well as the users of any other protected article or commodity?

Mr. HARWOOD. That is too involved a question for me to answer intelligently, Senator; I do not know.

Senator GORE. If the tariff is a burden, should not everybody bear it; and if it is a benefit, should not everybody share it?

Mr. HARWOOD. Yes; and along that line it seems to me that a general sales tax would be a much better instrument to use.

Senator GORE. You think you could escape it, do you?

Mr. HARWOOD. No, I don't think I could escape it.

Senator CONNALLY. You are against taxing imports with a tariff, but you are in favor of taxing everybody who buys anything in the domestic market with a general sales tax?

Mr. HARWOOD. Yes.

Senator CONNALLY. Food, clothes and everything else?

Mr. HARWOOD. Yes, if it is evenly distributed.

Senator CONNALLY. You are against taxing joyriding and in favor of taxing food and clothing.

Senator GORE. Undoubtedly the sales tax is one which the Government gets the revenue from, and that is not always true of the tariff.

You submitted a curve here showing prices of crude oil and gasoline. Does that take oil at the refinery?

Mr. HARWOOD. No, sir.

Senator HULL. You were asked about everybody paying the tariff. I wanted to ask you if it is not true that if it were possible to give everybody relatively equal tariff benefits, that would be one proposition——

Mr. HARWOOD. There would be no objection to that at all.

Senator HULL. But with agriculture, for instance, on most of its products, especially wheat, cotton, tobacco, corn, rye, and oats and hog products and all those things, if a tariff were levied of a thouand per cent they would not get any tariff benefits, whereas if one cent a gallon is levied on gasoline and collected, that is an entirely different proposition, is it not?

Mr. HARWOOD. Quite.

Senator GORE. The farmers are enjoying the luxurious protection of 42 cents a bushel on wheat and wheat has been selling at 20 cents a bushel, or did last spring, in my State.

However, I do not want to get into a tariff discussion here. I was simply trying to ascertain Mr. Harwood's views without giving any expressions of my own.

Senator HULL. Just one more question, please. If it were possible for us to levy tariffs in this situation, where all commodity prices are nearly on a bankrupt level, all of them practically alike—if it were possible to levy tariffs to lift all of them up together, on farm products for instance—if all commodities could be lifted up together or in relative proportion, that would be one proposition; but to single out one industry, where the tariff is effective, and leave agricultural prices

hopelessly below the pre-war level, would not that further dislocate our whole economic situation?

Mr. HARWOOD. Yes, sir.

Senator HULL. That is all.

STATEMENT OF MICHAEL O'SHAUGHNESSY, EDITOR AND OWNER OF O'SHAUGHNESSY'S OIL BULLETIN, NEW YORK CITY

Mr. O'SHAUGHNESSY. Realizing the gravity of the national emergency which faces your committee in balancing the Budget, and being mindful of the importance of time as an element, I shall be very brief, avoid tedious statistics which can be made to prove anything or nothing, and address myself directly to the oil tariff item in the House bill as a possible source of revenue and in its broad application to the interests of consumers in the United States as well as the American oil industry itself.

The improperly called excise tax on oil in the House revenue bill, being considered by your committee, is not an excise tax to raise revenue because it will raise no revenue; nor is it an import tax for protection, because the oil industry does not need protection. It is a subsidy from consumers to the oil industry.

The oil tariff advocates are not trying to help your committee to find revenue to balance the Budget in a national crisis, nor are they entitled to ask protection, certainly not a subsidy from consumers to cover their inefficient and wasteful stewardship in handling an irreplaceable natural resource of the country, of inestimable value and basic necessity to all the people.

Eliminating a discussion of the Tariff Commission's figures of comparative domestic and foreign costs of production, which is largely "dust in the eyes," it is a fact that if the American oil industry could curb its greed in overproducing crude oil or increasing its developed supply under ground in huge potential production, which is a constant menace to prices, and if it could eliminate unfair and destructive competition in marketing, that wastes the profits of the business, crude petroleum and petroleum products could be produced as cheap or cheaper in the United States than anywhere else in the world—and that includes Russia.

It is true that present laws, determining the rights to subsoil oil, stimulate the greed of operators to overproduce and our antitrust laws make it difficult for marketers of petroleum products to curb their greed, which results in destructive competition.

But the remedy is certainly not a subsidy from consumers to correct these conditions, but a change in the laws covering subsoil rights to oil, a limited revision of the Federal laws which promote destructive competition and defeat the object for which they were passed, and a development of a state of mind in the oil industry which will induce all oil operators to agree upon measures which work the greatest good to the greatest number in the industry, and to the greatest good of their customers, the people.

While present daily production of crude oil is approximately in balance with demand, unnecessary drilling has created a potential production of from six to eight million barrels per day, while only 2,000,000 barrels per day are required, which is a constant menace to profitable crude prices. By that I mean, gentlemen, if the valves

of the wells controlling the flow of oil in the United States were opened to-day for a very considerable period, the oil wells of the United States would produce from six to eight million barrels of oil a day.

It is also a fact that the oil industry has an unnecessary investment of perhaps a billion dollars in three times as many gasoline service stations as are required to efficiently serve the public, which leads to a waste of around $450,000,000 a year. In such circumstances a subsidy from consumers whose purchasing power is constantly contracting is indefensible.

The change desirable in the laws covering subsoil oil rights would be to compel unit development and operation of single oil pools. The antitrust law might be revised so as to define, as not a restraint of trade, the creation of a monopoly in which all units in the oil industry doing an interstate business would be permitted to cooperate in conducting the business in an economic and efficient manner, subject to Federal supervision.

Gentlemen, a subsidy of 42 cents a barrel on crude, gasoline, and fuel oil in the House bill, should it be finally written into the revenue law, to balance the Budget, will have the eight following results:

The first effect: It will produce no revenue for three reasons: Forty million barrels of crude or fuel oil per year, normally imported and furnished by east coast marketers to shipping, would produce no revenue as through the drawback provision in the House bill, no duty would be collected. It is interesting, however, here to note that, in anticipation of a tariff on fuel oil, five great passenger steamers arriving in New York from Europe this past week took on no fuel oil in New York harbor, having filled their bunkers in European ports for the round trip. Incidentally, it is worth mentioning that our already sorely tried merchant marine would be further crippled by very substantially higher fuel oil prices.

The second result: The eastern seaboard requirements of the thirty-odd million barrels of fuel oil and asphalt now being furnished to eastern seaboard industries from Venezuela would be furnished by California producers, in this country, with no revenue.

And, third, competition for gasoline business is so keen in the eastern seaboard States that the protection of 1 cent a gallon would be used by domestic producers to undersell the Venezuelan product and consequently exclude imports of gasoline. Well, I put it the other way; that would simply mean that they would send gasoline to Europe where it would displace just that much American exports.

The second effect it would have: The subsidy would provide the American oil industry a plausible excuse to unjustifiably raise prices of petroleum products to consumers in defiance of world's supply and demand.

It would raise the price of fuel oil to 50,000,000 consumers in the eastern seaboard States from present prices of around 60 cents a barrel to at least $1.02, and undoubtedly considerably higher, as the only source of supply in the United States of fuel oil for these consumers is in California, and it is questionable whether California oil operators would supply eastern seaboard requirements unless the price were substantially higher than $1.02 a barrel.

Third, the subsidy would be of very temporary benefit only to the American oil industry and would eventually greatly complicate its effort toward stabilization.

South American crude and fuel oil is imported into the United States only to provide the fuel oil and asphalt requirements of eastern seaboard consumers. The American oil industry has never done this business and never can.

Following the discovery of heavy oil in Mexico, an educational campaign of several years was required to induce industry and shipping to change their boiler equipment to use oil instead of coal. When Mexico killed its oil industry by high taxes and unwise interference, the companies who had built up this fuel-oil business, transferred their operations to Venezuela, where a large supply of crude of fuel grade was discovered, adjacent to tidewater. They were simply getting abroad material that they could not get here to supply a business that they had already built up. Those are the plain facts, gentlemen. Nowhere in the United States can a sufficient amount of oil be secured of a similar low grade to that produced in Venezuela to supply the fuel oil and asphalt requirements of the eastern seaboard consumers, except in California. The Pacific Coast States, however, have no supply of coal and their economic life depends upon their supply of low grade oil and gas, which is not sufficient to warrant California operators depleting it to serve eastern seaboard consumers. Should the industry in the Mid-Continent fields attempt to do the eastern seaboard fuel oil business, it would result in an oversupply of gasoline which would demoralize the domestic market and consequently, the market for crude in the United States which, in the end, would be disastrous to the industry and to the consumers of the country.

Should the temporary and artificial prices for petroleum products, which is the only possible excuse for a duty, be maintained, for any length of time, it would make more difficult, if not impossible, the task of restricting crude production to demand, for every artificial raise in price of crude oil in the last eight years in the United States you will find that immediately after the production goes very much higher.

Fourth reason: The subsidy would stimulate the expansion of refining capacity in the Caribbean area, the products of which would displace American petroleum products in foreign markets and drastically reduce the oil exports of the United States, which was the second item of importance in our export trade in 1931. The value of petroleum exports exceeded imports by $177,000,000 in that year.

Fifth, the subsidy, if te nporarily but artifically helpful, would delay the industry in adopting fundamental reforms which are necessary to make the oil business of the country profitable.

Senator WATSON. Do you say it would not raise the price of oil in the United States?

Mr. O'SHAUGHNESSY. I say it would most certainly do it, Senator.

Senator WATSON. It would?

Mr. O'SHAUGHNESSY. Yes.

Senator WATSON. What about imports? Would imports increase, or would they decrease?

Mr. O'SHAUGHNESSY. They would not increase nor decrease. The only object of bringing them in primarily is to furnish a product that can not be furnished in the United States—40,000,000 barrels of bunker oil, about 16,000,000 barrels of asphalt, which I doubt

could be had in the United States, anyway, and 16,000,000 barrels of oil that goes to industry—house heating, and that sort of thing.

Senator WATSON. If it increased the price, would it not increase the imports, and therefore would there not be a revenue derived from it?

Mr. O'SHAUGHNESSY. No, sir; it would not.

Senator WATSON. It would not have any effect at all on imports?

Mr. O'SHAUGHNESSY. It would absolutely exclude fuel oil. Fuel oil would come in under the drawback and go abroad without paying any revenue; 42 cents a barrel tariff would exclude all other. Consequently, an attempt would have to be made to furnish it in this country, and there would be no revenue. Do I make myself clear?

Senator WATSON. I understand you, but I do not believe it.

Senator BINGHAM. You say in one breath it would not affect imports, and in another breath that it would not increase revenue.

Mr. O'SHAUGHNESSY. Just one moment. Let us get this cleared up before we go along. A duty or subsidy of 42 cents a barrel on crude or fuel oil would exclude the oil from this country, and it would go abroad. However, under the drawback provision of the House bill, oil that is brought in here from abroad and delivered to ships pay no duty. Consequently, the Government would get no duty, and the American oil industry would not get that market.

Senator BINGHAM. A few moments ago you said there was no place we could get oil from except Venezuela, because California could not spare any.

Mr. O'SHAUGHNESSY. They should not do it.

Senator GORE. Senator, his arguments contradict each other, and you can not believe them all.

Senator WATSON. I am trying to reconcile them.

Senator GORE. It can not be done.

Mr. O'SHAUGHNESSY. I want to be helpful. I am not arguing the case for any particular interest or any person. I would like to be helpful to the committee.

Senator WATSON. We are just sitting here as a court, in an unbiased way, to get your position.

Mr. O'SHAUGHNESSY. That is my viewpoint. I am not interested in the tariff one way or the other personally.

Sixth, the subsidy would mark a distinctly backward step in the conservation of the petroleum resources of the United States. The use of American crude, more valuable for other purposes, to supply the fuel oil and asphalt requirements of eastern seaboard consumers, would be an indefensible waste against the interests of all the people of the country.

Seventh, the subsidy would jeopardize a very large investment by American citizens in South American oil production, which was encouraged by the United States Government as a move to conserve the petroleum resources of the United States, which is consuming two-thirds of the petroleum products produced in the world, while the country contains but one-fifth of the world's oil reserves. This is likely to become a serious factor in our industrial life in the next decade.

Senator BINGHAM. Do you think this tax would raise the price of oil just as much as the tax proposed?

Mr. O'SHAUGHNESSY. That would be the only reason for it, Senator.

Senator BINGHAM. Then, how would it keep out any of the Venezuelan oil, because it could come in and pay the tariff and sell for just that much more, according to your own statement?

Mr. O'SHAUGHNESSY. They could sell the oil abroad, and make that much more favorable conditions. You would not pay any duty abroad, and here you would have to pay it.

Senator BINGHAM. If it increased the price by the amount of the duty, then the imported oil could afford to pay the duty and get the increased price. Then it would keep coming in just the same.

Mr. O'SHAUGHNESSY. Provided they want to sell it in this market. They will sell it in a market where they do not have to pay any duty.

Senator BINGHAM. Why will they not sell it in this market, if they can get the same price they were getting before?

Mr. O'SHAUGHNESSY. There is only a limited market here, Senator. They certainly would not take oil and sell it here if they could get 42 cents a barrel more for it abroad.

Eighth, the subsidy would unfavorably affect our trade relations with Latin American countries, which offer the most attractive opportunity for trade expansion for this country in this generation.

I presented data to support all of the above statements to the Ways and Means Committee of the House at their public hearings, much of which appears in the printed record of their hearings. To save time, I refer you to that record, or should you desire it, I will file such data in the form of supplementary material to this testimony.

In opposing this indefensible oil subsidy, I feel that I am assisting, rather than embarrassing your committee in the stupendous task of writing a revenue law in a national crisis. Tariff duties and certainly subsidies, are out of place in such a measure.

In conclusion, only a word on just taxes. Paying a very small income tax myself, I should be glad to bear my part of the burden imposed by the 2¼ per cent sales tax, originally proposed in the Ways and Means Committee bill. The rate is not high, and it is an equitably distributed burden. I can not understand why those citizens whose circumstances do not warrant them paying an income tax, would not be glad to pay the sales tax and have that much of a share in helping their country in one of the greatest crises in our history.

Senator CONNALLY. Mr. Chairman, I would like to ask the gentleman a question or two. What is the name of your publication?

Mr. O'SHAUGHNESSY. O'Shaughnessy's Oil Bulletin.

Senator CONNALLY. Have you a copy of it there?

Mr. O'SHAUGHNESSY. I may have, Senator. I have not a full copy. They are mutilated.

Senator CONNALLY. Have you your advertising section there?

Mr. O'SHAUGHNESSY. I have no advertising.

Senator CONNALLY. You publish the South American Oil Reports, do you not?

Mr. O'SHAUGHNESSY. That is the name of the little company, the private company that owns the paper, and I own all the stock.

Senator CONNALLY. You own all the stock of your company. That company prints the South American Oil Reports, is that correct?

Mr. O'SHAUGHNESSY. Yes.

Senator CONNALLY. Your subscribers are principally among the oil importers, are they not?

Mr. O'SHAUGHNESSY. No; all of our companies that are interested in foreign production.

Senator CONNALLY. Foreign production. So, your livelihood is derived from foreign-produced oil?

Mr. O'SHAUGHNESSY. No.

Senator CONNALLY. That is what you said.

Mr. O'SHAUGHNESSY. Very many American oil companies who want to keep track of what is going on abroad, subscribe to the paper.

Senator CONNALLY. I say, you get your revenue and your livelihood from people in this country who are interested in foreign production of oil, do you not?

Mr. O'SHAUGHNESSY. Financially, no; not necessarily.

Senator CONNALLY. Not necessarily? How much.

Mr. O'SHAUGHNESSY. I could not say.

Senator CONNALLY. You derive a large portion of your income from interests who are interested in producing foreign oil.

Mr. O'SHAUGHNESSY. Yes, sir.

Senator CONNALLY. So, naturally, you are interested in keeping that industry going.

Mr. O'SHAUGHNESSY. Senator, let me say that it would not make a particle of difference in my publication whether there is a tariff or not.

Senator CONNALLY. I understand that, but if you get your revenue from these people that are interested in South American oil, you want to help them and cooperate with them. You came down here when the House hearings were on, did you not?

Mr. O'SHAUGHNESSY. Several times.

Senator CONNALLY. You came down at the invitation and at the instance of the Pan American Oil Co., did you not?

Mr. O'SHAUGHNESSY. I did at one time, yes.

Senator CONNALLY. Did they aid you in preparing this paper?

Mr. O'SHAUGHNESSY. Certainly not.

Senator CONNALLY. You did that purely from an altruistic, unselfish standpoint?

Mr. O'SHAUGHNESSY. Senator, I have published that report for eight years, and it is on file there at the library. Nobody has ever seen anything published in that paper until it appeared.

Senator CONNALLY. I understand that; but I am talking about your argument here. Did you get aid in that?

Mr. O'SHAUGHNESSY. Absolutely not.

Senator CONNALLY. But you came at the instance of the Pan American Petroleum Co.?

Mr. O'SHAUGHNESSY. I did not, sir.

Sentor CONNALLY. You said you did a while ago, in the House.

Mr. SHAUGHNESSY. You asked me if at one time I did go to the House at their instance. I said yes. I wrote to Senator Smoot, when this hearing was proposed, and suggested that I had certain information which might be useful to the committee, and asked him if he considered it of service, that I would be glad to appear.

Senator CONNALLY. Did you not testify a minute ago that when the House hearings were on, you came here at the invitation and instigation of the Pan American Petroleum Co.?

Mr. O'SHAUGHNESSY. I did three years ago.

Senator CONNALLY. How about the hearing about two months ago?

Mr. O'SHAUGHNESSY. No, sir. I wrote to the chairman of that committee, and simply told him that if he wanted me to come, I would come.

Senator CONNALLY. Did you come?

Mr. O'SHAUGHNESSY. I did; at nobody's instigation whatever.

Senator CONNALLY. Three years ago, however, you were here at the instance of the Pan American Petroleum Co.?

Mr. O'SHAUGHNESSY. No; not at their instance, Senator.

Senator CONNALLY. You said so, did you not?

Mr. O'SHAUGHNESSY. Well, then, I want to correct it.

Senator CONNALLY. All right.

Mr. O'SHAUGHNESSY. Not at the instance of the Pan American Co. at all. Mr. Walker simply suggested the process by which I could appear. I was entirely unfamiliar with these hearings. I never knew how to get there, or what the process was, and he simply said, "I will put your name down as a witness." That is all he had to do. It was not at anybody's instigation. Let me be clear about that.

Senator CONNALLY. I hope you will.

Mr. O'SHAUGHNESSY. I do not want the impression to get abroad that I am here arguing for anybody. I am arguing simply facts, or trying to give the committee facts.

Senator CONNALLY. Then you want to correct your statement that you came here at the instance and invitation of the Pan American Petroleum Co.?

Mr. O'SHAUGHNESSY. I do, most assuredly.

Senator CONNALLY. Why did you say that, if it is incorrect?

Mr. O'SHAUGHNESSY. You are trying to confuse me into saying what I do not mean.

Senator CONNALLY. No. I did not suggest your answer. I asked you if you did not come here at the instigation and invitation of the Pan American Petroleum Co., and you said yes.

Mr. O'SHAUGHNESSY. I wish to correct it, and I hope you will make the correction in the record.

Senator CONNALLY. It will be in the record. Who is Mr. Walker, that you conferred with about coming down here?

Mr. O'SHAUGHNESSY. Vice president of the Pan American Petroleum Co.

Senator CONNALLY. You are pretty close to him?

Mr. O'SHAUGHNESSY. No, sir. I am not any closer to him than anybody else. I see him perhaps twice a year, if I am lucky.

Senator REED. Can we not assume that the companies that do not want the duty have asked witnesses to come and speak against it, and the companies that do want the duty have asked witnesses to come and speak for it?

Senator CONNALLY. Certainly. That is what I assume.

Senator REED. I do not see that that is a sin.

Senator CONNALLY. I did not say it was a sin. I simply want the facts. He has appeared here from an unselfish viewpoint, with no interest in it.

Mr. O'SHAUGHNESSY. I am rather sensitive about that.

Senator CONNALLY. I am not attacking you. You have a perfect right to come here.

Mr. O'SHAUGHNESSY. I have tried to be fair about everything I have printed in the paper, and I do not want it to appear that I am appearing here biased, for or against any proposition.

Senator GORE. I want to ask one question. You stated that six large ships recently coming into our ports had filled their bunkers with oil abroad for the return trip.

Mr. O'SHAUGHNESSY. Yes.

Senator GORE. What was the point in that?

Mr. O'SHAUGHNESSY. Simply that this agitation about the tariff has alarmed the shipping companies in this way, that they are beginning to make their arrangements for their bunker oil so that if the tariff goes on, they will have their arrangements all made.

Senator GORE. Do you mean that any of those concerns thought this tariff act would pass before they could get over here and get oil and get out?

Mr. O'SHAUGHNESSY. No; but, you see, they make their arrangements quite a little in advance, and as long as it is in the wind——

Senator GORE. Is there not a drawback on this bunker oil?

Mr. O'SHAUGHNESSY. Yes; but for a long time that has been a very much mooted question, and the language is so ambiguous that it is very difficult to tell whether there is or is not.

Senator GORE. Then, the harm has already been done, and we might as well go ahead——

Mr. O'SHAUGHNESSY. To the extent of six ships; not to the extent of 40,000,000 barrels of oil a year.

Senator GORE. That would go out under the drawback provision now. We know that.

Mr. O'SHAUGHNESSY. If that is the construction of the law.

Senator GORE. You want the committee to believe that six ships thought this bill might pass, or some other contingency might occur, and that they could not get their bunker oil on this trip going out now?

Mr. O'SHAUGHNESSY. No. I do not mean that at all. I simply stated the fact. I made no inferences at all. I simply stated the fact that six large ships came in and took all of their bunker oil supply from abroad.

Senator GORE. I thought your implication was that it was due to this bill.

Mr. O'SHAUGHNESSY. Only as an interesting incident bearing on the whole subject.

The CHAIRMAN. Are you through?

Mr. O'SHAUGHNESSY. Yes, Senator.

STATEMENT OF JOSEPH K. MILLIKEN, MOUNT HOPE FINISHING CO., NORTH DIGHTON, MASS.

Mr. MILLIKEN. Mr. Chairman, and gentlemen of the committee, my name is Joseph K. Milliken. I am treasurer of the Mount Hope Finishing Co., North Dighton, Mass. I speak in behalf of a group of employers engaged in the business of finishing cotton goods. As I sat here listening to the discussion on the proposed oil tariff, it seemed to me that there was danger that these great industries and the wage earners engaged therein, who have most at stake, might be

overlooked and that the hearing might assume the form of a contest between the importing and exporting oil companies. The group that I speak for has no interest in such a contest. They are the plants engaged in an old-established industry which is greatly dependent upon fuel oil, and which would be seriously affected by the increase of 1 cent a gallon.

I am appearing in the interest of the following group of bleachers, dyers, printers, and finishers of cotton textiles who are users of fuel oil to generate steam for power and for heat in the various processes of scouring, bleaching, dyeing, drying, printing, and finishing cloth:

The Apponaug Co., Apponaug, R. I.
Fall River Bleachery, Fall River, Mass.
Harodite Finishing Co., North Dighton, Mass.
Mount Hope Finishing Co., North Dighton, Mass.
Pacific Mills, Lawrence, Mass.
Providence Dye, Bleach & Calender Co., Providence, R. I.
Sayles Finishing Plants (Inc.), Saylesville, R. I.
American Printing Co., Fall River, Mass.

Other textile plants using fuel oil, as disclosed by the records of the National Association of Finishers of Textile Fabrics, are the following:

COTTON FINISHERS

Algonquin Printing Co., Fall River, Mass.
Cranston Print Works, Cranston, R. I.
Eddystone, Manufacturing Co., Eddystone, Pa.
Farwell Bleachery, Lawrence, Mass.
Imperial Printing & Finishing Co., Providence, R. I.
Lincoln Bleachery & Dye Works, Longsdale, R. I.
Slater Co. (Inc.), Webster, Mass.
Standard Bleachery & Printing Co., Carlton Hill, N. J.
Manhattan Print Works (Waldrich Bleachery), Delawanna, N. J.
Greenwich Bleachery, East Greenwich, R. I.
Great Falls Bleachery & Dye Works, Somersworth, N. H.

SILK FINISHERS

Cheney Bros., South Manchester, Conn.
Cretona Print & Dye Works, Clifton, N. J.
International Print & Dye Works, Paterson, N. J.
National Silk Dyeing Co., Paterson, N. J.
United Piece Dye Works, Lodi, N. J.

The work in these plants consists in preparing for use and sale the gray cloth as it comes from the loom, converting it by bleaching, dyeing, printing, and finishing into the form of finished fabric that is used for shirts, dresses, linings, underwear, draperies, and all the other manifold uses of finished textiles.

The textile finishing industry has found fuel oil a desirable form of fuel.

First. It is cleaner than coal. It avoids the dirt from the handling and storing of coal and the removal of ashes.

Second. It is easier to store than coal.

Third. It is free from the danger of spontaneous combusiton that menaces a large storage of coal.

Fourth. For a steam demand that varies widely from day to day and from hour to hour during the day it is easier to start up more fires with as needed and take off boilers as not needed.

Fifth. Along the Atlantic Seaboard the imported fuel oil has been available at prices more advantageous than coal.

From the figures supplied by the eight finishing plants first named above I have prepared a table which shows:

First. The total amount of fuel oil purchased by these plants in 1930 and 1931.

Second. The number of wage earners in these plants in 1930 and 1931.

Third. The total wages paid in 1930 and 1931.

Fourth. The proportion of cost of fuel oil to plant wages in 1930 and 1931.

Fifth. The cost of alterations that would be required to change from fuel oil to coal.

Sixth. The value of material that would be scrapped by a change from fuel oil to coal.

The table shows that the eight finishing plants used in 1930, 57,560,993 gallons fuel oil; in 1931, 56,025,725 gallons fuel oil.

An increase in cost of 1 cent a gallon means an added cost to the group of $560,257 per annum.

In 1931 these plants report a total of 10,303 wage earners with total plant wages of $12,293,056.

The cost of the fuel oil purchased in 1931, even at the low prices prevailing, represents 12.15 per cent of the plant wages.

If the cost of fuel oil is increased $560,000 to these plants, it means an increased cost of fuel oil per employee of $54.38 per annum, almost 5 per cent of the average plant wage.

With the present idle capacity in the finishing industry and the keen competition for each order—this increased cost, if it comes, can not be passed on to the buyer; it must be absorbed by the industry to show itself later in efforts of management to balance their budgets by further reductions in wages. There may be those managements who are already showing losses who will see in the mounting costs of their fuel the final argument that will prompt them to liquidate their business and discharge their employees altogether. Let us assume, however, that the plant owners and management, recognizing the misery that results to their employees and the community by a liquidation of their business, do the obvious thing and try to save the amount of the tax; where else can they get it except out of the pay envelope of the workingman? If that happens we are putting a tax directly on the workingman twice that contemplated in the sales tax.

The table shows the estimated cost to change back to coal of $1,229,900 for seven plants. While some of these companies have the money to make this plant expenditure to change back to coal, others with old boiler plants have not; they will have to make almost a complete new power plant installation to provide suitable boilers, bunkers for coal storage, automatic stokers or pulverizers, and all that goes with a modern efficient coal-fired plant.

The textile finishers have installed their oil-burning equipment and the storage facilities that go with it in the firm belief that the established policy of the Government of no embargo or tariffs on fuels is wise and would be continued. They believe it is in the best interest of their employees, their stockholders, their customers, and the ultimate consumer that the present Congress shall follow the established national policy of admitting foreign fuels free of any tax.

They believe, furthermore, that with the proposed duty on foreign fuel oil the price will mount so rapidly that it will only be a short time when the industry, that is, such of it as survives, will be back again using coal, and the revenue to be derived from imports of fuel oil will be positively negligible.

(Mr. Milliken submitted the following tables:)

Plant No.	Fuel oil purchased		Number wage earners in plant		Total plant wages paid	
	1930	1931	1930	1931	1930	1931
	Gallons	*Gallons*

QUESTIONNAIRE RE PROPOSED TARIFF ON FUEL OIL

1. Name of company: Taunton Municipal Lighting Plant.
2. Location of plants where oil is used as fuel: West Water Street.
3. Number of gallons of fuel oil purchased by your company:
   (*a*) In 1930, 3,667,146.
   (*b*) In 1931, 3,960,390.
4. Number of wage earners employed in plant:
   (*a*) In 1930, 98.
   (*b*) In 1931, 98.
5. Total plant wages paid:
   (*a*) In 1930, $154,207.59.
   (*b*) In 1931, $163,522.89.
6. Proportion of total cost of fuel oil (including cost of transportation to plant) to total of plant wages (not including administrative salaries):
   (*a*) In 1930, 60.84 per cent.
   (*b*) In 1931, 60.61 per cent.
7. Estimated expense of alterations that would be required to enable your plant now using oil as fuel, to use coal instead: Approximately $300,000.
8. Book value of equipment that would have to be scrapped if your plant were to be equipped to use coal instead of oil: Approximately $50,000.

TAUNTON MUNICIPAL LIGHTING PLANT,
By CHESTER F. BUCKLEY, *Assistant Manager.*

APRIL 2, 1932.

Mr. MILLIKEN. I have a brief statement showing a different type of user of fuel oil in our locality in Massachusetts. I refer to the Taunton Municipal Lighting Plant, located in Taunton, Mass. In 1930 this municipal lighting plant burned 3,367,000 gallons of fuel oil. In 1931 it used 3,960,000 gallons of fuel oil. They estimate their expense of alterations that would be required to enable this plant to change back to burning coal at $300,000, and they estimate the book value of the equipment that would require to be scrapped at $50,000.

I have here a more complete brief that has been prepared in the interest of this group of employers that I referred to, that I would like to put into the record.

Senator WATSON. Very well. We are very much obliged to you.

Senator CONNALLY. Do you favor taking the tariff off cotton goods?

Mr. MILLIKEN. I come from a part of the country that is supposed to have profited, and profited a good deal, by high tariffs, Senator. I would like to say, in answer, that the only end of the tariff that I am competent to speak of at all is the cotton manufacturing end to which you have referred, and I have seen the manufacturer of cotton goods in New England, which, as you know, is a very old established industry, drying up and drying up and drying up, and with plants in liquidation. I have seen the cities of Fall River——

Senator CONNALLY. We have all seen that, but do you favor taking the tariff off cotton goods?

Mr. MILLIKEN. I do not think taking the tariff off cotton goods would make any great amount of difference.

Senator CONNALLY. Therefore, you do not mind if we take it all off?

Mr. MILLIKEN. I should say to you that I am not a cotton mill manufacturer. Our business is supplying the service on these cotton goods after they are made and off the loom. But, so far as our business is concerned, we do not to-day set any store by the value of the

high protective tariff that there is on cotton goods, because there is so much competition right here at home that the profit is all gone, anyhow.

Senator CONNALLY. Then you think it would be all right to take the tariff off cotton?

Mr. MILLIKEN. So far as we are concerned in our business; and so far as I am concerned, looking at it from the standpoint of our locality——

Senator CONNALLY. Look at it from the national viewpoint. Do not look at it from your narrow viewpoint.

Mr. MILLIKEN. I am not in love with a high protective tariff on cotton goods.

Senator CONNALLY. Do you favor repealing the cotton goods tariff?

Mr. MILLIKEN. Whether it would be better——

Senator CONNALLY. I did not ask you that.

Mr. MILLIKEN. I am not competent to express a definite opinion on just how far that should be reduced.

Senator CONNALLY. And yet you come here professing to express an opinion on a tariff on oil, that you say you know nothing about.

Mr. MILLIKEN. I do not see a great deal of similarity between the problem represented by a protective tariff on cotton textiles, and a protective tariff on fuel, any more than I see the connection between these two forms of tariff and the protective tariff on the products of coal tar that are used for dyestuffs in this country. I think the only appearance I have ever made down here was in the interest of the manufacturers of dyestuffs in America, to help put on a protective tariff, believing that that was a good thing.

Senator CONNALLY. You favored that, did you not?

Mr. MILLIKEN. Yes.

Senator CONNALLY. You are against the tariff on oil. That is all.

Senator GORE. Do you think there is any argument against the tariff on oil that does not apply equally to the tariff on everything else?

Mr. MILLIKEN. Yes, sir; I would like to say specifically, as applied to our industry, as I set it out in our brief——

Senator GORE. I did not want to lead you into that.

Senator REED. There is no use asking him questions unless you are going to give him a chance to answer them.

Senator GORE. If it is printed in the record, it will be available.

(Mr. Milliken submitted the following brief:)

BRIEF IN OPPOSITION TO PROPOSED TAX ON IMPORTED PETROLEUM AND ITS PRODUCTS IN BEHALF OF MOUNT HOPE FINISHING CO., PACIFIC MILLS, SAYLOS FINISHING PLANTS, AMERICAN PRINT WORKS, WHITTENTON MANUFACTURING CO., FALL RIVER BLEACHERY, PROVIDENCE DYEING, BLEACHING & CALENDERING CO., GREENWICH BLEACHERY, CRANSTON PRINT WORKS, THE APPONAUG CO., HARODITE FINISHING CO., (INC.), POOLE SILVER CO., REED & BARTON, TAUNTON MUNICIPAL LIGHTING PLANT.

(Presented by Mark M. Herblit of Boston, Mass.)

THE WIDESPREAD PROTEST AGAINST THE OIL TARIFF

I. Public opinion aroused.
II. The Avowed object of the legislation is revenue only.
III. Why a protective tariff is out of place in a bill for revenue only.
A. The objects of a protective tariff differ from these of a bill for revenue only.

B. The investigations which are necessary to supply the facts as a basis for intelligent consideration of a protective tariff differ greatly from those required in a revenue bill.
C. Permitting protective tariff proposals as part of revenue bills will unsettle tariff conditions, and will seriously affect business and industry.
IV. Our traditional policy is against a tariff on oil.
A. Our domestic source of supply is limited.
B. The necessity for conservation of our limited domestic supply of petroleum has been recognized and adopted as a settled policy.
C. Oil is a giant industry, whose exports far exceed the imports—it lacks the basis for the application of a protective tariff.
V. The proposed tariff will produce no revenue to the Government but on the contrary would result in a positive and direct deficit.
A. The tariff on crude petroleum and on fuel oil would be in effect an embargo and would produce no revenue.
B. Little, if any, revenue can be expected from the levy on gasoline.
C. The increase in price which would inevitably follow the enactment of the proposed tariff would result in a direct loss and a positive deficit to the Government.
VI. If tariff legislation is a remedy for depression, many other industries are equally entitled to consideration.
VII. Who will benefit?
A. The big oil companies will be the real beneficiaries.
B. Very little, if any, benefit will result from it to the small independent oil producer.
VIII. Who will be damaged by the increase in price induced by the proposed tariff?
A. The increase of one cent a gallon in the price of fuel oil means an increase of about 70 per cent in fuel costs and such an unusual and exorbitant jump will seriously affect industry and the wage earners.
B. It will seriously affect our shipping and fisheries.
C. It will cast a direct burden on our citizens by increasing the cost of roads, construction, and that of operating our municipal lighting plants.
D. More than 750,000 home owners will be affected.
E. It will be detrimental to the farmers.
IX. The proposed tax will reduce our exports to Venezuela.
X. Summary and conclusion.

I. PUBLIC OPINION AROUSED

The proposal in the emergency revenue bill now before the Senate Finance Committee to place a tariff of one cent a gallon on imported crude petroleum and its products has evoked vigorous protest in practically all parts of the country except only in Oklahoma, Texas, Kansas, and California. Rarely has any legislative proposal aroused such widespread opposition. Newspaper editorials and articles, running into the hundreds and appearing in publications, ranging from the important metropolitan dailies to weekly farm magazines, have emphatically given voice to an aroused public opinion.

An examination of several hundred such editorials discloses that this protest comes alike from Democrats and Republicans. Nor does this intense opposition emanate from any one class. It seems apparent that farmers, wage-earners, home owners, manufacturers, business men, fishermen and maritime interests are all agitated by this proposed tariff. The inclusion of this oil tariff as part of a revenue bill presents features which are of prime importance to every American.

II. THE AVOWED OBJECT OF THE LEGISLATION IS REVENUE ONLY

That the sole purpose of the bill was to meet the urgent necessity for raising revenue to meet the deficit in the Budget can not be doubted. This is clearly established not only by the messages of the President, but also by the avowals in Congress of the Speaker of the House and the leaders of both parties. The entire record as to the origin and as to the expressed purpose of the legislation shows conclusively that the bill was not intended and does not purport to be a tariff bill, but purely and simply a bill to raise revenue, called forth by a serious national emergency. The legislation was approached by both parties without party spirit and with the high patriotic motive of accomplishing promptly an important result which the country sorely needs. It is in such a setting and under this guise that the proposal for a protective tariff on oil is presented.

III. WHY A PROTECTIVE TARIFF IS OUT OF PLACE IN A BILL FOR REVENUE ONLY

This inclusion of protective tariff legislation in a bill designed merely to raise revenue runs counter to sound principles of legislative procedure as well as to the established precedents and settled principles and traditions of Congress. The reasons for those principles and traditions are not far to seek.

A. The objects of a protective tariff differ from those of a bill for revenue only. The aim and purpose of an internal revenue bill is to provide the Government with necessary funds. Beyond providing this, an internal revenue bill has no object. President McKinley, in his introduction to Protection and Reciprocity Illustrated, said that a revenue bill "accomplishes but a single purpose—that of raising revenue; it has no other mission."

A protective tariff measure, on the other hand, has an entirely different object. That its major problem is not to provide revenue for the Government has been recognized by economists from the days of Adam Smith to the present, and by our statesmen since the founding of our Republic. Our very first tariff act, that of 1789, was in pursuance of Washington's message advising "the expediency of giving effectual encouragement—to agriculture, commerce, and manufactures." In Washington's second inaugural message, he speaks of giving "such encouragement to our own navigation as will render our commerce and agriculture less dependent upon foreign bottoms." Not only these messages, but the express words of our first tariff act shows that it was for "the encouragement and protection of manufactures." Professor Taussig in his Tariff History of the United States, seventh edition, at page 14, says, "The first tariff act, that of 1789, was protective in intention and spirit." Madison urged it for that purpose and when he later became President, he stated in his message to Congress on February 20, 1815, that a protective tariff was a "means to preserve and promote the manufactures that have sprung into existence." The first platform of the Republican Party (1860) urged a protective tariff "to encourage the development of the industrial interests of the country."

Our Tariff Commission, for instance, concerns itself not with the amount of revenue which the Government needs, but with the condition of business, industry, labor, domestic markets, foreign markets, costs of production, foreign exchange, the state of the allied industries and competing industries, reciprocity with foreign nations and many other considerations. Thus, from the beginning of our national existence until the present time, it has been recognized that a tariff measure concerns itself with numerous complicated problems that are foreign to the purposes of a bill for revenue only.

B. The investigations which are necessary to supply the facts as a basis for intelligent consideration of a protective tariff differ greatly from those required in a revenue bill.

The soundness of the principle and the wisdom of the precedents set by Congress in separating these two different kinds of legislation appears also when we consider the modus operandi which is required for intelligent tariff legislation, as distinguished from revenue legislation. The extent and variety of the considerations that must be borne in mind in enacting intelligent tariff legislation are almost without limit. These considerations involve practically the whole gamut of our domestic economic structure and of our relations with foreign powers. It has been shown again and again that a tariff on one article affects not only the producers of that article and the wage earners engaged in that industry, but the consumers, allied industries, foreign markets, domestic markets, and many other important and complicated considerations. It is, therefore, necessary that laborious and painstaking investigations be made to ascertain the facts as to the commodity on which a tariff is sought and as to the numerous interrelations with other commodities in order that an intelligent conclusion may be arrived at as to the effect of a proposed tariff on such a commodity.

There was a time, during the nineteenth century, when we had what Thomas Walker Page refers to as the era of "tariff making without method." But it is to be hoped that this haphazard era is behind us. Legislators and economists recognize that in the fixing of tariff duties, whether by executive order, or by a commission, or by Congress itself, a great deal of consideration, research and effort, an unusual amount of thought is necessarily involved and an extraordinary length of time is consumed. All tariff experts agree that a great volume of information much of a highly technical character, is absolutely essential for intelligent tariff legislation. That is what led to the creation of the permanent Tariff Commission. The history of past tariff legislation in Congress proves that such legislation has consumed many months and, at that, it has been said that our legislators have

not had sufficient time to study carefully all the problems involved. (See Taussig on Free Trade, Tariff and Reciprocity, pp. 184 and 185.) The experience of Congress shows that tariff legislation can not and should not be hammered out in the stress of an emergency which requires, above all, prompt action. A disinterested consideration of the clear distinction between the aims and purposes of the two kinds of legislation, of the necessary difference in the method of approach to each by reason of the wide divergence in the considerations and effects of each, thus convinces one of the wisdom of separating these two kinds of legislation.

C. Permitting protective tariff proposals as part of revenue bills will unsettle tariff conditions, and will seriously affect business and industry.

There is a further consideration of policy which should prohibit the merging of these two kinds of legislation. Of necessity, revenue bills frequently come before Congress. On the other hand, tariff measures have been before Congress at comparatively rarer intervals. During the 35-year period since 1897, there have been but four tariffs—1909, 1913, 1922, and 1928. The effect upon business and industry of the uncertainty caused by the consideration of tariff measures has long been recognized and has been brought home effectively to Congress. As far back as a hundred years ago, in February, 1832, Henry Clay, speaking in the United States Senate, said that proposals for tariff changes create "alarm and insecurity" and he added that, with respect to tariff, "Nothing is more prejudicial to the great interests of a nation than unsettled and varying policy." The profound effect of unsettled tariff conditions can not be doubted.

The principle and policy of separation, therefore, finds another important reason for, if we allow tariff measures to be included in revenue bills, business, industry and labor will be in an almost constant state of uncertainty by reason of the frequency with which revenue bills necessarily come before Congress, and each would offer an opportunity for proposed tariff legislation. Moreover, the pulling and hauling which a tariff measure involves consumes so much time of Congress that, if such legislation is to be a part of every revenue measure, our already overburdened legislators will find their tasks almost unbearable and, being only human, they will be necessarily unable to devote to other legislation the same amount of energy and thought as at present. There can, therefore, be no doubt of the wisdom of our established policy and that the inclusion of the oil tariff in a bill for revenue only, would set a bad precedent.

IV. OUR TRADITIONAL POLICY IS AGAINST A TARIFF ON OIL

Aside from these important considerations which apply to any tariff measure in a bill for revenue only, there is a serious question of policy with respect to a tariff on oil in particular. Even if the oil tariff were presented in a proper bill, a consideration of the merits of such a proposed tariff shows that it runs counter to our settled policy.

A. Our domestic source of supply is limited.

After a study of the probable world supply of underground petroleum, geologists have estimated that we have within our borders only about 18 per cent of the estimated world underground supply. This estimate is a most important consideration when we find that the United States produces about 68 per cent of the total of the world production of petroleum and consumes about 64 per cent. There is no escape from the conclusion, in view of this rate of consumption, that our supply will be exhausted within the not far distant future, unless measures to conserve the same are promptly inaugurated. The Federal Oil Conservation Board in its report of January, 1928, says at page 5:

"Neither the high rate of domestic consumption nor the excess of exports over imports would be disquieting if the petroleum resources of the United States bore anything like the same ratio to the world's resources as the production ratio of 68 per cent. According to the present opinion of our best petroleum geologists, our total resources, instead of being 68 per cent of those of the world, are not more than 18 per cent. If our petroleum reserves are to be drawn upon at a faster rate than those of all other countries, our resources should be several times larger."

Those entitled to speak on the subject have estimated that at our present rate of consumption our domestic supply will last a scant 10 years. In this respect the situation of oil differs from that of coal and iron. The report of the Federal Oil Conservation Board, September, 1926, on page 5 states:

"There must be natural concern over our future supply of oil because of the manifest dependence of so large a part of our industrial life, national defense, and domestic comfort upon continued adequate supplies of lubricating oils for all

machinery and fuel for automobile engines. Our future resources in coal and iron have been so determined by geological evidence and exploration that we can measure our proved supplies by centuries."

It does not take an expert to recognize the vast difference between an agricultural product like wheat and cotton, which can be reproduced year in and year out, and a natural product like petroleum, which is irreplaceable and the supply of which is so limited.

B. The necessity for conservation of our limited domestic supply of petroleum has been recognized and adopted as a settled policy.

It is these urgent considerations of stubborn facts that have forced upon our statesmen and economists the policy of conservation with respect to petroleum. The Federal Oil Conservation Board, of which President Hoover, then Secretary of Commerce, was a member, says in its report of September, 1926, at page 12:

"The fields of Mexico and South America are of large yield and much promising geologic oil structure is as yet undrilled. That our companies should vigorously acquire and exploit such fields is of first importance, not only a source of future supply, but supply under control of our own citizens."

In its report of January, 1928, the board says at page 6:

"The depletion rate of our own resources can be brought more into accord with that of foreign resources only in one way—by importing a greater quantity of crude petroleum. The present imports of Mexican and South American crude oil come largely from American operators and, while not obtained from United States oil sands, they are the product of American engineering and enterprise. Cooperation in the development of foreign oil fields, through technical assistance and the further investment of American capital, would seem to be a logical conservation measure."

This policy has been adopted by both of our political parties.

The Democratic Party, in its platform for 1920 says:

"The Democratic Party recognizes the importance of the acquisition by Americans of additional sources of petroleum and other minerals, and declares that such acquisition should both at home and abroad, be fostered and encouraged."

The Republican Party has also recognized the wisdom of conserving our limited supply of petroleum by permitting imports duty-free. The Republican Handbook for 1928 specifically calls attention to crude petroleum, gasoline and lubricating oil "which are on the free list"; and thus impliedly promised that they will continue to be on the free list.

This policy has been adopted not only by both of the political parties, but by Congress. Congress considered at great length proposals for a tariff on oil in connection with the tariff bills of 19[illegible] in 1930 on a proposal for an embargo. It had availa[illegible] the Tariff Commission, by the Bureau of Min[illegible]encies. It gave lengthy hearings to delega[illegible]d those representing business and indu[illegible]rings, study, and research were acco[illegible]ubject on e[illegible]ca[illegible] each case Congress, in pursuanc[illegible]ed policy [illegible]oil on[illegible]t among the other irreplaceab[illegible]hose [illegible]c supp[illegible] limited.

It may be safely [illegible] th[illegible]on which [illegible] of our country has been e[illegible]and [illegible]h unanim[illegible] would be difficult to fin[illegible]press[illegible]esight than those that u[illegible]s policy.

C. Oil is a gia[illegible]try, whos[illegible] lacks the basis for the [illegible]on of a pr[illegible]

There is a furt[illegible]articula[illegible] proposal for a tariff o[illegible]ts to cla[illegible]indus-try as "an infant[illegible]n the c[illegible]d last year petroleum an[illegible]exp[illegible] Tariff Commission shows[illegible]eport da[illegible]s of oil far exceed our impo[illegible]that this ha[illegible]he fa[illegible]io being about three to one. [illegible]we find[illegible]e volum[illegible]increased even in 1931 over th[illegible]1930.[illegible]at in bot[illegible]olume was far in excess of the im[illegible]imports ha[illegible]d. In 1922 we imported 130,000,000[illegible]petrol[illegible]y 47,000,000 barrels.

Another important fact be[illegible]rative rate of production by the various oil produ[illegible]Commission reports that in 1931 the United States pro[illegible]0 per cent of the entire

world production." It may therefore be said without fear of contradiction that the oil industry of our country has far outgrown the infant stage.

The historical basis for a protective tariff, i. e., the necessity of fostering a struggling infant industry, is entirely absent. The statement of Madison, with respect to our first tariff measure, aptly shows the historical distinction. He said:

"There may be some manufactures which one being formed can advance toward perfection without adventitious aid, while others for want of the fostering aid of the Government will be unable to go on at all."

Our oil industry has certainly advanced to a predominant position "without adventitious aid." Moreover, what Professor Taussig said in his Tariff History of the United States, seventh edition, at page 378, is also strongly applicable to the proposed oil tariff:

"There can be nothing in the nature of protection to young industries—no prospect of ultimate cheapening through stimulus to improved domestic production Even the 'true' principle of equalized cost of production could not be applied to a flourishing export industry."

The oil industry lacks the essential grounds for tariff protection: (*a*) It is not an infant industry; (*b*) the limited supply affords no hope of "ultimate cheapening" of oil through production; and (*c*) it is an industry whose exports are immensely in excess of the imports. In view of this lack of the essential grounds as a basis for a protective tariff, it seems clear that the enactment of this tariff on oil would inaugurate a new policy of protection. There is thus a further important consideration which should deter the enactment of a tariff on oil. In view of the many recognized principles and settled policies to which the proposed tariff runs counter, the proponents certainly bear a heavy burden when they undertake to persuade Congress to enact that proposal into law as part of the emergency revenue bill.

V. THE PROPOSED TARIFF WILL PRODUCE NO REVENUE TO THE GOVERNMENT BUT ON THE CONTRARY WOULD RESULT IN A POSITIVE AND DIRECT DEFICIT

A. The tariff on crude petroleum and on fuel oil would be in effect an embargo and would produce no revenue.

This inclusion of an oil tariff as part of a revenue bill ought at least to have in its favor a reasonable basis for expectation that it will produce revenue, but a consideration of the facts and of the conclusions therefrom convincingly shows that it lacks even that saving grace. The proposed tariff has three main divisions: (*a*) Crude petroleum, (*b*) fuel oil, and (*c*) gasoline. The Ways and Means Committee inquired of Secretary Mills whether a tariff of 1 cent on crude petroleum, 1 cent on fuel oil, and 2 cents on gasoline would produce any revenue. His reply was as follows:

"In the opinion of experts of the Department of Commerce, such a tax would yield no revenue, since the levy which would be added to the import price exceeds the margin of advantage on which oil is imported to this country, and therefore would exclude the products affected."

Thus, experts hold, and it seems clear that 1 cent a gallon on crude petroleum and on fuel oil would act as an embargo and would therefore produce no revenue. Certainly, then, there is no justification for a tariff on fuel oil or on crude petroleum. The same is true concerning gasoline at 2 cents a gallon. Even with respect to deliveries at our eastern seaboard, which is the only part of the United States that is aided by ijports of oil, the "margin of advantage" of foreign gasoline is apparently less than 2 cents a gallon.

B. Little, if any, revenue can be expected from the levy on gasoline.

After the receipt of this opinion from Secretary Mills, the proposal was modified so as to reduce the tariff on the item of gasoline from 2 cents to 1 cent a gallon. But the proponents still left crude petroleum and fuel oil in the bill, in spite of the total lack of revenue from those items. The question is whether the modified proposal concerning gasoline would make a difference as to expectation of revenue from that particular product of petroleum.

The Treasury estimate as to the expected income from imported gasoline at 1 cent a gallon was about $5,000,000. This was no doubt based on the amount of gasoline imported in 1931, to wit, 546,000,000 gallons, and also upon the assumption that imports of gasoline would in fact continue at about the same volume in spite of the proposed tariff. But it does not take an economist to figure out that, as the "margin of advantage" on which gasoline is imported to this country would be reduced by the levy of 1 cent a gallon, no such volume of imports of gasoline could be expected. In other words, the proposed tariff

would not only be an absolute embargo on fuel oil and on crude petroleum, but even as regards gasoline, it would deter imports and would therefore produce very little, if any, revenue.

C. The increase in price which would inevitably follow the enactment of the proposed tariff would result in a direct loss and a positive deficit to the Government.

There is no dispute that the enactment of the proposed tariff would result in an increase in price to consumers in our country. This is the avowed purpose of the proponents. There can be no doubt but that this would be the result with respect to crude petroleum and fuel oil This price trend is definitely indicated by an increase of over 10 per cent in fuel oil, which has already occurred in the few days that have elapsed since the Ways and Means Committee included the proposed tariff in the revenue bill. Experience has shown that the price of gasoline quickly follows the price changes of crude petroleum. The 1928 report of the Federal Trade Commission says on page 175:

"As a rule, price advances in crude petroleum have been followed promptly by gasoline price increases."

This conclusion is amply established by a mass of indisputable facts, collected in the August, 1931, issue of Petroleum Facts and Figures, published by the American Petroleum Institute and reprinted in the Report of the Hearings conducted by the Ways and Means Committee on this proposed tariff (pp. 40 to 56).

In view of this expected and certain increase in price, it is important to note that the United States Government uses over 20,000,000 barrels of petroleum products a year. The first report of the Federal Oil Conservation Board (September, 1926) says at page 22:

"Current peace-time requirements of those branches of the Government responsible for the national defense are approximtaely 20,000,000 barrels of petroleum products a year. In case of war, the national defense requirements would, of course, immediately increase many fold."

It is to be noted that the 20,000,000 barrels served only peace-time requirements for purposes of national defense. The total consumption of our Government, even in peace time, is much in excess of this. It is one of the largest oil consumers in the world. But, even on the basis of the 20,000,000 barrels only, we have the following ridiculous result:

	Per year
Used by the Government.....barrels..	20,000,000
In gallons (42 gallons per barrel).....gallons..	840,000,000
At 1 cent per gallon increase in cost.....	$8,400,000
Income from tax on imported gasoline upon assumption that imports will continue at same rate as in 1931.....	5,000,000
Minimum net loss to the Government.....	3,400,000

Thus, we see that the proposed tariff will net to the Government a direct and substantial loss, and will lead to the ridiculous position of an avowed revenue bill creating an actual deficit.

VI. IF TARIFF LEGISLATION IS A REMEDY FOR DEPRESSION, MANY OTHER INDUSTRIES ARE EQUALLY ENTITLED TO CONSIDERATION

The present economic depression has seriously affected industry, business, shipping, farmers, laborers; everyone, in fact. Although the oil industry has been selected as the beneficiary of this special tariff, an examination shows that it has not been as badly hit as many others. The Department of Labor has issued a report which shows that the price index declined generally between January and December, 1931, and that the decline in oil between those dates has been less than in many other lines. A few examples are illuminating:

Item	Index for January, 1931	Index for December, 1931
Farm products	73.5	55.7
Semimanufactured articles	73.4	62.8
Raw material	72.9	60.2
Textiles	71.0	59.2
Miscellaneous	64.7	56.9
Oil	69.8	63.6

These facts, collated by a disinterested and reliable source, clearly indicate that raw materials, farm products, textiles and the products of industries in general have suffered a greater decline in price between January and December, 1931, than oil, and that in December, 1931, the price index in many other lines and industries was lower than that of oil. Aside from other objections to the proposed oil tariff, those figures show that there is no reason for singling out the oil industry as the beneficiary of a protective tariff at this time. Many other industries are in at least an equally depressed plight. If a tariff is the simple remedy for this condition, why the discrimination?

VIII. WHO WILL BENEFIT?

In view of the fact that the Government will receive no revenue but will suffer a deficit, it is pertinent to inquire who will be the real beneficiaries of this tariff. The proposal is being urged in the name of the small independent oil producers who are pictured as people of small means, each owning a little well that produces about a barrel and a half a day. But an examination into the facts reminds one of the Biblical story of the voice of Jacob and the hand of Esau.

A. The big oil companies will be the real beneficiaries.

The control over the oil industry exercised by a few large companies presents a picture approaching monopoly which is unequalled in any other large industry that is not regulated or controlled by the Government. The United States Tariff Commission reports show that a few large companies own the pipe lines, the refineries, the storage plants and the means of transportation and of marketing. A turn of the valves on one of their gushers brings forth thousands of gallons a day and the figures show that these companies own, store, and market practically all the refined oil, and themselves produce a very large proportion of all the crude petroleum. Practically nine-tenths of the increase in price which American consumers will pay will, therefore, go into the coffers of these few large oil companies.

B. Very little, if any, benefit will result to the small independent oil producer.

The position of the independent oil producers is no different from what might be expected in such a state of the industry. They constitute but a small and negligible factor in the oil industry. It is not competition of imported petroleum that affects them. They are situated at such great overland distances from eastern tidewater, where imported oil is used, that the freight rate removes them from the field of competition. Alfred M. Landon, the chairman of the Kansas delegation to the governor's oil relief conference, says:

"To-day the greatest danger facing the oil industry is not from without but from within—and that danger is the elimination of competition through 'integration,' which is only a gentle-sounding phrase under which a monopoly masquerades."

This is effectively shown by an analysis of the figures which go to make up the base price of petroleum. In the July–August, 1931, issue of the Independent Monthly of the Petroleum Association of America, we find that out of the base price at tide water of 85 cents a barrel, only 10 cents per barrel went to the producer of petroleum. The remainder—75 cents—went to the big companies, as follows:

	Cents
Trunk-line charge for transportation	40
Gathering charge	12½
Shiploading charge	2½
Service charge or premium	20
Total	75

Those figures show indisuptably that any small oil producer, being entirely dependent upon the means of transportation, the refinery and storage plants and marketing facilities, all under the control of the big companies, must accept what these companies see fit to give him as the price of crude petroleum. Another cent a gallon taken from industry, shipping, the farmers and other consumers will not remedy these conditions. The small independent oil producer will still remain in the grip of these big companies—without any other means of refining, storing, transporting, or marketing.

The few big oil companies that exercise this ironclad control, and who will be the chief beneficiaries of this tariff, are certainly not in need of "the fostering hand of the Government." A compilation made by the Interstate Commerce Commission in its statement No. 3170 shows that, for the year 1930, six large

pipe-line corporations have declared dividends ranging from 40 per cent upwards. It is evident that they are not languishing for lack of a tariff, and it is they who will be by far the real beneficiaries of the tariff.

VII. WHO WILL BE DAMAGED BY THE INCREASE IN PRICE INDUCED BY THE PROPOSED TARIFF?

In addition to the considerations that the proposed tariff on crude petroleum and fuel oil will produce absolutely no revenue, and that on gasoline very little, if any, revenue, and that the net result of its operation will be a direct loss and a positive deficit to the Government, all without substantial benefit to anyone except to the few big oil companies which control the industry, there is the further important consideration of the effect of the tariff on industry, wage earners, home owners, farmers and consumers, generally.

A. The increase of 1 cent a gallon in the price of fuel oil means an increase of about 70 per cent in fuel costs and such an unusual and exorbitant jump will seriously affect industry and the wage earners.

Many large and important industries use oil as fuel. It is that portion of crude petroleum which is the residuum left after gasoline, naphtha, kerosene, and other more expensive products have been removed by the so-called cracking process. Until the recent rise in price, which followed quickly and directly upon the adoption of the oil tariff in the House, fuel oil was obtainable at tide water on the Atlantic coast at 60 cents a barrel, which is less than a cent and a half a gallon. An increase of 1 cent per gallon, therefore, means an increase of 70 per cent in the cost of fuel to those industries. That such a tremendous increase is unusual may be seen by an examination of the average duties imposed by past tariffs. Aside from the question whether any tariff on fuel oil is warranted, it thus appears that the amount of the increase which this particular tariff would involve is all out of proportion to the prevailing price of fuel oil.

In many industries, fuel oil is a very large and important item. It enters to a substantial degree into the cost of production. In the textile finishing plants, for example, the cost of fuel oil, according to carefully compiled figures, has averaged more than 12 per cent of their entire factory pay rolls. An increase of 1 cent a gallon on fuel oil will therefore practically double an important item of cost in those industries.

That such an increase will be a serious blow to those industries can not be doubted. Many of the plants have been shut down and the rest are running only part time, struggling under the pressure of general economic conditions. In many plants, wages have been reduced, but there is but little work. In view of the conditions, the increase in fuel oil can not be absorbed by the manufacturers, for most of the industries show large deficits, and the rest very little, if any, profit. If this increase in the cost of fuel oil is passed on to the wage earners engaged in those industries, millions of employees will be directly affected. On the other hand, if this great increase in the cost of turning the wheels of industry and of shipping should result in increasing the price of the manufactured products, then consumers generally will be affected. On any view of the condition that seems certain to follow the wake of this proposed tax on fuel oil, there can be no doubt of its detrimental widespread effect.

B. It will seriously affect our shipping and fishing interests.

The present plight of shipping is well known. The largest trans-Atlantic liners are being advertised for 3-day cruises—at unheard of low rates. Fuel oil is a very large item of the cost of operation. At present, they are receiving their fuel in our ports. A 70 per cent increase in the price of fuel oil will drive this substantial business to the other side of the Atlantic, with resultant loss to us.

Our fisheries afford employment to many men. By time-told custom, their wages depend on the results of the voyage. It is one of the few lines in which the worker is a direct partner in the profits. After the expenses are deducted from the amount realized from the catch, the balance is divided among the shipowners and the crew. Almost 50 per cent of these expenses is the cost of fuel oil. The effect of a 70 per cent increase in this item upon these seafarers is easily seen.

C. It will cast a direct burden on our citizens by increasing the cost of road construction and that of operating our municipal lighting plants.

Asphalt is a by-product of certain kinds of petroleum—those of an asphaltic base. There are only two sources within our country where such petroleum is obtainable to any appreciable extent, namely California, and a small area in Texas. A cent a gallon on fuel oil and crude petroleum will mean an increase

of 70 per cent in the cost of asphalt for road building. This is of direct concern to all our citizens.

Another direct affect of this tariff upon our public interests is with relation to our municipal lighting companies. For example, 1 cent a gallon on fuel oil will mean an increase of more than $150,000 a year in the cost of operation of the Taunton municipal lighting plant. Our municipalities are already bearing great burdens and a finding it difficult to balance their budgets. Even some of our large cities have suffered a loss in their financial status. The proposed tariff adds another burden to them.

D. More than 750,000 home owners will be affected.

Fuel oil has come to be widely used as fuel for homes not only for heating but for cooking purposes. The American Oil Burner Association reports that more than 750,000 American homes have been equipped with oil burners and that in excess of $500,000,000 has been invested in the industry of producing oil burners for homes. (See report of hearings before Ways and Means Committee, p. 119.) The increase in the cost of fuel oil of course directly affects the home owners and the thousands of employees engaged in the industry of producing, installing, and selling oil burners.

E. It will be detrimental to the farmers.

The proposed oil tariff is very detrimental to the American afrmer. An increase of 1 cent in the price of the gasoline necessary for his tractor, trucks, and other gasoline motors will cost our farmers in excess of $150,000,000 a year. This is shown by an elaborate schedule detailing the number of vehicles and engines used on our farms and the amount of gasoline used by the farmers, introduced at the recent hearings before the Ways and Means Committee.

Furthermore, the farmer has a direct interest in the improvement and extension of our roads and in having manufactured goods come to him at as low a price as possible. The price of his clothing, tools, roofing, building materials, and manufactured commodities generally are dependent in some degree on the cost to the manufacturer and shipper of the heat and power that turns the wheels of the industries. The increase of the cost of fuel oil to industry and to shipping will result in an increase in the price of these commodities to the farmer, and thus, in addition to his direct loss, by reason of the increase in the price of gasoline, the farmer will bear an indirect loss by reason of the increase in the cost of production of these manufactured articles.

It is no wonder that farmers' organizations are protesting against this tariff. Protests have already been received by the Committee on Ways and Means from the representative farmers' associations in Minnesota, Indiana, Nebraska, Ohio, South Dakota, Tennessee, New Hampshire, and elsewhere. (See report of hearings before Ways and Means Committee, p. 108.)

IX. THE PROPOSED TAX WILL REDUCE OUR EXPORTS TO VENEZUELA

The great importance of foreign trade to our wage-earners and industries can not be overestimated. The Bureau of Foreign and Domestic Commerce of the United States Department of Commerce (Bulletin No. 783) reports that Venezuela is buying from us 55 per cent of all the goods which she imports, and says:

"Since the World War, Venezuela has become of increasing interest to the American public, primarily through the intensive development of its oil fields, but also because of the increased trade between the two countries."

We sell Venezuela food products and increasingly large amounts of manufactured goods. (See Bulletin of United States Department of Commerce, No. 783, pp. 46 to 48.) Venezuelan imports from the United States in 1913 and from 1926 to 1929, were as follows:

	Our exports to Venezuela	Our imports from Venezuela (p. 39)
1913	$6,829,000	$8,335,000
1926	44,063,000	18,926,000
1927	36,058,000	19,896,000
1928	46,069,000	32,619,000
1929	48,179,000	42,308,000

The growth of our exports to Venezuela has thus been steadily and substantially increasing. The comparison of the figures of recent years with 1913 is impressive

Our Department of Commerce, in Bulletin No. 783, page 40, recognizes that "the importance of petroleum in this rapid trade development is striking."

It is the export of petroleum and its products that furnishes Venezuela a means of payment for our goods, and therefore has established it as a good potential customer. The trade balance with Venezuela has been steadily in our favor, as shown by the above schedule. Our total imports from Venezuela in 1930 aggregated $38,868,010 (p. 46). Of this amount, nearly $26,000,000 consisted of petroleum and its products (p. 46). In other words, more than 72 per cent of the payment by Venezuela for our goods is in petroleum and its products. If, by reason of this tax, imports from Venezuela are cut off, as the Treasury Department says they will be, Venezuela will have to look for other markets for her petroleum and its products. Venezuela must and will import from those countries that buy her oil. It follows that our foreign trade with Venezuela will be greatly reduced. The effect of this reduction in our expert trade will of course further reflect upon our industries and wage earners. Our foreign trade is not in such condition that we can afford to tamper with it—it has already fallen off nearly 40 per cent from 1927 and we must carefully foster and develop our remaining foreign markets.

XI. SUMMARY AND CONCLUSION

In this national emergency which imperatively demands the speedy balancing of the budget, a tariff measure is entirely out of place. There is no time for the careful investigation of the plight of other industries, their comparative conditions, the complicated results and all the numerous incident accompanying tariff legislation. The proposed tax opens the door wide to demands by other industries equally distressed and with an equal measure of justice. The soundness of the principle that tariff legislation should not be confused with emergency revenue measures is made clear when we consider the confusion and delay that will inevitably follow the opening of the doors to these numerous demands for tariff legislation.

The proposed oil tariff is not only out of place, but it will produce no revenue. Citizens might be resigned to added burdens of taxation, even in these hard times, if at least the taxes imposed resulted in revenue. But the only possible justification for the proposed tax disappears when we find not only lack of revenue, but a direct and positive deficit to the Government itself on its own peace-time requirements for national defense.

It has been shown that the burdens to industry, to the wage earners, to commerce, to the farmer, to the home owner, which the proposed tax involves, will be many and far-reaching. It does not even have the redeeming feature of helping the independent oil producers, for whose sole benefit it is ostensibly imposed. The corporations that exercise a monopolistic control over the means of transportation, refining, storing, distributing and selling the oil, certainly do not need it. And when, to top all, it appears that it is contrary to our established policy, and that it will substantially interfere with our foreign trade, it would seem that the last vestige of justification for including such legislation in the emergency revenue bill disappears.

STATEMENT OF WILLIAM C. McTARNAHAN, PRESIDENT OF THE PETROLEUM HEAT & POWER CO., 511 FIFTH AVENUE, NEW YORK CITY

Mr. McTARNAHAN. I am William C. McTarnahan, president of the Petroleum Heat & Power Co., New York, representing the American Oil Burner Association of America.

Mr. Chairman and gentlemen, I am here in behalf of the American Oil Burner Association to offer our protest against the proposed tax on importations of petroleum and its products, including fuel oil from foreign countries, into the United States.

In order to give you a fair idea of the growth of the oil-burner industry and thereby lend proper weight to our protest, it should be noted that during the past 16 years the oil burner business has had a phenomenal growth in the United States, and as compared with 5 or 10 manufacturers of oil-burning equipment, mostly located in Cali-

fornia, 16 years ago, there are now over 600 manufacturers in the business with over $100,000,000 invested. These same manufacturers have created over 10,000 dealers in the United States who have established themselves in almost every city, town, and village throughout our country where fuel oil is available for use in homes, hotels, and for commercial and industrial purposes. These dealers in order to enter this business have invested capital running anywhere from a few thousand dollars to as high as $500,000 and a low estimate would probably average $15,000, or $150,000,000 invested by the dealers, a total of $250,000,000 invested capital by dealers and manufacturers to say nothing of the money invested by the manufacturers of kindred products, such as oil-storage tanks, fire brick, pipe fittings, electric equipment, electric motors, automatic controls, and so forth.

The manufacturers and distributors have installed over $1,000,000,000 worth of oil-burning equipment in 805,794 installations and employ a total of approximately 250,000 people, to say nothing of the employees of the manufacturers of commodities depending upon us for their business.

These manufacturers and distributors are renting show rooms and stores in the various cities and towns and are employing salesmen, service men, and are purchasing motor trucks and service cars. The employees of these dealers have rented or purchased homes, put their children in school, and are firmly established in their respective communities.

The above figures do not take into account the tremendous investment in oil-burning equipment by steamship companies, steel mills, mining operations, railroads, and other industries, but are confined to plants installed primarily for heating and the generation of power in private and public buildings.

The only reason it has been possible to build up an American industry as large as the oil-burner business is because of the fact that there has been, by reason of the importation of fuel oil into the United States an adequate supply at a reasonable price.

Now, after our Government for years past has encouraged enormous sums of American capital to be invested in foreign countries in the production of oil, with the idea of conserving our own supply, it certainly would be unjust to place a prohibitive tax or tariff on the importation of foreign petroleum products which would result in a virtual embargo of 100,000,000 barrels of oil mostly consumed as fuel oil on the Atlantic Coast.

The American Oil Burner Association represents almost 100 per cent of the manufacturers of oil-burning equipment in the United States and as good American citizens the members of the Association are unanimous in their desire that the National Budget should be balanced and are all willing to do their part in assisting to this end. But, it seems to us that the mid-continent and western producers should set their own house in order by cutting down their production to supply the demand, instead of trying to make the taxpayers subsidize their mistakes.

Many manufacturers in the United States could turn out ten or more times as much finished product as they are now manufacturing. Many of them expanded unwisely during the 1928–29 boom period, and I am sure this committee would consider it ludicrous if these manufacturers were to ask Congress to tax the public so that they

could either make a profit on reduced output or beg the Government to buy their excess products when there was no demand for the article manufactured.

Protecting a deserving American industry is one thing, but subsidizing poor judgment at the expense of the oil-burner industry and the American taxpayer is something entirely different.

As stated above, the members of the American Oil Burner Association are just as much interested in balancing the National Budget as any other good American is, but we most strenuously object to an import tax on fuel oil of 1 cent per gallon or 42 cents per barrel, which is equivalent to a tax of 70 per cent on the present price of Bunker C fuel oil along the Atlantic seaboard and would be prohibitive. It would simply shut out the oil as would an embargo, with the result that no tax would be collected and, therefore, would bring no return to the National Treasury.

On the other hand, such a tax would increase the price of the domestic product, resulting in the curtailment of the manufacturer and sale of oil-burning equipment and increase the price of one of the necessities of life, heat, by $25,000,000, to over 800,000 home owners, or between four and five million people now being kept warm through the use of fuel oil in oil-burning apparatus. The only beneficiaries from such a tax, if imposed, will be the domestic oil producers. It will not return one penny of revenue to the National Treasury.

It has been estimated that the combined revenue to help balance the Budget from the import tax on both coal and oil would result in approximately $8,000,000. I understand this figure has since been reestimated at $5,000,000. If the proposed petroleum import tax is enacted the United States Treasury would at once be called upon to pay for the oil and petroleum products it consumes for the Army, the Navy, the Post Office Department, and in the operation of the thousands of trucks, automobiles, dredges, and other oil-consuming equipment in the various Government departments, including fuel oil for heating Federal and other buildings, at least $10,000,000 additional caused on account of the immediate increase in price of the domestic product which would result after the imposition of the proposed tax.

I wish to quote here a resolution passed by the Independent Oil Association of Oklahoma on February 4, 1931, from the printed records of the hearings on H. R. 16585 by the House Ways and Means Committee, during the third session of the Seventy-first Congress, which resolution was read into the records by the proponents of the Garber bill.

Resolved, That the Independent Oil Association of Oklahoma, with headquarters at Okmulgee, Okla., call upon the Congress of the United States to enact legislation that will serve to bar, either by a high tariff or an embargo, all imports of crude or refined oils from foreign countries until the developed supply of the United States fields can be marketed in an economic manner.

Mr. Wirt Franklin represented the Independent Oil Association of Oklahoma before the House Ways and Means Committee. I call your attention, gentlemen, to the words "bar all imports."

The domestic producers have been trying for several years to have our Government place an embargo on high tariff on imported petroleum and petroleum products, not for the benefit of the American people, not for the benefit of the Government, but for their own selfish interests. When they discovered the words "tariff" and "embargo"

were not popular, the proponents of the petroleum import tax, which has recently been adopted by the House, seized an opportune moment as the psychological time to accomplish their desired end, and cloaked in the guise of a producer of revenue for our national Budget, suggested this import tax on foreign oils. It was a very smart idea, I must admit, on the part of the sponsors of this tax measure, and unless this committee goes below the surface, I can see where they might very easily feel the measure a worthy one on the grounds of helping to balance our Budget.

The truth of the matter is the proposed tax on imported oils is nothing more or less than a subterfuge and is just another name for a tariff or embargo to accomplish what the proponents of the Garber bill failed to accomplish last year, only dressed up in a different suit of clothes and erroneously earmarked as something that will increase the revenue of our National Treasury.

I am sure the members of this committee will see through the intent back of this proposed import tax and realize that it would be economically impossible to import oils pay 42 cents a barrel and compete with the domestic product, which would result in no oil coming in and, therefore, no return to the Government, and if no return to the Government, then certainly such a tax has no business in a Treasury bill.

Even if this were the only reason, it should be thrown out; but you should consider that if passed this import tax would affect the employment of 250,000 people, to say nothing of thousands of American citizens, engineers, and oil men employed in foreign countries by American firms, which firms would be forced to shut down their refineries and curtail operations in foreign countries and bring home their people, only to add to the already vast army of unemployed, piling another problem on the Emergency Relief Committee.

According to the Index of Prices compiles by the Department of Labor, it shows that crude oil produced in the United States has had a phenomenal price rise since June and July, 1931, when it struck its low, more than practically any other commodity. For instance, prices in the State of Texas rose from 10 cents per barrel to $1, an increase of 900 per cent; in the mid-continent field, 24 cents to 77 cents, an increase of 220 per cent; and in all American fields, from 41 cents to 81 cents, an average increase of 102 per cent.

Notwithstanding this, Mr. Franklin is howling for still higher prices and wants our Government to put the equivalent of an embargo on foreign oil for the express purpose of further increasing the prices, throwing them further out of line as compared with depression low prices, of other commodities and putting a further burden on the consumer without one penny's return to the Government to help balance the Budget.

Just a little more—and I am well within my time: I now wish to dispute some of the statements made before this committee yesterday by Mr. Wirt Franklin.

1. Mr. Franklin stated that petroleum imports had now reached such proportions as to drive the domestic price down to its present low level. This is an erroneous statement, as the actual records will show during the past 8 or 10 years that when domestic prices were at their very highest was the time that the greatest amount of oil was being imported. As a matter of fact, importations of all petroleum

into the United States during this period has ranged between one hundred and one hundred and thirty million barrels per year, until the past year, when it dropped to 87,000,000 barrels.

2. Mr. Franklin stated yesterday that production in the United States had dropped 98 per cent. I think the record of his testimony will show this. As a matter of fact, the average top production for any one year has been approximately two and one-half million barrels per day, and for the past year it has averaged approximately two and one-fourth million barrels, or a decline of approximately 10 per cent.

Probably what Mr. Franklin wished to convey to this committee was that from the enormous potential production if all wells were turned wide open in the Oklahoma City and east Texas pools they could produce 98 per cent or 100 per cent more than they were producing, and I assure you this would also be true of practically every manufacturer of various commodities in the United States.

3. Mr. Franklin also stated yesterday that Russian gasoline had been brought into Detroit. I am quite sure the Government records will show that this gasoline came not from Russia but from Rumania.

Senator GORE. That would make a difference, wouldn't it?

4. Mr. MCTARNAHAN. Mr. Franklin also quoted Ralph Arnold, the oil geologist, as having estimated the oil reserves in the United States as being able to endure at the present rate of production for from 300 to 500 years. I also listened to as well as read Mr. Arnold's remarks, and I wish to correct Mr. Franklin, or rather amplify what he claims Mr. Arnold said, which was that at best such estimates are only a guess as no one can see beneath the surface. But taking into consideration the shale beds located in Colorado, Wyoming, and Utah and considering the hydrogenation of coal plus the so-called well oil, it should supply our Nation's needs for from three to five hundred years.

Let us assume that all Mr. Arnold said proved to be facts instead of guesses and that the same condition we find ourselves in to-day existed when Columbus discovered America in 1492. Then, when I was born 50 years ago or, more correctly, 1882, 390 years after Columbus discovered America, this Nation would have been completely out of petroleum and I would have missed my first baby-buggy ride in a spring buckboard in the mountains of California, as there would have been no axle grease with which to grease the axles. And to-day, 440 years later than the discovery of America, we would have been dependent upon Russia, Rumania, or some other foreign country for our petroleum supply and undoubtedly have paid through the nose for it and probably told that we could use none of it to sustain an army or a navy.

What is 300 or 500 years in the life of a nation? Our Nation is the youngest of any importance in the world. What would 300 or 500 years be to China, Japan, India, or even France, Germany, or Great Britain? If it is true that our complete petroleum reserves will only last three to five hundred years at the present rate of consumption, then this time will naturally be cut down, as our country is growing rapidly, and undoubtedly a hundred years from now our consumption will be many times greater than it is to-day; or, in other words, we will be reaching the end of our string so far as oil is concerned much sooner than expected.

Now, gentlemen, when you consider that petroleum is one of the absolute necessities of life to-day and that our people would start dying off rapidly within a few weeks if we had exhausted our last drop of petroleum, say to-day, then certainly it would be wise planning to import as much of the petroleum from foreign countries as we possibly can and conserve our supply, looking to the future welfare and prosperity of this United States as did some of our wise statesmen who signed the Declaration of Independence.

We can continue to produce wool, cotton, spinach, wheat, corn, and thousands of other necessities of life as long as we have our soil, but we can not plant or grow petroleum. When it is gone it is just gone. And certainly if we are going to have to import it later on when we have none of our own and pay, maybe, $20 a barrel for it, why not import it now when we can get it for a dollar a barrel.

In closing I want to emphatically state once more that if a tax is imposed on imported petroleum products of 42 cents a barrel, it will shut it out as would an embargo and, therefore, no tax will be collected to help the Treasury.

I thank you.

Senator CONNALLY. Mr. Chairman, I wish to ask the witness some questions, please.

Mr. McTarnahan, what is the name of your company?

Mr. McTARNAHAN. My company I am not testifying for. My company happens to be the Petroleum Heat & Power Co.

Senator CONNALLY. Yes, sir.

Mr. McTARNAHAN. And I am a director and one of the organizers of the American Oil Burner Association.

Senator CONNALLY. Yes; but I want to talk about your company now. You are with the Petroleum Heat & Power Co.?

Mr. McTARNAHAN. Yes, sir.

Senator CONNALLY. And that is a subsidiary, is it not, of the Mexican Petroleum Co.?

Mr. McTARNAHAN. No, sir.

Senator CONNALLY. Who owns it?

Mr. McTARNAHAN. I organized that company originally. The Pan American Co. have some stock in that company, but they do not control it.

Senator CONNALLY. Yes. Well, the Pan American Oil Co. that imports this oil owns a big chunk of your stock, does it not?

Mr. McTARNAHAN. They own some of our stock; yes.

Senator CONNALLY. The same company that Mr. Harwood testified for here a while ago?

Mr. McTARNAHAN. Yes, sir.

Senator CONNALLY. How long have they owned stock in your company?

Mr. McTARNAHAN. Oh, they originally bought it quite some time ago. Within a couple of years they bought some more.

Senator CONNALLY. Yes, sir; business was good and they took another chunk?

Mr. McTARNAHAN. No. On the other hand, business was not good. As a matter of fact, we were so far behind that we could not get money from the banks, and we had to go to them for some more money, and we sold them some stock.

Senator CONNALLY. How about the Standard of New Jersey? How much does it own in your company?

Mr. MCTARNAHAN. Does not own a nickel's worth.

Senator CONNALLY. The Pan American, however, is a subsidiary of the Standard, is it not?

Mr. MCTARNAHAN. Of the Standard of New Jersey?

Senator CONNALLY. Of Indiana.

Mr. MCTARNAHAN. Of Indiana, but not the Standard of New Jersey.

Senator CONNALLY. All right; let us not be technical. Standard is Standard. You sell fuel oil in New York. You are the largest seller there?

Mr. MCTARNAHAN. We are a large dealer, but I would not say the largest.

Senator CONNALLY. What do you get for your fuel oil on the Atlantic coast?

Mr. MCTARNAHAN. An average of 5.85 right now.

Senator CONNALLY. 5.85. What does that fuel oil cost you per barrel?

Mr. MCTARNAHAN. It costs us——

Senator CONNALLY (interposing). Forty-two gallons to the barrel, is it not.

Mr. MCTARNAHAN. Forty-two gallons a barrel. That is per gallon. We are paying an average on the Gulf now of 3 cents for that oil. We bring it to New York at a cost of about half a cent a gallon.

Senator CONNALLY. Wait a second now—3 cents a gallon?

Mr. MCTARNAHAN. Three cents a gallon on the Gulf.

Senator CONNALLY. From whom do you buy principally?

Mr. MCTARNAHAN. Well, we buy it from different people. I started to say that we bought a million and a quarter barrels of oil last year, not from Pan American; we bought a little over half the supply of Pan American, but we buy it where we can get it the cheapest. We do not buy it of Pan American unless we can get it cheaper.

Senator CONNALLY. What did you pay the Pan American for this oil you bought from them?

Mr. MCTARNAHAN. We bought it from them at the same price we paid the other people.

Senator CONNALLY. How much?

Mr. MCTARNAHAN. Three cents.

Senator CONNALLY. Three cents a gallon?

Mr. MCTARNAHAN. An equivalent of 3 cents a gallon on the Gulf; 3½ a gallon in New York.

Senator CONNALLY. On the Gulf 3 cents a gallon. That would be about a dollar and twenty-six cents a barrel for the crude?

Mr. MCTARNAHAN. Yes. Not crude; that is fuel oil, domestic fuel oil.

Senator CONNALLY. What do you get for that, 5.85 or 8 cents?

Mr. MCTARNAHAN. After all costs of distribution about a cent a barrel for delivery and paying the salesmen who have to pay to sell it and take their credit losses, why, we——

Senator CONNALLY (interposing). I do not want to go into all your itemized accounts. What did you get for it?

Mr. MCTARNAHAN. Sold it for 5.85.

Senator CONNALLY. Is that the highest you have been selling it at?

Mr. McTARNAHAN. That is our average price.
Senator CONNALLY. Average price?
Mr. McTARNAHAN. Yes, sir.
Senator CONNALLY. That is the price now?
Mr. McTARNAHAN. That is the price now, just under 6 cents.
Senator CONNALLY. But most of your oil you bought from the Pan American Co. because it owns stock in your company?
Mr. McTARNAHAN. We bought about half of our supply from them last year.
Senator CONNALLY. Do you favor a tariff on oil-burning equipment?
Mr. McTARNAHAN. We would be very glad to pay a manufacturers' tax along——
Senator CONNALLY (interposing). I did not ask you anything about manufacturer's tax; I asked you about tariff on oil-burning equipment.
Mr. McTARNAHAN. You mean a tariff on imports?
Senator CONNALLY. Yes.
Mr. McTARNAHAN. There is none imported.
Senator CONNALLY. So you are not worried about a tariff, on that, because you do not have any imports. Is there a tariff on it?
Mr. McTARNAHAN. No; there is no tariff on it. It would be foolish to put it on. There are no oil burners imported into the United States.
Senator CONNALLY. So the tariff would not bother you?
Mr. McTARNAHAN. No.
Senator CONNALLY. If you did have imports, you would favor a tariff, would you not?
Mr. McTARNAHAN. Why, probably a reasonable one.
Senator CONNALLY. Probably a reasonable one. So you want a tariff on your stuff but you do not want a tariff on what you burn in this equipment?
Mr. McTARNAHAN. All I say is what I covered in my brief, Senator——Connally, is it?
Senator CONNALLY. That is right.
Mr. McTARNAHAN. All I want to say is we should have something fair and equitable.
Senator CONNALLY. Certainly, and your idea of "fair and equitable" is a tariff on what you produce but not a tariff on anybody else's products?
Mr. McTARNAHAN. I do not think fair and equitable would be to put a tax which would be equivalent to a prohibitive tariff and shut out the hundred million barrels of oil that are coming in here from American manufacturers who invested their money abroad and have been encouraged to do so by the Oil Conservation Board for years past, to shut it out and have them shut their refineries up, because they can not take it abroad and compete with other oil there.
Senator CONNALLY. Well, couldn't you buy American oil—of course it will not shut it out, but even if it did shut it out, couldn't you buy American oil and sell it just like everybody else in this country?
Mr. McTARNAHAN. We could buy it, but it would curtail our business and it would increase the cost to our consumers, a necessity of life, as I pointed out here by $25,000,000. And I also say that the oil

industry is the only industry practically that has enjoyed a hundred per cent rise, and in some cases 900 per cent rise, they ought to be satisfied.

Senator CONNALLY. You quoted there the price of oil at 10 cents in Texas, and you think it ought to have stayed at 10, do you?

Mr. MCTARNAHAN. No, sir; I do not.

Senator CONNALLY. Well, you are complaining because it rose.

Mr. MCTARNAHAN. No; I am not complaining. I said they ought to be satisfied.

Senator CONNALLY. You get $1.26 a barrel and your Pan American Co.——

Mr. MCTARNAHAN (interposing). That is for light domestic crude, and we are talking about 10 cents a barrel at the well.

Senator CONNALLY. All right, I know, but you pay $1.26 for South American fuel oil a barrel, and yet you are kicking because the oil, the crude oil at the well, was 10 cents, and now that it rose to a dollar.

Mr. MCTARNAHAN. No; I beg to differ, Senator. I am not speaking about that at all.

Senator CONNALLY. You said they ought to be satisfied with that profit.

Mr. MCTARNAHAN. No; I didn't say that. I said they ought to be satisfied with a dollar a barrel as compared to 10 cents a year ago.

Senator CONNALLY. How about $3 several years ago?

Mr. MCTARNAHAN. Well, I think that is too high.

Senator CONNALLY. You think that is too high?

Mr. MCTARNAHAN. Yes, sir.

Senator CONNALLY. What is your idea of what it ought to be?

Mr. MCTARNAHAN. Why, I think some price depending on the cost of it, depending on the transportation on the Gulf; but I should say that considering the fact that all commodities we have to-day, including hats and shoes and everything, are down, that oil ought to stay more or less in its general level with other commodities, and not expect to get away up above everything else.

Senator CONNALLY. What is that level according to your idea?

Mr. MCTARNAHAN. I do not know what the level is. You mean the level of oil? I certainly should say a dollar a barrel, and I think the Governor of Oklahoma, Mr. Murray, was talking some time ago and his ambition was dollar oil. Well, all right; they have got dollar oil now.

Senator CONNALLY. You tie yourself to Mr. Murray?

Mr. MCTARNAHAN. No; I do not. I never met Mr. Murray.

Senator CONNALLY. Do you realize the Tariff Commission reported that domestic oil cost $1.03 a barrel more to produce than this foreign oil?

Mr. MCTARNAHAN. Well, you can juggle all kinds of figures. If you analyze the figures, why you will find that there are all sorts of things in there about depreciation and depletion and all sorts of things. It is not actual money out of pocket.

Senator CONNALLY. So you do not agree with the Tariff Commission?

Mr. MCTARNAHAN. Well, I would not go so far as to say that. But I say that figure will bear analyzing. It includes everything.

Senator GORE. Mr. McTarnahan, about what is the range in the price of oil burners for the average dweller?

Mr. McTARNAHAN. The average price?
Senator GORE. Residence; yes.
Mr. McTARNAHAN. Our average price that we get, the manufacturer gets?
Senator GORE. Yes.
Mr. McTARNAHAN. The average price that we get for our product is about $145 a plant to the dealer.
Senator GORE. Yes. Now, you would not object to a reasonable excise tax?
Mr. McTARNAHAN. No, sir.
Senator GORE. What would you regard as a reasonable tax? I am glad to hear you say that, because we want to find some source.
Mr. McTARNAHAN. I do not know that I have figured out what that should be, but certainly in order to help balance the Budget for as many years as is necessary, if other manufacturers were agreed to it, our association has already passed a resolution that we would be glad to pay our share of the tax.
Senator GORE. Without any regard to other manufacturers, you are willing to do your duty anyway?
Mr. McTARNAHAN. You mean what price?
Senator GORE. No, I say without regard to them.
Mr. McTARNAHAN. Yes, certainly; we are willing to do our share and bear our share of the burden.
Senator GORE. Yes, that is the point. You say the oil producers "ought to put their own house in order." Don't you think they have made a pretty strenuous effort to do that?
Mr. McTARNAHAN. Well, it seems to me, Senator Gore, that when one man gets a piece of ground and drills a well and the other fellow runs over and sticks a well alongside of him, the same thing that has happened in the oil industry ever since I have known anything about it, and that is 25 years, it creates overproduction.
Senator GORE. That is the point I am coming to. You say they ought to put their own house in order?
Mr. McTARNAHAN. Yes, sir.
Senator GORE. The point is that it is the hardest of all industries to do that very thing. You know that when an oil company takes an oil lease it pays so much rent an acre, and sometimes pays a very large bonus, and sometimes has to drill a well to hold its lease—isn't that true?
Mr. McTARNAHAN. I think that is true.
Senator GORE. Now, take the very case you put, and this is the state of facts in the east Texas field; there are a great many small leases. You had a lease of 10 acres, and I had a lease of 10 acres, and I drilled a well offsetting your lease. You would have to drill a well under your contract whether you wanted to or not, would you not?
Mr. McTARNAHAN. All right.
Senator GORE. Or forfeit your lease?
Mr. McTARNAHAN. All right.
Senator GORE. You would not have any choice about it?
Mr. McTARNAHAN. All right.
Senator GORE. Now, doesn't that make it rather difficult for the oil people to control it?
Mr. McTARNAHAN. I say that is a fault in the petroleum industry. Let me cite then another case in answer to that: I build an oil-burner

factory on one side of the street and start to enjoy a nice business, and another fellow sees I am doing that and he builds another factory on the other side of the street, and that results in overproduction and down goes the price. Then should I sit by and be protected and get a higher price?

Senator GORE. The cases are not analogous at all, Mr. McTarnahan.

Mr. MCTARNAHAN. The Government did not put the oil man in and make him take his oil lease. He gambled his own money of his own free will.

Senator GORE. Yes, but he has to produce oil in order to run your oil burners.

Mr. MCTARNAHAN. And oil burners have to go on in order for oil to be used also.

Senator GORE. Have you any solution for that difficulty that inheres in the situation?

Mr. MCTARNAHAN. As I said before, I think they should put their own house in order.

Senator GORE. How would that be done? Would you forbid a man to drill a well on his lease?

Mr. MCTARNAHAN. I don't know how it could be done, but there is an overproduction, and therefore more than the demand will consume, and the price is down.

Senator GORE. Yes, and in the east Texas field and in the Oklahoma City field they are holding this overproduction down to 2 per cent of their capacity.

Mr. MCTARNAHAN. That is all right. The same thing happened in Mexico, the Tampico pool. It is now exhausted, but when Doheny and the Gulf and all of them went in there and struck a very rich pool of oil they took it out just as fast as they possibly could, some wells at the rate of 300,000 barrels a day.

Senator GORE. And you think the Government ought to have prohibited that?

Mr. MCTARNAHAN. I think they ought to have prohibited wasting our national oil reserve as fast as that; yes, sir; and shutting out imports of petroleum and using it up as fast as possible.

Senator GORE. Who do you figure has the power in this country to do that? Do you think Congress has any power to regulate the drilling of oil wells in Oklahoma and Texas?

Mr. MCTARNAHAN. I do not know, but they seem to want to get some power to shut out oil and regulate the price of the industry.

Senator GORE. Yes; taking recourse to what they regard as the only alternative?

Mr. MCTARNAHAN. Well, gentlemen, all I can say is that I am speaking for the American Oil Burner Association. I do not own any oil wells, and I do not own any production. We are not producers. We purchase oil for resale to our customers for one of the necessities of life, and we are interested to see it stay at something like a reasonable price in reach of the people, and we believe that if an impossible tax is placed on imported oil it will increase the price and the burden of our people and our consumers, and to the detriment of our own business and to the profit of the oil consumer in a few of the oil States.

Senator GORE. In other words, you think it will injure your business and you are against it?

Mr. McTARNAHAN. Yes, sir.

Senator GORE. Mr Chairman, resulting from a remark of Mr. McTarnahan's that Mr. Franklin and some of his associates here undertook to obtain an embargo on imported oil, I want to insert in the record following Congressman Nelson's statement—he very kindly enlightened the committee yesterday—a bill introduced by the Congressman in the House to lay an embargo on imported lobsters—not to impose a tariff on imported lobsters, but an embargo. I think it might shed some light on his general philosophy.

(The bill referred to by Senator Gore appears in the printed record following Mr. McTarnahan's statement.)

Senator CONNALLY. Mr. McTarnahan, you do not own any stock in the Pan American Petroleum Co., do you?

Mr. McTARNAHAN. No, sir.

Senator HULL. What was the average pre-war price for petroleum in this mid-continent field?

Mr. McTARNAHAN. It has varied up and down during the war.

Senator HULL. I mean just before the war.

Mr. McTARNAHAN. It went up. Well, I bought oil in 1915 at 87 cents a barrel in Providence, R. I., and Boston, fuel oil brought up here ready for delivery.

Senator HULL. I was speaking about the mid-continent field. You do not happen to have the exact figures?

Mr. McTARNAHAN. The price was low. The price was low before the war. It was high during the war, and in 1919——

Senator HULL (interposing). That is all right. Unless you have the exact figures, I do not care to consider it.

Mr. McTARNAHAN. In 1919 shortly after the war the price went away down.

Senator HULL. You were asked something about one or two units of the Standard Oil Co. Just for my information I would like to ask you how many units of that company there are now in this country?

Mr. McTARNAHAN. I could not answer that, but there are a great many. I can name some: Standard of California, Standard of Kentucky, Standard of Indiana, Standard of Ohio, Standard of New York, and Standard of New Jersey, and I do not know how many more there are, but there are quite a number. I never counted them.

Senator HULL. I think I heard one of the witnesses say that two of these units were supporting this proposal and the others were opposed to it.

Mr. McTARNAHAN. As long as you asked the question, Senator, last week I happened to be talking to one of the higher officials of the Standard Oil of New Jersey and in a private conversation he admitted to me that the amount of oil they import into the United States would be so small as compared with the amount they produce in the United States that a tariff would proably be beneficial in the last analysis. Now that happened to come from the Standard of New Jersey. I can not quote who it was or anything about it. That is all, sir.

The CHAIRMAN. Are you through?

Mr. McTARNAHAN. Yes, sir.

The CHAIRMAN. Michael O'Shaughnessy.

Senator CONNALLY. Mr. Chairman, are you going to close these hearings at 12 to-day?

The CHAIRMAN. I should think we would go right on and get through with it.

Senator CONNALLY. What I mean is, Mr. Franklin, you know, has some more time coming, and if you are going to close——

The CHAIRMAN (interposing). He has 30 minutes or whatever time he wants to take.

Senator CONNALLY. If you are going to close I shall insist you go on until 1.30, because his time has been allotted to him.

The CHAIRMAN. I think we will go beyond 12.

Senator HARRISON. I thought it was the understanding yesterday that it would be equally allocated.

The CHAIRMAN. It was.

Senator HARRISON. Let us adhere to that, then.

Senator REED. The witnesses have not taken the time; it is the questions of the committee that took time.

(The bill referred to by Senator Gore is here printed in full.)

[H. R. 6586, Seventy-second Congress, first session]

A BILL For the conservation of lobsters, to regulate interstate transportation of lobsters, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That when used in this act the word "person" includes company, partnership, corporation, association, and common carrier.

SEC. 2. It shall be unlawful for any person to deliver or knowingly receive for transportation, or knowingly to transport, by any means whatsoever, from any State, Territory, or the District of Columbia, to or through any other State, Territory, or the District of Columbia, or to or through any foreign country, any lobster (Homarus americanus), if (1) such transportation is contrary to the law of the State, Territory, or the District of Columbia or foreign country from which such lobster is or is to be transported; or (2) such lobster has been either caught, killed, taken, sold, purchased, possessed, or transported at any time contrary to the law of the State, Territory, or the District of Columbia or foreign country in which it was caught, killed, taken, sold, purchased, or possessed, or from which it was transported, or contrary to the law of the State, Territory, or District of Columbia into which it was transported; and no person shall knowingly purchase or receive any such lobster which has been transported in violation of the provisions of this act; nor shall any person receiving any shipment of lobsters transported in interstate commerce make any false record or render a false account of the contents of such shipments.

SEC. 3. The importation into the United States, or any Territory or District thereof, of any lobster less than three and one-half inches in length, measured from the rear of the eye socket along a line parallel to the center line of the body shell to the rear end of the body shell, or any lobster meat frozen, chilled, cooked, or in the raw state, unless hermetically sealed in tin cans by soldering or rolling the edges with machines made for that purpose and bathed in a retort and subjected to not less than two hundred and thirty-five degrees of heat for not less than thirty-five minutes, is hereby prohibited. It shall be unlawful for any person to deliver or knowingly receive for transportation, or transport by any means whatsoever from any State, Territory, or District of the United States to any other State, Territory, or District thereof, any lobster the importation of which is hereby prohibited.

SEC. 4. Any package or container containing lobsters or lobster meat transported or delivered for transportation in interstate commerce, except any shipment covered by section 10, shall be clearly and conspicuously marked on the outside thereof with the name "lobsters," or "lobster meat," an accurate statement of the number of such lobsters or the poundage of lobster meat contained therein, and the names and addresses of the shipper and consignee.

SEC. 5. All such lobsters transported into any State, Territory, or the District of Columbia for use, consumption, sale, or storage therein shall upon arrival in such State, Territory, or the District of Columbia be subject to the operation and effect of the laws of such State, Territory, or the District of Columbia to the same extent and in the same manner as though such lobsters had been produced in

such State, Territory, or the District of Columbia, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise.

SEC. 6. The Secretary of Commerce is authorized (1) to make such expenditures, including expenditures for personal services at the seat of government and elsewhere, and for cooperation with local, State, and Federal authorities, including the issuance of publications, and necessary investigations, as may be necessary to execute the functions imposed upon him by this act and as may be provided for by Congress from time to time; and (2) to make such regulations as he deems necessary to carry out the purposes of this act. Any person violating any such regulation shall be deemed guilty of a violation of this act.

SEC. 7. (a) Any employee of the Department of Commerce authorized by the Secretary of Commerce to enforce the provisions of this act (1) shall have power, without warrant, to arrest any person committing in the presence of such employee a violation of this act or any regulation made in pursuance of this act, and to take such person immediately for examination or trial before an officer or court of competent jurisdiction; (2) shall have power to execute any warrant or other process issued by an officer or court of competent jurisdiction to enforce the provisions of this act or regulations made in pursuance thereof; and (3) shall have authority, with a search warrant issued by an officer or court of competent jurisdiction, to make search in accordance with the terms of such warrant. Any judge of a court established under the laws of the United States or any United States commissioner may, within his respective jurisdiction, upon proper oath or affirmation showing probable cause, issue warrants in all such cases.

(b) All lobsters or lobster meat, delivered for transportation or which have been transported, purchased, received, or which are being transported, in violation of this act or any regulations made pursuant thereto, shall, when found by such employee or by any marshal or deputy marshal, be summarily seized by him and placed in the custody of such persons as the Secretary of Commerce shall by regulations prescribe, and shall, as a part of the penalty and in addition to any fine or imprisonment imposed under section 8 of this act, be forfeited by such court to the United States upon conviction of the offender under this act, or upon judgment of the court that the same were transported, delivered, purchased, or received in violation of this act or regulations made pursuant thereto.

SEC. 8. In addition to any forfeiture herein provided, any person who shall violate any of the provisions of this act shall, upon conviction thereof, be punished by a fine not exceeding $200, or imprisonment for a term of not more than three months, or by both such fine and imprisonment, in the discretion of the court.

SEC. 9. Nothing in this act shall be construed to prevent the several States and Territories from making or enforcing laws or regulations not inconsistent with the provisions of this act, or from making or enforcing laws or regulations which shall give further protection to lobsters.

SEC. 10. Nothing in this act shall be construed to prevent the shipment in interstate commerce of live lobsters and eggs for breeding or stocking purposes.

STATEMENT OF FREDERICK S. WHITESIDE, REPRESENTING PACIFIC MILLS, BOSTON, MASS.

Senator WATSON. Will you please state your name?

Mr. WHITESIDE. Frederick S. Whiteside.

Senator WATSON. Where do you live?

Mr. WHITESIDE. Boston, Mass. The Pacific Mills is one of the mills Mr. Milliken has just told you about. We employ about 5,000 men and women, and we burn oil in those mills. Through competition, and all sorts of restrictions and troubles, we are in very serious condition, and if this tax is put on the oil, whether it is right or wrong—we do not know—but it may make us close down those mills and throw 5,000 people out of employment, and we thought we might as well tell you that.

The larger aspects of the matter are for you to settle, but so far as we are concerned, that may be the result.

Senator WATSON. How much do you spend a year for oil there?

Mr. WHITESIDE. We use half a million barrels, and we spend about $600,000 now, and this would be another $200,000 for the tax. It amounts to a quarter of a cent on our goods.

Senator WATSON. All right. Much obliged.

Senator GORE. One question. Mr. Whiteside, do you not think that both fuel oil and cotton fabrics ought to be on the free list, or that neither fuel oil nor cotton fabrics ought be on the free list?

Mr. WHITESIDE. I am not prepared to answer that, sir.

Senator GORE. You are just specializing on this one point?

Mr. WHITESIDE. Having this tariff on cotton goods sounds very nice, but the fact is——

Senator GORE. Would you be willing to have it taken off?

Mr. WHITESIDE. I could not say that, sir.

Senator GORE. All right.

Senator CONNALLY. You say you use 500,000 barrels?

Mr. WHITESIDE. Yes.

Senator CONNALLY. And you pay $600,000 for it?

Mr. WHITESIDE. Yes.

Senator CONNALLY. So, you pay $1.20 a barrel for it?

Mr. WHITESIDE. I was speaking of the mill cost, plus the freight, and everything.

Senator CONNALLY. I know; but that is what you pay?

Mr. WHITESIDE. Under our boilers.

Senator CONNALLY. You pay $1.20 a barrel for the fuel oil in Boston?

Mr. WHITESIDE. That was last year.

Senator CONNALLY. That is what I am talking about. That is what you pay. You testified you paid $600,000 to get 500,000 barrels of oil.

Mr. WHITESIDE. Last year.

Senator CONNALLY. You pay $1.20 a barrel.

Mr. WHITESIDE. The price has gone down since.

Senator CONNALLY. That has gone down since. Why didn't you you say that? As a matter of fact, you testified that you use 500,000 barrels, and you pay $600,000 for it. That is $1.20 a barrel, is it not?

Mr. WHITESIDE. Yes.

Senator CONNALLY. All right. What are you paying now?

Mr. WHITESIDE. We are paying 85 cents a barrel delivered.

Senator CONNALLY. Then you are not spending this year, $600,000?

Mr. WHITESIDE. No, sir.

Senator REED. What is that, imported oil?

Mr. WHITESIDE. Yes.

Senator REED. Venezuelan oil?

Mr. WHITESIDE. Yes, sir.

Senator GORE. Mr. Chairman, I do not want to call Mr. Milliken back, but I would like to have him include in his statement when he corrects it the reason why a tariff of 1 cent a gallon on imported fuel oil would lead him to substitute coal-burning apparatus for oil-burning apparatus, when this very act imposes a tariff of $2 a ton on coal, and it is selling at 60 cents a ton at the mouth of the mine in West Virginia?

Senator WATSON. He can incorporate that.

STATEMENT OF WILLIAM HARWOOD, SECRETARY-TREASURER AMERICAN FEDERATION OF TEXTILE OPERATIVES, FALL RIVER, MASS.

Senator WATSON. Give the committee your name, and tell where you live and what your business is.

Mr. HARWOOD. William Harwood. I am secretary and treasurer of the American Federation of Textile Operatives, Fall River, Mass. I reside in Fall River, Mass., and have been connected with labor in the textile industry for over 30 years. I am now, and for over 10 years have been, secretary and treasurer of the American Federation of Textile Operatives. This is a national association of the cotton textile operatives covering the entire industry. Its national office is in Fall River, and it has branches in practically every principal location where textiles have been manufactured. At this hearing, I have been authorized by our national organization to represent it, owing to the inability of our president, James Tansey, to be present, and, in its behalf, to protest against the proposed oil tariff. In normal times the textile industry of the United States offers a source of livelihood, according to my best information, to employees exceeding 500,000 in number, and our national organization and its local unions represent and speak for the employees of that industry.

The reasons why we are interested in opposing this tariff are not far to seek. The textile industry is and for some years has been in very dire straits. Although it is one of our old-established industries and represents generations of effort and large investments in plant and machinery it has recently been facing a very serious situation, resulting in the closing down and actual abandonment of a large number of plants and in the curtailment of employment in the remaining plants. Only recently the Whitman Mills of Bedford were abandoned and their machinery sold at auction. The result has been disastrous to the workmen employed in the industry.

Textile employees require a course of apprenticeship and training in order to fit them for their employment. It is difficult for them, when the plants go out of business, to adapt themselves quickly to other employment. There are hundreds of thousands of textile workers now out of employment, not only in the six New England States but in every textile location. The records of our national organization show that our textile workers have been particularly hard hit—all without any fault of their own.

The few mills that are not entirely closed are running only part time, many of them only about one-third capacity. It seems very clear to our national organization and to all familiar with the conditions that the industry can not possibly stand any further burden in view of the strained conditions which it now faces. To the great number now constituting the army of the unemployed, will be added those who still are fortunate enough to obtain part-time employment in the industry, if the few plants now in operation should be forced to shut down. This danger is not remote, but is a very threatening one.

We know what serious efforts have been made to maintain the plants and what rigid economies have been practiced. Our workmen in the industry have cooperated toward this economy by accepting lower wages, although the standard of pay in our industry has never, according to our light, been adequate. But in spite of these ecomo-

mies and wage reductions, many of the plants have been shut down and only about one-third of the wage earners of the industry now find part-time employment therein. Our unemployment relief funds have been exhausted, and actual suffering is imminent.

The proposed oil tariff is therefore a most serious matter to this industry, that is already facing a critical situation. Fuel oil is used for heat and power in many of the industrial plants and it enters to a substantial extent in the cost of production. The addition of 1 cent a gallon to the price of fuel oil means a large increase in the cost of that important item. To operate some of the plants requires more than 10,000,000 gallons a year. A cent a gallon on that amount will mean an increased expense of $100,000 a year to such a plant. This tax forebodes clearly a closing down of more plants, increases in the army of unemployed, and further reduction in wages. Our sorely burdened American textile workers are therefore vitally interested in opposing the oil tax. It bears down particularly on them. We call to the attention of the committee that the Treasury Department has estimated that a tariff on crude petroleum and fuel oil will produce no revenue. This in itself should exclude those items from the bill. As to the tariff on gasoline, the estimated amount of revenue to the Government is altogether out of proportion to the amount of loss, suffering, and distress that the proposed oil tariff will cause to industry and hundreds of thousands of American workers.

We are not opposed to a balancing of the Budget, but we believe that a tax should be enacted which is more equitable, more uniform, less exorbitant, and which bears in its train results other than the suffering and distress the oil tariff would cause to the American textile workers.

STATEMENT OF GEORGE M. ROMMEL, INDUSTRIAL COMMISSIONER, THE INDUSTRIAL COMMITTEE OF SAVANNAH, GA.

Mr. ROMMEL. Mr. Chairman and gentlemen of the committee, my name is George M. Rommel. I am industrial commissioner of the Industrial Committee of Savannah, Ga. That committee is a federation representing the leading business institutions of the city. In addition to representing the committee I have credentials from the city of Savannah, the Savannah Chamber of Commerce, the Savannah Junior Chamber of Commerce, the Savannah Clearing Association, and the Savannah Real Estate Board. I will file this brief, with those credentials, with the committee.

I wish to say only this, and take as little of your time as possible, that so far as revenue is concerned, we do not believe that there will be any revenue produced in Savannah by reason of this bill, for the simple reason that the price of fuel oil will rise to such a point that we will be compelled to return to the use of coal, which we formerly used for industrial fuel in Savannah. That is the whole story. The details are in this brief.

Senator GORE. Do you figure that a tariff of 1 cent a gallon on oil will bear heavier on you than $2 a ton on coal?

Mr. ROMMEL. The coal tariff will not affect us at all, sir.

Senator GORE. Why? I do not want to take too much time on it.

Mr. ROMMEL. The trouble in Savannah in regard to the use of coal is simply this. We are so far from the coal fields that we must pay a

freight rate of not less than $3.05 a ton, and that is for a poor grade of steam coal. For good Pocahontas slack from West Virginia, the freight rate is $3.60 a ton. The question of the price of coal is immaterial. You can not reduce those freight rates. They are down as low now as the railroads can afford to charge.

Senator GORE. Coal in West Virginia, as I understand, is selling at 60 cents a ton at the mouth of the mine.

Mr. ROMMEL. That is a distress price, of course.

(Mr. Rommel submitted the following brief:)

REMARKS ON THE PROPOSED EXCISE TAXES ON IMPORTED PETROLEUM AND PETROLEUM PRODUCTS BY GEORGE M. ROMMEL, INDUSTRIAL COMMISSIONER, THE INDUSTRIAL COMMITTEE OF SAVANNAH, GA., BEFORE THE FINANCE COMMITTEE, UNITED STATES SENATE

Mr. CHAIRMAN. My name is George M. Rommel. I am the industrial commissioner for the Industrial Committee of Savannah, Ga., which represents and is supported by the leading business organizations of the community, including the city of Savannah. I am here under the instructions of the industrial committee. I also have credentials authorizing me to represent at this hearing and present the views of the city of Savannah, the Savannah Clearing Association, the Savannah Real Estate Board, the Savannah Junior Chamber of Commerce, and the Savannah Chamber of Commerce. The latter body includes in its membership more than 1,400 associate members in the surrounding counties in Georgia and South Carolina.

The people of Savannah, of Chatham County, and of the State of Georgia believe it wise to put their own official houses in order. Therefore we stand four-square with the leaders in Congress who are determined to do the same thing for the business of the Nation. And we will take the next step. We are willing loyally to pay our share of increased Federal taxes, and pay them as cheerfully as anyone pays taxes.

For three years the Industrial Committee of Savannah and the community it represents have consistently opposed the efforts which have been made to induce Congress to place a tariff on imported petroleum and petroleum products, or even to prohibit such importations. We have taken this stand in self-defense

When the oil-tariff proposal comes to the fore as an item in the revenue bill, we are just as strongly opposed to it as when it was presented as an honest-to-goodness tariff measure, and for the same reasons.

As citizens of the State of Georgia we again oppose it in self defense and we also oppose it as loyal citizens of the United States because we believe it to be our duty to point out to the Congress that no revenue can be derived from these sources so far as Savannah is concerned.

About four years ago the leading industries in Savannah and the steamship lines in overseas service whose home port is Savannah stopped using coal for fuel and changed over to fuel oil. This action at once removed Savannah and Chatham County from the high-cost-fuel class, because grade bunker C fuel oil at a normal price of around $1 per barrel is a reasonably priced industrial fuel, while coal has always been a high-priced industrial fuel in Savannah on account of the long freight haul. There is no reason ever to expect any change in this condition in respect to coal.

The lowest coal price which has come to our attention was a quotation of 50 cents a ton in large lots at the mine for Pocahontas slack. The freight on this coal to Savannah is $3.60 per ton, making the cost $4.10 f. o. b. cars Savannah. However, this was a "distressed" price and not a normal one. Pocahontas slack usually sells for much more. But let us allow that 50 cent figure to stand for purposes of comparison.

Considering all details of cost, our engineers in Savannah estimate that three and one-half barrels of grade bunker C fuel oil are equivalent to 1 ton of good steam coal averaging 18,000 to 19,000 British thermal units per pound. At $1 per barrel of oil, the cost-equivalent price is therefore $3.50 per ton, for which coal has never been delivered in Savannah and never will be.

The fuel oil contracts in Savannah are based on New York prices. They call for delivery in customers' tanks and hence are practically the cost of the oil in the furnace. To the f. o. b. Savannah coal price must be added various incidental costs such as unloading, powdering, conveying, ash disposal and the like,

so that there is a normal differential in favor of fuel oil of at least $1 per ton, coal equivalent.

As a result of the change from high-cost coal to reasonable-cost fuel oil, industrial activity has increased in Savannah. It is especially important to note that electric rates have decreased on this account until the local electric company claims that it sells current at lower rates than those of any other steam generating plant on the Atlantic coast.

So long as reasonable prices prevail for fuel oil in Savannah, we may expect these cheap electric rates to continue. If fuel costs increase, however, the cost of generating electricity will increase, the charge for electricity to the consumer will increase and the ability of the user of electricity to pay taxes to the Federal Government will decrease to a corresponding extent.

With normal prices for fuel oil we can depend on it as an industrial fuel in Savannah. Increase the price above normal by the imposition of a tariff and we will be compelled to stop using oil, we will pull the oil burners out of our furnaces, replace the coal grates and go back to coal.

In that event no fuel oil would be used in Savannah industrial plants and hence, so far as Savannah is concerned, the United States would derive no revenue from the proposed excise tax on imported fuel oil.

Now what effect would this have on users of electricity, of whom there are more than 15,000 in Savannah, ranging from the small householder whose bills average a few dollars each month, to the manufacturer whose monthly consumption of current costs him thousands of dollars?

A change from oil to coal in Savannah is to be expected if a tariff in the guise of an excise tax is placed on imported fuel oil and no revenue would accrue to the United States. However, consumers of electricity and gas would be heavily taxed indirectly as a result.

Engineers for the public utilities in Savannah estimate that a change from oil to coal would increase the cost of generating electricity approximately one-half cent per kilowatt-hour and that of gas 20 cents per 1,000 cubic feet. This would be equivalent to a tax of nearly 10 per cent on monthly bills of the smallest user of domestic electricity current and of nearly 50 per cent on those of the large industrial user.

Most of the gas manufactured in Savannah is used for domestic purposes. Permit me to cite my own case as a convenient illustration. My gas bill for March last was $10.73 net. An increase of 20 cents per 1,000 cubic feet would have increased my March bill $1.48, or just under 14 per cent.

And all to no purpose so far as it helps to raise revenue for the National Treasury. The United States Government would derive no benefit whatever from these increased expenditures. On the contrary, my ability and my neighbor's ability, the ability of Savannah merchants and manufacturers, to pay our just share in supporting the United States Government through the present crisis would be diminished.

The proposed excise tariff on crude oil would also hit us hard with similar negative results in revenue production. Three years ago Pan-American Petroleum and Transport Co. erected an asphalt refinery at Savannah to supply asphalt to the roofing plant of Certainteed Products Corporation across the street. The crude oil refined at this plant comes from Mexico and Venezuela, and is said to be especially high in asphalt content.

This asphalt goes into the manufacture of low-cost roofing which has a wide distribution in the Southeast.

It also has great importance as a cheap material for the construction of secondary highways. In fact, it promises to be a godsend to communities where soils are sandy and there is no stone or gravel nearby. Using this asphalt and local sand with no other ingredients, satisfactory hard surfaced highways are being built in the Southeast for less than $5,000 per mile.

There is grave doubt whether the Savannah refinery could continue to operate if the proposed tax on imported crude oil is imposed. In that event, crude oil imports at Savannah would stop and again the United States would fail to derive revenue in Savannah by the proposed legislation.

If the oil refinery at Savannah is closed the roofing plant will close, throwing several hundred men out of work and shutting off Savannah pay rolls of $200,000 a year.

Finally, a word on the proposed tax of 1 cent per gallon on imported gasoline.

The State gasoline tax in South Carolina and Georgia is 6 cents per gallon. In Florida it is 7 cents. The price of gasoline has recently advanced 2 cents per gallon, making the retail price 21 cents. I submit that it is contrary to human

nature to pay another cent of gas tax without resort to all sorts of schemes to avoid it. It would be difficult to collect any more gas tax than is now being paid in the Southeast. In our opinion it would be quite impossible to sell imported gasoline in that section with a 1-cent tax on it. Again the proposed item would fail to be a source of revenue and this is a revenue bill before Congress.

To sum up, we oppose these proposed taxes not because we object to the payment of taxes per se, but because they will be futile in effect. The United States can look for no revenue from these sources in Savannah, and we will be so seriously handicapped by their operation that we will be much less able to pay Federal taxes in other ways than we will be if the Congress leaves the oil tariff alone.

We maintain that these proposed excise taxes are not revenue items; they are prohibitive tariffs.

In conclusion, may I express our wonderment as to the necessity for these excise tariffs?

I am in no sense an oil expert and I am the veriest layman on oil prices, but surely any layman should be allowed to call attention to the rise in the price of domestic crude oil, in the absence of a tariff. The Oklahoma price rose steadily from a low of 20 cents a barrel in July last to more than 90 cents a barrel in the first week of April this year. My authority for these quotations may be found on page 12 of the Oil and Gas Journal, of Tulsa, Okla., for April 7, 1932.

Not only have crude oil prices advanced, but the prices of refined products are going up. There has been a recent advance in fuel oil of 5 to 10 cents a barrel and, as I have already stated, we are paying 2 cents a gallon more for gasoline in Savannah than we paid two weeks ago.

What other commodities can show such a spectacular rise during the depression? Certainly not cotton or corn, peanuts, pecans, peaches, watermelons, or sweetpotatoes in Georgia, nor butter, eggs, potatoes, or hay in New York or Minnesota, nor hogs and cattle in Iowa, nor wheat in the Dakotas, nor lambs in Utah or Wyoming, nor any other agricultural commodity that might be mentioned, to say nothing of steel, copper, and other staple commodities.

In view of these facts, why does the oil industry need tariff protection?

THE INDUSTRIAL COMMITTEE OF SAVANNAH,
Savannah, Ga., April 5, 1932.

Hon. REED SMOOT,
Chairman Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR SMOOT: This will introduce Mr. George M. Rommel, industrial commissioner, who is appearing before the Senate Finance Committee to file the protest of Savannah and Chatham County against the proposed excise taxes on petroleum and petroleum products. He is hereby authorized to represent the Industrial Committee of Savannah in this connection.

Very truly yours,

H. C. FOSS,
Chairman The Industrial Committee of Savannah.

EXECUTIVE OFFICE,
Savannah, Ga., April 5, 1932.

Hon. REED SMOOT,
Chairman Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SENATOR SMOOT: This will serve to introduce Mr. George M. Rommel, Industrial Commissioner of the Industrial Committee of Savannah, which is a federation representing the leading business institutions of this city. Mr. Rommel is appearing before the Senate Finance Committee to file the protest of Savannah and Chatham County against the proposed excise taxes on petroleum and petroleum products. He is authorized to represent the city of Savannah, and every consideration shown Mr. Rommel will be greatly appreciated by both him and myself.

Respectfully,

T. M. HOYNES, *Mayor.*

SAVANNAH CLEARING ASSOCIATION,
Savannah, Ga., April 4, 1932.

Hon. REED SMOOT,
Chairman Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR SMOOT: This will introduce Mr. George M. Rommel, Industrial Commissioner of the Industrial Committee of Savannah, which is a federation, representing the leading business institutions of this city. Mr. Rommel is appearing before the Senate Finance Committee to file the protest of Savannah and Chatham County against the proposed excise taxes on petroleum and petroleum products. He is hereby authorized to represent the Savannah Clearing Association in this connection.

Very truly yours,

GEO. H. SMITH,
President Savannah Clearing Association.

SAVANNAH REAL ESTATE BOARD,
Savannah, Ga., April 5, 1932.

Hon. REED SMOOT,
Chairman Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR SMOOT: This will introduce Mr. George M. Rommel, Industrial Commissioner of The Industrial Committee of Savannah, which is a federation representing the leading business institutions of this city. Mr. Rommel is appearing before the Senate Finance Committee to file the protest of Savannah and Chatham County against the proposed excise taxes on petroleum and petroleum products. He is hereby authorized to represent the Savannah Real Estate Board in this connection.

Very truly yours,

GEO. S. CLARKE,
President, Savannah Real Estate Board.

CHAMBER OF COMMERCE,
Savannah, Ga., April 4, 1932.

Hon. REED SMOOT,
Chiarman Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR SMOOT: This will introduce Mr. George M. Rommel, Industrial Commissioner of The Industrial Committee of Savannah, which is a federation representing the leading business institutions of this city. Mr. Rommel is appearing before the Senate Finance Committee to file the protest of Savannah and Chatham County against the proposed excise taxes on petroleum and petroleum products. He is hereby authorized to represent the Savannah Junior Chamber of Commerce in this connection.

Very truly yours,

W. H. CAIN,
President, Junior Chamber of Commerce.

CHAMBER OF COMMERCE,
Savannah, Ga., April 4, 1932.

Hon. REED SMOOT,
Chairman Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR SMOOT: This will introduce Mr. George M. Rommell, Industrial Commissioner of The Industrial Committee of Savannah, which is a federation representing the leading business institutions of this city. Mr. Rommel is appearing before the Senate Finance Committee to file the protest of Savannah and Chatham County against the proposed excise taxes on petroleum and petroleum products.

He is hereby authorized to represent the Savannah Chamber of Commerce in this connection. In addition to its membership in Savannah and Chatham County, Ga., the Savannah Chamber of Commerce has more than 1,400 associate members in near-by territory in Georgia and South Carolina.

Very truly yours,

PETER R. NUGENT, *President.*

STATEMENT OF BENJAMIN A. FRANKLIN, SPRINGFIELD, MASS., REPRESENTING THE ASSOCIATED INDUSTRIES OF MASSACHUSETTS

Mr. FRANKLIN. My name is Benjamin A. Franklin, Mr. Chairman and gentlemen of the committee, of Springfield, Mass. I represent the Associated Industries of Massachusetts, about a thousand manufacturers, four hundred thousand employees, one billion and a quarter of investment, and one billion and a half of sales. A'so the Writing Paper Manufacturers Association of America. I have been president of both of these concerns. All of these concerns are perfectly in the belief that we ought to balance the budget. They are all willing to do a fair share in helping to raise the necessary money, helping to pay the necessary money to do it.

It is very evident that this has developed purely into a tariff matter and not into a revenue-raising matter. We would like to call your attention to the fact that the whole Atlantic Seaboard is without a natural supply of fuel, and that it has developed oil as a fuel. All other sections of the country have natural supplies of both coal and oil, and the Atlantic Seaboard, having developed this situation with a very considerable expenditure, believes that it is entitled to a very definite consideration. There have been so many of the points already covered that I am not going to raise any new ones.

I would like to call your attention, however, to the fact that a considerable portion of our gas is now made from oil, and can only be made from coal provided the coke as a by-product can be sold, which seems difficult.

A great many of our industries employing very many more people than can possibly be affected in the oil fields are dependent very definitely upon this oil situation, and if they have to pay much more money they will very definitely have to either take it out of the public in price, which is difficult at this time, or they will have to take it out of wages, which ought to be made difficult at this time.

You have heard about the householders, and what that involves in the steamships. In New England our fishing industry is very considerably a user of this oil, and will be very materially affected.

In short, this tariff, which is purely a tariff, will unquestionably cost the Atlantic Seaboard, and probably the country, a very considerable number of millions of dollars, and bring in very little income.

Now if the Government is going to get any income out of gas, it occurs to me to suggest that in a democratic country the taxes should be somewhat democratic.

Senator REED. They are, I assure you.

Mr. FRANKLIN. And 1 cent a gallon on gasoline for automobiles, for example, would bring in a great deal of money and cost the ordinary man no more than five or ten dollars a year.

The idea, I think, has developed considerably in this bill that wealth ought to be taxed. I would like to call your attention to the fact that in this country wealth does not exist in great estates. Wealth in this country is productive wealth. If you overburden it, particularly at a time like this, you will very definitely restrict its incentive to develop production, and it seems to us that this bill, appreciating fully the point of view of the oil men, will merely add a very much greater burden to an already overburdened industry

than it can possibly produce in the way of taxes in this particular situation. We are therefore definitely opposed to it.

Senator WATSON (presiding). Thank you, Mr. Franklin.

Senator GORE. Mr. Franklin, you see a fundamental difference and distinction in principle between a tariff on fuel oil and a tariff on wool and cotton fabric?

Mr. FRANKLIN. I will answer your question in another way.

Senator GORE. I wish you would answer the question as I asked it.

Mr. FRANKLIN. In the past 10 years America has permitted a great many excesses, and one of them is the excess of tariff, and I do not want to see them go any further.

Senator GORE. Yes. You would not want it reduced on cotton, would you, and woolen fabrics?

Senator WATSON (presiding). Thank you, Mr. Franklin.

STATEMENT OF A. M. LOOMIS, WASHINGTON, D. C.

Mr. LOOMIS. Mr. Chairman, if agriculture can get two minutes between these two contending oil industries, I want to say one word. You will notice by the record that two large farm organizations have asked for an appearance here. The two men representing those farm organizations, not being familiar with the situation here, will not be here. I want to file briefs on behalf of both of them. Mr. Kirk, the master of the Ohio State Grange, and Mr. Robinson, of the Kentucky Farm Bureau Federation.

Senator CONNALLY. For or against?

Mr. LOOMIS. Against. It is the position of agriculture over the United States.

Senator CONNALLY. I want to ask Mr. Loomis a question or two. You said, Mr. Loomis, that you were speaking for agriculture. Are you, generally, or not?

Mr. LOOMIS. I did not say I was speaking for agriculture.

Senator CONNALLY. Well, you said if agriculture could have two minutes of the committee's time you would tell them about the attitude of agriculture on oil, did you not?

Mr. LOOMIS. I said I spoke for two agricultural representatives whom I was personally representing.

Senator CONNALLY. All right. You are supposed to represent the Dairy Council here in Washington, as their representative?

Mr. LOOMIS. One of my pieces of work. Not the Dairy Council. You will have to have a diagram to keep straight among these dairy industries.

Senator CONNALLY. There are a lot of them. Well, are you representing them here to-day?

Mr. LOOMIS. No.

Senator CONNALLY. Have you not been employed to appear here or anywhere else to lobby for an American importer of oil?

Mr. LOOMIS. I have not been employed to appear here for anybody.

Senator CONNALLY. Before the House committee, then?

Mr. LOOMIS. No. I have been employed to do certain work.

Senator CONNALLY. Yes. For an American ——.

Mr. LOOMIS. For an importing oil company.

SENATOR CONNALLY. For an importing oil company?

Mr. LOOMIS. Yes.

Senator CONNALLY. And you have been paid to do that work?

Mr. LOOMIS. Yes, sir.

Senator CONNALLY. And that has nothing on earth, of course, to do with your appearing here to-day?

Mr. LOOMIS. That has nothing to do with what these two men wish to testify about.

Senator CONNALLY. But you spoke up and said you wanted to get two minutes for agriculture. Did agriculture help pay your fee that you got from this American importer of oil to prepare this work?

Mr. LOOMIS. No, sir.

Senator CONNALLY. Were you speaking a moment ago, then, for the great downtrodden American agricultural interests, or were you speaking for this American importer of oil that has paid you a fee for doing this work?

Mr. LOOMIS. I have never done a piece of work in Washington in the 12 years I have been here and I am not now doing a piece of work except for what I was convinced is for the benefit of American agriculture.

Senator CONNALLY. That was your motive in accepting this fee from the oil importer?

Mr. LOOMIS. It was, and so understood.

Senator CONNALLY. You say that American agriculture accepts a nice fee from the American importer on behalf of this great American industry?

Mr. LOOMIS. No; I accepted a fee. Not that agriculture did.

Senator CONNALLY. You said you represented agriculture.

Mr. LOOMIS. No, I did not say——

Senator CONNALLY. Well, why did you say a while ago——

Mr. LOOMIS. I said this, and I want that to appear on the record, and I made myself plain, and I want to do it again. I never have taken a task of any kind in the 12 years I have been in Washington, or 13 years, but what I was thoroughly convinced in my own mind was for the interest of American agriculture. And that is irrespective of who may have paid me for the work I was doing.

Senator CONNALLY. Who is the American importer of oil that employed you?

Mr. LOOMIS. Pan American Petroleum & Transport Co.

Senator CONNALLY. A branch of the Standard Oil Co. of Indiana; that is right, isn't it?

Mr. LOOMIS. Subsidiary.

Senator CONNALLY. Subsidiary of the Standard Oil Co. of Indiana?

Mr. LOOMIS. Subsidiary of the Standard Oil Co. of Indiana, I am informed. I know nothing about that.

Senator CONNALLY. So in accepting a fee from that company you thought you were doing a great service to American agriculture?

Mr. LOOMIS. Exactly.

Senator CONNALLY. Are you on the pay roll regularly, or just now and then?

Mr. LOOMIS. No, not regularly.

Senator CONNALLY. You hope to get on again, do you not?

Mr. LOOMIS. I will be very glad to.

Senator CONNALLY. Yes. I thought so. That is all.

Senator WATSON. Do you have the statements?

Mr. LOOMIS. They are not prepared.

Senator CONNALLY. I object to opening the record to something that is not even in existence. If he has got a brief and wants to file it, let him file it, but if he has got something that he wants to go back and cook up I object to his doing that.

Senator WATSON. Who is it wants to file these briefs, Mr. Loomis?

Mr. LOOMIS. The master of the Ohio State Grange, Mr. Walter F. Kirk, and the president of the Kentucky Farm Bureau Federation, a Mr. Robinson, whose first name escapes me.

Senator CONNALLY. Let them file them, but not have someone come and ask to file something that is not in existence.

Senator REED. He says the men will have their statements here, and he has requested our permission to file them.

Senator CONNALLY. We can pass on them Monday when the statements come.

Senator WATSON. Have they been prepared, Mr. Loomis?

Mr. LOOMIS. Not that I know of.

Senator WATSON. They have not. Well, get them in here Monday and we will give you an opportunity to make the offer, at all events.

Senator WATSON (presiding). Mr. James O'Hara of Fall River, Mass., vice president of the National Loom Fixers' Association, and Mr. William McNamara of Lowell, Mass., of the Weavers Progressive Association, ask the privilege of filing briefs on this question, and if there be no objection they may do so.

STATEMENT OF JAMES O'HARA, FALL RIVER, MASS., VICE PRESIDENT OF THE NATIONAL LOOM FIXERS' UNION

Mr. O'HARA. Gentlemen, I have been designated to present the protest of the National Loom Fixers' Union against the proposed tariff on fuel oil. All the loom fixers of the carpet industry and the textile industry are unionized and our locals cover every locality where looms are used in mills. Our members require at least five years of apprenticeship to fit them for their work and they have to own their own tools. It is, therefore, very hard for them to turn their hand to other employment, even if employment were available. Conditions prevailing in the mill districts are pitiful. More than half of our men are out of work entirely and the rest are only partly employed.

Many of the mills use fuel oil and the few mills that are operating on part time are barely hanging on. We have cooperated by taking large cuts in wages because the mill management has shown us what tremendous losses they have sustained. Committees of our organization in connection with other labor organizations are cooperating with the management to reduce expense so as to enable them to keep the mills from shutting down altogether.

We ask this committee not to add any expense to these tottering industries because we are fearful that the additional burden of the proposed oil tariff will be the cause of further unemployment.

I am shortening my remarks in compliance with the wishes of this committee, and I hope that my few words will convey my important message which my organization wanted me to deliver.

STATEMENT OF WILLIAM McNAMARA, LOWELL, MASS., SECRETARY OF THE WEAVERS PROGRESSIVE ASSOCIATION

Mr. McNAMARA. Gentlemen, I have been commissioned to appear here for the Weavers' Progressive Association to protest against a tariff on fuel oil. This organization of which I am secretary is composed of over five thousand workers in the textile industry in Fall River, Mass. I had prepared a few remarks as to the effect of this tax on our group of workers. On account of the limited time at my disposal, I will simply say that my organization agrees with the stand taken by the organization represented by Mr. Harwood, and I want to add that out of the 35,000 textile workers in Fall River, less than 7,000 are now employed, and these have only part-time employment; that is, not more than two or three days a week. The rest of the plants are entirely shut down, some of them for good.

The tax on fuel oil will add a great expense to the few mills that have been able to hold on, and there is grave danger that even these will close and the few part-time employees will be thrown out of work. Our community chest for the unemployed is dry. Fall River is in the hands of a finance commission. I can not adequately describe the black outlook in our city, and I hope that this committee will not add a burden to our industry which will increase the army of the unemployed.

STATEMENT OF BERNARD FRANKEL, NEW YORK CITY, OF THE WARNER QUINLAN CO.

Mr. FRANKEL. Gentlemen of the committee, my name is Bernard Frankel. My office address is No. 2 Park Avenue, New York City. I am the general sales manager of the Warner Quinlan Co.

Mr. Chairman and members of the Senate committee. I wish to preface my remarks by stating very definitely that I appear before you as a private citizen—not as spokesman for any oil company—not as a shareholder in any oil enterprise.

At the same time I would hardly presume to come before this committee unless I felt myself somewhat qualified to do so by years of active practical experience in the industry that is now struggling for a chance to live.

In the course of my business, I naturally come in contact with all forms of competition—particularly in the metropolitan New York area. I have been able without undue exertion to influence the conversion of many important customers of coal into switching from coal to oil. This accomplishment, gentlemen, has been very simple because—using the commonly accepted formula that four barrels of oil are equivalent in heating value to 1 ton of coal—the price of oil, at current market levels, is actually below the single item of railroad freight on coal to tidewater.

Furthermore, the price of foreign crude is selling for less laid down in New York Harbor than the actual pipeline charges, plus ocean transportation to the same market from our important domestic fields. Clearly, it is impossible for American producers to compete on this basis. I have had ample time to reflect that while aforementioned process of changing from coal to oil and from domestic oil to foreign oil has been progressing, hardly any of our own people were

benefiting thereby. On the contrary, we were doing ourselves an irreparable damage by assisting in the depreciation of our own purchasing power. The oil we sold was of foreign origin—the railroads were losing the revenues derived from haulage of coal—the coal people were losing a vital market for their product—coal miners were losing the opportunity to earn their daily bread and the American royalty owner, usually the farmer, was deprived of his rental and royalty income which very often spelled the difference between a reasonable degree of comfort and starvation standards.

Senator WATSON (presiding). How long is it going to take you to read that, Mr. Frankel?

Mr. FRANKEL. I have just got about four more pages.

Senator WATSON. Well, that is a long time. Can you not file that statement in the record so that we can save time?

Mr. FRANKEL. I certainly can, Mr. Chairman. But I do not like to see it mutilated in this way.

Senator WATSON. It is not going to be mutilated. It will be published in the record.

Senator CONNALLY. He is one of the proponents, that have only had an hour, against 3½ hours on the other side.

Senator WATSON. Oh, he is one of the proponents?

Senator CONNALLY. Yes. He is speaking for the bill.

Mr. FRANKEL. Mr. Chairman, that is one reason why I would not like to have it just put in the record. I would like to have you listen to it.

Senator WATSON. Well, are you a proponent of this tariff on oil, or excise tariff on oil?

Mr. FRANKEL. I am in favor of anything that is good for the country.

Senator WATSON. Oh, I understand. We are all on one platform.

Mr. FRANKEL. I am certainly in favor of an excise duty on oil.

Senator WATSON. Well, that is the point. Then if Senator Connally insists on hearing you, why, we will hear you.

Mr. FRANKEL. Thank you, Senator.

It is significant to note that less than 300,000 barrels of daily importations from foreign lands controls the entire price structure of the country. Not only has it demoralized out domestic oil industry, but it has also had a ruinous effect on the price structure of the coal industry.

Crude oil and refined products therefrom are admittedly selling below the cost of production. Thus we find an industry that represents billions of dollars of invested capital flat on its back—unable to report anything but deficits to a vast army of shareholders throughout the country.

An excise duty of 1 cent a gallon will not shut out our importation of foreign oils but it will at least serve to reduce the paralyzing handicap that now exists between the cost of foreign and domestic production. Your own tariff commission in a committee report prepared during the course of debate on this measure, presented official figures to the effect that the differential in the cost of producing and transporting oil to the Atlantic seaboard between domestic and foreign producing fields amounted to $1.03 a barrel. With these authentic figures at your disposal, it is difficult to see how anyone can legitimately minimize or question the revenue-producing benefits of the

proposed duty to the Government. I believe such income will readily approximate $40,000,000 per annum.

The argument has been advanced that the added cost of petroleum products used by the Government would more than counterbalance the potential revenues from this measure. The accuracy of such figures can be easily challenged. I wish to direct the attention of your honorable body to the fact that the Government would benefit a hundredfold through the potential increase in taxable corporation incomes in this one industry alone if it receives this modest degree of protection. Surely no right-minded individual or sane economist desires to see a great key industry held down so that the Government can buy its requirements below cost. Such a policy would be palpably penny wise and pound foolish. We have only to consider the frantic efforts made by our Government to raise the market price for wheat to realize the fallacy of the aforementioned contention.

I have heard a great deal of talk about the depletion of our oil reserves. This spectre has been dragged across the trail like the proverbial red herring on many previous occasions and your own Congressional Record carries facts and figures which thoroughly refute it. In the course of an extended analysis of world oil conditions, I came inevitably to the conclusion that as soon as the pipeline from Iraq field—which is in Mesopotamia—to a Mediterranean loading port was functioning—and such construction is now under progress—the American exports about which we hear so much will be practically excluded from continental European markets. If the proposed duty on petroleum imports is not sustained there is no question that the exploration, development, and exploitation of South American oil will be expedited and immeasurably encouraged, while our own domestic producers and our own independents are further squeezed to the wall. I wonder whether oil prices have advanced because of this proposed excise tax as some of its opponents state, and I wonder also whether anyone can actually prove that the principal purchasers of pipeline crude are actually buying the entire available production at their own posted prices.

In August of 1929, our daily domestic production of crude totaled 2,973,000 barrels. At the present time daily production has slumped to 2,100,000 barrels—a reduction of approximately 30 per cent. Surely nobody can accuse our domestic producers of not cooperating in the curtailment program.

As near as I can figure it out, the railroads by virtue of the present large-scale dumping of foreign crude and refined products along the Atlantic seaboard, have been deprived of hundreds of millions of dollars in coal freights. If the railroads, the coal producers and our domestic oil industry fit into our economic scheme of things—if the millions of our citizens who depend for a livelihood on those and affiliated industries are entitled to any consideration, there can be no plausible argument against this excise duty. I, for one, firmly believe that business generally will turn that long heralded corner when this duty is exacted.

When you toss a pebble into a pond the ripples caused by that pebble spread out to every corner of the pond. If you extend a helping hand to these great industries you will do more than cause a ripple in our economic cycle—you will give it sufficient impetus not

only to snap out of its present deplorable status, but also to tone up the whole economic fabric of this country.

Senator WATSON (presiding). Thank you, Mr. Frankel.

Mr. FRANKEL. Is that all, Mr. Chairman?

Senator WATSON (presiding). That is all. Thank you.

STATEMENT OF WIRT FRANKLIN, PRESIDENT OF THE INDEPENDENT PETROLEUM ASSOCIATION, ARDMORE, OKLA.—Contd.

Mr. FRANKLIN. Mr Chairman and gentlemen of the committee, I desire to resume where I left off yesterday afternoon.

Senator GORE. Mr. Chairman, just one moment. I was conferring with Mr. Franklin a moment ago. I think he has so much ground to cover and has so little time in which to cover it, that he would prefer to finish his statement and then subject himself to questions at the hands of the Senators. I feel that when he has finished his statement there will be little left to question him on.

Senator WATSON. We have no objection to that.

Senator GORE. Thank you.

Mr. FRANKLIN. The last thing I stated yesterday afternoon was the statement showing the average imports of oil and oil products into the United States for the years 1929, 1930, and 1931, showing that these importations, based upon that average would produce a total revenue of $53,687,825. That somewhat refutes this idea of "car fare' revenue that has been mentioned, and that this proposed tax in the revenue bill is a tariff.

Gentlemen of the committee, were I presenting this to you from the standpoint of a tariff on oil, a protective tariff, such as Massachusetts enjoys, and has enjoyed from time immemorial, I would be asking for a tariff of a dollar a barrel and 50 per cent ad valorem on refined products, and that would only be a trifle less than the difference in cost of foreign and domestic production. But I presented this matter to the Committee on Ways and Means from a standpoint of revenue. It is true that from that standpoint I asked, and proved that 2 cents a gallon on imported oil would not keep it out, because that would still be more than 20 cents a barrel less than the difference in cost of production. But the committee in its wisdom saw fit to fix a cent a gallon tax on the merits of this case, after a very exhaustive hearing.

Senator REED. Mr. Franklin, if it does not keep the oil out, how is it going to help Oklahoma and Texas?

Mr. FRANKLIN. By equalizing the price and keeping competition alive.

Senator WATSON. Would there not have to be a great restriction in American production if any kind of a tariff was to be helpful?

Mr. FRANKLIN. I answered that question yesterday I thought very thoroughly.

Senator WATSON. I beg your pardon.

Mr. FRANKLIN. I would like to repeat it for your information.

Senator WATSON. No.

Mr. FRANKLIN. Last year, in 1931, the American oil industry reduced its production as compared with the year 1929, 157,000,000 barrels, and it is under thorough control now under the conservation agencies of the oil-producing States. And no oil in excess of market demands are now allowed to be produced by the authorities of those

States. It is another red herring that has been drawn over the trail. There has not been any overproduction in the United States in 13 years. That is a fallacy. It is a false impression that has been created here by those importing oil.

Senator WATSON. Do you mean to say that we do not produce more oil in the United States than we consume?

Mr. FRANKLIN. Never in thirteen years, except in two years, and then the excess was very slight. As a whole we produced 686,000,000 barrels less in those 13 years than we consumed, and during that period there were 1,010,000,000 barrels of oil imported, resulting in the excessive stocks which we now have of 341,000,000 barrels.

Senator WATSON. I can not see your argument. If the demand and the supply in the United States are equal, what advantage is the tariff going to be to you unles it greatly raises the price to the producer?

Mr. FRANKLIN. I answered that also yesterday.

Senator WATSON. All right. I beg your pardon. Go right on, I won't bother you.

Mr. FRANKLIN. There has been a question arise here before this committee as to the vote in the House on the oil measure. The question was asked yesterday by Senator Gore of Mr. McCormack. I know Mr. McCormack had no intention of misstating the facts, due to the multiplicity of things in which he is engaged, but I have before me the record of the vote in the House on oil alone. This is on page 7040 of the Congressional Record of March 25.

Mr. MCCORMACK. Mr. Chairman, I offer an amendment to the Crisp amendment.

The clerk read as follows:

Amendment by Mr. McCormack: Strike out page 4 of the Crisp amendment.

The CHAIRMAN. Without objection, the clerk will report the matter proposed to be stricken out.

This was in Committee of the Whole. [Continuing reading:]

The clerk read as follows:

This is the matter that was proposed to be stricken out. [Continuing reading:]

(4) Crude petroleum, fuel oil derived from petroleum, gas oil derived from petroleum, and gasoline, 1 cent a gallon; but the tax on the articles described in this paragraph shall apply only with respect to the importation of such article.

After the debate on that, on page 7052 of the Congressional Record of March 25, the committee divided and the tellers reported that there were ayes 97, noes 190. That was the only vote taken on oil alone. When the vote was 204 to 188, it was the united opposition to the Crisp amendment that was voted on. But on oil alone the vote was 190 to 97 in favor of oil.

Senator GORE. I thought there was a clearcut vote on that issue alone.

Mr. FRANKLIN. Well, that is what the record shows.

Senator GORE. Yes, sir.

Senator JONES. No record was made, however.

Mr. FRANKLIN. It was a tellers' vote.

Senator JONES. Yes, I understand the vote in the House.

Mr. FRANKLIN. Now, Senator Gore stated yesterday that he had an amendment to suggest to carry out the provisions of this schedule which I filed, which, as I said, raised a revenue in excess of $53,000,

000. I desire to read that amendment suggested by Senator Gore, and to explain why these changes should be made. [Reading.]

(4) Crude petroleum fuel oil derived from petroleum, gas oil derived from petroleum and all liquid derivatives of crude petroleum, except lubricating oil and gasoline or other motor fuel, 1 cent a gallon; on gasoline or other motor fuel, 3 cents a gallon; on lubricating oil, 4 cents a gallon; on paraffin and other petroleum wax products, 1 cent a pound; on natural asphalt and asphalt and bitumen derived from petroleum, 10 cents a hundred pounds; but the tax on the articles described in this paragraph shall apply only with respect to the importation of such articles.

Senator REED. Mr. Franklin, why is it fair to charge as much duty on crude oil as on fuel oil derived from crude oil?

Mr. FRANKLIN. For this reason, Senator Reed. Under the modern methods of refining, the residuum from oil, after it has been topped for its light products, may be cracked and practically as much gasoline made from fuel oil as from the original crude. It was therefore thought fair to make the tax the same on fuel oil and crude oil, otherwise the tax on crude oil may be defeated by the cracking of the fuel up into gasoline after its importation.

Senator REED (presiding). That is just what occurred to me. It seems to me that with that in mind the fuel oil ought to carry a higher tax than the crude.

Mr. FRANKLIN. Well, I can not subscribe to that doctrine myself.

Senator REED. I think you have got things just twisted around.

Senator CONNALLY. Well, the crude has the gasoline content in it; that is the point you are making, is it?

Mr. FRANKLIN. Yes.

Senator CONNALLY. And, therefore, having that content it is more valuable than a derivative that has not got that content.

Senator REED. But he has just told us that the derivative can be cracked up into gasoline and would be imported and used to defeat the tariff on crude.

Senator CONNALLY. It does not get as much gasoline as the crude has. It may have some, but you have taken the most valuable element out of it in the topping.

Senator REED. Well, it would look to me that the effect of such a tariff would be to drive the refining industry right out of the United States. I think that deserves a little thought on your part.

Mr. FRANKLIN. Well, if the tax on fuel oil is the same as on crude, I think it would equalize things between the domestic and the foreign refiner.

Now in explaining the reasons for this suggested amendment of Senator Gore, there has been added into it "and all liquid derivatives of crude petroleum." Gentlemen, that is for the purpose of preventing the evasion of the tax as passed by the House. If that provision is not included in this amendment it would be very easy for the importers to evade the tax that is levied, because there is such a slight difference in the scale, in the gravities of these different products of crude petroleum that it would be easy to ship a product in here and call it kerosene, and after it got here subject it to a very slight refining process and sell it as motor fuel. So it is necessary to include in here "and all liquid derivatives of crude petroleum."

Senator GEORGE. What are some of the light products?

Mr. FRANKLIN. Some of the products, these light products which would not be covered by the bill as written at present, Senator George, are benzine, kerosene——

Senator CONNALLY. Naphtha.

Mr. FRANKLIN (continuing). Naphtha, and there is a variety of others listed by the Department of Commerce under the head of light distillates. This clause that I have here would include them all and would be a fair and equal tax.

Then the present bill does not provide any tax on the importation of lubricating oil. Now importation of lubricating oil at the present time and in the past has been very little, due to the fact that Pennsylvania and West Virginia oils supply a much superior lubricating oil. But if this was not put in the bill there would immediately commence at these refineries down off the coast of Venezuela the manufacture of lubricating oil on a large scale, and it would be imported if it was not equalized. Therefore, this provision must be in here of 4 cents a gallon on lubricating oil.

The same thing applies to the paraffin and other petroleum wax products. The importations of these run into a considerable amount. 46,000,000 pounds last year. Or the average of the three years, I should say.

That same thing applies to natural asphalt and petroleum asphalt and bitumen, of which there were 73,770 long tons imported. That is the average figure for the three years.

Senator GORE. Is there a good deal of asphalt base oil located in Texas and Louisiana?

Mr. FRANKLIN. I wanted to get to that.

Senator GORE. Yes.

Mr. FRANKLIN. There has been an attempt to create the impression here that the United States can not furnish certain products to the American markets, and especially to the Atlantic seaboard and New England market. That is not true. There are large quantities of oil of this class produced in California, Texas and Arkansas, and they can supply adequately from those sources all the demand for such products.

I desire to have this suggested amendment made a part of the record.

(The amendment is as follows:)

On page 232 of H. R. 10236, as passed by the House and now pending in Senate, insert in lieu of lines 16 to 20, inclusive, the following:

"(4) Crude petroleum, fuel oil derived from petroleum, gas oil derived from petroleum, and all liquid derivatives of crude petroleum, except lubricating oil and gasoline or other motor fuel, 1 cent a gallon; on gasoline or other motor fuel, 3 cents a gallon; on lubricating oil, 4 cents a gallon; on paraffin and other petroleum wax products, 1 cent a pound; on natural asphalt and asphalt and bitumen derived from the petroleum, 10 cents a hundred pounds; but the tax on the articles described in this paragraph shall apply only with respect to the importation of such articles."

Mr. FRANKLIN. Congressman Nelson made a reference to the 300,000 little wells. He said those wells ought to be abandoned.

Senator REED. I would not advise him to say that up in Bradford, Pa.

Mr. FRANKLIN. He said those wells ought to be abandoned in the interest of economy of American production. In that regard, gentlemen, I want to call your attention to the fact that most of those little wells are in the Eastern States, in New York, Pennsylvania, West

Virginia, Ohio, Indiana and Illinois, and Kentucky. They represent billions of investments. At a rough estimate I would say that there are 115,000 separate leases, and that there are 200,000 families living on those leases operating those properties.

To make a suggestion that reserves be abandoned which contain from two to four billion barrels of oil in order that that district of the United States which has fattened on a prohibitive tariff and without which it could not exist might still obtain cheaper fuel is the most preposterous assertion that I have ever heard in my life. A sacrifice of 200,000 families, of $6,000,000,000 of invested money in the States which I have named, all that Massachusetts and Maine may continue to buy fuel oil below the cost of American production.

Senator GORE. Mr. Franklin, those little wells, some three hundred thousand—is that not the kind of a ballast that keeps the industries going?

Mr. FRANKLIN. Why, those 300,000 wells, Senator, are the backbone of the American petroleum industry. The flush wells are here to-day and gone to-morrow. To-day we bring in a flush field, and to-morrow that flush field with its wells takes its place alongside of the other pumping wells. And in the aggregate they produce 500,000 barrels of oil day in and day out. That is the steady source of supply.

Senator GORE. That is, wells producing less than three barrels a day.

Mr. FRANKLIN. About a barrel and a half a day on the average. And without those the American oil industry would be in a serious condition, because that supply is steady. The flush wells go up and down.

Senator GORE. Now, Mr. Franklin, on that point. If those wells were abandoned now, the production is so small it never would pay to drill new wells to open up those sands again?

Mr. FRANKLIN. Once abandoned they are gone, because the water will take them if they are not pumped continuously. It takes continuous operation of these wells to save them.

Senator GORE. And there would be no flush production if new wells were drilled?

Mr. FRANKLIN. No. These wells are what is left after the flush production is gone, and they continue to pump day in and day out over a period of 20 to 40 years. There are some in Pennsylvania and New York that are more than 40 years old, that are still operating, still supporting a vast population, and which is their sole means of livelihood.

Now I wish to clear up another matter. There have been inferences here by one distinguished gentleman that I appear here not in the interest of the independent petroleum industry but that I have appeared—to use a common phrase—as the stool pigeon of the Standard Oil group. That has been of long standing.

Senator REED. No member of this committee has done that.

Mr. FRANKLIN. No, indeed.

Senator GEORGE. No. We do not believe that you do, Mr. Franklin.

Senator GORE. No.

Mr. FRANKLIN. I want that cleared up, because two years ago on that theory I was haled before the Lobby Committee and treated as if

I had been a criminal. In the end the Lobby Committee exonerated our group of all blame. But it had a very serious effect. And there have been attempts at this session of Congress to create that same impression. I want that cleared up once and for all.

I have stated who I represented here. I represent the American petroleum industry generally except the import group, but more particularly I represent the independent petroleum branch of the industry, and I have not hesitated to speak the truth on this matter, and I have never exaggerated facts and figures. I have given the truth, which can always be substantiated. But my statements have been twisted and turned around, and I want that matter cleared up once and for all as to who I represent.

I might add that by reason of my fearless representation of the independent group I have suffered enormously. My production of oil in the Oklahoma City field was being prorated, I was entitled to run so much oil. But these pipelines, which are owned by the same companies that import oil, were my only market, and although the Corporation Commission of Oklahoma said I was entitled to a certain percentage of my production, for some unaccountable reason I got 600,000 barrels behind when the price of oil was a dollar and 35 cents a barrel. That production was made up and run when oil was 18 cents a barrel. That is what I lost at one swoop by reason of my representation of this industry. I am not saying it in any sort of regret, because the question has become one of welfare for my State of Oklahoma and for the entire Southwest, and what happens to Wirt Franklin is of little moment when the condition of 22,000,000 people is involved.

Senator CONNALLY. Any of that material that you want to put in the record you can put in it.

Mr. FRANKLIN. I shall be glad to do so.

Senator REED (presiding). You may go on with your statement.

Mr. FRANKLIN. Gentlemen of the committee, I wish to call your attention, in view of some things that have been said here, to some news articles. First is one taken from the New York Herald-Tribune of March 17, 1932.

OIL COMPANIES IN MEXICO PROTEST UNITED STATES TARIFF PLAN—AMERICAN AND BRITISH INTERESTS FEAR TAX ON IMPORTS

[By cable to the Herald Tribune. Copyright, 1932, New York Tribune (Inc.)]

MEXICO CITY, March 16.—American and British oil interests in Mexico have taken the first step in objecting to the passage of the proposed revenue act now before the Ways and Means Committee of the House of Representatives at Washington, which calls for a tax of 1 cent a gallon, or 42 cents a barrel, on oil imported from Mexico or any other country into the United States. Objection to the law is contained in an appeal made by the Confederation of Industrial Chambers of Commerce over the signature of Hilary Branch, legal representative of the Mexican Standard Oil of Indiana interests, Gaylea Steel, general manager of the Sinclair interests in Mexico, as spokesman for the Mexican oil group that is composed mostly of American companies.

The appeal, voiced in a telegram to the Secretary of Industry, Commerce and Labor, General Abelardo Rodriguez, is understood to have the sympathy of the Mexican government, which has shown more than ordinary interest in the proposed American revenue bill. It is claimed locally that this bill would still further depreciate petroleum production in Mexico and react unfavorably both on the general economic condition of the country and upon the unemployment problem. Should the measure become a law, in the opinion of oil interests, it "would make exportations to the United States, which last year amounted to 9,000,000 barrels, unprofitable."

The possibility that the Mexican Government may take up the objection through diplomatic channels is foreseen in that part of the message which requests the government to "take whatever steps it may deem necessary to prevent the passage of the proposed bill," which oil interests assets would "react disadvantageously on the economic condition of Mexico; would paralyze completely our exports, reduce the Federal income and increase the number of unemployed."

Senator REED (presiding). Mr. Franklin, your time is getting short.

Mr. FRANKLIN. Now here is an article that appeared in the New York Times of April 14, 1932 [reading]:

MEXICAN OIL RACING HERE TO BEAT TARIFF—TAMPICO SHIPS NEARLY 2,000,000 BARRELS IN A FEW DAYS TO GO INTO STORAGE

[Wireless to the New York Times]

MEXICO CITY, April 13.—The Huasteca, Aguila, Transcontinental, and Sinclair Oil Cos. have exported from Tampico to the United States more than 2,000,000 barrels of petroleum in the last few days, according to press dispatches.

The extraordinary activity is said to be to get the oil in storage in the United States before the new tariff goes into effect, as it is expected to make future shipments from Mexico unprofitable.

A protest against the new tariff has been placed before Abelardo Rodriguez, the Minister of Industry, Commerce, and Labor, by the Confederation of Industrial Chambers of Commerce, which contends that not only would enforcement of such taxation have a grave repercussion on the Mexican economic situation, but would make oil export to the United States impossible. The confederation recalls that last year nearly 10,000,000 barrels of petroleum were exported to the United States and observes that a serious economic situation would be produced here if this business is curtailed or wiped out.

And here is an article that appeared in the Wall Street Journal on April 15, 1932 [reading]:

MEXICAN OIL RUSHED TO UNITED STATES

[Special to the Wall Street Journal]

MEXICO CITY.—With 26 extra tankers loading oil at Tampico during the past month, growing activity is reported from that port. The unseasonal petroleum exodus is attributed to a desire on the part of large corporations to rush the fuel into the United States, in anticipation of the enactment of an import duty on oil.

And next I should like to call to your attention the following:

The detailed reports of companies importing into the United States is not available from the Treasury Department. By resolution of the Senate in the Seventy-first Congress the Treasury Department was directed to make a report. From this report we have prepared the attached statement showing the principal importers and the products imported. The same relationships of imports exist today as did then.

Imports of crude petroleum and refined products, calendar year, 1929

[Compiled from report of Secretary of Treasury (S. Doc. No. 125, 71st Cong., 2d sess.)]

	Crude oil	Gasoline	All other products
Standard of Indiana	12,574,775	1,924,312	20,599,448
Standard of New Jersey	22,585,000	.....	294,460
Gulf Oil Corporation	21,691,487	.....	.....
Dutch-Shell	480,503	3,577,036	7,599,311
Total	57,331,771	5,501,348	28,593,219
All other	17,427,651	1,249,461	1,364,665
Grand total	74,759,422	6,750,809	29,957,884
Per cent of each item imported by above companies	77	81	96
Grand total, all imports by companies named.....per cent	.....	.....	82

Senator REED (presiding). Your time has run out, Mr. Franklin.

Mr. FRANKLIN. Now, further, referring to the available oil to supply these markets, I wish to refer to page 97 of the Petroleum Refinery Statistics for 1929 published by the Department of Commerce.

Imports of refined oils, after declining steadily during 1927 and 1928, rose rapidly in 1929. Total imports of refined oils in 1929 amounted to 29,777,000 barrels, a new high figure, and an increase over 1928 of 17,987,000 barrels (153 per cent). Imports of gasoline rose from 4,198,000 barrels in 1928 to 8,834,000 barrels in 1929. From the standpoint of quantity this increase was equivalent to only about one-third of the increase in imports of fuel oil, yet on the basis of value and general economic significance it was of much the greater importance. Practically all of the increase in gasoline imports in 1929 resulted from increased receipts from the Dutch West Indies. This gasoline was produced in the Dutch West Indies from crude obtained in the near-by Venezuela fields. Although the increase in imports in 1929 from the standpoint of quantity was 153 per cent, the gain in value was only slightly over 50 per cent.

The peak of oil transportation through the canal occurred in 1923, when approximately 54,000,000 barrels were carried eastward from California. The following is quoted from Petroleum in 1929, published by the United States Department of Commerce, page 476:

Shipments of crude oil from California through the Panama Canal to eastern ports in the United States continued to decline and amounted to only 1,299,000 barrels in 1929, compared with 2,301,000 barrels in 1928. No shipments were recorded during the last four months of the year, as contrasted with 1923, when an average of approximately 150,000 barrels of crude passed through the canal every day.

I wish to call the attention of the committee particularly to that feature and to the bearing it has upon the welfare of the United States as a whole. The exports of oil from California formerly furnished the needs of the Atlantic seaboard. Gentlemen here have made the statement that from no other source can the Atlantic seaboard get oil. I say that plenty of oil can be shipped upon American tankers, and that at the present time there are 85 tankers tied up in ports.

And I would further call the attention of the committee to the fact that Congress appropriated over $300,000,000 for the assistance of the merchant marine, and one of the reasons for its decline is the fact that we are importing oil from foreign countries in ships flying foreign flags, whereas our own ships flying the American flag would have to transport this oil should it be brought from California or the Gulf coast, which would give employment to hundreds of American seamen and to those 85 idle tankers now tied up in port.

Another great effect it would have, as an analysis of the records will show, although I will not take up the time of the committee at this time to read it, but it is a report from the Governor of the Canal Zone, a Government report, which sets out the serious fact as to the effect the cessation of shipments of oil from California to the Atlantic seaboard has had upon the revenues of the Panama Canal.

Pacific to Atlantic: Since the beginning in the fiscal year 1923 of shipments of mineral oils on a large scale from the California fields, this product has been the leading commodity shipped from the Pacific to the Atlantic. As pointed out in the report of last year this item of cargo reached its high point in 1924 with 9,721,446 tons. In 1925 the shipments declined to 5,989,622 tons and in 1926 they were slightly lower, with 5,930,716 tons. The year 1927 saw an increase to 7,143,165 tons, followed by decreases in 1928 and 1929. In 1930 shipment of mineral oils aggregated 5,700,587 tons, the highest since 1927. In the past year they decreased to 4,824,338 tons, the lowest for any fiscal year since 1923, when 4,334,664 tons were reported. In comparison with 1930 the past year's mineral-

oil tonnage from Pacific to Atlantic decreased 876,249 tons, or 15.4 per cent. Of this decrease 547,455 tons, or 16.2 per cent occurred in the United States intercoastal trade, and 436,661 tons, or 31.2 per cent in the trade between the United States and Europe. The trade between the United States and the West Indies showed an increase in this business of 102,344 tons, or 119.3 per cent over the preceding year.

Furthermore, this oil is largely produced upon lands belonging to the United States Government, and the royalty on that oil belongs to the United States Government. In producing that oil the Government would be buying its own product, and that would offset in toto the purchases of oil made for the benefit of the United States. Why, gentlemen of the committee, I repeat, why in the world shouldn't the United States purchase its own oil produced on the public domain in preference to buying foreign oil?

Here are some further figures I should like to place in the record. This is statistical information as to oil in the world at large, not only the United States but covers the entire world, which we have prepared for the convenience of the members of the committee, and in which answers can be found to any question that might arise in the mind of any member of the committee. These are figures taken from the Department of Commerce and also the Treasury Department. And I should like to have this made a part of the record.

Senator REED. That may be done.

Mr. FRANKLIN. It is as follows:

MEMORANDA AND DATA COMPILED BY THE INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA

The following information has been compiled for those interested in the oil industry and will show:

1. That the proposed tariff on oil will prevent an excessive domestic price for gasoline by keeping alive a healthy competition.

2. That under the present policy of "no tariff on oil" with unrestricted imports of gasoline, many independent producers and refiners have been bankrupted during the past year, and the remainder are being rapidly forced out of business. They will be practically eliminated unless that policy be changed. This will result in concentration of the oil business in the hands of a relatively few companies, creating monopoly and destroying competition, with consequent higher prices to consumers.

3. That our national supply of oil is adequate to supply all demands and is practically inexhaustible, and that the fundamental objective of true conservation will be advanced by a reasonable tariff on oil by preventing the abandonment of 300,000 small wells of settled production, producing more than 500,000 barrels daily.

4. That the principal beneficiaries of the present policy of importing oil "free of duty" are the following companies: Gulf Refining Co., two large units of the Standard Oil group, and the Royal Dutch-Shell group.

5. For more than two years stabilization of the oil industry has been attempted through curtailment and proration of production. Production declined from 2,975,000 barrels daily in August, 1929, to less than 2,100,000 barrels, January 1, 1931. The posted price of crude declined for mid-continent 36 gravity crude from $1.45 per barrel in August, 1929, to $0.18 per barrel in July, 1931. Present price through martial law, $0.77. We produced 109,312,000 barrels less in 1930 than in 1929, while imports increased to 105,000,000 barrels and gasoline imports increased about 100 per cent. Domestic production decreased 54,000,000 barrels first 11 months, 1931, as compared first 11 months, 1930. Between November 30, 1930, and November 30, 1931, crude-oil stocks were reduced 54,000,000 barrels. Truly curtailment of production has been accomplished. Stabilization of crude prices, however, has not materialized because of low-cost imports from Mexico, South America, Rumania, and Russia. The one link necessary to complete stabilization program is a reasonable tariff on oil.

WIRT FRANKLIN,
President The Independent Petroleum Association of America.

DECEMBER 31, 1931.

Summary of facts relating to petroleum industry

	United States production	United States percentage of world	Foreign production
1927	901,129,000	71	361,463,000
1928	901,474,000	68	423,259,000
1929	1,007,323,000	68	476,718,000
1930	898,011,000	63	520,712,000
1931 [1]	850,000,000	62	529,000,000

[1] Preliminary estimates

Note large annual increase in foreign production.

Classification of oil producers.—The petroleum directories have listed about 9,000 persons, firms, and corporations producing oil in the United States. Of these, over 8,000 were small producers. Recently, their ranks have been and are being rapidly reduced by industrial conditions forcing them to sell, actually at great loss, to larger companies.

Oil reserves of the United States.—Various well-known authorities have from time to time made estimates of the total oil supply of the United States. These estimates were made with all information available, but subsequent production has in most instances amounted to more than the total estimated reserves, and we are producing oil sufficient to supply all demands with many fields restricted to only a small percentage of their potential output. This shows how unduly we have been alarmed over the possibility of the early exhaustion of the domestic oil supply. From the discovery of the Drake well in 1859 to December 31, 1931, the United States produced 13,966,000,000 barrels, and each year sees production sufficient to meet all demands. Vast areas of possible oil territory from Canada to the Gulf are unexplored and will not be until the demand for oil indicates possibility of profit in development of new fields.

Shale oil and coal deposits of the United States.—Immense deposits of oil shale exist in several States. Colorado, Utah, and Wyoming have great reserves. Coal deposits in Colorado are estimated by the Colorado Bureau of Mines to contain 80,000,000,000 barrels of recoverable oil, an amount that would be sufficient for about 80 years of present demands. More than 50 per cent of the world's coal deposits are in the United States. If ever needed coal can fill all of our oil requirements for centuries.

Gasoline recovery from oil.—Improved refining processes are giving greater recovery of gasoline from a barrel of crude oil. Some of our high grade crudes are refining as much as 60 per cent motor fuel. Under the Bergius hydrogenation process, adapted for American use by the Standard Oil Co. of New Jersey, a barrel of most any quality of crude oil can be converted into a barrel of gasoline. One hundred per cent gasoline recovery by this process makes it imperative that our domestic markets be protected.

Comparative cost of domestic and foreign production.—The recent report of the United States Tariff Commission indicates that a barrel of mid-continent Gulf coast crude oil laid down at Atlantic seaboard refineries costs $1.90, and a barrel from the Maracaibo Basin, 87 cents. The "differential" is, therefore, $1.03 a barrel and indicates that a tariff of $1 a barrel will about equalize this difference in cost. The report further shows a refining profit on domestic crude oil of 11 cents per barrel and a profit of 54 cents per barrel on oil imported from Maracaibo Basin, of Venezuela.

FORMER ESTIMATES OF FUTURE OIL PRODUCTION IN THE UNITED STATES

KNOWN WELL OIL RESERVES ARE INCREASING, NOT DECREASING; SUPPLY WITHIN UNITED STATES SUFFICIENT FOR CENTURIES

1908—David T. Day.
Estimated minimum of 8,500,000,000 barrels.
Estimated maximum of fifteen to twenty-two and one-half billion barrels.
From January 1, 1908, to December 31, 1931, inclusive, United States has produced 12,209,000,000 barrels.
All of Day's minimum, plus 43 per cent.

1914—Ralph Arnold.
Estimated future production at 5,700,000,000 barrels.
From January 1, 1914, to December 31, 1931, inclusive, United States has produced 10,927,000,000 barrels.
All of Arnold's estimate, plus over 92 per cent.
1915—United States Geological Survey.
Estimated future production at 7,600,000,000 barrels.
From January 1, 1915, to December 31, 1931, inclusive, United States has produced 10,660,000,000 barrels.
All of that estimate, plus 40 per cent.
1921—Certain Petroleum Geologists of A. A. P. G.
Estimated future production at 9,150,000,000 barrels.
From January 1, 1921, to December 31, 1931, inclusive, United States has produced 8,566,000,000 barrels.
Nearly 93 per cent in 11 years.
1925—Committee of Eleven.
Estimated future production from proven acreage on present methods, 5,300,000,000 barrels.
From January 1, 1925, to December 31, 1931, inclusive, United States has produced from these properties and new pools 6,090,000,000 barrels, almost 115 per cent of the estimate.
1930—In the year 1930 the United States produced 898,011,000 barrels, compared with 1,007,323,000 barrels in 1929. This reduction was caused by curtailment of United States fields. Millions more could have been produced. Foreign production, in 1930, increased 44,000,000 barrels.
1859 to December 31, 1931, inclusive, from the beginning to date, the United States has produced a total of 13,996,000,000 barrels.
1929, 1930, or 1931. The country could have produced the Nation's needs, including all oil supplied by imports and several hundred million barrels additional, which would have placed the industry and Government in better financial condition.

RESERVES AMPLE FOR FUTURE NEEDS

Now oil deposits of the greatest importance are continually being discovered, and only a small fraction of the probable oil territory of the United States has as yet been prospected. Deeper drilling in old fields is constantly bringing in hereto unanticipated new production. The visible supply of oil is thus constantly increasing. In addition to the supply from oil wells, there are untold billions of barrels of potential shale oil in the shale deposits of the Rocky Mountain States and other untold billions in the trillions of tons of world coal, about 50 per cent of which is in the United States.

Dr. Ralph Arnold and Mr. William J. Kemnitzer, in their recent book, Petroleum in the United States and Possessions, have this to say:

"The ultimate quantity of crude oil available from these three sources in the United States is estimated to have been on January 1, 1929, about 726,236,862,000 barrels, of which approximately 39,091,877,000 barrels, or 5.4 per cent was natural crude oil; 92,144,985,000 barrels, or 12.7 per cent, shale oil; and 595,000,000,000 barrels, or 81.9 per cent, coal oil. Of the total crude oil from all sources, less than 2 per cent had been produced. Of shale oil and coal oil together less than 0.1 per cent had been produced, but of natural crude oil 26.2 per cent had been produced.

Approximate quantity crude oil obtainable in the United States from various sources

[Thousands of barrel of 42 United States gallons]

Source	Originally available	Produced, quantity	1859-1929, per cent [1]	On hand, Jan. 1, 1930	
				Quantity	Per cent [1]
Natural reservoirs	[2] 39,091,877	[2] 11,488,403	29.4	[2] 27,603,474	70.6
Oil shales	92,144,985	[3] 550	(4)	92,144,635	100.0
Coals	595,000,000	[3] 25,000	(4)	594,975,000	100.0
Total	726,236,862	11,513,753	1.6	714,724,109	98.4

[1] Per cent of quantity "originally available."
[2] Crude oil and natural-gas gasoline.
[3] Estimated.
[4] Less than 0.1 per cent.

"Natural reservoirs constitute the only source of crude oil of commercial importance at the present time. Oil shales and coals comprise important reserves of crude oil, but as yet, they are of no commercial value. The time when oil shales and coals will become of commercial value depends entirely on when the cost of producing natural crude oils equals or exceeds the cost of extracting or manufacturing similar oils from oil shales, and coals. That time is apt to be remote in light of enormous foreign resources of natural crude oils, the unrestricted importation of which keeps the price of domestic oils low regardless of the quantity of domestic oils available. Of present concern, then, are the future possibilities of natural crude oils only.

"The resources of natural crude oil in the United States are estimated to have been, on January 1, 1929, a little more than 50 per cent developed, but less than 30 per cent exhausted. At the rate wells were then being drilled, average full development would be reached in 30 years at the end of which time would begin a long period of post-development production lasting 113 years to practical exhaustion. Of the 39,091,877,000 barrels estimated ultimate production, 11,488,403,000 barrels or 29.4 per cent was produced during the period of past development from 1859 to 1929 inclusive; 13,182,278,000 barrles, or 33.7 per cent, would be produced during the average period of future development from 1929 to 1959 inclusive; and 14,421,196,000 barrels or 36.9 per cent, during the average period of post-development from 1959 to 2072 inclusively."

A TARIFF ON OIL WILL ADVANCE TRUE CONSERVATION

Of 331,070 oil wells in the United States at the end of 1930, nearly 300,000 were producing about 500,000 barrels of oil, or a daily average of 1½ barrels per well. The operation of these 300,000 small wells can not be continued permanently at a loss. They are being abandoned before they have recovered all of their oil, and if fair prices for crude prevailed they might furnish employment and produce oil for many years. Maintaining a policy of "duty free" imported oil will cause continued early abandonment of small wells, and, with that abandonment, hundreds of millions of barrels of oil will be absolutely lost. A tariff on oil would give our old fields the opportunity to produce more oil for more years and is practical conservation by which we would recover all of our oil instead of abandoning our partially produced oil reserves. The reserves in the pools where these 300,000 small wells are producing have been estimated at from two to four billion barrels, certainly worth saving from the standpoint of true conservation.

Intense and destructive competition between oil and coal is causing the uneconomic use of oil for fuel where substutution could be made and thereby conserve oil for higher uses.

Crude oil production, imports, exports, refinery runs, miscellaneous uses, and stocks of crude oil in the United States, from January 1, 1918, to December 31, 1931

[All amounts in barrels of 42 gallons, compiled from annual statements of United States Bureau of Mines, except for year 1931, in which 11 months are Bureau of Mines figures and December is estimated]

Year	Current supply		Current demand		
	Production	Refinery runs	Exports	Other uses	Total current demand
1918	355,928,000	326,025,000	4,901,000	89,492,000	420,418,000
1919	378,367,000	361,520,000	6,019,000	58,630,000	426,169,000
1920	442,929,000	433,915,000	8,757,000	106,340,000	549,012,000
1921	472,183,000	443,363,000	8,940,000	77,368,000	529,671,000
1922	557,531,000	500,706,000	10,163,000	99,664,000	610,533,000
1923	732,407,000	581,238,000	17,385,000	132,917,000	731,540,000
1924	713,940,000	643,719,000	17,973,000	104,743,000	766,435,000
1925	763,743,000	739,920,000	13,335,000	[1] 58,285,000	811,540,000
1926	770,874,000	779,264,000	15,407,000	65,932,000	860,603,000
1927	901,129,000	828,835,000	15,843,000	43,754,000	888,432,000
1928	901,474,000	913,295,000	18,968,000	30,512,000	962,773,000
1929	1,007,323,000	967,708,000	26,401,000	28,480,000	1,042,589,000
1930	896,011,000	927,447,000	23,705,000	32,272,000	983,424,000
1931	850,000,000	888,000,000	27,000,000	26,000,000	941,000,000
Total	9,745,839,000	9,354,955,000	214,795,000	954,389,000	10,524,139,000

[1] Includes 17,827,000 barrels "adjustment" in California stocks on account of adding fuel oil to heavy-oil stocks. Add 17,827,000 to supply when setting up "balance sheet" for either the year 1925 or for the entire 14 years.

Crude oil production, imports, exports, refinery runs, miscellaneous uses, and stocks of crude oil in the United States, from January 1, 1918, to December 31, 1931—Continued

Year	Excess of demand over production	Imports	Added or withdrawn from stock	Stock Dec. 31
1917				171,090,000
1918	64,490,000	37,736,000	[1] 26,754,000	144,336,000
1919	47,502,000	52,822,000	5,020,000	149,356,000
1920	106,063,000	100,175,000	92,000	149,448,000
1921	57,488,000	125,364,000	67,876,000	217,324,000
1922	53,002,000	127,308,000	74,306,000	291,630,000
1923	[2] 867,000	82,015,000	82,882,000	374,512,000
1924	52,495,000	77,775,000	25,280,000	399,792,000

[1] Estimate by Valentine R. Garfias of Henry L. Doherty & Co.; appeared in Daily Oklahoman, October 7, 1933.

[2] Based on 118,000,000 estimated production.

Principal importing companies, 1929

IMPORTS OF CRUDE PETROLEUM AND REFINED PRODUCTS

[Compiled from Report of Secretary of Treasury (S. Doc. No. 125, 71st Cong.—2d sess.)]

	Crude oil	Gasoline	All other products
Standard of Indiana	12,574,775	1,924,312	20,599,448
Standard of New Jersey	22,585,000	.....	294,460
Gulf Oil Corporation	21,691,487	.....	.....
Dutch-Shell	480,503	3,577,036	7,699,311
Total	57,331,771	5,501,348	28,593,219
All other	17,427,651	1,249,461	1,364,665
Grand total	74,759,422	6,750,809	29,957,884
Per cent of each item imported by "Big Four"	77	81	96
Grand total, all imports, by "Big Four," 82 per cent.			

NOTE.—On account of oil and its refined products being on the free list the Treasury Department does not make public the names of the importers. These figures and names are available only in the report made in response to a Senate resolution requesting the report of the companies and amounts of their imports for 1929. This information is not available for later or other years than 1929.

IMPORTS OF CRUDE PETROLEUM AND LIQUID REFINED PRODUCTS, 1927-1930, AND FOR 1931 WITH DECEMBER ESTIMATED

Year	Crude Oil	Refined Product
	Barrels	*Barrels*
1927	58,383,000	13,353,000
1928	79,767,000	11,790,000

Authority: Oil Price Handbook, 1926, 1929, compiled by the National Petroleum News, Cleveland, Ohio.

Above prices do not include the gasoline tax which varies in different states.

OIL EXPORT TRADE VANISHING

Our export trade is being lost regardless of tariff legislation as shown by following figures:

Commodity	Value of exports January to September—		Value loss	Volume gain (+) or loss (−)
	1931	1930		
			Per cent	*Per cent*
Gasoline, naphtha, and other light products	$87,878,000	$202,723,000	56.7	−30.6
Lubricating oil	48,526,000	70,779,000	31.4	−20.9
Illuminating oil	27,036,000	50,132,000	46.1	−27.5
Gas and fuel oil	18,894,000	26,040,000	27.5	−18.9
Crude petroleum	15,820,000	25,490,000	37.9	+6.5
Paraffin wax	5,853,000	7,853,000	7.3	−7.3
Oil well and refinery machinery	9,430,000	20,810,000	54.7	.....

Exports of petroleum and petroleum products averaged 46 per cent lower in value than a year ago. The volume of crude petroleum shipped abroad during three quarters of 1931 was 19,626,000 barrels, valued at $15,820,000, an increase in quantity of 6.5 per cent above the 1930 figure, but a decline in value of 37.9 per cent. The volume was 32 per cent above and the value 29 per cent below the 5-year average.

Third among the chief exports is gasoline and naphtha, with a value of $87,878,000, 56.7 per cent lower than a year ago and 53 per cent below the 5-year average value. The quantity exported during the first nine months of 1931 was 34,198,000 barrels, 30.6 per cent less than in 1930, but only 14 per cent below the 5-year average. Although the average export price was only $2.57 a barrel against $4.11 a year ago, most of our best customers purchased smaller quantities. However, larger amounts were taken by the Netherlands, Sweden, Japan, Philippines, and Mexico.

Exports of lubricating oil totaled 6,038,000 barrels, valued at $48,528,000, a decline in quantity of 20.9 per cent below both 1930 and the 5-year average and 31.4 per cent below the 1930 value and 31 per cent lower than the 5-year average. Illuminating oil volume was 27.5 per cent less than in 1930 and 37 per cent below the 1926–1930 average. The value was off 46.1 per cent from 1930 and 57 per cent below the 5-year average. The volume of gas and fuel oil was 18.9 per cent smaller than the 1930 exports and 26 per cent below the 5-year average. The value was 27.5 per cent below that of the January-September period of 1930 and 40 per cent smaller than the 5-year average.

NOTE.—Authority 44th Quarterly Issue, "Our World Trade" Chamber of Commerce of the United States, January–September, 1931.

Price of gasoline does not follow price of crude oil—Comparative statement of prices of gasoline at service stations, less gasoline tax, in 52 representative cities of the United States for the years 1926 and 1929

	36 gravity crude oil price at well	Average per cent gasoline recovery for year	Average gallons of gasoline recovery from barrel crude oil	Average retail price in 52 cities without tax	Retail price of gasoline from barrel crude oil	Difference between crude cost and retail price of gasoline from barrel crude
		Per cent	*Gallon*	*Cents per gallon*		
February, 1926	$2.04	38.5	16.17	18.98	$2.92	$0.88
February, 1929	1.20	44.0	18.5	18.39	3.40	2.20
January, 1931	.95	49.0	20.6	(1)	(1)	(1)
July, 1931	.18	49.0	20.6	(1)	(1)	(1)
December, 1931	.77	49.0	20.6	(1)	(1)	(1)

[1] Average retail values not available Dec. 31, 1931.

The above figures show that losses to the producer and landowner, due to lower priced oil, did not proportionately benefit the consumer.

Asphalt and bitumen	106,775	107,053	47,498

[1] 280 pounds equal a barrel.
[2] 5.5 barrels equal 2,000 pounds.

Exports of crude petroleum and liquid refined products, 1927–1930–1931

[December, 1931, estimated]

Year	Crude oil (barrels)	Refined products (barrels)	Total value
1927	15,843,405	115,398,500	$485,903,000
1928	18,961,302	126,166,841	525,852,000
1929	20,394,349	126,377,138	561,191,000
1930	23,705,000	130,844,000	494,243,000
1931	27,000,000	100,000,000	270,455,000
Export shrinkage in 1931 (about 45 per cent)			223,788,000

NOTE.—Authority, U. S. Bureau of Foreign and Domestic Commerce and U. S. Bureau of Mines.

Imports of crude and refined products

Year	Barrels	Total value
1929	108,710,000	$143,557,000
1930	105,618,000	145,116,000
1931	85,000,000	95,000,000

Revenue which would accrue to the United States Treasury if the proposed tariff on petroleum and refined products were in effect—principal imported items

[Based on statistics for 1930]

Product	Quantity imported	Unit of duty	New York wholesale price average	Rate of duty	Tariff revenue
	Barrels	*Barrels*			
Crude oil	62,129,419	62,129,419		$1.00	$62,129,419
Fuel oil	26,080,383	26,080,383		1.00	26,080,383
		Gallons		*50 per cent*	
Distillates and topped oils	148,993	6,257,706	0.0604	0.302	188,982
Gasoline	16,926,800	710,825,600	.080765	.0403	28,650,301
Kerosene	200,086	8,403,612	.070077	.0353	296,647
Lubricating oil	24,728	1,038,576	[1].30	[1].15	155,786
	Pounds	*Pounds*			
Wax (paraffine)	42,764,399	42,764,399	[1].36	[1].018	769,759
Total					118,271,277

[1] Does not include asphalt, pertoleum coke, and medicinal oils.

NOTE.—Should a tariff cause importations of oil to cease, the increased value of domestic oil, coal, and allied industries will provide an equal amount of Federal revenue.

Democratic Platform, 1928, Promises Protection to United States Natural Resources

The Democratic tariff legislation will be based on the following policies:

(*a*) The maintenance of legitimate business and a high standard of wages for American labor.

(*b*) Increasing the purchasing power of wages and income by the reduction of those monopolistic and extortionate tariff rates bestowed in payment of political debts.

(*c*) Abolition of log-rolling and restoration of the Wilson conception of a fact-finding tariff commission, quasi-judicial and free from the executive domination which has destroyed the usefulness of the present commission.

(*d*) Duties that will permit effective competition, insure against monopoly and at the same time, produce a fair revenue for the support of government. Actual difference between the cost of production at home and abroad, with adequate safeguard for the wage of the American laborer, must be the extreme measure of every tariff rate.

(*e*) Safeguarding the public against monopoly created by special tariff favors.

(*f*) Equitable distribution of the benefits and burdens of the tariff among all. Wage earner, farmer, stockman, producer and legitimate business in general have everything to gain from a Democratic tariff based on justice to all.

MINING

Mining is one of the basic industries of this country. We produce more coal, iron, and copper than any other country. The value of our mineral production is second only to agriculture. Mining has suffered like agriculture and from similar causes. It is the duty of our Government to foster this industry and to remove the restrictions that destroy its prosperity.

COAL

Bituminous coal is not only the common base of manufacture, but is a vital agency in our interstate transportation. The demoralization of this industry, its labor conflicts and distress, its waste of a national resource and disordered public service demand constructive legislation that will allow capital and labor a fair share of prosperity with adequate protection to the consuming public.

Republican Platform, 1928, Promises Protection to United States Natural Resources

We reaffirm our belief in the protective tariff as a fundamental and essential principle of the economic life of this nation. While certain provisions of the present law require revision in the light of changes in the world competitive situation since its enactment, the record of the United States since 1922 clearly shows that the fundamental protective principle of the law has been fully justified.

It has stimulated the development of our natural resources, provided fuller employment at higher wages through the promotion of industrial activity, assured thereby the continuance of the farmers' major market and further raised the standards of living and general comfort and well-being of our people. The great expansion in the wealth of our nation during the last fifty years, and particularly in the last decade, could not have been accomplished without a protective tariff system designated to promote the vital interests of all classes.

ALL SECTIONS BENEFITED

Nor have these manifest benefits been restricted to any particular section of the country. They are enjoyed throughout the land either directly or indirectly. Their stimulus has been felt in industries, farming sections, trade circles, and communities in every quarter. However, we realize that there are certain industries which can not now successfully compete with foreign producers because of lower foreign wages and a lower cost of living abroad, and we pledge the next Republican Congress to an examination and where necessary a revision of these schedules to the end that American labor in these industries may again command the home market, may maintain its standard of living, and may count upon steady employment in its accustomed field. Adherence to that policy is essential to the continued prosperity of the country. Under it the standard of living of the American people has been raised to the highest levels ever known. Its example has been eagerly followed by the rest of the world, whose experts have repeatedly reported

with approval the relationship of this policy to our prosperity, with the resultant emulation of that example by other nations.

TARIFF VITAL

A protective tariff is as vital to American agriculture as it is to American manufacturing. The Republican party believes that the home market, built up under the protective policy, belongs to the American farmer, and it pledges its support of legislation which will give this market to him to the full extent of his ability to supply it. Agriculture derives large benefits not only directly from the protective duties levied on competitive farm products of foreign origin, but also, indirectly, from the increase in the purchasing power of American workmen employed in industries similarly protected. These benefits extend also to persons engaged in trade, transportation and other activities.

The tariff act of 1922 has justified itself in the expansion of our foreign trade during the last five years. Our domestic exports have increased from $3,800,000,000 in 1922, to $4,800,000,000 in 1927. During the same period imports have increased from $3,100,000,000 to $4,400,000,000.

EXPORTS NOT HAMPERED

Contrary to the prophecies of its critics, the present tariff law has not hampered the natural growth in the exportation of the products of American agriculture, industry and mining, nor has it restricted the importation of foreign commodities which this country can utilize without jeopardizing its economic structure.

The United States is the largest customer in the world today. If we were not prosperous and able to buy, the rest of the world would also suffer. It is inconceivable that American labor will ever consent to the abolition of protection which would bring the American standard of living down to the level of that in Europe, or that the American farmer could survive if the enormous consuming power of the people in this country was curtailed and its market at home, if not destroyed, at least seriously impaired.

MINING

The money value of the mineral products of the country is second only to agriculture. We lead the countries of the world in the production of coal, iron, copper, and silver. The Nation suffers as a whole from any disturbance in the securing of any one of these minerals, and particularly when the coal supply is affected. The mining industry has always been self-sustaining, but we believe the Government should make every effort to aid the industry by protection, by removing any restrictions which may be hampering its development, and by increased technical and economic research investigations which are necessary for its welfare and normal development. The party is anxious, hopeful, and willing to assist in any feasible plan for the stabilization of the coal-mining industry which will work with justice to the miners, consumers, and producers.

Senator REED (presiding). Mr. Franklin, your 30 minutes have expired.

Mr. FRANKLIN. I should like to put in an analysis of the Tariff Commission's report, prepared by Mr. R. C. Osterstrom and Mr. J. W. Chewning, of the Pure Oil Co.

Senator REED (presiding). Without objection permission will be given.

Mr. FRANKLIN. This is in addition to the report which is a part of the record of the hearings of the Ways and Means Committee of the House of Representatives.

THE PURE OIL CO.,
Chicago, February 24, 1932.

Mr. WIRT FRANKLIN,
Washington, D. C.

DEAR MR. FRANKLIN: I am attaching a letter written by our Mr. Chewning in further connection with the Tariff Commission's report, which you will undoubtedly find interesting and possibly of some value.

This is being forwarded to you for what it is worth.

Very truly yours,

R. C. OSTERSTROM,
The Pure Oil Co.

PURE OIL CO.,
February 16, 1932.

DEAR MR. WAGNER: Continued study of the Tariff Commission's report on relative cost data of foreign and domestic petroleum and its products reveals that the cost tables the commission presents are all right as statistics, out misleading to one who undertakes to arrive at true relative costs. Its method of allocating costs obscures the relative value of Venezuelan crude—which dominates foreign costs and values—almost to the vanishing point.

It is well known in the refining industry that Venezuelan and other crudes of its class are suitable for making just two products, viz, commercial gasoline and bunker C fuel. As has already been shown in Mr. Osterstrom's letter to Mr. Wirt Franklin dated January 26, this crude, when refined by the proper methods, yields these two products approximately volume for volume. That is the sum of the volumes of the products (gasoline and fuel) approximate the original volume of the crude, and consist of 30 per cent gasoline and 70 per cent bunker C fuel. Actual yields are 30 per cent gasoline, 5 per cent fixed gases and 65 per cent fuel oil. But since the fixed gases are used as fuel it comes to the net result of 30 per cent gasoline and 70 per cent fuel oil which figures are used for simplicity.

If we forget for a moment the ponderous mass of data with which the commission has become entangled and consider its determined average cost of Venezuelan crude delivered to the Atlantic Seaboard for the 4-year period 1927–1930 compared to the average price of gasoline and bunker C fuel for this same period the calculation of the cost and profits obtainable from a barrel of this crude becomes simple. We have:

Average cost of 1 barrel crude delivered to Atlantic Seaboard	$0.87
Average cost of refining (Maximum of Commission's Findings)	.30
Total cost of 1 barrel finished products consisting of 30 per cent gasoline and 70 per cent bunker C fuel	1.17
Average value of 30 per cent barrel of gasoline over same 4-year period[1]	1.25
Average value of 70 per cent barrel of bunker C fuel same 4-year period[1]	.86
Total value per barrel	2.11
Net profit per barrel	.94

Regarding these figures from a standpoint of practical common sense supplies the most trustworthy evidence of their essential truthfulness. We know that the United States Government has often in the past years delivered Mexican crudes of essentially this class to Atlantic and Gulf coastal refiners and received in return bunker C fuel barrel for barrel. Inspection of the above figures shows that the excess value of a barrel of fuel oil over the original crude from which it came is a little more than sufficient to pay carrying charges. These values would tally up almost exactly if we placed the crude on a market basis instead of a cost basis.

It will be noted that the crude and refining costs given above are those the commission compiled (obtained from refiners). If we substitute the transportation and refining costs which Dr. Holland has already shown should be used here and which are brought out in Mr. Osterstrom's letter to Mr. Wirt Franklin dated January 26, 1932, the net profit will become $1.15 per barrel instead of $0.94 per barrel.

Returning to the commission's cost comparison it will suffice to point out a few of the absurdities to which these comparisons lead:

(1) By grouping gas and fuel oils together it arrives at an average value for those products combined somewhat higher than the real market value of industrial fuel oils. This fact is drawn out and made to appear that it is assigning too high a value to the foreign crude products grouped in this class when in reality—if gas oil and industrial fuel oil were segregated—it could be shown that relatively too low a value is assigned to the industrial fuel portion of which the Venezuelan product should consist entirely for this purpose of comparison.

(2) In allocating costs the domestic fuel products, being of low market value compared to the other products from this crude are made to absorb only about 17 per cent of the costs, while the same products from foreign crude must absorb 50 per cent of the costs. The result is a cost factor for the foreign products close

[1] Taken from Oil Price Handbook for 1930, which shows detail prices for 1930 and average price for the period.

to the actual, while for the domestic product it is probably less than one-half the actual cost. This is brought out very strikingly when one notices that the costs the commission determines for fuel and gas oils from foreign crude [2] are 93 per cent of the cost of the crude from which they came, while the costs determined for the same group of materials from domestic crude are only 59 per cent of the cost of the crude from which they came. All of this simply means that bunker C fuel from Venezuelan crude can be sold at a very handsome profit under average market conditions, while it must be sold from domestic crude at a great loss. Note again that gas oil is grouped here and hence does not get its fair share of costs. From Venezuelan crude properly handled, there is no gas oil, other than that which is cracked, so that this grouping simply serves to obscure the enormous difference in cost of making bunker C fuel from Venezuelan crude as compared to domestic crude.

NOTE.—These figures were calculated by averaging the costs shown in Appendix Tables 118 and 119 for foreign crude and Tables 120 and 121 for domestic crude. These tables give the commission's summary of costs for the years 1929 and 1930, respectively.

(3) A comparison of Appendix Tables 128 and 120 which show detailed distribution of refining costs for 1929 and 1930 shows that it cost 5 cents more in 1930 than in 1929 to refine a barrel of foreign crude. This increased cost is attributed by the commission to installation of cracking equipment and is pointed out several times, both in connection with increased gasoline yields and increased costs—notably on pages 52 and 60 of Part II and on page 43 of Part III. Yet Table 41,[3] Part III, shows that the cost of a gallon of gasoline from foreign crude was 51 cents [4] less in 1930 than in 1929, and that the foreign products cost 90 per cent of the domestic product's cost in 1929 while it cost only 86 per cent of the domestic product's cost in 1930.

In other words, one must conclude—from the commission's figures and discussions of the same—that it costs considerably less to make a gallon of gasoline by cracking Venezuelan crude than straight run gasoline costs from the same crude. No one who understands the principles of petroleum refining could agree to this.

(4) On page 30, Part III, the commission states:

"Fuel and gas oil have necessarily been treated as one product. House Resolution 391 calls for the determination of costs for fuel oil, but there is no clear line of demarcation between it and gas oil, and the questionnaires make no consistent distinction."

Here again the commission has been so grossly misled that it has failed utterly to comply with the explicit direction of House Resolution 391. There is just as clear a line of demarcation between gas oil and fuel oil as there is between gasoline and kerosene or for that matter between any other two commercial products of petroleum which lie adjacent to each other in their distillation ranges.

Yours very truly,

J. W. CREWNING.

Mr. FRANKLIN. By way of extension of my remarks, as suggested by the presiding officer, I should like to say:

The oil excise taxes in the proposed revenue law are practically the only ones which will produce large receipts for the Federal Government without imposing additional burdens upon industry, commerce or the ultimate consumer. At the rates fixed of 1 cent per gallon upon the various petroleum products, over $40,000,000 will be assured, if we base this estimate upon the average amount of imports for the past three years. The various items upon which this total is estimated are as follows:

Crude oil, 2,636,367,888 gallons, at 1 cent	$26,363,678
Fuel and gas oil 1,002,734,834 gallons at 1 cent	10,027,343
Gasoline, naphtha, and other finished light products, 551,349,414 gallons, at 1 cent	5,513,494
Total	41,904,515

[2] Also appendix basic cost Tables 118, 119, 120, and 121.
[3] Percentages calculated from comparative costs given in above tables.

If the proper distinction had been made between gasoline and crude oil so that the former were taxed at a rate proportioned upon the tax levied on crude oil, a 3 cent impost would have been set as the rate on imported gasoline. In round terms, it requires three barrels of crude oil to produce one barrel of gasoline. If the same rate is fixed for both of these commodities, it would be more economic to refine the crude oil before importing it, thus affecting American labor now engaged in American refineries. If this amendment were made, solely to equalize the rates in the present bill, then a tax of 3 cents per gallon upon gasoline would produce from this single item $16,540,482 instead of only $5,513,494.

In order to prevent evasion through false declarations and also to add a substantial amount to the revenue receipts, the foreign petroleum products now omitted from the bill might be included as follows, the figures given here, as also above, being based upon the official government data:

Tops and other refined distillates, 2,717,534 gallons at 1 cent	$27,175
Kerosene, 5,873,994 gallons, at 1 cent	58,739
Lubricating oil, 1,339,548 gallons at 4 cents	53,581
Paraffin and petroleum wax products, 46,928,711 pounds, at 1 cent	469,287
Natural asphalt and petroleum asphalt and bitumen, 73,770 long tons, at $2	147,540
Total	756,322

Since, according to the United States Tariff Commission, the differential between foreign and domestic production costs is $1.03, it is self-evident that the imposition of a 42-cent tax upon a barrel of foreign crude oil will not constitute any embargo and should not materially affect the volume of these imports. Neither should the gasoline tax, even at the increased figure which would make it equitable, constitute any barrier against this foreign product.

The suggestion that these excise taxes would adversely affect the importations upon which they are estimated is less valid when addressed to this tax than when it is considered in relation to the many other forms of taxation proposed in this measure. All tax history demonstrates the fact that the imposition of a tax burden upon any commodity or upon any business practice (such as stamp taxes, etc.) acts as a handicap or a deterrent. This is especially true in the case of the "nuisance taxes," so called. It is also especially true in the case of ordinary taxation upon commodities in which the margin of profit is very low. There have been cases in which importations have ceased and other cases in which importations have ceased because the tax burdens have become prohibitive. This is not true in the case of the oil excise taxes. According to the analysis of the United States Tariff Commission report made by Dr. W. W. Holland, of Toledo, Ohio, and quoted in the House Ways and Means Committee hearing, the importer of foreign petroleum now enjoys a net profit of 94 cents per barrel. Computations based upon other portions of the report show a net profit of $1.15 per barrel. The imposition of an excise tax of 1 cent per gallon or 42 cents per barrel would still leave the foreign importer a net profit of 73 cents.

This same report of the United States Tariff Commission gives the profits on the domestic product as only 11 cents. It requires no higher mathematics to demonstrate that a tax of 42 cents upon

foreign petroleum, which leaves the importer a net profit of 73 cents or a clear advantage of 62 cents over his American competitor, should not seriously decrease the continued importation of the foreign product. It would decrease the enormous profits now made by the oil importers at the expense of American industry and to the detriment of American labor. It would probably be the first blow struck at the approaching monopoly of the American petroleum industry now being created by these great oil-importing corporations. It would constitute a positive encouragement to the American oil interests and might prove the entering wedge through which, ultimately, they may obtain a fair competitive field.

The imposition of this tax upon imported petroleum and its refined products would not impose any additional burdens upon the prices paid by gasoline consumers. It is well known that there is no essential relation between the prices paid for gasoline and the prices paid for crude oil. Comparison of these prices in typical cities of the country over a period of years demonstrates the fact that gasoline has sold at its highest price when the crude oil from which it was produced sold at an unusually low price. Conversely, gasoline has sold at record low prices when the crude oil from which it was produced had reached an unusually high figure. Actually the price of gasoline is determined by the great distributing corporations which manipulate it at their will.

The fact that incredible dividends were paid during the depression period by the subsidiaries of the oil-importing concerns ranging from 100 per cent to 400 per cent per annum, demonstrates the enormous profits now being reaped by these organizations, at the expense of the consumer.

It is apparent to the unprejudiced student of the petroleum situation that while the Federal Government might realize from approximately $40,000,000 to $60,000,000 annually through these excise taxes, or, by justified increases in the rates an even larger sum, no excessive burden would be placed by them upon American industry, American labor, or any American capital except that which has been profiteering through the duty-free admission of these foreign products.

In the event that the purposes of this tax measure should be defeated by any movement on the part of the great oil-importing corporations to decrease their importations, the Nation's requirements could be adequately met by the American petroleum industry which would thus be enabled to reemploy approximately 300,000 oil workers now idle with a stimulating effect upon related industries upon which approximately 2,000,000 persons depend for their livelihood. The restoration of the consuming power of these people would be reflected at once in a new development of prosperity and would be registered in the tax receipts of the Federal Government from income taxes, corporation taxes, and from items included in this bill now under consideration.

Furthermore, the imposition of this tax would have a stimulating effect upon the petroleum situation in this country. While it should not necessarily cause any decrease in oil imports for legitimate purposes, such as supplying the demand of those now using foreign oil or its derivatives, it would prevent the use of these imports as a club to force down the prices of the American product below the

amount of tax thus fixed. In the past, through either the fact or the threat of greatly increased importations of foreign oil, American producers have been forced to sell their product at the price of 10 cents a barrel of 42 gallons. This low price has not been passed on to the consumer but has been absorbed in profits by the subsidiaries of the oil importers. The excise taxes in their present form would thus establish a 42 cents minimum price. While this would not affect the consumer and would not create any serious competition with imported oil, it would be of great value to the American petroleum industry.

The propriety of this excise tax should not be seriously disputed. Both political parties have repeatedly declared in favor of the principle involved in this measure. They have at times been so specific as to urge the imposition of excise taxes on foreign products for the purpose of creating revenue, especially when national emergencies such as the present arise. If it is right to tax the products of American industry, then it should also be right for us to tax the products of foreign labor. If it is right to tax the poverty of the poor, it should also be right for us to tax the profits of corporations now paying dividends ranging upward as high as 400 per cent.

This measure is justified in advance by the example set us by other nations, many of whom levy heavy excise taxes upon imported foreign petroleum and its products. The Netherlands have just put into effect a special import duty of 6 florins per 100 kilos, or approximately 6.83 cents for each gallon of gasoline, in addition to the former excise tax of 1.25 florins per 100 kilos, or 1.43 cents a gallon which had been levied upon all gasoline, both import and domestic refining. The Government of Batavia has just increased its gasoline excise tax to 9 florins on each 100 litres or 13.7 cents per gallon. This is in harmony with what seems to be the consistent and widespread attitude of other countries on taxation, many of them levying extremely heavy taxes, especially upon petroleum products even when these countries neither have petroleum reserves in their own lands or in their colonies. Compared with the oil excise taxes imposed by other countries, those suggested in the proposed revenue bill are extremely modest.

Most of the arguments offered against the excise tax on the ground that it might unwarrantably limit oil importations are based upon the present production figures in Venezuela. While it is true that Venezuelan crude oil last year totaled 25,224,620 barrels out of the 47,249,655 barrels imported, and while the fuel oils and gasoline from that country almost constituted the total amount of such importations, we must face the fact that Russia is rapidly becoming an important factor in our oil-importing situation. During the past year and in the present year cargoes of Soviet oil have been landed in this country at prices far below the production prices current in Venezuela. The Russian oil output last year totaled approximately 160,809,840 barrels, exceeding Venezuela's total by about forty-three and two-thirds million barrels, representing a gain of 21 per cent over the 1930 figures. In view of the prices declared at port of delivery, sometimes as low as 1.96 cents, it is clear that the excise taxes stated in the present bill will not constitute any protective tariff or embargo so far as Russia is concerned.

Objection to the inclusion of the excise taxes in the revenue bill on the ground that they should be brought up in a special tariff measure

is ill-founded. If these proposals were designed solely for the protection of the American industry, they should be much larger. They do not constitute a tariff, properly considered. They will produce revenue. They are appropriate provisions in any revenue measure. There are a number of precedents for their inclusion.

The American petroleum industry sought a tariff from the present session of Congress. It did not propose these excise taxes. The Ways and Means Committee of the House, on its own motion, inserted this provision in the revenue bill for the purpose of obtaining additional revenues. In order to expedite the balancing of the Budget and that we might not appear to obstruct, in any degree, such action by Congress, the American petroleum industry did not press the bills establishing a tariff upon foreign petroleum and its products. It tacitly agreed to the sacrifice of a goal toward which it had been working for several years with very bright prospects of success at this session. Although suffering from the unfair competition of duty-free foreign products which make no contribution whatever to State or Federal treasuries to which the American product paid tremendous taxes, it was willing to subordinate its interests and possibly its whole future, for the next few years at least, to the national necessities. It practically stepped aside and supported the present revenue bill although the consideration given the American oil industry through these oil excise taxes was far below what might have been expected if the condition of this American industry and its intimate relationship to general prosperity had been considered.

While we do not stress this moral responsibility and prefer not to over emphasize any implied obligation, we, nevertheless, feel that the fullest consideration is due these oil excise taxes. If they are eliminated merely through the influence of those who are profiting through foreign oil importations, then we must feel that a gross injustice is being done and that millions of dollars of potential revenue are being sacrificed without adequate justification. That such revenue can be obtained is indisputable; that most of those who oppose it are concerned about their own profits more than they are about the potential receipts by the Federal Government must be clear. Had the same motives actuated the responsible leaders of the American petroleum industry, they would have either directed their efforts toward securing a high protective tariff or else would have urged upon the other branch of Congress the correction of the very low tax figures proposed in the bill.

Senator CONNALLY. Senator Hull, would you be willing to wait 10 minutes longer?

Senator HULL. Yes.

Senator CONNALLY. Mr. Franklin, there is one point you have not had time to develop, the relation between gasoline and crude oil; the price of crude oil is not always reflected in the price of gasoline, is it?

Mr. FRANKLIN. What I said to your Senators about the revenue this would produce, I will refer you to a member of the Ways and Means Committee, Mr. Sanders of Texas, who on the floor of the House, when challenged as to the revenue this bill would produce, said, and I am quoting from the Congressional Record, page 6287, from a speech made on Monday, March 14, 1932:

> Mr. SANDERS of Texas. I can answer that yes and no, because they have been on both sides of the creek.

Senator CONNALLY (interposing). That is now about the matter of revenue.

Mr. FRANKLIN. Yes. He is referring to the Treasury Department:

I will admit that Mr. Mills stated that it would not produce any revenue. I can also say that I had an opinion from the Treasury Department that it would produce $44,000,000.

Now, as to this question about the cost of gasoline as compared with the cost of crude oil, it is a matter of general knowledge in the oil country that there is very little relation between the price of gasoline at the filling station and the price of crude oil at the well.

Senator CONNALLY. But if natural laws were permitted to operate there would be.

Mr. FRANKLIN. Yes. If like any ordinary branch of industry it were permitted to live, and the price of foreign oil was equalized with that of domestic oil, there would be some relation. But with imported oil used as a club to drive down the price paid for oil to the American producer, they can say: Our price is 10 cents. Sell it to us or we will bring in Venezuelan oil. In fact, that statement was made by one of the representatives of a pipe line in Kansas. And my authority for it is Mr. Loe, of Wichita, Kans. That was made last summer.

Senator GORE. I recall a statement made about a year ago as to a comparison when crude oil is $1 a barrel and when it is $3 a barrel, showing that in both cases the price of gasoline at the filling station was 18 cents a gallon. Could you prepare a statement and show the items of expense intervening between the well and the filling station?

Mr. FRANKLIN. It is in the statistics I filed a while ago.

Senator GORE. Very well.

Mr. FRANKLIN. There is a page on that and it gives the cities and prices in detail.

Senator GORE. All right.

Mr. FRANKLIN. In that relation I should like to call the attention of the committee to an investigation made by the Federal Trade Commission on resolution adopted by the Congress as to the petroleum industry, prices, profits, and competition, this report being dated December 12, 1927.

Senator HULL. Might I interrupt you for one moment to clear up a matter and then I will not bother you any more.

Mr. FRANKLIN. Senator Hull, don't you think I better finish this?

Senator HULL. Very well. Go ahead.

Mr. FRANKLIN. But I want you to understand that I always welcome questions.

Senator HULL. I know, but it is a question of time with the committee. Go ahead.

Mr. FRANKLIN. This was an investigation made by the Federal Trade Commission as to the relation of refined products of crude oil to the price of crude petroleum, and on page 19 in a latter of transmittal of the report to the Congress, appears this language:

In general as to the prices of crude petroleum this inquiry tends to establish the conclusion that the price movements for the longer periods are substantially controlled by supply and demand conditions, but that those conditions are reflected quite imperfectly in shorter periods, partly because crude prices are determined by the decisions of a few large purchasing companies among which there is generally little real competition. With respect to refined products, at least in local sale and distribution, the price conditions reflect oven less closely the actua changes in supply and demand, so far as they can be measured by concrete sta

tistical facts. In part this corresponds to the normal conditions of local marketing over wide areas, but in part also to the fact that the varying prices at which the different Standard companies offer their products at the same time in their respective marketing territories are generally followed by their competitors.

Senator HULL. Now, Mr. Franklin, the matter I referred to is this: I think you inadvertently gave the impression, to me at least, a while ago, that the Federal Government itself might be buying foreign oil. I think the statute requires the Government itself to buy from home producers anything it buys.

Mr. FRANKLIN. I am glad you asked me that question. That provision in the present statute which requires the Government to buy home-produced rather than foreign oil, was put in on an amendment to the appropriation bill introduced into the House of Representatives by Mr. Ayres, of Kansas last year and has become a permanent feature of this appropriation bill without inconvenience to the Navy. But up until that time a very large quantity of the purchases made by the Government were from the Royal Dutch Shell, being a foreign oil company and being foreign oil.

Senator CONNALLY. That question was injected by the opponents of this measure, who stated that if we passed this tariff the United States would spend from $8,000,000 to $10,000,000 more for its oil supply.

Senator HULL. I understand, but I was merely trying to get at the facts.

Senator CONNALLY. I know.

Mr. FRANKLIN. Now, gentlemen of the committee, I do not wish to take up any more of your time. I wish to thank the committee for the courtesies I have enjoyed. But I do wish to add that I welcome any questions. All I wanted to do was to have an opportunity to get before you our side of this matter, and now if there are any questions you would like to ask I will be very glad to answer them if I can.

LETTER FROM THE NETHERLAND MINISTER

DEPARTMENT OF STATE,
Washington, April 21, 1932.

Hon. REED SMOOT,
United States Senate.

MY DEAR SENATOR SMOOT: The Netherland minister this afternoon handed me a memorandum, a copy of which is attached, commenting on a statement Mr. Franklin is said to have made to your committee concerning the Dutch import duty on gasoline. The minister said he would be very grateful if I could get this memorandum in your hands immediately, as he believes the hearings are to be closed to-morrow. He feels it important for you to understand that the duty imposed in Holland is for revenue only and that it does not penalize the production of foreign countries, since the same duty is charged on the production of the Dutch Colonies themselves.

Sincerely yours,

W. R. CASTLE, Jr.

The Netherland minister presents his compliments to the Acting Secretary of State and begs leave to draw Mr. Castle's attention to a statement, reported by the United States Daily of April 18, to have been made by Mr. W. Franklin, president of the Independent Petroleum Association of America, before the Senate Finance Committee at the hearing which was held on the 16th in the matter of levying an import tax on foreign petroleum, etc., as prescribed in the revenue bill No. H. R. 10236, at present under consideration.

Mr. Franklin is cited to have stated that "The Netherlands have just put into effect a special import duty of 6 florins per 100 kilograms, or approximately

6.83 cents for each gallon of gasoline in addition to the former excise tax of 1.25 florins per 100 kilograms, or 1.43 cents a gallon, which had been levied upon all gasoline, both of import and domestic refining."

It is not Mr. van Roijen's intention to contest any of the figures given by Mr. Franklin, but as it is possible that the Senators before whom the statement was made have obtained the impression that the Netherlands are protecting their own oil industry (which is not established in the Netherlands in Europe but in Netherland India) to the extent of the above quoted duty, the minister would like to make it clear that the tariff in question applies in equal measure to imports from Netherland territories overseas as to those from foreign sources.

Foreign and domestic mineral oils and the products derived therefrom compete in the markets of the Netherlands on absolutely equal terms.

That the American oil industry in particular meets the Netherland Indian producers in the markets of the Netherlands on perfectly equal terms is demonstrated when the imports of American petroleum, etc., during 1930 are compared with those from the Netherland East and West Indies.

The figures are:

	Imports from the United States of America	Imports from the Netherland East Indies	Imports from the Netherland West Indies
	Kilograms	*Kilograms*	*Kilograms*
Kerosene	144, 275, 972	701	.....
Fuel oil	15, 189, 241	499, 771	83, 446, 287
Gasoline	183, 649, 631	7, 286, 411	3, 022, 726
Crude oil not specified	103, 270, 256	3, 016, 602	84, 146, 533

The above figures represent the quantities imported for consumption; for storage in bond the import statistics are:

	From the United States of America	From the Netherland East Indies	From the Netherland West Indies
	Kilograms	*Kilograms*	*Kilograms*
Kerosene	150, 868, 968	.....	1, 269, 308
Gasoline	349, 630, 930	52, 762, 659	40, 204, 292
Gas oil	835, 062	.....	76, 890, 429

The imports from the Netherland West Indies do not of course constitute oil and products of oil mined in the Netherland West Indies, as no mineral oil is found there, but oil from foreign sources refined or in some way processed in the Netherland West Indies.

In view of the fact that the import duty of 1 cent a gallon on petroleum and petroleum-products, proposed in revenue bill H. R. 10236, will place, if enacted, such a heavy burden on the Netherland West Indian oil industry, the main importer in the United States of refined oil and gasoline, that all competition with the domestic producers will become impossible and the very existence of the industry itself may be threatened, Mr. Van Reijen would feel much obliged if Mr. Castle would transmit the contents of this communication to the Finance Committee of the Senate for consideration.

WASHINGTON, D. C., *April 21, 1932.*

STATEMENT IN OPPOSITION TO TAX ON TRANSPORTATION OF OIL BY PIPE LINE

(Submitted on behalf of Southwestern Oil Producers)

This statement is submitted by and on behalf of the producers of oil and particularly in the interest of the nonintegrated, independent producers of the mid-continent field. The mid-continent field is composed of the States of Kansas, Oklahoma, north and central Texas, Arkansas, and north Louisiana.

These producers, by reason of their financial distress and the certainty that the imposition of any further taxes or charges upon them at this critical time would mean the elimination of many of them and the loss of thousands of their stripper wells through inability to carry the additional loss, feel impelled to appear in their own behalf to petition the Finance Committee to eliminate from the revenue bill the tax on transportation of oil.

As grounds for this request these inland producers of domestic petroleum respectfully show and represent to the Finance Committee that—

1. Any tax levied upon or on account of, the transportation of oil inevitably will fall on the producer of oil;

2. It will bear most severely upon and will, therefore, be a discrimination against those inland producers who have to depend upon long pipe-line hauls to reach the refining centers;

3. The domestic producer has so severely suffered for three years from falling prices, demoralized and declining markets, and the excessive burden of State taxation that he is entirely without ability to pay any additional taxes, directly or indirectly; and

4. The effect of such an additional burden would be of far-reaching consequence in that it would not only drive many small producers out of business but would involve the loss of many old, small wells and the irreplaceable natural resource which they represent.

THE INCIDENCE OF THE TAX

The tax upon the transportation of oil by pipe line would be passed on to the public or passed back against the producer. Since the retail markets for petroleum products are demoralized by competition and prices are held down by excessive gasoline taxes and the undermining influence of evasion thereof, this transportation tax could not be passed on to the public by the refiner but would fall upon the producer for the reason that we have now, and probably will have for several years, a buyer's market for crude oil. Actual overproduction of crude oil, plus a great potential production awaiting a market, place the producer in the predicament of being unable to control the price of his commodity. (See Appendix B.) On the contrary, he must take what is offered him just as the farmer does in the case of his products. Naturally the refiners who because of extreme competition are all doing business upon an extremely narrow margin of profit, if any, can not and will not absorb an extra charge upon the transportation of crude oil but will recoup it by paying a correspondingly lower price to the producer. Thus the transportation tax will fall on the producer.

DISCRIMINATION AGAINST PRODUCERS IN THE INTERIOR

The mid-continent field depends upon pipe-line transportation to reach the refining centers near Kansas City, St. Louis, Chicago, Toledo, Cleveland, the international boundary near Detroit, and the Atlantic seaboard. Therefore a long haul is involved and since the tax is a percentage of the pipe-line charge the greater portion of the total revenue raised will be collected from mid-continent producers. In Appendix A hereto attached representative pipe-line rates from Oklahoma, Kansas, and north Texas fields to points north and east are listed. These range from 50 cents per barrel to Sugar Creek, Mo., to over 96 cents per barrel (including the gathering charge) to Atlantic coast points and would call for a tax of from 4 cents to nearly 8 cents per barrel under the terms of the pending bill. Such a tax would exceed the present day profits of the relatively few mid-continent producers who are making any profit, and that from flush production, and in the case of the others it would merely add to current losses.

PRODUCING INDUSTRY PROSTRATED AND UNABLE TO BEAR ADDITIONAL TAXATION

For three years the producers of domestic oil have been struggling for existence and many of them have passed out by the bankruptcy route. The price of crude oil in the mid-continent field is now only 33.6 per cent of what it was in May, 1926. The average grade of mid-continent crude now sells for 77 cents per barrel, which is the lowest price (with the exception of certain months in 1931) since prior to the world war and contrasts with a price of $2.29 per barrel for the same grade in 1926. The present price is below the cost of production and jeopardizes the existence of approximately 300,000 old small wells which constitute about 90 per cent of the producing wells in the United States. These wells can not stand the imposition of an additional tax of 5, 6, or 7 cents per barrel, and if imposed the rate of abandonment will be materially increased.

The losses of the producers both large and small have been appalling. Financial statements of individuals and small companies are not available, but the following data from statements of representative larger companies, some of them integrated, will reveal the generally depressed condition of the industry.

Year 1931 net losses

Amerada Petroleum Corporation	$1,701,648.00
Barnsdall Corporation	3,268,637.00
California Petroleum Corporation	712,048.00
Continental Oil Co	10,683,312.98
Gulf Oil Corporation	23,670,052.00
Ohio Oil Co	21,488,763.00
Panhandle Producing & Refining	515,644.00
Phillips Petroleum Co	5,576,409.00
Prairie Pipe Line Co. (11 months)	547,313.00
Sinclair Consolidated Oil Corporation (6 months)	10,415,088.00
Skelly Oil Co	2,117,110.00
South Penn Oil Co	820,191.00
Standard Oil Co. of Kansas	618,616.00
Texas Corporation	9,954,478.00
Texas Pacific Coal & Oil Co	1,413,235.51
Universal Consolidated Oil	301,898.00
Indian Refining Co	3,130,986.00
Signal Oil & Gas Co	269,405.00
Colonial Beacon Oil Co	2,365,780.00
Valvoline Oil Co	311,205.00
Republic Petroleum Co	78,293.00
Rio Grande Oil Co	2,476,499.00
Houston Oil Co	356,484.00
Pacific Western Oil Co	903,124.00
Wilcox Oil & Gas Co. (9 months)	718,862.00
National Refining Co	752,286.00

In large part these losses are caused by excessive State taxation of the oil industry and its products. They are subjected by the States to extraordinary burdens because of popular misconception of the industry's ability to pay. It has been fairly estimated that the tax burden of the oil industry is now in excess of a billion dollars per annum. The oil producer is particularly harassed by exorbitant taxation.

Illustrative of this condition is the fact that in the various States the property and business of the industry are subjected to the heavy ad valorem or general property tax, plus State income and corporation license taxes, tank-car taxes, and, particularly, gross production and severance taxes; in some States transportation taxes, and in all States exorbitant gasoline taxes.

Gasoline taxes of the States during the past year aggregated approximately $550,000,000 and ranged in rate from 2 cents per gallon to 7 cents per gallon, plus, in some instances, local county and municipal gasoline taxes. These taxes have become a heavy burden on the sale and distribution of the industry's principal product—so heavy, in fact, as to invite widespread bootlegging, evasion, price cutting, and other demoralizing marketing practices which have undermined the power of the industry to maintain itself upon a legitimately profitable basis.

The average rate of State gasoline tax alone is equivalent to a tax of from 84 cents to $1 per barrel of crude oil from which the gasoline is extracted and is therefore equal to a tax of 100 per cent of the selling price of such crude oil. In those States having the highest rates the tax is equal to 200 per cent of the market value of the crude.

To now add a tax upon the transportation of the crude oil which inevitably would be passed on to the producer would simply augment the growing deficit of the industry and render more remote the day when the producer could hope to emerge from the depression.

Furthermore, the producer in the interior who is already losing his markets for crude oil would suffer further in that respect by the imposition of the discriminatory transportation tax. The demand for oil in Oklahoma has declined from approximately 700,000 barrels per day in August 1929, to only about 400,000 barrels per day at this time. A supercharge upon the transportation and use of Oklahoma oil would be at this time particularly unfortunate.

THE EXCESSIVE RATE OF TAX AND ITS PROBABLE ILL EFFECTS

Unquestionably the rate of tax contained in the House bill, 8 per cent of the amount paid for transportation, is too high. It is the same rate as that assessed during and immediately after the war when business was flourishing and prices booming. Now, with bankruptcy threatening us, the depressive effect of the tax would be incalculably greater. It would add fifteen to twenty millions of dollars to the current net losses of the oil producer. An examination of the facts will reveal that, in the case of approximately 100,000 of the smaller wells in the mid-continent field which are yielding on the average only about 1 barrel per well per day and the cost of operation exceeds the gross income therefrom, the addition of such a tax would be ruinous. To a great extent it would set at naught the nation-wide efforts toward conservation of our oil resources.

For these reasons the American oil producers respectfully urge the finance committee and the Senate to refrain from inflicting this destructive additional burden upon them.

APPENDIX A

APPENDIX B

POTENTIAL PRODUCTION OF CRUDE PETROLEUM GREATLY EXCEEDS MARKET DEMAND, THUS CREATING A BUYER'S MARKET

The potential production of crude petroleum in the various oil-producing areas in the United States, as officially ascertained by the various State commissions and officials, has exceeded the actual market demand many times over since August, 1926. The following tabulation presents representative data for April, 1932, on the potential production as contrasted with the market demand for crude petroleum:

[In barrels per day]

Area	Potential production	Indicated demand	Excess production available
Hobbs Field, New Mexico	1,144,435	31,376	1,113,059
San Joaquin Valley, Calif.	537,180	164,650	372,530
Coastal District, California	121,385	59,450	61,935
Los Angeles Basin, California	400,465	232,600	167,865
Oklahoma City Field, Oklahoma	3,371,425	103,000	3,268,425
Other Oklahoma Fields, Oklahoma	631,879	339,163	292,716
Van Field, Texas (Oct. 1, 1931)	499,722	50,000	449,722
Yates Field, Texas	2,359,493	65,000	2,294,493
Darst Creek Field, Texas	130,727	18,000	112,727
Crane, Upton, Ector, Howard, Glasscock, and Winkler County Fields, Texas	260,893	84,000	176,893

The above producing areas provide 1,150,000 barrels per day of the present market demand for crude oil, and have a potential production in excess of the current market demand of approximately 8,300,000 barrels per day, the total present potential daily production of these areas being approximately 9,450,000 barrels per day.

To the above list of flush production areas, must be added the great east Texas producing fields of Longview, Kilgore, and Joiner. No official gage of the potential production in this area has been made in recent months, and few, if any, of the wells will ever be opened to full flow production during the flush stage. At the present time (April 15, 1932) there are 4,632 producing wells in the area, and it is variously estimated that if they were opened on full flow for one full day, the area would produce from 10,000,000 to 50,000,000 barrels that day. It is further variously estimated that the field could average from 2,500,000 to 7,500,000

barrels per day for several months. At the present, the market demand from this area is only approximately 325,000 barrels per day, and the total market demand in the United States does not exceed 2,250,000 barrels per day.

RESOLUTION OF THE GENERAL BOARD OF DIRECTORS OF THE MID-CONTINENT OIL AND GAS ASSOCIATION IN OPPOSITION TO THE OIL TRANSPORTATION TAX

Respectfully submitted to the Finance Committee of the United States Senate.

Whereas there is pending before the Senate of the United States as a part of the revenue bill a provision for a tax of 8 per cent upon the amount paid for the transportation of oil by pipe line, which tax, by the terms of the pending bill, is to be collected by the person furnishing the transportation from the person paying for such transportation, and is also to be levied and collected even in those instances where the transportation for any reason is not paid for; and

Whereas no similar transportation tax is levied against other commodities but is confined to oil and at an extremely high rate:

Now, therefore, the general board of directors of the Mid-Continent Oil and Gas Association, representing the southwestern producers of oil, hereby protests against the enactment of part 4, title 5, being section 731 of said proposed bill for the following reasons, to wit:

That the domestic petroleum industry and its products are now overtaxed in comparison with other industries. The oil business and its products are subjected by the States to extraordinary burdens because of some popular misconception of the industry's ability to pay. Illustrative of this condition is the fact that in the various States the property and business of the industry are subjected to the heavy ad valorem or general property taxes, plus State income and corporation license taxes, tank car taxes and, particularly, gross production and severance taxes; in some States transportation taxes, and in all States exorbitant gasoline taxes.

Gasoline taxes of the States during the past year aggregated approximately $550,000,000, and ranged in rate from 2 cents per gallon to 7 cents per gallon, plus, in some instances, local county and municipal gasoline taxes. These taxes have become a heavy burden on the sale and distribution of the industry's principal product—so heavy, in fact, as to invite widespread bootlegging, evasion, price-cutting, and other demoralizing marketing practices which have undermined the power of the industry to maintain itself upon a legitimately profitable basis.

The average rate of State gasoline tax alone is equivalent to a tax of from 84 cents to $1 per barrel of crude oil from which the gasoline is extracted and is therefore equal to a tax of 100 per cent of the selling price of such crude oil. In those States having the highest rate the tax is equal to 200 per cent of the market value of the crude.

Financial reports for 1930 and 1931 will reveal widespread and appalling losses throughout the industry. It has been fairly estimated that the tax burden of the oil business is now in excess of a billion dollars per annum. The producer of oil is particularly harassed by exorbitant taxation. To now add a tax upon the transportation of oil, which tax would be largely borne by the producer, would be but to add to the growing deficit of this industry and to retard, if not to indefinitely postpone the date of its recovery. And this would be true whether the tax in the first instance was levied directly against the pipeline company or the shipper.

Aside from the welfare of the oil industry, the public interest is involved here because oil is an unreplaceable natural resource and the addition of a heavy tax upon its transportation from the inland pools will have a depressing effect upon the price and demand for such inland oil, thus jeopardizing the continued existence of some 300,000 old small wells which after being subjected to every economy are unable to make a profit at present prices. The imposition of additional taxes directly or indirectly would mean the abandonment of thousands of them and consequently the permanent loss of the natural resource which they represent.

We, therefore, respectfully petition the Finance Committee of the United States Senate to eliminate this item from the revenue bill, believing that its destructive effects, if enacted, would far outweigh the importance and value of any revenue that might be derived therefrom.

MID-CONTINENT OIL AND GAS ASSOCIATION

TULSA, OKLA.

STATEMENT OF WILLIAM G. WINSOR, JR.

UNITED STATES SENATE, *April 21, 1932.*

Hon. REED SMOOT,
United States Senate.

MY DEAR SENATOR: I have a letter this morning from Mr. William G. Winsor, jr., president of the Rhode Island Welding Co., and one of my constituents, in which he expresses disappointment at his failure to be heard by the Finance Committee when he came to here and stayed last Friday and Saturday to oppose the proposed tariff on imported oil.

Mr. Winsor incloses with his letter a copy of a statement which he desired to read to the committee. It is brief and it occurred to me that under the circumstances you might be willing to have it incorporated in the record of your hearings. If you can do so, will you please let me know in order that I may reassure Mr. Winsor?

Yours very truly,

FELIX HEBERT.

In appearing in opposition to the proposed oil tariff, I represent the Rhode Island Welding Co. of Providence, R. I., manufacturers of Ray-Dio Sunshine Burners that convert oil into sunshine. I also speak in behalf of the oil-burner industry of Rhode Island in particular and of the country in general, and, last but not least, for users of oil-burning equipment.

Sir Roger de Coverly used to say, "There is much to be said on both sides." Surely, there has been a lot of talk on both sides—how much has been said is for you gentlemen to determine. Many figures have been submitted by proponents—and by opponents, as well. Both can't be right.

My conception of a protective tariff has been that it should protect an infant industry or one where imports exceed exports. The oil industry in the United States is not exactly an infant. Recent Government figures show our oil exports to be increasing—about three times the amount of imports. Figures have been advanced to show the very opposite—and figures don't lie, they say.

The Boston Post carried an advertisement day before yesterday, stating that the first oil burning equipment in the East was installed in Boston in 1915. It has been in use on the west coast at least 15 years longer.

I have here figures given me by the editor of Fuel Oil Journal that will appear in their 1932 Survey of the Oil Burner Industry, not yet published. From this I find the following estimates:

	Number of burners in use
Automatic domestic burners	773, 400
Range oil burners	350, 000
Circulating oil burning heaters	100, 000
Total	1, 223, 400
Of these, there are in New England alone:	
Automatic domestic burners	101, 470
Range oil burners [1]	300, 000
Circulating oil burning heaters	40, 000
Total	441, 470
Money invested by users	$528, 210, 000
Money invested by manufacturers and dealers	95, 000, 000
Employees of 225 manufacturers	10, 000
Employees of 8,000 bona fide dealers	40, 000
Total (a conservative estimate)	50, 000

[1] The range burner business originated in New England and until recently the volume of sales has been confined to those six States, but now is heeding that famous bit of advice to young men, and is "going West."

Estimated sales for 1931, in dollars:	Number of burners in use
Automatic domestic (103,997)	$57, 198, 350
Commercial (large buildings, 2,300)	4, 600, 000
Industrial (manufacturers, marine, locomotive)	25, 000, 000
Range burners (148,212)	5, 928, 480
Circulating heaters	3, 468, 320
Total	96, 195, 150

In addition to employees directly connected with the manufacture and sales, many people are employed by manufacturers of motors and other electrical equipment, piping, tubing, fittings, asbestos, refractories, storage tanks, etc.

Domestic burners are owned, in the main, by people of moderate means. Range and stove (circulating heaters) burners are owned mostly by wage earners. Being more familiar with these two classes, I shall confine my remarks to them.

The sale has increased rapidly the past two years, particularly range and stove burners, because oil could be had at reasonable cost. In fact, in the past the high cost of oil presented the principal sales resistance. Even during these two years, many people have refused to buy, fearing that the price of oil would be advanced as soon as large numbers were installed. Those who did buy, did so because their fears were allayed by statements such as one given by the president of one of the large oil companies in the Fuel Oil Journal of June, 1931, saying:

"We have knowledge at this time of petroleum resources gained by actual drilling, as well as resources of new refining technique and methods, upon which to base the belief that there will be an ample supply of oil at reasonable prices for many years. Under the circumstances, there can be no hesitancy by a prospective oil burner purchaser on the ground that the supply of oil may give out."

During the past eight years, and mostly in the last two, a substantial business has been developed in the manufacture and sale of blue-flame, vaporizing, atmospheric type burners, such as our Ray-Dio Sunshine, adaptable to ordinary kitchen ranges, parlor stoves, and small heating plants, at reasonable prices—within the reach of the wage earner.

These burners bring to the workingman's home the same relative comfort the rich man enjoys. In many homes, the only means of cooking and heating is the kitchen range. The installation of these small burners has been a real boom to the laborer's homes, for it is not uncommon for both man and wife to be employed in mills or factories.

Before the advent of these Emancipators of Stove and Furnace Slaves, they would come home to find the fire out and the house cold, which meant cleaning out the stove, chopping kindling, lugging in coal or wood, carting out ashes, and—waiting for supper. Now, they come home to a warm house, kettle singing on the stove, and—no waits for supper.

These people have invested their money on the assurance of an adequate supply of oil at reasonable price. They are not concerned with the differences between groups of oil companies, especially since they both make us weep—one, because they bought oil at 10 cents per barrel, with gasoline that much per gallon to the rest of us, which made them look to their pipe-line companies for their profit, while the other, so an oil man told me Wednesday of this week, could maintain here in Washington a suite of offices in one of the hotels, a fleet of taxicabs at their beck and call, jewelry-bedecked stenographers, and telephone operators in low-necked dresses, topped off with a retinue of attendants that would put an Indian prince to shame. The users of oil-burning equipment are interested in the price of oil, however.

It was admitted by one witness yesterday that the adoption of this tariff—in the guise of revenue—would boost the price of oil. This same witness claimed there would be no decline in imports. Department of Commerce experts say it would mean virtually an embargo on oil and a positive loss to the Government. Again, both can't be right.

Undoubtedly, the proposed oil tariff, if adopted, will bear down on these people of moderate means, who have to count the pennies in normal times, and pinch them now. An oil burner means much to the workingman's wife, for she can cook any time, day or night, and her house work is cut in two, for there's no coal dust or ashes on curtains and sashes—or anywhere else. It makes this dream come true:

No ashes to cart out,
No coal to lug in,
No grates to shake down,
No knuckles to skin.

The manufacturers of oil-burner equipment, the wage earners in the industry and hundreds of thousands of users, therefore, believe that your committee should not permit a tariff on oil, especially since such a tariff will mean an embargo of foreign imports and an admitted increase in the price of oil, and will produce no revenue to help balance the Budget.

WASHINGTON, D. C., *April 16, 1932.*

STATEMENT OF HARRY H. SMITH, TULSA, OKLA., REPRESENTING THE MID-CONTINENT OIL & GAS ASSOCIATION

Mr. SMITH. Mr. Chairman and members of the committee, I only desire a moment or two to present one or two phases briefly of the Transportation Act as affecting the inland oil producers in the Southwest.

Senator GORE. Tell who you are, Mr. Smith.

Mr. SMITH. I represent the Mid-Continent Oil & Gas Association, headquarters Tulsa, Okla.

Senator GORE. What is your connection with that organization?

Mr. SMITH. I am secretary. My name is Harry H. Smith.

Senator GORE. And the Mid-Continent Oil & Gas Association embraces which States?

Mr. SMITH. The Mid-Continent Oil & Gas Association covers the fields of Kansas, Oklahoma, Texas, Arkansas, north Louisiana, and a part of New Mexico; represents the oil producers. And I particularly appear for the nonintegrated or independent producers as distinguished from the large pipe line companies.

There are just four points that I wish to present to the committee very briefly. The first is that this tax upon the transportation of oil by pipe lines inevitably will be a tax upon the producers of oil themselves. Not upon the pipe-lines.

Secondly, it will bear most severely upon those producers who are in the inland regions of the country and must use pipe-line transportation.

Senator COUZENS. Do the oil producers own the pipe lines?

Mr. SMITH. No, sir; the producers I represent do not. They sell their oil at the mouth of the well.

Senator GORE. He is representing the nonintegrated groups, Senator.

Mr. SMITH. Third, the domestic producer has so severely suffered for three years from falling prices, demoralized markets, and particularly the excessive burden of State taxation, that they simply can not pay any additional taxes at this time.

Fourth, necessarily the effect of such tax would be to put many of them out of business and cause the abandonment of thousands of the small oil wells.

Briefly, as to the incidence of the tax, the reason why the producers would have to pay it is simply this. It would be taxed on either to the public or back to the producer. Because the retail markets are demoralized, held down by the gasoline tax. There is no opportunity to pass it on to the public.

Secondly, we have a pronounced buyer's market for crude oil, with a daily demand for crude oil in this country of approximately two and one-quarter million barrels per day. We have a potential production of 10,000,000 barrels per day. And so the little oil producer in the Southwest merely takes for his oil what the great refiners offer him

for it, just as the farmer does when he takes his products to the railroad station.

Senator COUZENS. Are not the pipe-line companies showing a profit now?

Mr. SMITH. The great pipe lines operating under rates prescribed by the Interstate Commerce Commission show a profit. They are about the only people that do. But this tax is assessed not on the pipe line but upon the person who pays for the transportation.

Senator GORE. A tax on the shipper?

Mr. SMITH. A tax on the shipper.

Now in conclusion I merely want to call the attention of the committee that the price of crude oil in the mid-continent field at this time is only about 33.6 per cent of what it was in 1926. In other words, oil selling at 77 cents a barrel is at the lowest point since the World War, and compares with the price of $2.29 for the same crude in 1926. The present price is below the cost of production, and this is reflected by the losses of the oil-producing companies as contained in the brief which I submit for the record.

In conclusion I want to call the committee's attention to the fact that this tax at 8 per cent is the same rate that was assessed during and immediately after the war, and that unquestionably if it was a reasonable tax at that time with business good and prices booming it is not a reasonable tax at this time when bankruptcy is threatening us. So I hope the committee will find its way clear to eliminate this tax which in its incidence is a tax upon the people least able to pay it in this country.

Senator GORE. You want to file a brief, do you not?

Mr. SMITH. Yes. I wish to file this brief.

The CHAIRMAN. It may be placed in the record at this point.

(The brief presented by Mr. Smith is here printed in the record in full, as follows:)

STATEMENT IN OPPOSITION TO TAX ON TRANSPORTATION OF OIL BY PIPE LINE

(Submitted on behalf of Southwestern Oil Producers)

This statement is submitted by and on behalf of the producers of oil and particularly in the interest of the nonintegrated, independent producers of the Mid-Continent Field. The Mid-Continent Field is composed of the States of Kansas, Oklahoma, north and central Texas, Arkansas, and north Louisiana.

These producers, by reason of their financial distress and the certainty that the imposition of any further taxes or charges upon them at this critical time would mean the elimination of many of them and the loss of thousands of their stripper wells through inability to carry the additional loss, feel impelled to appear in their own behalf to petition the Finance Committee to eliminate from the revenue bill the tax on transportation of oil.

As grounds for this request these inland producers of domestic petroleum respectfully show and represent to the Finance Committee that—

1. Any tax levied upon or on account of, the transportation of oil inevitably will fall on the producer of oil;

2. It will bear most severely upon and will, therefore, be a discrimination against those inland producers who have to depend upon long pipe-line hauls to reach the refining centers;

3. The domestic producer has so severely suffered for three years from falling prices, demoralized and declining markets and the excessive burden of State taxation that he is entirely without ability to pay any additional taxes directly or indirectly; and

4. The effect of such an additional burden would be of far-reaching consequence in that it would not only drive many small producers out of business but would involve the loss of many old, small wells and the irreplaceable natural resource which they represent.

THE INCIDENCE OF THE TAX

The tax upon the transportation of oil by pipe line would be passed on to the public or passed back against the producer. Since the retail markets for petroleum products are demoralized by competition and prices are held down by excessive gasoline taxes and the undermining influence of evasion thereof, this transportation tax could not be passed on to the public by the refiner but would fall upon the producer for the reason that we have now, and probably will have for several years, a buyer's market for crude oil. Actual overproduction of crude oil, plus a great potential production awaiting a market, place the producer in the predicament of being unable to control the price of his commodity. (See Appendix B.) On the contrary, he must take what is offered him just as the farmer does in the case of his products. Naturally the refiners who because of extreme competition are all doing business upon an extremely narrow margin of profit, if any can not and will not absorb an extra charge upon the transportation of crude oil but will recoup it by paying a correspondingly lower price to the producer. Thus the transportation tax will fall on the producer.

DISCRIMINATION AGAINST PRODUCERS IN THE INTERIOR

The Mid-Continent field depends upon pipe-line transportation to reach the refining centers near Kansas City, St. Louis, Chicago, Toledo, Cleveland, the international boundary near Detroit and the Atlantic seaboard. Therefore a long haul is involved and since the tax is a percentage of the pipe-line charge the greater portion of the total revenue raised will be collected from Mid-Continent producers. In Appendix A hereto attached representative pipe-line rates from Oklahoma, Kansas, and north Texas fields to points north and east are listed. These range from 50 cents per barrel to Sugan Creek, Mo., to over 90 cents per barrel (including the gathering charge) to Atlantic coast points and would call for a tax of from 4 cents to nearly 8 cents per barrel under the terms of the pending bill. Such a tax would exceed the present-day profits of the relatively few Mis-Continent producers who are making any profit, and that from flush production, and in the case of the others it would merely add to current losses.

PRODUCING INDUSTRY PROSTRATED AND UNABLE TO BEAR ADDITIONAL TAXATION

For three years the producers of domestic oil have been struggling for existence and many of them have passed out by the bankruptcy route. The price of crude oil in the Mid-Continent field is now only 33.6 per cent of what it was in May, 1926. The average grade of Mid-Continent crude now sells for 77 cents per barrel, which is the lowest price (with the exception of certain months in 1931) since prior to the World War and contrasts with a price of $2.29 per barrel for the same grade in 1926. The present price is below the cost of production and jeopardizes the existence of approximately 300,000 old small wells which constitute about 90 per cent of the producing wells in the United States. These wells can not stand the imposition of an additional tax of 5, 6, or 7 cents per barrel and, if imposed, the rate of abandonment will be materially increased.

The losses of the producers, both large and small, have been appalling. Financial statements of individuals and small companies are not available but the following data from statements of representative larger companies, some of them integrated, will reveal the generally depressed condition of the industry.

Year 1931, net losses

Amerada Petroleum Corporation	$1,701,648.00
Barnsdall Corporation	3,268,637.00
California Petroleum Corporation	712,048.00
Continental Oil Co	10,683,312.98
Gulf Oil Corporation	23,670,052.00
Ohio Oil Co	21,488,763.00
Panhandle Producing & Refining	515,644.00
Phillips Petroleum Co	5,576,409.00
Prairie Pipe Line Co., 11 months	547,313.00
Sinclair Consolidated Oil Corporation, 6 months	10,415,088.00
Skelly Oil Co	2,117,110.00
South Penn Oil Co	820,191.00
Standard Oil Co. of Kansas	618,616.00
Texas Corporation	9,954,478.00

Texas Pacific Coal & Oil Co	$1, 413, 235. 51
Universal Consolidated Oil	301, 898. 00
Indian Refining Co	3, 130, 986. 00
Signal Oil & Gas Co	269, 405. 00
Colonial Beacon Oil Co	2, 365, 780. 00
Valvoline Oil Co	311, 205. 00
Republic Petroleum Co	78, 293. 00
Rio Grande Oil Co	2, 476, 490. 00
Houston Oil Co	356, 484. 00
Pacific Western Oil Co	903, 124. 00
Wilcox Oil & Gas Co., 9 months	718, 862. 00
National Refining Co	752, 286. 00

In large part these losses are caused by excessive State taxation of the oil industry and its products. They are subjected by the States to extraordinary burdens because of popular misconception of the industry's ability to pay. It has been fairly estimated that the tax burden of the oil industry is now in excess of a billion dollars per annum. The oil producer is particularly harassed by exorbitant taxation.

Illustrative of this condition is the fact that in the various States the property and business of the industry are subjected to the heavy ad valorem or general property tax, plus State income and corporation license taxes, tank car taxes, and, particularly, gross production and severance taxes; in some States transportation taxes, and in all States exorbitant gasoline taxes.

Gasoline taxes of the States during the past year aggregated approximately $550,000,000, and ranged in rate from 2 cents per gallon to 7 cents per gallon, plus, in some instances, local county and municipal gasoline taxes. These taxes have become a heavy burden on the sale and distribution of the industry's principal product—so heavy, in fact, as to invite widespread bootlegging, evasion, price cutting and other demoralizing marketing practices which have undermined the power of the industry to maintain itself upon a legitimately profitable basis.

The average rate of State gasoline tax alone is equivalent to a tax of from 84 cents to $1 per barrel of crude oil from which the gasoline is extracted and is therefore equal to a tax of 100 per cent of the selling price of such crude oil. In those States having the highest rates the tax is equal to 200 per cent of the market value of the crude.

To now add a tax upon the transportation of the crude oil which inevitably would be passed on to the producer would simply augment the growing deficit of the industry and render more remote the day when the producer could hope to emerge from the depression.

Furthermore, the producer in the interior who is already losing his markets for crude oil would suffer in that respect by the imposition of the discriminatory transportation tax. The demand for oil in Oklahoma has declined from approximately 700,000 barrels per day in August, 1929, to only about 400,000 barrels per day at this time. A supercharge upon the transportation and use of Oklahoma oil would be at this time particularly unfortunate.

THE EXCESSIVE RATE OF TAX AND ITS PROBABLE ILL EFFECTS

Unquestionably the rate of tax contained in the House bill, 8 per cent of the amount paid for transportation, is too high. It is the same rate as that assessed during and immediately after the war when business was flourishing and prices booming. Now, with bankruptcy threatening us, the depressive effect of the tax would be incalculably greater. It would add 15 to 20 millions of dollars to the current net losses of the oil producer. An examination of the facts will reveal that, in the case of approximately 100,000 of the smaller wells in the Mid-Continent Field which are yielding on the average only about one barrel per well per day and the cost of operation exceeds the gross income therefrom, the addition of such a tax would be ruinous. To a great extent it would set at naught the nation-wide efforts toward conservation of our oil resources.

For these reasons the American oil producers respectfully urge the Finance Committee and the Senate to refrain from inflicting this destructive additional burden upon them.

MID-CONTINENT OIL & GAS ASSOCIATION, TULSA, OKLA.

APPENDIX B

POTENTIAL PRODUCTION OF CRUDE PETROLEUM GREATLY EXCEEDS MARKET DEMAND, THUS CREATING BUYERS' MARKET

The potential production of crude petroleum in the various oil-producing areas in the United States, as officially ascertained by the various State commissions and officials, has exceeded the actual market demand many times over since August, 1926. The following tabulation presents representative data for April, 1932, on the potential production as contrasted with the market demand for crude petroleum.

Area	Barrels per day		
	Potential production	Indicated demand	Excess production available
Hobbs field, New Mexico	1,144,435	31,376	1,113,059
San Joaquin Valley, Calif.	537,180	164,650	372,530
Coastal district, California	121,385	59,450	61,935
Los Angeles Basin, Calif.	400,465	232,600	167,865
Oklahoma City field, Oklahoma	3,371,425	103,000	3,268,425
Other Oklahoma fields, Oklahoma	631,879	339,163	292,716
Van field, Tex. (Oct. 1, 1931)	499,722	50,000	449,722
Yates field, Texas	2,359,493	65,000	2,294,493

The above producing areas provide 1,150,000 barrels per day of the present market demand for crude oil and have a potential production in excess of the current market demand of approximately 8,300,000 barrels per day, the total present potential daily production of these areas being approximately 9,450,000 barrels per day.

To the above list of flush-production areas must be added the great East Texas producing fields of Longview, Kilgore, and Joiner. No official gage of the potential production in this area has been made in recent months, and few, if any, of the wells will ever be opened to full-flow production during the flush stage. At the present time (April 15, 1932) there are 4,632 producing wells in the area, and it is variously estimated that if they were opened on full flow for one full day, the area would produce from 10,000,000 to 50,000,000 barrels that day. It is further variously estimated that the field could average from 2,500,000 to 7,500,000 barrels per day for several months. At the present, the market demand from this area is only approximately 325,000 barrels per day, and the total market demand in the United States does not exceed 2,250,000 barrels per day.

RESOLUTION OF THE GENERAL BOARD OF DIRECTORS OF THE MID-CONTINENT OIL & GAS ASSOCIATION IN OPPOSITION TO THE OIL TRANSPORTATION TAX

[Respectfully submitted to the Finance Committee of the United States Senate]

Whereas there is pending before the Senate of the United States as a part of the revenue bill a provision for a tax of 8 per cent upon the amount paid for the transportation of oil by pipe line, which tax, by the terms of the pending bill, is to be collected by the person furnishing the transportation from the person paying for such transportation, and is also to be levied and collected even in those instances where the transportation for any reason is not paid for; and

Whereas no similar transportation tax is levied against other commodities but is confined to oil and at an extremely high rate;

Now, therefore, the General Board of Directors of the Mid-Continent Oil & Gas Association, representing the Southwestern producers of oil, hereby protests against the enactment of Part 4, Title 5, being section 731 of said proposed bill for the following reasons, to-wit:

That the domestic petroleum industry and its products are now overtaxed in comparison with other industries. The oil business and its products are subjected by the States to extraordinary burdens because of some popular misconception of the industry's ability to pay. Illustrative of this condition is the fact that in

the various States the property and business of the industry are subjected to the heavy ad valorem or general property taxes, plus State income and corporation license taxes, tank car taxes and, particularly, gross production and severance taxes; in some States transportation taxes, and in all States exorbitant gasoline taxes.

Gasoline taxes of the States during the past year aggregated approximately 550 million dollars, and ranged in rate from 2 cents per gallon to 7 cents per gallon, plus, in some instances, local county and municipal gasoline taxes. These taxes have become a heavy burden on the sale and distribution of the industry's principal product—so heavy, in fact, as to invite widespread bootlegging, evasion, price-cutting and other demoralizing marketing practices which have undermined the power of the industry to maintain itself upon a legitimately profitable basis.

The average rate of State gasoline tax alone is equivalent to a tax of from 84 cents to $1 per barrel of crude oil from which the gasoline is extracted and is therefore equal to a tax of 100 per cent of the selling price of such crude oil. In those States having the highest rate the tax is equal to 200 per cent of the market value of the crude.

Financial reports for 1930 and 1931 will reveal widespread and appalling losses throughout the industry. It has been fairly estimated that the tax burden of the oil business is now in excess of a billion dollars per annum. The producer of oil is particularly harassed by exorbitant taxation. To now add a tax upon the transportation of oil, which tax would be largely borne by the producer, would be but to add to the growing deficit of this industry and to retard, if not to indefinitely postpone, the date of its recovery. And this would be true whether the tax in the first instance was levied directly against the pipe line company or the shipper.

Aside from the welfare of the oil industry the public interest is involved here because oil is an unreplaceable natural resource and the addition of a heavy tax upon its transportation from the inland pools will have a depressing effect upon the price and demand for such inland oil, thus jeopardizing the continued existence of some 300,000 old small wells which after being subjected to every economy are unable to make a profit at present prices. The imposition of additional taxes directly or indirectly would mean the abandonment of thousands of them and consequently the permanent loss of the natural resource which they represent.

We, therefore, respectfully petition the Finance Committee of the United State Senate to eliminate this item from the revenue bill, believing that its destructive effects, if enacted, would far outweigh the importance and value of any revenue that might be derived therefrom.

MID-CONTINENT OIL & GAS ASSOCIATION, *Tulsa, Okla.*

BRIEF SUBMITTED BY NATIONAL COAL ASSOCIATION

To the FINANCE COMMITTEE,
United States Senate, Washington, D. C.

GENTLEMEN: On behalf of the bituminous mining industry, the organization of which is the National Coal Association, this brief is submitted in support of the request of the industry for adequate protection against the demoralizing influence of the unrestricted importation from Caribbean ports of fuel and gas oil and of crude petroleum, a large part of which enters the fuel oil market. This foreign oil, produced in countries with a standard of living far below anything that would be considered tolerable in the United States, enters into direct competition with bituminous coal in the markets of the Atlantic seaboard. Its effects are seen in the thorough demoralization of the bituminous coal market. Mine operators in the attempt to meet this competition have been compelled to lower their prices to a point where neither the capital nor the labor engaged in the bituminous mining industry is receiving a return adequate to protect the employment and the standard of living of the workers or to yield any return to the operators.

PLIGHT OF THE BITUMINOUS MINING INDUSTRY

Both on account of the magnitude of the industry and because of the difficult times through which it has been passing the bituminous mining industry is deserving of your most earnest solicitude. The investment in bituminous mine operations is in excess of $3,000,000,000. Nearly 500,000 wage earners, as well as some 35,000 salaried men about the mines and in the offices of the com-

panies, are engaged in the industry even in these times of great industrial depression. Three million people are directly dependent upon the industry for their daily living, and operators' expenditures for supplies and materials to be used in connection with mine operation and the personal expenditures of 535,000 employees for needed articles of consumption, are a substantial factor in the total demand for goods and service. Moreover, the transportation systems of the country are seriously affected by declines in coal shipments. Coal constitutes the largest single item in the traffic of the railroads and yields them more revenue than any other commodity. The effect of a falling-off in the shipments of bituminous coal is seen to-day in the large amount of coal-handling equipment now standing idle on railroad sidings and in the large number of men with whose services the railroads have dispensed, partly because of the decline in this traffic. In these times of general unemployment and of abnormally restricted demand for consumers' goods, we feel that we have social as well as individual justification in asking for protection against such further decline in employment and contraction of demand as is bound to result from a continuation of the present excessively low prices for this imported fuel oil.

Since the close of the World War the bituminous mining industry has had to contend with a number of adverse conditions, for the existence of which it was itself in no way responsible. In patriotic response to the war need of coal the industry rapidly increased its productive capacity to a point far in excess of what was needed to meet peace-time demands. After the close of the war the elimination of such excess capacity began, but because of the permanent character of mine investments and because of the unavoidable loss involved in the abandonment of such investments this process of elimination has necessarily been slow and costly.

Moreover new conditions were continually arising to make progress more difficult. While high cost operations were being eliminated at one extreme the mechanization and electrification of coal mine operations have been adding to the capacity of the better mines with a consequent decline in the cost of mine operation, the saving from which has been passed along to the public in the form of lower prices. The market for bituminous coal has failed to advance in proportion to the rate of growth of industry and transportation. On the one hand improved methods of preparation and combustion have brought about great economies in the use of coal, until in many lines of consumption not much more than half the amount is required for the performance of a given amount of work that was required a decade ago. On the other hand, rival sources of power have encroached upon what was in pre-war days the nearly exclusive market for bituminous coal. Owing to this combination of factors (increased capacity developed to meet war-time demands, increased efficiency of mining methods, increased competition of other sources of energy, declining rates of consumption per unit of work) the bituminous industry has had to make a long series of profound adjustments.

COMPETITION OF DOMESTIC FUEL OIL

The competition of fuel oil has been one of the most serious factors in the bituminous coal situation in all the years since the war. This competition has been growing more intense with the increase in the quantity of fuel oil seeking a market. From table I attached hereto it will be seen that the average annual production of fuel and gas oil in the United States in the three years 1920, 1921 and 1922 was 207,229,000 barrels, while the average domestic consumption for the years 1928, 1929 and 1930 was no less than 357,954,000 barrels. If we use the usual rate of equivalence of 4 barrels of oil to the ton of coal, we find that during the earlier period oil was annually performing the work of approximately 50,725,000 net tons of bituminous coal per year, while during the latter period it was equivalent to 89,489,000 tons. The increase in annual displacement amounted to 38,764,000 net tons.

In spite of the rapid increase in the available supply of domestic fuel and gas oil in the years following the war and the resulting intensity of competition between that fuel and bituminous coal, the bituminous industry had succeeded until recently in adapting itself to such competition and arriving at a fair degree of stabilization. It is now face to face with new and more intense competition from the same fuel, and it may be frankly stated that it is in no condition to face with equanimity the situation thus created.

COMPETITION OF IMPORTED CARIBBEAN OIL

The source of the new competition is the cheap imported petroleum and fuel oil entering the country from Caribbean ports. Reference will be made here only to such figures as have a direct bearing upon the effect of the new flood of cheap foreign importations upon the interests of the bituminous mining industry.

Even as recently as 1924 the imports of crude petroleum and fuel oil from Colombia and Venezuela, whether direct or through the Dutch West Indies, amounted to little more than a million barrels. By 1927 they had increased to over 31,000,000 barrels. In 1929 they amounted to more than 81,500,000 barrels. In 1930 they declined slightly to 73,000,000 barrels, but this decline is entirely due to the current industrial depression and indicates no permanent change in the trend of this movement. The detailed figures for recent years are given in Table II in the appendix.

This Caribbean oil is a particularly serious competitor of bituminous coal because of its physical constitution. By the topping process, still used to a considerable extent in treating this oil, only 10 to 12 per cent of crude petroleum is removed as gasoline. Ninety per cent of the petroleum so treated must find a market as fuel oil. Even with the more advanced methods of refining, through which a part of the Venezuelan crude is now passed, only 20 to a maximum of 30 per cent is removed. On the average at least 75 per cent of the crude petroleum passed through the refineries enters the fuel-oil market. It is this flood of fuel oil which is now demoralizing the market for bituminous coal along the Atlantic seaboard. The immediate effect of these new importations is largely confined to that section of the country, but indirectly it reaches every bituminous mine operator in the country.

Table III in the appendix shows importations of crude petroleum and topped and fuel oils into New England and the other Atlantic States for the years 1927-1930, inclusive. From this table it will be seen that between 1927 and 1929, the last year of normal business activity, the importation of crude petroleum and topped and fuel oils into these States had increased more than 55 per cent—from 56,000,000 to 87,000,000 barrels. If we assume that 75 per cent of the imported crude enters the fuel oil market we find that in the aggregate approximately 70,000,000 barrels, or the equivalent of over 17,000,000 tons of bituminous coal, entered that market in 1929. From the small total equivalent of 250,000 tons of bituminous coal in 1924 the annual imports of crude and fuel oil from Caribbean ports had increased by 1929 to sixty eight times that quantity. Much of this oil directly or indirectly replaced bituminous coal. That the rapid rate of increase of such importations hitherto prevailing will be resumed with the return of normal business conditions can not be questioned in view of the enormous reserves already known to exist in the Venezuelan oil fields.

EFFECT OF CARIBBEAN OIL ON LABOR IN THE UNITED STATES

The most serious effect of this replacement of coal by oil lies in its influence upon the employment of labor in this country. That effect is far-reaching but is most severely felt in the bituminous mining industry and in railroad transportation.

The average f. o. b. mine price for coal in 1929 was more than $1.70 per net ton. The sale of 17,000,000 tons of bituminous coal at that figure would have returned to bituminous mine operators $28,900,000. Careful statistics presented before the Interstate Commerce Commission in 1923 showed that for every dollar received by the operator in payment for bituminous coal over 68 cents was paid to labor. Making all allowances for the increased use of machinery and any decline in wage rates that may have occurred, it is safe to assume that fully 60 per cent of the present mine price of coal goes for wages. Out of the $28,900,000 loss suffered by the operators $17,300,000 represented loss of income to mine labor. If we add to this the indirect payments to labor engaged in the manufacture of mine supplies and equipment and of commodities for the consumption of mine labor, the total decline in remuneration to direct and indirect mine labor could not be less than $20,000,000.

The loss to railroad labor is even more serious. The average freight transportation charge on coal shipped to the Atlantic seaboard is approximately $2.75 per net ton. At that rate the revenue obtained by the railroads for transporting 17,000,000 tons of coal would be $46,750,000. According to figures published by the Bureau of Railway Economics the share of the gross income of railroads going to labor is 44.8 per cent. On that basis the direct loss of wages due to the

decline in freight traffic would be approximately $21,000,000. The indirect loss because of the reduced demand for railway supplies and the reduced consumption of railway employees would easily raise that amount to $25,000,000. Moreover, the income of railroads and railroad labor would be further reduced by the decline in the transportation of mine equipment and supplies due to the lessened mining activity, and the loss on the transportation of consumers' commodities to mining communities brought about by the decline in the purchasing power of mine labor. Undoubtedly in the aggregate the replacement of 17,000,000 tons of coal by imported petroleum and fuel oil would mean a loss of fully $50,000,000 to the laborers of the country. Such a loss is felt with special severity in a time of depression and unemployment like the present.

RELATION BETWEEN IMPORTS AND EXPORTS OF OIL

The effect of the importation of crude petroleum and its products upon the bituminous market on the Atlantic seaboard is not mitigated, as is sometimes alleged, by a withdrawal of these imported commodities from the domestic market for exportation. It is true that the exports of crude petroleum, fuel oil, and refined products from the United States as a whole, exceed in volume the imports of the same products, but the effect of the two movements is felt in different parts of the country. Table IV in the appendix illustrates that point very forcibly. From that table, taken from the annual report of the Department of Commerce on Foreign Commerce and Navigation of the United States, 1930, it appears that in that year the net imports into the States bordering on the Atlantic ocean, after deducting exports from the same States, were as follows: Crude petroleum, 58,745,670 barrels; topped and fuel oil, 22,679,389 barrels; gasoline and other finished light products, 8,933,499 barrels. The aggregate imports of all these commodities into the Atlantic States amounted to 97,705,476 barrels, and the aggregate exports, mostly gasoline, to only 7,340,918 barrels. For the rest of the country, for the States bordering on the Gulf of Mexico, the Pacific Ocean, and the Canadian frontier, exports exceeded imports by the following quantities: Crude petroleum, 21,320,412 barrels; gas and fuel oil, 28,976,704 barrels; and gasoline and other finished light products, 55,202,030 barrels. The aggregate imports into that territory, amounting to 6,431,126 barrels, were far exceeded in volume by the aggregate exports of 111,930,333 barrels. The net result of the whole movement is that the bituminous coal industry is rapidly losing its market on the Atlantic coast to cheap imported oil, while the domestic oil producers ship out to foreign countries that portion of their output which can no longer find a market in the Eastern States.

SUBSTITUTION OF OIL FOR COAL

The full effect of this new competition upon the consumption of bituminous coal in New England has not yet been felt. The change from coal to oil often involves substantial expense, an expense which consumers have been slow to incur until they became assured of the continuance of the low prices of fuel oil now prevailing. In the past the effect of this competition has been shown by the failure of the consumption of bituminous coal in this territory to advance with the rapid increase in the rate of industrial activity, especially between 1927 and 1929. The decline in shipments of bituminous coal into the Atlantic seaboard States would have been noteworthy had it not been for the rapid growth of the by-product coke industry in parts of that territory, the increase in shipments for that purpose having to a considerable extent offset the decline in shipments for other uses.

It is impossible to secure a complete list of the formerly coal-burning steam installations which have been changed over to oil. A partial list, compiled some time ago, showed substitutions displacing more than three and one-half million tons of coal. The change is going on at an increasing rate as consumers come to rely upon the continuation of the present supply of cheap foreign oil. Among the more striking instances of changes recently chronicled in the trade press, the following may be mentioned: The Grasselli Chemical Co., whose plant at Grasselli, N. J., replaced coal with oil some time ago, has now made the same change at its plant in Philadelphia. Barrett & Co. have already changed over two of their plants in Pennsylvania and are stated to be contemplating a similar change in two plants in New Jersey. The Narragansett Electric Co., operating a modern, highly efficient steam power plant in Providence, R. I., and supplying power and light to a large and densely populated surrounding territory, is con-

templating a similar change. The substitution of oil for coal in this last plant alone will cost the bituminous industry a market for 250,000 to 350,000 tons a year.

EFFECT OF IMPORTED OIL ON MARKET PRICE OF BITUMINOUS COAL

Utter price demoralisation is as yet the most outstanding result of the new competition. In their desperate efforts to retain their markets, bituminous mine operators have reduced the price of their product to less and less remunerative levels, until to-day such prices are below the level necessary to yield to the labor engaged in the industry an adequate return even after all profit for the operating companies has been eliminated.

As evidence of this price decline two sets of quotations are given in Table V in the appendix. The first set is taken from the well-recognized trade publication, Coal Age. It shows the average f. o. b. mine spot price in the Boston market for run-of-mine coal from three sections of the central Pennsylvania field and for similar coal from southern West Virginia low volatile fields. Both average high prices and average low prices for each year are shown. An examination of the table indicates that between 1927 and 1930 the average high quotation on central Pennsylvania coal declined approximately 30 per cent, and the average low quotation by amounts varying from 10½ to 17 per cent. In the southern West Virginia coal the declines were 25 and 6.4 per cent, respectively.

The decline in prices during the current year has been at a more rapid rate than for any of the years here shown. Coal Age spot prices are not available for the entire year 1931. Careful records kept by a responsible statistical trade organization show that between 1927 and 1930 there was a decline of 13 per cent in the average realization for the coal covered by its reports. This was at the rate of approximately 4 per cent a year. The same coal between 1930 and the first 11 months of 1931 registered an average decline in price of more than 8½ per cent.

The greatest effect of oil competition has been felt in the market for small sizes of bituminous coal which are used with mechanical stokers in industrial plants. The price obtainable for this grade of coal has been steadily declining for a number of years, because it is largely this grade of coal that is being replaced by cheap fuel oil. Coal Age quotations on this coal are given f. o. b. vessel Hampton Roads. At the beginning of May, 1930, the minimum price quoted was $4 per gross ton. For the corresponding week of 1931 the minimum price was $3.42, while for September, 1931, the last month for which comparable figures are available, the minimum was $2.91. The freight rate from the mines to Hampton Roads is $2.52 per gross ton. Deducting this from the prices quoted and making no allowance for handling charges, there was left for the coal operator on these dates $1.48, 90 cents, and 39 cents per gross ton, respectively, equivalent to $1.32, 80 cents, and 35 cents per net ton. It is such excessively low prices as these, forced upon the industry by the disastrous competition of cheap fuel oil, which are largely responsible for its present depressed condition. These figures are typical of what has been going on in the whole Atlantic seaboard territory. It is well known to the trade that the price movement continues to be downward.

The effect of this new competition and the resulting price decline would not have been felt so severely if it had come at a time when the bituminous-mining industry was in a prosperous condition. It is a well-known fact that the industry was already experiencing serious financial hardship because of the loss of market from such causes as the increased use of hydro-generated electricity, competition of domestic fuel oil, and the economies in coal consumption brought about by improved methods of preparation and combustion. For years the record of the industry has been one of steadily declining prices. Thus the Coal Age average spot price referred to above, which was $2.21 in 1926, declined steadily to $1.99 in 1927, $1.80 in 1928, $1.79 in 1929, $1.75 in 1930. The latest such price available, that for September, 1931, was $1.62. The last figure reflects the precipitousness of the decline now going on as a result of the increasing use of cheap imported oil. Economies of operation had enabled mine operators to meet the moderate declines of earlier years, but the sudden, rapid decline in 1931, forced upon the industry by the foreign oil competition, is one which will inevitably bring disaster upon many coal-mining companies and loss of employment for many bituminous-mine employees.

COMPARATIVE COST OF DOMESTIC AND IMPORTED CRUDE PETROLEUM

Unless relief is afforded by the imposition of a duty on imported petroleum and fuel oil sufficient to offset the differences in the cost of production in this country and in the Caribbean countries, the industry is fighting a losing battle. The striking differences in such costs are conclusively shown in the recent report of the Tariff Commission on the cost of crude petroleum. For the purpose of this brief it is sufficient to refer to the table found on page 29 of that report and reproduced as part 1 of Table VI in the appendix to this brief. In that table figures are given which show that in the year 1929 the total delivered cost of Venezuelan crude oil at Atlantic ports was 79 cents, an amount substantially below either the cost of production of Midcontinent crude at the well, which was reported at $1.03½, or the cost of transportation and other charges from the well to Atlantic coast refineries, which was 87.77 cents. The total cost of domestic crude laid down at Atlantic ports was nearly two and one-half times that of Venezuelan crude at the same ports, exceeding it by $1.12 a barrel. In view of these figures it is evident that purveyors of imported fuel oil can, if necessary to meet bituminous coal competition, make further substantial reductions in their quoted prices, especially as the same report, in another table found on page 32 and reproduced as part 2 of Table VI in the appendix, supplies figures from which it can be shown that in 1929 the prices which refineries paid for Midcontinent crude were only 11½ cents in excess of the total delivered cost, while the average price paid for Venezuelan crude was more than 23 cents in excess of the total delivered cost.

The effect of any increase in price that may be brought about by the imposition of a duty on imported petroleum and its products will be confined almost entirely to the fuel oil market. Not only is it true, as has already been pointed out, that a very large percentage of the imported oil enters that market, but it is equally true that the low price paid by refineries for imported oil has been of little or no benefit to consumers of gasoline and lubricating oil, the two most widely used products of refining. The price of gasoline has not declined as the price of crude has gone down, nor will the price of gasoline advance if the price of crude again rises. In 1926 when the price of domestic crude oil at the well was $2.26 a barrel and when comparatively little Venezuelan oil was entering the country, the average retail price of gasoline in 52 cities scattered throughout the United States was 18.1 cents. In 1929 when the price of domestic crude had declined to $1.20 a barrel and large quantities of cheap imported crude, for which, according to the Tariff Board, the refiners were paying $1.10 a barrel, were entering the Atlantic ports, the price of gasoline in these same 52 cities had actually increased to 18.4 cents per gallon. Nor did the price of gasoline decline materially during the year 1931, although the price of domestic crude reached the lowest point in its history and cheap imported crude was available in the East in almost unlimited quantities. Similar figures could be produced with reference to the price of lubricating oil, for different grades of which motorists have paid prices ranging from 20 to 35 cents a quart throughout this period of declining prices of crude. The price of gasoline and lubricating oil is fixed at the point where the refiners make the largest profit. If the price of crude should advance again to that prevailing in 1926 the refiners would still maintain the price in different communities that their experience has shown to be most advantageous to them.

THE RIGHT OF THE COAL INDUSTRY TO THE RELIEF DEMANDED

The facts and figures quoted above furnish incontrovertible evidence of our claim that unless the importation of foreign petroleum and fuel oil is checked the bituminous mining industry, with its billions of investment and its hundreds of thousands of employees, will suffer irreparable harm. While the effect of this competition is felt first on the Atlantic seaboard, it gradually permeates the entire coal mining industry, for operators who lose their eastern market will have no recourse except to attempt to force their product upon the already oversupplied markets of the Middle West. In the attempt to meet this competition prices will fall still further, laborers will lose employment, and the standard of living will decline. Surely no industry could ever present a more meritorious case for the application to itself of the protective principle as a means of safeguarding American markets and maintaining the American standard of living. Especially in a time like this not merely the bituminous mining industry but the whole country will suffer from an increase in unemployment on the part of those working in and about the mines as well as on the part of the employees of transportation

companies which move the coal to market and of laborers in many industries, the demand for whose products comes directly from the mining and transportation of coal.

That a duty on imported petroleum and fuel oil would cause an increase in the price of such oil in this country is no argument against the application of the protective principle. The entire case for protection is based on the fact that the low prices at which imported oil is sold are made possible by the low standards prevailing in the countries in which it is produced, and that a continuation of the importation of this oil will inevitably bring about a decline in the standard of living of millions of people in our own country. No one has a right to purchase fuel at such a price as to make impossible the maintenance of American standards.

The greater part of the imported Caribbean fuel oil is consumed by industrial plants and chiefly by manufacturing industries located along the Atlantic seaboard. Many of these industries have for more than a century enjoyed the benefits of import duties on competing products. They have owed their success largely to this protection. In all fairness such industries should be the last to oppose the application of the same principle to another industry as much in need of similar protection as the manufacturing industries ever were. It is certainly inconsistent for these eastern manufacturing industries to refuse the benefits of protection to the bituminous mining industry simply in order that they may keep down the cost of their fuels, when such low cost is secured at the expense of the employment and the standard of living of hundreds of thousands of American laborers. Moreover, a sharp limit is set to the possible increase in the price of foreign oil by the competition of domestic producers, who are prepared to supply the entire legitimate demand for their product at the minimum price consistent with the remunerative operation of the industry and the maintenance of the American standard of living. The so-called conservation of natural resources, which it is maintained the use of foreign oil encourages, is surely purchased at an excessive price so long as it involves the demoralization of American markets and the degradation of the standard of living of American workers. The bituminous mining industry feels that in view of the many years of adversity through which it has recently passed, brought upon it by circumstances entirely beyond its own control, its present condition, as threatened by the importation of foreign petroleum and fuel oil, should receive your sympathetic consideration. It appeals with confidence to your sense of social expediency and to your spirit of fair play to relieve it from the demoralizing effects of this new iniquitous competition.

NATIONAL COAL ASSOCIATION,
CARROLL B. HUNTRESS,
Executive Secretary.

TAX ON MALT, MALT SIRUP, AND WORT

STATEMENT OF JOHN L. FITZSIMONS, BALTIMORE, MD., PRESIDENT THE AMERICAN MALT CO.

Mr. FITZSIMONS. My name is John L. Fitzsimons, and I represent the American Malt Co., of Baltimore. I operate my own business, and I would like to have, in considering this tax of 35 cents per gallon proposed on malt sirups, a special sirup which I manufacture eliminated from this tax. We manufacture a malt sirup that is used by cereal beverage manufacturers who are licensed under permit from the United States Bureau of Industrial Alcohol. I only sell to a small proportion of these manufacturers; in fact, I only sell to about 10 per cent of them. They are now paying a price of about $33 per barrel for this product. They can get along without it entirely if necessary. If this tax goes on it will mean on this particular product a 50 per cent increase in the cost. This would eliminate the product entirely from my business.

Senator SHORTRIDGE. What is the rate suggested in the bill?

Senator REED. Thirty-five cents a gallon.

Mr. FITZSIMONS. Thirty-five cents a gallon. That would mean $17.50 per barrel.

This particular sirup that I refer to is the foundation of my particular business. I am not up here about any other tax that we might pay on any regular sirups whatever. That would be terminated in my plant as it is if imposed. But this one sirup, as I mentioned, is the foundation of the financial structure of our concern. We are rather small in this line of business and only 6 years old. These particular people with whom I do business are all well rated, and I have the privilege at any time of going to my bank and using the commercial paper from these concerns to borrow on.

Senator GORE. Is your product used only in licensed and legitimate business?

Mr. FITZSIMONS. This particular product is used only by cereal-beverage manufacturers to make cereal beverage and who are now taxed under section 615 at the rate of 2 cents per gallon.

Senator GORE. You want yours lifted out of that general distribution?

Mr. FITZSIMONS. Out of this tax, yes; for this particular product.

The loss of this particular product to me would not only mean a loss to myself but to the railroads and farmers as well. For instance, last year, in this particular product, we used over 100 carloads of barley malt, 25 carloads of coal, and about 27 carloads of barrels. We shipped out about 99 minimum carloads of sirup to all parts of

the United States. The freight bill was about $35,000 on this product. This does not include the freight on coal or barrels, because they are prepaid to us.

Senator CONNALLY. Is your stuff handled in the general trade, or does it just go to these manufacturers?

Mr. FITZSIMONS. I just have a few customers.

Senator CONNALLY. You do not sell it through the grocery stores?

Mr. FITZSIMONS. No, sir.

Senator REED. Do you also manufacture other articles which are sold to the general trade?

Mr. FITZSIMONS. Yes.

Senator REED. And they are pretty generally used in making home-brew beer, are they not?

Mr. FITZSIMONS. Yes, sir. This one particular product would just simply disappear, because if the price were raised 50 per cent, as it will be raised under this particular clause, it will mean $17.50 a barrel, where they are now paying $33 a barrel; it will mean $17.50 additional. It is merely a flavor. Although it must be considered and construed a malt sirup or a malt extract it really is a flavor.

Senator SHORTRIDGE. What is the name of it in the market?

Mr. FITZSIMONS. We call it material No. 12. I have nothing to say about any other tax on sirup.

Senator SHORTRIDGE. It is the article known as No. 12?

Mr. FITZSIMONS. Yes.

Senator REED. Have you prepared an amendment in form to suggest to us that would take care of your case?

Mr. FITZSIMONS. Yes, sir. In section 601 (c) (2) on page 247, line 5, after the word "products" and before closing the parentheses, insert the words: "or unhopped malt sirup or extract sold to cereal-beverage manufacturers operating under permit from the United States Bureau of Industrial Alcohol, for manufacturing into cereal beverages containing less than one-half of 1 per cent of alcohol."

Senator HARRISON. Somebody has moved to make it 4 per cent.

Mr. FITZSIMONS. I would like to also say that that is only one item of my business. And if I lose this business in my particular case of course it is my loss. I am the only person that makes this particular sirup. The Government would not get any tax anyway, because I would quit it, and it would jeopardize the balance of three-fourths of my business, amounting to $881,000 a year.

Senator REED. You have been very candid. I would like to ask your opinion on the balance of this section, as to the probable result of this effort to tax the home-brewing business.

Mr. FITZSIMONS. The results of it?

Senator REED. Can we succeed in doing it?

Mr. FITZSIMONS. Do you mean collecting taxes?

Senator REED. Yes.

Mr. FITZSIMONS. Yes.

Senator REED. That ought to be a pretty good revenue raiser.

Mr. FITZSIMONS. I do not think it would be as much as the papers seem to think.

The CHAIRMAN. What would be your opinion as to the brewers' wort?

Mr. FITZSIMONS. I would not have any idea, sir.

The CHAIRMAN. You have not had any experience with that?

Mr. FITZSIMONS. No; but I have figured out that if all the barley malt manufactured in the United States was made into either malt sirup or wort, the taxes, even if they used 30 per cent of other grain with that barley malt, would probably amount to about $15,000,000.

Senator GORE. What is that?

Mr. FITZSIMONS. $15,000,000. I am figuring on their using other grain with that. Which very few people do.

The CHAIRMAN. What was the amount?

Mr. FITZSIMONS. I say that if all the barley malt made in the United States were made into malt sirup, we will say, for instance, that if it was all made of barley malt the taxes would not be $12,000,000.

The CHAIRMAN. That is malt sirup?

Mr. FITZSIMONS. Yes.

The CHAIRMAN. What about brewers' wort?

Mr. FITZSIMONS. Well, I have not the slightest idea how much of that is made. But predicting on the basis of the manufactured product of barley from which wort and malt is made, I say $12,000,000, if it is all made without any raw grain being added. About $15,000,000 if the other were added.

Senator GORE. What is the total amount of barley used in this process in the United States?

Mr. FITZSIMONS. In the United States?

Senator GORE. Yes.

Mr. FITZSIMONS. In the malt business?

Senator GORE. Yes.

Mr. FITZSIMONS. There are about, I should say, 17,000,000 bushels. Some of that stuff is exported and some of it is used for other purposes.

Senator REED. The Treasury estimates that we would get about $46,000,000 out of the taxes on malt sirup and brewers' wort and grape concentrate. Have you any reason to think that that is excessive?

Mr. FITZSIMONS. Well, I could not tell you on the grape concentrate or wort. I do not think there is as much wort as the people seem to think there is. But predicated on my previous statement of all the barley that is made into malt in the United States it would be around $12,000,000. Provided that all these wort people did not cheat you out of it.

Senator REED. Yes. I have seen estimates of an incredible number of bottle caps made for capping home-brew bottles. Have you ever seen the estimate of the number of bottles and bottle caps that are made and sold for that purpose?

Mr. FITZSIMONS. No, sir.

Senator GORE. I saw an estimate of 2,000,000, Senator Reed, once.

Senator REED. 2,000,000, Senator?

Senator GORE. Yes. My authority for that is the attorney for the association of the manufacturers of these bottle caps.

The CHAIRMAN. Is that all?

Mr. FITZSIMONS. Yes. I would like to put a statement in the record.

The CHAIRMAN. That may be done.

(The statement presented by Mr. Fitzsimons is here printed in the record in full, as follows:)

STATEMENT OF JOHN L. FITZSIMONS

THE AMERICAN MALT CO.,
1700 North Gay Street, Baltimore, Md.

Hon. REED SMOOT,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR SMOOT: We manufacture a product designated, when sold, as material No. 12. This product, however, is made of barley malt, and could be construed as a malt sirup or a malt extract. It is made under a special process which we have perfected, and is sold in 50-gallon barrels to manufacturers of cereal nonalcoholic beverages only.

As stated, it is sold exclusively to manufacturers who use it in the production of their cereal beverages, or so-called near-beer, and who operate under permit from the United States Bureau of Industrial Alcohol.

Section 601 (c) (2) of House bill 10236, a bill to provide revenue, equalize taxation, and for other purposes, now before the Senate Finance Committee, imposes an excise tax of 35 cents per gallon on malt sirup, or malt extract, containing over 15 per cent of solid matter. Such a tax, if applied to material No. 12, would impose a burden of $17,50 per barrel upon our product, or over 50 per cent of the sale price.

Our product is a raw material used in the manufacture of cereal beverages, and upon which the same bill (section 615 (a) (1) imposes a tax of 2 cents per gallon. Thus, a double tax would be imposed if material No. 12 were also taxed. Since a manufacturer's excise tax is thus proposed upon the cereal, nonalcoholic, soft-drink beverage, the addition of the tax proposed on malt sirup, or malt extract would, if considered in terms of the finished product, near beer or cereal beverage, amount to an additional tax to the cereal beverage manufacturer of over one-half cent per gallon.
