In such manner the actual ratio of taxes is determined, as the conclusion rather than the premise, and it is generally recognized that the higher this ratio, the stronger is the Government's financial position.

3. *Large deficits inevitable.*—Judging from the estimates of revenue under existing law, huge annual deficits are in prospect. Even with the addition of three to four billion dollars of revenue, the deficits will still be large. Any calculation only serves to reinforce the conclusion that large additional revenues must be sought. The amount that might be sought retroactively from 1941 incomes and the total amount that might be made available in the current fiscal year are to be dealt with by another chamber witness.

4. *Curtailment of nondefense expenditures.*—If additional taxes are to be levied with the idea of obtaining the largest practicable amount of revenues, then it would appear obligatory upon the administration and upon the Congress to reduce the nondefense expenditures by the largest practicable amount. An "all out" tax program to finance an "all out" defense effort should be accompanied by "all out" economy in nondefense spending. The taxpayers may be expected to submit to increased demands with much more cheerfulness if they can be assured that the money they contribute will not be spent on unnecessary objects or wasted.

Secretary Morgenthau has proposed that nondefense expenditures be reduced by at least a billion dollars. He first made this proposal when testifying before the House Ways and Means Committee last April 24, and he reiterated it before your committee last week.

Before the Ways and Means Committee, he said he did not know of anything that would help the Treasury more when it is going to the country and inviting the people to invest in defense savings bonds than for the Congress itself to take a strong position on economizing in nonessential and nondefense items.

Secretary Morgenthau suggested, as a general guide, that particular attention be given to agricultural aids, the C. C. C., the N. Y. A., and Public Works.

We support the Secretary's proposal but do not believe it goes far enough. Scrutiny of the expenditures he mentioned and of other nondefense items would, it is believed, reveal that reductions amounting to about $2,000,000,000 could be made.

In the first place, we suggest the suspension—in large part in some instances and entirely in others—of activities instituted to relieve unemployment and economic distress; such disbursements are less necessary now due to changed economic conditions. In this connection, in addition to the billion dollars that might be saved by following Secretary Morgenthau's suggestion to curtail the agricultural program, the C. C. C., the N. Y. A., and Public Works activities, there should be reconsideration of the W. P. A. and a few other emergency activities. This might easily justify the addition of three-quarters of a billion or more to the proposed savings.

Senator VANDENBERG. May I ask whether, in making that observation, your committee has taken into account that the application of priorities and curtailment under the present summary formulas that have been used will probably cause more unemployment than we had at the height of the depression?

Professor FAIRCHILD. We are not of the opinion that taking everything together—priorities and other defense arrangements—the amount of unemployment is going to increase.

I have, in fact, every reason to believe that the present industrial activity, caused by defense enterprises and otherwise, will cause unemployment to definitely decrease.

Senator VANDENBERG. I hope you are a good prophet, but your prediction is not so far borne out by what is happening in Michigan by reason of the decimation of small businesses as a result of these summary curtailments and priorities.

Professor FAIRCHILD. I have never undertaken to bear the mantle of a prophet, but I think the facts before us are sufficient to warrant the assumption that these activities should result in less, rather than greater, unemployment. That is why I take the position that certain activities established to combat unemployment and the depression may now safely be curtailed, greatly reduced, or altogether ended.

In the second place, from a review of the 1942 Budget estimates, it is apparent that there are numerous regular old-line or less emergent activities which, without elimination in any case, could safely be reduced in scope. If these were cut back to levels somewhere between the high and low points of the past 5 years, additional savings of some $300,000,000 would be possible.

5. *Avoidance of waste and extravagance in all Government expenditures.*—While we advocate a reduction of nondefense expenditures to the minimum, consistent with efficient performance of essential activities, we admit the necessity of bearing the cost of whatever may be required for national defense.

In making this distinction, however, between defense and nondefense expenditures, it should be recognized that there is no more excuse for waste and extravagance in national defense than in other Government service. Furthermore, an expenditure of doubtful necessity cannot be justified simply by tagging it with the defense label. We urge, therefore, that all governmental activities be examined as to the efficiency and economy of their performance. Any such examination would obviously be so detailed and searching that it is impracticable to estimate the magnitude of savings that could be obtained by this means. Nevertheless, such savings are believed to be substantial.

Senator WALSH. Who should take the initiative, in your opinion, in cutting these nondefense expenditures and effecting these economies?

Professor FAIRCHILD. It seems to me that that is a task which should be undertaken by all branches of the Government; the legislative and the executive.

Senator WALSH. Don't you think that it requires "must" legislation to get reductions in appropriations as much as it does to get "must" legislation to get the appropriations themselves?

Professor FAIRCHILD. I am sorry; I did not quite hear that.

Senator WALSH. Don't you think it requires force from the administrative departments of the Government who come here and ask for these appropriations, and show how the money can be procured to effect these economies?

Professor FAIRCHILD. I think certainly an interest in economy and effort to bring it about by the administration would be most desirable. On the other hand, Congress is the final authority for making appropriations and has in its hands the spending policy of the Government.

Senator WALSH. Don't you think the agencies who come here asking for this money should also come here with a program for these economies?

Professor FAIRCHILD. I think that all agencies of the Government should do so.

Senator WALSH. Have you seen any such program?

Professor FAIRCHILD. I have mentioned the suggestions made by the Secretary of the Treasury.

Senator WALSH. It has been my experience that without the active support of these agencies who appear here requesting the money, unless they get behind the program of economy, there never will be any.

Professor FAIRCHILD. I subscribe to that statement; and I, of course, as an outsider here, can do nothing more than offer suggestions.

Senator WALSH. Yes; what I had in mind is that there is a disposition to say Congress ought to do it, but unless there is some leadership in the force that asks us to get the money, there is going to be, in my opinion, no program of economy.

Senator VANDENBERG. I want to apologize, but I have now to leave and go over to the Senate where I could give you an excellent example of what happens to one when he tries to save a little money and promptly gets his throat cut.

Professor FAIRCHILD. It must be recalled that, no matter how difficult it is to raise additional tax revenues, money is easy enough to spend. A dollar saved in Government outgo is just as good for financing defense as a dollar of new taxes. The significance of the sum of $2,000,000,000 becomes apparent when it is realized that this figure is one-fourth more than the original 1942 Budget estimate for individual income-tax collections and probably exceeds the total of such collections that is now expected under present law. It is about equivalent to the yield from the corporate income tax as estimated last January and equivalent to the revenue expected from liquor taxes and manufacturers' excise taxes after adding the increases of the pending bill.

6. *Congressional Budget agency.*—Whether or not it proves practicable to curtail expenditures for the current fiscal year by such a substantial sum, we firmly believe that the indicated reductions in nondefense spending could be made for the fiscal year beginning July 1, next, for which the Budget is now in preparation.

In this connection it is to be recalled that on various occasions the national chamber has advocated, and Secretary Morgenthau has proposed, that Congress adopt devices to protect itself from pressure for increased expenditures. Specific procedure to this end must be left to Congress to decide, but we support the Secretary's proposal for closer association between the appropriating and money-raising committees of both Houses of Congress in cooperation with representatives of the executive branch. Without attempting to specify a method, we believe that the whole procedure with respect to congressional action on the Budget should be reexamined in the light of present needs.

In past years we have advocated that a device such as a budget committee be used to establish a ceiling on the total of Federal expenditures. We recognize that there are limitations, in present circumstances, as regards defense outgo, but we still believe that such method should be used to fix a definite total for nondefense expenditures and that it would be most helpful in reaching a careful estimate of expenditures for defense.

Such a device would have distinct values not only in determining a wise spending program in connection with existing activities but should result in more careful weighing of proposed spending for new activities which under existing conditions should be foregone or at least deferred.

In addition to other benefits, this plan would have the merit of relieving the pressure upon individual Congressmen exerted by various groups, official and unofficial, for appropriations for nondefense purposes.

II. *Limitations upon further tax increases.*—While our committee, as I have said, is convinced that, in the present emergency, the greatest possible share of essential governmental costs should be met by taxation, there are certain considerations indicating clearly that there are limits beyond which taxation cannot be pushed without threat to our existing economic and political institutions.

1. *Taxation in relation to national income.*—The increases in taxes contemplated under the pending bill may be expected to bring the total burden of Federal taxes (for the present purpose I include the social-security taxes) up to about $12,000,000,000 in the 1942 fiscal year and to about $14,000,000,000 in the first full year of operation, depending upon the level of economic activity. State and local Governments are taxing at the rate of a little more than $9,000,000,000 a year, which would make the total national tax burden about $21,000,000,000 in 1942 and $23,000,000,000, or more, in the first full year of operation.

Nobody can say exactly what the national income for 1942 will be. Assuming for the sake of the calculation that it will be somewhere between 90 and 95 billions, the taxes will be between 22 and 23 percent of the national income in the fiscal year 1942. With the prospect of still more taxes, it would seem that for some years the American people will be called upon to pay taxes amounting to about a quarter of the national income.

While this may to some appear moderate in the light of the threat of war and the consequent possibility of still further tax increases, it should be recalled that even during the World War peak in 1919 and 1920 Federal, State, and local taxes took only 12 to 13 percent of the national income and in the worst year of the immediate post-war depression (1921) the ratio of taxes to national income was less than 16 percent. The World War peak amount of Federal taxes was $6,700,000,000 in 1920, or $63 per capita. Total per capita taxes that year were $85; 1941 per capita taxes were approximately $125, and by 1943 they are expected to be around $170.

A comparison of our total tax burden with that of the United Kingdom of Great Britain and Northern Ireland is significant. Despite the high income-tax rates imposed by Great Britain on corporations and individuals, the per capita tax burden in the United States surpassed that of Great Britain in the fiscal year 1940. In the last completed fiscal year 1941 and in the current year 1942 as estimated, including both the recent increases in British taxes and the proposed increases in our pending bill, the tax burden in the United States is just about equal to the British tax burden, whether measured as a per capita burden or as a percentage of national income.

These are the two bases that show most accurately comparative tax burdens. A form of comparison that is frequently used in current popular discussion, based on relative rates of corporation and individual income taxes in this country and Great Britain, is altogether unsound and meaningless.

2. *Effects on State and local revenues.*—If, as has been suggested, the national tax program should have regard to the preservation of our existing political institutions, then it is evident that the Federal Government, in seeking opportunity to extend its own taxes, should have regard to the repercussions upon the revenues of the States and their local subdivisions.

Many of the forms of taxation used by the Federal Government are also relied upon by the State and local governments.

It is significant, for example, that 33 States rely extensively upon receipts from individual income taxes for State revenues. From this source they derive about $220,000,000 a year. Twenty-three of these States permit their income taxpayers to deduct Federal income-tax payments from their net taxable income for State income-tax purposes. By so doing they permit the State taxable base to be reduced by an amount equivalent to the Federal tax. Under the rates of the proposed bill these reductions would be about doubled, amounting in many States to as much as a quarter of the State taxable base—in some States to even more. Revenue shrinkage will, of course, be even greater in proportion because the amounts of income subject to the higher rates will be reduced.

Corporation income taxes, to the extent of about $140,000,000, are also levied by 32 States. Twenty-one of these States allow a deduction similar to that permitted for Federal individual income taxes, and because of this their revenue loss is again considerable.

The estate tax policy of the Federal Government in recent years has caused a rapid absorption by it of this source of revenue, which it would be proper to relinquish to the States. The proposed rates, lacking any additional credit for taxes paid a State government, would accelerate this absorption. Our position in the matter of death taxation will be presented by Mr. Osgood. I fully agree with his statement as to the loss of future revenue because of present high rates, the injustice from continual shifting in the basis of a capital levy, and the resulting discouragement to saving.

Considerable overlapping of Federal and State tax systems has grown up as the result of a natural development and is doubtless bound to continue. While not necessarily harmful under ordinary conditions, this overlapping becomes a cause of serious danger to the States when their citizens face not only heavy increases in Federal tax rates, but also State budgetary difficulties and the possibility of additional State taxes because of the loss resulting from Federal tax increases. Moreover the States are injured when changes in Federal taxes are made without allowance of sufficient time for the States to make appropriate adjustments in their own taxes on the same objects or without proper consultation and cooperation between Federal and State taxing authorities.

With Federal taxation of incomes, estates, and gifts, and commodities as high as they now are, further increases are certain to present serious restrictions upon the power of the States to secure their customary adequate revenues.

Senator DAVIS. Mr. Chairman, I have to leave to go over to the Senate. I would like to have in the record a communication from Mr. Charles R. Hook, president of American Rolling Mills Co.

The CHAIRMAN. You may put it in after Professor Fairchild's testimony. The committee will sit until Professor Fairchild has finished, and will then recess.

Professor FAIRCHILD. I have almost finished.

Eventually the result might be the loss of the financial integrity of the States. Once financial independence is lost, political sovereignty cannot long endure. The Congress, in considering the additional Federal taxes, needs therefore to be watchful of the effects upon the States and the possible threat to their financial solvency and their continued existence as sovereign units in a federal form of government.

III. *The primary purpose of taxation.*—Although few would fail to recognize that the primary purpose of taxation is to raise revenue for the Government, there is frequently the temptation to make the tax system serve also certain other ends, such as the redistribution of national wealth, the equalization of incomes, the curbing of profits, the checking of inflation, etc.

It is submitted that the present interests of defense and sound national finance will best be served if tax legislation is devoted strictly to the primary purpose of obtaining revenue to meet the costs of defense. To a certain extent most of the incidental purposes which I have mentioned will be accomplished anyway by a tax system whose objective is revenue. That is well enough. To go beyond this and seek to modify the tax system in order to accomplish one or more of these other ends would lead into a field in which we have no very clear guideposts either of theory or of practical experience. The doubtful advantages that might be obtained are not likely to be worth the consequent weakening of the tax system as a producer of revenue.

In particular, there is grave danger in the proposal to use the tax system as a means for controlling inflation. While there is reason to believe that, under certain circumstances, taxation might be employed so as to produce beneficial results along this line, the subject is an extremely complicated one. It is quite possible, for example, that income taxes employed for this purpose might have more effect in reducing savings than in reducing consumer demand for goods. On the other hand, there is no certainty that excise taxes imposed upon certain commodities whose consumption is to be checked or whose prices are to be kept down would not result in practice in checking the demand for quite different commodities. After all, the consumer has the choice of the particular expenditure he will curtail in order to meet the new tax. A normal effect of excise taxes is to raise the prices of the taxed articles. To the extent that this results, the taxes are directly inflationary. Taxation aimed to limit consumer purchasing may adversely affect production of consumer goods and so offset by reduced supply the intended effect of reduced demand. Even if the result should be neutral as to price, it is a far less healthy and beneficial adjustment than the natural correction of increased consuming power through increased supply of consumers' goods.

It is futile to place our trust in a dubious use of taxation to prevent inflation in the face of the various inflationary policies which are being followed by the Government itself. For example, the wage policy, some forms of Government spending, the measures taken to increase agricultural prices, the credit and monetary policies, including the

continued purchase and monetization of silver, some of the fiscal practices which contribute to the creation of enormous excess bank reserves, the powers to devalue the dollar and print greenbacks, and other aspects which might be mentioned. If the Congress desires to prevent inflation, it is in the modification of such policies that it can find opportunity for really effective action.

This is only a brief sketch of some of the reasons which lead the chamber of commerce committee to feel that at the present time the Federal taxes should be enacted with the clear purpose of raising revenue to meet the cost of defense rather than to accomplish other social or political ends.

Senator BAILEY. You mentioned those possible causes of inflation, but is not the principal cause of this threat of inflation the fact that we have had for years, and will continue to have an irredeemable character of currency, plus the deficit financing? Are not those the main causes of inflation?

Professor FAIRCHILD. I think those are important causes.

Senator BAILEY. What else is there?

Professor FAIRCHILD. I would rather rest on the statement these are very important causes, along with other causes. It is difficult to appraise the relative importance of the various factors involved.

Senator BAILEY. Can we hope to get rid of our tendency toward inflation until we get rid of our system of irredeemable currency and deficit financing?

Professor FAIRCHILD. It is my opinion that a return to a redeemable standard of currency based on the gold standard would be most beneficial for many reasons.

Senator BAILEY. How would taxation head off inflation?

Professor FAIRCHILD. Could I just finish my answer to your previous question?

Senator BAILEY. Yes.

Professor FAIRCHILD. Deficit financing has been, for a decade or more, I think, an important cause of inflation, or threat of potential inflation. Now, to say that we should get rid of deficit financing at this time is, of course, a counsel of perfection which I would not care to urge upon this committee. As I said, we are bound to face deficits as long as this program goes on, or at least for the next 2 or 3 years. Nevertheless, I agree with you that any diminution of the deficit is most desirable. Any step toward an approach to a balanced budget is anti-inflationary.

Senator BAILEY. I agree with you as to the necessity for deficits for at least 2 years, but the threat of inflation is now here. Now, is the remedy in taxation against that threat, or is the remedy in a redeemable currency?

Professor FAIRCHILD. I think the remedy lies in what you say, making the deficit as little as possible and, in addition, in a great many other policies which are largely inflationary being stopped. I would place the remedy not in one or two of these, but on the correction of a great number of policies which are inflationary in their general effect.

Now, as to taxation: I am aware that one thing taxation can do is to reduce the incomes available to consumers, as anyone recognizes.

Senator BAILEY. Well, the money is expended; it doesn't take the money out of the economy; the money continues in the economy?

Professor FAIRCHILD. But it reduces the deficit financing; the more you get from taxation, the less deficit financing is necessary.

Senator BAILEY. But you can't get rid of that anyway for 2 years, you say.

Professor FAIRCHILD. I also said that, while you can't get rid of it, any reduction is in the right direction.

Taking money from consumers in taxation, thereby reducing the deficit financing of the Government is antiinflationary.

Senator BAILEY. It has really got to greatly increase for the coming 2 years, next year will be $9,000,000,000 more than the revenue.

Professor FAIRCHILD. Certainly.

Snator BAILEY. And the year following that will probably be $12,000,000,000; so you are not getting rid of deficit financing by taxation. Then you must find another remedy.

Professor FAIRCHILD. No; I said that you cannot entirely avoid deficit financing. While you cannot get rid of the deficit, any reduction is antiinflationary. Now, I don't want to be put in the position of overemphasizing the efficacy of taxation to prevent inflation. There has been a tendency to exaggerate the efficacy of taxation as a means of preventing inflation. It is a complicated matter. It is difficult to appraise, and overtaxation could be used to prevent inflation, while not accomplishing other unfortunate results.

My own opinion of the place where taxation would be most effective would be as it falls on the incomes of those who are not now generally paying income tax; those who were receiving less and who doubtless will, as a result of defense activities, very largely increase their income.

Now, there is a point where I am inclined to think that Federal taxation measures will probably have a considerable antiinflationary effect. I am not hopeful of a wide progrom of attack upon inflation by taxation, and also, as will be more clear as I proceed, this antiinflationary effect of taxation would, I think, be produced anyway if you set out to construct and set up a sound system of taxation for one purpose and only for the one purpose of raising revenue, which means that attention in framing tax measures should be primarily directed to the problem of producing revenue to meet current costs. Such advantageous effects on inflation as might result will result incidental to that program, even though it were not specifically directed to removing inflation.

Does that answer the question?

Senator BAILEY. I am not clear that inflation is permanent. I just hear that there is for the first time in the country, a considerable fear of inflation and I cannot help but think that taxation is not the remedy in the first instance. It is agreed that you are not to get rid of your deficit financing for 2 or possibly the next 10 years.

Professor FAIRCHILD. I would have no hesitancy in saying that taxation alone cannot remove the threat of inflation.

The CHAIRMAN. You may proceed.

Professor FAIRCHILD (continuing):

IV. *A balanced revenue system.*—The present revenue bill proposes to obtain 3¼ billion dollars of additional tax revenue. Two-thirds of this total is to come from income taxes on corporations and individuals. Having in mind the great heights to which the Federal taxes upon incomes, corporate and individual, have already attained, there is

grave danger to the Government and to the economy of the Nation in any such reliance upon income taxation. Taxation of incomes as heavy as this has a profound effect in reducing the supply of capital available for production, checking savings and discouraging investment and business enterprise.

A study of income statistics indicates that incomes in the high savings brackets have been considerably reduced, due not only to taxes but also to declining interest rates and other conditions. Even in the lower income brackets a number of influences have combined to discourage savings.

It is well known that the building of an estate, due again to high taxes, low interest rates, and uncertainty of values, is much more discouraging than in times past.

At a time like the present, when the demands of defense require that national production be stepped up to the utmost, it would be suicidal to enact revenue measures which tended to reduce production by discouraging investment and business enterprise.

The heavy reliance of the present bill upon income taxes is not only a discouragement to savings. It fails also to meet the test of equitable distribution of the cost of defense. More than one-fourth of the total yield proposed is to come from the individual income tax. Moreover, the persons who pay individual income taxes would also bear the bulk of the burden of the corporation income tax, the capital-stock tax, and the estate and gift taxes. These taxes together are called upon to furnish nearly three-fourths (almost 73 percent) of the total additional tax revenues which this bill is estimated to produce. And even the remaining 27 percent, coming from excise and miscellaneous taxes, is heavily weighted on the luxury side and so aimed at the same group of people. This bill thus proposes to place the major part of the burden of new taxation upon the same group that already contributes the bulk of the Federal taxes.

This class now consists of about 7,000,000 people, individual income taxpayers. If we allow for other members of the families of taxpayers, we may estimate roughly that some 20,000,000 people, or about 15 percent of the population, are to be called upon to contribute the bulk of the 3¼ billion dollars of tax revenue which this bill calls for. The obvious injustice of this distribution is further emphasized by the fact that a very large portion of the increased national income which is being predicted as the result of defense activity will inure to the other 85 percent of the people, who do not bear the burden of the income and similar taxes. This proposal departs far from the purpose expressed by Secretary Morgenthau, "that all sections of the people shall bear their fair share of the burden."

In addition to its injustice, the choice of taxes of the present bill is woefully weak as a revenue measure. If we are going "all out" to raise the maximum from taxation, we shall have to give up the idea of relying chiefly on the 5 or 6 percent of the people who now pay income taxes. This class probably receives about one-third of the national income. Of the increased national income which is expected to justify our estimates of future tax capacity it is likely that this class will receive far less than one-third. It should be apparent that any real emergency-tax program must be composed of taxes that place reasonable burdens upon all recipients of the national incomes. We must go out after the money where it is. New incomes and new increases

in incomes flowing to the great mass of nonincome taxpayers should be considered, with provision for some form of collection at the source, much along the lines of a withholding tax, such as is in force in Canada, with or without devices for credits against income tax. Future increases in effective rates of income taxes should be accompanied by removal of a number of inequitable provisions of the Internal Revenue Code that bear with special hardships upon incomes derived from savings. Specific suggestions on these points, with reference to the terms of the pending bill, will be presented in later testimony.

Senator BYRD. I would like to say that Professor Fairchild has made a fair and very able statement. I want to compliment him on it.

Professor FAIRCHILD. Thank you.

The CHAIRMAN. Any questions? Professor, we thank you.

(Following is a memorandum presented by Senator Davis from Mr. Charles R. Hook, president of the American Rolling Mills Co.:)

The injurious action of the provision 204 (3) in the 1941 revenue bill should be remedied by either the entire elimination of this language or by restricting it to taxable years beginning after December 31, 1940.

1. 204 (e) relates to the excess-profits credit carry-over and applies in a retroactive manner not only to the full year 1941 but also to any "taxable year beginning in 1940." This new provision would substantially nullify the constructive action of Congress a few months ago when it enacted the excess-profits tax amendments of 1941 in March.

2. The proposed section 204 (e) discriminates against a company which could not take the benefit of its excess-profits credit in 1940. Such a company would have to pay a heavier tax on its average earnings for the 2 years 1940 and 1941 than a company which could take full advantage of its 1940 credit.

3. Companies guided by the March enactment of excess-profits tax amendments have gone forward with plans for necessary plant expansion to meet national-defense needs on the basis that last year's unused credit has been finally determined. The proposed drastic revision of such credit would severely penalize such companies acting in good faith on recent congressional action.

Recommended.—Either strike out 204 (e) from the pending bill or substitute for the words " in 1940" the words "after December 31, 1940."

The CHAIRMAN. The committee will recess until 2 o'clock this afternoon.

(Whereupon, at 12:10 p. m., a recess until 2 p. m. this afternoon was taken.)

AFTERNOON SESSION

(Pursuant to adjournment the committee met at 2 p. m.)

The CHAIRMAN. The hour for reconvening has arrived. Due to a situation in the Senate, most of the Senators are over on the floor—that is, most of the members of this committee—because of the difficulty of holding a quorum over there.

While I dislike to do it, the committee is almost in the position where, in view of the heavy schedule of today and all next week, it will have to proceed, I regret to say, at this time, and I will not make a further announcement. It is possible we will carry the hearings over tomorrow, although the committee had not intended to have a Saturday session.

I would be willing for the committee to meet in the morning if we could have a reasonable number of the members of the committee here to hear such witnesses as would rather go over until tomorrow.

Dr. Anderson, would you prefer to go on this afternoon?

Dr. ANDERSON. Just as you please, Senator.

The CHAIRMAN. Under the circumstances—you see the situation now—other members of the committee may be coming in before you can finish your testimony, but I am not sure how many of them can get here because of the situation in the Senate. If you care to proceed, I will be very glad to have you proceed.

STATEMENT OF DR. BENJAMIN M. ANDERSON, LOS ANGELES, CALIF., PROFESSOR OF ECONOMICS, UNIVERSITY OF CALIFORNIA AT LOS ANGELES

Dr. ANDERSON. All right, sir. It is a privilege to talk to you, at all events.

The CHAIRMAN. I regret very much that we have not the other members of the committee here, because I would like the committee to hear your statement. I, of course, would be glad to have it in the record as a part of the record in the case.

As is usually the case, when the Senators are not able to be present to hear the testimony, they always read that part of the testimony in the record anyway.

Dr. ANDERSON. Yes, sir.

Our congressional system, under which the details of legislation dealing with economic topics are worked out by separate committees, is doubtless very necessary from the standpoint of careful draftsmanship and efficient legislative procedure.

I have been very much impressed this morning with the sympathetic attention that the committee has given to technical points raised by individuals who claim hardship, but this system has one immense disadvantage. The different aspects of our economic life are, in fact, intimately interrelated.

Under our system one committee will deal with one segment, and another committee with another segment, and another committee with another segment, and it is difficult, in the extreme, to get the senatorial mind on an economic problem as a whole. It is highly important that what is done by one committee should be coordinated with what is done by other committees if sound general economic policy is to be followed.

Concretely, the immense problem of preventing a ruinous inflation will involve the following elements, only two of which can certainly be dealt with by the Finance Committee—though a third may be—but all of which can be dealt with by the members of the committee in their capacity of Senators, and all of which ought to be in the minds of the committee as it deals with the problems of Government finance.

To hold down prices, we wish, on the one hand, to reduce the demand for goods and we wish to, on the other hand, do what can be done to increase the supply of goods.

One tremendously effective way of reducing the demand for goods is adequate taxation of the incomes of those who buy goods, and this is one of the central problems you have to consider in passing on the pending tax bill.

But another vital point in holding down the demand for goods is the borrowing policy of the Government, and this is very definitely in the province of the Finance Committee of the Senate. If the Government, with its desire to borrow as cheaply as possible, continues to take advantage of the great artificial cheapness of bank money, and continues to borrow primarily from the banks instead of offering its long-

term bonds at rates that will attract investors' money, relying on the bank expansion rather than on the savings of the people, we are going to have very great difficulty, indeed, in holding prices down by price fixing or by any other measures.

Again, if the Government continues unchecked its nondefense expenditures, competing with itself in the markets of the country, it will force up prices much more rapidly than would be the case if the Congress asserted its powers by amendment to the pending tax bill, providing a mandatory reduction of nondefense expenditures.

The English Parliament in the old days knew how to hold down an extravagant king. The Congress of the United States should assert its powers. It is one of the most precious legislative powers, deciding how much money shall be spent.

It is, of course, a pity that we have separate committees for appropriations and for finance. We shall have no adequate budgetary control unless the Congress sees fit to prepare revenue measures and appropriation measures in one document, worked out in the same committees. But I think that a provision requiring the reduction of nondefense expenditures from existing appropriations might well be germane to a tax bill.

The question of the monetary policy of the Government is, of course, very closely related to the question of inflation control, and very closely related to the question of the Government's borrowing policy, the latter being in your jurisdiction. I venture to urge the members of this committee who are members also of the Committee on Banking and Currency, as well as all members of the committee in their capacity of Senators, to give very serious attention indeed to the recent unanimous recommendation of the Board of Governors of the Federal Reserve System, the 12 presidents of the Federal Reserve banks and the Federal Advisory Council that the Federal Reserve authorities be given power to raise the reserve requirements for the member banks of the Federal Reserve System. If I were presenting this to the Banking and Currency Committee, I should wish to go into some technicalities here, but I content myself with making the observation that the maximum increase proposed by the Federal Reserve authorities would put the reserves of the great banks of Chicago and New York at 52 percent, which is too high for the flexibility of banking, and that the maximum ought not to exceed 40 percent.

There is another major factor on the supply side which is outside the jurisdiction of this committee but which I wish to mention here because of its tremendous importance.

Senator Bailey was raising questions this morning about the element in this problem of controlling commodity prices. I think heavy emphasis should be put on that. Production in the United States is handicapped by the 40-hour-week legislation with its requirements of 50 percent for overtime after 40 hours.

We should find a very great slack revealed in our industrial capacity if this 40-hour week were abrogated for the period of the war emergency. It will not do, if we are trying to hold down prices, to say that we can get the extra labor time by paying the extra 50 percent for overtime. If we do that generally, we shall have forthwith a great rise in prices. We are doing it on a substantial scale in defense industries where the Government is paying the bill. But if we apply it generally, we do it only at the expense of a general rise

in prices—to be followed by a further rise in wages, making a new hurdle in the 50 percent for overtime, and with the further certainty of much higher commodity prices than would otherwise prevail. The theory of the 40-hour week is not that it is harmful to the health of men to work for more than 40 hours; it is rather that there are not enough jobs and that we want to spread the work. This theory has no place in time of great national emergency when we are trying to use all our resources.

There are yet other aspects of this inflation problem. But I have imposed upon the patience of this committee enough in trying to present the major phases.

It is certain that if we do not control the underlying forces that make for higher prices, the efforts at price fixing under the bill now pending before the House of Representatives would be a ghastly fiasco. General price fixing, in any case, must be a ghastly fiasco. The place for price fixing is where you have a great scarcity of commodities vitally needed by Army and Navy, where the Government is itself an immense dominating purchaser and where there is not enough to go around for the new defense purposes and the ordinary civilian purposes. And the further place where price fixing is justified is in the case of some necessity of life, like bread or fuel.

When you fix a price, you must provide substitutes for the work that the free price would otherwise do. Prices have work to do. When supply is short and demand is strong, a rising price operates to check demand and to increase supply. The less pressing demand drops out, new sources of supply come into the market, and an equilibrium is reached. If we are going to fix a price, we must take control of supply and demand; you must ration out the supply, giving priorities to the most important needs, or in the case of civilian goods, see to it that, even though nobody gets all he wants, on the other hand nobody shall be entirely without what he needs. This is a tremendous job. It calls for close study of the supply situation and of the need situation.

We did this in the last war for a very limited number of commodities. We did not at all undertake it for commodities in general. We let the prices of nonessentials take their own course and we let the prices of a great many comforts take their own course.

We fixed the prices of certain essential foods and fuels, rationing out supply, limiting the amount which any one purchaser could buy. We made no effort to fix the price of silk stockings. We curtailed automobile production drastically, reducing it to 25 percent, but we did not undertake to fix the price of automobiles and we did not undertake to fix priorities among the consumers of automobiles. It was possible, with sugar, to say that one purchaser would get only 2 pounds at a time, to make a scant supply go round so that all had some sugar. But I don't know how it would be possible, with anything like justice, for the Government to undertake to ration the supply of pleasure automobiles. Who could say that I should have one and that my neighbor should not have one? We left that question to the market in the last war. A great many people who would have liked to buy new automobiles refrained from doing so because they cost too much, while men whose automobiles were most nearly worn out bought new ones.

Incidentally, I raise the question of the equity or justice of taking away essential supplies from an industry, compelling it drastically to

curtail its activities, and, at the same time, saying to it that it must not raise its prices on what it does produce.

Overhead costs rise rapidly when volume is curtailed. The rising price of the scant output is justified from the standpoint of costs, and the desirability of having a solvent industry when the emergency is over would suggest the desirability of allowing an industry to recoup part of its losses by higher prices.

In the last war, we did not undertake to control retail prices at all, except in the matter of food and fuel. I quote from War Industries Board Price Bulletin No. 3, Government Control Over Prices, by Paul Willard Garrett, assisted by Isador Lubin and Stella Stewart; Washington, Government Printing Office, 1920, page 550:

> The great bulk of regulation over prices administered by the Federal Government during the war pertained to producer or wholesale prices. There was no real attempt to save in food and fuel, to control prices at retail. The task of controlling retail prices was undertaken in a comprehensive manner by the Food Administration after its wholesale control was well underway.

The price-fixing legislation and price-fixing policy apparently contemplated in the legislation pending in the House is far more ambitious than anything we undertook in the last war, and even such things as we did undertake in the last war, unless buttressed by adequate action with respect to taxation, Government borrowing policy, and the other things I have referred to, would have been almost impossible.

With this background, I turn to the pending tax bill. You are concerned with getting revenue so that you can pay as much as possible of the new defense expenditures out of taxes rather than with borrowing. And you are concerned with this both from the standpoint of maintaining the solvency of the Government and from the standpoint of preventing a ruinous rise in prices and costs. These two purposes are harmonious so far as the measures to be considered are concerned. To get revenue for the Government out of the incomes of the people, you must go where the income is. And to prevent a rapidly rising income of the people (growing out of war expenditures) from competing with Government, you must take that part of the income which is most rapidly rising. Where is the income of the country?

I call your attention to figures drawn from the Statistical Abstract of the United States for 1940, page 314, which gave, for the years 1929, 1938, and 1939, a classification of the income paid out. I read the figures here only for 1939, but I offer the table for your record, which gives the same figures for 1929 and 1938 also.

National income paid out, by types of payment

	Amount (millions of dollars)			Percent distribution		
	1929	1938	1939	1929	1938	1939
Income paid out, total	80,611	65,007	68,600	100.0	100.0	100.0
Compensation of employees, total	52,776	44,301	46,768	65.5	68.2	68.2
Entrepreneurial withdrawals	12,620	10,473	10,826	15.6	16.1	15.8
Dividends	5,945	3,370	4,124	7.4	5.2	6.0
Interest	5,906	4,888	4,832	7.3	7.5	7.0
Net rents and royalties	3,364	1,975	2,050	4.2	3.0	3.0

Compensation of employees, 68.2 percent of total income paid out. Entrepreneurial withdrawals, 15.8 percent. (Entrepreneurial withdrawals means money taken out of unincorporated businesses by the owners or partners to live on.) Dividends, 6 percent of total national income. Interest, 7 percent of total national income. Net rents and royalties, 3 percent.

Now, a regrouping of these figures will make it clear that far over 70 percent of the total national income paid out is labor income. From the 68.2 percent compensation of employees, we must make a minor subtraction for large salaries, and, on the other hand, we must make a major addition for that part of entrepreneurial withdrawals, which represents labor income rather than profits.

The biggest element in entrepreneurial withdrawals is found in agriculture, where the farmer takes his profits when the harvest is made. But the farmer, although a businessman and the recipient of business profits, is also a workingman, and the greater part of the income of the farm owner, taking the country as a wh e, is not business profits, but rather, compensation for labor.

The same is true of the great bulk of unincorporated businesses. The boss barber and the master mechanic in a garage do not receive regular salaries. They take their income out of the business, but it is far more wages than it is profits that they take out of the business. I estimate that not less than half of entrepreneurial withdrawals constitute true labor income, and that we must, therefore, add 7.9 percent to the 68.2 percent of compensations of employees in getting at labor income.

I have indicated above that we must make a subtraction from that figure also for large salaries. Large salaries have been conspicuous in individual cases, but the total is small.

The total compensation of corporation officials in the United States was $3,337,000,000 in 1929, and was $2,171,000,000 in 1934. But there are over 475,000 corporations in the country and, when 3,000,000,000 is divided by 475,000, the average is $6,300 per corporation. And most corporations have more than one officer, while the large corporations have many officers. A very large part of the total salaries of the officials of corporations is essentially labor income. The salary of the president of a small mercantile corporation who is himself behind the counter and does part of the bookkeeping, and of the numerous minor executives, even in large corporations, are a true part of labor costs. The few conspicuous big salaries are altogether swallowed up in the totals for corporate salaries. We do not need to make any large subtraction from the percentage of labor income to take account of them.

I conclude that anyhow 74 percent of the total income of the country is labor income. What percentage of the income of the country represents the income of property and of business enterprise? To get this, I add the following items:

Dividends, 6 percent; interest, 7 percent; rents and royalties, 3 percent; and the one-half of entrepreneurial withdrawals, which represents profits rather than wages, adding another 7.9 percent. We thus get a total of 23.9 percent as representing all the income received for property ownership and business enterprise.

If I were giving a different table, based on income produced rather than income paid out, I should have to take account of another factor, namely, profits left in the business and corporate profits added to surplus. This was a negative factor in 1938, but was a small positive factor in 1939, and it amounted to about 1 percent of the total national income of 1940.

(See table, Survey of Current Business, U. S. Department of Commerce, June, 1941, p. 15.)

This factor of business savings is far too small, and does not appreciably affect the figure I have given above, based on the tables for income paid out.

Now, you need extra income for the Government; you need more tax money. Where are you going to get it? The answer, I think, is startlingly clear. You have already overtaxed the large incomes. You are already taxing corporate earnings to a point which I regard as very dangerous. I believe that the corporations ought to be allowed to make some profits and to keep some profits in this time of activity, if only that they may have something to fall back upon to protect their solvency when reaction comes. They made a lot of money in the last war, and in the postwar crisis it was extremely helpful. I watched it then as a banker and I saw corporations, desperately short of cash in the postwar liquidation readjustment, still able to get credit from the banks to carry on and do what business was to be done, and to make new plans, and start plans for new things, by virtue of the fact that their surpluses were large enough to stand the losses and to leave their capital unimpaired.

You have already terribly overtaxed the 23.9 percent that represents income from property and from business enterprise. You have already gone as far as I think you would feel there is any justification for going in taxing large salaries.

The head of a great institution, with a salary of $100,000, when he has paid his Federal income tax and his New York income tax, will have a little over $40,000, if the schedules in the bill before you stand. And if you take all the rest of his salary, you would do the Government very little good indeed, because there are so few men in his position. You must go where the income is.

The mercantile world has learned long since that there are not enough rich people to make profitable customers for many businesses. The great, successful businesses are, in general, those dealing with the great body of the people, not getting very much from any one of them, but getting a very large business in the aggregate. I think that the framers of tax legislation will do very well to consider that same principle. Relatively modest amounts taken from the recipients of 74 percent of the income of the country will bring you far more than taking all that is left from the recipients of the 23.9 percent.

I offer you some other figures bearing on this same point, drawn from the Statistical Abstract of the United States for 1940, on page 316. These figures are not as dependable figures as they would be if they had been prepared by the Department of Commerce alone. They relate to the 12-month period from July 1935 through June of 1936. These figures show that 69.10 percent of all the income of the country was received by families and individuals with incomes of $3.000 and less, and that over 80 percent of the total income of the country was received by individuals and families with incomes of $5,000 and less. Over 90 percent of the total income of the country was received by individuals and families with incomes of less than $15,000.

And finally, I offer one other set of figures to show where the most rapid increase in income is to be found. The following figures for pay rolls are taken from the Conference Board Economic Record, published by the National Industrial Conference Board of July 11,

1941. They are index numbers for pay rolls with a base of 100 in 1929.

1929	100	1940: January	90.4
1936	77	December	110.0
1937	92.8	1941: January	109.3
1938	71	April	122.1
1939	83	May	128.5
1940	95		

The figures for June and July I cannot give you exactly, but the rapid increase has continued.

I would, therefore, emphasize that, both from the standpoint of getting revenue and from the standpoint of holding down the growing income of the people, so that they may not compete too heavily in the purchase of goods with the Government, you should put heavy emphasis upon increased taxation of small incomes. I would support heartily the proposal that the exemptions for individuals be lowered to $750 and that the exemption for families be lowered to $1,500. I would urge you to consider how much more revenue could be got by putting these exemptions still lower.

I do not go into the technical points as between lowered income-tax exemptions and a withholding tax. There are men on this committee far better informed than I with respect to the technical problems of tax administration. My emphasis is on the general proposition that you should get a great deal out of incomes that have been so far untaxed, and out of incomes that have been so far untaxed, and out of incomes that have so far been lightly taxed; first, because you can make no real contribution to the Government's need for money by squeezing still dryer the larger incomes and incomes from property and business enterprise, and second, because taxation of these smaller incomes is vitally needed as part of an anti-inflation program.

The CHAIRMAN. Thank you very much, Doctor.

Dr. ANDERSON. I thank you for the opportunity of being heard.

The CHAIRMAN. Mr. Osgood. Mr. Osgood, we were thinking of adjourning the committee hearings to a room on the floor with the Senate chamber level, that is, the Military Affairs Committee, but if you prefer to go on here, under the circumstances, I would be very glad for you to proceed. We could go over there and after some 15 minutes reconvene and give you an opportunity to come on the witness stand there.

Mr. OSGOOD. Just as you prefer. I imagine, from what you say, the removal to the other place would be more convenient to you.

The CHAIRMAN. It would be very much more convenient and would probably enlarge the presence of some of the other senators. Fifteen minutes later would give you an opportunity to make your presentation and take your train or plane as you desire.

Mr. OSGOOD. Thank you very much.

The CHAIRMAN. The committee will adjourn to reconvene in 20 minutes in the Military Affairs Committee room, and all the witnesses who are to appear on today's schedule, we will be very glad to have you come to the Military Affairs Committee room.

Under the circumstances, it is necessary to do that in order to have present any of the members of the committee outside of the chairman.

(Whereupon, at the hour of 2:35 p. m. the committee adjourned and

reconvened at 3 p. m. in the Military Affairs Committee room in the Capitol.)

The CHAIRMAN. Gentlemen of the committee, Mr. Osgood, of Chicago, vice president of the First National Bank; the committee on Federal finance, United States Chamber of Commerce, had begun his statement when we recessed to this room. Mr. Osgood will now proceed.

STATEMENT OF ROY C. OSGOOD, CHICAGO, ILL., VICE PRESIDENT, FIRST NATIONAL BANK; COMMITTEE ON FEDERAL FINANCE, UNITED STATES CHAMBER OF COMMERCE

Mr. OSGOOD. Mr. Chairman and gentlemen of the committee, I am Roy C. Osgood, vice president of the First National Bank of Chicago and in charge of its trust department. I have been administering trusts in the bank for 35 years, and dealing with tax problems in connection with them. I appear here, however, as a member of the Committee on Federal Finance, Chamber of Commerce of the United States.

In connection with the work of various national and local organizations, and in various official and unofficial conferences, it has been necessary for me to give attention to legislation relating to estates and inheritances and the administration of such legislation by Federal and State officials.

My testimony will deal with the estate and gift tax aspects of the bill. This will be given in brief and I would like to file with the committee a supplemental memorandum presenting in detail the points outlined here.

A. GENERAL

1. *Estimated yields.*—The estate and gift tax revisions are estimated to yield approximately $152,000,000 in addition to the yield of the last year of $355,000,000, or a total of $507,000,000. This would increase the yield from this source 43 percent, but the increase would not be substantially effective until 1943. On the basis of the Treasury estimates of a tax system producing $12,606,000,000, estate and gift taxes would produce about 4 percent, and the increased rates about 1.2 percent.

The provisions of the House bill are a great improvement over and much sounder than the original Treasury proposals made last April to the Ways and Means Committee. However, when Mr. Sullivan appeared before your committee on August 8 he recommended changing the estate and gift tax rates in the House bill to those originally proposed by the Treasury and to reduce the specific exemptions and exclusions from $40,000 to $25,000. This change he estimated to produce an increased yield of $347,000,000. This is over $200,000,000 disproportionately too high in relation to estimated yields from other increases when compared with the proportionate yield from this particular tax source. The House bill recognized this and reduced it to $152,000,000. We realize the need of increased revenue production but like the Ways and Means Committee we think the total yield from this source proposed in the bill approaches a fairer sense of proportion.

2. *Sound temporary policy would propose no increase.*—The bill's proposed increase in rates, though producing only 1.2 percent of the estimated revenues, will, even as it stands, have a wholly disproportionate effect on our social economy. On the assumption that the present rates and exemptions are fair to our economy, as a sound temporary fiscal policy this increase should not be proposed.

3. *Sound permanent policy would reduce rates and increase exemptions.*—As a matter of fact, the present rates and exemptions are not fair to our economy. Sound permanent fiscal policy, if the estate and gift taxes are to remain as sources of Federal revenue, would require even the present rates to be reduced and the present exemptions increased.

B. ESTATE TAX CHANGES

1. *Estimated yields and rate increases.*—The estate-tax increased yield is estimated at $136,000,000. This is obtained by increasing the estate-tax rates. The 10-percent defense tax applicable to estates is made permanent. The $40,000 exemption remains unchanged. On a net estate of $50,000 (before exemption) the tax is increased from $220 to $550, an increase of $330, or 150 percent. On $100,000 it is increased from $4,620 to $9,570, an increase of $4,950, or 107.1 percent. On $400,000 it is increased from $63,780 to $99,530, an increase of $35,750, or 56.1 percent. On $1,000,000 it is increased from $228,780 to $308,090, an increase of $79,310, or 34.7 percent. The percentage of increase in the effective rates gradually reduces until at $100,000,000 the new rate is 1.8 percent higher than the present rate.

2. *Major increase falls on smaller estates.*—The last available Treasury report on estate taxes is for returns filed in 1938. This shows taxpayers reporting under $100,000 comprised 51 percent of the total; those reporting between $100,000 and $500,000 were 42 percent; and those over $500,000 were 7 percent. Assuming the year 1938 to be fairly representative, the new rates increase taxes on the estates of 93 percent of estate taxpayers from 150 percent to about 50 percent; and on 7 percent of the taxpayers from 50 percent to 1.8 percent. The major impact of the increase will fall upon 93 percent of estate taxpayers.

C. GIFT TAX CHANGES

1. *Estimated yields and rate increases.*—The gift tax increased yield is estimated at $16,000,000, beginning in the fiscal year 1942. The gift tax has been effective since 1932 and there have been changes in rates relative to the changes in estate-tax rates. The total tax collections in the 5½ years through 1937 were $280,000,000 or an average of $51,000,000 a year. At the existing rates the Budget estimate for last year was $31,300,000. Like the present law the new rates are three-quarters of the new estate-tax rates. The specific exemption of $40,000 and the exclusion of $4,000 per year for each donee remain unchanged.

2. *Major increase falls on smaller gifts.*—Inasmuch as the increases in the rates are relative to those of the estate tax, the major impact of the increase will fall upon the smaller taxpayers.

3. *No proper correlation of gift and estate tax and income tax.*—The lack of correlation, between the gift-tax law and the estate-tax

law and with certain provisions of the income-tax law, which calls for remedial legislation, remains unjust to taxpayers. The new gift-tax law not only does not remedy the situation, but makes the injustices more acute by increasing the rates. This will be referred to later in the testimony.

D. ESTATE-TAX PROPOSALS VIOLATE PRINCIPLES OF EQUALITY AND JUSTICE

1. *Death-tax laws and rates should be stable.*—One of the vital principles of death-tax legislation should be stability of laws and rates. Federal estate taxes have not been stable in the past. In the last 25 years there have been at least nine changes in the effective rate of the estate tax and four of these have occurred within the last 9 years.

2. *Federal estate-tax laws have been unstable.*—With this record of instability, equality among individual taxpayers was impossible. If A inherited a $200,000 estate in 1926 he would have paid $1,500 in Federal death tax. If B inherited the same amount in 1933, he would have paid $9,500 in tax. If C had inherited the same estate early in 1935, the tax would have been $12,800. D, inheriting the same in 1937, would have paid $19,800; E, inheriting the same estate after the Revenue Act of 1940, would have paid $21,600; F, inheriting the same estate under the act of 1941, would pay $38,270.

3. *Present proposals continue unsound principles.*—All of these changes have taken place in the short space of 14 years and are in addition to other changes in the law, which required readjustment in the plans of every person, so that many estates suffered heavily because of inability to plan payments. The new law makes another change and adds to the record of unstable tax policy.

4. *Instability of policy makes equality among taxpayers impossible.*—Equality among individual taxpayers is a prime requisite of any tax law. In the case of death taxes, equality cannot be had without stability in effect and rates. A death tax is different from other types of taxes in that the impact of death tax comes only at death. The ordinary forms of taxation, such as the income tax, are imposed annually. Thus, every year the taxpayer finds himself subject to the impact of this tax. Any change in rates affects all taxpayers alike. On the other hand, changes in the death-tax law and particularly those affecting the impact of the tax; that is, changes in rates, result in unequal imposition on the heirs of different persons dying at different times. On the ground of tax-paying ability, of justice, of obligation to support the Government, each estate should stand equal before the law. Any system of taxation which makes the amount of contribution of the different citizens depend upon such fortuitous circumstances as death is not in harmony with sound principles of taxation.

5. *Estate owners entitled to long-range planning.*—Every citizen should have the opportunity to plan his business, his investments, and the disposition of his property after his death according to his best judgment. If the citizen during his lifetime cannot know what will be the rates of taxation imposed upon his estate at death, he is denied this right.

6. *Instability of estate-tax policy makes planning impossible.*—Modern death taxes are substantial capital obligations which must be

paid out of the capital of the estate of decedent after death. With a stable rate of tax, even though high, the decedent during his lifetime can adjust his plans to consider the tax which will be payable at death. Continuous changes in laws and rates make it impossible to foretell even approximately what the tax will be when death occurs.

7. *Federal policy of instability causes inequality and injustice.*—If uniformity and equality as between individual taxpayers, prime requisites of any just tax, are to be obtained in death taxation, the laws and rates must be stabilized and placed on a more permanent basis. So long as the laws and rates are changed with the varying moods of Congress, inequalities and injustices will prevail.

8. *Estate-tax-rate increase of small effect on current policy.*—The raising of estate-tax rates cannot affect materially the current fiscal policies of the Government. As previously pointed out, most other types of taxes recur at regular intervals, normally once a year. The rates of such taxes are determined naturally, by consideration of the tax base and the amount of revenue to be raised to meet the needs of the Government. Rates will normally be subject to frequent change, in harmony with changed and unforeseen conditions. In such cases there is no long-range inequality among taxpayers produced by such changes in rates.

9. *Estate taxes are not adapted to accomplish elasticity of the tax sytem.*—The estate tax, on the other hand, occurs irregularly so far as the taxpayer is concerned, and is more or less irregular even from the standpoint of the Government. There is no direct relation between the needs of the Government and the estate-tax rates for the reason that there is no predictable tax base. Citizens die without regard to the needs of the Government, and deaths are not subject to the control of the tax collector. Obviously, therefore, the estate tax by its very nature is not adaptable for use as a flexible base to accomplish elasticity in the tax system. Other forms of revenue must be utilized to meet the expanding and contracting needs of the Government. The estate tax should be kept stable.

E. ESTATE-TAX RATE PROPOSALS VIOLATE PRINCIPLES OF MODERATION

1. *Basic principles of rate structure.*—In attempting to determine the rates to be used in estate taxation, they may reasonably be considered higher than the rates of an anually recurring tax on property; and the principle of progression is reasonable if reasonably applied; that is, the rates should not be excessive.

2. *Reasonable exemption for dependents should be allowed.*—From the standpoint of the decedent and his dependents, the rates of tax must not be so high as to make impossible or discouragingly difficult reasonable provision for the family and dependents. This principle indicates liberal exemptions from the standpoint of the common welfare.

3. *Law should consider family's economic position.*—It is a well-established principle of probate law that a widow's exemption and a child's exemption for at least a year for the purpose of debt priority should be sufficient to afford them support and maintenance in the manner of life to which they have been accustomed. A $100,000 Federal estate-tax exemption is about the minimum that ought to be

granted under a sound theory of exemptions. A liberal exemption makes the effect of the first rate or the first few rates both progressive and distinctly moderate as applied to the first brackets above the exemptions.

Those of you who are particularly familiar with the application of the present estate-tax law know we have not touched the basic exemption of $100,000 applied under the 1936 rate. That was reduced to $40,000, and has gone on ever since, except, as you know, the Treasury elected to have it reduced at this time to $25,000.

4. *Increased administration costs constitute increased tax burden.*—One other matter in connection with the exemptions involves the increased cost of doing business of those engaged in settling decedent's estates. With an exemption of $100,000, there are naturally fewer estates which require the difficult and technical task of preparing Federal estate-tax returns. When the exemption was reduced to $40,000 the time and work in settling estates between $40,000 and $100,000 was immeasurably increased. And now the Treasury would reduce the exemption to $25,000.

5. *Rates should not be so high as to stimulate evasion.*—Death-tax rates should not be so high as to stimulate avoidance and evasion. So long as death-tax rates are relatively low, the individual taxpayer finds it uneconomic to attempt to engage in activities resulting in avoidance or evasion of the tax. The rewards are not worth the cost or the risk involved. However, the higher the tax becomes the more profitable and attractive the avoidance or evasion appears to the taxpayer. When tax rates become confiscatory, every dollar or property included in the gross estate becomes important. Minor defects in the law are magnified and injustices become real.

6. *Law should not cause adverse social and economic effects.*—The adverse economic and social effects of high estate-tax rates deserve special consideration. The rates must be regarded from the social and economic point of view with respect to the effect of the tax upon industry. High rates are capable of producing a variety of results harmful not only to the persons called upon to bear the tax burden but also to the industry of the Nation. First of all there is the danger of large forced sale of assets. Few estates include large amounts of liquid assets. I think the general estimates are about between 10 and 11 percent.

At death, therefore, in order to meet heavy tax payments it frequently becomes necessary to sell a considerable part of the assets of the estate. The sale of these assets in time to meet the requirements of the law has a tendency to depress the market and to cause a decline of prices. Such sales, therefore, may be and frequently are, difficult except at a considerable sacrifice.

7. *In effect, the tax constitutes a demand loan payable at maker's death.*—Heavy taxes at time of death of a sole or principal owner of a business are also likely to result in forced alterations in its control through compelling the sacrifice of holdings by those into whose hands the control of the business would normally come following the death of such an owner. A heavy tax may compel the sale of enough stock to cause the loss of such control and the impairment of both the incentive and valuable management policies that have made the business

successful. In some cases the sale of the stock is impossible, and actual liquidation of the business is necessary. When a tax requires of an estate payments greater than can be met from cash resources on hand those in control of a closely owned business comprising substantially their entire resources may seek to avoid sale of assets by borrowing, and may be thus forced to make engagements so heavy as to impair the credit of the concern.

All of the foregoing effects, whether forced sale of assets, forced change of control, or strain upon credit, are made doubly serious because of their appearance at the very time when the enterprise is least able to stand the strain on account of the loss of personal management resulting from the death of the former head.

Senator GERRY. Have not you had some cases where the forced sale meant that the tax was greater than the whole value of the estate?

Mr. OSGOOD. Yes; of course, Senator Gerry, that was particularly true during the depression period, as we know. We had some very curious situations there, where a forced sale of the assets would not even produce the tax, let alone leave anything for the estate itself.

The injurious effects upon industry of excessive estate taxes are unfortunately not confined to the particular company involved in the estate. All who are engaged in such enterprise, and also many who are engaged in other enterprises related to those which are directly affected by the tax, are subjected to insecurity which is demoralizing and impairs the productive capacity of the community as a whole.

I might say that the First National Bank 2 years ago was made executor and trustee under the will of Louis Comiskey, the owner of the White Sox. The assets of the estate, the grandstand and the ball player investments, were not liquid. It took a great deal of maneuvering to keep the whole estate in the hands of the family, and the ball club in the hands of Comiskey's son, which was the third generation. We were just about able to do it.

8. *Sound fiscal policy demands moderate rates.*—Can we afford in such a period as now exists, no matter what may be advanced in the way of argument as to immediate revenue needs or other justification, to discourage the enterprises of living people, cause shut-downs of active businesses or violent changes in ownership through forced transfers? Under all these considerations a sound fiscal policy demands moderate rates.

F. EXCESSIVE RATES HARMFULLY DEPLETE FUTURE TAX BASE

1. *Rates should not harmfully deplete future tax base.*—We should be just as concerned with future tax capacity as with present revenues. The estate tax is essentially a capital tax, and if capital is dissipated through excessively high estate-tax rates, the tax base, that is, the capital which produces income subject to taxation may be lost in future generations. While it is important to have our present tax plans designed so that the present generation will pay for as much of the defense expenditures as possible, future generations will have their burden in paying for those portions of such expenditures as are financed by Government borrowings. Estate taxes force the second generation to pay twice: First, through loss of income on the capital levy involved in the estate tax and, second, in that generation's proportionate share of current taxes imposed at some future date.

2. *Excessive rates harmfully decrease productive wealth.*—If through excessively high income taxes the building of wealth through productive enterprise is prevented and if through excessively high death taxes such wealth as has already been accumulated is removed from productive enterprise, there will come a time when there is no wealth in productive enterprise. The final result will be a complete drying up of tax revenues from all sources which have productive wealth as their base.

If the committee is interested, I can furnish for the record some very interesting figures on the effect of what that would be.

The CHAIRMAN. We will be glad to have you do so.

Mr. OSGOOD (continuing).

G. SHOCK OF HIGH ESTATE TAXES SHOULD BE CUSHIONED

1. *Present cushion now inadequate.*—The only cushion now provided against the shock of the tax is the possibility of extensions of time up to 10 years in which to pay estate taxes. The present postponement carried 4-percent interest, and current income is less than 4 percent.

I might say I think this committee was largely responsible in reducing that rate from 6 to 4 at a previous period when we testified on the same subject.

Senator BYRD. Mr. Osgood, is that a matter of right? Has the taxpayer got a right to ask for that extension and get it?

Mr. OSGOOD. Yes; he has. He did have to pay 6 percent, and now he has to pay 4 percent.

Senator BYRD. I mean it is not subject to discretion?

Mr. OSGOOD. It is subject to a certain amount of discretion, Senator Byrd, because certain things have to take place. We practically have to prove to the Commissioner that we have to borrow to pay the tax in order to get a postponement. I might say most executors and trustees do not like postponements, because they like to get the thing out of the way if it is possible to do so.

2. *More adequate cushion should be made.*—Since estate taxes should fall as lightly as possible upon the actual capital of an estate, the taxes should, so far as possible, be payable as are other taxes, out of income. Under the present law, any postponement of the tax carries with it interest in excess of the earning capacity of capital itself. Obviously, practical considerations should reduce the interest rate upon extensions to at least 2 percent in order to allow an estate to meet some part of death taxes out of income.

H. RESERVES FOR ESTATE TAX

1. *Need for adequate tax-free reserve.*—Even with the existing high estate tax rates, some means should be provided whereby the shock of the estate tax upon noncash assets may be lessened and the Government assured the prompt payment of the tax. In this connection some form of tax-free reserve should be authorized.

We do not suggest any specific method as the best or only possible one, but suggest for your consideration two general methods for providing essential relief. It is believed that some combinations of these

two methods, which may be denominated (1) "self-insurance," and (2) "purchased insurance," may provide the most practical solution.

2. *Self-insurance method.*—This plan involves setting up a trust specifically for estate-tax purposes. If deemed desirable, the statute might limit the types of assets which could be placed or kept in such a trust, such as, for example, Government bonds, securities listed on the New York or other recognized exchanges, and the like. It is suggested, however, that no such special limitations be imposed, in order to avoid discrimination between investments, since the trust instrument would ordinarily contain provisions as to liquidity.

In the interests of simplicity and prevention of possible income-tax avoidance, such trusts should be permitted to be revocable, except that, after the settlor's death, the assets would be specifically earmarked for estate-tax payment and no prior distributions could be made till such tax liabilities were liquidated. The trust instrument could provide for the disposition of earnings prior to the settlor's death either by way of accumulation or distribution to him. In either event, the trust income would be taxable to the settlor. The instrument might also require as a guaranty of liquidity that the trust be liquidated within a relatively short time after the due date of the estate tax.

Whatever portion of the trust assets are required to pay estate taxes should be made exempt from such taxes, and any excess should be subject to tax. There should be no tax on the privilege of creating such trusts.

The principle of not taxing such portion of the estate as is required to pay the tax accords with the result now reached under the gift tax where the tax is paid by the donor out of the estate remaining to him after a gift. The tax so paid is not taxed as a part of the gift and operates to reduce the estate passing at death and subject to estate tax.

3. *Purchased insurance.*—Past proposals in this field have usually taken the form of exempting from estate tax the proceeds of life insurance, definitely earmarked in some way for the purpose, to the extent such proceeds are required to pay estate-tax liabilities with any excess added to the corpus and subject to tax.

The great advantage of this plan is its simplicity. On the other hand, a limitation of relief to this plan alone may be deemed objectionable because it may discriminate between taxpayers, since all taxpayers are not insurable. For these reasons it is believed that some form of both plans should be recognized by the statute, leaving the taxpayer to select the form best adapted to his own circumstances.

I might say that Kansas is one State in the Union that has such insurance provisions on this tax, and most of the Canadian Provinces have had them for years.

I. PROPOSALS ADVERSELY AFFECT STATE TAXES

1. *Decrease of States' share of death taxes.*—Under present law the maximum possible State share of combined death duties under the 80-percent-credit system ranges from 3.1 percent of the combined death duties on a net estate of $100,000—after exemption—to 21 percent on an estate of $50,000,000. In the proposed bill the amount would be reduced to 1.55 percent on an estate of $100,000 and to 20.23 percent on an estate of $50,000,000.

2. *Recoupment of State loss impracticable.*—Increase of State revenues from death taxes through an increase in State rates would be very difficult because of the shrinkage in funds available after deduction of Federal death taxes.

3. *Certain States would suffer direct losses.*—Those States which do not make specific legal provision for taking the maximum Federal allowance would suffer a loss of revenue. Those States having inheritance taxes based upon principles of consanguinity, and not utilizing a supplementary estate tax, would find the available taxable base greatly reduced.

4. *Eventual shrinkage of State death tax base.*—Reduction of the corpus of estates through the imposition of heavy Federal death taxes will result in eventual shrinkage of State revenues from death taxes on these estates in succeeding generations.

5. *Adverse effect on State income and property taxes.*—Future taxation of incomes derived from estates will yield less revenue to the States, due to depletion of the invested capital base from which such income is derived. Existing and proposed heavy Federal income-tax rates render it difficult, if not impossible, to restore depleted capital through savings.

J. DEATH-TAX FIELD SHOULD BE RETURNED TO STATES

1. *Death-tax field belongs to States.*—Death taxes are not technically a levy on the estate but are excises imposed upon the transfer of the property and are merely measured by the size of the estate. However, rights of transfer are determined wholly by State laws, and the Federal Government has no jurisdiction over them.

2. *Continuance of present rates first step toward return.*—It is recognized that the immediate repeal of the estate tax is impractical. However, the objective should be toward returning this field of taxation to the States. A step in that direction would be a continuance of the existing rates.

The effect on State revenues is a matter of considerable concern. The position of the States was expressed by Gov. H. Lehman, of New York State, in a letter to Senator Harrison, chairman of the Senate Finance Committee, in connection with the Revenue Act of 1938.

Governor Lehman wrote:

> The independent sovereignty of the States is threatened by Federal taxing policy. This country was organized on the theory and has prospered under a system of independent States with exclusive authority in many fields and with independent taxing power, a power not second to, but on a parity with, the Federal Government itself.
>
> Under such conditions if one of two governments, having equal concurrent jurisdiction to levy a tax, actually monopolizes the field to the exclusion or the near exclusion of the other, it may follow that that other government will be destroyed or at least starved into impotency.
>
> The extent to which the Federal Government has been and is ignoring the rights of the States in the income (personal and corporate) and estate-tax fields, and virtually monopolizing those fields to the exclusion of the States is truly alarming. The result is that the bulk of State and local revenue is shouldered on real property and that many of the States and their localities have been forced to enact tax laws not suited to State and local use and uneconomic in their effects.

That was written in 1938, of course, before the act of 1940 became effective and before the proposed rates became effective, and it would be even more pertinent today.

3. *Program should contemplate return to States.*—Having in mind the fact that the Federal-estate tax was primarily an emergency measure, that it is a field of taxation traditionally reserved to the States, and that the present high rates already deprive the States of a much-needed source of revenue, it must be concluded that any sound tax program will contemplate the eventual return of this tax source to the States. As a further step in this direction, a decrease in the present Federal estate-tax rates is recommended.

K. GIFT AND ESTATE TAXES NEED CORRELATION

1. *Estates handicapped by provision for gifts in contemplation of death.*—You recall that the gift-tax law, which I think was the first gift-tax law that was ever enacted in any English-speaking country, was made in 1932 and was a sort of policeman principle for the estate tax.

Senator GERRY. There was a gift-tax law previous to that, it is my recollection.

Mr. OSGOOD. There was in 1924. You are right.

Senator GERRY. In 1924?

Mr. OSGOOD. In 1924. We were the first English-speaking country, at least, to adopt the gift-tax statute. The present law provides for including in the gross estate all gifts made "in contemplation of death." The law also provides that any gift made by the decedent within 2 years of the date of his death shall, unless shown to the contrary, be presumed to have been made "in contemplation of death." The intent of the law was to place the burden upon the Government of proving that gifts made prior to the 3-year period were "in contemplation of death." As to gifts made within the 2-year period, the intent of the statute was to place the burden upon the taxpayer of proving that such gifts were not made "in contemplation of death."

This legislative policy is being greatly defeated by the present attitude of the Treasury Department. Recent experience has shown that it is the policy of the Government to assert that all gifts in any substantial amounts were made "in contemplation of death," regardless of when made. As a result, the taxpayer is practically forced to litigate every case.

2. *Overlapping provisions cause double taxation.*—Certainly the problem could be eased by administrative action which recognizes the position presently taken by our courts. A better solution would be to change the law.

There is no reason why, now that the Government has both laws, it should not be required to choose whether it will subject a particular transaction to a gift tax or an estate tax. The two laws, to whatever extent they overlap, result not only in double taxation but subject the taxpayer to the uncertainty and very probably also the annoyance and expense of litigation.

3. *Law should eliminate existing complications.*—Section 811 (c) should be changed. Certainly it would be sound tax policy to repeal all of section 811 (c) except the provision with respect to gifts

strictly in contemplation of death, leaving all other gifts to be taxed under the gift-tax law.

By the way, my supplemental statement goes into the technical details as to the suggested language for the amendments.

The CHAIRMAN. That is all right, Mr. Osgood.

Mr. OSGOOD (continuing):

4. *Return of death tax to States would eliminate need of gift tax.*—Of course, many of the perplexing problems in the gift-tax law could be avoided entirely if the gift-tax law were repealed in its entirety. Certainly if the Federal Government would, as it should, leave the field of death taxation to the States, there would be no need for any Federal gift-tax law. The only justification for any Federal gift tax is to correlate with the Federal estate tax. The present gift-tax law does not provide this necessary correlation, since there are many instances of gifts being subject to both gift tax and Federal estate tax. A program looking toward the eventual return of the death tax to the States and elimination of the Federal gift tax is sound in principle.

L. CORRELATION OF ESTATE AND INCOME TAX NEEDED

1. *Estate-tax valuation for income tax needs correlation.*—We recommend an appropriate amendment to section 113 (a) (5) of the code which will definitely establish, as the basis for income-tax purposes, the valuation of property transmitted at death which was used in the computation of the Federal estate tax.

There is a serious lack of correlation between the estate tax and the income tax at this point under the existing law.

2. *Present provisions cause unfair discrimination.*—Moreover, code section 811 (j) allows the executor or administrator to elect between valuation at the date of death or 1 year thereafter for estate-tax purposes, with a proviso that if value at the later date is elected, then as to assets in the gross estate distributed or sold during the year, value at the date of distribution or the sale price shall be used. Yet section 113 (a) (5) of the code has never been amended so as to correlate with section 811 (j).

That also, Mr. Chairman, is referred to in detail in the supplemental statement.

The CHAIRMAN. All right, Mr. Osgood.

Mr. OSGOOD (continuing).

M. LAW CONCERNING GIFTS IN TRUST UNFAIR

1. *Gifts in trust require $4,000 exclusion.*—Prior to the Revenue Act of 1938, gifts in trust enjoyed the benefits of the annual exclusion of $5,000 to the same extent as gifts made in other ways. The only exception was gifts of future interests, whether by trust or otherwise. Section 505 of the Revenue Act of that year reduced the annual exclusion to $4,000, and denied its benefits altogether to gifts in trust. This caused unfair discrimination between outright gifts and gifts in trust. The reason for the change was caused by certain court decisions and has now disappeared. It is recommended that the present unwarranted inequalities be corrected by appropriate amendments to section 1003 (b) of the code.

That also is dealt with technically in the supplemental statement.

N. EXEMPTION OF SECURITIES OF NONRESIDENT ALIENS FROM ESTATE AND GIFT TAXES SHOULD BE PROVIDED.

Under the existing law nonresident aliens are subject to estate and gift taxes only with respect to property situated within the United States. However, the Internal Revenue Code provides in respect of both taxes that stock of a domestic corporation shall be considered property situated within the United States, no matter where the stock certificates are physically located. No similar inconsistency exists in the case of bonds, which are usually taxed in the place where the bonds are physically located.

We recommend that bonds and other securities of foreign corporations owned by nonresident aliens be specifically exempted from estate and gift taxes. This recommendation is based solely upon practical considerations. There are many good reasons for encouraging nonresident aliens to keep their securities, whether foreign or domestic, in American custodian accounts.

The existing law defeats its own purpose, viz, maximum revenue, by creating a tax incentive to foreigners to keep their foreign securities outside the United States. For these reasons, it is confidently believed that appropriate amendments to sections 863 and 1030 of the code would benefit the revenue.

Thank you very much, sir.

The CHAIRMAN. Now you wish the supplemental statement to follow your original statement?

Mr. OSGOOD. I would like to have the supplemental statement made a part of the record.

The CHAIRMAN. Following your remarks?

Mr. OSGOOD. Yes, sir.

The CHAIRMAN. That will be done.

Mr. OSGOOD. Thank you, sir.

(The supplemental statement of Mr. Osgood is as follows:)

SUPPLEMENTAL STATEMENT OF ROY C. OSGOOD

Mr. Chairman: I am Roy C. Osgood, vice president of the First National Bank of Chicago and in charge of its trust department. I have been administering trusts in the bank for 35 years, and dealing with tax problems in connection with them. I appear here, however, as a member of the Committee on Federal Finance, Chamber of Commerce of the United States.

In connection with the work of various national and local organizations, and in various official and unofficial conferences, it has been necessary for me to give attention to legislation relating to estates and inheritances and the administration of such legislation by Federal and State officials.

My testimony will deal with the estate- and gift-tax aspects of the bill.

A. GENERAL

1. *Estimated yields.*—The estate- and gift-tax revisions are estimated to yield approximately $152,000,000 in addition to the yield of the last year of $355,000,000, or a total of $507,000,000. This would increase the yield from this source 43 percent, but the increase would not be substantially effective until 1943. On the basis of the Treasury estimates of a tax system producing $12,606,000,000, estate and gift taxes would produce about 4 percent, and the increased rates about 1.2 percent.

2. *Sound temporary policy would propose no increase.*—This proposed increase in rates, even though producing only 1.2 percent of the estimated revenues, will have a wholly disproportionate effect on our social economy. On the assumption

that the present rates and exemptions are fair to our economy, as a sound temporary fiscal policy this increase should not be proposed.

3. *Sound permanent policy would reduce rates and increase exemptions.*—As a matter of fact, the present rates and exemptions are not fair to our economy. Sound permanen fiscal policy, if the estate and gift taxes are to remain as sources of Federal revenue, would require even the present rates to be reduced and the present exemptions increased.

B. ESTATE TAX CHANGES

1. *Estimated yields and rate increases.*—The estate tax increased yield is estimated at $136,000,000. This is obtained by increasing the estate-tax rates. The 10-percent defense tax applicable to estates is made permanent. The $40,000 exemption remains unchanged. On a net estate of $50,000 (before exemption) the tax is increased from $220 to $550, an increase of $330, or 150 percent. On $100,000 it is increased from $4,620 to $9,570, an increase of $4,950, or 107.1 percent. On $400,000 it is increased from $63,780 to $99,530, an increase of $35,750 or 56.1 percent. On $1,000,000 it is increased from $228,780 to $308,090, an increase of $79,310, or 34.7 percen. The percentage of increase in the effective rates gradually reduces until at $100,000,000 the new rate is 1.8 percent higher than the present rate.

2. *Major increase falls on smaller estates.*—The last available Treasury report on estate taxes is for returns filed in 1938. This shows taxpayers reporting under $100,000 comprised 51 percent of the total; those reporting between $100,000 and $500,000 were 42 percent; and those over $500,000 were 7 percent. Assuming the year 1938 to be fairly representative, the new rates increase taxes on the estates of 93 percent of estate taxpayers from 150 percent to about 56 percent; and on 7 percent of the taxpayers from 50 percent to 1.8 percent. The major impact of the increase will fall upon 93 percent of estate taxpayers.

C. GIFT TAX CHANGES

1. *Estimated yields and rate increases.*—The gift tax increased yield is estimated at $15,000,000, beginning in the fiscal year 1942. The gift tax has been effective since 1932 and there have been changes in rates relative to the changes in estate-tax rate. The total tax collections in the 5½ years through 1937 was $280,000,000 or an average of $51,000,000 a year. At the existing rates the Budget estimate for the last year was $31,300,000. Like the present law the new rates are three-quarters of the new estate-tax rates. The specific exemption of $40,000 and the exclusion of $4,000 per year for each donee remain unchanged.

2. *Major increase falls on smaller gifts.*—Inasmuch as the increases in the rates are relative to those of the estate tax, the major impact of the increase will fall upon the smaller taxpayers.

3. *No proper correlation of gift and estate tax and income tax.*—The lack of correlation, between the gift-tax law and the estate-tax law and with certain provisions of the income-tax law, which calls for remedial legislation, remains unjust to taxpayers. The new gift-tax law not only does not remedy the situation, but makes the injustices more acute by increasing the rates. This will be discussed in detail later in the testimony.

D. ESTATE TAX PROPOSALS VIOLATE PRINCIPLES OF EQUALITY AND JUSTICE

1. *Death-tax laws and rates should be stable.*—One of the vital principles of death-tax legislation should be stability of laws and rates.

Federal estate-tax rates have not been stable in the past. The 1916 law imposed rates ranging from 1 percent on net estates from $50,000 to $100,000 to 10 percent on net estates in excess of $5,000,000. By an amendment of March 3, 1917, the rates were increased by 5 percent and the Revenue Act of 1917 further increased the rates to a maximum of 25 percent. The Revenue Act of 1918 reduced the rates of tax in the lower brackets. The 1924 act instituted a credit of 25 percent for State inheritance taxes paid and increased the rates. The 1926 act reduced the rates of tax and increased the exemption and the credit for State inheritance taxes. In 1932 an additional estate tax was imposed over and above that imposed by the 1926 law, the exemption was decreased from $100,000 to $50,000 and in effect the credit for State inheritance taxes was decreased. The 1934 and 1935 acts both increased the estate-tax rates and in 1940

the additional 10-percent defense tax was imposed. The exemption was reduced to $40,000.

2. *Federal estate-tax laws have been unstable.*—With this record of instability, equality among individual taxpayers was impossible. If A inherited a $200,000 estate in 1926 he would have paid $1,500 in Federal death tax. If B inherited the same amount in 1933, he would have paid $9,500 in tax. If C had inherited the same estate early in 1935, the tax would have been $12,800. D, inheriting the same estate in 1937 would have paid $19,800; E inheriting the same estate after the Revenue Act of 1940, would have paid $21,660; F inheriting the same estate under the act of 1941 would pay $38,270.

3. *Present proposals continue unsound principles.*—All of these changes have taken place in the short space of 14 years and are in addition to other changes in the law, which required readjustment in the plans of every person. Obviously, in many cases the changes came so fast that many estates suffered heavily because of inability to plan payments. The new law makes another change and adds to the record of unstable tax policy.

4. *Instability of policy makes equality among taxpayers impossible.*—Equality among individual taxpayers is a prime requisite of any tax law. In the case of death taxes, equality cannot be had without stability in effect and rates. A death tax is different from other types of taxes in that the impact of the death tax comes only at death. The ordinary forms of taxation, such as the income tax, are imposed annually. Thus every year the taxpayer finds himself subject to the impact of this tax. Any change in rates affects all taxpayers alike. If the tax is low this year and high next year, each taxpayer gains the advantage of the low rate this year and suffers the penalty of the high rate next year. On the other hand, changes in the death-tax law and particularly those affecting the impact of the tax, that is, changes in rates, result in unequal imposition on the heirs of different persons dying at different times. For example, to take 5 percent of the estate of one person who happens to die when one law is in effect, and merely because the lawmaking body in its wisdom has seen fit to change the death-tax rates, to take 10 percent of the estate of another owning the same amount of property, who might live until after another law has been enacted, is unjust and should be avoided as far as possible. On the ground of tax-paying ability, of justice, of obligation to support the Government, each estate should stand equal before the law. Any system of taxation which makes the amount of contribution of the different citizens depend upon such fortuitous circumstances as death is not in harmony with sound principles of taxation.

5. *Estate owners entitled to long-range planning.*—Every citizen should have the opportunity to plan his business, his investments, and the disposition of his property after his death according to his best judgment. If the citizen during his lifetime cannot know what will be the rates of taxation imposed upon his estate at death, he is denied this right. Certainly the continual changing of rates of death-taxes leaves little room for individual planning.

6. *Instability of estate-tax policy makes planning impossible.*—Modern death taxes are substantial capital obligations which must be paid out of the capital of the estate of decedent after death. Frequently it becomes necessary to sacrifice assets of the estate in order to raise a sufficient sum to pay such taxes. With a stable rate of tax even though high, the decedent, during his lifetime, can adjust his plans to consider the tax which will be payable at death. A person should be able to determine with some degree of accuracy the amount which his estate will be called upon to pay, so as to be able to protect his estate by making suitable provision before death for its payment. Continuous changes in laws and rates make it impossible to foretell even approximately what the tax will be when death occurs.

7. *Federal policy of instability causes inequality and injustice.*—If uniformity and equality as between individual taxpayers, prime requisites of any just tax, are to be obtained in death taxation, the laws and rates must be stabilized and placed on a more permanent basis. So long as the laws and rates are changed with the varying moods of Congress, inequalities and injustices will prevail.

8. *Estate-tax rate increase of small effect on current fiscal policy.*—The raising of estate-tax rates cannot affect materially the current fiscal policies of the Government. As previously pointed out, most other types of taxes recur at regular intervals, normally once a year. The rates of such taxes are determined naturally, by consideration of the tax base and the amount of revenue to be raised to meet the needs of the Government. Rates will normally be subject to frequent change, in harmony with changed and unforseen conditions. In such cases there is no long-range inequality among taxpayers produced by such changes in rates.

9. *Estate taxes are not adapted to accomplish elasticity of the tax system.*—The estate tax, on the other hand, occurs irregularly so far as the taxpayer is concerned, and is more or less irregular even from the standpoint of the Government. There is no direct relation between the needs of the Government and the estate-tax rates for the reason that there is no predictable tax base. Citizens die without regard to the needs of the Government, and deaths are not subject to the control of the tax collector. Moreover, because of the delays in administering estates and the consequent delays in determining the tax, changes in the estate-tax laws usually do not materially affect the revenues for at least 1 year after the changes are made. This is confirmed by the statement of John L. Sullivan, Assistant Secretary of the Treasury, before the Committee on Ways and Means of the House of Representatives on April 24, 1941, when he stated in connection with the present proposal to increase the estate-tax rates: "The estate-tax changes, however, would not begin to yield revenue until the fiscal year 1943." Obviously, therefore, the estate tax by its very nature is not adaptable for use as a flexible base to accomplish elasticity in the tax system. Other forms of revenue must be utilized to meet the expanding and contracting needs of the Government. The estate tax should be kept stable.

E. ESTATE-TAX-RATE PROPOSALS VIOLATE PRINCIPLES OF MODERATION

1. *Basic principles of rate structure.*—In attempting to determine the rates to be used in estate taxation, there are certain basic principles to be considered:

(*a*) The rates of death tax may reasonably be considered higher than the rates of an annually recurring tax on property.

(*b*) The principle of progression has won general acceptance and is reasonable if reasonably applied. In estate taxation progression is according to the size of the estate.

(*c*) The reasonableness of the progression is the third basic principle of death taxes; that is, the rates should not be excessive. This is the most important principle.

2. *Reasonable exemption for dependents should be allowed.*—From the standpoint of the decedent and his dependents, the rates of tax must not be so high as to make impossible or discouragingly difficult reasonable provision for the family and dependents. This principle indicates liberal exemptions from the standpoint of the common welfare. The amount of the exemption should be the sum the income from which would provide a support for dependents sufficient to prevent them from becoming a charge upon the public. There generally would be common agreement that there should be exempted from tax an amount of capital sufficient at least to provide an annual income for the support of a widow and one child. Probably there would also be agreement upon a larger exemption in the case of two or more children, and the normal family would doubtless consist of a widow and two children. Under the income-tax proposals the exemption of $2,000 for the head of a family, plus $400 for each dependent, is not disturbed. This is a minimum normal exemption of $2,800, though, of course, if one of the children is of an age to receive the individual exemption of $800, the total exemption might be $3,200. Thus, roughly speaking, the income-tax exemption for the average family will run between $2,400 and $3,200, irrespective of dependents of more remote relationship. When the present estate-tax exemptions were adopted, a fair average income on capital was 5 percent. Then the estate-tax exemption, plus the gift-tax exemption, would have proved adequate (5 percent of $80,000 equals $4,000). In the past few years, however, the average income yield from suitable investments has dropped to 3½ percent, so that to produce the same income there would be required an investment of over $115,000. Even this leaves no margin for investment costs, losses, income fluctuations, and other forms of taxation. A 20-percent margin of safety would raise the capital required to about $140,000.

3. *Law should consider family's economic position.*—Even this is the minimum and does not consider the economic status to which the family have been accustomed. It is a well-established principle of probate law that a widow's exemption and a child's exemption for at least a year for the purpose of debt priority should be sufficient to afford them support and maintenance in the manner of life to which they have been accustomed. The payment of these allowances takes precedence over the debts of the decedent or other distributions out of his estate. Much the same principle should be applied and has been applied in determining the priority of the exemptions for widows and children in death-tax statutes. Certainly a $100,000 Federal estate-tax exemption is about the minimum that

ought to be granted under a sound theory of exemptions. From the standpoint of the beneficiaries the matter of exemption is a consideration of first importance. A liberal exemption makes the effect of the first rate or the first few rates both progressive and distinctly moderate as applied to the first brackets above the exemptions.

4. *Increased administration costs constitute increased tax burden.*—One other matter in connection with the exemptions involves the increased cost of doing business of those engaged in settling decedent's estates. With an exemption of $100,000, there are naturally fewer estates which require the difficult and technical task of preparing Federal estate-tax returns. Formerly an estate of $100,000 or less could be closed in the probate court within 1 year, but now only estates under $40,000 may be so closed, and under the present law such estates must remain open in the probate court for at least 15 months with the increasing expense and delay of administrative action. When the exemption was reduced to $40,000 the time and work in settling estates between $40,000 and $100,000 was immeasurably increased. Experience has shown that the lowering of the exemption to $40,000 placed an undue burden on the smaller class of estates. On the other hand, the compensation of those engaged in settling decedents' estates has not been, and in most cases cannot be, increased to compensate for the additional service rendered.

5. *Rates should not be so high as to stimulate evasion.*—Death-tax rates should not be so high as to stimulate avoidance and evasion. It is unquestionably true that the more burdensome a tax the less compunction the individual feels in seeking to escape payment, and regardless of how carefully a statute may be drawn, experience has demonstrated that it is almost impossible to make its provisions absolutely inescapable. A heavy estate tax holds out a strong temptation to use every legal and illegal means of avoidance and evasion. As long as death-tax rates are relatively low, the individual taxpayer finds it uneconomic to attempt to engage in activities resulting in avoidance or evasion of the tax. The rewards are not worth the cost or the risk involved. However, the higher the tax becomes the more profitable and attractive the avoidance or evasion appears to the taxpayer. When the tax rates become confiscatory, every dollar of property included in the gross estate becomes important. Minor defects in the law are magnified and injustices become real.

6. *Law should not cause adverse social and economic effects.*—The adverse economic and social effects of high estate-tax rates deserve special consideration. The rates must be regarded from the social and economic point of view with respect to the effect of the tax upon industry. High rates are capable of producing a variety of results harmful not only to the persons called upon to bear the tax burden but also to the industry of the Nation. First of all, there is the danger of large forced sale of assets. Few estates include large amounts of liquid assets. At death, therefore, in order to meet heavy tax payments it frequently becomes necessary to sell a considerable part of the assets of the estate. The sale of these assets in time to meet the requirements of the law has a tendency to depress the market and to cause a decline of prices. Such sales, therefore, may be and frequently are difficult except at a considerable sacrifice.

7. *Tax constitutes a demand loan payable at maker's death.*—Heavy taxes at time of death of a sole or principal owner of a business are also likely to result in forced alterations in its control through compelling the sacrifice of holdings by those into whose hands the control of the business would normally come following the death of such an owner. To illustrate, assume a corporation conducting a business built over a long period through family group control by the ownership of a slight majority of stock. A heavy tax may compel the sale of enough stock to cause the loss of such control and the impairment of both the incentive and valuable management policies that have made the business successful. In some cases the sale of the stock is impossible and actual liquidation of the business is necessary. When a tax requires of an estate payments greater than can be met from cash resources on hand, those in control of a closely owned business comprising substantially their entire resources may seek to avoid sale of assets by borrowing and may be thus forced to make engagements so heavy as to impair the credit of the concern.

All of the foregoing effects, whether forced sale of assets, forced change of control, or strain upon credit, are made doubly serious because of their appearance at the very time when the enterprise is least able to stand the strain on account of the loss of personal management resulting from the death of the former head.

The injurious effects upon industry of excessive estate taxes are unfortunately not confined to the particular company involved in the estate. All who are engaged in such enterprise, and also many who are engaged in other enterprises related to those which are directly affected by the tax are subjected to insecurity which is demoralizing and impairs the productive capacity of the community as a whole.

8. *Sound fiscal policy demands moderate rates.*—Can we afford in such a period as now exists, no matter what may be advanced in the way of argument as to immediate revenue needs or other justification, to discourage the enterprise of living people, cause shut-downs of active businesses or violent changes in ownership through forced transfers? Under all these considerations a sound fiscal policy demands moderate rates.

F. EXCESSIVE RATES HARMFULLY DEPLETE FUTURE TAX BASE

1. *Rates should not harmfully deplete future tax base.*—We should be just as concerned with future tax capacity as with present revenues. The estate tax is essentially a capital tax and if capital is dissipated through excessively high estate-tax rates, the tax base, that is, the capital which produces income subject to taxation may be lost in future generations. While it is important to have our present tax plans designed so that the present generation will pay for as much of the defense expenditures as possible, future generations will have their burden in paying for those portions of such expenditures as are financed by Government borrowings. Estate taxes force the second generation to pay twice: First, through loss of income on the capital levy involved in the estate tax, and second, in that generation's proportionate share of current taxes imposed at some future date.

2. *Excessive rates harmfully decrease productive wealth.*—If through excessively high income taxes the building of wealth through productive enterprise is prevented and if through excessively high death taxes such wealth as has already been accumulated is removed from productive enterprise, there will come a time when there is no wealth in productive enterprise. The final result will be a complete drying up of tax revenues from all sources which have productive wealth as their base.

G. SHOCK OF HIGH ESTATE TAXES SHOULD BE CUSHIONED

1. *Present cushion now inadequate.*—Certainly with any increase in Federal estate taxes and probably even with the present rates, there should be enacted a better cushion against the shock of the estate-tax requirements. The only cushion now provided is the possibility of extensions of time up to 10 years in which to pay estate taxes. The present postponement carries 4 percent interest. Tax rates are so high that tax requirements cannot be paid out of cash resources on hand or out of current income which is less than 4 percent.

2. *More adequate cushion should be made.*—Since estate taxes should fall as lightly as possible upon the actual capital of an estate, the taxes should, so far as possible, be payable as are other taxes out of income. Under the present law any postponement of the tax carries with it interest in excess of the earning capacity of capital itself. Consequently, the present provisions are inadequate. Obviously, practical considerations should reduce the interest rate upon extensions to at least 2 percent, in order to allow some opportunity to the estate to meet death taxes out of income, at least to some extent.

H. PROVISION SHOULD BE MADE FOR TAX-FREE FUNDS FOR ESTATE-TAX PAYMENTS

1. *Need of adequate tax-free funds.*—It is recommended that appropriate provisions be written into the Federal estate tax statute which will permit the owners of estates to build up reserves or funds the proceeds of which are earmarked for the payment of estate taxes at death, which proceeds shall be exempted from estate taxes to the extent they are applied to the payment of such taxes.

We believe that such provisions are urgently needed under the existing law and that they are absolutely imperative if the radical revision in the rate schedule should be enacted into law, in whole or in part. High progressive estate-tax rates have already created acute problems for executors and administrators in finding funds to pay these taxes without disastrous forced liquidation of assets at sacrificial prices. This problem is especially acute where all or a major part of the estate consists of the ownership of a going business or of real estate or

other nonliquid assets. The artificial pressure for liquidity created by the present law is a serious obstacle to the movement of enterprise capital into new business ventures which the general welfare demands.

It is respectfully submitted that the merits of this recommendation cannot be determined on the basis of actuarial estimates of the possible short-run effects of its adoption upon the number of estate-tax dollars collected. These effects may be easily exaggerated. In any event, it is believed that they will be far outweighed by other and beneficial effects upon the economy and the productivity of the revenue system as a whole. Collection of estate taxes will be speeded up. Losses, due to sacrificial liquidation of estates, which are costly to income-tax revenues, will be greatly reduced. The depressing influence on market values generally of such liquidations will be minimized. Most important of all, businessmen will be able better to plan their affairs and will be encouraged to embark upon new enterprises, when the pressure to maintain a high degree of liquidity in their assets is materially reduced. The estate tax, of all taxes, should be constructed from the point of view of its long-run effects, if the hens that lay golden revenue eggs are to be preserved.

We do not suggest any specific method as the best or only possible one, but suggest for your consideration two general methods for providing essential relief. It is believed that some combination of these two methods, which may be denominated (1) "self-insurance" and (2) "purchased insurance" may provide the most practical solution.

2. *Self-insurance method.*—This plan involves setting up a trust specifically for estate-tax purposes. If deemed desirable, the statute might limit the types of assets which could be placed or kept in such a trust, such as, for example, Government bonds, securities listed on the New York or other recognized exchanges, and the like. It is suggested, however, that no such special limitations be imposed, in order to avoid discrimination between investments, since the trust instrument would ordinarily contain provisions as to liquidity.

In the interests of simplicity and prevention of possible income-tax avoidance, such trusts should be permitted to be revocable, except that, after the settlor's death, the assets would be specifically earmarked for estate-tax payment and no prior distributions could be made till such tax liabilities were liquidated. The trust instrument could provide for the disposition of earnings prior to the settlor's death, either by way of accumulation or distribution to him. In either event, the trust income would be taxable to the settlor. The instrument might also require as a guaranty of liquidity that the trust be liquidated within a relatively short time after the due date of the estate tax.

Whatever portion of the trust assets are required to pay estate taxes should be made exempt from such taxes, and any excess should be subject to tax. Some special provision may be necessary, in the event of such an excess, to prevent introducing algebraic complications into the computation of the tax, but there are several ways in which resort to alebra can be obviated by proper draftsmanship. There should be no tax on the privilege of creating such trusts.

The principle of not taxing such portion of the estate as is required to pay the tax accords with the result now reached under the gift tax where the tax is paid by the donor out of the estate remaining to him after a gift. The tax so paid is not taxed as a part of the gift and operates to reduce the estate passing at death and subject to estate tax.

(2) *Purchased insurance.*—Past proposals in this field have usually taken the form of exempting from estate tax the proceeds of life insurance, definitely earmarked in some way for the purpose, to the extent such proceeds are required to pay estate-tax liabilities, with any excess added to the corpus and subject to tax. Here also some special provision is necessary to obviate the use of algebraic formulae, when such an excess is present.

The great advantage of this plan is its simplicity. On the other hand, a limitation of relief to this plan alone may be deemed objectionable because it may discriminate between taxpayers, since all taxpayers are not insurable.

For these reasons it is believed that some form of both plans should be recognized by the statute, leaving the taxpayer to select the form best adopted to his own circumstances.

I. PROPOSALS ADVERSELY AFFECT STATE TAXES

1. *Decrease of States' share of death taxes.*—Under present law the maximum possible State share of combined death duties under the 80-percent credit system ranges from 3.1 percent of the combined death duties on a net estate of

$100,000 after exemption to 21 percent on an estate of $50,000,000. In the proposed bill the amount would be reduced to 1.55 percent on an estate of $100,000 and to 20.28 percent on an estate of $50,000,000.

2. *Recoupment of State loss impracticable.*—Increase of State revenues from death taxes through an increase in State rates would be very difficult because of the shrinkage in funds available after deduction of Federal death taxes.

3. *Certain States would suffer direct losses.*—Those States which do not make specific legal provision for taking the maximum Federal allowance would suffer a loss of revenue. Those States having inheritance taxes based upon principles of consanguinity, and not utilizing a supplementary estate tax, would find the available taxable base greatly reduced.

4. *Eventual shrinkage of State death tax base.*—Reduction of the corpus of estates through the imposition of heavy Federal death taxes will result in eventual shrinkage of State revenues from death taxes on these estates in succeeding generations.

5. *Adverse effect on State income and property taxes.*—Future taxation of incomes derived from estates will yield less revenue to the States, due to depletion of the invested capital base from which such income is derived. Existing and proposed heavy Federal income tax rates render it difficult, if not impossible, to restore depleted capital through savings.

J. DEATH TAX FIELD SHOULD BE RETURNED TO STATES

1. *Death tax field belongs to States.*—Death taxes are not technically a levy on the estate, but are excises imposed upon the transfer of the property, and are merely measured by the size of the estate. However, rights of transfer are determined wholly by State laws, and the Federal Government has no jurisdiction over them.

Traditionally, the death tax field has been reserved to the States as distinguished from the Federal Government. In the past, Federal death taxes were imposed purely as a temporary measure. In 1779 the Federal Government resorted to this method of raising revenue only under pressure of emergencies caused by the war, and the law was repealed in 1802. A second Federal statute was in force from 1862 to 1870, again an emergency period. A similar statute was in effect from 1898 to 1902, a third emergency period. The present Federal estate tax law originated with the enactment of the statute of September 8, 1916, and was an emergency measure based upon the expenditures that were likely to follow American participation in the first World War. At the conclusion of the World War efforts were made to abandon the tax because of its emergency character, and under the Revenue Act of 1926 the Federal estate tax as such became more or less nominal because of the 80-percent credit granted for the payment of State death taxes. In 1932—another emergency period—the additional estate tax was enacted, and in years following the amount of the tax increased beyond all original concepts.

2. *Continuance of present rates first step toward return.*—It is recognized that the immediate repeal of the estate tax is impractical. However, the objective should be toward returning this field of taxation to the States. A step in that direction would be a continuance of the existing rates.

The effect on State revenues is a matter of considerable concern. The position of the States was expressed by Gov. H. Lehman, of New York State, in a letter to Senator Harrison, chairman of the Senate Finance Committee, in connection with the Revenue Act of 1938. Governor Lehman wrote:

"The independent sovereignty of the States is threatened by Federal taxing policy. This country was organized on the theory, and has prospered under a system of independent States with exclusive authority in many fields and with independent taxing power, a power not second to but on a parity with the Federal Government itself.

"Under such conditions, if one of two governments, having equal concurrent jurisdiction to levy a tax, actually monopolizes the field to the exclusion or the near exclusion of the other, it may follow that that other government will be destroyed, or at least starved into impotency.

"The extent to which the Federal Government has been and is ignoring the rights of the States in the income (personal and corporate) and estate tax fields, and virtually monopolizing those fields to the exclusion of the States, is truly alarming. The result is that the bulk of State and local revenue is shouldered on real property, and that many of the States and their localities have been forced to enact tax laws not suited to State and local use and uneconomic in their effects."

The dollars and cents value to the States is illustrated by the following data for the State of Illinois:

Death-tax collections from Illinois

Year	State	Federal	Year	State	Federal
1933	$9,122,785.42	$4,077,217.70	1936	$3,868,877.59	$11,645,213.03
1934	3,739,093.57	6,575,492.10	1937	4,839,910.65	13,007,801.24
1935	5,577,415.86	11,381,091.91	1938	8,407,274.75	29,720,467.80

It should be borne in mind that the Federal estate tax is a deduction from the estate before the State taxes are imposed. Thus, in 1938, the Federal Government took nearly $30,000,000 of the State of Illinois' tax base. The figures in other States are equally startling.

3. *Program should contemplate return to States.*—Having in mind the fact that the Federal estate tax was primarily an emergency measure, that it is a field of taxation traditionally reserved to the States, and that the present high rates already deprive the States of a much-needed source of revenue, it must be concluded that any sound tax program will contemplate the eventual return of this tax source to the States. As a further step in this direction, a decrease in the present Federal estate tax rates is recommended.

K. GIFT AND ESTATE TAXES NEED CORRELATION

1. *Estates handicapped by provision for gifts in contemplation of death.*—The present law provides for including in the gross estate all gifts made "in contemplation of death." The law also provides that any gift made by the decedent within 2 years of the date of his death shall, unless shown to the contrary, be presumed to have been made "in contemplation of death." The intent of the law was to place the burden upon the Government of proving that gifts made prior to the 2-year period were in contemplation of death. As to gifts made within the 2-year period, the intent of the statute was to place the burden upon the taxpayer of proving that such gifts were not made in contemplation of death. This legislative policy is being greatly defeated by the present attitude of the Treasury Department. Recent experience has shown that it is the policy of the Government to assert that all gifts in any substantial amounts were made "in contemplation of death" regardless of when made. As a result the taxpayer is practically forced to litigate every case.

The lack of success of the Government in litigating these cases is well known. Apparently the policy of the Government is to continue to litigate these cases in hope that the courts will finally adopt a policy of holding all gifts to be in contemplation of death unless the evidence is overwhelmingly to the contrary.

The executor of a decedent's estate is, of course, seriously handicapped. In all of these cases the testimony of the decedent is unavailable. Oftentimes he left no record of his motive for making the gifts in question. In other instances the evidence of that motive is of such a nature as to be legally inadmissible in evidence. Even if the evidence is clear and convincing, the attitude of the Government forces the executor to litigate. This means expenditure of additional funds in attorneys' fees and other costs to determine a question which in most cases is perfectly clear. It means that estates cannot be closed until this litigation is settled, and, of course, there is the hazard of an unfavorable decision in the lower courts which must be appealed.

Many such cases have been compromised in the past simply because of the difficulties involved in any litigation. There is no question but what the Treasury Department has used this section of the law to exact tax payments which would not have been sustained by the courts.

The problem is admittedly difficult and the attitude of the Government is perhaps understandable. The taxpayer would probably not admit that any gift was made in contemplation of death. On the other hand, the Government seems to insist that all gifts were made in contemplation of death. Probably neither is correct in its position.

2. *Overlapping provisions cause double taxation.*—Somewhere between these two extremes lies the proper answer. Certainly the problem could be eased by administrative action which recognizes the position presently taken by our courts. A better solution would be to change the law.

When this section of the law was last amended by joint resolution of Congress on March 1, 1931, immediately following the decision of the Supreme Court in the case of *May* v. *Heiner and others*, there was no Federal gift-tax law. It is submitted that upon the enactment of the Federal gift-tax law on June 1, 1932, no adequate recognition was given to the purport of the above-mentioned section 811 (c) of the Federal estate-tax law, although as above stated, this section deals entirely with gifts inter vivos also covered by the gift-tax law. The adoption of the Federal gift-tax law it is believed was not only for the purpose of providing a source of revenue on transfers that otherwise were escaping the estate tax, but also was for the purpose of encouraging the making of substantial gifts inter vivos by offering the taxpayer certain tax savings for so doing, which tax savings, from the Government's point of view, were offset by the advantage of having an immediate source of revenue on certain transfers without the ultimate burden of proving that such transfers were subject to the estate-tax law. In other words, as expressed by Mr. Justice Holmes in the Guggenheim decision, the gift-tax law and the estate-tax law are in pari materia, and it is felt that it was intended that one should pick up where the other one leaves off, the critical test being if the transfer is inter vivos it is covered by the gift-tax law and if the transfer is testamentary it is covered by the estate-tax law.

There is no reason why, now that the Government has both laws, it should not be required to choose whether it will subject a particular transaction to a gift tax or an estate tax. The two laws, to whatever extent they overlap, result not only in double taxation, but subject the taxpayer to the uncertainty and very probably also the annoyance and expense of litigation. This in many cases is more burdensome than the amount of tax ultimately collected. The only excuse for this injustice is to afford the Government an opportunity to collect the greatest amount of revenue.

3. *Law should eliminate existing complications.*—Section 811 (c) should be changed. Certainly it would be sound tax policy to repeal all of section 811 (c) except the provision with respect to gifts strictly in contemplation of death, leaving all other gifts to be taxed under the gift-tax law. There is no reason why the Government should lose by such a policy. If the provisions of the present gift-tax law with respect to such gifts are inadequate they can be revised, but the taxpayer would be enormously benefited by knowing that the tax he pays at the time of a gift is all he would have to pay; but if the Government is unwilling to go even this far, it should at least provide that any transfer inter vivos upon which a gift tax has been paid and which shall not have been reimbursed by the Government to the taxpayer within 2 years after the payment of such tax, shall be excluded from the taxable estate of the donor for Federal estate tax purposes. It is believed that such an amendment would overcome the uncertainties that presently exist in the application of section 811 (c) of the Federal estate-tax law to gifts inter vivos. It would give some meaning to the 2-year presumption of contemplation of death found in that section, would reduce the great amount of litigation which works against the interest of the Government as well as the taxpayer inasmuch as the expenses of such litigation are deductions for estate tax purposes. It would also enable a taxpayer during his lifetime to arrange his affairs with a much greater degree of certainty, without fear of both tax laws being applicable to his transfers inter vivos, and would make the two laws more consistent with the purposes for which we understand they were enacted.

4. *Return of death tax to States would eliminate need of gift tax.*—Of course, many of the perplexing problems in the gift-tax law could be avoided entirely if the gift-tax law were repealed in its entirety. Certainly if the Federal Government would, as it should, leave the field of death taxation to the States, there would be no need for any Federal gift-tax law. The only justification for any Federal gift tax is to correlate with the Federal estate tax. The present gift-tax law does not provide this necessary correlation, since there are many instances of gifts being subject to both gift tax and Federal estate tax. A program looking toward the eventual return of the death tax to the States and elimination of the Federal gift tax is sound in principle.

L. CORRELATION OF ESTATE AND INCOME TAX NEEDED

1. *Estate-tax valuation for income tax needs correlation.*—We recommend an appropriate amendment to section 113 (a) (5) of the code which will definitely

establish as the basis for income-tax purposes, the valuation of property transmitted at death which was used in the computation of the Federal estate tax.

There is a serious lack of correlation between the estate tax and the income tax at this point under the existing law. While the valuation of property used for estate-tax purposes is prima facie evidence of its value at the date of death, it may be challenged by either commissioner or the heir, devisee, or legatee in a subsequent income-tax proceeding. This fact creates an incentive to change of position and litigation which should be removed. Section 3801 of the code does not operate to discourage such inconsistency since it does not apply where the estate tax is involved in one year and the income tax in the other.

2. *Present provisions cause unfair discrimination.*—Moreover, code section 811 (j) allows the executor or administrator to elect between valuation at the date of death or 1 year thereafter for estate-tax purposes, with a proviso that, if value at the later date is elected, then as to assets in the gross estate distributed or sold during the year, value at the date of distribution or the sale price shall be used. Yet section 113 (a) (5) of the code has never been amended so as to correlate with section 811 (j). It continues to define as the basis of property transmitted at death its value at the date of death. The result, in cases where the benefits of section 811 (j) are elected, is that the income-tax basis will usually, as a matter of law, be lower than the valuation used in computing the value of the taxable estate. This result is an unfair discrimination against other taxpayers, which should be corrected.

The proper remedy is believed to be to amend section 113 (a) (5) of the code so as to provide that the basis of property transmitted at death shall be the value at which it was included in the gross estate of the decedent (under sec. 811 of the code), in the determination of the estate tax. Where the property formed a part of an estate too small to require the filing of an estate-tax return, the income-tax basis will continue to be its value at the date of death.

M. LAW CONCERNING GIFTS IN TRUST UNFAIR

1. *Gifts in trust require $4,000 exclusion.*—We recommend appropriate amendments to section 1003 of the Internal Revenue Code to accomplish the following results:

(a) Restore to gifts in trust of other than future interests the benefit of the annual exclusion from the tax base of the first $4,000 given to any particular donee during the gift-tax year.

(b) Treat as gifts of present interests (in proportion to the beneficiaries' interests), entitled to the benefits of such exclusion, gifts in trust for the benefit of one or more minors, whether the income is to be distributed or accumulated, if both principal and income are payable only to or for the benefit of such minors or their estates.

Prior to the Revenue Act of 1938, gifts in trust enjoyed the benefits of the annual exclusion of $5,000 to the same extent as gifts made in other ways. The only exception was gifts of future interests, whether by trust or otherwise. Section 505 of the Revenue Act of that year reduced the annual exclusion to $4,000 for gift-tax years beginning on or after January 1, 1939, and denied its benefits altogether to gifts in trust.

The effect of the 1938 amendment will appear from a simple illustration. D has two children, one of them a minor, 12 years of age, and the other an adult. He makes a gift of $14,000 outright to the adult child in 1940. Of this amount, only $10,000 is subject to tax. Desiring to treat his children equally, but knowing his other child is a minor and without legal capacity to manage his own affairs, he sets aside $14,000 irrevocably in trust for the benefit of such child. The entire amount of gift is subject to tax, even if the trust provides that the income from the trust be distributed currently to the child or applied for his benefit. As a practical matter, however, it is difficult to make such gifts to minor children outright. Hence, such trusts, other than those established to provide for maintenance and support, commonly provide that the income be accumulated for the child until he reaches his majority.

2. *Removal of exclusion produced unfair discrimination.*—If this discrimination necessary? The report of the Senate Finance Committee (p. 32) justified this discrimination on the ground that it was a practical measure to protect the revenue by minimizing the abuses growing out of such decisions as *Wells* v. *Commissioner* (88 F. (2d) 339 (1937)), where it was held that the trust entity was the donee in the case of a gift in trust. This decision severely restricted the scope of the exception of future interests from the annual exclusion and

encouraged the creation of multiple trusts for the same beneficiary in order to obtain a $4,000 exclusion for each trust.

3. *Reason for present provision has vanished.*—This reason for the 1938 amendment has vanished by reason of the recent decision of the Supreme Court in *Helvering v. Hutchings* ((March 3, 1941) 61 S. Ct. 653), which held that the donee of a gift in trust is not the trust entity but the beneficiary, thereby overruling the *Wells case* in principle. On the same day the Court ruled in *United States* v. *Pelzer* (61 S. Ct. 659), that, where a trust provides for accumulation of income during the minority of a beneficiary and the beneficiary's right to receive the accumulated income and corpus is contingent upon his surviving until he reaches his majority or other specified age, the interest given to the minor is a future interest and the annual exclusion does not apply. This decision is squarely contrary to the *Wells case*. The case in which there is no contingency and the minor or his estate are absolutely entitled to receive the accumulated income at a future date was not directly ruled upon, but the reasoning of the Court suggests that the rule of the *Pelzer case* would still apply.

We believe that the reason justifying the exception of future interests, viz, the uncertainty as to the identity and number of the donees of the remainder interests, does not apply to a case in which there is a present gift of the entire interest, with only the actual enjoyment of the income postponed during the minority of the beneficiary.

In order to correct these unwarranted inequalities, we urge the adoption of appropriate amendments to section 1003 (b) of the Internal Revenue Code.

N. EXEMPTION OF SECURITIES OF NONRESIDENT ALIENS FROM ESTATE AND GIFT TAXES SHOULD BE PROVIDED

Under the existing law nonresident aliens are subject to estate and gift taxes only with respect to property situated within the United States. However, the Internal Revenue Code provides in respect of both taxes (sec. 862 (a); sec. 1030 (b)) that stock of a domestic corporation shall be considered property situated within the United States, no matter where the stock certificates are physically located. In accordance with this theory, it is suggested that the statute should specifically enact the rule stated in the present regulations (regs. 80, art. 50, and regs. 79, art. 18) that stock of a foreign corporation shall be deemed to be property without the United States, regardless of the physical location of the certificates.

No similar inconsistency exists in the case of bonds, which are usually taxed in the place where the bonds are physically located.

We recommend that bonds and other securities of foreign corporations owned by nonresident aliens be specifically exempted from estate and gift taxes. This recommendation is based solely upon practical considerations. There are many good reasons for encouraging nonresident aliens to keep their securities; whether foreign or domestic, in American custodian accounts. Employment and income are provided to numerous persons handling such accounts. The presence of these accounts facilitates the collection of other taxes due from the owners thereof. The transactions consummated by the custodians in American markets yield revenue in the form of stamp taxes and otherwise.

The existing law defeats its own purpose, viz, maximum revenue, by creating a tax incentive to foreigners to keep their foreign securities outside the United States, thereby in some measure defeating the policy of the changes in the income-tax law made in 1936 (see code, sec. 231 (a)) which exempted nonresident aliens from tax on their capital gains realized by transfers on American securities exchanges. Also, since most persons prefer to keep all their securities in a single account, the result is that many accounts of such aliens are kept in Canada or elsewhere, which might otherwise be maintained in the United States. For these reasons it is confidently believed that the adoption of the foregoing recommendation would in the net, benefit the revenue. Also, it is thought that the estate and gift tax revenue derived from such nonresident alien securities is so small as to be negligible.

For these reasons, we recommend that paragraph (b) of section 863 of the Internal Revenue Code be amended by changing the period at the end thereof to a semicolon and adding the word "and," and that a new subsection be added reading as follows:

"(c) *Foreign securities.*—Stock in, and securities of, a foreign corporation or of a foreign government or political subdivision thereof, owned and held by

a nonresident not a citizen of the United States, without regard to the physical location of the certificates or other physical evidences representing such stock or securities at the time of the decedent's death."

The adoption of this recommendation should be accompanied by the addition to section 1030 of the Internal Revenue Code of a new subsection (c) with a text identical with that of the foregoing proposed section 863 (c).

STATEMENT OF ELLSWORTH C. ALVORD, WASHINGTON, D. C., CHAIRMAN, COMMITTEE ON FEDERAL FINANCE OF THE CHAMBER OF COMMERCE OF THE UNITED STATES

Mr. ALVORD. Mr. Chairman and gentlemen of the committee, I desire first to congratulate this committee and the Congress upon the real opportunity which is confronting you. You have an opportunity to improve the fiscal position of the Treasury, not by the three and one-half billion amount suggested by the Secretary of the Treasury, but by a minimum of $6,500,000,000. Before I discuss the details of that amount, however, I would like to refer generally to the use of the taxing power for other than revenue purposes. I believe quite firmly that tax statutes should have as their primary objective the raising of revenue. I think that many persons, as was said this morning, overestimate the effect of the use of the taxing power upon the promotion of other objectives. At the same time, I think your taxing policies, designed primarily to raise revenue, must at the same time be devised so that they will not conflict with your other very desirable objectives.

For example, the country is immediately confronted with the necessity for more speed in the production of defense goods; more speed in the production of tanks and guns, ships and planes.

You are also confronted with the shadows of a very serious civilian depression. Likewise, unless something is done, there may very well be complete annihilation of small businesses which are unable to convert and participate in the defense program.

It is a further fact that we must bear in mind that some day this emergency is going to end. We shall have the millions of persons now dependent upon the defense program returned to civilian life. We shall have, I presume, somewhere between two to four million men from our military and naval forces released again for civilian life. If your present policies can do something to permit those gentlemen to return to their old jobs or to build new jobs or businesses for themselves, they will be well worth while.

We hear very much about the threat of inflation. I don't want to repeat what has already been said before your committee, but I merely outline what seem to me to be the available methods to control or prevent unchecked inflationary price increases. Apart from monetary and credit controls, there are, I would say, four methods by which inflation can be checked somewhat. Two of them we hear about frequently; the other two I have not heard related to the inflation problem.

The first and obvious method is price control. My only comment is that effective price control will require the complete regimentation which totalitarian governments have found necessary. I doubt seriously whether that type of price control will be enacted by Congress.

Second, we hear about the possibilities of siphoning off or with-

drawing substantial amounts of consumer purchasing power. That may be done by either or both of two methods: One is by taxation; the second is by borrowing. There may be some question as to the second, because I have sometimes heard it asked whether Congress is going to tax all our income or will leave a portion of it for the Treasury to borrow. These two methods are very frequently discussed. There are, however, two additional methods which I think should be considered seriously at the present time.

For example, it would seem to me that instead of pumping purchasing power out of the stream once it has entered, it would be at least as effective if not more so, to keep the stream from overflowing. It is possible and practicable, gentlemen, to reduce the nondefense expenditures of your Government by at least $2,000,000,000.

Quite apart from its fiscal effect, you will then have kept out of the stream of consumer purchasing power the same $2,000,000,000, and the job of reducing our overexpanded consumer purchasing power will be to that extent relieved.

We have a fourth method, the one I desire to stress before you this afternoon. That fourth method is the real, sincere encouragement of expansion in the production of goods, particularly the production of civilian goods. The more goods there are to buy, the less danger there is of uncontrolled bidding which pushes prices up. Your tax policies have a most direct effect upon the expansion of civilian production.

I also want to point out that the expansion of civilian production; the encouragement of research; new products; substitutes, and so forth, will lessen the problem of civilian depression and the problem of annihilation of small businesses, to which I have referred. Perhaps of even greater importance, expansion of civilian production will give you a base after the emergency is over for a return to our normal process of free enterprise under a democratic form of government. Jobs should be available for those leaving defense production to go back into civilian life, and opportunities should be available for those leaving our military forces to come back into our civilian life.

Unfortunately, the House bill, in my opinion, does not touch any of the problems I have discussed except in an adverse manner. That is true notwithstanding the declaration of the Secretary of the Treasury that two of the purposes of his recommendations were to help in the control of inflation, and to spread the burden equitably throughout the country. The House bill, on the contrary, fails to accomplish either purpose. It does raise some $3,200,000,000, according to estimates, for the first full year of its operation. The revenue-raising potentialities appear to have been the prime consideration in the adoption of the House bill by the Ways and Means Committee and the House of Representatives. At the same time, I desire to commend the Committee on Ways and Means for its overwhelming defeat of the Treasury proposal with respect to the excess profits tax.

Let me discuss the House bill briefly from the point of view of the excess-profits tax. You gentlemen last year decided—most wisely, in my opinion and, I think, in the opinion of the country—that an excess-profits tax should be confined to taxation, at very high rates, of true excess profits; that normal profits derived from normal activities, even though those profits have increased considerably, should not be subjected to the high rates of an excess-profits-tax law. The House

bill now proceeds in precisely the opposite direction. For example, the 8 percent return on invested capital, which you gentlemen fixed last year as an appropriate measure of normal profits, is cut very considerably. First, it is reduced to 7 percent on invested capital in excess of $5,000,000. I read the report of the Committee on Ways and Means most carefully in an effort to determine what the committee considered to be the justification for that cut. So far as I could find, nothing was said in its justification. I conclude that nothing can be said in justification of it; there is no justification. Not only that, the House bill—solely, I am convinced, because of revenue considerations—reversed the deductions for taxes under the law which you enacted last year. The committee report states that this has the effect of reducing the invested-capital credit from 8 percent on the first $5,000,000 to 5.6 percent; and from 7 percent on capital over $5,000,000 to 4.9 percent.

In determining excess profits you said: "Certainly, the funds used for the payment of normal taxes should not be considered excess profits and subjected to an excess-profits tax." You permitted the deduction of normal tax in computing the net income to which the excess-profits tax was to be applied. The House bill reverses that deduction. It says: "We shall subject to the excess-profits tax the amount of money which you are required to pay into the Treasury of the United States as a normal tax," and then goes on to say that, of course, in computing your normal tax you may deduct the amount of your excess-profits tax. If by any stretch of the imagination the amounts necessary to pay to the Government in normal taxes were excess profits; if they were not in exactly the same class as ordinary business expenses, then I would agree with the House bill, because something over $300,000,000 is involved; but on neither of those tests is the House bill correct. Only the great skill of the draftsmen, to which I gladly pay tribute, avoided the necessity of resort to algebraic formulae in computing the normal tax, as the result of this reversal of the deductions. Even their skill was unable to avoid several pages of additional verbiage in the bill in accomplishing the result. I seriously urge that you go back to the principle of subjecting to the excess-profits tax only excess profits, fairly determined.

The House bill has another provision which to me is very objectionable. It is the first step, as I see it, in the enactment of the Treasury excess-profits-tax plan. It says, "We shall impose a tax of 10 percent upon the income of corporations using the invested-capital base to the extent that their current incomes exceed their average-earnings credit but do not exceed their invested-capital credit." The only conceivable justification for that is additional revenue. The explanation in the committee report is completely unsatisfactory. One would believe, after reading the report, that the 10-percent tax applies only to corporations which pay no excess-profits tax, but I find no such provision in the bill itself. There is no justification for singling out corporations which happen to have been unfortunate in the making of profits during the pre-war period, that is, 1936, 1937, 1938, and 1939, and saying, "You gentlemen shall pay more taxes than corporations who did make reasonable earnings during the base period."

Another provision in the House bill says this: Pursuant to the insistence of the Senate conferees last October there was written into the law, by amendment last March, a provision stating that if you don't use all your excess-profits-tax credit this year, you may carry the unused portion of the credit over until next year, thus permitting you to make additional profits next year before the high excess-profits tax applies. If not absorbed in the first year, you can carry the excess over for a second year.

What does the House bill do with this? Solely, I am convinced, as a first step in whittling away that very proper provision, they say, "No; you don't do that, now. You don't compute your unused excess-profits credit for 1940 under the 1940 act, which you used to compute your excess-profits-tax liabilities. You now compute the credit for 1940 under the 1941 act." If, as you can readily see, there are substantial changes in the computation and imposition of those liabilities for 1941, as compared with 1940, that credit is, to that extent, whittled away.

Senator TAFT. You mean you have to go back and figure the 1940 tax all over again as if the present law was in effect?

Mr. ALVORD. For this purpose; yes.

It seems to me that we must continue to safeguard normal profits. I think it would be most wise for this committee to recommend several necessary changes in the existing excess-profits-tax law, not only in the substantive provisions, but also in what we usually call the administrative or technical provisions, which have just as much effect upon tax liabilities as the rates themselves. Normally, when we want to correct these so-called technical provisions in the statute, we are met by the Treasury with the objection that such a change will cost a large amount of revenue. I urge this committee to adopt a tax system which will permit necessary changes in technical and administrative categories to be made equitably without fear of the effect on the revenue. We are actually in this situation today: The Treasury not only may oppose the retroactive correction of an admitted error in the law, on the ground that it will cost too much, but it also may oppose an amendment to correct the error even for the future, on the same grounds.

I think you can devise a tax system which will permit you to enact several very necessary changes, substantive, technical, and administrative. For example, we recommend, as I told you in the beginning, an improvement in the fiscal position of the Treasury, not by the 3½ billions recommended by the Secretary of the Treasury, which we think is woefully inadequate, but by 6½ billions. Those inadequate measures are the things that cause you gentlemen to sit here a month or two twice a year writing and rewriting a tax bill. I would much prefer to see you adopt a plan based on what might be called maximum revenue possibilities and stop. Then, you might say "This is the law we shall have in force during the period of the emergency; but it shall cease to be in force immediately following the emergency."

My 6½-billion figure is reached quite simply; I think soundly; I think equitably. First, I say reduce the nondefense expenditures of your Government by 2 billions. That can be done; it must be done.

Next, impose increased taxes upon corporations and individuals of about a billion and a half. That is in lieu of the 2.4 billion of the tax bill.

Next, collect about a billion dollars in sales or excise or miscellaneous taxes, and finally—tied squarely into the objectives I have discussed before—impose a withholding tax based upon all wages and compensation of all kinds, all dividends and interest paid to individuals, effective, I should say, as of January 1 next year. A low rate of about 3 percent will yield at least 2 billions of dollars. Those 2 billions, moreover, will come from the places where increased purchasing power now rests, so that it does permit the raising of revenue consistent with the necessary prevention of inflation.

The CHAIRMAN. What do you figure the individual income: Half a billion?

Mr. ALVORD. I would say the individual income tax—apart from the withholding tax—half a billion; and the corporation income and excess-profits taxes, a billion.

Senator TAFT. I notice this morning that the Treasury suggested an additional tax on pay rolls for social security. Your tax would have something of the same effect?

Mr. ALVORD. Yes, to some extent; but there are important differences. The social-security tax is a tax on both employer and employee, so that it is only partially a withholding tax. Furthermore, it applies only to wages and salaries under $3,000, and not to dividends or interest. Even in the field of compensation, there are very broad exemptions—farm and domestic labor, professional fees, etc. Owing to the limited area of its operation, I think it would be a very ineffective medium for the application of a withholding tax, both from the standpoint of revenue and possible effect on inflation. Furthermore, I object strenuously to the use of social-security payments to finance the ordinary expenditures of our Government.

The withholding tax I propose is on wages, compensation, and also on dividends and interest, and is collected at the source. That tax could go on immediately; produce revenue beginning January 1, 1942. By February 15 the funds would be flowing into the Treasury; you would not have to wait until March for collection in quarterly installments; you would not compel persons to file these very complicated income tax returns in the lower brackets; you would not have to worry about them saving enough money to pay their tax. My guess is that they wouldn't miss the deduction after the second pay check. I would apply it all along the line, to everybody, with no credits.

The CHAIRMAN. Is that substantially the Canadian system?

Mr. ALVORD. It is; except that the Canadian law allows certain credits. Also, I have not taken the step, which the British have been forced to take, of adding an additional tax under the doctrine of the so-called forced loan.

The CHAIRMAN. Compulsory savings?

Mr. ALVORD. Forced loans to the Government; forced savings for the individual. That is one of the things I would attempt to avoid, if we possibly can; we may have to come to it. If the voluntary borrowing policy of the Treasury, designed to withdraw from the individual his savings does not work, and if the Treasury must continue to finance a substantial portion of its deficit by borrowing from commercial banks, then I think you will have to resort to a forced-loan plan. Otherwise, the basis of the wildest credit inflation will be created.

That sort of a tax system conforms to the President's letter to Chairman Doughton in which the President said:

> I am convinced that the overwhelming majority of our citizens want to contribute something directly to our defense and that most of them would rather do it with their eyes open than do it through a general sales tax or through a multiplication of what we have known as "nuisance taxes."
>
> In other words, most Americans who are in the lowest income brackets are willing and proud to chip in directly even if their individual contributions are very small in terms of dollars. After all, the majority of all Americans are in these lowest brackets.

It conforms to what I believe to be the general desire of the country: it conforms to the Gallup poll which appeared on August 10 in the Washington Post. The poll indicated that the public would be willing to accept the following income taxes:

	What the income tax would be if public wrote the bill	Proposed Federal rates in tax bill passed by House
Family of 4 earning—		
$1,000	$0	None
$1,500	17	None
$2,000	55	None
$3,000	140	$11
$5,000	386	202
$10,000	1,123	998
$50,000	10,000	19,527
$100,000	24,000	52,738

Furthermore, if as the Secretary of the Treasury well says, our price increases continue, we shall find the wage earner all the way along the line most unfortunately squeezed by the increase in his cost of living, and the increase in his tax liability.

In addition to that, if we can prevent the disaster well pictured by the President in his message on the price-control bill, the disaster of uncontrolled inflation, a 3 percent withholding tax is a very small price to pay.

The CHAIRMAN. Would you suggest lowering the base?

Mr. ALVORD. No, sir.

The CHAIRMAN. If you put on those taxes?

Mr. ALVORD. No, sir; it isn't necessary.

The CHAIRMAN. You would really be accomplishing the same purpose, wouldn't you?

Mr. ALVORD. You would do that. It would spread the burden more fully; it would reduce the administrative problem for the Treasury. The taxpayer never has had the money; he hasn't spent it; it has been paid into the Treasury. But under the present system, the taxpayer usually has spent his income; he has nothing but current and future income with which to pay the tax.

The CHAIRMAN. But some of the Treasury people with whom I have discussed the withholding tax have suggested it is impossible to apply it to certain people such as dentists, artists, lawyers, and the like, where the tax could not be withheld at the source.

Mr. ALVORD. I know of no tax plan that is 100 percent effective. But it could be applied to such classes of persons.

Senator TAFT. Couldn't you, on their net income tax return, add a 5 percent on the gross?

Mr. ALVORD. I think the better solution would be to require every individual from whom the 3 percent has not been deducted to file monthly returns and pay it. That would not be very difficult because the chances are that the person will be making withholding returns and collecting withheld taxes in any event.

The CHAIRMAN. Is there much disposition to evade taxes on the part of that relatively small number of people that fall in that class—dentists, artists——

Mr. ALVORD. I thought you were also going to include lawyers.

The CHAIRMAN. I would include lawyers.

Mr. ALVORD. Senator, I don't think so. Bear in mind you will always have tax evasion just as you will always have murders, robberies, and rape, but I don't think the number of tax evaders should determine the sound policy of the tax law. You can have adequate provisions to get them; you do get a great many of them. Criminal enforcement is exceedingly unfortunate but necessary.

Senator GUFFEY. If you withheld at the source, don't you do away with a part of the psychological appeal, the tax consciousness? If withheld at the source, doesn't the fellow lose that consciousness derived from having filed his own tax return?

Mr. ALVORD. There might be some loss in that, but I don't think it would be great; I think everybody would realize that he or she had paid the 3 percent by having it withheld.

Senator GUFFEY. Wouldn't a lot of them think that the employers were holding it out and not turning it in?

Mr. ALVORD. I shouldn't think so.

Senator CONNALLY. It would increase our mail a great deal.

Senator TAFT. Couldn't it be provided that every employer should put in the worker's pay envelope notice to the effect that the tax had been withheld?

Mr. ALVORD. I suspect they would, without the requirement.

Senator CONNALLY. You want a flat reduction regardless of exemptions?

Mr. ALVORD. Yes; without exemptions, credits, or anything else. I think that is the only way a tax of this type can work smoothly. I quite agree with you that we might have to adjourn politics to put this system into effect. If you must provide credits, it could be done, but it is contrary to the principle of this method of taxation. You can provide that an individual shall have a credit for the withholding tax against income tax. Great Britain has done that, and always has. Great Britain's administrative machinery is geared to that sort of administrative work, ours is not. I would much prefer to have it apply to everyone; and then, to the extent you wish, you could adjust the income-tax rates applicable to existing taxpayers so as to reflect, in whole or in part, the 3 percent withheld. I wouldn't take it into consideration; I would apply it generally.

That brings me to a few very important so-called technical amendments. I quite realize that this committee voted yesterday not to consider administrative amendments. The ones that I shall discuss I trust do not fall within that prohibition. First, you gentlemen will remember that your tax is divided something like this: You have the earnings credit based upon pre-war earnings, particularly applicable

to earnings produced by individual effort—genius, hard work, and good luck. You have the invested capital credit: 8 percent on invested capital peculiarly applicable to cases where invested capital rather than individual effort is the controlling factor. You then have a third category which, for want of a better name, we call special relief. One of the provisions in this third category was enacted last March. It is called the normal growth provision, designed specifically to permit corporatons to grow normally, to increase normal profits without subjecting them to your excess-profits-tax rates. I think it was by error that the provision is applicable only to section 713 corporations—single corporations—and is not applicable to our supplement A corporations, which have gone through liquidations, reorganizations, and consolidations. Supplement A, gentlemen, is a most difficult provision to read and I would like to forget it is there. But the normal growth provision most clearly should be applicable to acquiring corporations under that supplement. Then I think also that this normal growth provision should remove from consideration the year 1938, because the year 1938 was an exceedingly bad year. The effect under the present law is that you must have constant growth: 1936, 1937, 1938, and 1939, in order to gain any benefit from the normal growth provision.

The unfortunate corporation which had normal growth going back far beyond 1936, and then happened to be hit by the recession of 1938, is denied the benefits of the provision. This is somewhat similar to the recommendation I made before and which I make again, that it is unfair and improper to use the entire 4 years of the base period in the earnings credit when they include a deficit year. I have repeatedly recommended and the Senate adopted last year the amendment providing that 3 out of 4 years should be used in determining the credit.

Finally, I think that the principle of normal growth should be extended if normal increases in profits in 1941 and subsequent years are to be protected. The present provision allows only for normal growth during the base period. One method of measuring normal growth after the base period might be to project the trend shown by the present computation into future years. Another alternative is the so-called Stiles formula, already discussed before your committee, which would determine the excess-profits credit by applying to the pay roll of the taxable year a percentage based on the ratio of profits to pay roll in the base period. This formula has certain definite advantages which entitle it to serious consideration.

Then I should think that everyone would agree that consolidated returns should be made applicable for both normal-tax purposes and excess-profits-tax purposes. The complications which are going to result otherwise are innumerable and, so far as I can see, to no purpose at all.

In that connection, I might point out that in the event there are changes in the rates or substantive provisions of this bill, it is only fair to provide a new election for filing consolidated returns, so that affiliated corporations may determine on the new basis whether to file consolidated or separate returns. That election, as I read the regulations, does not now exist.

Then I come to the rate schedule. The House bill, like the present law, bases the rates not upon the ratio by which the excess-profits taxes exceed the credit but solely upon dollar amounts. The Senate last year, as you gentlemen know, adopted an appropriate rate schedule. As I read the testimony of Assistant Secretary of the Treasury, Mr. Sullivan, before the Committee on Ways and Means, he now admits the present schedules are wrong. If he had thought that last October, I think the present schedule would have been made to conform to his present opinion. I trust that since he has reached that conviction now, he would approve a change in the schedule in the House bill.

You have heard a great deal about section 734. I won't say much about it except I know there is no one in this room who can read it and have the slightest idea what its effect will be. What it does is to repeal the statute of limitations whenever there is an inconsistent position. I think I can assure you gentlemen that under the present trend of court decisions there will be inconsistencies in practically every position the taxpayer has taken. Section 734 was designed to open up past tax returns only in the case of taxpayers who, after the statute had run, knowingly manipulated the statute to their own benefit by taking inconsistent positions. If that is its purpose, let that purpose be stated in the section.

Then let me invite your attention to the capital-stock excess-profits-tax situation. To the extent you change this present law you change the basis upon which estimates may be made for capital-stock excess-profits-tax purposes. Furthermore, that tax was designed solely for the purpose of raising $100,000,000 in revenue and no more. The yield has been stretched somewhat since. It is now proposed to increase the rate to pick up twenty or twenty-two million dollars. Under the present uncertainty of existing business conditions, no one can predict or guess with any degree of confidence what his income should be for capital-stock purposes.

I think, as I have said before, and repeat, that this tax should be repealed. Especially since the passage of the excess-profits tax, I find no justification for it. I am always met with the contention that repeal would cost $150,000,000 to $175,000,000. My reply is precisely the reply that I made sometime ago about costs in revenue; but if you gentlemen believe that you cannot repeal that tax at the present time, most certainly you can provide for an annual declaration of value, which was in the provision when it was adopted in 1933, but changed in conference. There cannot be much loss of revenue in such a provision. Certainly there is no wrongful loss of revenue in permitting annual declarations of value.

I think, gentlemen, that I have covered substantially all the so-called technical amendments except two. One is the use of cost in the computation of invested capital rather than tax basis. Invested capital normally is considered to be cash paid in for stock, property paid in for stock, accumulated earnings and profits. That is a simple definition of invested capital on which a fair rate of return is permitted. But what value do you take for the property paid for that stock? Suppose this table was given to me in return for capital stock. Under the 1917, 1920, and 1921 acts that table would go into my invested capital at its value on the day turned in, usually computed on the value

of the stock I gave. Under the present law, for some reason which I cannot comprehend, you disregard completely what that table cost me, if I happen to get it in one of the so-called tax-free reorganizations from which I, as the buyer, do not benefit.

Now admitting, contrary to law and fact, that you can readily determine what is a taxable and what is a nontaxable reorganization, I see nothing at all in that factor which should decide the value at which that table goes into my invested capital. It should be cost, with appropriate provisions to prevent tax evasion. Under the present law, you go back not only to the previous owner of the table, but perhaps many years, in order to find cost to somebody. You always have to determine cost to somebody. Why not determine cost to the corporation whose invested capital is being determined.

The last technical provision I wish to discuss is special relief. The present provisions of the law do not include any provision applicable to abnormalities in invested capital. You will remember that section 722½, as it went through the Senate last year, provided for the correction of abnormalities in both earnings and invested capital. The March amendments, however, were applicable solely to the correction of abnormalities in earnings; no provision is made with respect to abnormalities in invested capital. Nor does the present law adequately take care of corporations long in existence which suddenly realize perfectly normal profits for the first time in 1940 or 1941; nor does the present law take care of the new corporations created in 1940 or 1941 and realizing perfectly sound, proper, normal profits. I think the provisions should be expanded to include the three types of cases I have mentioned.

My suggestions are incorporated in a prepared statement. If I may, I would like to file this written statement as part of my remarks. I also have a rather lengthy and detailed comprehensive analysis of a large number of amendments which I recommend should be made to the existing law, not necessarily at the present time. However, there will be, we are told, a bill in October making the necessary amendments to the so-called administrative provisions not only of the tax bill, but also to the Internal Revenue Code. I brought a copy of our recommendations here, and I would like to file it, so that it can be available to the staff of the committee and to other taxpayers.

The CHAIRMAN. Are there any questions by any member of the committee?

Mr. ALVORD. In conclusion, I would like to discuss briefly the subject of amortization. You gentlemen will recall that provision placed in the law last October. At that time there was considerable misapprehension as to just what amortization was. I think before the debate ended that misapprehension was removed. I point out to you that the testimony of the national-defense officials at that time indicated that there are three types of defense contracts. The first type is the normal contract under which the Government buys goods and pays money for them, and that is all there is to it. Any new facilities are financed privately, with no reimbursement provided for in the contract—except, of course, as the cost of all facilities must eventually be recouped from the sale of the articles they produce.

Second is the type where the Government buys goods and agrees with the seller, separately, that he will be reimbursed for the cost of his facilities; and the third type is one where the Government finances the entire enterprise.

Some people were afraid that the second type of contract would not be duly considered, and were afraid that a fellow might get both amortization and reimbursement. The present law has been interpreted in such a way that it applies not only to the second type of contract, for which it was designed, but also to the first type. The result is that only a very limited number of certificates of nonreimbursement have been issued to taxpayers under the present law.

I have definite recommendations to make in that respect. They are contained in more or less detail in my printed statement, which I trust you gentlemen will have an opportunity to examine, whereupon I think you will agree with me.

The CHAIRMAN. Thank you very much, Mr. Alvord.

(Mr. Alvord submitted the following prepared statement and supplemental memorandum:)

STATEMENT OF ELLSWORTH C. ALVORD

Mr. Chairman, gentlemen, I am Ellsworth C. Alvord, an attorney, of Washington, D. C. I am appearing as the chairman of the committee on Federal finance of the Chamber of Commerce of the United States.

OUTLINE OF TESTIMONY

Prof. Fred R. Fairchild, of Yale University, has discussed Government expenditures and principles of taxation. Mr. Roy C. Osgood has discussed the proposed changes in the estate tax. Both are members of the chamber's committee. I will discuss the provisions of the House bill and our recommendations with respect to the House bill and the present law.

OBJECTIVES

The problems of financing the defense and nondefense expenditures of the Federal Government cannot be segregated and considered separately. The first consideration must be, of course, the raising of revenue. But at the same time, fiscal policies must not be permitted to conflict with other objectives, such as:

(1) Speeding production for defense.
(2) Stopping the threatened civilian depression.
(3) Preventing the annihilation of small business.
(4) Avoiding the disasters of inflation.
(5) Protecting against post-war deflation.

Furthermore, immediate revenues are of no greater concern than future revenues.

DEMANDS FOR DEFENSE

Adequate defense of the United States must be provided. Demands of the national-defense program must have priority. The period of transition from a peacetime economy to a state of full armament production is not yet completed. Increased production of raw materials, and the acquisition of raw materials not produced within our territory, are essential. More and more production facilities—plants, tools, machinery, power, and transportation—are demanded. Speed is essential. But the problems of financing require solution. When the job is done—and the fight for democracy is won—must all the increased capacity be owned by the Government?

THE THREATENED CIVILIAN DEPRESSION

In the presence of the unprecedented prosperity of our armament boom, we see the shadows of a serious civilian depression. Many civilian industries are being converted into armament production. But even during the period of maximum armament production (extending over the indefinite period of the emergency) most of us will be dependent upon civilian industry. The supply of

raw materials, and the production, distribution, and marketing of products for civilian consumption, must somehow carry on. The processes of research, and the development of new products or substitutes for defense materials must be permitted to continue during the emergency. Normal business activities not related to wartime production, and fair and reasonable profits attributable thereto, must be given the utmost protection during the emergency.

Subject to the demands of national security, we urge recognition of the following principles:

(1) Curtailment of essential civilian industries should be resorted to only in extreme emergencies, after exhaustion of all reasonable alternatives for speeding defense production.

(2) The normal profits of civilian industries, as distinguished from "defense" or "excess" profits, should be protected against unfair or burdensome taxation.

(3) New industries and the development of new products or substitutes should be encouraged.

SMALL BUSINESS

It is particularly difficult to fit small business enterprises in to the defense program. Many of them must exist to serve civilian demands. Priorities are depriving them of essential materials. Importations are severely restricted. Prices and costs are increasing. Debts are owing and must be paid. Cash is scarce. But the annihilation of small business is not necessary.

INFLATION

The causes and consequences of inflation are pictured in the message of the President of the United States transmitted to the Congress in connection with the price-stabilization bill (H. Doc. 332, 77th Cong.).

It is generally conceded that an inflationary price movement is already under way, and that it may assume serious proportions within a short time. This movement is reflected in the wholesale commodity price index, which has increased 13½ percent over the pre-war level, and about 4 percent over the last 2 months. Similarly, the cost of living has moved upward about 4 percent since the first of the year.

The fundamental reason for rising prices is that the Government and private purchasers are competing for a limited supply of goods. The productive machine of the country is unable to turn out enough goods to supply both. Unless effective controls are applied, the price of goods rises to the point where demand is discouraged. The Government suffers through increased cost of armaments. The individual suffers through unchecked increases in his cost of living.

Four methods of curbing inflation have been suggested:

(1) Control of prices and rationing of the product.

(2) Reduction of consumer purchasing power through taxation or by Government borrowing, either voluntary or compulsory, from the savings of private individuals.

(3) Reduction of consumer purchasing power through the elimination of nonessential Government expenditures.

(4) Increases in productive capacity, especially for nondefense goods in which shortages are apparent.

Price control is an important and necessary device, particularly to deal with temporary shortages or "bottlenecks." But a rigid control of all prices is virtually impossible except under a totalitarian system of government. Even then the basic cause of inflation, the pressure of excess purchasing power, remains unremoved.

Under certain circumstances, taxation, properly devised and applied, may help to counteract forces tending toward inflation. At the present time it would seem that the most favorable opportunity for using taxation to accomplish this purpose lies in its effectiveness as a means of drawing off new increases in individual purchasing power. Such application of taxation is quite consistent with the object of raising revenue for defense.

But taxation will be ineffective if it merely imposes heavier burdens on the limited group of persons now subject to Federal income taxes. The average family of four persons has an effective income-tax exemption of $2,800. Studies made by the National Industrial Conference Board indicate that, out of a total of $67,600,000,000 of consumption expenditures in 1937, $46,700,000,000, or almost 70 percent, were made by groups having less than $3,000 annual income.

Studies of the distribution of national income reveal a similar result. Two-thirds of the national income in 1940 consisted of wages and salaries, and 90 percent of those wages and salaries were paid to individuals earning less than $5,000.

A satisfactory solution for the problem of inflation, in our opinion, would require a combination of three factors:

(1) A drastic reduction in all nondefense expenditures of Government. At a time when strenuous efforts are being made to reduce consumer purchasing power, it is the height of folly to maintain in force, without reduction, subsidies and activities created during the depression to stimulate consumer purchasing power. At least $2,000,000,000 of excessive and unnecessary purchasing power can be withdrawn by the application of common-sense principles to Government spending. Furthermore, are sacrifices to be expected and demanded of everyone but the Government? Why should not the Government set the example?

(2) The production of goods and services should be expanded tremendously and at the most rapid rate possible. Encouragement to expansion should be provided, both directly and through fiscal policies. A real increase in the national income and national wealth will result.

(3) Taxation should be imposed which reaches the bulk of consumption expenditures in the lower brackets of income. The recent Gallup poll indicates that the country as a whole supports such a straightforward and necessary step. The objective can be accomplished by a withholding tax collected at the source on all principal elements of individual income, or by broad sales, or excise taxes, or by a severe reduction in the personal exemption and the credit for dependents. A choice of methods depends on the amount which must be raised and considerations of administrative convenience.

THE HOUSE BILL AND INFLATION

The House bill promotes none of these desirable objectives. It appears to be based on the theory that indiscriminate increases in the rates of tax on existing taxpayers will be sufficient to avoid inflation.

No effective consideration was given to the reduction of nondefense expenditures, despite the statement of Secretary Morgenthau before the Ways and Means Committee in April that $1,000,000,000 could be saved out of 1942 appropriations for nondefense purposes.

Far from encouraging, or even permitting, the essential expansion of goods and services, the bill proposes to impose the excess-profits tax on a substantial portion of corporate normal profits. This is in addition to a special surtax of 6 percent on normal profits. By subjecting normal profits to a 60-percent excess-profits tax, it is obvious that normal research, expansion, and development will be effectively prevented.

The full burden of the increases in the individual-income tax is thrown upon the persons now subject to income tax, and particularly those in the $3,000 to $20,000 group. This is the so-called "middle class" composed mainly of families with fixed incomes and fixed liabilities. The Secretary of the Treasury admits that this group is already being "squeezed" by increases in the cost of living. Nevertheless, instead of distributing an additional tax burden of such tremendous proportions over a large segment of the population, it is proposed to concentrate it on about 7,000,000 persons, who, with their families, constitute about 15 percent of the total population and about one-eighth of the gainfully employed. Is "liquidation" of the middle class a part of the plan?

POST-WAR READJUSTMENT

Inadequate time and study has been devoted to the problems of the post-war period. When the present emergency is over we shall inevitably face severe readjustments. The millions who have been engaged in production for defense will find that this livelihood has vanished. Two to four million men in the armed forces will be returned to their homes. Where will their old jobs be, and will they be foreclosed from new jobs and businesses of their own? Have we no solution except to create another W. P. A., to embrace one-fourth of the population?

The severity of the shock will depend on the intelligence with which we now plan to meet it. This much is plain: The preservation of a strong and healthy enterprise system, which can continue to function effectively after the war, is vital.

TAXATION AND BORROWING

Funds to defray the defense and nondefense expenses of the Government must be provided. Taxation and borrowing are the only available sources. But the present and future tasks are tremendously difficult. Our revenue laws are based in large part purely upon political policies, and not upon the production of revenues. They already far exceed, in normal times, the point of maximum return. And we are confronted with a public debt of $50,000,000,000, brought about by a decade of unwieldy and unnecessary deficits.

ADDITIONAL REVENUES

The Secretary of the Treasury has recommended that we should raise $12,700,000,000 by taxation. He reached this total by determining that two-thirds of our Government expenditures should be paid for through current taxes, and one-third should be raised by borrowing. He estimated that the present law would yield $9,200,000,000, and that our total expenditures would be $19,000,000,000. Two-thirds of $19,000,000,000 is roughly $12,700,000,000. Accordingly, an additional $3,500,000,000 (bringing the total yield to $12,700,000,000) would be necessary to meet the mathematical two-thirds formula.

The two-thirds one-third formula is based neither upon logic nor upon precedent. It was outmoded within 30 days of its birth.

We recommended a simpler and more practical rule: Tax as much as you can, then borrow the rest. In determining how much you can tax, we repeat that your tax policies must conform to, and aid in the attainment of our present objectives. In determining the methods of borrowing, we again point out the inflationary results of continued borrowing from banks, and we again endorse the efforts of the Treasury to tap the savings of individuals.

According to official estimates (the Annual Report of the Secretary of the Treasury for the fiscal year ending June 30, 1940, the President's Budget message for 1940, and Treasury statements before the Committee on Ways and Means in April of this year), the present law should yield, at a $90,000,000,000 level of national income which is probable for 1941 without the addition of any new revenues, between $11,200,000,000 and $12,400,000,000. If the national income reaches $100,000,000,000, which appears probable for the calendar year 1942 (assuming that the threatened civilian depression is avoided), the present law should yield at least $14,000,000,000.

The lower yields which are estimated for the fiscal year 1942 (which include in part collections from 1940 incomes and only in part from 1941 incomes) are not a realistic measure of probable revenues or of existing tax burdens.

REVENUE RECOMMENDATIONS

We believe that the Treasury program is again inadequate. An adequate and comprehensive fiscal program should be founded upon the following:

Reduction of nondefense expenditures by at least	$2,000,000,000
Increase in present corporate and individual-income taxes	1,500,000,000
Additional sales, excise, or miscellaneous taxes	1,000,000,000
A withholding tax upon all compensation, dividends, and interest paid to individuals	2,000,000,000
Total annual improvement in Treasury fiscal position	6,500,000,000

In addition, the present unintelligible, complicated, inequitable revenue laws, including both income and excess-profits taxes, should be thoroughly revised to place them upon a reasonable and equitable basis. Unintended inequities and unexpected interpretations must be, and can be, corrected without consideration of the oft-sounded objection of "cost to the Treasury."

We earnestly believe that by the adoption of the above program (and only through the adoption of the above program) will—

(1) The outlined objectives be attained;

(2) Taxation be used as an effective aid in the prevention and control of inflation;

(3) The burdens of the defense program be distributed with reasonable equity among everyone, with due recognition to the principles of ability to pay;

(4) Tax liabilities be determinable with at least some certainty;

(5) The annual tinkering and haphazard efforts to squeeze additional revenues from existing taxpayers, with their necessarily upsetting effects upon both the defense program and the meeting of civilian demands, be unnecessary;

(6) The repeated imposition of retroactive taxes stop; and

(7) Private funds be available for financing a part of the defense program and all of the civilian program.

THE EXCESS-PROFITS TAX

(1) *Purpose.*—The fundamental purpose of the excess-profits tax remains unchanged. That purpose, as expressed by the President and by the Congress, was to prevent unjust enrichment and the creation of new "war millionaires" as a result of the defense program. More broadly, the defense program should create neither prince nor pauper. A true excess-profits tax, designed to carry out such a purpose, must be based on the following principles, which we have repeatedly emphasized:

(*a*) It should be designed solely to prevent or to tax excess profits—and normal profits must not be subjected to the high rates of an excess-profits tax.

(*b*) If additional revenues, rather than control of excess profits, are the objective, they should be sought directly and openly through other available and appropriate sources.

(2) *The present law.*—The excess-profits tax enacted by the Congress last October, and amended in March, in general observes these principles. It provides three alternate bases for determining normal profits not subject to the tax: Average earnings for the period 1936 to 1939, inclusive; a return on invested capital of 8 percent; and "special relief" (although the provisions of the present law are woefully inadequate) in certain specified cases of hardship in the application of the other two bases.

None of these yardsticks, considered independently, is an adequate measure of normal profits for all industries and all types of business. Unquestionably, earnings over a representative period before the war are a fair measure of normal profit. They are the only fair and practical measures wherever normal profits result primarily from the efforts and genius of the individual. This yardstick is simple; it does not discriminate on the basis of size, capitalization, or risk; and it confines the excess-profits tax to profits which have increased after the emergency arose. But average earnings cannot be used in the case of new corporations formed after the base period; and they are inadequate as a measure of normal profits in the case of (*a*) corporations which experienced abnormally low profits in the base period, (*b*) corporations which expand and grow through normal activities; and (*c*) where invested capital is the principal income-producing factor. Hence, a fair return on invested capital is prescribed as a necessary and appropriate alternative to average earnings. There are also certain exceptional cases in which neither average earnings or invested capital provides a satisfactory measure of normal profits. This will be true, for example, of small corporations with an increasing trend of profits not arising from the defense program; corporations engaged in research or development which suddenly realize profits; and many others. Special treatments must be given to such hardship cases on an individual basis.

Each of these credits has flaws and imperfections which should be corrected in order to improve the operation of the law. But the retention of all three basic methods of computing normal profits is essential to the concept of a true excess-profits tax.

(3) *The Treasury proposal.*—The Treasury Department sought to revive in the House, and again seeks to raise before this committee, a proposal which was carefully considered and rejected by both Houses last fall. This proposal is to abandon the average earnings basis, and to use, as the sole measure of normal profits, the average return on invested capital for the 4 years 1936–39, but not more than 10 percent or less than 4 percent. Before the House committee, the Treasury further suggested that an additional 10 percent tax should be applied to that part of the current profits that is in excess of the base period earnings but not in excess of 4 percent of invested capital. A special rate of 8 percent would be allowed for new capital, with 10 percent for new capital under $500,000.

It would seem to require little argument to demonstrate the unsoundness of the Treasury proposal. The average earnings basis is a fair and simple rule for determining normal profits in the majority of cases. It gives effect to all sources of earnings, including the value of good management and the contribution of goodwill and other intangibles to earning power. It recognizes the risk factor in the investment of capital, which an arbitrary return on invested capital ignores. It does not discriminate, as does the invested-capital method, by reason of accidents in the method or time of capitalization. Most important, it limits the excess-profits tax to the increase in profits after the emergency arose, which is the only proper objective of such a tax. All these points were developed fully at the hearings last year and require no further elaboration on my part.

(4) *The House bill.*—In order to satisfy the demands of the Treasury for additional revenue from the excess-profits tax, the Ways and Means Committee adopted certain provisions designed to increase the yield of this tax. These are as follows:

(*a*) *Direct and indirect reductions in excess-profits-tax credit.*—Section 201 of the bill proposes a direct reduction in the invested capital credit from a flat 8 percent on invested capital to 8 percent on the first $5,000,000 of invested capital and 7 percent on the remainder. In addition, section 204 proposes a further substantial reduction in the credit "indirectly" by denying the present deduction of the normal tax in computing excess-profits net income and allowing in lieu thereof a deduction of the excess-profits tax in computing normal tax net income.

The House report offers no justification for the direct reduction in the credit. It attempts to justify this reversal of deductions, however, on the ground that it conforms to the rule of our 1918 act and the present English law and is equivalent, in amount, to the Canadian rule (H. Rept., p. 24). Under the Canadian rule that part of the normal income tax which is computed on income subject to excess-profits tax is allowed as a deduction in computing excess-profits net income. The report states that—

"It seems unfair to allow that part of the income tax which is computed on income which is not subject to the excess-profits tax to reduce the excess-profits net income."

Neither the justification based on precedent nor on fairness supports the proposed reversal of deductions, however. The deduction of the normal tax in computing excess-profits tax net income, prescribed in the present law, was advocated in the preliminary recommendations of the Ways and Means subcommittee on the 1940 bill and was accepted by the Congress and the Treasury as the sound rule. Precedents were not overlooked; they were discarded. Furthermore, there is no justification for the imposition of an excess-profits tax upon income required for the payment of a normal tax. Can the amount paid to the Federal Government properly be treated as "excess profits"? The normal corporate tax, which has been in existence for more than 25 years, is, for practical purposes, just as much a business expense as other taxes paid to the Federal Government and the States. It should be recognized as such for excess-profits tax purposes.

In fact, the House report indicates that the real reason for the proposed reversal is not to return to precedent and "fairness," but because—

"The effect of the reversal of the deduction is that the 8-percent credit on invested capital provided in the bill is equivalent to a credit on invested capital of 5.6 percent after deduction of the normal tax and surtax, and the 7-percent credit on invested capital is equivalent to a credit on invested capital of 4.9 percent after deduction of the normal tax and surtax."

Thus, in substance, the bill proposes an aggregate reduction in the present invested capital credit from a flat 8 percent to 5.6 percent on the first $5,000,000 of invested capital and 4.9 percent on the remainder. And the only real question presented is whether or not any such reduction in the invested capital credit is justified.[1]

Such a reduction would represent a serious departure from the legislative policy adopted last year and embodied in the present law. That policy is that the excess-profits tax should apply solely to profits arising directly or indirectly from the defense program and then only to the extent that such profits are in excess of a fair return on invested capital. The soundness of this policy cannot

[1] The reversal of the deduction also effects a reduction in the income credit, but such reduction is less severe due to a corresponding adjustment in computing base period income.

be questioned. The major purpose of the excess-profits tax is to prevent the creation of a new crop of war millionaires. The extraordinary rates which are required in order to effect this major purpose limit the tax as a revenue measure to the recapture of excess profits realized from the defense program.

In view of the increase in defense program activities, the excess-profits rates proposed by the House bill will result in a very substantial increase in revenue. But the revenue-raising capacity of the excess-profits tax must not be increased still further by subjecting normal profits thereto, whether such profits are from defense program activities or otherwise. A 72-percent tax rate imposed on normal earnings is obviously unfair and destructive. It will jeopardize sound corporate fiscal structures generally and will seriously interfere with the inevitable transition to a peacetime economy at the end of the present emergency. The Congress should be directing its attention toward the perfection of the present credit provisions, in order to safeguard normal earnings, rather than toward a reduction in the present credits and a consequent jeopardizing of such earnings.

(*b*) *Special tax on corporations using the invested capital credit.*—Section 201 (a) (2) (B) of the bill imposes on corporations using the invested-capital credit a special tax of 10 percent on the amount by which the adjusted excess-profits net income computed with the use of the income credit exceeds the adjusted excess-profits net income computed with the use of the invested capital credit.

The House report (pp. 25 and 26) states that the purpose of the provision is to require corporations to pay an additional tax where their income has increased over the base period but where they are nevertheless exempt from excess-profits tax under the invested capital credit. It is claimed that such corporations are enjoying increased earnings by reason of defense expenditures and therefore should contribute some part of such increase to the Government, in addition to the normal tax. An analysis of the provision, however, demonstrates that it is not supported by the justification assigned to it in the report.

In the first place, so far as existing corporations are concerned, no such limitation is found in the provision as is suggested in the report. The tax is not limited to corporations which pay no excess-profits tax. On the contrary, many corporations which are subject to excess-profits tax, because their earnings for the taxable year exceed the invested capital credit, will nevertheless be required to pay a 10 percent additional tax to the extent that their base period earnings are less than the invested capital credit. Thus, the tax will operate to penalize those corporations which, for any reason, had abnormally low earnings during the base period.

In the second place, new corporations are wholly exempt from the tax.[2] What policy can justify penalizing by a special tax on existing corporation having no earnings or abnormally low earnings in the base period, merely because it has enjoyed a moderate increase in earnings attributable, perhaps, only indirectly to the defense program, while a new corporation, formed for the very purpose of handling defense contracts, pays no such tax? Argument is unnecessary to show how great an incentive to tax avoidance through the dissolution of old and the formation of new corporations such a discrimination would create.

The imposition of this tax on new corporations, while it would cure this discrimination, would be equally objectionable for different reasons. It would mean that new corporations, even though formed to carry on nondefense activities, would be subjected to a tax burden running up to nearly 40 percent of their earnings. Such a tax burden would constitute a virtual embargo upon new enterprises vitally needed to preserve the economic health of the Nation.

This analysis of the defects of this tax demonstrates the soundness of the policy adopted last year of allowing all corporations a minimum tax-free return on invested capital. The policy should be adhered to and this penalty tax should be eliminated.

(*c*) *Recomputation of excess-profits credit carry-over.*—Section 204 (c) of the bill adds a provision to the law which requires that, for the purpose of computing the excess profits credit carry-over, the excess-profits credit, and the excess-profits net income for any taxable year beginning in 1940 shall be computed under the law applicable to taxable years beginning in 1941.

---

[2] This is because the tax is imposed only on corporations entitled to use the income credit. This credit is not available to new corporations.

This provision would establish a bad legislative precedent. The unused excess-profits credit for 1940 should in fairness be computed under the law which imposed the tax for that period. The bill, on the other hand, would compel taxpayers, already overburdened by the necessity of making the intricate computations for 1940 required by existing law, to discard these computations and recompute under the 1941 law. Presumably, if this principle is once established and further amendments to the excess-profits-tax law should be made by Congress in 1942, taxpayers would then be compelled to make a recomputation for 1941 and a second recomputation for 1940, in accordance with the 1942 law.

Certainly the Treasury would not propose any such provision in the event the House bill had liberalized the credit provisions. Its purpose, obviously, is to reduce the benefit of the carry-over provision of the present law—not to carry out any sound tax policy.

It is apparent that the cumulative effect of the foregoing changes made by the House bill is seriously to impair the safeguards provided by the existing law against the taxation of normal earnings as excess profits. They should be rejected.

NORMAL GROWTH

There still remains the important problem of providing adequate credits in the statute to cover ordinary everyday normal growth in no way related to the defense program either directly or indirectly—cases where a trend of growth is reflected prior to the inauguration of the defense program. Clearly, normal profits from normal growth should not be subjected to an excess-profits tax.

The normal-growth problem was recognized by Congress in the 1941 amendments and section 713 (f), which was added at that time, affords a partial solution. The formula prescribed by that section is based on a comparison of the last half of the base period with the first half. It produces a credit equal to the average earnings for the last half of the period, plus one-half of the excess of the average earnings for the last half of the period over the average for the first half. A maximum requirement is prescribed equal to the earnings for any 1 year in the base period.

This formula in section 713 (f) is inadequate in the following principal respects:

(1) The arbitrary limitation based on the maximum earnings for any 1 year in the base period is in conflict with the very purpose of the normal-growth provision. In most cases, 1939 will be the largest year in the base period for normal-growth corporations. If the trend in the base period shows a growing earning capacity, it is obvious that the normal earnings for 1940 and subsequent years would exceed the 1939 earnings. Thus the limitation to 1939 earnings has the effect of denying a normal-growth credit for 1940 and subsequent years even to the extent of the indicated increase in normal earnings for 1940.

(2) The formula fails to reflect normal growth, or the true amount of the normal growth, in a majority of cases because of the inclusion of 1938 in the computation. For growing corporations, as well as for others, 1938 was an unusually subnormal year, resulting either in losses or greatly reduced earnings. Its inclusion in the formula prescribed by section 713 (f) distorts the true picture of the growth by concealing the normal trend that would otherwise be reflected if the nontypical year 1938 were excluded.

Congress has already recognized the distorting effect of 1938 in computing average earnings for the entire base period under section 713 (e), although, as pointed out herein, such recognition is incomplete. By the same token, Congress should give recognition to the distortion which 1938 produces in the normal-growth provision of section 713 (f). Its effect is even more aggravated under section 713 (f) because there it plays a part in determining a 2-year average, as distinguished from a 4-year average under section 713 (e), and in addition, operates again to distort the comparison between the first and last halves of the base period.

In order to obtain a clear reflection of normal growth, 1938 should be excluded from the formula and a comparison should be made between 1939 and the average of the first half of the base period.

(3) The foregoing amendment will effect a substantial improvement in section 713 (f). But the principle must be extended if normal increases in profit in 1941 and subsequent years are to be protected adequately from the excess-profits tax and normal growth in peacetime enterprises is to be encouraged. This

is because section 713 (f), even if revised as suggested above, cannot be counted on to measure more than the normal growth of the corporation for the first year after the base period, namely, 1940. While the formula employed points to a trend of increased normal profits into the future, the section fails to translate this trend into corresponding increases in the income credit.

Various alternative suggestions have been offered to meet this normal requirement for 1941 and future years—none of which will accomplish the correct result in all substantial respects. For example, section 713 (f) itself can be further revised so as to provide for projecting the present trend not only into 1940, but into subsequent years, with a uniform step-up in the income credit to cover the indicated normal profit increase. If the actual increase in profit, excluding direct defense profit, is sufficient to substantiate the indicated growth per formula, then the propriety of the credit increase as well as the necessity therefor would be established.

As another alternative, the so-called Stiles formula, which has been presented to the committee during the present hearings, might be accepted as a solution to the future year normal growth problem. Under this formula, the excess profits credit is determined by applying to the pay roll of the taxable year subject to social security tax the percentage representing the ratio of profits to such pay roll during the base period. This formula has certain definite advantages which entitled it to serious consideration. These advantages are set forth in detail in the memorandum accompanying this statement.

(4) Finally, and perhaps most important of all, is the fact that section 713 (f) has never been made applicable to acquiring corporations which compute their average base period earnings under the provisions of supplement A. In order to obtain the benefits of the normal growth provision, such corporations must elect to compute their excess profits credit under section 713 rather than supplement A, and thereby lose the base period income of their component corporations in computing their income credit.

Obviously, there is no good reason for compelling an acquiring corporation to make a choice between supplement A and the normal growth provision. The acquisition of component corporations since 1936, through tax-free liquidations of subsidiaries for example, is a normal and common incident of the trend toward simplification of corporate structures which has been encouraged by Congress. In supplement A, Congress has recognized the necessity of including the base period income of such components, if they are qualified in the base period income of the acquiring corporation, in order to reflect the average base period earnings from the aggregate assets in the hands of the acquiring corporation after the acquisition. In section 713 (f), Congress recognized the necessity for a normal growth allowance in the income credit, insofar as such normal growth is indicated by a trend in the base period. There is no inconsistency between the policy of supplement A and the policy of the normal growth provision. In fact, if the combined income of acquiring and component corporations increased in the latter half of the base period the policy of the normal growth provision demands that such increase should be recognized.

Apparently, the failure to include the normal growth provision in supplement A in the first instance represented a drafting error. The continuation of this error has possibly resulted from the fact that supplement A is defective in several respects and any correction of the provisions of the supplement is being postponed until a complete job can be done. It is submitted that this defect in supplement A is too substantial to continue, that it can be corrected by a simple amendment, and that such correction should be made promptly without awaiting further improvement in the supplement.

Furthermore, since the failure to include the normal growth provision in supplement A is recognized as a defect in the statute and as one that has already created hardship, there is no reason why the correction should not be made retroactive to 1940 and thereby prevent normal growth earnings in that year from being subjected to the excess-profits tax rates.

SPECIAL RELIEF

Since it is not practical to undertake a detailed analysis of the relief provisions of the existing law in this statement, I shall limit my discussion to the major defects in the present special relief provisions which demand an immediate solution.

(1) *Abnormalities in invested capital.*—The existing law contains no provision whatever for relief of abnormalities in invested capital. Section 722 of the 1940 bill contained a provision vesting general authority in the Commissioner to make adjustments necessary to correct abnormalities in invested capital but this provision was eliminated by the March 1941 amendments. The provisions enacted to take its place relate entirely to adjustments of income in the taxable year or the base period. They are utterly inadequate to afford relief in numerous cases where the invested capital credit, as computed under section 714, does not provide even an approximately fair measure of normal profits.

Two common cases of invested capital abnormality may be cited by way of illustration. The first case involves a corporation which has enjoyed a large increase in its earnings in a taxable year due to the successful exploitation of a patent or a secret process. The patent or process had no direct relation to the defense program. The patent may represent only a small addition to the invested capital, so that, without some equitable adjustment, the whole of the profits derived from it will be taxed as excess profits. Unless relief is granted in such cases, a virtual embargo is placed upon the development of new patents and processes, and the public, as well as taxpayers, suffer a serious loss.

The second type of case arises directly out of the use of "tax basis," in lieu of cost, in computing invested capital. The result will be that innumerable taxpayers will be restricted to an invested capital which has no relation either to the value of the assets actually employed in the business, or the actual investment of the current generation of stockholders, but represents only the investment made by predecessors of the taxpayer a generation or more ago. I have urged as the only adequate remedy in these cases the abandonment of "tax basis" and the substitution of the fairer and more realistic rule of cost to the taxpayer. Until this is done, special relief is essential in order to prevent an abnormally low invested capital in many reorganization cases where identity between the parties is lacking. The statute should be amended immediately to provide adjustments in invested capital where and to the extent necessary to remove abnormalities, after which the excess-profits credit and the tax should be computed in the manner provided by the law. The adjustments once made should be effective for future taxable years.

(2) *Abnormalities in income in taxable year.*—The adjustments provided by section 721 are for the purpose of eliminating abnormal items of income in the taxable year. The most substantial deficiency in this section as now drawn is its failure to cover abnormal income resulting from the elimination of a deductible expense in the taxable year which was incurred throughout the base period. A typical situation is one in which the taxpayer during the base period was obligated to make a substantial royalty payment because of its use of a patent. In the taxable year, the patent expires and the taxpayer is freed of the burden of the royalty payment. Any increase in profits directly attributable to the lapsation of the royalty is in no proper sense an excess profit and should not be included in excess-profits net income.

I therefore suggest an enlargement in section 721 which will take care of abnormalities on account of the dropping out of normal items of deduction in the taxable year.

(3) *Abnormalities in the base period.*—Abnormalities in the base period are covered by section 711 (b) and section 722. Section 711 (b) deals with the elimination of separate items of base period abnormality, while section 722 deals with more general changes, such as expansion or curtailment of business, occurring prior to January 1, 1940. Whether or not section 711 (b) adequately provides for the elimination of items of abnormality depends in large part on the administration of the section and the interpretation of the limitations contained in section 711 (b) (1) (k). As the Finance Committee report on the March 1941 amendments frankly recognizes, these and other similar general limitations in section 722 will call for intelligent and sympathetic administration in order properly to carry out their purposes (77th Cong., 1st sess., S. Rept. No. 75, p. 3). I share the hope that the experience and ability of the officials of the Treasury and the Bureau of Internal Revenue will prove equal to the heavy responsibilities imposed upon them.

Section 722 permits the taxpayer to reconstruct its base period income if, prior to January 1, 1940, there have occurred certain specified changes in the character of the business, or interruption or reduction or normal output or operation on

account of some abnormal event. In determining an abnormal event, however, or in reconstructing the base period income in the event of a change in the character of the business, high prices of materials and so forth, low selling prices, or low sales volume due to low demand for the taxpayer's product, are excluded from consideration as abnormalities.

There are, unquestionably, many types of changes in the "character of the business" other than those prescribed in section 722 which would justify a modification of the actual base-period income as a standard of normal profits—changes in management and operating policies, for example, or reduction in costs due to discovery of new sources of supply, technological improvements, and so forth. It is probably as difficult to anticipate the various changes in the character of the business as it is to anticipate all the various classes of abnormal items. Accordingly, a catch-all provision should be included corresponding to the general classification of abnormalities contained in both section 711 (b) and section 721, which would "leave room" for relief in the unforeseen situation.

The most serious deficiency in base period abnormality provisions results from the limitations contained in section 722 preventing adjustments to base-period income on account of high prices of materials and other agents of production during the base period, low selling prices, low volume, etc. Subnormal base-period income on account of these factors should certainly be adjusted. Their existence and effect can readily be ascertained by reference to prior years or, where they occur in 1 or more years in the base period but not throughout the entire base period, by reference to other base-period years. Abnormal business conditions of the type now excluded from consideration by section 722, occurring in a single base-period year, may distort the entire base-period average so that it would utterly fail to reflect average normal earnings. Provision should certainly be made for this type of base-period abnormality.

(4) *New production.*—By far the most serious defect in the so-called special-relief sections is their complete failure to cover the case of the new corporation, or the existing corporation, coming into production after January 1, 1940, and engaged in a business in which invested capital is only a minor income-producing factor.

Under section 713 the new corporation is entitled to no income credit and the income credit of the existing corporation will be nominal. Section 722 affords no relief to either corporation since the event giving rise to income occurs after January 1, 1940. Obviously, therefore, corporations of this type will be left at the mercy of the excess-profits tax unless some special-relief device is inserted in the law to protect their normal earnings. A fair and workable method must be found to enable new peacetime enterprises to develop and enjoy reasonable prosperity without fear of paralyzing excess-profits taxation.

In view of the fact that such corporations have no past experience, it is necessary to construct an income credit therefor by reference to the base-period experience of other corporations in the same industry. The law should be amended to provide for the construction of an income credit in this manner.

THE INCOME CREDIT

There are several defects in the income credit provided by the existing law which are in urgent need of prompt correction in order to make it a fair standard of normal profits.

(1) The present law prescribes an income credit based on an average of the earnings for the 4 years 1936-39, inclusive. It permits the taxpayer to treat 1 loss year as zero but requires the remaining 3 years' income to be divided by four. This method of computing average normal earnings is inadequate. In the first place, the years selected as the base period were not a representative period of normal earnings, for they were merely the culminating years of a period of depression. Many companies operated under depressed conditions for most of that period. The year 1938, in particular, was a bad year for most businesses. The right to treat 1 loss year as zero does not compensate for a year of subnormal earnings, and the necessity of dividing the remaining 3 years' total by four distorts the average for the 3 years.

The Senate amendment to the 1940 bill permitted a corporation to elect any 3 out of 4 years in the base period. This reasonable yardstick for measuring normal profits should be restored in the pending bill.

(2) The existing law takes into account only 95 percent of the average base-period earnings in computing the income credit. This limitation results in subjecting a part of the normal profits to excess-profits tax. There is no justification for this result. Taxpayers should be allowed the full 100 percent of their average base-period earnings in computing the income credit.

(3) Section 721 permits the income of a taxable year to be allocated to another year or years in certain specified cases. Where such income is determined to be allocable to a year or years in the base period, it should be taken into account in computing the income credit. The Senate Finance Committee report (S. Rept. No. 2114, p. 16) specifically stated this to be the result under the existing law. The Regulations (Regs. 109, sec. 30.721–1) have taken a contrary position, in disregard of this unequivocal expression of legislative intent. Section 721 should be specifically amended so as to incorporate the Finance Committee's construction.

USE OF COST IN LIEU OF TAX BASIS IN COMPUTING INVESTED CAPITAL CREDIT

The present excess-profits-tax law provides (contrary to the 1917, 1918, and 1921 acts) that property paid in to a corporation shall be taken into its equity invested capital, not at its cost to the taxpayer, but at its "tax basis" for computing loss upon a sale or exchange. Thus, if the taxpayer acquires property through the issuance of its stock in a transaction in which no gain or loss to the transferor is recognized, it must include the property in its invested capital in an amount based on the cost of the property to the transferor rather than at the cost to itself.

"Tax basis" is merely the device adopted for measuring the gain or loss upon the subsequent disposition of property involved in a "tax-free" reorganization or exchange.

It is utterly unrelated to the amount of the property which the taxpayer has invested in his business. Its use in computing invested capital is neither fair nor logical. It results in serious and indefensible discrimination between taxpayers similarly situated, and opens a loophole of serious proportions. It is neither necessitated nor justified by considerations of administrative convenience.

Property paid in to a corporation for its stock (or as paid-in surplus, or as a contribution to capital), should be included in equity invested capital at its cost to the corporation—i. e., the market value of the corporation's stock issued therefor or (in the absence of market quotations) the value of the property at the time paid in. The necessity for special relief, in order to prevent an abnormally low invested capital in many reorganization cases, has already been discussed.

REVISION OF RATE STRUCTURE

The present law and the House bill base the tax brackets in the rate schedule exclusively upon the dollar amounts of excess profits without regard to the ratio of the excess profits to normal profits.

The rate structure of the earlier excess-profits-tax laws recognized the equitable principle that excess-profits-tax rates should be based primarily upon the ratio between the excess profits and the credit, rather than upon the mere dollar amount of the excess profits. The report of the Ways and Means Subcommittee on August 8, 1940, recommended the adoption of such a rate structure, and it was adopted in section 710 of the 1940 bill as it passed the Senate. The elimination of this section was rightly characterized by Senator George, when the conference report on the 1940 bill was agreed to in the Senate, as representing the abandonment of one of the soundest and most important provisions of the Senate bill (Congressional Record, vol. 86, No. 183, p. 19503). Assistant Secretary Sullivan has in effect conceded the unsoundness of this feature of the present law (hearings, May 19, 1941, p. 1339). Furthermore, the rate schedule as now constructed is responsible for many of the complexities of the existing law, such as the provisions in supplement B relating to the highest bracket amount.

CONSOLIDATED RETURNS

We continue to urge that permission to file consolidated returns for normal and surtax purposes be restored to corporations generally. The requirement of separate returns for a group of affiliated corporations is indefensible, compelling the statement of nonexistent profits and losses on intercompany transactions and distorting the earnings of particular units. The principle of taxing

as a business unit what is in fact a business unit is sound, equitable, and convenient both to the taxpayer and the Government. The Treasury Department has urged the restoration of consolidated returns on several previous occasions, and action should not be longer delayed.

At the same time, a new election to file consolidated returns for excess-profits-tax purposes should be allowed, as a matter of equity and fairness, if substantial changes in the credits and rates of tax are enacted.

ANNUAL DECLARATION OF CAPITAL-STOCK VALUE

I have discussed the declared-value capital-stock tax and its companion excess-profits tax on several occasions in the past before this committee. These are hybrid taxes, arbitrary in their operation, which have no place in a tax system constructed on sound, scientific principles. I renew our recommendation that they be eliminated at the earliest possible date.

If this solution is impracticable under present conditions, I urge the immediate amendment of the capital-stock tax so as to permit an annual declaration of value. The bill, contrary to past legislative practice, does not even provide for a new or amended declaration of value, although it materially increases the capital-stock-tax rate.

There are several reasons of unusual urgency making it imperative to allow an annual declaration at this time. The problem of calculating the future trend of corporate income has always been a very difficult one. Under present conditions it becomes impossible. To all uncertainties present in past years are now added those created by the defense program and the emergency itself. The defense program cuts both ways. To many corporations it means or may mean a decline in profits or no profits at all. The latter include those not enjoying defense contracts, whose sources of materials may be cut off by priority orders. Finally, who can foresee with assurance the rapidity and extent of future price increases due to inflationary factors?

Under such conditions of uncertainty, simple justice demands that taxpayers should not be compelled to hazard a guess as to their future incomes for more than a year in advance. An annual declaration of value is the only fair and practical solution.

AMORTIZATION

A little over a year ago, the problem of providing the physical facilities necessary for defense production was a critical one. Private capital was naturally hesitant to invest heavily in facilities which might have only a temporary usefulness. At the same time, it was desirable that the financial burden upon the Government, in connection with providing the necessary facilities, be kept to a minimum.

In this situation, three plans were developed. They were explained to the Committee on Finance, in detail, by Messrs. Biggers and Henderson, then of the Advisory Commission to the Council of National Defense. The first plan involved the construction of new plants wholly with private funds. In order to encourage the widespread use of this plan, and thus lighten the Government's burden, it was proposed that taxpayers providing plants under the plan be permitted to amortize the cost of those plants over a 5-year period. The plan involved no outlay by the Government, no reimbursement for the cost of the plants. The second plan involved the use of private funds at the outset, with the builder being reimbursed specifically and directly by the Government for his expenditures. After the emergency, the plant was to belong to the Government unless the builder chose to buy it back. The third plan provided for direct and complete financing by the Government, with full Government ownership at all times.

The Second Revenue Act of 1940 added to the Internal Revenue Code a new provision, section 124, which was intended primarily to implement the first plan described above, by permitting taxpayers to amortize, over a 5-year period, the cost of essential new facilities constructed or acquired for national defense.

This special 5-year amortization is not in any sense a subsidy. It is merely a substitute for the regular depreciation deduction allowed under section 23 (l). The regular depreciation deduction permits a taxpayer to recover the cost of his plant over its useful physical life. The amortization deduction allows that cost to be recovered over 5 years, provided the plant is necessary in the interests of

national defense. If the plant is continued in operation after the 5-year period, the taxpayer will not be allowed any depreciation deductions. No part of the cost of any plant may be recovered more than once. In return for increased deductions over the 5-year period, the taxpayer gives up all deductions thereafter. The aggregate amount of deductions is not increased.

Under section 124, a taxpayer desiring to amortize the cost of a facility must apply for a certificate, issued jointly by either the Secretary of War or the Secretary of the Navy and the Advisory Commission to the Council of National Defense, that the facilities proposed are "necessary in the interests of national defense." Such a certificate is known as a "necessity certificate." In the case of a facility acquired or constructed wholly with private funds, the issuance of such a certificate was intended to, and should, conclusively establish the right to the amortization deduction. The service departments and the Advisory Commission have done an excellent administrative job in handling applications for necessity certificates covering thousands of facilities costing many millions of dollars. The applicants who have received certificates should no longer be in doubt as to their rights. Unfortunately, however, even more uncertainty and confusion exists today than existed a year ago.

The current difficulty arises out of the provisions of subsection (i) of section 124. This subsection relates to reimbursement by the United States of the cost of facilities covered by necessity certificates. It provides, in effect, that if the taxpayer is being reimbursed by the United States for the cost of such a facility—a result contemplated only under the second plan mentioned above—amortization will be denied unless the contract providing for reimbursement adequately protects the Government with reference to the "future use and disposition" of the facility. It contemplates that the service departments and the Advisory Commission will issue two types of certificates with respect to individual contracts with the United States: (1) A certificate that the contract does not provide for reimbursement by the United States—a "certificate of nonreimbursement." (2) A certificate that the Government's interest is adequately protected—a "certificate of Government protection."

Obviously, subsection (i) has a logical connection only with the second plan mentioned above, under which the Government actually reimburses the contractor. Nevertheless, its provisions have also been applied in respect of facilities provided under the first, or private, financing plan, so that a particular taxpayer holding a necessity certificate cannot be assured of his right to amortize the cost of the facility covered by the certificates unless and until he is able to obtain either a certificate of nonreimbursement or a certificate of Government protection with respect to every contract he may have with the United States. If he fails to obtain one or the other certificate with respect to a single contract, regardless of the extent, if any, to which the particular facility may be employed in filling the contract, regardless of its date of execution, and regardless of its amount, the possibility remains that the Treasury will deny him his amortization deduction, on the ground that he has been reimbursed, and force him into litigation to prove the contrary.

The provisions of subsection 124 (i) were adopted, it will be recalled, as a substitute for subsections (i), (j), and (k) of the second revenue bill of 1940, as it passed the House. Those subsections required the maintenance of all amortized facilities so long as the Secretary of War or the Secretary of the Navy might require, and imposed severe penalties for any violations. These provisions were vigorously opposed before the Senate Finance Committee by Messrs. Knudsen, Henderson, and Biggers, representing the Advisory Commission, and also by the heads of the service departments. This opposition was founded, first, on the belief that such provisions were illogical and inappropriate in a tax statute, and second, on the confidence of those testifying that the Government could and would be adequately protected by contract provisions.

Subsections (i), (j), and (k) of the House bill were duly eliminated, and were replaced by subsection (i) in its present form. On the basis of its legislative history, the present subsection (i) must be treated as merely a formal guaranty that the Government's contracting officers would follow the course outlined by the Advisory Commission officials; and Congress naturally anticipated that the law would be administered in the light of its background and obvious purpose.

It seems a natural assumption that Congress, in providing for the issuance of certificates of nonreimbursement, anticipated that the contracting officers would know, in the case of any given contract, whether or not they were providing for reimbursement, and that certificates of nonreimbursement would be quickly granted or denied on the basis of that knowledge. In fact, the express wording of the statute, as well as its background, justifies the view that Congress had in mind only such reimbursement as might readily appear on the face of the contract. It is only in such contracts that it would ever be thought proper or necessary to add provisions for the Government's protection. Certainly it was never thought that ordinary supply contracts would involve reimbursement, or require provisions for Government protection.

Had this natural interpretation been adopted, the certifying agencies could have proceeded rapidly with the task of examining and certifying contracts. Instead, another view prevailed, the view that every single contract must be minutely examined from the standpoint of cost elements, amount of profit, etc., and regardless of the actual intention of the parties, as evidenced by the affidavit of the applicant and the report of the contracting officer. No single concept of nonreimbursement exists, the various interpretations of it are vague and uncertain, and as a result, the situation has become hopelessly confused. Only a bare handful of certificates of nonreimbursement and certificates of Government protection have been issued, although thousands of applications, covering many more thousands of contracts, have long been on file.

Taxpayers who relied on the amortization provision and proceeded with the acquisition and construction of emergency facilities now find that they cannot be sure of their amortization deductions. Those contemplating additional facilities are in grave doubt as to how to proceed. Largely on this account virtually all facilities now being contracted for are being built at Government expense.

In view of this impossible situation, we urge that the recommendations of the Advisory Commission officials, made last year, and then concurred in by the War and Navy Departments, be adopted at this time. Subsection (l), relating to a matter of procurement policy, has no proper place in a tax statute, and should be repealed. As indicated by the foregoing officials, the exclusion of reimbursement, or the protection of the Government where reimbursement exists, can be fully controlled by the procurement officers by means of their power over the terms of contracts. The wisdom of the testimony of those officials has been established by a year of administration which has produced only hopeless confusion. The elimination of the subsection will relieve taxpayers of an unintended, unnecessary, and impossible burden. It will also relieve contracting officers of the duty of minute examination of thousands of contracts, when their time is fully required on urgent procurement problems connected with the defense program.

In addition to this fundamental change in the provision, other important and related amendments are necessary. We urge the following:

(1) *Depreciation over actual life.*—The language of section 23 (l) should be clarified in such a manner as to remove all doubt that facilities for which no amortization has been claimed may be depreciated over the emergency period, or a shorter period, if the taxpayer can demonstrate that this is in fact the period of their useful life. Amortization was not intended to be an exclusive method of depreciating emergency facilities. It did not change, or replace, the intent of the law, which has always been that the cost of property should be written off over its useful life.

(2) *Earlier basic date.*—As it now stands, section 124 does not apply to any expenditures made before June 10, 1940. This basic date should be reexamined. The only reason for excluding facilities completed before that time was that this was the first date upon which taxpayers were officially apprised that they might expect amortization. The reason is not sound. It arbitrarily excludes contractors who built essential facilities for the national defense without waiting for express assurances of amortization. A more reasonable and logical base date would be the beginning of the war, or approximately September 1, 1939. If the present base date is retained, however, discretion should be given to the service departments to certify facilities meeting all tests except the date of completion. Such discretion is conferred in the administration of the Canadian law.

SUPPLEMENTAL MEMORANDUM

(Detailed discussion of modifications of the Internal Revenue Code proposed by Messrs. Ellsworth C. Alvord and Roy C. Osgood, representing the Committee on Federal Finance, Chamber of Commerce of the United States, before the Committee on Finance, United States Senate, August 15, 1941.)

FOREWORD

A number of proposals for modifications of the Revenue Code are set out in the attached communication to the Senate Finance Committee.

The communication, however, does not embrace all the changes in revenue law which are urged by the National Chamber's Committee on Federal Finance, but deals primarily with technical or administrative questions.

Other proposals for such amendments to the code are still in process of consideration by the Chamber Committee. The committee expects to have opportunity to present its recommendations in relation thereto in subsequent memoranda.

Not all of the proposals in the communication are urged for inclusion in the pending revenue bill, although, it is believed they should have early consideration of the Congress. The testimony of the Chamber's representatives before the Senate Finance Committee on August 15, 1941, is the principal guide to the recommendations urged for immediate adoption.

This testimony, particularly the presentation by Chairman Ellsworth C. Alvord of the Chamber's Committee, and the statement by Mr. Roy C. Osgood, give special emphasis to such of the proposals in the attached communication as the Chamber Committee believes should have immediate attention.

The testimony, in addition, deals with phases of the pending revenue bill, not discussed in this communication, with which the Chamber's Committee is in agreement as well as those provisions with which it differs.

SUMMARY

Preliminary statement.

A. Income, estate, and gift taxes

I. Consolidated returns should be permitted for corporate normal tax and surtax purposes.
II. Taxation of intercorporate dividends should be eliminated.
III. The declared value capital stock and excess-profits taxes should be repealed; if present revenue requirements preclude repeal, there should be provision for annual redeclaration of value.
IV. The basis of depreciable assets should not be reduced on account of depreciation in prior years not used to offset taxable income.
V. Taxpayers should be given the right to a 3 months' extension for filing income returns, subject to the filing of tentative returns and the payment of tentative tax.
VI. The statute should be amended so as to provide definite and certain rules to govern the tax consequences of mortgage and lien foreclosures.
VII. Worthless stock and bad debt losses should not be treated as capital losses, and the statutory requirements relating to the deduction of bad debts should be liberalized.
VIII. Agreements extending the statutory period for the assessment of deficiencies should similarly extend the period for claiming refunds.
IX. The arbitrary treatment of gains on the redemption of preferred stock should be corrected.
X. The principle of exemption of dividends from the normal tax on individuals should again be recognized.
XI. Recoveries of bad debts should be treated as income only to the extent that the deduction of such bad debts in prior years has been used to offset taxable income.
XII. Ordinary and necessary expenses incurred in the production and collection of income and in the management, protection, and conservation of property devoted to the production of income should be deductible.
XIII. The income tax basis of property transferred at death should be correlated with its valuation for estate tax purposes.
XIV. The $1,000 annual gift tax exclusion should be made applicable to gifts in trust.
XV. Securities of nonresident aliens should be made exempt from Federal estate and gift taxes.
XVI. Provision should be made for adequate tax-free funds for payment of Federal estate taxes.
XVII. Sections 42 and 43 should be repealed or modified so as to cure the inequitable results flowing from the decision in *Helvering* v. *Enright*, (61 S. Ct. 777).
XVIII. The doctrine of congressional adoption or ratification of administrative regulations by subsequent reenactment of the statute should be abrogated or sharply limited by legislation.
XIX. Legislative regulations should be promulgated only after public hearings held upon due notice.
XX. The application of the personal holding company surtax to the capital gains of nonresident foreign corporations should be clarified.

B. The excess-profits tax

I. Taxpayer's cost should be substituted for tax basis as the general rule in computing invested capital (with proper provisions for relief in exceptional situations).
II. Determinations of invested capital under the World War excess-profits tax laws should be permitted to be used as the starting point in computing invested capital for present purposes.
III. Advances made by governments to American contractors should be treated as borrowed capital.
IV. The burdensome requirements of computations of invested capital based upon daily averages and ratios should be modified.

V. Various discriminations made by the existing law against the use of the credit based upon base period earnings should be removed.
VI. Excess profits should be measured over a longer period.
VII. The excess-profits rate schedules should be based on percentages in lieu of dollar amounts.
VIII. Section 734, relating to adjustments on account of inconsistencies, should be revised and restricted.
IX. Section 718 (c) (2), relating to the effect on equity capital of dividends within the initial 60 days of the taxable year, should be repealed.
X. Sections relating to adjustments of basis in computing invested capital should be revised.
XI. Additional special relief provisions and better yardsticks for measuring normal profits should be enacted.
XII. Supplements A and B should be revised.

C. Amortization

I. There should be some revision of the base date, the present June 10, 1940, deadline being highly arbitrary and discriminatory.
II. Emergency Plant Facility (E. P. F.) contracts should be treated as sale contracts for tax purposes.
III. Section 124 (i), relating to certificates of nonreimbursement and Government protection, should be repealed or substantially revised so as to correct the impossible situation which has developed in the administration of the section.

MEMORANDUM

To the Chairman and Members of the Committee on Finance, United States Senate:

The Committee on Federal Finance of the Chamber of Commerce of the United States respectfully submits for your consideration the following recommendations for modification of various provisions of the Internal Revenue Code, including subchapter E containing the provisions relating to the excess profits and amortization of defense facilities enacted by the Second Revenue Act of 1940, as amended.

The various proposals submitted for your consideration are based upon one or more of the following principles:

(1) The statutory net income which is the base of the personal and corporation income taxes should be fairly defined so as to correspond as nearly as practicable with net income as determined by generally accepted principles of accounting. With the rates of tax, individual and corporate, rising to unprecedentedly high levels because of the fiscal demands of the defense program, the need for greater fairness in defining the tax base is imperative if gross hardship and discrimination between taxpayers are to be kept to a minimum.

(2) Unnecessary sources of costly and wasteful litigation should be removed by clarifying amendments of the statute at points where the statute is obscure. Needless controversy and litigation are destructive of the confidence between taxpayers and their Government which is so essential to the efficient administration of tax laws based upon the principle of self-assessment.

(3) The estate- and gift-tax laws should be amended at points where they operate in a discriminatory manner or become so oppressive as to imperil the sources of future revenues through destruction of the tax base.

(4) Unfortunate consequences of judicial decisions interpreting existing law should be promptly corrected by the Congress.

(5) The processes of administration of the revenue laws should be subjected to frequent scrutiny and improved, wherever possible, by amendment of administrative provisions of the law.

(6) Extensive revision and rectification of the excess-profits tax law should be made to prevent gross inequities and severe hardships which are injurious to the national economy.

A. Income, estate, and gift taxes

I. *Consolidated returns.*—It is recommended that the privilege to file consolidated returns for normal and surtax purposes should be restored to corporations generally.

It will be recalled that this privilege was allowed under all the revenue acts from the 1918 act to and including the Revenue Act of 1932. Indeed, after the enactment of the profits tax of 1917, a committee, consisting of members of the Committee on Ways and Means and the Committee on Finance, and of leading tax experts, who were engaged in the preparation of regulations under that act, after a very careful and nonpartisan consideration of the problem, decided that the filing of such returns should be permitted. The Treasury thereupon authorized the filing of consolidated returns by corporations which,

by reason of common ownership, were affiliated. While such groups are composed technically of several corporate entities, the reality was recognized that they are as a practical matter one corporation. Congress promptly ratified the judgment of this committee by writing these regulations into the 1918 act.

The reasons justifying this action, which are still applicable, can hardly be better stated than by quoting a statement made by Senator Simmons, then chairman of the Finance Committee, in his report upon the 1918 revenue bill:

"So far as its immediate effect is concerned consolidation increases the tax in some cases and reduces it in other cases, but its general and permanent effect is to prevent evasion which cannot be successfully blocked in any other way. * * * As a general rule, therefore, improper arrangements which increase the tax will be discontinued, while those which reduce the tax will be retained.

"Moreover, a law which contains no requirement for consolidation puts an almost irresistible premium on a segregation or a separate incorporation of activities which would normally be carried on as branches of one concern. Increasing evidence has come to light demonstrating that the possibilities of evading taxation in these and other ways are becoming familiar to the taxpayers of the country. While the committee is convinced that the consolidated return tends to conserve, not reduce, the revenue, the committee recommends its adoption not primarily because it operates to prevent evasion of taxes or because of its effect upon the revenue, but because the principle of taxing as a business unit what in reality is a business unit is sound and equitable and convenient both to the taxpayer and to the Government." (Report, Senate Finance Committee, p. 8-9, 65th Cong., 3d sess., S. Rept. 617.)

We believe that the present Treasury officials, along with all prior officials of the Treasury responsible for the administration of the revenue laws, agree that consolidated returns are both necessary and proper to the fair application of corporate-income taxes. The Under Secretary of the Treasury stated a few years ago that "businessmen and their professional advisers, the lawyers, and accountants have long recognized that the one way to secure a correct statement of income from affiliated corporations is to require a consolidated return. * * * Such a consolidated statement is simply a recognition of the actual fact that the separate corporations, though technically distinct legal entities, are for all practical business purposes, branches or departments of one enterprise."

The necessity of retaining the consolidated return in the case of railroad corporations was recognized even in 1934. (See sec. 141 of the 1934 act.) Section 141 (d), defining affiliated group was broadened somewhat by subsequent amendments, viz, street, suburban, and electric railways, members of an affiliated group, were included by the Revenue Act of 1936, and street or suburban trackless trolley systems of transportation, or street or suburban bus systems of transportation operated as a part of a street or suburban electric railway or trackless trolley system were brought in by the Revenue Act of 1938. Section 225 of the 1939 act added section 152 to the Internal Revenue Code and thereby extended the privileges of section 141 to so-called pan-American trade corporations. Finally, the Congress recognized the imperative need of allowing consolidated returns for excess-profits tax purposes with limited exceptions (see sec. 730 of the code) and in the March 1941 amendments adopted an amendment permitting insurance companies subject to taxation under section 204 of the code to join with ordinary corporations in filing consolidated returns. In all these cases the exercise of the privilege is conditioned upon consent of the members of the affiliated group to be governed by legislative regulations promulgated by the Commissioner of Internal Revenue with the approval of the Secretary of the Treasury.

This steady expansion of the scope of consolidated returns since their virtual abolition in the 1934 act evinces a growing recognition of the sound principle that corporate enterprises which are essentially unitary ought to be taxed as a unit, even though for legal or business reasons it is found necessary or convenient to carry on different branches of the business through technically separate corporations. When, as under existing law, intercorporate transactions within the group are not disregarded, serious distortion of income is bound to occur. Under the present high rates of tax on corporate income and the much higher rates in prospect, such distortion becomes a very serious problem and operates as a substantial clog upon free business enterprise. The device of conditioning the filing of consolidated returns upon consent to and compliance with legislative regulations provides an effective safeguard against abuses of the privilege.

We respectfully urge that this vitally important issue be reconsidered upon its merits. We believe that such reconsideration can lead to but one conclusion, viz,

that consolidated returns for corporate normal and surtax purposes should be restored.

II. *Taxation of intercorporate dividends.*—We recommend the complete exemption of intercorporate dividends from corporate normal tax.

Dividends on the stock of domestic corporations are already excluded from income for excess-profits tax purposes (sec. 711 (a) (1) (F) and 711 (a) (2) (A) of the code) and dividends on stock of foreign corporations are also excluded with respect to corporations whose excess-profits credit is computed under section 714 (invested capital credit) (sec. 711 (a) (2) (A) of the code).

Intercorporate dividends in full are included in net income for purposes of corporate surtaxes measured by undistributed net income, such as the taxes imposed by code section 102 on corporations formed or availed of to evade surtaxes on their shareholders and by section 500 of the code on personal holding companies. Such dividends are included in the tax base for the purpose of these surtaxes for reasons which do not exist in the case of the corporate normal tax or the declared-value excess-profits tax. The discussion which follows is therefore directed only to these latter taxes.

Beginning with the Revenue Act of 1917 through and including the Revenue Act of 1934, Congress adhered consistently to the sound policy of excluding dividends received by a corporation from other domestic corporations (with minor exceptions not here material) from the corporate income tax. The policy of this exclusion was to prevent obvious multiple taxation of the same earnings. Such exclusion was not provided by the Revenue Acts of 1913 and 1916, but the problem was not then serious because of the lowness of the tax rate.

The first departure from this long-established policy came in the Revenue Act of 1935. Section 102 of that act amended section 23 (p) of the Revenue Act of 1934 so as to limit the deduction on account of intercorporate dividends to 90 percent of the amount thereof. This amendment never came into actual operation, being supplanted by section 26 (b) of the Revenue Act of 1936, which changed the deduction of intercorporate dividends into a credit against net income and limited the credit to 85 percent of the amount so received. Under the rate schedule contained in that act, the net effect was to tax such intercorporate dividends included in net income at a normal-tax rate running from a minimum of 1.2 percent to a maximum of 2.25 percent.

In the Revenue Act of 1938 the burden of this tax upon intercorporate dividends was measurably increased in two respects. Section 26 (b) was amended so as to limit the credit to an amount not in excess of 85 percent of the adjusted net income. The effect of this change was to subject such dividends to some tax in any case in which the corporation had an adjusted net income or, in other words, a proportionate part of the corporate deductions on account of expenses, losses, interest, depreciation, and the like was in effect allocated against dividend income. In addition, the effective burden of the tax was increased by the upward adjustment of the rate schedule. This burden has been measurably enhanced by the higher rate schedules which have since been enacted. Thus, in the case of corporations whose net incomes are sufficiently large to take them out of the so-called notch or alternative tax provide in section 13 and 14 of the code, the effective rate of corporate normal tax on intercorporate dividends is now 3.6 percent (24 percent of 15 percent). The proposed increase to 30 percent in the normal tax rate on such corporations would enhance the effective burden to 4.5 percent, exactly double the maximum burden under the Revenue Act of 1936.

The application of the normal tax to these intercorporate dividends has not been seriously defended or justified on the basis of purely fiscal considerations. It has not been in fact a major revenue producer. The restoration of the privilege of filing consolidated returns would reduce this yield substantially, since intercorporate dividends are eliminated as intercorporate transactions where a consolidated return is filed.

The President, in recommending an intercorporate dividend tax in 1935, sought to justify a small tax as a measure "to prevent the evasion of the graduated tax by means of a multiplicity of corporations." While this recommendation was ultimately followed, the report of the Committee on Ways and Means (p. 7) expressed the view that such a tax was unnecessary to prevent evasion in view of the moderate graduation in rates provided in the bill. It is even clearer that the tax cannot be defended as a device to prevent evasion under the statute as now drawn, where the graduated rates apply only to corporations having net incomes of $25,000 or less. No argument is necessary to demonstrate how improbable it is that a great corporation would endeavor to split up into an indefinite number of

small corporate units, each having a net income of less than $25,000, in order to get the benefit of the present restricted graduation of rates. The diseconomy and inefficiency of such a form of organization, even if possible, would far outweigh its tax advantages.

The original stated purpose of the tax on intercorporate dividends no longer obtains. The reasons, if any, for its retention can only be nonfiscal in character. It is probable that the real purpose of the tax is to coerce the simplification of complicated corporate structures by the imposition of tax pressure. Even if it were sound policy to use taxation for such nonfiscal ends, which we do not believe, the intercorporate dividend tax is a singularly inefficient and nonselective device to accomplish this purpose. It penalizes a corporation which conservatively invests some portion of its reserves in sound corporate stocks without any view to control, along with a holding company at the apex of a pyramided corporate structure. It operates upon holding companies and parent corporations which are necessary or legitimate even in the light of the standards reflected in such legislation as the Public Utilities Holding Company Act. It imposes unwarranted burdens upon corporations which find it necessary or desirable for legitimate business reasons, including insulation from liability in hazardous new enterprises, to create subsidiary corporations. In order to reach a possibly guilty minority, it penalizes a majority.

Even if the tax has possessed some degree of utility in bringing about desirable simplifications of corporate structure it is no longer needed for such purpose. Such simplification has already taken place in large measure, and will no doubt continue to do so, where it is desirable, as the result of other measures, such as the Holding Company Act, and the tax-free liquidation of subsidiaries made possible by section 112 (b) (6) of the code. It is high time that this tax, unimportant as a revenue producer and a deterrent to investment in new enterprise, should be eliminated from our tax structure.

III. *The declared value capital-stock tax and excess-profits tax; if present revenue requirements preclude repeal there should be provision for annual redeclarations of value.*—We recommend that this tax imposed by section 1200 of the code, and its companion tax, the so-called declared value excess-profits tax imposed by section 600, be repealed.

The Congress is already familiar with the many weighty arguments against these taxes, originally imposed as emergency measures in 1933 in the tax provisions of the National Recovery Act. Your committee has already shown its awareness of the basically unsound character of these taxes and the serious hardships and inequities frequently resulting from their application. While these hardships have been considerably ameliorated by amendments in 1938 providing for triennial redeclaration of value, and in the 1939 amendment allowing an increase only in declared value in nondeclaration years, the basic weaknesses in these taxes still remain. The capital-stock tax is not a true capital-stock tax for declared values have no relation to the true fair market value of the capital stock. The declared-value excess-profits tax is not a true excess-profits tax, since it is not measured by any yardstick recognized as proper for measuring excess profits. The combined operation of the two taxes penalizes very heavily the inability of a corporate taxpayer accurately to foresee the trend and amount of its future earnings. In many cases net income may be unexpectedly increased by unforeseen windfalls, the result of which may be to mulct the corporation unfairly by a heavy tax, even though the return by any fair standards may be relatively low. The proliferation of corporate taxes represented by these taxes increases the already excessive and costly burdens on corporations with respect to the filing of returns, and adds to the sources of wasteful litigation.

Finally, it seems paradoxical to say the least, that corporate taxpayers should be subjected simultaneously to two excess-profits taxes having quite different and independent bases.

We respectfully urge that these taxes be eliminated from the Federal tax system at the earliest possible date and that the revenues lost by their repeal be replaced, if necessary, by taxes having a less discriminatory and arbitrary incidence. If their elimination is not possible at this time, we believe it is vital that an annual declaration of value be allowed.

IV. *Excessive depreciation not beneficially allowed.*—We recommend that the statute be appropriately amended so as to provide beyond any question of doubt that excessive depreciation not beneficially allowed, i. e., not used to offset taxable income in earlier years, shall not be applied to reduce the basis of depreciable property.

We also urge that the policies applied in the determination of depreciation deductions should be liberalized so as to accord more nearly with business and accounting practics.

Clarification of the existing statute at this time is also needed by reason of doubt as to the proper interpretation of its terms. This doubt is causing litigation and hampering the expeditious settlement of cases before the Bureau.

Prior to the Revenue Act of 1932, the statute provided for adjustment of basis on account of depreciation by the amount of depreciation allowable. In the 1934 act, section 113 (b) (1) (B) was amended to its present form, viz, to provide for adjustment of the basis to the extent of depreciation allowed but not less than the amount allowable. The report of the Committee on Ways and Means on the 1934 act, at page 22, explained that the Treasury frequently encountered cases where a taxpayer who had taken and had been allowed depreciation deductions at a certain rate consistently over a period of years, later claimed, often after the statute of limitations had run, that the allowances so made to him in prior years were excessive and that his basis should therefore be adjusted by an amount less than the total of the amounts so allowed, i. e., that the basis could be adjusted only for the lesser amounts which were allowable. The report then went on to say that the Treasury ought not to be penalized for having approved the taxpayer's deductions. The report concluded by stating that, while the committee did not "regard the existing law as countenancing such inequitable results, it believes that the new bill should specifically preclude any such possibility."

The Bureau made its first published ruling interpreting the effect of the 1934 amendment in 1935 in I. T. 2944 XIV–2 C. B. 50. It was there held that the statute, as amended, required the basis of depreciable assets to be adjusted to accord with the amount "allowed" or the amount "allowable," whichever is the greater, irrespective of any statute of limitations applicable to the year of deduction, and that the depreciation claimed in the return for a given year which has been accepted by the Bureau is the amount "allowed" for that year. Whether or not the deduction offset income otherwise taxable is immaterial under the principle upon which this ruling is based.

This interpretation of the statute was successfully challenged by a taxpayer in the case of *Pittsburgh Brewing Co.* v. *Commissioner*, 107 F. (2d) 155, decided by the circuit court of appeals for the third circuit in 1939. A unanimous court there held that depreciation is not "allowed" within the meaning of section 112 (b) (1) (B) of the 1932 act, the text of which has not been modified in the subsequent acts nor in the code, unless it is actually taken as a deduction against taxable income. To illustrate, under this interpretation of the statute, if a taxpayer had a net income of $5,000 for the taxable year before claiming $20,000 deduction on account of depreciation, the basis of its depreciable assets should be reduced by $5,000, not $20,000. In other words, "allowed" is interpreted, in effect, to mean "beneficially allowed."

The interpretation enunciated by this decision is sound. Nevertheless, one circuit court of appeals decision cannot be regarded as settling the law on this question, particularly since the Government did not seek review of the decision by the Supreme Court on certiorari. The published ruling of the Commissioner cited above has not been either modified or revoked by any later published ruling, although it is possible that some effect is being given to the decision of the third circuit in the settlement of cases. In any event, the question involved is of great importance to such a large group of taxpayers that we believe any doubt as to the statute's meaning should be promptly removed by a clarifying amendment.

It is apparent that the above decision is consistent with the underlying rationale of the depreciation deduction. Congress has recognized the indisputable fact that depreciation is a part of the cost of carrying on business and is a part of the cost of production of goods and services. To the extent that depreciation is denied upon assets worn out or consumed in production, in computing taxable income from such production, the income tax is perverted, in effect, into a tax on capital. The reduction of the basis of depreciable assets on account of allowable depreciation which cannot be used to offset taxable income in loss years denies to taxpayers the recovery of their capital investment. To go still further and penalize a taxpayer by reducing the basis where in past years he has, with no resulting tax benefit, mistakenly claimed an amount of depreciation as a deduction which exceeds the amount legally allowable, cannot be defended either on grounds of equity or sound legislative policy.

While the situation is helped to some extent by the restoration of the operating loss carry-over (sec. 23 (s) and sec. 122 of the code, added by sec. 211 of the 1939 act), the remedy will be inadequate in many cases because of the 2-year restriction

upon the period of the carry-over. It is our conviction that the only adequate remedy is to amend section 113 (b) (1) (B) of the code in such manner that the adjustment of basis of depreciable assets cannot in any case exceed the amount of depreciation beneficially allowed as a deduction, i. e., used to offset taxable income in prior years. If it be objected that such an amendment will operate to increase the burdens of the Bureau in the audit of returns, the answer is that administrative convenience must sometimes yield to the demands of simple justice. Also, it is believed that this increase in administrative burden can be easily exaggerated. The growing complexity of the law and recent developments, such as the operating net loss carry-over and the excess-profits tax, already compel reasonably thorough audits of all but the smallest corporation returns. It is in corporate returns that the depreciation problem is most important.

While reasonable or liberal administration of the depreciation provisions is primarily an administrative problem and responsibility, Congress can make an important contribution by encouraging the adoption of wise administrative policies. The shift in administrative policy by the Bureau, reflected in T. D. 4422, XIII–1 C. B. 58, was the direct result of pressure in the form of proposals in Congress to make arbitrary horizontal decreases in depreciation rates by legislative mandate. This change to a more rigid and inelastic policy has been productive of widespread controversy and dissatisfaction among taxpayers. Moreover, it is quite certain that its result will be a net loss in tax revenue over a period of years. With the tendency of tax rates rather constantly upward, it is elementary that taxpayers who consistently overstate their depreciation deductions in earlier years are likely to end up by "paying through the nose" in higher taxes in subsequent years. So long as taxpayers keep within the limits of reasonable judgment and are required to adhere consistently to the rates once selected, the Government has little reason to fear. An arbitrary policy of consistent trimming of depreciation rates is not only destructive of taxpayer good will and promotive of sterile litigation but, under conditions now obtaining and likely to continue for many years to come, is not even in the interest of maximum revenue yield.

V. *Extension of time for filing income returns.*—It is recommended that sections 51 and 52 of the code be amended so as to give to taxpayers an absolute right to an extension of time within which to file their returns for a period of not to exceed 3 months, conditioned upon their filing tentative returns on or before the statutory due date and the payment of interest upon any deficiency in the first installment.

The adoption of this recommendation would greatly serve the convenience of thousands of taxpayers without working any injury or serious inconvenience to the Government. The requirement that a tentative return be filed, accompanied by payment of at least one-fourth the tentative tax, with interest upon any deficiency in the first installment, affords adequate assurance that only taxpayers who really need the additional time will avail themselves of the extension privilege. Many of these will file their returns well before the end of the 3-month period in order to save interest. The budget estimates of revenue will not be materially affected since almost the same amount of tax would have to be paid before the end of the fiscal year, on June 30, as under existing law. There may be a slight difference with respect to taxpayers having fiscal years ending January 31 or the last day of February. To the extent the privilege, if given, is availed of, the Treasury would stand to make a net gain on account of interest paid, since such interest would greatly exceed the cost of any short-term borrowing which might be necessary.

The allowance by statute of this extension of the period for filing should improve the administration of the income tax in several important respects. It should relieve the collectors of the burden of passing upon thousands of individual requests for extensions. It should enable taxpayers and their tax accountants materially to improve the accuracy of income-tax returns and thereby to reduce the number of cases of deficiencies and the amounts involved. This is particularly true with respect to the March 15 date, when the majority of returns have to be filed. Many taxpayers, particularly corporations, are unable to close their books and obtain figures essential in the preparation of returns, until well after the close of the calendar year. The volume of work involved in the preparation of the voluminous schedules required in many cases by the regulations is enormous. This burden has been greatly increased by the excess-profits tax, with the innumerable complex and difficult computations which it requires, even in the case of many small corporations. Tax accountants and advisers are often so swamped by the demands made upon them during this short period that it is humanly impossible for them to give as careful analysis to problems arising in the preparation of their clients' returns as they ought to

do. The result is often inaccurate returns, understating or overstating net income, and waste of administrative energy in determining deficiencies and overassessments which might otherwise have been avoided.

Only one or two plausible objections to the best of our knowledge, have been offered to proposals for such an extension. One is that the delay in filing of final returns by a large number of taxpayers will interfere with the work of Treasury statisticians in furnishing Congress promptly with data on revenue collections needed in determining the necessity for modification of the tax laws. It is not believed that this objection is sufficiently serious to outweigh the considerations in favor of the proposal. The understatement of taxes in tentative returns is not likely to be so great as to create a serious margin of error in the estimates based on March filings. Nor do we believe that the adoption of the above amendment would interfere seriously with the Bureau's routine procedure in the handling and audit of returns, in view of the large number of taxpayers with fiscal years who file their returns during months other than March. The balance of convenience is strongly in favor of this amendment.

VI. *Income-tax consequencies of mortgage foreclosures should be specifically defined by the statute.*—Perhaps in respect of no other common situation is the income-tax law in a more bewildering state of confusion and uncertainty than in the field of mortgage foreclosures.

A simple illustration will suffice to show a few of the points at which doubt and uncertainty exist. Suppose that John Smith owns a farm in Kansas for which he paid $25,000. In a prior year he mortgaged his farm to secure a loan of $15,000. In the year 1940, Smith was in default with respect to both principal and 1 year's interest and foreclosure proceedings were brought by the mortgagee. At the foreclosure sale in October of 1940, the mortgagee bid in the property for $16,200, which included the mortgage debt, $750 interest, $250 unpaid taxes, and $200 costs of the foreclosure suit. The mortgagee thereby got title to the property for the amount of his investment. The fair market value of the farm at the time of the sale was $14,000. It is assumed that under Kansas law, Smith may redeem the property within a period of 1 year from the date of the foreclosure sale.

The following tax questions, among others, immediately arise. First as to the mortgagor:

(1) Does the mortgagor, John Smith, sustain a deductible loss when he loses his farm on foreclosure?

(2) If so, is it an ordinary loss deductible in full or is it a capital loss subject to the limitations imposed by section 117 of the code? Is the answer to this question affected by the presence or absence of personal liability of the mortgagor for the mortgage debt?

(3) In what year may he lawfully claim the deduction, the year of the foreclosure or the year in which the statutory period of redemption expires, or some other year?

(4) What difference, if any, would it make from the point of view of the tax consequences if John Smith, in order to avert the expenses and delay of judicial foreclosure, conveyed the farm to the mortgagee in consideration of the latter's canceling the mortgage debt, including accrued interest?

(5) What would be the tax consequences if Smith abandoned the property?

On the side of the mortgagee, even more baffling questions arise:

(1) What is the tax effect of the mortgagee's bidding in the property on foreclosure at a price which includes the accrued interest?

(2) Is the answer to this question affected by the fact that the fair market value of the property on the foreclosure date is less than the principal of the debt?

(3) If the price at which the mortgagee bids in the property is less than the basis of the obligations of the debtor applied in satisfaction of the bid, can the excess of the basis over the bid price be taken as a bad debt deduction and, if so, in what year?

(4) If the fair market value of the property on the date of foreclosure is in excess of or less than the basis of the obligations of the debtor applied by the mortgagee in satisfaction of his bid, does the mortgagee realize a recognized gain or loss to the extent of the difference? If so, is such gain or loss classified as ordinary or as a capital gain or loss?

(5) What is the mortgagee's basis of the property acquired on foreclosure?

Despite the fact that such transactions are common and of frequent occurrence, one looks in vain to the statute for a definite answer to all these questions.

Administrators and courts have been compelled to grope for answers thereto with no legislative directions or signposts to guide them. However, the selection of the best rule from among two or more possible alternatives may depend upon considerations of policy which are peculiarly appropriate for legislative determination. Confusion and conflict in judicial decision are rife. Only two of the above questions have recently been authoritatively determined by Supreme Court decisions. One of these decisions creates doubt as to the validity of a Treasury regulation of long standing; both have undesirable practical consequences which may require correction by legislative rules.

In the case of *Helvering* v. *Hammel* (85 L. Ed. Adv. Op. 295), decided at the present term, the Supreme Court held that the loss sustained by a mortgagor upon foreclosure is a capital loss, subject to the limitations imposed by section 117 of the Revenue Act of 1934. This decision overturned several decisions of the Board of Tax Appeals and of circuit courts of appeal, and (as so frequently in judge-made law) completely overlooks the legislative policy upon which the capital loss limitations are based. The decision in *Betty Rogers* v. *Commissioner* ((C. C. A. 9th) 103 F. (2d) 790), in which the court reached a similar result where the mortgagor faced with a possible foreclosure, conveyed the property to the mortgagee in full satisfaction of the mortgage debt seems a fortiori correct, in the light of the *Hammel case*.

We believe that the results in this case are of very questionable desirability from the point of view of policy. We recommend that the statute be amended so as specifically to provide that mortgagor's losses, whether upon foreclosure sale or voluntary transfer to the mortgagee to obviate foreclosure, shall be deductible in full as ordinary losses.

Recent decisions have held that a mortgagor may establish an ordinary loss by abandoning the mortgaged property at least in cases in which it has become so great a liability that he is willing so to do without first obtaining a release extinguishing his personal liability. (*Polin* v. *Commissioner*, C. C. A. 3, 1940, 114 F. (2d) 174; *Park Chamberlain*, 41 B. T. A. 10, on appeal C. C. A. 7th.) But the fact of foreclosure is highly persuasive evidence that the mortgagor's equity in the property has already become worthless. Why should the technical event of sale operate to determine the character of the loss for tax purposes? The rule of the *Hammel case*, by assimilating losses on mortgage foreclosures to losses sustained on truly voluntary sales and exchanges of capital assets, will work a hardship on thousands of mortgagors whose transactions were not motivated by tax considerations. It may have repercussions prejudicial to the public interest in the field of mortgage loans by causing lenders to insist upon a wider margin of security. To that extent, the decision may act as a clog upon the new housing construction which is so vital to economic recovery.

We recommend that the statute also be amended to state a definite rule for determining the year in which the loss of a mortgagor upon foreclosure shall be deemed to be sustained.

Originally the Treasury took the position in a series of rulings that the event which determined the date of the loss was the foreclosure sale. Hence, the loss could be taken in the year of the sale. This was a sensible and realistic rule. The percentage of cases of redemption from foreclosure within the statutory period is almost negligible, and should not govern the normal case. However, the Board of Tax Appeals, adopting a narrowly legalistic position, held that the loss was not sustained for tax purposes until the year in which the period of redemption expired. (*J. C. Hawkins*, 34 B. T. A. 918, aff'd 91 F. (2d) 354 (C. C. A. 5th, 1937.)) The Bureau accepted this unrealistic rule and published a ruling revoking its earlier rulings. (G. C. M. 19367, 1937-2 C. B. p. 115.) In view of the activities of legislatures in the last decade in extending periods of redemption by moratory laws, the effect of this rigid and unfair rule in many cases is to defer indefinitely the year in which such losses may be taken as deductions. In the meantime, neither taxpayers nor the Government can be certain that the rule of the *Hawkins case* will survive should the problem later reach the Supreme Court for final determination. In the event of an ultimate reversal, confusion and injustice will result. A possible conflict with the *Hawkins case* has only very recently developed (see *Commissioner* v. *Peterman* (C. C. A. 9, 1941) P. H. Ct. Dec. No. 62,592), and the Supreme Court may possibly be called upon to resolve the conflict during the October 1941 term.

We recommend that the statute be amended, in line with the earlier Treasury position, so as to provide that a mortgagor shall be allowed to deduct his loss in the year of the foreclosure sale, unless he shall establish, by proof of abandon-

ment or otherwise, that his equity became worthless in an earlier year, in which case the deduction shall be allowed in such year.

No difficulty need be apprehended in the occasional case where the mortgagor redeems the property in a subsequent year, as a proper adjustment would be made in the return for that year under existing principles.

The position of the mortgagee after foreclosure is, if possible, even more obscure than that of the mortgagor under existing law. The long-standing administrative rule, found in section 19.23(k)-3 of Regulation 103, states that, where a mortgagee bids in property at a foreclosure sale, he realizes gain or loss in the amount of the difference between the fair market value of the property at the date of the sale and the basis of the obligations of the debtor applied in satisfaction of his bid; also that he may deduct as a bad debt, if and when ascertained to be worthless and charged off, the balance of the basis of such obligations which is not satisfied by his bid. The bid price is treated merely as prima facie evidence of the value of the property. The peculiar result follows, under these regulations, that a mortgagee may realize a taxable gain upon the acquisition of the mortgaged property and in the same year claim a bad-debt deduction for the unsatisfied portion of the mortgaged debt, where it is ascertained in that year that a deficiency judgment for such portion would be worthless and the requisite charge-off is made.

Suppose, however, that the mortgagee's bid price equals the amount of the mortgage debt, plus accrued interest, costs, etc., but that the basis of the debtor's obligations applied in satisfaction of the bid exceeds the fair market value of the property. It is apparent here that there is no basis for claiming a bad-debt deduction, since the debtor's obligations have been satisfied in full by the bid price. In this situation the Supreme Court has held in *Helvering* v. *Midland Mutual Life Insurance Co.*, 300 U. S. 216 (1937), that the mortgagee is required to report the amount of accrued interest included in the bid price as interest received, that the bid price conclusively establishes the value of the property for the purposes of the transaction, and that the actual fair market value of the property at the time of acquisition on foreclosure is immaterial. By parity of reasoning, the mortgagor is presumably entitled to a deduction of the accrued interest thus satisfied by way of credit against the bid price. It is reasonable inference from the Court's opinion in the case that the mortgagee occupies the legal position of a purchaser; that he takes as his basis the price bid at the sale; that he is entitled to a bad-debt deduction only if and to the extent that the basis of the debt is in excess of the bid price and is ascertained to be worthless and charged off; and that the mortgagee realizes gain only if and to the extent that his basis of the portion of the debt represented by the bid is less than the face amount thereof. So interpreted, the Supreme Court's decision raises grave questions as to the validity of the existing Treasury Regulations.

That such uncertainty exists is well shown by the decision in *Hadley Falls Trust Co.* v. *United States*, 22 F. Supp. 346 (1938), affirmed in part and reversed in part in 110 F. (2d) 887 (C. C. A. 1st, 1940). Cf. *Grigsby* v. *Commissioner*, 87 F. (2d) 96 (C. C. A. 7th, 1937). In this case the Commissioner refused to follow his regulations and denied the mortgagee deduction of a loss representing the excess of the amount bid by him on foreclosure over the actual fair market value of the property. The Circuit Court of Appeals, while expressing grave doubt as to the validity of the regulations, reversed and allowed the loss on the slippery ground (always fictitious and invariably wrong) that the regulations had acquired the force of law by virtue of the repeated reenactment of the statute without material change.

Should these regulations ultimately be ruled invalid, and the rule be established that the mortgagee's bid becomes the basis of the property in his hands, confusion worse confounded will result and many gross inequities may arise when the mortgagee subsequently resells the property, in some cases to the taxpayer and in others to the Government. Where the subsequent sale price exceeds the bid, the mortgagee may be taxed on the excess even though he may have been earlier taxed under the regulation on that portion of it coresponding to the excess of the fair market value of the property on foreclosure over the bid price. In the converse situation, the mortgagee may be able to claim a loss in the year of sale, although he had earlier been allowed to deduct as a loss the excess of the bid price over the fair market value of the property on the date of the foreclosure.

These and other illustrations which might be given show the imperative necessity of legislative action to remove the confusion and uncertainty now exist-

ing in this large group of everyday business and financial transactions. It is appreciated that the choice between alternative rules will in some situations involve difficult questions of policy. Also, it may be that the same rules ought not be applied to foreclosure of corporate bond issues, secured by blanket mortgages and bond indentures, as to ordinary private mortgages and deeds of trust. But the situation demands solution. It is one where it is perhaps as important to have a definite and certain rule as to select the right rule from several alternatives. No rule is likely to work perfectly in all cases, but lenders and borrowers in the mortgage field can adapt themselves to a particular statutory rule which is reasonably definite and certain.

We recommend as the rule with respect to mortgagees which will involve the least administrative difficulty that which recognizes the fact that a mortgagee who himself bids in the property on foreclosure is engaged essentially in a salvage operation which should not be regarded as a closed transaction for tax purposes. We therefore urge the insertion in section 112 of an appropriate provision providing for nonrecognition of gain or loss to a mortgagee who acquires the mortgaged property, whether by foreclosure or voluntary conveyance, in total or partial satisfaction of his debt.

In the event that the mortgagee, subsequent to such acquisition, receives money or other property in reduction of the unsatisfied portion of the debt, the statute should provide for the application of such money and the value of such other property to reduce the basis of the property acquired on foreclosure, etc., any excess over such basis to be taxed as capital gain. In cases in which the acquiring mortgagee has sold the property in the interim, the rule should be that the full amount of property or other money so received shall be treated as capital gain. A correlative basis provision should be written into section 113, providing that the basis of property so acquired by a mortgagee shall be the same as the basis of the debt immediately prior to such acquisition, with any adjustments appropriate to the nature of the transaction.

We also recommend that section 22 (b) of the code be amended so as to exclude from gross income interest accrued on a debt secured by mortgage or lien on real property, or on leaseholds or other interests in real property, which is paid solely by means of being applied or credited in satisfaction of a bid by the mortgage creditor at a sale, or by a conveyance of the property to such creditor. Correlatively, section 23 (b) should be amended to deny a deduction of interest excluded from gross income under the proposed amendment to section 22.

The effect of these latter amendments would be to abrogate the rule of the *Midland Mutual case*, except in respect of value. The interest of the mortgagor is promoted if mortgagees bid on the property on foreclosure for the full amount of the debtor's obligations for he is freed from a deficiency judgment. The mortgagee most certainly would prefer an established rule.

VII. *Worthless corporate obligations and stocks should be excluded from capital losses.*—Prior to the Revenue Act of 1938, a long series of revenue acts had treated losses sustained on account of stocks becoming worthless as ordinary losses deductible in full in the proper year. (Sec. 23 (e) (2) of the Revenue Act of 1936 and corresponding provisions of prior acts.) Likewise, corporate obligations were treated as bad debts and, if ascertained to be worthless and charged off within the taxable year, were deductible in full to the extent of their bases. They were also subject to the deduction allowed in the case of debts on account of partial worthlessness. (Sec. 23 (k) of the Revenue Act of 1936 and corresponding provisions of prior acts.)

Congress deviated sharply from this policy by a series of amendments in the Revenue Act of 1938, now found in section 23 (g) (2) and (3) of the code, relating to worthless stocks, and section 23 (k) (2) and (3), relating to corporate obligations ascertained to be worthless. The deduction allowed on account of partially worthless debts was made wholly inapplicable to these corporate obligations, which include bonds, debentures, notes, or certificates, or other evidences of indebtedness, issued by any corporation (including those issued by a government or political subdivision thereof), with interest coupons or in registered form.

The net effect of these amendments was to include these losses in the category of capital losses, subject to the limitations imposed by section 117. The losses are to be treated as though realized by sale or exchange of capital assets on the last day of the taxable year during which the stock became worthless, or the obligation was ascertained to be worthless and charged off. If the loss so considered is a long-term capital loss, as most losses of this type are, only a portion of it is taken into account under section 117 (b) and such portion only can be

offset against ordinary income, subject to the further limitations of section 117 (c) (2), the so-called ceiling provision. If it falls into the category of short-term capital losses, it can be applied only to offset short-term capital gains of the taxable year under section 117 (d) and, to the extent of any short-term capital net loss not in excess of the net income for such year, it can be used, under the 1-year carry-over provision of section 117 (e), to offset short-term capital gains of the succeeding taxable year.

We recommend that these amendments of 1938 be repealed and that the statute be restored for future years to its form prior to the 1938 act.

We believe that the reasons which were assigned to justify the restrictions on the deduction of capital losses from ordinary income in the Revenue Act of 1934 and succeeding acts do not apply to worthless stock and bad-debt losses because of their involuntary character. Our recommendation, however, is based both upon the proper concept of capital loss, and upon considerations of sound legislative policy. We feel that provisions in the tax laws which unnecessarily clog the free flow of capital into new enterprises are against the public interest. We think it is plain that such is the tendency of these amendments and that the harm they may do far outweighs the insignificant amount of revenue loss, which should not be controlling in any event. When equity capital or borrowed capital is sought in order to finance new enterprise, prospective investors are keenly aware of the inevitable hazard of partial or total loss of their investment should the enterprise prove to be a failure or only partially successful. They know also that, if the venture proves to be very successful, they will be required to pay over a large portion of their gains and profits to the Government in taxes. Any arbitrary limitations on the deduction of investors' losses due to their capital investment in such enterprises becoming worthless, by increasing the hazard, makes it just that much harder to finance new enterprises. It is our conviction that such limitations therefore defeat their own purpose in the end and clog the sources of the very revenues it is their professed purpose to protect.

In the same general connection we urge that careful consideration be given to some liberalization of the requirement that worthless debts must be charged off within the year of ascertainment of worthlessness in order to be deductible. While the Board of Tax Appeals and the courts have in general interpreted the statutory requirements much less rigidly than the Commissioner, nevertheless the charge-off requirement is a trap for the ill-advised or unwary taxpayer, and results in a denial of many meritorious deductions. Likewise, many taxpayers lose the benefit of the worthless stock deduction either because of over-optimism, lack of information, or the inherent difficulty of locating accurately in the stream of time the point at which a security loses its last increment of value.

It is recognized that the solution of these problems is not easy, but it is important that it should be sought. The administration of these provisions, perhaps more than any others in the statute, has been productive of sterile controversy and lack of confidence upon the part of taxpayers in the fairness of internal revenue officials. We submit three specific suggestions.

(1) Section 3801 of the code should be amended so as to apply its principles to cases of inconsistent disallowance of deductions by the Bureau in 2 or more years.

(2) The requirement of charge-off within the taxable year should be modified from a rigid requirement to a prima facie rule, i. e., that it shall be presumed, in the absence of a preponderance of evidence by the taxpayer to the contrary, that the debt was not ascertained to be worthless unless it was charged off within the taxable year, or before the due date for filing of the return.

(3) Because of the difficulty of localizing worthlessness at a point in time, the statute might be amended so as to provide that a deduction should not be disallowed if claimed in a return for the correct taxable year or for either of the two following taxable years, but that, in the event the deduction was so claimed in a year subsequent to the correct year, it should not have the effect of reducing the tax payable in the subsequent year by more than the reduction in tax it would have effected if claimed in the correct year. It would also eliminate much unnecessary controversy if the statute were amended to provide certain objective criteria, such as that the deduction should not be questioned if taken (*a*) for a taxable year in which a corporation is adjudicated bankrupt, or (*b*) in the year of corporate dissolution.

The above limitation would remove any incentive to deliberate postponement of the taking of the deduction beyond the correct year for tax reasons. The amendment would afford some protection to taxpayers making honest and reasonable errors of judgment. It would also discourage the tendency on the part of

administrative officials to rule in all doubtful cases that the deduction was claimed in the wrong year.

VIII. *Agreements extending the statute of limitations for assessment of deficiencies should similarly extend period for refunds.*—We recommend that section 322 (b) of the code, relating to the limitation on refunds and credits, be amended so as to provide that, where an agreement is executed by the taxpayer and the Commissioner, under the authority conferred by section 275 (c), (which extends the period otherwise provided by law within which assessment of tax may be made), such an agreement shall have the effect, notwithstanding any other provision of law, of extending the period within which a valid claim for refund or credit may be filed to the last day of the period, as so extended, for assessment of the tax. The period within which a determination of overpayment may be sought by the filing or amendment of a petition before the Board of Tax Appeals should be similarly extended where an agreement has been entered into under section 275 (b).

Under the existing law, section 322 (b) of the code, no allowance by way of refund or credit may be made unless a claim for refund or credit has been filed by the taxpayer within 3 years from the time he filed his return or 2 years from the time the tax, with respect to which refund or credit is sought, was paid, whichever of such periods expires the later. The Supreme Court has held that the Commissioner is without power to extend the period so fixed by law within which a claim for refund or credit may legally be made (*Finn* v. *U. S.* 123 U. S. 227 (1887); *Tucker* v. *Alexander* 275 U. S. 228 (1927). It is not the purpose or effect of the proposed amendment to vest in the Commissioner any general power, by agreement or otherwise, to waive or modify a statute of limitations in favor of the Government. It is much more limited. It would merely tend to preserve equality of operation in the statutes of limitation on deficiencies and refunds. Congress has accepted this policy as fair and equitable. However, in the classes of cases covered by the above amendment, the policy has not been realized.

A simple case will illustrate that this is so. Suppose a taxpayer filed a return on March 15, 1938, covering the calendar year 1937 and showed a tax due of $100,000 which he paid in full by a check attached to the return. In February 1941 the taxpayer, at the request of the Commissioner, executed an agreement under section 275 (b) extending for 1 year, i. e., to March 15, 1942, the period within which an assessment might be made. He did this because additional time was desired by the Commissioner for consideration of his case. Otherwise, the Commissioner would send out a 90-day letter before March 15, 1941, in order to protect against the statute. Under the existing law the Commissioner would be free to take full advantage of intervening court decisions and to assert a larger deficiency at any time up to March 15, 1942. During this time the taxpayer may be quite in the dark as to what the Commissioner will ultimately do. Even if, in excess of caution, he files a claim for refund before that date, it may not avail him to gain the advantage of some later court decisions, unless the decision is within the scope of a ground stated in his claim, since the law is now well settled that a claim for refund cannot be amended after the end of the stautory period for filing claims, so as to state a new substantive claim (*U. S.* v. *Andrews*, 302 U. S 517 (1938)).

The adoption of the proposed amendment would restore the full equality of operation of the statutes of limitation which the Congress intended they should have and which they do have, unless and until an agreement extending the period for assessment under section 275 (b) is made. Such agreements or waivers play an important and constructive part in the administration of the revenue laws by promoting administrative settlement of cases. The amendment would relieve taxpayers of the necessity of filing blanket claims for refund while the Bureau still has their cases under consideration, as a measure of self-protection. It would encourage the execution of these agreements by relieving the taxpayers of the necessity of placing the Government in a position of advantage by so doing.

We also recommend that section 322 (d) of the code be amended so as to place the taxpayer and the Commissioner of Internal Revenue on a basis of equality in cases pending before the Board of Tax Appeals.

Suppose, under the existing law, that the Commissioner has mailed a notice of deficiency prior to the running of the statutory period and the taxpayer has filed a petition with the Board, within the 90-day period prescribed by law, contesting the deficiency or alleging an overpayment and claiming a refund. The law permits the Commissioner subsequently to amend his answer to the petition so as to

claim an increased deficiency, although the statutory period for assessing a deficiency has otherwise run. The mailing of the deficiency letter stops the running of the statute against the Government. But the filing of a petition has no similar effect with respect to a claim for refund. Contrary to the true intent of Congress, the taxpayer cannot amend his petition so as to claim an overpayment or increase a claim of overpayment if the statutory period for filing a claim for refund has expired (*Commissioner* v. *Rieck* (C. C. A. 3), 105 F. (2d) 294, rehearing denied June 16, 1939; *Georgie W. Rathbone*, 39 B. T. A. 56). Fairness demands equality of treatment. This result can be secured by a simple amendment to section 322 (d) which will allow the taxpayer, who has duly filed a petition within the applicable period of limitation, to amend the claim on petition at any time before the hearing or rehearing before the Board.

IX. *Treatment of gain on redemption of preferred stock as short-term capital gain should be revised.*—We recommend an amendment to section 115 (c) and 117 (f) of the code which will make gain to shareholders realized on the redemption of preferred stock fully subject to section 117.

The effect of the adoption of this recommendation would be to treat such gains in the same manner as gains realized on the sale or exchange of such stock. Whether the gain is taxed to an individual shareholder as a short-term or a long-term capital gain will depend on how long he has held his stock prior to the redemption. This is the rule which already applies to losses sustained on such redemptions in the case of bonds.

Under the existing law the definition of partial liquidation in code section 115 (i) brings any cancelation or redemption of a part of the stock of a going corporation within the limitations of section 115 (c), unless it represents one of a series of distributions in complete liquidation as therein defined. The result is that a holder of preferred stock which is called for redemption, often contrary to his own desire, finds himself penalized by the provisions of section 115 (c) if he continues to hold his stock to the date of redemption and realizes a gain at that time. The fact that he has no thought or motive of tax avoidance is immaterial. Section 115 (c) imposes an arbitrary requirement that gain realized on a distribution in partial liquidation shall, despite the provisions of section 117, be considered as a short-term capital gain. As such, 100 percent of such gain must be taken into account, no matter how long the stock has been held. This arbitrary rule creates an incentive to its avoidance by sale of the stock, wherever possible, prior to the redemption date for a price equal to or slightly under the redemption price.

This provision was first introduced into the law in the 1934 act. The report of the Senate Finance Committee on this act (p. 37) specifically pointed out that the new limitation was aimed at cases in which shareholders might seek to avoid surtaxes levied at full rates, if accumulated earnings and profits were distributed as ordinary dividends, through distributions thereof in the form of liquidating dividends. The cure, however, went much further than was necessary to correct the evil. It was found to work such hardships upon stockholders of corporations desiring to liquidate for business reasons that the 1936 act and subsequent acts gave relief by taking complete liquidations consummated within specified periods of time out from under the rule.

We believe that redemptions of preferred stock do not fall within the purpose of the 1934 limitation and should be treated, like redemptions of bonds under section 117 (f), as sales or exchanges. The statute provides other ample safeguards against the use of such redemptions as a device for distributing earnings and profits free from high surtaxes. Section 115 (g), relating to cases where redemption of stock is made in such a way as to have the effect of a taxable dividend, will still be applicable to cases where it is apparent a primary purpose of the redemption is tax avoidance. Section 115 (c) prevents that portion of a distribution in partial liquidation which is properly chargeable to capital account from being considered a distribution of earnings and profits. A simple case will suffice to illustrate the normal situation on a redemption of preferred stock. Corporation A issues 1,000 shares of preferred stock to 1935 for $100 a share. For business reasons it calls this issue for redemption in 1941 at $105 a share, the price fixed in the share certificates. Only the excess of the redemption over the issuance price, or $5,000, could be treated as a distribution of earnings and profits. The balance would be charged against capital account.

It it quite unlikely that a corporation would endeavor to use a redemption of preferred stock for the purpose of surtax escape by the stockholders, particularly with the threat of section 115 (g) hanging over it. Our proposal would not

apply to partial liquidation of common stock, the case where the danger at which section 115 (c) is really directed, is most likely to be present.

A uniform rule should apply both to bonds and preferred stocks.

X. *The principle of exemption of dividends from individual normal tax should again be recognized.*—We recommend that an exemption of dividends from the normal personal income tax, which obtained in some form from the beginning of the present income tax in 1913 until the enactment of the Revenue Act of 1936, be restored.

We believe that such an exemption should be allowed as a measure of simple justice and for reasons of sound policy. The existing tax structure works patent and discriminatory double taxation of corporate earnings distributed in dividends, which no responsible authority has, to the best of our knowledge, had the temerity to defend.

This unfortunate form of double taxation of corporate earnings crept into the law in 1936. The House bill of that year would have abolished all Federal corporate taxes except for a heavy graduated tax on that portion of the corporate net income which was not distributed in dividends. Under that proposal, which eliminated any flat tax on corporate income, it was quite logical to subject dividends received by shareholders to both normal and surtax, as in the case of interest on corporate bonds, since dividends and interest alike would have been taken out of the corporate tax base. However, in the bill which was finally enacted into law, a substantial normal tax on corporations was restored. But the exemption of dividends from normal tax was not restored then or since.

With the corporate normal tax rate schedules presently to go to double the maximum rate of the 1936 act, and with heavy excess-profits taxes superimposed, the burden of this double taxation of corporate income has become very serious from the shareholder's point of view. Corporate equities become steadily less attractive to investors. An artificial and unwise incentive to finance corporate capital needs by borrowing is created. The discrimination against the corporate form of enterprise, in relation to other forms such as the partnership, is unfairly increased.

We appreciate that the restoration of the exemption of dividends from normal individual tax can only partially remove the discrimination, so long as there is a large disparity between the corporate normal and individual normal tax rates. As long as such disparity is unavoidable, such discrimination will of necessity continue. We believe, however, that this fact is not a good reason why the discrimination should not be ameliorated by restoring this exemption from the normal tax. This result can be readily accomplished by adding a new subdivision to section 25 (a) of the code, providing a credit in the amount of dividends received from a corporation subject to tax under chapter 1 of the code.

XI. *Recoveries on bad debts.*—We recommend that section 22 (b) of the Internal Revenue Code, as amended by the Revenue Act of 1939, be further amended so as to provide that amounts recovered during the taxable year on account of a debt, for which a bad debt deduction or deductions have been allowed in a prior year or years, shall be included in gross income only to the extent that such prior deduction or deductions have been applied to offset taxable income.

This amendment, if adopted, would be applicable to corporate as well as to individual taxpayers. However, there is no special difficulty in the case of corporate taxpayers. While the writing off of the bad debt in an earlier year or years may have operated to reduce the accumulated earnings and profits, the amount recovered in a subsequent year would undoubtedly operate to increase earnings and profits, even though the statute excluded it from gross income under the circumstances indicated above.

The effect of the amendment may be indicated by a simple illustration: Suppose that T, a taxpayer, in 1936 determined that a debt of $25,000 owed to him had become absolutely uncollectible and worthless and charged it off during the year. He claimed a bad debt deduction in this amount in his income return for that year and such deduction was allowed by the Bureau on audit of the return. T's net income before taking this deduction was only $10,000, so he paid no tax. In 1941, the debtor pays T $25,000, the full amount of his debt. Under our suggested amendment, T would be required to include only $10,000 of this amount as gross income in his return for 1941.

The principle of the proposed amendment accords with the Bureau's former interpretation of the existing law. (See G. C. M. 18525, 1937–1 C. B. 80, and

G. C. M. 20854, 1939-1 C. B. 102.) These two rulings were based upon what we believe to be the correct theory, and certainly reached the right result as a matter of good sense and sound policy. They regarded amounts received or recovered in payment of debts as constituting tax-free reimbursement of capital, unless the taxpayer had in effect already recovered his capital tax-free by securing a deduction on account of the bad debt and using such deduction to offset taxable income in a prior year.

More recently, however, the Bureau has completely reversed its position. On July 8, 1940, G. C. M. 22163, 1940-No. 28, I. R. B., page 4, was published, revoking these prior rulings and holding that all payments received upon debts previously charged off and claimed as deductions constitute taxable income in the year of recovery whether or not such deductions in fact operated to offset taxable income and so conferred a tax benefit. Limited relief against hardships resulting from the retroactive application of this ruling was granted by a special ruling of the Department on December 11, 1940.

There are no Supreme Court decisions on the precise issue and decisions by the Board of Tax Appeals are in apparent conflict. (Cf. *National Bank of Commerce of Seattle* v. *Commissioner*, 40 B. T. A. 72 (1939), and *Lake View Trust & Savings Bank* v. *Commissioner*, 27 B. T. A. 290 (1932)). There are indications that the Bureau promulgated its latest ruling with some reluctance, feeling that certain Supreme Court decisions involving other factual situations were controlling in principle. See *Burnet* v. *Sanford & Brooks Co.* (282 U. S. 359 (1931)), holding the proceeds of a judgment to be income in year of recovery, though representing reimbursement of a business loss sustained in a prior year, when the tax return filed showed a large net loss, and *U. S.* v. *Ludey*, (274 U. S. 295 (1927)), where the Court held that, in determining the cost basis of certain oil properties, adjustment had to be made for properly allowable deductions for depreciation and depletion in prior years, whether actually claimed or not, inasmuch as the thing sold is not physically the same as when it was purchased. The *Ludey case* was followed in *Hardwick Realty Co.* v. *Commissioner* (29 F. (2d) 498 (C. C. A.-2, 1928)), where it specifically appeared that the taxpayer derived no tax benefit from the prior deductions.

The *Sanford & Brooks case* was definitely an income case, the difficulty being that the computation of income on a strict annual basis precluded any consideration of the fact that there had been no net profit if all the years involved were considered. But the recent ruling ignores the fact that the payment of a debt is not income per se and that the only way it can become income is by virtue of the fact that it has been charged off and deducted so as to offset taxable income in a prior year.

Whatever the proper interpretation of the existing law may be, the issue is not settled by the recent ruling. An amendment is needed to settle the doubt and resolve the confusion. Such an amendment might well be made retroactive, in view of the recency of the change in the Bureau's position. Under this recent ruling, the question whether subsequent recoveries of bad debts constitute income apparently turns upon the more or less adventitious fact whether the taxpayer has claimed and has been allowed a deduction on his income-tax return for a prior year. Such a result is certain to offend the good sense of the common man.

We believe the sensible and just solution is for Congress to write into the law the rule formerly followed by the Bureau. It is fair to the taxpayer and affords adequate protection to the interests of the revenue.

XII. *Deductions of expenses should be liberalized.*—We recommend an amendment to section 23 (a) of the code to fill a hiatus in the existing law, as it has been interpreted by recent Supreme Court decisions, and relieve hardships inflicted upon a large number of taxpayers. The effect of the amendment is to allow the deduction of ordinary and necessary expenses incurred in the production and collection of income, and in the management, protection, and conservation of property devoted to the production of income in situations which do not involve the "carrying on of a trade or business," as that phrase has been interpreted by the courts.

Since the first income-tax law enacted under the sixteenth amendment, Congress has adhered to the policy of using net income, not gross income, as the basis of the income tax. Only net income can represent even roughly ability to pay. The only significant deviations from this principle have been in the taxation of income from United States sources of nonresident aliens (sec. 211 (a) of the code) and nonresident foreign corporations (sec. 231 (a) of the code), and in various limitations imposed on deductions.

Deduction has always been permitted of the ordinary and necessary expenses incurred in carrying on a trade or business on the one hand; deduction of personal and family expenses has always been denied on the other. It is extremely doubtful that the Congress realized, when the groundwork of the personal income tax was laid, that this dichotomy did not fully cover the classification of expenses, and that there was a third category of expenses falling between trade or business expenses and personal or family expenses. This category includes expenses incurred in the production or acquisition of income, where such production or acquisition does not constitute the carrying on of a trade or business. Yet, such expenses are not personal or family expenses under the common understanding of that term. The denial of a deduction for such expenses transforms a net-income tax into a gross-income tax with respect to these types of income. It is not believed Congress ever intended any such result. Too frequently, the courts are rewriting our tax laws, and the protection of legislative procedure is lost.

For many years the hardships latent in this imperfect classification of expenses in the statute were minimized by a series of administrative rulings. These rulings, in the interests of equity and good sense, resolved doubts in the taxpayer's favor in many situations by permitting individuals to deduct ordinary and necessary expenses incurred in the production of income. (See I. T. 2751, XIII-1 C. B 43 (1934), I. T. 2579, X-2, C. B. 129, and many earlier rulings, such as O. D. 877, 4 C. B. 123.) Such expenses typically included costs of bookkeeping, stenographic work, office and safety vault rent, auditing fees, fees paid to investment counsel and attorneys, and the like, in connection with the management and conservation of income-producing property and investments. The validity of these rulings was clouded with doubt by the decision of the Supreme Court in the case of *Van Wart* v. *Commissioner* (295 U. S. 112 (1935), where the Court held that an attorney's fee paid by a guardian for conducting litigation to secure income for his ward was not deductible under section 241 (a) of the Revenue Act of 1924 (sec. 23 (a) of the code is the corresponding section of the present law), because it was not an expense incurred in carrying on a trade or business. The rulings received their death blow on February 3, 1941, when the Supreme Court held in *Higgins* v. *Commissioner* (61 S. Ct. 475), that such expenses incurred by a so-called passive investor, who devoted a major portion of his time to managing security investments and maintained two offices for such purposes, were not entitled to be deducted. In this case the Commissioner allowed to be deducted the portion of such expenses allocated to the management of real estate, and this issue was not passed upon by the Court.

The Bureau thereupon revoked its earlier rulings. (See I. T. 3452, 1941-8 I. R. B., page 4.) For the present, at least, a distinction which seems difficult to justify is drawn between expenses incurred in the management of real estate and of other income-producing investments. (The case of *Heiner* v. *Tindle* (276 U. S. 582 (1928)), gives some support by inference to the propriety of the real-estate deductions.) More recently, on April 28, 1941, the Supreme Court has applied the Higgins doctrine in holding nondeductible similar expenses incurred by trustees in the management and conservation of the securities investments of trusts. Affirming *City Bank Farmers Trust Co.*, v. *Commissioner* (112 F. (2d) 467 (C. C. A.-2, 1940)), and reversing *U. S* v. *Pyne et al.* (35 F. Supp. 81 (Ct. Cls, 1940)) It is therefore apparent that only legislation can solve the problem.

The possible need for such legislation was recognized in 1938 when a subcommittee of the Ways and Means Committee made the following recommendation which was endorsed by the Treasury Department:

"*Expenses incurred in connection with the collection or production of income.*—Your subcommittee believes that a taxpayer should be granted a reasonable deduction for the direct expenses he has incurred in connection with his income. Under the present law, section 23 (a) of the Revenue Act of 1936, some expenses attributable to the collection or production of taxable income are not permitted as deductions because the statute limits deductible expenses to those incurred in carrying on a trade or business. Thus a taxpayer cannot deduct fees and expenses paid in litigation for moneys which are includible in gross income but which are not received in connection with the trade or business. In order that net income be more equitably ascertained, your subcommittee recommends (recommendation No. 33) that section 23 of the Revenue Act of 1936 be amended so as expressly to include as deductible items all expenses not at present deductible, which are immediately and directly incurred in the collec-

tion or production of income, limited to 50 percent of the amount collected or produced."

Pursuant to the foregoing, which was set forth on page 46 of the Report, Recommendation No. 33 itself, which was set forth on page 76, read as follows:

"*Recommendation No. 33.*—It is recommended that a deduction be permitted under section 23 of the Revenue Act of 1936 for expenses not attributable to the taxpayer's trade or business, but immediately and directly incurred in the collection or production of amounts included in gross income, limited to 50 percent of the amount collected or produced."

The particular recommendation was not written into the law in 1938, partly because the necessity for it was not then so acute. The Bureau was still following the sound policy then reflected in its rulings. It is also understood that it was desired to delay action until inquiries could be made as to how similar provisions in State income-tax laws, such as New York, were operating, and because of technical drafting difficulties, attributable largely to the form of limitation on the deductions which was then recommended. It is our understanding that these States have found no difficulty in administering their provisions.

It is believed that the dangers of abuse of such an amendment are greatly exaggerated. If the amendment is carefully drawn and accompanied by appropriate explanatory statements in the committee reports, there is small danger that the courts will give it a broader application than Congress intended. It will not break down the well-established concepts of what constitute nondeductible personal and family expenses or nondeductible capital expenditures. It will do little more than to ratify the earlier Bureau practices. For that reason, it is recommended that whatever amendment be adopted be applied retroactively.

The heavy increases in income-tax rates recently made or now projected greatly increase the gravity of this problem. Taxpayers are willing to pay heavy taxes to help meet the great demands of the present time upon the National Treasury, provided the burden is distributed on an equitable basis. This can only be done by a fair definition of the net income which is taxed. They feel it is unfair discrimination to allow a limited deduction for gambling losses (code, sec. 23 (h)), and to deny any deduction for expenses incurred in producing or collecting income, or in conserving income or income-producing property. The Treasury benefits from such income in increased taxes and also benefits by measures taken by careful investors to conserve and protect it. It is unfair to tax more than the portion which remains to the taxpayer after such expenses have been paid.

It will be noted that this problem is limited to individuals, including fiduciaries. All the ordinary and necessary expenses of corporate taxpayers are deductible.

XIII. *Correlation of income-tax basis of property with valuation for estate-tax purposes.*—We recommend an appropriate amendment to section 113 (a) (5) of the code which will definitely establish as the basis, for income-tax purposes, of property transmitted at death the valuation of such property which was used in the computation of the Federal estate tax.

There is a serious lack of correlation between the estate tax and the income tax at this point under the existing law. While the valuation of property used for estate-tax purposes is prima facie evidence of its value at the date of death, it may be challenged by either the Commissioner or the heir, devisee, or legatee in a subsequent income-tax proceeding. This fact creates an incentive to change of position and litigation which should be removed. Section 3801 of the code does not operate to discourage such inconsistency since it does not apply where the estate tax is involved in one year and the income tax in the other.

Moreover, code section 811 (j) allows the executor or administrator to elect between valuation at the date of death or 1 year thereafter for estate-tax purposes, with a proviso that, if value at the later date is elected, then as to assets in the gross estate distributed or sold during the year, value at the date of distribution or the sale price shall be used. Yet section 113 (a) (5) of the code has never been amended so as to correlate with section 811 (j). It continues to define, as the basis of property transmitted at death, its value at the date of death. The result, in cases where the benefits of section 811 (j) are elected, is that the income-tax basis will usually, as a matter of law, be higher than the valuation used in computing the value of the taxable estate. This unfair discrimination should be corrected.

The proper remedy is to amend section 113 (a) (5) of the code so as to provide that the basis of property transmitted at death shall be the value at which it was included in the gross estate of the decedent (under sec. 811 of the code), in the determination of the estate tax. Where the property formed a part of an

estate too small to require the filing of an estate-tax return, the income-tax basis will continue to be its value at the date of death.

XIV. *Annual gift-tax exclusion should apply to gifts in trust.*—We recommend appropriate amendments to section 1003 of the Internal Revenue Code to accomplish the following results:

(1) Restore to gifts in trust of other than future interests the benefit of the annual exclusion from the tax base of the first $4,000 given to any particular donee during the gift-tax year.

(2) Treat as gifts of present interests (in proportion to the beneficiaries' interests), entitled to the benefits of such exclusion, gifts in trust for the benefit of one or more minors, whether the income is to be distributed or accumulated, if both principal and income are payable only to or for the benefit of such minors or their estates.

Prior to the Revenue Act of 1938, gifts in trust enjoyed the benefits of the annual exclusion of $5,000 to the same extent as gifts made in other ways. The only exception was gifts of future interests, whether by trust or otherwise. Section 505 of the Revenue Act of that year reduced the annual exclusion to $4,000 for gift tax years beginning on or after January 1, 1939, and denied its benefit altogether to gifts in trust.

The effects of the 1938 amendment will appear from a simple illustration. D has two children, one of them a minor, 12 years of age, and the other an adult. He makes a gift of $14,000 outright to the adult child in 1940. Of this amount only $10,000 is subject to tax. Desiring to treat his children equally, but knowing his other child is a minor and without legal capacity to manage his own affairs, he sets aside $14,000 irrevocably in trust for the benefit of such child. The entire amount of the gift is subject to tax, even if the trust provides that the income from the trust be distributed currently to the child, or applied for his benefit. As a practical matter, however, it is difficult and usually unwise to make such gifts to minor children outright. Hence, such trusts other than those established to provide for maintenance and support, commonly provide that the income be accumulated for the child until he reaches his majority.

Is this discrimination necessary? The report of the Senate Finance Committee (p. 32) justified this discrimination on the ground that it was a practical measure to protect the revenue by minimizing the abuses growing out of such decisions as *Wells* v. *Commissioner* (88 F. (2d) 339 (1937)), where it was held that the trust entity was the donee in the case of a gift in trust. This decision severely restricted the scope of the exception of future interests from the benefit of the annual exclusion and encouraged the creation of mutiple trusts for the same beneficiary in order to obtain a $4,000 exclusion for each trust.

This reason for the 1938 amendment has vanished by virtue of the recent decision of the Supreme Court in *Helvering* v. *Hutchings* (March 3, 1941) (61 S. Ct. 653), which held that the donee of a gift in trust is not the trust entity but the beneficiary, thereby overruling the *Wells case* in principle. On the same day the Court ruled in *United States* v. *Pelzer* (61 S. Ct. 659), that where a trust provides for accumulation of income during the minority of a beneficiary and the beneficiary's right to receive the accumulated income and corpus is contingent upon his surviving until he reaches his majority or other specified age, the interest given to the minor is a future interest and the annual exclusion does not apply. This decision is squarely contrary to the *Wells case*. The situation in which there is no contingency, and the minor or his estate are absolutely entitled to receive the accumulated income at a future date, was not directly ruled upon, but the reasoning of the court suggests that the rule of the *Pelzer case* would still apply.

We believe that the reason justifying the exception of future interests, viz, the uncertainty as to the identity and number of the donees of the remainder interests, does not apply to a case in which there is a present gift of the entire interest, with only the actual enjoyment of the income postponed during the minority of the beneficiary.

XV. *Exemption of securities of nonresident aliens from estate and gift taxes should be provided.*—Under the existing law, nonresident aliens are subject to estate and gift taxes only with respect to property situated within the United States. However, the Internal Revenue Code provides in respect of both taxes (sec. 862 (a), sec. 1030 (b)) that stock of a domestic corporation shall be considered property situated within the United States, no matter where the stock certificates are physically located. In accordance with this theory, it is suggested that the statute should specifically enact the rule stated in the present regulations (regs. 80, Art. 50, and regs. 79, Art. 18) that stock of a foreign corporation shall

be deemed to be property without the United States, regardless of the physical location of the certificates.

No similar inconsistency exists in the case of bonds, which are usually taxed in the place where the bonds are physically located.

We recommend that stock, bonds, and other securities of foreign corporations owned by nonresident aliens be specifically exempted from estate and gift taxes. This recommendation is based solely upon practical considerations. There are many good reasons for encouraging nonresident aliens to keep their securities, whether foreign or domestic, in American custodian accounts. Employment and income is provided to numerous persons handling such accounts. The presence of these accounts facilitates the collection of other taxes due from the owners thereof. The transactions consummated by the custodians in American markets yield revenue in the form of stamp taxes and otherwise.

The existing law defeats its own purpose, viz, maximum revenue, by creating a tax incentive to foreigners to keep their foreign securities outside the United States, thereby defeating the policy of the changes in the income-tax law made in 1936 (see code, sec. 231 (a)) which exempted nonresident aliens from tax on their capital gains realized by transfers on American securities exchanges. Also, since most persons prefer to keep all their securities in a single account, the result is that many accounts of such aliens are kept in Canada or elsewhere, which might otherwise be maintained in the United States. For these reasons it is confidently believed that the adoption of the foregoing recommendation would, in the net, benefit the revenue. Also, it is believed that the estate and gift-tax revenue derived from such nonresident alien securities is so small as to be negligible.

For these reasons we recommend that paragraph (b) of section 863 of the Internal Revenue Code be amended by changing the period at the end thereof to a semicolon and adding the word "and", and that a new subsection be added reading as follows:

"(c) *Foreign securities.*—Stock in, and securities of, a foreign corporation or a foreign government or political subdivision thereof, owned and held by a nonresident not a citizen of the United States, without regard to the physical location of the certificates or other physical evidences representing such stock or securities at the time of the decedent's death."

The adoption of this recommendation should be accompanied by the addition to section 1030 of the Internal Revenue Code of a new subsection (c) with a text identical with that of the foregoing proposed section 863 (c).

XVI. *Provision should be made for adequate tax-free funds for payment of Federal estate taxes.*—It is strongly recommended that appropriate provisions be written into the Federal estate tax statute which will permit the owners of estates to build up reserves or funds for the payment of estate taxes at death, the amount of which shall be exemped from estate taxes to the extent they are applied to the payment of such taxes.

We believe that such provisions are urgently needed under the existing law and that they are absolutely imperative if the radical revision in the rate schedule and reduction in exemptions recommended to your committee by the Treasury Department should be enacted into law, in whole or in part. High progressive estate tax rates have already created acute problems for executors and administrators in finding funds to pay these taxes without disastrous forced liquidation of assets at sacrificial prices. This problem is especially acute where all or a major part of the estate consists of the ownership of a going business or of real estate or other nonliquid assets. The artificial pressure for liquidity created by the present law is a serious obstacle to the movement of enterprise capital into new business ventures which the general welfare demands.

Collection of estate taxes will be speeded up. Losses, due to sacrificial liquidation of estates which are costly to income-tax revenues, will be greatly reduced. The depressing influences on market values generally of such liquidations will be minimized. Most important of all, businessmen will be able better to plan their affairs and will be encouraged to embark upon new enterprises when the pressure to maintain a high degree of liquidity in their assets is materially reduced. The estate tax, of all taxes, should be constructed from the point of view of its long-run effects.

There are several possible alternative methods which may be provided whereby the shock of high estate-tax rates upon other types of assets may be cushioned and the Government assured of prompt payment of its tax. The only cushion now provided is the possibility of extensions of time in which to pay estate

taxes up to 10 years. However, such extensions carry an interest burden of 4 percent, which is in excess of the current average earning power of investments. The combined impact of heavy estate-tax rates and increasing income-tax rates upon the incomes of estates makes it impossible to meet estate taxes out of income of estates within any reasonable period. The tax problem is further increased in some cases where State death taxes exceed the amount of the Federal credit.

We do not suggest any specific method as the best or only possible one, but submit for your consideration two general methods for providing essential relief. It is believed that some combination of these two methods, which may be denominated (1) "self-insurance," and (2) "purchased insurance," may provide the most practical solution.

(1) *Self-insurance.*—This plan involves setting up a trust specifically for estate-tax purposes. If deemed desirable, the statute might limit the types of assets which could be placed or kept in such a trust, such as, for example, Government bonds, securities listed on the New York or other recognized exchanges, and the like. It is suggested, however, that no such special limitations be imposed in order to avoid discrimination between investments, since the trust instrument would ordinarily contain provisions as to liquidity.

In the interests of simplicity and prevention of possible income-tax avoidance, such trusts should be permitted to be revocable, except that after the settlor's death the assets would be specifically earmarked for estate-tax payments, and no prior distributions could be made till such tax liabilities were liquidated. The trust instrument could provide for the disposition of earnings prior to the settlor's death, either by way of accumulations or distribution to him. In either event, the trust income would be taxable to the settlor. The instrument might also require as a guaranty of liquidity that the trust be liquidated within a relatively short time after the due date of the estate tax.

Whatever portion of the trust assets are required to pay estate taxes should be made exempt from such taxes, and any excess should be subject to tax. Some special provision may be necessary, in the event of such an excess, to prevent introducing algebraic complication into the computation of the tax, but there are several ways in which resort to algebra can be obviated by proper draftsmanship. There should be no tax on the privilege of creating such trusts.

The principle of not taxing such portion of the estate as is required to pay the tax accords with the result now reached under the gift tax, where the tax is paid by the donor out of the estate remaining to him after a gift. The tax so paid is not taxed as a part of the gift and operates to reduce the estate passing at death and subject to estate tax.

2. *Purchased insurance.*—Past proposals in this field have usually taken the form of exempting from estate tax the proceeds of life insurance, definitely earmarked in some way for the purpose, to the extent such proceeds are required to pay estate-tax liabilities, with any excess added to the corpus and subject to tax. Here, also, some special provision may be necessary to obviate the use of algebraic formulas when such an excess is present.

It is recognized that its simplicity is a major advantage of this plan. On the other hand, a limitation of relief to this plan alone may be deemed objectionable because it may discriminate between taxpayers, since all taxpayers are not insurable.

For these reasons it is believed that some form of both plans should be recognized by the statute, leaving the taxpayer to select the form best adapted to his own circumstances.

XVII. *Section 42 of the code should be repealed or modified.*—We recommend that section 42 of the Internal Revenue Code, as interpreted and applied by the Supreme Court in the recent case of *Helvering* v. *Enright* (61 S. Ct. 777 (1941)), be repealed or modified.

Section 42 of the code provides in part as follows:

"In the case of the death of a taxpayer there shall be included in net income for the taxable period in which falls the date of his death the amounts accrued up to the date of his death, if not otherwise properly includible in respect of such period or a prior period."

There is a correlative provision in section 43 relating to the accrual of deductions and credits. The combined effect of these two sections is to compel the net income of a deceased taxpayer to be computed on an accrual basis, irrespective of the fact that in all prior years the deceased taxpayer had been on a cash basis. This provision was first introduced in the Revenue Act of 1934

and grew out of a decision that income accrued before the taxpayer's death, but actually collected or received thereafter, was not income to the estate, but a part of the corpus (*Nichols* v. *U. S.*, 64 Ct. Cls. 241; cert. den., 277 U. S. 584). The report of the Ways and Means Committee on the 1934 act (H. Rept. 704, p. 24) stated that such an amendment was necessary, since, if such income is not taxable to the estate, it escapes taxation altogether unless the law taxes it to the decedent. There is no quarrel with the position that such income should not escape taxation altogether.

However, the form of remedy employed in the 1934 amendment in correcting an inequity to the revenue has created several new and even more serious injustices to deceased taxpayers and their estates. The truth of this statement is vividly exemplified by the cases of *Helvering* v. *Enright*, supra, and *Pfaff* v. *Commissioner* (85 L. Ed., Adv. Op. 693) decided the same day. In the *Enright case*, section 42 of the code was held to require the inclusion in the closing return of the decedent who was a member of a partnership which also reported its income on a cash basis, not only the decedent's interest in the firm's uncollected accounts valued at about $2,650, but also his interest in unfinished work of the firm at its appraised value for estate and inheritance tax purposes, viz, about $40,850.

Simple analysis will show the many inequities lurking in such a result.

(1) A large and disproportionate amount of income, which may be collectible only over a period of several years, if at all, is subjected to a heavy surtax as an addition to the decedent's normal income in the year of his death.

(2) This income so accrued is thus taxed entirely in the decedent's "top brackets" in the year of his death, although it would normally have been taxed at lower rates over several taxable years, had the decedent lived.

(3) The additional income tax required to be paid by the estate as the result of the inclusion of such accruals would, in many cases, exceed the cash income available for payment thereof.

(4) The items accrued under the doctrine of the *Enright case* will often include large amounts which are not accruable under the ordinary understanding of that term, since in many cases the amount of the fees to be charged by professional partnerships for work in process are not determined until the work is completed.

(5) The decision will require the accrual of substantial amounts of professional fees which will never be collected, since the excess of fees on the books over the fees collected in such cases is notoriously large. Decedents' estates will therefore be mulcted of income taxes on "dead horses" in many cases.

(6) In summary, an income tax law which is based upon the principle that incomes shall be taxed in accordance with ability to pay; i. e., $10,000 taxpayers at one rate, $30,000 ones at a higher rate, and $50,000 ones at a still higher rate, in fact may work out in many cases under section 42 as follows: In the year in which a $10,000 taxpayer dies, the rate of tax to which he will be subjected may be that of the $30,000 one; or the rate payable by the $30,000 man may become that of the $50,000 man, etc.

We do not believe that the Congress contemplated such paradoxical results when it enacted section 42 in the 1934 act. The section works a practical approximation to fairness in ordinary cases where the amounts involved, such as wages and salaries, interest, rents, and the like, are small and the amounts accrued are for the most part amounts which the taxpayer would have actually received in ordinary course, had he lived until the end of his taxable period. But it works serious injustice as applied to many decedents, such as doctors, lawyers, dentists, insurance agents, advertising agents, and the like, whose compensation is subject to delay in determination and payment, and to substantial shrinkage in actual realization by collection. This injustice is gravely accentuated by the broad concept of accrual applied to section 42 by the Supreme Court in the *Enright case*.

The extremes to which the doctrine of the *Enright case* may be carried are shown in a very recent decision of the circuit court of appeals for the fourth circuit in the case of *Helvering* v. *McGlue* (April 10, 1941), P. H. C. D. No. 62, 607, revg. 41 B. T. A. 1186. In this case the court held that section 42 compelled the inclusion in the decedent's gross income reported in the closing return of estimated executor's fees, neither allowed by the probate court nor received by the decedent prior to his death. The court stated that "Had respondent been alive, and had he kept his books on the 'accrual basis' (as that term has been interpreted in many court decisions) we should feel obliged to uphold the Board's

findings that the executor's fees could not have accrued prior to the allowance and approval of these fees by the probate court." Nevertheless, the court felt bound by the *Enright* decision, and held the estimated fees accruable under section 42, since it was the rationale of that decision that it was the intent of Congress by that provision to reach all income earned during the life of the decedent that might otherwise escape income tax. The court said that there was no contingency or uncertainty qualifying the decedent's right to at least a quantum meruit recovery, although there was no finding as to the value of the services on this basis. Furthermore, until the executor's final accounting had been approved by the probate court, appraisal of the value of his rights, even in quantum meruit, would be a matter of guesswork, in view of the possibility of offsets and surcharges arising out of his administration of the estate.

The *Enright doctrine* has very recently been carried to similar extremes in a case involving section 43, relating to deductions. In the case of the estate of *Lewis Cass Ledyard*, 44 B. T. A. No. 162, a substantial amount was held deductible on account of a liability, which was involved in a lawsuit pending at the time of the decedent's death, and which was not settled until more than a year. Such a deduction would not have been allowed on ordinary principles of accrual. The implications of this decision are clearly very adverse to the interests of the revenue.

We recommend the repeal of sections 42 and 43 as the simplest method of rectifying these inequities.

XVIII. *The doctrine of congressional adoption or ratification of administrative regulations by subsequent reenactment of the statute should be abrogated or sharply limited by legislation.*—The past few years have witnessed the judicial evolution and sporadic, though increasing, application (or misapplication) of an ill-defined doctrine that congressional reenactment of a statute, without changes of substance, after the statute has been interpreted in departmental regulations, has the effect of legislative approval or adoption of such regulations. Leading cases for the doctrine are *Brewster* v. *Gage*, 280 U. S. 327; *Helvering* v. *R. J. Reynolds Tobacco Co.*, 306 U. S. 110. The result of the application of the doctrine may be tantamount to an incorporation of the regulation into the statute.

The doctrine has been invoked in many cases without regard to whether the regulation in question is a legislative regulation, promulgated under specific authority and direction of Congress to spell out detailed rules necessary to effectuate the general principles of a statute, or is an interpretative regulation setting forth merely an administrative construction. It has been most frequently applied in cases arising under the internal-revenue laws. The Supreme Court has itself vacillated so frequently in its formulations and applications of the rule that it has produced serious uncertainty among taxpayers and confusion among the lower Federal tribunals. The natural tendency in the inferior courts has been to apply the doctrine mechanically, frequently with inequitable or even absurd results. The uncertainty and confusion has been aggravated by several vaguely defined limitations upon the scope of the doctrine itself. The doctrine has met with widespread criticism, mainly adverse, by close students of the problem.[1]

The application of the principle tends to favor the Government, since most Treasury regulations incline to resolve doubts in a manner beneficial to the revenue. Yet there are striking exceptions, among them the recent case of *Helvering* v. *R. J. Reynolds Tobacco Co.*, *supra*, where the court held that Treasury regulations which had survived several reenactments of the statute had been adopted by Congress. These regulations had laid down the unqualified rule that a corporation realized no income from dealing in its own stock. This position had been sharply modified by the Treasury in its regulations under the Revenue Act of 1934, at which time the earlier regulations were also retroactively amended. The court held that the Treasury was bound by the prior regulations, at least so far as it was sought to amend them retroactively.

The uncertainty created by the apparently rigid and far-reaching formulation of the doctrine in the *Reynolds case* was slight compared to the confusion engendered by the decision at the same term in *Helvering* v. *Wilshire Oil Co.* (308

[1] See, especially, Paul, Use and Abuse of Tax Regulations in Statutory Construction, 49 Yale L. J. 660 (1940); Alvord, Treasury Regulations and the Wilshire Oil Case, 40 Col. L. Rev. 252 (1940); Surrey, The Scope and Effect of Treasury Regulations Under the Income, Estate, and Gift Taxes, 88 U. of Pa. L. Rev. 556 (1940); Brown, Regulations, Reenactment, and the Revenue Acts, 54 Harv. L. Rev. 377 (1941); Griswold, A Summary of the Regulations Problem, 54 Harv. L. Rev. 398 (1941); Feller, Addendum to the Regulations Problem, 54 Harv. L. Rev. 1311 (1941); Griswold, Postcriptum, 54 Harv. L. Rev. 1323 (1941).

U. S. 90). There the court, by a resort to very technical grounds, distinguished the *Reynolds case* and refused to be bound by a prior regulation where it deemed that doing so would produce a bad result. The *Wilshire case* seems also to indicate that the doctrine does not prevent the administrative authority from modifying regulations presumably adopted by congressional reenactment of the statute, if the amended regulations are limited to prospective operation. This leads to the paradoxical and absurd result that conflicting regulations interpreting identical statutory language may both have the force of law, one before and the other after a particular date, by virtue of the same doctrine of congressional approval.

The uncertainty and confusion created by the foregoing decisions seriously impede the proper administration of the revenue laws. More serious, however, is the threat which the doctrine carries to the integrity of the legislative process itself. It assumes that, when Congress legislates by reenactment of revenue laws, with amendments to only a few sections, it thereby gives its approval to prior regulations interpreting the many sections in which no changes are made. It even assumes familiarity on the part of Congress with the content of such regulations. These assumptions are unrealistic and are based upon ignorance of the legislative process. In occasional instances only, are particular regulations brought to the specific attention of Congress or its Ways and Means and Finance Committees. Only in such cases is there any reason for regarding a failure to amend the section interpreted by the regulation complained of as amounting to legislative approval of such regulation in fact.

Congress lacks the time required for careful analysis of the vast volume of regulations promulgated by the Treasury Department under the tax laws. It is, therefore, invidious policy to attach to the bare reenactment of the statute consequences which should flow only from an express or clearly implied ratification in fact of such regulations by Congress. In the absence of such a ratification, the regulations should carry no additional weight in the courts by virtue of reenactment of the statute.

We believe the situation has become so urgent that it can be satisfactorily solved only by legislation. We therefore recommend that each revenue act contain a specific provision declaring that the reenactment of any portion of the statute shall not be deemed to imply legislative sanction of prior regulations relating thereto, unless (1) Congress specifically declares that it shall have such effect, or (2) a committee report upon the bill providing for such reenactment states that the committee has considered the regulation in question and has found it to contain the proper interpretation of the reenacted statute.

XIX. *Legislative regulations should be promulgated only after public hearings held upon due notice.*—In a limited number of situations under the internal revenue laws, Congress has found it desirable to vest in the Commissioner, with the approval of the Secretary, specific authority to promulgate regulations which may be found necessary to carry out the provisions of a statute. These regulations are very different in their effect and in the functions they perform than the more common type of interpretative regulations, which merely serve to inform the public as to the official interpretation of certain provisions of the statute. They are in reality legislation supplementing the basic statute itself, made under a delegation of power by Congress, within the framework of the general principles and standards contained in the statute. Assuming that the delegation of power itself satisfies constitutional limitations, the regulations, when promulgated, have the force and effect of legislation and can be attacked only if they violate some substantive constitutional guaranty, or contravene the limitations of the statute under which they are promulgated. Hence, it is a matter of relative infrequency for such a regulation to be held invalid.

A good illustration of this type of regulations is found in the case of consolidated returns of railroad corporations, provided by section 141 of the Internal Revenue Code, and consolidated returns of corporations generally for excess-profits-tax purposes, provided by section 730 of the code. In both cases the subject matter is too complicated and technical to permit the spelling out of highly detailed rules in the statute itself. Congress solved this difficulty by conditioning the privilege of filing such returns on consent by the taxpayer to the provisions of regulations promulgated prior to the making of such return, the filing of a return to constitute such consent. The statute itself contains only very general standards to govern such regulations. Regulations of this type, unless held invalid by court decision, are unusually stable and are seldom amended, save when the enactment of another statute permits changes to be made in a new regulation promulgated thereunder, effective only for the future.

We have no quarrel with congressional employment of this device. Indeed, in situations such as the above, its use is a matter of necessity. There may even be increasing occasion for its use in the future. But we think, by reason of the peculiar character of such regulations, that careful control of the procedure followed in their promulgation is necessary in the public interest, as a safeguard against hasty, ill-informed, or arbitrary administrative action in framing them. Congress itself follows the policy of allowing public hearings before framing and enacting important legislation affecting private rights and interests. We believe a similar procedure is necessary here.

In line with the report and recommendations of the President's Committee on Administrative Law and Procedure, we recommend the enactment of legislation requiring the holding of public hearings by the Treasury Department prior to the promulgation of any legislative regulations. Adequate notice of the date and place of such hearings should be given in the Federal Register. In order that such hearings may be of maximum utility, the basis of the hearings should be supplied by the publication in the Federal Register, along with the notice, of a draft of the regulations as tentatively proposed to be issued by the Department. Anyone interested in the subject matter should have the right to appear orally or by brief, or both, to submit criticisms and suggest additions, deletions, and other amendments to the regulations as proposed. Similar requirements should apply to any amendments to such regulations the Department may desire later to make. The validity of any such regulations or amendments thereto should be conditioned upon prior compliance with these requirements.

XX. *The application of the personal holding company surtax to the capital gains of nonresident foreign corporations should be clarified.*—Beginning with the Revenue Act of 1936, Congress deliberately relieved from tax the capital gains of nonresident alien individuals and nonresident foreign corporations not engaged in trade or business or having an office or place of business in the United States. (Secs. 211 (a) and 231 (a), Revenue Act of 1936.) Congress further specifically declared that the effecting of transactions in the United States in stocks, securities, or commodities through a resident broker, commission agent, or custodian did not constitute the carrying on of a trade or business (sec. 211 (b)). In lieu of the income taxes formerly imposed, Congress levied a flat-rate tax, ordinarily withheld at the source, on dividends, interest, wages, rents, and other specified types of income, not including capital gains.

In the Revenue Act of 1937, Congress changed the method of taxation of nonresident alien individuals by making them subject to graduated surtaxes where their United States incomes from the specified sources aggregated more than $21,600 for the taxable year. Again, Congress made it clear that their capital gains were excluded from the tax base (sec. 211 (c)).

Despite this clear expression of legislative policy, the Treasury Department has ruled in its regulations that the personal holding company surtax applies to the capital gains of nonresident foreign corporations. (Regs. 94, art. 351–1; Regs. 101, art. 401–1; Regs. 103, sec. 19.500–1.) This is true even if all the stock of the corporation is owned by nonresident alien individuals.

This paradoxical position was adopted in face of the well-known fact that this surtax was aimed at incorporated pocketbooks commonly used by individuals to hold their investments and effectuate their transactions in order to reduce their individual surtaxes. But what possible tax incentive could there be since 1936 for nonresident alien individuals, who were themselves exempt from all taxes on capital gains, to use their corporations to effectuate their capital-gain transactions in the United States? Obviously none. Congress, having exempted nonresident alien individuals and nonresident foreign corporations from any normal or basic tax on their capital gains, cannot reasonably be supposed to have intended to apply this surtax to such gains.

In order to effectuate the clear intent and policy of the statute, we recommend a clarifying amendment which will specifically exclude from taxable income for the purposes of the tax imposed by section 351 of the 1936 act and the corresponding provision of later acts the capital gains and losses of a nonresident foreign corporation, all of whose stock is owned by nonresident alien individuals.

B. The excess-profits tax

I. *The present basis for determination of invested capital should be revised so as to employ cost to the taxpayer in lieu of cost basis as the general rule, with proper provisions for relief in exceptional situations.*—It is respectfully submitted that several important changes in the methods prescribed for the

determination of invested capital are essential in the interests of sound policy and fair and equitable results.

(*a*) The first change which we recommend is that section 718 (a) (2) of the Internal Revenue Code be amended so as to provide for the use of taxpayer's cost instead of tax basis in the computation of invested capital where property is paid in for stock.

Section 718 (a) (2) now reads as follows:

"(2) *Property paid in.*—Property (other than money) previously paid in (regardless of the time paid in) for stock, or as paid in surplus, or as a contribution to capital. Such property shall be included in an amount equal to its basis (unadjusted) for determining loss on sale or exchange. If the property was disposed of before such taxable year, such basis shall be determined in the same manner as if the property were still held at the beginning of such taxable year. If such unadjusted basis is a substituted basis, it shall be adjusted, with respect to the period before the property was paid in, in the manner provided in section 113 (b) (2)."

This use of "tax basis" represents a major departure from the old excess-profits tax laws. See section 207 (a) of the Revenue Act of 1917, and section 326 (a) (2) of the Revenue Acts of 1918 and 1921. The basic rule under those acts was that invested capital was increased by "the actual cash value of tangible property paid in, other than cash, for stock or shares." Arbitrary limitations were applied to intangibles paid in. This departure creates a whole host of new complications in the computation of invested capital and will result in serious and indefensible discrimination between corporations similarly situated in many cases, as will be demonstrated hereinafter.

It will be noted that the above provision prescribes as the "tax basis" to be employed the unadjusted basis for determining loss upon a sale or exchange in accordance with the basis provisions of the present law. The report of the Ways and Means Committee on the bill (p. 24) gave as the reason for using unadjusted basis, rather than adjusted basis, that:

"The use of the unadjusted basis is dictated by the fact that adjustments of basis, notably for depreciation, are reflected in earnings and profits * * *."

This is at best only partially true, since such adjustments will often have been made to a basis different from that at which the property is required to be taken into invested capital. In the case of depreciation, this very discrepancy is present, since under section 114 (a) of the code depreciation must be taken on the basis for computing gain, not loss, on the sale or exchange. This difference becomes important wherever March 1, 1913, value is involved. Wherever such disparity of bases exists, the reflection of adjustments to basis in the earnings and profits account will be distorted. This distortion is less than if adjusted tax basis were used, and constitutes one of the lesser objectives to the employment of "tax basis" in section 718 (a) (2).

It is our position, however, that the decision to use "tax basis" at all as a measure of invested capital was not well taken and should be reconsidered. There is no necessary relation, economic or otherwise, between basis for ordinary corporate tax purposes and the concept of invested capital. The chief function of invested capital is to provide a yardstick in determining what part of the profits of a business enterprise are "excess profits" which may properly be subjected to a high-rate graduated tax. If the term "excess profits" means anything at all in this context, it must mean a return in excess of a fair return on the property which the taxpayer is employing in its business and which is thereby exposed to all the risks and hazards of the enterprise. This reality was recognized in the older laws when the cash value of the property paid in was used as a measure of invested capital, although the arbitrary limitations imposed on intangible property paid in were unfortunate and it is well that such distinction has not been adopted in the present law.

The essential problem is, "What capital has been invested in an enterprise by the taxpayer which is subjected to tax." How much capital was invested by some other entity or person in the acquisition of assets subsequently acquired by the taxpayer and employed in its business is of no relevance in determining a fair profit to the taxpayer itself.

A simple case will serve to illustrate this distinction and also to show the results reached under the existing law. Suppose that X corporation, the taxpayer, in 1936 issued one-half its authorized stock of 10,000 shares in consideration of the transfer to it by another corporation or by a group of individuals of certain assets which X employs in its business. At or about the same time X issues the balance of its stock to others for cash, the subscription price being $50

per share or more. Had X sold all its stock for cash at $50 per share, there could be no doubt the cash received would constitute its invested capital. However, under the existing law, if the transactions in which X obtained property for stock were of such nature that, under the basis provisions of the present law, found in section 113 of the code, a carry-over or "substituted" basis will apply to the property so acquired, and the adjusted basis of such assets to the transferors was only $25 per share of the stock issued, then the invested capital of X under the existing law will be only $125,000 ($25×5,000)+$250,000 ($50×5,000) or $375,000, although X has by hypothesis issued stock of a value of $500,000, stock which might have been sold for that amount, in order to acquire the assets employed in its business.

The foregoing illustration will serve to bring out several of the vices inherent in employing tax basis as a yardstick of invested capital. Let it be assumed, as may often be the case, that another corporation, Y, perhaps an actual competitor of X, has a capital structure identical with that of X. The only difference between the two corporations in that Y issued its stock for cash, which it used to purchase the assets needed in its business. The two corporations are both well managed, do about the same volume of business, and enjoy about the same net income. Yet under the existing law, Y will have an invested capital (exclusive of any accumulated earnings and profits) of $500,000, while X has an invested capital of only $375,000. Y's excess profits credit will be correspondingly larger than X's, and X may have to pay a substantial excess-profits tax, while Y, having the same net income, pays little or no tax. Moreover, in the case of X, the 50 percent of shareholders who paid cash for their stock are penalized by the excess-profits tax on the corporation, since the corporate profits available for dividends are thereby reduced, because X is compelled by section 113 of the code to use its transferror's basis for normal tax purposes with respect to the assets acquired through the issuance of stock. Only very weighty considerations can justify such manifest discrimination in a tax law.

It is believed that there are no such considerations. It may be contended that these paradoxical results are justified because in the case in which assets were exchanged for stock gain or loss was not recognized to the transferors; therefore, the law should not permit the stepping up of invested capital with respect to the interest so transferred. There are several cogent answers to this argument.

First: Whatever substance it may seem to have, it is fairly applicable only to such nontaxable transactions consummated after the effective date of excess-profits-tax law. There may be reasons why, with such a law on the books, Congress might deem it wise policy to condition any increase in invested capital by means of a reorganization upon the recognition of gain to the transferors in the transaction, at least where there is no substantial change in ownership or control. But such considerations of policy could not apply to such transactions consummated in prior years when the parties never dreamed of the possibility of an excess-profits tax, and when the only tax benefit derived from nonrecognition of gain was the postponement of normal taxes. This benefit bore no relation to taxes on excess profits. But to penalize transferee corporations and their present stockholders years later by heavy excess-profits tax computed upon a base which is arbitrarily reduced cannot be justified either as a matter of policy or equity.

Second: The argument proves too much. It confuses the investment of the corporation issuing the stock with the investment of the owners of the stock in their shares. A simple illustration will help to illuminate the point. Suppose that corporation S issued its stock originally to A, B, and C for $50 in cash per share. The corporation has prospered and its assets have appreciated in value so that its stock is now worth $100 a share. A, B, and C sell their stock at that figure to M, N, and O, gain being recognized to A, B, and C, of course, on the transfers. Such transactions have no effect upon S's invested capital. It remains the amount of cash received, plus any accumulated earnings and profits. If the increase in the value of its shares is due entirely, as it might be, to unrealized appreciation in the value of its assets rather than to accumulated earnings, the corporate invested capital would be only one-half of the investment of its new shareholders in their equities. In the converse situation, there is no reason why the corporate invested capital should be limited by the investment of those who transferred assets to it for its stock, where for any reason the value of the stock when issued exceeds the transferors' investment.

Third: The provisions of the existing law are not even consistent, in that they do not in fact require a corporation issuing stock for assets to use tax basis in all cases where no gain was recognized to the transferors in the transaction by

which the property was acquired. The reason for this is that section 113 of the code, the present law which is made applicable, does not prescribe the transferor's basis as the basis of the transferee in every case in which no gain or loss was recognized to the transferor under the law applicable to the year in which the transfer was made. A striking case of this sort is one of a reorganization where the tax basis is governed by section 113 (a) (7) (a) of the code, that is, a transfer by a corporation in connection with a reorganization in a taxable year beginning prior to January 1, 1936, where immediately after the transfer an interest or control of less than 50 percent remained in the same persons or any of them. Similarly, many reorganizations were treated as tax-free in prior years under interpretations of the law which have since been disturbed or overthrown by the judicial introduction of nonstatutory overriding doctrines such as the "germaine to business" requirement of *Gregory* v. *Helvering* (293 U. S. 465 (1935)), the "continuity of interest" requirement of *Helvering* v. *Minnesota Tea Co.* (296 U. S. 378 (1935)), and *LeTulle* v. *Schofield* (308 U. S. 415 (1940)), and the "party to the reorganization" requirement of *Helvering* v. *Bashford* (302 U. S. 454 (1938)), and *Groman* v. *Commissioner* (302 U. S. 82 (1937)). In many of these cases, taxpayers are free to use cost rather than transferor's basis in computing invested capital, subject only to the adjustments prescribed by sections 3801 or 734 of the code. These sections do not apply to the cases governed by section 113 (a) (7) (a) of the code, referred to above.

It is probable, however, that section 718 (a) (2), in its use of "tax basis," will be defended chiefly upon the ground of administrative convenience or simplicity. It will be said that the use of taxpayer's cost would involve many difficult problems of valuation of the stock issued in consideration therefor. There are several sufficient answers to this argument. In the first place, while administrative convenience is entitled to due weight, it does not justify inflicting serious hardship and discrimination. In the second place, the apprehended difficulties of valuation may be easily exaggerated. The Bureau of Internal Revenue is in a far better position to administer problems of valuation without undue controversy or litigation than it was under the earlier excess-profits tax laws. In many cases stock-exchange sales and over-the-counter transactions will afford ready evidence of values of the stocks involved. Vast stores of information, in the form of balance sheets and profit-and-loss statements of thousands of corporations, appraisals of corporate securities for estate- and gift-tax purposes and the like, accumulated over a long period of years, are now available in Bureau files. The Securities and Exchange Commission and other Federal agencies possess great amounts of relevant and trustworthy data with respect to corporate valuations. All these resources, if intelligently used, would minimize the seriousness of the valuation problem.

Finally, in appraising the merit of the administrative argument based on valuation, the formidable difficulties inherent in the "tax basis" rule of the present law should not be ignored. The use of the basis for determining loss rather than gain, in order to eliminate March 1, 1913, value as a substitute for cost in the case of property acquired prior to that date, will require that records be traced back in all cases to the original acquisition of property by the taxpayer in order to determine its cost. Moreover, where the taxpayer acquired the property in a transaction resulting in a substituted basis under section 113, it will then be essential to trace the records back to the acquisition of the property by the taxpayer's predecessor to determine such predecessor's original cost. In many cases, the necessary records will be missing or will be incomplete and unsatisfactory.

It is obvious that the administration of these requirements will present an unknown number and variety of knotty issues of law and fact and very formidable difficulties of proof.

Furthermore, the requirement of the third sentence of section 718 (a) (2) that, where property has been disposed of prior to the taxable year, the basis shall be determined as if such property were still "held" has the effect of applying the present basis provisions of section 113 of the code to all transactions, even though the property may have been acquired and disposed of at a time when the basis provisions were different from those of the present law, and the resulting gain or loss may have been computed in accordance with the earlier provision. This is particularly significant in view of the reduction of the control requirement in a "control reorganization" from 80 to 50 percent by section 113 (a) (7) of the Revenue Act of 1932, which reduction was applied retroactively to acquisitions of property occurring prior to 1932. It is apparent that the effect of these requirements incidental to the use of the "tax basis" rule will be to require a reexamination of a vast number of transactions consummated in prior years.

This necessity goes far to rebut the claim of administrative convenience advanced to support the adoption of the "tax basis" rule.

Finally, the existing law involves all the difficulties of valuation in the very class of cases in which they are likely to be most acute, viz, cases where property was acquired by taxpayers for stock prior to January 1, 1918, or, in some cases, prior to January 1, 1921.

A careful analysis and weighing of all relevant factors leads to the conclusion that the use of taxpayer's cost to measure invested capital, where assets, other than cash, are paid in for stock, will present less difficulties of administration than the existing "tax basis" rule. Certainly, it will be more easily understood by taxpayers than the bewildering complexities of law and fact which the determination of "tax basis" often involves.

We recognize that there are situations, especially those involving reorganizations and readjustments under court decree, in which a rigid adherence to the general rule of taxpayer's cost would lead to serious hardships. We believe that the proper remedy for such situations lies in the enactment of appropriate special relief provisions, rather than the infliction of the present unsound rule of tax basis upon the majority of growing enterprises whose future prosperity is of such great moment to the economic welfare of the Nation.

II. *Use of determination of invested capital under World War excess-profits tax as the starting point for present purposes should be allowed.*—It is recommended that the excess-profits tax law be amended so as to permit a taxpayer which computes an excess-profits tax credit under section 714 (invested capital) to use, as its "starting point," its invested capital as finally determined under the 1918 act, pursuant to rules and regulations promulgated by the Commissioner with the approval of the Secretary.

There are many thousands of corporate taxpayers throughout the Nation who filed returns for excess-profits tax purposes under the World War excess-profits tax law. In virtually all of these cases, determinations of invested capital were made for purposes of the 1918 act, either by judicial decision which has become final or by administrative determinations which have become final in effect because of the statutes of limitation.

It would be highly convenient if the statute permitted such corporations to use these determinations as the starting point in making their computations of their current invested capital. It would save many of them enormous burdens of tracing old records of themselves or of predecessors to determine original cost. No grounds for serious objection to this proposal are apparent, particularly if section 718 (a) (2) is amended so as to substitute taxpayer's cost or the fair value of assets paid in as the measure of invested capital in cases where property is acquired for stock or paid in as surplus or as a contribution to capital. The permission to do this should, of course, be granted subject to compliance with Treasury regulations which would prescribe the necessary adjustments and the manner of making them in order to conform to the structure of the present law.

It is believed the adoption of this recommendation would greatly facilitate the application and administration of the excess-profits tax law, both from the point of view of the Government and the taxpayer. Special provisions might be needed in the law or regulations to extend the privilege to an acquiring corporation to use such final determinations of invested capital of one or more qualified component corporations in computing its own invested capital.

III. *Advances by governments to American contractors should be treated as borrowed capital.*—Section 719 (a) (2) of the present law made provision for the inclusion in borrowed capital, under certain conditions, of amounts received as advance payments under contracts entered into with a foreign government before the date of enactment of the law or 30 days thereafter, for furnishing articles, materials, or supplies of such foreign government.

We recommend that this section be amended so as to strike out the limitation date and so as to make its provisions applicable also to such contracts entered into with the United States Government. No good reason has been suggested why the provision should be limited to contracts with foreign governments. The policy underlying it seems equally applicable to contracts with our own Government.

The only apparent reason for the time limitation, which restricts the application of the provision to contracts entered into with foreign governments prior to November 8, 1940, is that it may have been assumed that the period allowed would be sufficient to enable contractors to arrange their future dealings with foreign governments so that any advance payments would be given the form of loans which would constitute borrowed capital under section 719 (a) (1). This assumption, if made, was erroneous. Such changes in established forms and prac-

tices of foreign governments could be made, if at all, only after protracted negotiations. Such negotiations interfere with expeditious delivery of essential war materials to them. Since it is not believed the time limit is necessary to prevent abuses under this section, it is recommended that it should be removed.

It is also recommended, in the interest of simplification and ease of administration, that section 719 (a) (2) be further amended so as to permit the inclusion in borrowed capital of that part of the advance payment which has not been applied to the purchase price of articles furnished under the contract at the beginning of the given day. It is extremely difficult, because of unknown factors and uncertainties which are often present, to determine in many cases how much of the advance would be repayable to the foreign government, if the contract were to be canceled on any given date, as the existing provision requires.

IV. *Modification of the requirement of computations based upon daily averages and ratios should be made.*—It is recommended that the various provisions of the statute which require computations of invested capital by the use of daily averages (secs. 715 and 716), computation of net capital changes in computing the excess-profits credit based on income (sec. 713 (g)), and the determination of the ratio between admissible and inadmissible assets (sec. 720) be amended so as to vest the Commissioner with general power by regulations to waive such rigid requirements where in his judgment the circumstances do not demand the use of daily averages or ratios and, in lieu thereof, to permit the use of ratios on a monthly, annual, or other appropriate basis.

The adoption of this recommendation would restore section 715, in essentials, to the form it had in the Senate bill in 1940. The Senate provision was unfortunately reduced to an absurdity in conference, where it was changed to limit the Commissioner's power to relax the requirement of dairy computation only if he finds that it will not change the results by more than $1,000. This leads to the anomalous result that the taxpayer must first make the daily computations in order to ascertain whether or not it must make them.

The apparent purpose of the requirement of dairy computations is to reflect a highly exact weighted average for changes in invested capital occurring during the taxable year. While reasonable accuracy is desirable, it is believed that the rigid requirements of the present law impose upon taxpayers burdens of computation, which are disproportionate to the protection of the revenue afforded thereby. No such precision was found necessary in the earlier excess-profits tax laws where monthly averages were commonly employed. The Commissioner by regulation can provide ample safeguards to cover cases where relatively substantial changes in invested capital occur by reason of large new stock issues, heavy borrowings, or large capital distributions.

Under section 720, relating to admissible and inadmissible assets, a rigid adherence to the requirement of daily computations would have created insuperable difficulties making the law unworkable, since it would have necessitated daily adjustments to basis for depreciation and depletion, and daily valuation of inventories and of other assets on hand. No accounting method heretofore devised was capable of meeting such demands. Fortunately, the rigidity of these requirements was somewhat relaxed by the excess-profits tax regulations. (See Regulations 109, sec. 30.720–1.) While section 720 (b) perhaps gives some statutory support to the regulations, their validity should not be left open to any doubt.

We believe the proper solution, one which will facilitate the administration of the law and measurably relieve the burden of preparing the returns, is to grant power to dispense by regulation with daily averages and ratios to the extent the Commissioner deems it advisable to do so.

V. *Discriminations against the earnings basis should be removed.*—The enactment of a heavy graduated tax on excess profits in 1940 was justified largely on the ground of prevention of profiteering and the creation of a new crop of millionaires out of profits attributable to the defense program. (House of Representatives, 76th Cong., 3d sess., Rept. No. 2491, p. 3; Rept. No. 2894, pp. 1, 2. House of Representatives, 77th Cong., 1st sess., Rept. No. 146, p. 1.) There has been little apparent disposition anywhere to quarrel with these objectives. In accordance with this policy, the Congress in the Excess Profits Tax Act of 1940 wisely provided that either the average income method or the invested capital method might be used in computing the excess-profits credit. Congress thereby recognized and applied the principle that an excess-profits tax should as its name implies, apply only to excess profits. Normal profits

should not be subjected to such a tax, but should make their chief contribution to the fiscal needs of the Government through the normal tax. This principle was again recognized in the amendments enacted in March 1941 which introduced several needed refinements into the measurement of normal profits.

While much progress along sound lines has been made, it is believed that a number of additional changes are needed to eliminate inequities and to prevent the heavy burden of excess-profits tax from falling upon normal profits. Otherwise, the resources of many corporations, which are necessary to the maintenance of a healthy financial structure and to the provision of reserves, which will be essential to carry them through the period of painful readjustment after the present crisis is over, will be depleted.

The present law is still marred by several discriminations against the average earnings method of computing the excess profits credit. These discriminations should be removed. One of these discriminations is the limitation of the excess profits credit under section 713 to 95 percent of the average base period excess profits net income. It is respectfully recommended that this percentage should be increased to 100 percent.

Proposals that the percentage be further reduced are unwise and economically unsound and should be rejected. Their effect is to transform the tax upon excess profits into a high rate graduated tax on normal profits, in violation of the policy deliberately enunciated by the Congress as recently as March of this year. The consequences of such a change to thousands of corporations and to the economy as a whole are certain to be serious.

It is recommended that corporations using the income method be permitted to use their experience in any 3 of the 4 years of the base period in computing their average base period excess-profits net income.

Under the existing law (sec. 714 (e)), a taxpayer must aggregate the excess-profits net income for its taxable years 1936, 1937, 1938, and 1939. The aggregate of any loss year is subtracted from the aggregate of the plus year, except that the largest loss year is treated as zero. The resulting figure is then divided by the total number of months for all the taxable years, usually but not always 48, in the base period and multiplied by 12 in order to obtain the average base period excess-profits net income. This can in no event be less than zero.

The chief defect of this formula, as a yardstick for determining normal profits, is that the years 1936–39, which constitutes the base period, were not a period of normal earnings for most American corporations. Many companies suffered depressed conditions during a major part of the period. For many others, who made reasonably good earnings in 1936 or 1937, or both, 1938 was a bad year and resulted either in losses or severe decline in profits. Many of these companies enjoyed only a partial recovery in 1939. Consequently, an average of earnings in the 4 years of this period is not a fair measure of normal profits, even though the largest of the deficit years is treated as zero. Such year is still included in the number of years used in computing the average.

While section 713 (f), the so-called normal-growth provision, added to the law by the March amendments, is an excellent modification, its utility is limited in many cases because the year 1938, a bad year for a majority of corporations, falls in the latter half of the base period.

It is believed that average base period net income, as a yardstick of normal profits, will be greatly improved by a further amendment which will permit taxpayers to select any 3 of the 4 years in the base period in computing the average, the aggregate net incomes for such period to be divided by three.

A possible alternative amendment is also suggested which would permit a taxpayer to exclude any 1 year in the base period, where the excess-profits net income for such year is less than 65 percent (roughly two-thirds) of the average exceess profits net income for the other 3 years of such period. Attention is called, in this connection, to the fact that the British act allows a choice of any 2 of 3 years; also that the Canadian Excess Profits Tax Act is being amended this year so as to give a taxpayer the right, in computing its standard profits for the standard or base period (1936–40) to drop 1 year if the profits for such year were less than 50 percent of the average profits of the other 3 years (or in the case of taxpayers who have been in business only 3 years during the standard period, if the results of 1 year were less than the average of the profits of the other 3 years). While it is believed that this Canadian amendment is sound in its purpose, it is thought that 50 percent is too low, and that the percentage should be at least 65 percent.

VI. *Excess profits should be measured over a longer period.*—The profits of a great majority of enterprises are subject to wide variations from year to year. In certain types of business, particularly the so-called durable-goods industries, these fluctuations are often extreme in character. One or two years of large profits may be followed by several years of heavy losses. Many other enterprises deem themselves fortunate to have as many as 2 years of substantial profits in any 5-year period.

Congress has recognized the unsoundness and inequity of taxing business profits, even under a normal tax, solely on an annual basis. In the Revenue Act of 1939 it restored to the law a 2-year carry-over of net operating losses. See section 23 (s) and section 122 of the Internal Revenue Code. To the extent of their application, these provisions give some relief from hardships which would be intolerable if any excess-profits tax at very high rates were imposed strictly upon an annual basis.

The relief provided by a 2-year carry-over, however, is clearly inadequate for the purposes of a heavy excess-profits tax. Heavy loss years may be followed by 2 or more years when earnings are meager. If, thereafter, there are 1 or more years of large profits, a corporation may be mulcted of a large part of such profits by the tax, although a part of such profits is badly needed to repair the damage to its fiscal structure caused by the prior loss years. A carry-over of operating net losses for a minimum period of 5 years is necessary, at least for the purposes of the excess-profits tax, adequately to prevent hardships of this character. Such hardships are very injurious to the national economy.

The 1941 amendment to section 710 (b) (3) and 710 (c) which extended to all corporations subject to excess-profits tax the privilege of carrying forward for 2 years unused excess-profits credits should also be broadened in order adequately to accomplish its purpose. This sound provision evidences a partial recognition by Congress that it is sound policy to regard the emergency period as a whole in measuring excess profits which are to be taxed. Here also, however, the effectuation of such policy is in substantial measure defeated by the shortness of the period within which the carry-over may operate. It is submitted that the period of the carry-over should be extended to at least 5 years, and that section 710 should also be amended to allow unused excess-profits credits to be carried back for a reasonable period, perhaps 2 years, so as to reduce excess-profits tax liabilities for such years. An appropriate provision should, of course, be inserted to prevent the beneficial use of the same unused excess-profits credit under both the carry-over and carry-back provisions.

Since it is probable that many corporations will suffer heavy losses during the period of readjustment following the present crisis and the termination of extraordinary expenditures for national defense, it is believed it would be wise policy to provide that corporations suffering such losses during the first 2 years after the termination of the emergency, such termination to be evidenced in such manner as the Congress may see fit to provide, shall be permitted to apply such losses against earnings during the emergency period, so as to reduce prior excess-profits taxes. There is legislative precedent for such a measure in the 1918 act, which permitted inventory losses in 1919 to be offset against 1918 income. Unless some such protective measure is provided, the resources of many corporations will be so depleted that they cannot weather the strain of such subsequent losses. Widespread bankruptcy and increase in unemployment will result.

It is therefore recommended that the law be amended in the following respects:

1. To extend the period of carry-over of net operating losses to 5 years for purposes of both the normal tax and the excess-profits tax.

2. To extend the period of carry-over of unused excess-profits tax credits to 5 years.

3. To permit unused excess-profits tax credits to be carried back for a period of 2 years.

4. To allow operating net losses to the extent thereof incurred during the first 2 years after the termination of the present emergency to be used, to the extent thereof, to offset excess profits net income during the emergency.

VII. *The excess-profits-tax rate schedules should be revised.*—Under the present law (sec. 710 of the code) the tax brackets in the rate schedule are based exclusively upon the amounts of excess profits without regard to the ratio of excess profits to the normal profits. This leads to the paradox that corporations A and B, which have the same amount of excess profits, will pay the same tax, although the earnings of A may be 50 percent of its invested capital or several times its base period earnings while the earnings of B, because of its greater

corporate size, may be only 9 or 10 percent of its invested capital or 5 or 10 percent in excess of its base period earnings. A schedule of rates so constructed destroys the character of the tax as a true excess profits tax and makes it a tax upon mere size. As such, it discriminates seriously against stockholders, large and small, of big corporations.

The excess-profits-tax laws of 1917, 1918, and 1921 were based upon the equitable principle that excess-profits-tax rates should be based primarily upon the ratio between the excess profits and the exempt profits, rather than upon the dollar amount of the excess profits. The brackets were so adjusted as to subject a reasonable amount of excess profits to taxation at the lower rates. The soundness of this principle was also recognized in the report of the Ways and Means Subcommittee under date of August 8, 1940.

The departure from this principle in the rate schedules as now constituted is responsible for many of the complexities of the existing law, such as the provisions in supplement B, relating to the highest bracket amount in supplement B. The statute could be considerably simplified by a return to the principle of the earlier acts.

It is recognized, however, that the Congress may deem it unwise to impose excess-profits tax at the higher rates on small income corporations. If so, such a result can be easily avoided by substituting for the present schedule a schedule, such as was contained in section 710 of the Senate bill in 1940, containing alternative excess-profits-tax rates based on dollar amounts of excess profits or the ratio to excess profits to the excess-profits credit. It should be noted also that the inequity of the present rate schedule becomes greater the higher the rates of tax which are applied.

It is therefore recommended that section 710 be amended to incorporate alternative tax brackets based upon the percentage ratio of excess profits to the excess-profits credit.

VIII. *Section 734 should be revised.*—This section was added to the code by the March 1941 amendments to the Excess Profits Tax Act. Its professed purpose is to provide for an equitable adjustment, in the form of an addition to or subtraction from the excess-profits-tax liability for the taxable year, when a determination of the excess-profits-tax liability treats an item in a manner inconsistent with the treatment of such item in determining the income-tax liability of the taxpayer or its predecessor for any prior taxable year, i. e., any taxable year beginning before January 1, 1940.

It is recommended that this section be carefully revised and the scope of its application more precisely defined. Otherwise, it is certain to have a very disturbing effect and to cause serious uncertainty and confusion. As now drawn, the provision may operate to produce an adjustment on account of inconsistency in the treatment of items as far back as 1913, including the wartime excess-profits-tax years with respect to which the bar of the statute of limitations has fallen long since. The result is that the taxpayer of the Bureau may be compelled to search through all the income-tax records from 1913 to date in order to ascertain whether the computation of the excess-profits credit for the taxable year involves the treatment of any item "in a manner inconsistent with the treatment accorded such item in the determination of the income-tax liability of such taxpayer or a predecessor for a prior taxable year or years." With respect to many of these years, the tax returns or other essential records and data may be no longer available.

The section in its present form leaves the meaning of several important terms undefined or obscure. For instance, what is meant by an "item"? Section 734 lacks the detailed provisions found in section 3801 of the code in this connection. What is meant by the term "inconsistent"? During the period of more than 25 years in which income-tax laws affecting corporations have been in effect there have been numerous changes in the statute itself, not to mention the changes in its practical application due to changing judicial interpretation. Is there "inconsistency" within the meaning of the section where the treatment of a given item in the prior taxable year was correct under the statute and/or regulations then in effect, merely because the statute and/or regulations prescribe a different rule for the taxable year to which the determination relates? Or is there "inconsistency" only when the treatment of the item in the prior year is found to be erroneous under the law which was applicable in that year? It is submitted that the latter is the correct rule. In any event, the section should leave no doubt on this basic question. Otherwise, it may become a Pandora's box of confession and controversy.

In this connection, attention is called to the fact that section 115 (1) of the code (sec. 501 of the Second Revenue Act of 1940), relating to earnings and profits of corporations, was made applicable retroactively to the date of enactment of all prior revenue acts. It is probable that such retroactive application may cause determinations heretofore made for certain prior years to be incorrect. It is possible that the treatment of certain items in the computation of the excess-profits-tax credit, such as accumulated earnings and profits and the basis of stock held or formerly held, in accordance with the principles prescribed by section 115 (1) may create an inconsistency upon which section 734 would operate. This would be a paradoxical result, since the inconsistency would not be due to the taxpayer's volition but would be forced upon him by statutory changes made by Congress itself.

In order to obviate any such result, it is recommended that section 734 be amended so as to make it inapplicable in any case in which the inconsistent treatment of an item in the taxable year is caused by a change in the statute. It is also believed that the same principle should apply to cases in which the inconsistency results from a change in Treasury regulations. Why should a taxpayer be penalized where in the tax returns for both years it has complied in good faith with the current applicable regulations, because it subsequently develops that the prior regulation was based upon an erroneous interpretation of the statute by the Treasury Department?

It is also recommended that section 734 be amended so as to impose a 6-year limitation upon its operation. This would mean that the adjustment prescribed by it would be made only where the inconsistent treatment of an item occurred in a taxable year beginning after December 31, 1935. Such a provision would accord with the limitation prescribed in the application of section 3801 of the code. This provision became law in section 820 of the Revenue Act of 1938 and its operation was confined to taxable years beginning on or after January 1, 1932. Such a limitation would obviate the interminable search of old returns and records to uncover possible inconsistencies in the computation of the excess-profits credit. In the absence of such a search, it is highly probable that both the taxpayers and the Commissioner will unwittingly adopt inconsistent positions in the taxable year and will not discover the fact until after a determination is made. It will then be too late to withdraw from the inconsistent position, even where the party would otherwise desire to do so.

It is recommended that at least three other amendments to the section be made in the interest of clarity and fairness.

(1) The relation between section 734 and section 3801 of the code should be precisely defined. While it is probable such a result was not contemplated or intended, it is possible that an adjustment might be required under section 3801 in a case to which section 734 had previously been applied. It is suggested that any possibility of double adjustment could be avoided by an amendment to either section 3801 or section 734 which would make section 3801 inapplicable in any case to which section 734 applies.

(2) Section 734 should be clarified to preclude the possibility of an adjustment with respect to a particular item, in the treatment of which inconsistency exists, to more than a single taxable year, preferably the first taxable year under the excess-profits tax law in which such inconsistency appears. It is probable that this is the intent of the present law. If so, it should be made clear. To illustrate: Suppose that corporation X, in its excess-profits tax return for 1940, claims a basis for depreciation with respect to an asset higher than the basis which would be consistent with the tax treatment accorded to the acquisition of the asset in a prior taxable year. The use of the higher basis for 1940 is sustained in a subsequent determination, and an adjustment is made in the manner provided by section 734 (c) and (d). In its return for 1941, such higher basis is again used by X and such use is sustained in a subsequent determination. Another adjustment under section 734 should not be made.

In accordance with the same principle of prevention of multiple adjustments by virtue of the same inconsistency, if X had first claimed the higher basis in 1938 or 1939 and, as a result of a final determination sustaining his claim, an adjustment had been made on account thereof in the manner provided by section 3801 of the code, no adjustment should be made under section 734 because such higher basis was used by X in computing its excess-profits credit for the taxable year 1940 and subsequent years.

(3) Doubt has arisen whether interest included in determining the amount of the adjustment in the manner provided by section 734 (d) loses its character as interest for other purposes under the revenue laws. For instance, where such

interest forms a part of the amount added to the excess-profits tax for the taxable year, is the amount thereof deductible by the taxpayer under section 23 (b) of the code, whether it be on the cash or accrual basis? Similarly, is the included interest, where the adjustment constitutes a decrease, includible in the taxpayer's gross income under section 22 (a) of the code, whether it be on the cash or accrual basis?

Any doubt on this score should be resolved by an appropriate amendment, thereby preventing unnecessary controversy and litigation.

IX. *Section 718 (c) (2) should be repealed.*—Section 718 (c) (2) of the code provides that, for the purposes of section 718 (a) and (b), relating to the determination of equity invested capital and reduction in equity invested capital, distributions to shareholders in any taxable year beginning after December 31, 1940, to the extent they do not exceed the accumulated earnings and profits as of the beginning of the taxable year, if made during the first 60 days of the succeeding taxable year, shall be considered to have been made on the last day of the preceding taxable year.

It is recommended that the above provision be repealed.

This provision was taken from a similar provision in the 1918 act, section 201 (e). Its purpose is undoubtedly to discourage postponement of distributions into a succeeding year in order to minimize or postpone the reduction in the equity-invested capital of the prior year. The effect of the provision, however, may be easily avoided by taxpayers, who are inclined to adopt this rather petty form of tax avoidance, by postponing the distribution slightly more than 60 days beyond the beginning of the subsequent year.

The presence of this provision in the law, however, is a source of confusion and uncertainty because it runs contrary to the general provision of the code (sec. 115 (b)) relative to the source of distributions, viz, that "every distribution is made out of earnings and profits to the extent thereof, and from the most recenly accumulated earnings or profits." Also, there is doubt as to when a distribution is "made" within the meaning of the provision. Must a dividend be actually paid within the 60-day period in order for it to be applicable, or is the date of declaration or the record date determining?

Since the provision is so easy to avoid and the abuse at which it is directed is not serious, and in view of the uncertainty it creates, it is believed its repeal is desirable.

X. *Sections relating to basis should be revised.*—(1) Adjustments to basis for invested-capital purposes, with respect to depreciation, depletion, etc., should be such as are appropriate to the basis for loss.

It has earlier been pointed out, in connection with recommendation No. I, relating to the elimination of the "tax basis" rule from section 718 (a) (2), that the reflection of adjustments to basis in the earnings and profits account, and, therefore, in invested capital, will be distorted in any case in which March 1, 1913, value is involved. This distortion is due to the fact that the adjustments to basis with respect to depreciation and depletion are required, under section 114 (a) and (b) of the code, to be taken to the basis for determining gain, while the basis reflected in invested capital under such sections as 718 (a) (2) and 720 (b), relating to admissible and inadmissible assets, is the basis for loss. It may be noted in this connection that section 718 (a) (5), relating to increase on account of gain on tax-free liquidation, and section 718 (b) (4), relating to reduction on account of loss on tax-free liquidation, do not specify whether the adjusted basis to be employed is that for gain or for loss. However, regulations 109, section 30.718-5, prescribe adjusted basis for determining loss. The statute itself should, of course, prescribe specifically in all cases which basis is to be used.

It is recommended that all the above sections, which prescribe the use of basis for loss in connection with the computation of invested capital, be amended so as to provide that adjustments to such basis which may be required shall, for purposes of the excess-profits tax, be such as are appropriate to the basis for loss. Such an amendment will be in accord with the sound principle contained in section 115 (1) (2) of the code, which provides that "where in determining the adjusted basis used in computing such realized gain or loss the adjustment differs from the adjustment proper for determining earnings and profits, then the latter adjustment shall be used in determining the increase or decrease above provided."

(2) It is recommended that the provisions of section 718 (a) (5) and 718 (b) (4) be limited in their operation to the case where property acquired by a parent

corporation on the liquidation of a subsidiary is thereafter sold or otherwise disposed of in a taxable transaction.

This result would accord with that provided by an exception in these sections in cases where the parent corporation has elected, under section 113 (a) (15) of the Revenue Act of 1936, as amended by section 808 of the 1938 act.

The above provisions, as now drawn, produce very unfair results in many cases by compelling an adjustment in equity-invested capital to be made in the year of the liquidation, rather than in the year when property acquired on such liquidation is sold. A simple illustration will demonstrate this fact. Suppose that X corporation owns all the stock of Y corporation, acquired at a cost of $1,000,000, which is also its adjusted basis for determining loss. Such stock is a part of X's invested capital but is treated as an inadmissible asset under section 720. If the stock were sold for that amount, there would be no change in invested capital as such, but the inadmissible asset would become an admissible asset. Suppose, however, that in 1941 X liquidates Y into itself under section 112 (b) (6) of the code. The fair market value of Y's assets, including goodwill and other intangibles, is at least $1,000,000, but the adjusted basis of such assets to Y prior to the liquidation is only $500,000. Y has no liabilities.

In the illustration put, were it not for section 718 (b) (4), the only effect of the liquidation upon X's invested capital would be to change $1,000,000, the adjusted basis of its stock in Y, from an inadmissible to an admissible asset. The effect of 718 (b) (4), however, is to compel X immediately to reduce its equity-invested capital by $500,000, the excess of its adjusted basis of the stock over the subsidiary's basis of the assets acquired by X on the liquidation. It is assumed, of course, that X's accumulated earnings and profits at the beginning of the taxable year were at least $500,000. Otherwise, the adjustment would not exceed the amount of such earnings and profits.

The only apparent reason for section 718 (b) (4) is that if X should subsequently sell all the assets acquired on the liquidation for an amount equal to its adjusted basis of the Y stock, thereby realizing a gain of $500,000 over the tax basis of the assets, earnings and profits would be increased by that amount. If no offsetting adjustment were provided by the statute, the result would be to "step up" X's invested capital by $500,000 over its actual investment in the acquisition of the Y stock. But this reason does not justify compelling the adjustment to equity capital to be made in the year of the liquidation. The hardship resulting to the parent corporation is apparent in the illustration and similar cases. Liquidations under section 112 (b) (6) are not commonly made with a view to a subsequent sale of the assets by the parent. On the contrary, they are usually for the purpose of continuance of the business of the subsidiary by the parent corporation. The hardship will be particularly severe where, as in the above case, a principal part of the value of the assets taken over consists of goodwill, trade-marks, and similar intangibles which can usually be sold only as a part of a sale of the business itself.

No unfairness to the revenue is apparent if the adjustment prescribed by section 718 (b) (4) is confined to cases of subsequent sale or other taxable disposition of property acquired on the liquidation. On the contrary, the correlative adjustment by way of increase in equity capital, provided by section 718 (a) (5), in cases where the parent's basis of the stock is less than the basis of the assets acquired, creates perhaps the most serious loophole for tax avoidance in the excess-profits-tax law. It is this provision which makes it possible for a corporation to acquire at depreciated prices the stock of another corporation with a high invested capital base and, by liquidating it into itself under section 112 (b) (6), forthwith to "step up" its own invested capital by an amount substantially in excess of its own actual investment.

The enactment of the amendment we recommend will, therefore, be in the interest of the revenue as well as equity to taxpayers.

XI. *Additional special relief provisions should be enacted.*—Congress has already manifested a desire that the excess-profits tax shall not operate inequitably or oppressively through taxing as excess profits earnings which are in reality normal profits. The fact that the Congress in 1940 insisted upon allowing the use of average-income experience during a standard period as the basic yardstick of normal profits is impressive evidence of this fact. The alternative invested-capital yardstick was in effect relegated to the status of a relief provision for those corporations which, by reason of low earnings or losses during the base period, would have been taxed unfairly if compelled to use the average-earnings formula.

Congress has also recognized, however, that neither of these yardsticks can be depended upon to afford equitable treatment to all taxpayers and that some provisions for equitable relief in meritorious cases are imperative. Much that is constructive has already been accomplished in such provisions as section 713 (f), the so-called normal growth provision, section 721, relating to abnormalities in income in the taxable period, and section 722, relating to abnormalities in income during the base period. Unfortunately, since the elimination of section 722 of the Second Revenue Act of 1940 by the March 1941 amendments, there is no provision whatever for relief in special cases involving abnormalities in invested capital. Many of these taxpayers may be able to get fair treatment by using the average-earnings method, but it is certain such will not be the case in many instances. Thus, there is a complete absence of any relief provisions for those classes of corporations which are legally compelled to compute their excess-profits credit, in whole or in part, on the basis of invested capital. They include new corporations, corporations having to construct an excess-profits net income for a part of the base period by using a percentage of invested capital, and many foreign corporations.

The fact is that no yardstick or set of yardsticks has yet been evolved which will measure excess profits or normal profits with tolerable accuracy in all cases. The variations and peculiarities of circumstances, including business and financial history, in individual cases is so great that no set of statutory formulas, however precise and elaborate they may be, will afford essential equitable relief in more than a majority of instances.

There are several reasons for this. One is the great complexity and diversity of business itself. Another is that the base period years of 1936 to 1939, inclusive, were not a period of normal earnings for business in general, much less for particular taxpayers. A third difficulty is that, in many businesses, invested capital is not the chief, or even a major, income-producing factor. Particular cases cover the whole scale from those where capital is the principal factor to those where its importance is almost negligible. The special provisions of section 725, relating to personal-service corporations, apply only to a fraction of the corporations where invested capital is relatively unimportant. Finally, there is no single normal rate of return which will suffice to attract investment of capital in all types of enterprise. The rate of return must necessarily vary considerably according to the degree of risk involved. It is believed that, in general, an 8-percent return on equity capital is about the minimum essential to secure such capital, but in many cases the hazard is so great that a higher rate is required.

All these factors combine to prove the necessity of a broad, equitable relief provision in order to prevent gross injustice in exceptional cases. The provision must be sufficiently flexible to permit the exercise of sound administrative judgment in order to adopt the relief to the peculiar facts of the individual case. It is therefore recommended that the law be amended so as to restore a general relief provision similar to section 722 of the 1940 act, which authorized the Commissioner to make such adjustments as may be necessary to adjust abnormalities affecting income or capital, his decision to be subject to review by the Board of Tax Appeals.

It is believed not only that such a general equitable provision is essential to avoid gross hardship in the case of many taxpayers but that it is necessary from the point of view of the Government itself. Without it, the expeditious administration of the law will be impossible. The Board of Tax Appeals and the courts will be flooded with cases of the most difficult kind. Taxpayers smarting under what they feel to be intolerable injustice will fight such cases to the bitter end. The collection of large sums of revenue will be seriously delayed, and the energies of the administratice staff will be diverted from other pressing tasks. The bulk of such litigation can be avoided if the commissioner has adequate power to make reasonable adjustments when he is convinced that equity and the general purposes of the law will be served thereby. The disposition of such cases will then proceed along normal channels of administrative settlement.

The situation of new corporations under the Excess Profits Tax Act is difficult in the extreme. To date, virtually nothing has been done to alleviate the shock of so heavy a tax upon new business enterprises. The "normal growth" provision is very helpful to corporations experiencing growth in the base period but affords no remedy for normal growth after 1940. A fortiori, it gives no relief whatever to new corporate enterprises which came into existence after the end of the base period. No argument should be necessary to show the stagnating effect upon the national economy, through the throttling of new enterprise, which this tax will have if it remains in effect for any considerable period of time. New enterprises

producing new goods and services of a kind which will not compete with the defense program, are needed right now as one safeguard against serious inflation.

The Canadian Government has recognized the seriousness of this problem in its Excess Profits Tax Act. The Canadian law has established a board of referees to which cases of inequitable hardship may be referred for consideration and appropriate adjustment by means of constructing a fair standard profit for a particular taxpayer in the light of all the relevant facts. This board is subject to reasonable limitations upon the exercise of its discretion, the chief of which is that the standard profit so constructed shall not be less than 5 nor more than 10 percent of its invested capital. Under a pending amendment, these limitations are relaxed with respect to taxpayers where capital is not an important income-producing factor.

The categories of cases in which this board may act, however, are broad. They include cases in which the standard profit computed under the general provisions is unfair either (1) because the industry to which the taxpayer belongs was in a depressed condition during the standard (base) period, or (2) because the taxpayer's business was in a depressed condition due to factors peculiar to itself, and (3) cases of new enterprises, a new enterprise being defined as one which commenced business on or after January 1, 1938. A further special provision, based on volume of production, is applied only to gold mines and oil and gas wells. The findings and orders of the board of referees are final and conclusive, unless disapproved by the Minister of National Revenue.

It is believed that equitable provisions at least as broad as these are necessary to prevent our own law from causing havoc and gross hardship in many cases. We, therefore, recommend a relief provision broad enough to apply to new corporations and to cases, such as those involving abnormalities in capital, which are not covered by more specific provisions of the existing law. If it is necessary to set up special machinery, comparable to Canada's board of referees, to assist the Commissioner in administering such a provision, we believe the general welfare requires that this be done.

We recommend that careful consideration be given to inclusion in the statute of additional yardsticks for measuring normal or fair profits.

(*a*) The so-called Stiles formula, which was presented to your committee during the present hearings, in which the excess-profits credit is determined by applying to the pay roll of the taxable year subject to social-security tax a percentage representing the ratio of profits (net income less normal corporation tax) to such pay roll during the base period. This formula has certain definite advantages which entitle it to serious consideration. Among these are: (1) It recognizes the fact that labor is as important or more important in producing income than invested capital in many enterprises; (2) it gives growing enterprises an opportunity and incentive to keep on growing as long as net profits do not increase more rapidly than labor's share in the fruits thereof; (3) it is simple to apply and relieves the taxpayers using this method of the costly burdens of computation of the excess-profits credit which the preparation of returns under the existing law involves; (4) by the use of Social Security pay roll, a taxpayer cannot inflate its excess-profits credit through payment of large salaries to officers and a restricted group of higher paid employees; (5) abuse of the use of the method can be limited by excluding cases where the net profits after taxes during the base period exceeded the social-security pay roll; (6) the adoption of the formula would not deprive a taxpayer of the right to use the average income or invested capital methods in case one or the other reaches a more equitable result.

We therefore recommend an amendment incorporating the principles of the above plan as an alternative method of computing the excess-profits credit.

(*b*) We recommend that your committee give careful consideration to the employment, as an alternative yardstick for measuring excess profits, during the taxable year of a ratio based upon the relation between net income after payment of corporate income taxes, other perhaps than the tax imposed by section 102 of the code, and gross sales or gross income from the manufacture and/or sale of goods and services during the base period. This formula has several of the advantages of the formula which employs social-security pay roll. It is based upon the principle that there is no excess profit fairly attributable to the defense program or to price inflation which may result from defense spending where a taxpayer's margin of profit on the sale of goods and services does not increase over such margin during the base period.

(c) We recommend that careful consideration be given by your committee to an amendment to provide specific relief to many enterprises of which the following case is fairly typical.

A corporation is organized during the base period or thereafter to develop a patent or to perfect and exploit some new nondefense product or service. It does not commence to earn sizable profits until 1940 or a subsequent year. By virtue of the nature of its business, its invested capital may be relatively small. Hence, its excess-profits credit, whether computed under section 713 or 714, is small and gives it little relief. As the other relief provisions of the existing law have little or no application to such a taxpayer, it will be compelled to pay as high as 55 or 56 percent of its net income in corporation normal and excess-profits taxes in 1940 or in subsequent years. It is difficult to believe that Congress intended that such a corporation should be mulcted in tax of so high a fraction of its profits attributable to manufacture of a new product rather than to an increase in business attributable to defense contracts.

It is suggested that a practicable remedy for cases of this type would be a provision which would allow such a taxpayer to use as a base period its first 4 taxable years under the excess-profits tax law, and to compute for use in subsequent years an average base period net income based upon its experience during such years, employing for this purpose the growth formula contained in section 713 (f), and excluding income, if any, directly attributable to defense contracts. It is suggested that, during the years in such period, the corporation's excess profits tax be computed according to the provisions of existing law, with a proviso that the total of tax payable, including corporation income and excess-profits taxes, shall in no event exceed 35 (40) percent of its net income. Net income, if any, attributable to defense contracts, however, should be excluded from the operation of this proviso and taxed at full rates.

We recommend that section 722 of the code be amended in such manner as to relieve a taxpayer, who has filed an application for relief in the manner provided by section 722 (e), of the burden of full payment of the excess-profits tax as computed without the benefit of the relief provision. Under the existing law, full payment of the tax so computed must be made, pending action by the Commissioner on the application for relief. If relief is subsequently granted, the excess in payment is refunded or credited.

The difficulty with this procedure is that there will be delay, amounting in some cases to several years, before there is a final determination of the relief, if any, to which a taxpayer is entitled. In the meantime taxpayers may be forced to pay and deprived of the use in its business of substantial sums which may be badly needed for various purposes. The receipt of a refund or tax credit some time later, even though interest is allowed, will often be an inadequate remedy. This problem was met in part in the 1918 act by a provision which placed a ceiling on the tax which had to be paid immediately of 50 percent of the net income. Under that act there was a maximum war-profits rate of 80 percent, and the war-profits and excess-profits tax was first to be computed and then deducted before computing a 12-percent income tax.

This 50-percent limitation was, therefore, the virtual equivalent of allowing a tentative credit of 37½ percent of the amount of the net income before applying the 80-percent tax, as shown by the following:

Net income	100.0
Credit	37.5
Subject to tax	62.5
Tax at 80 percent	50.0

The Canadian act goes still further, with the adoption of an official recommendation recently proposed. This recommendation reverses the prior procedure whereby relief is obtained from the board of referees after a return is filed and full tax under the ordinary rules has been paid. Instead, the taxpayer is permitted to compute his own tax, after taking into account the relief adjustments to which the taxpayer deems itself to be entitled. If the Minister of Revenue deems the return as filed to understate the tax, he refers the return to the board. If the board decides the tax paid to be too low, a deficiency is assessed on the basis of its findings.

In lieu of such a provision, which may be regarded by your committee as too liberal under our conditions, we recommend for your consideration as a tentative tax limitation to be inserted in the present law the following:

"In any case in which a bona fide claim for relief has been filed under section 722, the amount of tax originally payable by the taxpayer shall be the amount computed on the return regardless of any undetermined claim under section 722, except that in no case shall the original tax payment exceed the amount of a provisional tax computed with the allowance of an excess-profits credit (a) equal to one-third of the amount of the excess-profits net income, or (b) equal to the excess-profits credit claimed under section 722, whichever is the lesser amount."

Computations indicate that, unless more than 50 percent of the relief claimed is ultimately disallowed, the tax will not materially exceed the provisional tax paid. Since interest will have to be paid on any deficiency, the Government will be well compensated for any delay in payment. Provision might be made, if Congress deemed it desirable, that the limitation should not be applicable in any case in which the Commissioner should determine that collection of the tax would be placed in jeopardy thereby.

XII. *Supplements A and B should be revised.*—These supplements are by far the most complicated portion of the Excess Profits Tax Act. In their present form they represent an unsuccessful attempt to prescribe detailed rules to govern the effect of mergers, consolidations, liquidations, split-ups, and other tax-free exchanges upon the excess-profits-tax credit and the tax brackets. The draftsmen did not have time in 1940 to analyze the problems, think the policies through, correlate the two supplements, and perfect the language. Some of the most serious defects result from the fact that the supplements, particularly supplement A, were not thoroughly revised to keep abreast of the important shifts in underlying policy which occurred when the House bill was revised in the Senate and in conference. The consequence is that the supplements in their present form are unsound in policy and replete with loopholes, ambiguities, and inequities.

The situation with respect to supplement A was considerably improved by the March amendment to section 742 which permits a taxpayer acquiring corporation to elect to come under that supplement or under section 713. It is believed, however, that the best interests of both taxpayers and the Treasury require that these supplements be completely revised as soon as possible.

Since the considerable time needed for an adequate revision by your committee and the draftsmen may not be available at this time, we recommend the repeal of these supplements and the substitution of general statements of principle and policy, with the promulgation of detailed rules to effectuate the same left to departmental regulations. We further recommend that, in the event this course should be followed, the amended statute continue the provision making section 713 applicable unless a taxpayer acquiring corporation elects to come under supplement A, and that an appropriate saving clause be inserted to protect any reorganizations consummated prior to such repeal from the loss of any advantages to which the resulting corporations may be entitled under the existing law.

In the event that it is decided to retain detailed specific provisions in the statute, it is recommended that the following amendments be made, in the interest of sound policy and in order to minimize inequity and uncertainty.

(a) *Supplement A.*—(1) Subsections (a) (1) and (2) of section 742 should be carefully revised to eliminate the incongruous results which may arise where the taxable years of the taxpayer and one or more of its qualified component corporations are not the same. Under section 742 (a) (2) as now drawn, where the taxpayer is on a calendar-year and qualified components are on a fiscal-year basis during the base period, then the income of the latter could be included in the taxpayer's base period net income for 3 taxable years, while under a strict construction, none of such income could be included. There is no justification for such results, and they were probably unintended.

(2) Section 742 (a) (2) should also be amended to eliminate the limitation which permits the inclusion of the base period net income of a component corporation only if it is a qualified component. Since the act permits a taxpayer to use the credit based on income where it was in existence for only a part of the base period, there is no reason in policy for excluding such a component. Rather, its actual income should be includable and, in addition, either a base-period income should be constructed for the part of the period in which it was not in existence or its actual income should be averaged over that part of the base period in which it did exist.

(3) The very severe limitations contained in subsections (f) (1), (2), and (3) should be reexamined and, we believe, removed. There is no reason of policy in the act as now drawn for excluding, as does section 742 (f) (1), the base period net income, whether actual or constructed, of a taxpayer which was in

existence for only a part of the base period, with respect to the period prior to the date it became an acquiring corporation. Nor is there any more reason for subsection (f) (2) which excludes the income of a component corporation, which was actually in existence during only a part of the base period, prior to the time it becomes qualified itself under section 740 (f) by acquiring a qualified component corporation.

Subsection (f) (3) is unfair in that, in cases in which a qualified component was actually in existence at the beginning of the taxpayer's base period, such component's excess profits net income for the period prior to such date is excluded, though a corresponding inclusion of an additional period at the end of the base period, in order to make up 4 complete taxable years, is not allowed.

(4) Section 742 (f) (4) contains a reasonable limitation, but is defective, as now drawn, in that it does not apply to cases governed by section 742 (d) (1) and (2) (A). This appears clearly to be due to an inadvertent oversight in draftsmanship.

(5) A serious defect from the revenue point of view from the complete silence of supplement A as to the effect on a component corporation's separate income credit where its base period net income is included in the acquiring corporation's base-period income, but the component corporation remains in existence.

For example, section 740 (a) (1) (A) does not require the liquidation of a component corporation. After the transaction making it a qualified component, it may continue to exist and may sell stock of its acquiring corporation and realize income therefrom subject to excess-profits tax. It is apparently free to use the credit provided by section 713 measured by its own base period net income, even though its acquiring corporation also uses the income credit. This or similar transactions may be repeated several times, with like duplication in the use of the same base-period income in computing the excess-profits credit under section 713.

(6) The principle of the normal growth provision of section 713 (f) should be applied to taxpayers computing an average base period net income under supplement A. There is no reason why a taxpayer should lose the benefit of this excellent provision merely because it includes the income of one or more qualified component corporations in its base period income. Such acquisitions are a normal incident in growing enterprises.

(*b*) *Supplement B.*—(1) Section 751 (b) should be amended to eliminate unfair results which may arise under it. Suppose a transferee issues stock and bonds for property acquired. Under the section as now drawn, it may increase its equity invested capital only by that portion of the basis of the property which may be allocated to the stock. The bonds are wholly excluded from borrowed capital. The result is that where the transferor liquidates, as is often the case after such exchanges, invested capital equal to the portion of the basis allocable to the bonds is lost. This inequity should be removed by a limitation on section 751 (b) which would prevent its application in cases where the transfer of the property is followed by the liquidation of the transferor.

(2) The provisions of supplement B, particularly those relating to highest bracket amount (sec. 752 of the code) are very complicated and difficult to understand, but more nearly approximate fairness in result than supplement A. They should be simplified as much as possible, and section 752 can be eliminated if the brackets in the rate schedule are revised so as to be based upon percentage relations between excess profits and the excess-profits credit, in lieu of the present dollar amounts.

However, there is one serious flaw in subsections (b) (4) and (c) (4) of section 752 which should be corrected by appropriate amendment. The method therein prescribed, as applied to section 112 (b) (5) transactions involving several transferors, where 90 percent control does not become vested in any one of the transferors, produces a reasonable and equitable allocation of highest bracket amount only where the transaction is limited exclusively to corporate transferors. In cases where the bulk or a large part of the property transferred comes from persons other than corporations, the corporate transferors are unfairly mulcted of a disproportionate part of their highest bracket amounts to the benefit of such other persons.

It is believed that a fair solution of this problem would be to reduce the reduction of the highest bracket amount of the corporate transferors, as computed under the subsections (b) (4) and (c) (4) of section 752 as now drawn, by a percentage representing the ratio between the amount of property transferred by noncorporate transferors and the total amount of property transferred in the transaction.

C. *Amortization*

We recommend that several amendments be made to section 124 of the code, relating to the amortization deduction. These amendments are believed to be necessary if the principal purpose of this provision is to be realized. That purpose was to facilitate the carrying out of the defense program by encouraging private capital to finance, so far as possible, the great expansion of plant, machinery, and other facilities, which its successful execution requires. In the light of experience to date, this purpose has not been achieved to any material extent. The result is a tremendous additional draft on Government funds for financing facilities, the amount of private financing to date having been relatively very small. It is believed this reluctance on the part of private capital is due in substantial measure to the requirements of section 124 (1), which are proving to be impossible of expeditious administration. These obstacles in the way of the defense program should be promptly removed, as they can be without depriving the Government of any essential protection.

There are also two or three major sources of injustice in the section as now drawn which should be promptly corrected.

I. *There should be some revision of the base date.*—As it is now drawn, the privilege of amortization under section 124 is limited to emergency facilities. Section 124 (e) by definition limits the scope of this term to include only "any facility, land, building, machinery, or equipment, or part thereof, the construction, reconstruction, erection, or installation of which was completed after June 10, 1940, or which was acquired after such date, and with respect to which a certificate under subsection (f) has been made." The certificate so referred to is the certificate of necessity.

It will be noted that the privilege is limited to facilities construction of which has been completed or which have been acquired subsequent to June 10, 1940. This statutory language appears to deny the privilege only in cases where the completion of construction or the acquisition occurs prior to the base date. It has not been so interpreted, however, as the Treasury regulations limit the amortization allowance where construction of a facility was commenced prior to the base date to that fraction of its basis corresponding to the part of such construction attributable to the period after such date. Thus, if 50 percent of the construction was complete on June 10, only 50 percent of the basis of the plant or other facility can be amortized. Ordinary depreciation only is allowable as to the remainder. If the facility were constructed on land acquired for the purpose prior to June 10, no part of the cost of the land could be amortized, and ordinary depreciation would be denied since land is not subject to the depreciation allowance provided by section 23 (1) of the code.

The June 10 date operates very unjustly. It came into the law, apparently, as an afterthought. When it was announced from the White House on July 10, 1940, that the principle of a 5-year amortization allowance on necessary defense facilities had been approved by the President, the Secretary of the Treasury, and the chairmen of the Ways and Means and Finance Committees, there was no suggestion of any such limitation. The House bill fixed, as the decisive date, July 10, 1940. The only possible reason for such a date was that the above announcement, which said nothing about a deadline date, issued on that day. The Finance Committee changed the date to January 1, 1940, on the ground that plant expansion for defense purposes had begun at least that early and that it ought to be covered. The June 10 date was selected in the conference as a compromise. It happens to be the date on which the revenue bill of 1940 was reported by the Committee on Ways and Means.

The adoption of such an arbitrary date produces very unfair results. Amortization is allowed in one case and denied in another, not by reason of differences in the character or necessity of a facility required for the performance of defense contracts, but solely because of its completion after or before a fixed date. Many taxpayers who cooperated with the Government by going ahead with necessary expansion of plant and facilities are penalized, while those who waited until they could see what law would be written are given discriminatory advantages. Such discrimination is not justified by the argument that the amortization deduction was allowed in order to encourage free cooperation in the defense program and that only those who withheld such cooperation until the deduction was promised by high authority or actually enacted could have relied upon such allowance. This cynical proposition simply penalizes those who, at greater risks to themselves, cooperated promptly in the defense program.

We respectfully submit that discrimination such as this is not only unfair but is contrary to sound legislative policy and creates an evil precedent for the future.

We therefore recommend an amendment to section 124 which will permit a certificate of necessity to be granted where a defense contract is in all respects, other than the date of completion or acquisition of the facility, within the terms of the regulations.

It is believed this suggested solution is preferable to a change of the statutory date. Any date which might reasonably be selected would still be somewhat arbitrary and might shut out some cases where the deduction should equitably be allowed. It should be noted that the Canadian Excess Profits Tax Act solved the difficulty in this manner. The base date in the statute is September 9, 1939, unless the War Contracts Depreciation Board and the Minister of National Revenue are satisfied that in all respects save as to date, the contract satisfied the requirements of the regulations.

II. *Emergency plant facility (E. P. F.) contracts should be treated as sale contracts for tax purposes.*—It now seems very probable that the amortization deduction of many taxpayers having emergency plant facility contracts will commence earlier than their inclusion in gross income of payments received from the Government under such contracts. The reason for this lack of coordination between deductions and payments is that the deduction is tied in with the acquisition or installation of particular portions of the facilities, such as machinery, under section 124 (a), whereas the payments under the contract may commence only when the whole plant is completed. This lack of correspondence will work great hardship in cases where a taxpayer has insufficient income from other sources to offset the amortization deduction in one or more of the periods for which it must be taken.

The only reason for allowing the contractor under an emergency plant facility contract any deduction for amortization, when the contract guarantees it direct reimbursement of the entire cost of the facilities, is to protect him from taxation upon the amounts so received by him, the Treasury having already indicated that such amounts constitute income. (See T. D. 5016, sec. 19.124–6.) The provisions of emergency plant facility contracts provide for reimbursement in 60 equal monthly installments, presumably so that they will coincide with the tax deductions. It has been pointed out, however, that this assumption of coincidence of deduction and payment will often fail to be realized. Also, section 124 (b) has provided that, if such a contract is terminated in less than 5 years, and the Government is obligated to pay the unpaid balance in a lump sum, a deduction may be taken equal to such amount, in lieu of the deduction otherwise allowed.

We therefore recommend that section 124 be amended so as to specifically provide that no amortization of facilities under an emergency plant facility contract shall be allowed, and that payments under such contracts, to the extent they do not exceed the cost of the facilities, shall be excluded from gross income. The effect of this amendment is to treat such contracts for what they in substance are, i. e., sales on deferred payments.

III. *Section 124 (i), relating to certificates of nonreimbursement and Government protection, should be repealed or modified.*—Great difficulties have been experienced, both by taxpayers and the Government, in the application and administration of this section. This is due in part to ambiguities in the drafting of the section; in part to overlapping authority between different agencies and conflicting policies in its administration; and in part to baffling difficulties inherent in the concept of reimbursement itself.

The combined effect of these factors has been virtually to paralyze the administration of this provision. Only a handful of nonreimbursement certificates out of the large number applied for have been issued. The expeditious execution of the defense program is being materially impeded by this log-jam. The time and energies of large numbers of Government and corporate officials and employees are being absorbed by the onerous requirements which the preparation, analysis, and review of applications for certificates, and frequent supplements or amendments thereto involves. Burdensome expenses are entailed. The time and labor so consumed might better be devoted, in the national interest, to the execution of the defense program itself.

Default in the issuance of certificates will have the later result of clogging the Board of Tax Appeals and the courts with a flood of refractory cases. In these cases taxpayers will have claimed amortization deductions, which the commissioner has disallowed. They will seek to prove nonreimbursement in fact, in order to support such deductions, even though nonreimbursement certificates have not

been obtained. A heavy burden will thereby be thrown upon the Treasury Department.

While much can be done by suitable amendments to improve procedure under the section and to correct some of its ambiguities, we do not believe any solution can be found which will be entirely satisfactory, short of repeal of the section itself. This is due to the uncertainty in the concept of reimbursement itself. The problem is one which by its nature should be solved by proper procurement procedure. It ought not to be imported, as it has been, into the tax laws to complicate and confound their efficient administration. We therefore recommend its repeal.

If repeal is not possible, then we favor the immediate enactment of legislation, such as that which has recently been proposed by the War and Navy Departments, which will remove some of the serious defects which are susceptible to correction. The proposed legislation would centralize jurisdiction to grant the certificates in the single agency immediately concerned, such as the War or Navy Departments, the Maritime Commission, or such other agency as the President by regulation may designate.

The issue of reimbursement should, so far as possible, be determined in the negotiations establishing the price to be paid under the contract. Amortization should be denied only to the extent reimbursement is determined to exist. Under the existing law, the presence of $1 of reimbursement may result in the denial of any amortization upon a million-dollar capital outlay. The proposed legislation, as now drawn, does not correct this defect. We believe this omission is very unfortunate.

The requirement of a certificate would be limited by the proposed legislation to contracts involving a substantial minimum, viz, $15,000. This is a very meritorious provision. The burden involved in procuring a certificate is out of all proportion to the benefits thereof unless the amount of the contract is substantial.

Under the proposal, the certificate requirement should not obtain with respect to purchases by all the Government departments. The proposed legislation wisely limits the requirement to contracts made with the United States and made on its behalf by the War or Navy Departments, the Maritime Commission, or such other department or agency as the President may designate.

One provision of the proposed legislation apparently requires the submission by the taxpayer, whenever practicable, of its estimated costs, in connection with the determination of whether there is any element of reimbursement contained in the price. We believe this provision is dangerously broad and is objectionable for several reasons. First, the statute provides no adequate safeguards against disclosure of valuable information which the cost schedules or other data submitted may contain, safeguards such an exist in connection with income-tax returns and information obtained by revenue agents in the audit thereof. Second, there is no apparent necessity for requiring such information in the case of contracts let upon the basis of competitive bids. In the case of cost-plus-fixed-fee contracts the information must already be made available. In any event, the new requirement might well be limited to contracts for new articles and perhaps negotiated contracts. Finally, compliance with the requirement may impose heavy additional burdens of expense upon the taxpayers affected.

The rigid requirement of a proprietary interest in the Government, as a condition to a certificate of Government protection in all cases, is burdensome and unnecessary. In many cases, a stand-by agreement or other contract obligation will amply secure the public interest. Power should be given to the Executive by regulation to make flexible adjustments in these and other requirements in order to adapt them to the practical realities of individual cases. Unfortunately, this problem is not covered by the proposed legislation.

We favor and recommend the enactment at this session of Congress of the proposed or any other legislation which will accomplish these and other improvements in the statute which may be necessary. The success of the defense program should always be kept in mind as the primary objective.

Respectfully submitted for the Committee on Federal Finance, Chamber of Commerce of the United States.

ELLSWORTH C. ALVORD, *Chairman.*

AUGUST 15, 1941.

(Senator Guffey requested that the following letter be incorporated in the record:)

PENNSYLVANIA STATE CHAMBER OF COMMERCE,
Harrisburg, Pa., August 25, 1941.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance, United States Senate,
Washington, D. C.

DEAR SENATOR GEORGE: Representing and speaking for business and industry in a State which is the keystone of the Nation's defense structure, contributing about 8 percent of the national-defense production and Federal internal revenues, the Pennsylvania State Chamber of Commerce is conscious of the patriotic duty to voice its views on methods of financing defense that will be currently effective without impairing the recuperative strength of the country when the present emergency has passed.

On June 5, 1941, the executive committee of the State chamber issued a statement on taxes for national defense. The basis of this statement was an intensive study made by the chamber's joint committee on taxation and Federal legislation, the members of which have a practical grasp of the economic and technical phases of national taxation. The well-considered conclusions reached by these representatives of Pennsylvania business warrant the serious consideration of your committee. Therefore, they are being fully set forth below, with added comments and certain specific recommendations for modifying existing and proposed Federal revenue laws.

TAXES FOR NATIONAL DEFENSE

We join with the President and Congress in recognizing that the national-defense program is paramount. Its demands transcend the interest of every man and every group. It must have priority over politics and pocketbooks. National unity in our defense effort cannot otherwise be achieved.

Obviously we cannot carry on either business or government as usual from now on and adequately meet our defense needs. While the task of building our defense is primarily one of greatly increased physical production, yet it must not be overlooked that a sound economic organization and financial stability are equally essential to effective military preparedness.

Problems of defense financing unparalleled

Secretary Morgenthau has estimated that expenditures for the next fiscal year will be about $19,000,000,000. He suggests that two-thirds of this amount, or $12,700,000,000, be raised by taxation and one-third by borrowing. He estimates that existing tax laws will produce $9,200,000,000 of revenue, leaving $3,500,000,000 to be raised by additional taxes. Other authorities have estimated expenditures and revenues in varying amounts.

The magnitude of estimated expenditures clearly indicates that financing the national-defense program presents a most serious and unparalleled problem. To say the least, the cost is difficult to approximate and may be limited only by the amount it is possible to spend during any fiscal period of the emergency.

Increased yields from present taxes

Sound fiscal planning requires that before any additional taxes are imposed, a most careful estimate should be made of the probable yield under existing tax laws. Further, any deficiency in revenue requirements for defense purposes should be made up insofar as possible by reducing so-called normal Government expenditures.

Recent forecasts of 1941 national income have varied from $85,000,000,000 to $90,000,000,000, as against the currently quoted estimate of $80,000,000,000. At the revenue-revision hearing of the House Committee on Ways and Means, a well-known economist conservatively estimated that national income would reach $95,000,000,000 in 1942.

Federal, State, and local taxes now require over 20 percent of the national income. Increased national income will produce increased Federal revenues under present tax laws. Therefore, estimates of revenue under present laws should be carefully determined in the light of greatly expanded business activity, before substantial changes are made in the existing tax structure.

Retrenchment in nondefense activities of Government

It is essential that any deficiency in revenue requirements under present laws should be made up as far as possible by—

1. Suspension of every activity of the Federal Government that may not be characterized as essential in the light of the present emergency. It would be neither just nor wise for Congress to enact the exceedingly heavy taxes proposed without demonstrating that the Government is willing to match the sacrifices it asks of the people by cutting down its own nonessential spending.

2. Achievement of rigid economies with respect to all remaining Government services.

Principles of taxing and borrowing

After drastic reduction in nondefense spending of the Government, so much of whatever additional revenue is required should be raised by taxation as the national economy will stand, with due regard to preserving our system of private enterprise and preventing inflation. The remainder should be borrowed. The amount to be borrowed should not be determined according to a fixed ratio. Too great a tax burden will seriously interfere with industry and retard production for defense purposes.

To finance the requirements of the defense program will necessitate the united and cooperative efforts of public officials and all the people. We deplore any attempt to enact additional revenue legislation that unfairly discriminates against, or in favor of, any class or group, or fails to distribute equitably the burden of added taxation resulting from the defense program.

Additional revenues for the emergency

To the extent that any new or additional taxes must be imposed, we offer the following specific suggestions:

1. A flat rate pay-roll tax, without exemptions; collected at the source.

2. A slightly higher flat rate tax on dividends and interest; also collected at the source.

3. Elimination of all tax-exempt securities.

4. Increase in the normal tax rate on personal incomes, but no increases in surtax rates.

5. Reasonable increase in excess-profits tax rates, with retention of both the income and invested capital credit bases as now provided by law.

6. Reasonable increase in rates on all excise taxes and broadening of the base by including other items or commodities, if necessary.

All new and additional taxes for the defense program should be imposed primarily for revenue purposes and be limited to the period of the national emergency.

Broadening of tax base essential

If additional taxes must be levied, then a broadening of the tax base is necessary. Without a broader tax base, serious doubt exists—in view of the present high tax rates and the size of the public debt—whether adequate revenue can be produced without permanently impairing our productive economy and drying up the sources of Government revenue.

Total annual income under $5,000 per consumer unit, i. e., families or self-supporting individuals, is estimated by the National Industrial Conference Board to aggregate $60,000,000,000, or 75 percent of a current $80,000,000,000 national income. Thus, consumer units with annual incomes of $5,000 or over, representing some $20,000,000,000, or 25 percent of the total national income, are bearing the brunt of existing Federal taxation.

It is both unjust and unwise to emphasize further this unbalanced condition. The defense program is for all the people. Accordingly, all should be taxed for it, in proportion to their means and in keeping with the sound fiscal policies which this critical hour demands.

Since the above views were published, the Revenue Act of 1941 (H. R. 5417) has been passed by the House of Representatives and is now under consideration by your committee. The following additional comments are submitted:

NONDEFENSE EXPENDITURES

We cannot emphasize too strongly that sound fiscal policy demands utmost economy in nondefense spending by the Federal Government. We urge the suspension, during this emergency period, of every activity of the Federal Government that is not essential in the light of the emergency and rigid economy with respect to all remaining activities. Curtailment of nondefense expenditures by the Government would be a convincing argument that the need for additional revenue is real, and would promote a greater willingness on the part of the people to accept the burden of additional heavy taxes.

After maximum reduction in nondefense expenditures, so much of whatever additional revenue is required should be raised by taxation as the national economy will stand, with due regard to preserving our system of private enterprise. The remainder should be borrowed.

BROADENING OF THE TAX BASE

It is imperative that the tax base be broadened if the additional revenue required to be raised by taxation is to be secured without drying up the source of private capital. Individuals having annual incomes of $5,000 or over, who now bear the brunt of existing taxation, are further called upon to bear the major part of the burden of the additional taxes proposed by H. R. 5417. Only a minor part of the burden will fall on those having annual incomes of less than $5,000. This latter group now receives approximately 75 percent of the national income and will receive an even greater proportion of the increase produced by defense activities.

We submit that all recipients of national income should bear a reasonable share of the burden of rearmament based on ability to pay. The suggested reduction in personal exemptions will not accomplish this purpose. Therefore, we urge the imposition of a flat-rate pay-roll tax, without exemption, on all compensation paid, to be collected at the source. This levy should be accompanied by a provision allowing credit against the individual's income tax for any such pay-roll tax withheld.

EXCESS-PROFITS TAX

Corporations are now required to comply with an excess-profits tax law which undoubtedly is the most complicated taxing statute ever enacted by Congress. It should be greatly simplified. Not only is the law difficult to apply, but it contains numerous inequities.

We further submit that only true excess profits should be taxed as such. Normal profits are in no sense excess and should not be so taxed. In passing the Second Revenue Act of 1940, Congress recognized the difficulty of determining excess profits by permitting the use of either the income or invested capital basis for establishing the excess-profits tax credit. Inequities will result from the elimination of the income basis, as recommended by the Treasury Department. We strongly urge your committee to retain in the law the present option of determining the excess-profits credit on either an income or invested-capital basis.

The following specific recommendations are made so as to tax uniformly only true excess profits:

1. Rates of tax upon excess profits should be graduated according to the ratio of excess to normal profits, as represented by the excess-profits credit, and not according to the dollar amounts of excess profits, as in the present law and proposed amendment. Discrimination against the owners of stock in large corporations as against stockholders in small corporations, will result unless this principle is recognized.

2. One hundred percent of base period income rather than 95 percent should be permitted as a credit in the case of taxpayers electing to use the average earnings basis. Otherwise, 5 percent of normal profits will be taxed under the guise of excess profits. Also 8 percent of invested capital rather than 8 percent on the first $5,000,000 and 7 percent on capital in excess of $5,000,000 should be allowed taxpayers electing to use the invested capital basis.

3. Provision for deducting the normal tax in determining excess-profits tax net income, as included in existing law, should be retained. Normal income tax should be treated as an ordinary expense in determining profits subject to an excess-profits tax. The only justification for denying this deduction is to increase the tax yield, which could be accomplished by raising the tax rates.

4. We are unalterably opposed to the special excess-profits tax of 10 percent, proposed by section 201 of H. R. 5417. The imposition of this special tax would operate to tax as excess profits, earnings below a normal return on capital.

5. The law should provide that losses incurred during the period of readjustment following the termination of the national emergency, should be allowed as deductions in reducing taxable income for income and excess-profits taxes, retroactively over the period of the national emergency.

We also suggest the following technical amendments to improve the workability of the act.

1. A corporation should be permitted to establish its invested capital on the basis of the determination made under the 1917 to 1921 acts, adjusted to December 31, 1939.

2. Section 716 of the existing law should be amended to give taxpayers the option of using a daily, monthly, or annual basis for determining average invested capital.

3. The law should expressly provide that the right to an excess-profits carry-over is in no way affected by the nonfiling of a return or the incompleteness of the data shown on a previous year's return. The carry-over provided under the 1940 act should not be recomputed.

The law should also provide that where a return is not required at the time of filing any elections available if a return had been filed can be exercised at any time until the tax liability is finally determined.

(4) Section 734 of the existing law should be revised to apply only to the years 1936 to 1939, inclusive.

(5) The amortization provisions of the existing law should be amended by eliminating section 124I.

CAPITAL-STOCK AND DECLARED-VALUE EXCESS-PROFITS TAX

The capital-stock tax and its companion measure, the declared-value excess-profits tax, should be repealed. These taxes have been a constant source of irritation to business, because they substitute guesswork for sound principles of taxation. They are measured by forecasting income for 3 years in advance. Under present conditions, only a Jeremiah could forecast income for 1941, let alone 1942 and 1943. These taxes should be repealed, but, if retained, the law should provide for a new election in determining the declared value of the capital stock each year.

The Pennsylvania State Chamber of Commerce had planned to present the foregoing views through an official spokesman appearing before your committee. However, since most of the recommendations have been ably presented orally, it is desired to conserve the committee's time by submitting this written statement to be included in the printed record of the hearings held on H. R. 5417 in lieu of a personal appearance. If the committee so desires, a representative of the chamber will gladly amplify this statement.

The careful consideration by the Finance Committee members of all the foregoing suggestions will be appreciated.

Respectfully submitted.

E. M. ELKIN, *Chairman*,
C. L. TURNER, *Vice Chairman*,
Joint Committee on Taxation and Federal Legislation.

The CHAIRMAN. John W. Hooper.

STATEMENT OF JOHN W. HOOPER, BROOKLYN, N. Y., CHAIRMAN OF THE COMMITTEE ON FEDERAL TAXATION OF THE BROOKLYN CHAMBER OF COMMERCE

Mr. HOOPER. I am John W. Hooper, comptroller, American Machine & Foundry Co., appearing on behalf of the Brooklyn Chamber of Commerce Committee on Federal Taxation of Corporations.

The Brooklyn Chamber of Commerce, in the city of New York, through its Federal taxation committee in cooperation with an advisory group from the Brooklyn Chapter of the National Associa-

tion of Cost Accountants, has closely followed the proceedings of the Committee on Ways and Means in the House of Representatives and has carefully considered insofar as time has permitted, the Revenue Act of 1941, introduced as H. R. 5417. While we differ in some respects as hereafter referred to, broadly speaking, in our opinion, the Ways and Means Committee have acted constructively in continuing the two bases—Invested capital and Prior years earnings—as methods for computing the theoretical normal earnings of corporations for excess-profits tax purposes. In order to conserve time, we are limiting our observations to the most essential points of tax legislation.

Congress should take lead in reducing expenditures for peacetime activities.—We recognize that neither the Ways and Means Committee nor the Senate Finance Committee appropriate money. Nevertheless, expenses and revenue are so closely interrelated that these committees, in performing their revenue-raising functions, can and should be a powerful factor in emphasizing to the Appropriation Committees the urgent need for retrenchment. The conviction is growing in the taxpayer's mind that we cannot carry on simultaneously an expanding defense program and unabated Government peacetime activities. In New York at least, taxpayers are shocked to learn that such tremendous long-term outlays as those for the St. Lawrence waterway and the Florida ship canal are being urged in the name of defense. Many taxpaying businesses and industries are thus being asked to finance their own eventual demise in the name of projects which cannot be completed for many years. The citizens generally will be bending their back under burdens of taxation and mounting debts, the proceeds of which are being spent in ways which threaten the existence of the institutions and the ways of life they are striving to protect. The taxpayers are looking to the Congress to maintain the distinction between a social revolution and the defense program so that we shall not be unwittingly or otherwise deprived of our birthright.

Emergency revenue legislation should have definite time limit.—Taxpayers should be given assurance of eventual relief by writing into the law a definite time limit on the emergency revenue legislation, thereby retaining in the Congress control over the essential functions of financing the Nation. The emergency nature of defense taxation must not be overlooked at any time.

Senator CONNALLY. What time limit would you put on that?

Mr. HOOPER. Just the period of the emergency.

Senator CONNALLY. You think we will be able to quit paying taxes then? Do you believe that in your lifetime we will be able to substantially reduce this $50,000,000,000 we owe without these taxes?

Mr. HOOPER. Not quit paying taxes but have the form of taxation changed to a more equitable one. This is an emergency law only, supposed to be designed for the period of the emergency.

Senator CONNALLY. We are going to have an emergency as long as we owe all this money.

Mr. HOOPER. That is true; but I don't think we will have to employ an emergency method of raising these funds.

Business control measures should be removed from tax legislation.—The taxpayers, individual and corporate, realize that they will be called upon to meet increasingly heavy tax burdens and will do so

willingly. However, in order that the faith of the taxpayer be not betrayed, any regulatory intention toward business should be considered separately from the tax legislation. In other words, the power to tax should be used for fiscal purposes only. A pertinent example of using the taxing power for control is the levying under existing law of excess-profits taxes at rates graduated according to specific dollar amounts rather than according to percentages of excess-profits credits.

Form and application of excess-profits tax should be simplified.—The tremendous cost of preparation and administration of returns of the excess-profits tax constitutes a nondefense expenditure which could be used to good advantage otherwise by both taxpayers and Government bureaus. Since the proposed changes of substance in the application of the excess-profits tax and the substantial increase in the rates are in themselves a frank admission that the primary purpose of the tax is revenue production and not the originally announced objective of recapturing excess profits, it is most advisable that simplification of the form and application of the tax in every possible way should be uppermost in the minds of the legislators now considering amendments of the act.

Special assessments board should be established.—In addition to the maximum simplification, we urge that in view of the many uncertainties which will inevitably remain, there be expressed the intention of the Congress that this law be liberally administered to avoid the interminable conflict between taxpayers and administrative bureaus which was the result of previous excess-profits tax administration. In furtherance of a liberal attitude in administration there should be included provision for a special board independent of the Treasury, with authority to carry into effect this intention and thus afford relief in cases where specific abnormality provisions do not apply.

Caution should be used in the adoption of additional forms of taxation.—In the interest of ameliorating the burdens which are being placed upon taxpayers and administrators alike, we strongly advocate that utmost care be exercised in the creation of additional forms of taxes now and urge that there be no general modification of present tax formulas at least until taxpayers generally have had opportunity to judge the effect of their application and adjust themselves to the taxes thereby imposed. Needless to say, a constantly changing and shifting burden is the hardest to carry under any circumstances.

Many such changes are included, or are being urged, and considered for inclusion, in the present bill. Those which would be most violent in effect are the following:

Alternate bases for computing excess-profits credit should be retained.—The Treasury is urging the elimination of the earnings basis as a method for computation of the excess-profits credit. There seems to be danger of forgetting that the alternative computations of the excess-profits credit are for the purpose of safeguarding the taxpayer's right under any just excess-profits tax, to limit the taxation to income which is in fact in excess of normal actual income and in excess of an established rate of return on invested capital.

Special 10-percent tax is unjust penalty which should be eliminated.—A special 10-percent tax is proposed to be assessed on those corporations where the excess-profits credit based on invested capital exceeds a credit based on their preemergency net income. This special

tax is unfair and burdensome in the case of companies using the invested-capital method in that it presumes that all earnings before income tax and surtax, in excess of its preemergency earnings up to 8 percent and 7 percent of its invested capital, are due to the emergency. Investigation will disclose that many growing companies will be unjustly penalized by this special assessment and that other companies which would ordinarily have enjoyed a return in the neighborhood of 8 percent on invested capital before normal and surtax, were it not for the depression, will also be burdened although their activities are in nowise related to the defense program of the country. We feel that any special taxation levied against income within the limits of the excess-profits credit is not only unfair but discriminatory. This type of taxation is typical of the unnecessary complexities added by the proposed legislation to an already bewildering situation.

Senator CONNALLY. You represent the American Machine & Foundry Co.?

Mr. HOOPER. No; I represent the Brooklyn Chamber of Commerce.

Senator CONNALLY. But you are an official of the American Machine & Foundry Co.?

Mr. HOOPER. Yes.

Senator CONNALLY. Your company has procured a lot of contracts as a result of this emergency you referred to?

Mr. HOOPER. We have some contracts.

Senator CONNALLY. Well, you wouldn't have those except for this emergency, would you?

Mr. HOOPER. We might not have those.

Senator CONNALLY. These materials which are being bought; they must be paid for.

Mr. HOOPER. We are paying for them plenty.

Senator CONNALLY. You are not paying for them yet; you won't unless we pass this bill.

Mr. HOOPER. Our objection is to the form of the taxation. This 10 percent I am speaking about is a most unjust tax.

Senator CONNALLY. You are earning more than you did last year and you are doing so as a result of this activity on the part of the Government.

Mr. HOOPER. No; we are not.

Senator CONNALLY. I am talking about this American Machine & Foundry Co. If you weren't, you wouldn't be down here talking to Senators to get contracts.

Mr. HOOPER. We haven't talked to any Senators to get contracts.

Senator CONNALLY. You are making a lot of money, aren't you?

Mr. HOOPER. No, sir; we are making about 4 percent.

Senator CONNALLY. That is 4 percent gross on the contract?

Mr. HOOPER. Yes; that is right, and we are working 23 hours a day to get it.

Senator CONNALLY. It might be 10 or 15 percent on your invested capital?

Mr. HOOPER. The percentages quoted are fantastic, as American's net return on defense work for the first 6 months of 1941 was 2 percent of its invested capital. And I want to say we have not been going around to Senators getting war contracts.

Senator CONNALLY. Well, you got them without it; I congratulate you.

Mr. HOOPER (continuing):

Procedure of assessing excess-profits taxes before income taxes should be reversed.—The assessment of excess-profits taxes before normal income taxes is a perversion of the relation between the two taxes and results in nullification of a substantial portion of the rates of excess-profits credits fixed in the law. Corporations which earn more than their excess-profits credit under the invested-capital method find their allowable rate of return reduced to inadequate percentages running from 4.9 percent to 5.6 percent, as pointed out in the report of the Ways and Means Committee. That is the 8-percent figure less the 30-percent normal rate. We would rather face greater direct tax rates on excess profits than have exemption decreased by the indirect method employed in the proposed legislation.

Carrying forward of unused excess-profits credit should be extended and provisions liberalized.—The excess-profits credit carry-forward provisions of the present law should be amended. At the present time the law permits carrying forward of unused-excess-profits credit for 2 subsequent years. There should be an extension of this principle so that the carrying forward will be permitted until all previously unused excess-profits credit has been used; otherwise there will be taxation of normal profits which happen to occur in a single year in the cases of corporations having wide fluctuations in earnings from year to year. There should also be provision for keeping open for adjustment the excess-profits-credit computation for all years of the emergency period and adding thereto unused-excess-profits credit for not less than 2 years after the close of the emergency period, to prevent taxation of apparent profits which were not realized, the actual net amount of which can only be ascertained after passing through the subsequent adjustment period, which includes the 4 percent which we in the American Foundry & Machine Co. figure on the books is being made.

Full amount of average base period net income should be allowed.—The full amount of the average base period net income should be allowed as an excess-profits credit, there being no logical reason for arbitrarily reducing it to 95 percent.

Provision should be made for adequate income on invested capital.—The provisions of the proposed bill for return on invested capital are inadequate. The proposed legislation allows a return of 8 percent on the first $5,000,000 of capital and 7 percent on the capital in excess of $5,000,000. After deducting the proposed normal and surtax of 30 percent, these returns are reduced to 5.6 percent and 4.9 percent, respectively, and are further reduced to the extent of the 10-percent special tax levied against earnings in excess of income in the pre-emergency period, as previously referred to. These rates of return are utterly inadequate if a corporation is to successfully interest new equity capital. Further, they do not allow for setting aside necessary reserves for contingencies. The act does provide for a 10-percent rate of return on new capital, but such rate is reduced to 7 percent when the normal tax and surtax are deducted, which rate of itself, in the light of the risks and personal income taxation, is insufficient.

Period for adjustment of inconsistencies should be limited.—Section 734 of the Excess Profits Tax Act provides for adjustment of inconsistencies, with payment of taxes and interest going back for an unlimited period of years. This leaves taxpayers in a position of uncertainty and jeopardy with respect to matters which have been properly settled and closed. It is our opinion that this adjustment period should be limited to not more than 5 years prior to 1940, and in view of the extraordinary type of legislation represented by the Second Revenue Act of 1940, as amended, and the proposed 1941 Revenue Act, collection of interest by either the Government or the taxpayer under section 734 should be waived.

And in this connection I think one of the finest expositions of the difficulties under section 734 was made the other day here by Mr. Blodgett, of Boston. (See p. 140.) One of our main troubles with it, aside from not understanding it, is the definition of the various phrases. I am not a lawyer, and I thought I read it through and got some idea of its intention, but when the experts read it through, it is just impossible.

Present capital-stock tax and declared-value excess-profits tax should be repealed.—The taxation absurdity now known as the capital-stock tax and declared-value excess-profits tax, the speculative features of which are unjustifiable under any circumstances and particularly so under present difficult and changing conditions, should be repealed. The least that can be done in common justice is to give the taxpayer opportunity each year to adjust the valuation guess upward or downward instead of compelling a 3-year prophecy under such unpredictable conditions.

The only justification for that law is the fact that it does raise money for the Treasury; that is the only justification that anyone can see. At least, what could be done would be to permit the taxpayer an opportunity to adjust his valuation guess which he is required to make upward or downward each year instead of requiring him to try to predict 3 years in advance under present conditions.

Discriminatory tax on radio broadcasting should not be enacted.—The proposed Revenue Act of 1941 levies a special tax on the net time sales of radio-broadcasting companies, per section 601 of title VI. Although the industry affected is generally outside the scope of business activities represented by the Brooklyn Chamber of Commerce, we cannot let this opportunity pass to protest the introduction of such a form of taxation. The singling out of a specific industry for special taxation of its gross income allegedly justified because it is operating under a special Government privilege is alarming to many businesses operating in whole or in part under Government franchises. Such taxation is revolutionary and destructive. A tax on gross income levied without relation to the net income of the taxpayer is not only objectionable but is in many instances confiscatory. The fact that the broadcasters may earn a high rate of return on a small invested capital does not mean that their earnings are excessive and therefore should be subject to special taxes not levied on other businesses.

Ingenious and wasteful tax devices should be eliminated in interest of economy.—At a time when national resources of manpower and materials must be conserved in the interests of defense, we urge the importance of avoiding waste and stress, the need for efficiency in matters of taxation, recommending in this connection the elimination of special

ingenious devices of taxation which may be very interesting as intellectual exercises when time is available, but which are wasteful, annoying, and tend to stimulate ill will rather than cooperation between the agents of Government and the taxpayers at a time when utmost cooperation is essential. A few examples are as follows:

Requirement in the law for computation of invested capital based on daily balances, under certain conditions—which balances are seldom available in taxpayers' records.

Requirement that dividends paid within the first 60 days of a taxable year be deducted in computing invested capital.

Capital-stock tax and its companion, declared-value excess-profits tax.

The 10-percent tax on portions of the net income under the special rule in section 201 (a) (2) of H. R. 5417.

Recomputation of excess-profits credit carry-over under proposed 1941 law instead of continuing the carry-over as originally determined by the law recognizing it.

Taxation to make up deficiency in revenue.—The apparent deficiency in revenues brought about by elimination of the provision for a joint husband-and-wife return should not be made up at this time by arbitrarily adding or increasing taxes. The amount of the deficiency is small when compared with the enormous expenditures being made during the defense period and the amount planned to be raised by the bill. Taxpayers and legislators alike need time to experience the incidence of the present taxes and determine a more scientific and rational application thereof to the purchasing power of the Nation. The present concentration on the earnings of a small sector, comprised in large part of incorporated businesses and its investors, must be relieved if they are to survive. We are of the opinion that provision for this comparatively small addition to the total deficiency may well await consideration of the next session of the Congress, particularly in view of the large savings possible in the curtailment of nondefense spending. If the Congress is confirmed in the opinion that the deficiency be provided for the 1941 revenue bill, then we recommend that it look to the broad purchasing power of the Nation to raise the money and, if necessary, to the lowering of the personal exemption for purposes only of the normal income tax on individuals, or a withholding tax such as suggested by Mr. Alvord.

And before closing, I will say I listened to Mr. Alvord's very interesting exposition of the subject and our committee would have mentioned many facts which he has made unnecessary. We therefore wish to go on record to the effect that we are 100 percent in accordance with the recommendations of the United States Chamber of Commerce. Further, I would like to record our agreement with the thought expressed here that developments on the part of industry during this period should be encouraged taxwise, so that when the emergency is over industry will be in position to come out with some new things to enhance employment. I think it is a very important thing that he mentioned.

Senator BAILEY. You would favor his recommendation of withholding at the source this 3 percent regardless of whether it was a $90-a-month stenographer or $50,000-a-year lawyer; regardless of ability to pay?

Mr. HOOPER. Yes.

Senator TAFT. Of course, with the surtax on that?

Mr. HOOPER. Yes; but I do think a little consideration should be given to those brackets which are now being so hard hit. I think the 3 percent should be given consideration in those cases.

The CHAIRMAN. Mr. Alexander King.

Mr. KING. At this time I would like to yield to my colleague, Mr. Gibson, of the Pioneer Rubber Co., Willard, Ohio.

The CHAIRMAN. Will you indicate something as to the length of your testimony?

Mr. GIBSON. About 7 minutes.

STATEMENT OF J. C. GIBSON, PIONEER RUBBER CO., WILLARD, OHIO

Mr. GIBSON. Mr. Chairman and gentlemen of the committee, I think it is about time to have 5 minutes of serious entertainment. The manufacturers of toy balloons particularly, and likewise all rubber toys will be adversely affected if a 10-percent excise duty is placed on these products. Rubber toys of all kinds, and particularly toy balloons, are in competition with products made of various other materials, and it will seriously handicap them if they are taxed, and all other toys exempted.

By far the largest number of toy balloons are sold to the retail trade—to the children of America—at 1 cent apiece. This selling price is set substantially by the producer, and through the years, merchandise has been built to fit into this price structure. The balloons themselves are sold by the factory generally in the neighborhood of 78 or 80 cents per gross. This enables the jobber who purchases them to dispose of them at approximately 95 cents a gross to the retailer, who, for servicing 144 sales, receives a gross profit of approximately 50 cents.

If a 10-percent excise tax is placed on this product, it will mean that the penny item is immediately raised to about 90 cents per gross, including tax, to the jobber which does not leave sufficient margin for him to handle toy balloons, and thereby eliminates such merchandise from the market, for without adequate jobbers' sales efforts and services, the merchandise could not be expected to move.

Another phase of the problem is, that we cannot decrease the size of balloons readily, and give the child a smaller balloon for his penny, because of the aluminum priorities. Toy balloons are made on forms that are made of aluminum. They are mounted on strips and 4 or 5 strips are then attached to a board so that it is possible to make perhaps 150 balloons at one dipping. Were there no limitations on aluminum, it would be possible to have new aluminum forms made, and the child would have to be satisfied with an item of smaller size for his penny. We have built up some pretty big sizes for a penny. In order to cut these sizes, if we must, will require new forms. You say we can melt them. True, but we can only save 10 percent, thereby requiring us to look for the 90 percent of virgin rubber.

Senator TAFT. Virgin aluminum?

Mr. GIBSON. Yes; virgin aluminum, which we cannot get.

We have just cut off a few of these knobs that I have here [indicating].

It is impractical to place an excise tax on toy ballons because they are made from latex; that is, liquid milk rubber. The latex is not readily preservable. In warm weather it will sour, in cold weather it will freeze. In view of this, it seems impractical to store it. And even if it were practical to store it in steel drums or tanks, it would be impossible to get such storage equipment in adequate quantities without taking it from defense needs.

Therefore, by placing an excise tax on toy balloons, you would simply be taxing the children, and the poorest children in America at that.

Senator CONNALLY. How is the tax levied in this bill; is it on the manufacturer?

Mr. GIBSON. If you will just give me one moment, I will give it to you; I have it here.

You would be taxing the child who buys a little rubber article, and by the use of air and sunshine, inflates it and beautifies it, so that he has a whole armful of fun for his penny. Are those children with their good influence for morale, to be penalized? Are these little children going to be totally deprived of a penny balloon while all the rest of the toy industry is exempted? Have we come to a point in this richest country in the world where the little child will have to carry the burdens that are taken from the shoulders of others?

Senator CONNALLY. Yes; but how is this tax levied; does the manufacturer pay it, in this bill?

Mr. GIBSON. Yes.

Senator CONNALLY. And you say that you are going to pass this tax to these poor little children you have been talking about; you won't exempt them but will take their heart blood?

Mr. GIBSON. I suppose we will have to, if you pass this bill.

The toy-balloon industry consists of 10 factories, 9 of which are located in the State of Ohio and 1 in Illinois. These plants furnish employment to 983 people, mostly women. If this excise tax is imposed on the manufacturers of toy balloons, and not on various competitive articles, such as various toys, candy, and so forth, the discriminating public, and particularly the discriminating child, who has no more than a penny to spend, is sure to eliminate toy balloons from his purchases—incidentallv, those are the balloons which will have to be made shorter if we cannot get the rubber—thus seriously affecting the employment of these 983 people—of these, 547 women. It will offer cold consolation for such to know that the wealthy husbands and wives have won their point and may continue to file separate income-tax returns and saving them hundreds of thousands of dollars a year, if their representatives in Congress, in an effort to make up these losses, turn to the factory workers and the children of America and make them jointly contribute in a desperate effort to raise the required revenue.

Toy-balloon manufacturers recognize the necessity of revenue in this time of emergency. They have accepted without complaint increased minimum wages, higher corporation, income, and excess-profit-tax rates. By exempting them from this excise tax, and permitting them to do a near-normal business, the Government will receive more in taxes than can be expected from a reduced volume which would result, should this tax be imposed.

Have you stopped to consider that this bill proposes exactly the same excise tax for the child's toy balloon that it does for furs, safety-deposit boxes, radio-receiving sets, air conditioners, sporting goods, luggage, electric mixers, motion-picture films, and so forth? On the other hand, section 541, of the admission-tax provision, exempts paid admissions of less than 10 cents. Is the child who buys a penny balloon to be taxed for that, and the moving-picture house exempted on 9-cent entrance fees?

It is our considerate opinion that the United States Government will receive a greater amount of revenue from income-taxes on the toy-balloon industry than they would receive by burdening the industry with this 10-percent tax, which would logically substantially reduce the volume of business, so that it would be beyond the realm of reason to expect that the tax would apply on today's normal production, for it is evident that with such a penalty, we could not rightfully expect more than half of present-day production. Factories operating on such a limited basis would have their earnings seriously affected by virtue of the excessive overhead and burdens due to operating on a low-quality, or high-cost production basis.

Can it be that the provision to tax rubber toys is an effort to conserve the use of rubber?

In 1940 the rubber industry used 648,000 tons of rubber; in 1940 the rubber-toy industry used about 2,500 tons of rubber—I am talking about the conservation of rubber—and in 1940 the toy-balloon industry used about 523 tons of rubber.

The entire toy-balloon industry consumed an average of 43½ tons a month, 4 tons per factory, employing an average of nearly 100 people each.

About half a ton of crude rubber gives employment to one person for a year in the toy-balloon industry.

You readily see that an infinitesimal amount of rubber would be saved, even if the entire toy-balloon industry were put out of business. The dangerous thing would be the effect on employment of nearly 1,000 people, in an effort to discourage the use of a fraction of a paltry 500 tons of rubber used in the manufacture of toy balloons.

Toy balloons constitute only 2.6 percent of all toys, games, and so forth. All rubber toys, including toy balloons, total only 5.9 percent of all toys, games, and so forth.

In conclusion, the question and the only question involved is whether out of over one hundred million dollars worth of toys sold in the United States annually, rubber toys are going to be penalized. The question is, can you in fairness exempt all other toys and place this burden on rubber toys only? There seems to be no logical middle ground—tax all toys or exempt all toys including toy balloons. We are not objecting to the tax so much as to the discrimination. The Revenue Act of 1932 recognized the wisdom and necessity of such a course.

Now, in closing, we are going to leave these balloons here for you to take home to your grandchildren. I want to request that you put in this paragraph here [indicating] just two words after the word "surgical," namely, "rubber toys."

The CHAIRMAN. Any questions?

(No response.)

The CHAIRMAN. All right. Thank you.

Mr. Edward A. O'Neal?

Mr. O'NEAL. I am prepared to go ahead, but I think it will take about 35 minutes, and I think you gentlemen are worn out. I therefore think it would be preferable for all concerned, if we did not start at this hour when you gentlemen are tired.

The CHAIRMAN. We would be sitting 35 minutes more.

Mr. O'NEAL. No; I didn't suspect so; I think you will all run out.

Senator TAFT. Do we meet tomorrow morning?

The CHAIRMAN. No. I think it would be best for you to be here and be heard next week. File your brief anyway, then. We will be in session anyway.

Mr. O'NEAL. I will be here, but I have a conference with the Secretary of Agriculture.

Senator JOHNSON. Are we going to have the 10-minute rule in effect next week?

The CHAIRMAN. Yes; we are.

Mr. O'NEAL. I will have to leave town—after Monday, I have an engagement.

Senator CLARK. I think we can hear him next Monday.

Mr. O'NEAL. I would like to have the opportunity to be heard on behalf of the farm people, at least the 3,000,000 in our Federation.

Senator CLARK. I think you would get better attention on Monday.

Senator TAFT. I think it will be possible to hear you.

The CHAIRMAN. All right, you will be with us again, then, next week.

Mr. Cowles. Mr. John Cowles.

STATEMENT OF JOHN COWLES, PRESIDENT, THE MINNEAPOLIS STAR JOURNAL AND TRIBUNE CO., MINNEAPOLIS, MINN.

Mr. COWLES. I would like to call your attention to provisions in the proposed tax bill which seem to put a discriminatory and inequitably heavy tax burden on those companies that are least able to carry it. I refer to companies which have a proportionately large amount of debt so that a big share of their invested capital is in the form of borrowed money and which also had small or no earnings during the base-year period of 1936 through 1939 and so must use the invested-capital instead of average-earnings method of computing excess-profits taxes.

Many persons who have not studied all the provisions of the bill assume that corporations may earn 8 percent on their total capital, or even more if their base-period average earnings were higher, before becoming liable for the excess-profits tax.

Actually, the way the bill is drawn, those companies whose capital structure includes a substantial proportion of borrowed money and who likewise because of lack of base-period earnings must rely on the invested-capital method of computing taxes must pay excess-profits taxes long before reaching the 8-percent return figure. Borrowed-money capital is, in the first place, counted at only 50 percent of its face, and in the second place one-half of the interest paid out is added to the actual net earnings and the excess-profits tax is computed on an artificially inflated earnings figure.

The way the thing works out, as I understand it, is that a corporation that has borrowed money, whether bonds, notes, or bank loans, can only

earn on such borrowed capital one-half of the difference between the interest rate paid and 8 percent, without being subject to excess-profits taxes on those earnings.

To use a specific illustration, the company I represent has about twice as much borrowed capital as equity capital. In round numbers we owe $5,000,000—largely in term notes—on which we pay 4 percent interest. As the law stands, we can only earn 2 percent above interest on that $5,000,000 without being subject to excess-profits taxes.

Moreover, if I understand the bill's terms correctly, which in this case I hope I do not, companies like the one I represent that did not have big earnings in the 1936-39 base-year period and so cannot use average earnings, are further penalized and discriminated against by having to pay an additional special 10-percent tax that is not levied against those corporations that did prosper in the base period. If my impression is accurate and we do have to pay this additional 10 percent, then under the terms of the bill we could make, after interest, only 1.6 percent on that portion of our capital that is borrowed money without being subject to heavy excess-profits taxes.

And that 1.6 percent which we would be allowed to earn is of course subject to the normal Federal income and defense tax of 30 percent, leaving us net 1.12 percent as the maximum above interest that we may earn on our borrowed capital without paying excess-profits taxes.

The point I want to emphasize is that unless a company that is in debt is allowed to make more than 1.12 percent or even 1.4 percent above interest on its borrowed capital without becoming liable for heavy excess-profits taxes it will be almost impossible for such companies ever to pay off their debts and get into strong, sound, financial condition.

If any types of companies are to be favored, not as a gift but in order to keep our whole free-enterprise system of private capitalism functioning, it should be those companies that are struggling with debts. If companies with large debts are allowed to make net, free of excess-profits taxes, only 1 percent, or 2 percent, or even 3 percent above interest on their borrowed capital, many of them will not be able to meet their debt-retirement provisions and may be forced into receivership even though, paradoxically, they are at the same time paying big so-called excess-profits taxes.

The way the bill is drawn, wealthy debt-free companies and companies that prospered greatly from 1936 through 1939 and are consequently far better able to pay large taxes than the weaker companies will actually pay excess-profits taxes at only a fraction of the rate that companies in the category of the one that I represent will pay.

While we will pay heavy excess-profits taxes after making only a 1 and a fraction percent return above interest on that portion of our invested capital structure that consists of borrowed money, other corporations may make five times as large as proportionate return with no excess-profits-tax liability. And the strongly entrenched, rich companies have no debt-retirement obligations while the companies that are in debt must meet their regular debt payments or go into receivership.

My specific suggestions for correcting the inequities are:

First, that all companies using the invested capital basis for calculating taxes be allowed to earn 8 percent on their borrowed capital as

well as their equity capital before becoming subject to excess-profits taxes. Of course, companies owing debts would have to pay their interest out of that 8 percent.

Second, that in computing a company's excess-profits taxes, the actual net income be used, instead of adding back half of the interest paid to secure an artificial and fictitiously high figure on which to base the excess-profits tax. The recipients of the interest are also paying taxes on it, so there is no justification in taxing it twice. The argument that companies not needing additional capital might borrow solely to increase their invested capital base and so reduce their taxes, could be met by a provision in the law that only borrowings made prior to, say, August 1, 1941, could be included as invested capital unless the corporation could demonstrate that the additional borrowings were required for bona fide working capital needs.

Third, that the special additional tax of 10 percent levied on those corporations using the invested capital alternative instead of the average-earnings method be eliminated. If either group is to pay a heavier tax as a premium for being allowed to choose its alternative method; such heavier tax should be levied on companies selecting the average-earnings method, because such selection indicates earnings in excess of 8 percent on their capital.

Unless changes along this general line are made many companies with heavy indebtedness face receivership. A debt-free corporation should not be allowed to make several times as high a return on its capital, without paying excess-profits taxes, as a corporation that has outstanding debt to retire.

We must not limit, moreover, the establishment of new business enterprises only to those individuals or existing corporations that have sufficient accumulated capital so they will never need to borrow money to develop and expand such businesses as they may start. We must allow all companies a chance to make a reasonable return on their capital, borrowed money as well as equity, or our whole system of free enterprise will dry up.

The present bill is based on the erroneous theory that farmer who has a $4,000 equity and a $16,000 mortgage to pay on his farm should be taxed more heavily than a neighbor who has a $20,000 farm clear of debt.

In its present form the bill penalizes the companies least able to pay by taxing them on a proportionately much higher basis than the companies whose financial position and past earnings records make them much more abundantly able to pay the taxes that are needed.

The CHAIRMAN. Mr. Watson. Mr. Morris Watson.

STATEMENT OF MORRIS WATSON, NEW YORK, N. Y., REPRESENTING AMERICAN PEOPLE'S MOBILIZATION

Mr. WATSON. My appearance is on behalf of the American People's Mobilization, 1133 Broadway, New York City, of which I am the labor representative and a member of the national executive board. The A. P. M. as it is known, is made up of individual members, local councils and branches, and affiliate organizations which include labor unions, fraternal societies, nationality groups, and so forth. Because of some duplication, it is impossible to estimate the exact number of

persons represented. It has been variously estimated at somewhere between eight and twelve million. The organization or movement is supported by individual and group contributions. Its policies are set by a national council in consultation with local councils and affiliate organizations.

The primary concern of the movement is the complete military defeat of Hitler and the total destruction of fascism abroad and at home.

To that end, we are opposed to the tax bill now pending before you. We believe that increased production is a prime necessity. Such increase depends upon skill, muscle, and efficiency, and they in turn depend upon health and morale. Therefore, in our view, anything that lessens health and morale endangers the safety of the Nation.

We have the resources to build a strong Nation, and with that strength and our traditional love of democracy we can achieve victory over fascism and wipe fascism from the face of the earth. Let's start now in this tax business. The Treasury literally is pouring billions of dollars into the coffers of corporations. These same corporations, and others, are raising prices, by one device or another, and capturing more and more of the substance of the people. It is from these corporate profits that the Nation can get its taxes without impairing the national strength.

The position of my organization, in brief, is that the tax bill should:

1. Restore the proposed mandatory joint return for husbands and wives, and thus plug up the scandalous loophole through which the very wealthy have been able to dodge their share of taxation.

2. Restore the $1,000 exemption for single persons and $2,500 exemption for married persons and family heads.

3. Provide for an effective excess-profits tax of 80 percent or more on profits which are above 5 percent of invested capital; eliminate the "average earnings" option of computing excess-profits credits; place profit limitation on defense contracts; restore the undistributed-profits tax; and repeal the 20-percent amortization privilege.

4. Drastically increase all brackets for estate and gift taxes with exemption for not more than $10,000, plus a like amount of life insurance.

5. Tax all income from Government securities.

6. Tax capital gains at full rates, and disallow capital-loss deductions against ordinary income.

7. Eliminate excise taxes on consumers' necessities, and reject completely any notion of a sales tax or wage tax.

In other words, the new bill should tax those who can pay taxes and still eat and live like human beings.

A glaring example of the inequity and inadequacy of the present tax bill is found in the report of P. W. Litchfield, chairman of the board of Goodyear Tire & Rubber Co. In accordance with the provisions of the present bill this company has set aside $8,158,406 to pay its income and excess-profits tax from 1941 earnings. In the same period of 1940—that is, the first 6 months—the company paid $1,097,875 in similar taxes. The increase this year is 643 percent. That sounds like a lot. But wait. The net profit for the first period of this year, after providing for taxes and reserves, is $6,196,756, as against $4,142,892 in that period last year. A profit increase of 49 percent. But wait again. In the first 6 months of 1940 the company set aside no reserves. This year it set aside $3,500,000 in reserves.

In other words, the Goodyear Tire & Rubber Co., as well as a lot of other corporations waxing rich on the defense program, can pay a lot more in taxes than is provided in the bill, and still wax rich.

That is not so of the salaried people, the wage earners, the little people, the vast majority of the American people. They have no "nets" and "reserves." Prices of foodstuffs go up and they eat less. Rents go up and they crowd into smaller quarters. On top of these things, you legislators increase their taxes! Down goes their standard of living! They get sick and weak, and we say that's a heck of a way to run a nation in a time of great peril, or any other time.

The alarming number of rejectees of selective service demonstrate that already too many people in this country don't get enough to eat and don't live as they ought to live. Last May, Brig. Gen. Lewis B. Hershey, reported 380,000 rejectees out of 1,000,000 men examined. To do anything but strive for correction of this situation is to help Hitler toward enslavement of the peoples of the world.

Finally, we must confess complete lack of ability to understand a system of taxation which says the people shall live on less and the corporations on more.

I should like to put the report of the Goodyear Rubber Co. in the record.

I thank your committee for hearing me.

The CHAIRMAN. All right. Thank you.

(The report referred to and submitted by Mr. Watson is as follows:)

SOME FACTS ON THE FIRST HALF OF 1941 FOR STOCKHOLDERS AND EMPLOYEES

(By P. W. LITCHFIELD, chairman of the board, the Goodyear Tire & Rubber Co.)

FOREWORD

For the past several years I have issued a somewhat informal report of our operations to our employees and stockholders in conjunction with the formal annual report. In these informal reports I have sought to give a nontechnical explanation of the forces and factors with which management had been dealing and thus to provide both stockholders and employees with a better understanding of Goodyear.

Because the first 6 months of 1941 were unusual in so many respects and because the influences of those first 6 months will continue to exert themselves upon our operations for an indefinite period ahead, it was deemed advisable to submit the following comment at this time rather than to wait for the close of the year.

GENERAL COMMENT

The first half of 1941 broke all previous Goodyear records in such important matters as total sales, tonnage of rubber products produced, pay rolls, and personnel employed.

Even the figures for the first half of 1929, considered the all-time boom year in American business and industry, were substantially exceeded by those of the 6 months just ended.

Under normal conditions, an achievement such as this would be viewed with unbounded gratification. But we must recognize that the dominant factor in our operations during the first half of 1941 was the national emergency. National wage levels advanced substantially during the period, thus providing increased buying power, and prospects of shortages in various lines of goods stimulated business enterprises and individuals alike to "stock up." This served to create an abnormal market for goods of all kinds resulting in a situation akin to the first stages of inflation. It would be imprudent in the extreme were we to base our expectations for the future on such records as these. On the contrary, we

must interpret current figures as the forerunner of changes which will come with the return of more normal times. That is why we are now setting up substantial reserves and in other ways endeavoring so to manage our affairs as to emerge from the present unsettled period with strength to meet the new conditions.

The continuing interests of our stockholders and employees obligate us to such a course.

With that policy in mind, it may be of interest to stockholders and employees to review some of the detailed figures covering the first 6 months of the current year.

We realized from the sale of our products	$152,931,046
As compared with a figure for the same period of 1940 of	$101,055,607
An increase of—percent	51
On June 30, 1941, we employed in our world-wide operations, persons	[1] 58,411
As compared with same date last year—do	48,996
An increase of—percent	19
We paid out to our employees, in salaries and wages	[2] $39,651,708
As compared with a figure for the same period in 1940 of	$30,319,353
An increase of—percent	27
In accordance with provisions of the bill now pending in Congress, we have set aside out of 1941 earnings for United States income- and excess-profits taxes	$8,158,400
As compared with our domestic tax charges for the same period of 1940 of	$1,097,875
An increase of—percent	643
Our net profits after providing for taxes and reserves of	$6,196,756
Compare with those for the first half of 1940 of	$4,142,892
An increase of—percent	49
Out of the 6 months' receipts we have set up as reserves for contingencies	$3,500,000
As compared with reserves set up during the first half of 1940 of	None
The tonnage of rubber goods we produced was—pounds	453,610,000
As compared with a figure for the same period in 1940 of—do	352,568,000
An increase of—percent	28

[1] Including coolie labor employed on our rubber plantations in the Netherland India.
[2] This figure does not reflect substantial wage increases placed in effect in our domestic plants in mid-June.

DEFENSE WORK

Under the pressure of our country's defense needs, Goodyear is continuing to expand its efforts in this field.

Our subsidiary, the Goodyear Engineering Corporation, is under contract to operate a large powder bagging plant at Charlestown, Ind., construction of which is now being rushed to completion. This plant is wholly owned by the Federal Government through its Defense Plant Corporation. It is situated on a 4,500-acre tract adjoining one of the world's largest power manufacturing plants.

Our subsidiary has assisted in the supervision of construction and will take over its operation under a lease arrangement which involves no investment on our part. Personnel for the management of the plant is being drawn from the parent company.

Our largest single new activity is the fabrication of metal parts for airplanes. This work is carried on by our subsidiary, the Goodyear Aircraft Corporation. Currently 2,000 persons are employed in this work, our organization having been built during the past few months around a nucleus of technicians and skilled workers who had gained experience in the fabrication of light metal alloys during the construction of airships.

This organization will be expanded to probably 10,000 employees upon completion of plants which are now under construction on land adjacent to our airship dock at Akron Airport.

The output of this organization goes to primary manufacturers of airplanes, we serving as subcontractors.

We are under direct contract with the Navy for the production of nonrigid airships for coast defense patrol and are now in process of expanding our facilities for this work.

Another major expansion is going forward in our division of wheel and brake assemblies for airplanes. We have been in this business for a great many years since it naturally links itself with the manufacture and sale of airplane tires. Growing demand for our products has necessitated the planning of a new manufacturing building which is expected to be completed this fall.

A long list of other defense products, such as barrage balloons, life rafts, self-sealing fuel tanks and combat tires, most of which were enumerated in our annual report for 1940, are being manufactured at sustained or accelerated rates.

RESEARCH

For more than three decades, Goodyear has devoted much time and effort to scientific research and development in our endeavor to improve standard products and to develop new products. Defense needs have magnified the importance of such work to a marked degree.

Accomplishments in this division have ranged from the development of a widely used accelerator of rubber vulcanization, known as Captax, to our own type of synthetic rubber which we have named "Chemigum." The first successful rayon tire was worked out in our laboratories. A rubber resin, named Pliolite, was discovered by Goodyear and is now being used in the manufacture of improved lacquers, water resistant paper coatings and a number of other products. Soon another Goodyear plastic, Plioform, may be used in certain ways to replace aluminum and the scope of its eventual usefulness is wide indeed.

We have developed various other plastics which are finding application in many fields and our exclusive product, Pliofilm, is being used more and more widely in the packaging of foods and other commodities which require protection against evaporation or moisture.

In the immediate field of defense we have developed a very efficient bullet-sealing structure for airplane fuel tanks, a practical and compact airplane motor suspension, advanced types of barrage balloons, and a number of other items used in modern warfare, the details of which we are not permitted to discuss.

Much of the work we are now doing is likely to have application in future peacetime markets since our development of an outstanding synthetic rubber has vastly expanded the limits of scientific research. Combining the known elements of the natural rubber with those of the synthetic rubber we can clearly see opportunities for a whole series of new processes, new plastics, and new organic chemicals which lend themselves to specific application in fields as yet untouched.

The swing away from natural materials to synthetics is one of the most important developments our industry has ever known, and the benefits will be translated into terms of meeting the expanding needs of mankind.

THE SITUATION IN RUBBER

In a recent public statement, I ventured the opinion that there will be enough rubber, even under present restrictions now imposed by the Government's effort to build up its own stock pile for defense, to meet the legitimate requirements of the general public.

Until there is an adequate reserve for defenses, the amount of rubber which the Government will make available for public consumption will continue to be limited. Tire production during the next 6 months will be at a reduced rate as compared with the first 6 months, but since it now appears that the level will not be below that of 1940, I do not believe such reduction will work a hardship on the public or our dealers.

Bear in mind that there is no actual rubber shortage today. At least a 6 months' normal supply is on hand in America and the commodity is being received at our ports in amounts which exceed current needs.

The complications arise out of the possibility that our supplies, which come from Malaya and the Netherland Indies, may be reduced or shut off by subsequent developments of the war.

Meanwhile, our policy is in complete accord with the Government's program, and we are willing in every way to cooperate with this intelligent plan for preparing for the worst possible emergency that may arise.

(Whereupon, at 5:10 p. m., an adjournment was taken until 10 a. m., Monday, August 18, 1941.)

REVENUE ACT OF 1941

MONDAY, AUGUST 18, 1941

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Josiah W. Bailey presiding.

Senator BAILEY. The committee will come to order.

Senator George, the chairman, is necessarily detained for a short time. He requested me to act as chairman.

I wish to make several announcements. Several days ago, the committee voted to impose a time limitation not to exceed 10 minutes, on all witnesses, with the privilege of submitting a written brief or statement to supplement oral testimony.

Those wishing to file briefs in lieu of oral testimony must submit them to the clerk of the committee by August 23, Saturday, the closing date of the hearings.

On the calendar for today, and the remainder of the week, are a number of witnesses on the same item. Wherever possible the committee wishes that the witnesses consolidate their testimony and select one spokesman in order to avoid repetition and duplication and to expedite the hearings.

Now, the first witness this morning is the Honorable James Lawrence Fly, Chairman of the Federal Communications Commission.

We will hear Mr. Fly. I understand that there is no time limitation on him.

Mr. FLY. Thank you, Mr. Chairman.

Senator JOHNSON. Mr. Chairman, in regard to witnesses who are on the calendar and who do not appear to make an oral statement, there will be no objection to putting their briefs into the record?

Senator BAILEY. If they get them in by the 23d.

Senator JOHNSON. They can present them today, if they are here.

Senator BAILEY. They can present them if they are here.

All right, Mr. Fly.

STATEMENT OF HON. JAMES LAWRENCE FLY, CHAIRMAN, FEDERAL COMMUNICATIONS COMMISSION

Mr. FLY. Mr. Chairman, I am afraid it is a bit presumptious of me to come before this committee on a matter of this kind, because I know this is something on which there are many attendant problems, and I fully appreciate that this committee is far more expert in this field than I am, or than I may ever hope to be. Therefore, I do not want to be guilty of presuming too much here, or extending into a field where I have little competence.

I do think that where the committee will be interested in specific figures, it might be well if the committee would assign to me, or conceivably to some representatives of the broadcasters, the duty of working up those figures. We did spend some considerable time studying the effect of this tax upon the different classes of organizations in the business, but the results are not easily to be attained, in view of the fact that one must consider the combined effect of this tax in the light of income and excess-profits taxes.

As I understand the figures of the Treasury, while there has been some indication that this tax upon broadcasting will net around $12,000,000, I believe the Treasury has indicated it would be probably around 4½ to 5 million in terms of its net effect. Therefore, I am not talking about a relatively large sum. At the same time, even that sum placed upon the broadcasting industry is substantial, because despite the prominence of the industry and despite its great significance in the broad public service it renders, it is not a big industry in a money sense.

There are a few general observations that I should like to offer for what they may be worth to the committee, I am sure you are all familiar with the fact that the broadcasting industry renders a great deal of public service. Much of the time, and much valuable time, of the industry is devoted to public-service programs, and there I am not referring simply to the Farm-and-Home hour, and Toscanini, and that sort of thing, although they are highly valuable, but more in point is the extensive time devoted to public debate, to speeches of you gentlemen, and of other public figures in the discussion of the great issues of the day. That not merely occurs today, that is a continuing practice in the industry and has become, if not a rule, certainly a consistent habit of this industry to carry a great range of public-service programs, and they are limited not merely to the field of political discussions, affairs of state, but to various other civic, charitable affairs, and that sort of thing.

Perhaps one of the most valuable public services which the industry renders is the extensive news gathering and dissemination. We take it for granted on Sundays, when we hear broadcasts from Singapore, from Cairo, from Hong Kong, Tokio, Manila, Moscow, that that is a routine broadcast. Of course, that is hardly routine. That is not merely a highly technical and difficult operation, but a highly expensive one, and in terms of returns to the public, I think we will all agree it is a very valuable service.

Now, in addition to those general items of service which I have so crudely outlined——

Senator VANDENBERG (interposing). You omitted the fireside chats. They are very important.

Mr. FLY. Yes, sir; they should be included, Senator Vandenberg. A great deal of time nowadays is devoted to Government programs, to those programs having to do with the armed services, with the campaigns for funds.

Senator CLARK. Mr. Chairman, the Government departments even set up radio stations of their own for broadcasting their own praises—haven't they? Do not they do that, do not they have one in the Interior Department?

Mr. FLY. No sir. They do have a studio down there, and from there, of course, it is convenient to tie into one of the local stations, or to the networks. It is a very nice little studio, incidentally. But a great deal of this national-defense work is carried by these stations and by the networks over these facilities.

Now, I do not think there will be any discussion, at least as I see it today—I do not think there will be any discussion on the demands of this industry for public service. Of course, that is all in terms of immediate money returns. That is the loss to the industry with nothing coming in.

There is also the probability that additional burdens may be placed upon the industry in terms of additional equipment. These facilities may be useful for national-defense purposes in a more direct sense. It may be important to keep them on the air—well, let us say, for example, an air-raid warning service, and that sort of thing.

Senator VANDENBERG. When are you going to start that?

Mr. FLY. We hope not at all, sir; but in the job of preparation for possible eventualities, that is one of the things that must be considered, and an example of that situation is the demand for an auxiliary power supply for the stations in order that the station that might be depended upon in an emergency will not go out with the failure of the regular power supply.

So, we find the industry, in a period where the demands upon it may be more significant, perhaps more useful and certainly more burdensome. I think that it can hardly be denied that the service rendered by the industry is of a very vital character.

Now, there are some interesting points regarding the economics of the business. There are important fixed costs. Telephone lines, for example, is one of the important cost elements. There are others, such as talent, labor, studios, and various facilities.

Now, it is the very nature of broadcasting that it must be continuous broadcasting, and broadcasting must go on whether the returns come in or not. For example, conceivably the leading oil companies—and the East not having enough gasoline for sale anyway—should they determine to cut down on their advertising, selling time heretofore occupied by them on the air must be occupied, entertainment or some service must go out to the public. That would be true with the automobiles or with any industry where, because of the peculiar requirements of the present situation, the advertising demand may conceivably fall off.

Now, the percentage of net to the gross is not awfully high, so that with not a constant base in terms of amount but a continuing base of actual costs that will be there whether or not you are getting any return, you see you can easily run from a period like 1940 into the future days that may lie ahead of us, into a net loss, and depending upon the demand of the industry and the amount that this advertising might provide, of course, would be the amount of the loss in terms of decreasing revenue and sustained costs.

Now, the industry has also felt, I believe, that this tax in effect upon advertising would be something of a burden upon the distribution of goods. That is a matter which is frequently debated, and I need not do anything more than mention it here for what it is worth.

Conceivably, that might be important in a time of recovery, changing from an emergency situation back to a normal economy, to see that the free distribution of goods is not burdened.

Of more significance at the moment, however, is that competing advertising media are not taxed. I believe that is generally true of newspapers and magazine advertising, for example. In addition to that, of course, there is a heavy subsidy to the use of the second-class mailing privilege to the newspapers, and so forth, which assuredly redounds to their very great economic benefit. Of course I am not criticizing that privilege. That is a matter of policy on which I would offer no criticism, but when we start to evaluate the status of a competing media I think it is of some significance.

Senator CLARK. The fact is that radio advertising and newspaper advertising are competitive. Under the decision of the Supreme Court of Louisiana in a case that came before it, it would be of very doubtful constitutionality to tax newspaper advertising, and, therefore, the contention of the radio people is that it is unfair to tax them when they are not taxing their competing advertising media. Is not that the contention on the part of the radio people?

Mr. FLY. I believe that is their contention, sir.

Now, I am not going to burden you gentlemen with the detailed figures. In the first place, as I said at the outset, I do not want to presume competence in that field. Let me say before I do mention these in general outline, that we shall be glad to study the records at the Commission if the committee desires that we make the study, and to give some more specific estimates. I would imagine, however, that the Treasury would be definitely more competent than we to do that. Our facilities, of course, are available to the committee.

Now, the factors in the industry that will be most heavily hit by the tax will be the chain companies. I believe nine of the chain companies will be affected by the tax. Taking the gross figure rather than the net figure of the tax, for example, and, of course, the net will be substantially less, the nine chain companies and the stations licensed to them would have a gross tax under this bill of $7,815,000. Then there are 224 stations in addition that apparently would be affected by the tax, giving a gross result under this bill of $4,823,790.

Thus, arriving at the gross as distinguished from the net figure, a gross of $12,639,486.

Now, there are in that group about a total of 256 stations that seemingly would be affected by the tax. However, upon examination, apparently the tax would not hit in a substantial way many of the stations. There are a relatively few stations, but, by and large, they are not important.

Senator JOHNSON. Well, Mr. Fly, as I understand, the relationship between the stations and the networks, why would not the networks pass on this tax to the stations? Instead of passing it on to the advertisers—and it is generally anticipated, it seems to me, they will pass it straight on to the station and reduce the amount that they pay the station for the service that the station renders the network, so why will not every station be affected?

Mr. FLY. That, of course, would be a conceivably indirect result, but I believe the bill as drafted, Senator, places the tax on persons engaged in operating a radio broadcasting station, or engaged in net-

work broadcasting. Then the tax is immediately placed upon net time sales.

Senator JOHNSON. It is just a sales tax. It is a sales tax on advertising sales.

Mr. FLY. Roughly speaking; yes, sir.

So, the tax here as you have it before you, I believe, is placed directly upon the network. I do not know what plans the industry might have in mind for any distribution of it.

Senator JOHNSON. The network pays the station. The network does not do any broadcasting itself, it hires the station to do its broadcasting and it pays the station for doing that broadcasting.

Mr. FLY. Yes—may I say, "yes" and "no"? Of course, the studio work, as you know, Senator, is done in New York. The broadcast originates in New York, or some program, Senator, in Chicago or Los Angeles, or possibly some other point and that, of course, is likely to be a network business at that end. On the commercial programs you are right, the network pays the station for putting the program out but, if it be a sustaining program, that is one in which there is no advertising sale and no income, the payment will run for that, that is, for the commercial program.

Senator JOHNSON. There is no tax on sustaining programs on that kind of broadcasting?

Mr. FLY. No.

Senator JOHNSON. The tax all comes on the commercial programs?

Mr. FLY. I do not think there is any conclusive answer to your point. That is conceivably a way that it might be worked out under the bill, although I merely point out that in the outset, it is placed directly upon the station broadcasting on its net time sales and directly upon the network upon its net time sales, so there is the immediate impact.

Now the large networks will be substantially affected here. I do not want to say what the figure would be. I suspect on the 1940 figures it would be roughly around $2,000,000 each, that is, upon N. B. C. and Columbia. That would take a very heavy proportion of their net income, of course. Based upon—well, the 1940 figures, for example, that sort of a result would not be destructive, still taking either a longer view of it backward or a further view into the uncertain future, with the income in doubt and with the burden of public service in the increase, I think it sufficient to give us some pause there.

Perhaps it may be found that the more emphatic results will be upon some of the regional networks. You take the Don Lee Broadcasting System, for example, on the west coast, where there is a pretty extensive regional network, now that network is rather extensive and having a fairly heavy and important business. It is not composed predominantly of big, profitable stations, and a tax falling heavily in a situation of that kind might conceivably result in impairment, or abandonment of service at a number of the smaller stations that are reached at some expense by such a network.

Gentlemen, I believe, in view of the greater competence of many of the gentlemen who appear here, I shall not give any more specific statements regarding this matter. However, I am at the service of the committee.

Senator BAILEY. Are you finished?

Mr. FLY. I would be glad to try to dig up anything that the committee may instruct me to.

Senator BAILEY. Are there any questions?

Senator VANDENBERG. You are opposed to the tax, are you, Mr. Fly?

Mr. FLY. I think it is a pretty dubious tax, sir. I am awfully reluctant, when you have the burden of finding money, to say I am opposed to the tax.

Senator VANDENBERG. You want to save the radio industry in many other aspects. I would be interested in how you feel about that.

Mr. FLY. I think it is a dubious tax.

Senator DAVIS. If you put a tax on advertising in radio, will that not set a precedent for taxing advertising in newspapers?

Mr. FLY. I think it might very well do so.

Senator CLARK. You cannot conceivably tax a newspaper advertising under the Supreme Court decision in the *Louisiana case.*

Mr. FLY. We have given consideration to a tax measure in view of the notion that broadcasting companies are operating with a public franchise, in effect utilizing public property. But then, considering the heavy public service the broadcasting industry is rendering, and in view of the competition with other advertising media, I am inclined to think that in any tax measure it would be well to treat the broadcasting industry pretty much in a class with the other branches of the communications industry. We have been considering for some time a possible draft of a bill which would assess broadly upon the communications industry roughly the cost of regulation, but a tax of that kind—well, I doubt, for example, if the result of that would be more than say, around one-half of 1 percent of gross upon the broadcasting industry, and then a part of such a tax, a very important part would be thrown upon the telephone industry, and some upon the telegraph industry which, incidentally, is not in a position to pay any heavy taxes.

Senator JOHNSON. From the emphasis you put on the public service rendered by the radio station, it leads me to believe that you feel that this is a tax upon the freedom of expression. Am I right in reaching my conclusion, based on your testimony? You place great emphasis upon the fine public service that the radio industry is rendering.

Mr. FLY. I think, sir, that that is really an important offsetting argument on the point that the radio operates with a public franchise. In other words, conceivably the approach to this would be that, since the business is, in effect, based upon the license, upon the use of the publicly owned frequency, a special tax should be imposed. I think the notion of the public service is rather an anticipatory reply to that point, at least in part; also, in emphasizing the amount of time, and hence the amount of money devoted to the public service, and I am pointing to the fact that, with the increase in that type of service, and with various additional burdens upon the broadcasters, coming at a time when there is apt to be a decreased income, then any substantial tax in addition to those now imposed might be very detrimental to the service.

Senator BAILEY. What does the Radio Commission cost the Government? What was the appropriation?

Mr. FLY. Apart from the special national-defense work, sir, it would be roughly $2,000,000 a year.

Senator BAILEY. That is the appropriation to carry on your activity?

Mr. FLY. Yes.

Senator BAILEY. Who pays that?

Mr. FLY. That is out of the appropriations, sir. It is not assessed in any way.

Senator BAILEY. You do not collect any license fees?

Mr. FLY. We get no license fees at this time. As I said, in considering this business of a tax to cover the industry as a whole, and merely to cover the cost of regulation, that is one possible, logical approach, to have some sort of license fees and costs for the different procedures, and that sort of thing.

Senator BAILEY. A man who enjoys a Government franchise ought to be willing to pay for it, ought not he?

Mr. FLY. I think that is true to that extent, sir. I think if they were readily available, a formula for assessing in terms of a franchise tax, that might well be done, but of course, when you start looking for the formula, you get into trouble.

For example, you have stations of a given power who pay a certain amount of tax, we will take examples of a couple of large, powerful operations; you take WEAF in New York, you take KOB in Albuquerque, N. M., which at times is operated at 50 kilowatts also, and you will see it would be quite impossible to place upon those two stations the same amount of tax. That is the sort of problem you run into when you head into a franchise tax, based upon power. Conceivably, a more logical base would be in terms of coverage, that is, in terms of population that receive adequate primary service. At least, superficially, that would be a fairly sound approach, but even that is none too easy. The coverage is hard to determine with a great degree of precision, and it changes at various times with the seasons, the time of day, the sun-spot cycle, and a lot of other things, not to mention changes in the stations themselves. So, while that is not an impossible sort of problem, you can see it readily offers some difficulties.

Senator BAILEY. The franchises heretofore granted are very valuable in some instances, are they not?

Mr. FLY. Very valuable, sir.

Senator VANDENBERG. As long as they last they are valuable.

Senator BAILEY. What would the N. B. C. sell their franchises for today?

Senator CLARK. It depends on who is trying to buy them, does it not?

Senator BAILEY. Just give me a general estimate. The question of price always takes into consideration whether there is somebody ready to buy. What do you imagine the N. B. C. franchise is worth? They got it free. What do you think it is worth?

Senator VANDENBERG. It is worth no more than you want it to be, is it not?

Mr. FLY. That is not completely in our control, Senator. I do not know. You see, the N. B. C., for example, has several million dollars of properties, and it is an important going concern. There are various

facilities that are not directly attached to a license for particular stations. You see, a network operation is something that can be done entirely apart from a license, quite apart from any station; that is, in the same ownership. What they need is the facilities; they need a sponsor; they need a program; they need talent; they need studios and a point of origin, and then from that studio programs can be piped to any number of stations by wires. So, when you come to evaluate the licenses for the particular stations that are controlled by the network, you need to draw a line between those two classes of facilities and services.

Senator VANDENBERG. Don't you think they would be willing to pay something for a more exclusive sort of franchise than they now have?

Mr. FLY. I suspect they would pay substantially more.

Senator CLARK. On the other hand, take the Noble station, for example, the price might be lower?

Mr. FLY. Might be lower.

Senator CLARK. In other words, in the common gossip, the station sold for considerably less than the owner thought the station was worth?

Mr. FLY. Yes; that is common gossip. And that, I think, is a pretty good description of it, Senator. I think I can give you some specific answer to that. The price that was paid for that station was around, I think, $850,000, and I also understand there was under consideration at the same time and for the period of a couple of weeks during the negotiations another proposition involving $875,000, but that the second proposition involved a restraining clause that would restrain the owner from going into the broadcasting business for a period of 5 years, or some such time. So there was adequate ground there for the choice of the slightly lesser amount without the restraint.

Senator CLARK. Do you happen to know who represented Mr. Noble in that transaction?

Mr. FLY. Yes; I do. Mr. Dempsey and Mr. Koplovitz.

Senator CLARK. Was Mr. Corcoran of counsel?

Mr. FLY. Pardon me?

Senator CLARK. Was Mr. Corcoran of counsel?

Mr. FLY. I do not think so, sir.

Senator DAVIS. Can you give me the cost of the telephone charges, so to speak? Can you give me what the connection of the wiring-up of these different stations is? Can you give me what the radio pays to the telephone company?

Mr. FLY. No, sir; I cannot, offhand. I can get some useful figures. Of course, they would vary, depending upon the location of the studio and the amount of distance that is to be covered, and the difficulties encountered.

Senator DAVIS. Will you put them in the record?

Mr. FLY. I shall be happy to do that, sir.

(The following memorandum was submitted at the request of Senator Davis during the course of Chairman Fly's testimony:)

NETWORK TELEPHONE-CIRCUIT EXPENSE

Reports filed by the three major networks indicate that $6,398,772 in the aggregate was spent by them during calendar year 1940 for network line service and to provide studio-transmitter service and local loop service for their owned and oper-

ated stations in the cities of New York, Chicago, San Francisco, and Los Angeles. This amount is distributed as follows:

Columbia Broadcasting System, Inc	$2,181,623
Mutual Broadcasting System, Inc	621,931
National Broadcasting Co., Inc	3,995,218
Total	6,368,772

Figures showing expenses for network line service exclusively are not available, since the two larger networks lump in their reports both expenses for network line service and for local station purposes. However, officials of these networks estimate that 10 percent would closely approximate the amount included in the above over-all figure which is actually expended for station as distinguished from network purposes. Assuming the correctness of this estimate, the total charge incurred by the three major networks for the maintenance of permanent network service would be approximately $5,800,000 for the year 1940.

In addition to the three major networks, a number of regional networks maintained permanent program-transmission circuits. The aggregate amount spent by all regional networks for this purpose would not have exceeded $500,000 for the year 1940.

The accuracy of these figures is confirmed by the report of the American Telephone & Telegraph Co., in which it is stated that for the year 1940 the company had 16 customers employing 17 program-transmission circuits with 417 users over a total distance of 49,979 miles. The revenues derived by the company for this total service for the year was $6,664,248, according to its report. The slight increase between the amount reported by the telephone company and the amounts reported above results from receipts by the telephone company for temporary hook-ups as distinguished from the maintenance of permanent network connections.

The total expense to the broadcasting industry for program-transmission circuits in 1940 was approximately $9,000,000. This sum includes, in addition to amounts for permanent network service given above, the costs incurred for studio-transmitter circuits and local loop circuits.

Senator BAILEY. If there are no further questions, the next witness is Mr. Maurice Lynch, of Chicago, the financial secretary of the Chicago Federation of Labor. You have 10 minutes, Mr. Lynch.

Mr. LYNCH. I will not take that long.

Senator BAILEY. All right.

STATEMENT OF MAURICE LYNCH, CHICAGO, ILL., FINANCIAL SECRETARY, CHICAGO FEDERATION OF LABOR

Mr. LYNCH. My name is Maurice Lynch. I am financial secretary of the Chicago Federation of Labor and have been for the past 14 years. The Chicago Federation of Labor is the licensee, owner, and operator of Radio Station WCFL, the "Voice of Labor."

The Chicago Federation of Labor believes it against the public interest to have this proposed tax bill passed as it is now written.

Our objections are simple and fundamental: First, the measure places an unequal or discriminatory burden on radio broadcasting—and I believe billboards—and fails to include other advertising media. Second, this bill departs from the well-established precedent of not taxing income of "not for profit" organizations and labor unions. We do not believe this body has any intention to discriminate against certain selected advertising media or to favor any others. Yet, this bill as now written does just that. We do not believe this committee intends to depart from the carefully considered past policy of exempting "not for profit" organizations and labor unions—yet this bill does that.

When WCFL was first established the cost was taken care of by voluntary contributions from members of union labor of Chicago and vicinity.

Since its establishment the cost of operations has been met by voluntary contributions from unions and proceeds from the sale of time and annual benefit entertainments. The station has been operating at a loss almost every year from its inception until the year 1940. The operating loss for 1938 was $61,000 and $29,000 loss for the year 1939. The profit for 1940 was $20,163. When we saw that we were operating at a profit during 1940 we undertook to apply to the Federal Communications Commission for an increase in power from 5 to 10 kilowatts in order that we might be heard by more people and over a larger area. The Federal Communications Commission granted our application.

In order for us to increase our facilities to 10 kilowatts it necessitated committing ourselves to expenditures of approximately $46,000. Penalizing us to the extent which this proposed tax bill provides would prevent us from carrying on the service to the public which we intend to give. It was and is our intention to increase our power to 50 kilowatts, or more, if we were to become financially able, but with this proposed burden to be met those good intentions would have to be abandoned. Further than preventing future expansion, this proposed tax bill would limit our present operations and necessitate reductions of personnel, service to the public, and hours of operation.

We have donated, we do donate, and we expect to continue to donate valuable time to our Government to help publicize any and all of its activities, especially those relating to national defense and public welfare.

Our radio station, more than any other in Chicago, is available to the free use of national-defense and public-welfare organizations. This is not said critically of other stations. We can serve better than the other stations because the profit motive is not the object of our operations. It would not be just that the radio stations which donate so much time to Government agencies, be discriminated against, as they would be if this bill passes, just as it is.

Much of the "American way" comes from the activities of "not for profit" organizations. We urge you—do not depart from the well-considered and long-established policy of exempting those "nonprofit" organizations from income taxation, at a time when our Nation, more than ever, needs their support.

We have a tremendous national-defense debt to meet—as a Nation. We should meet this debt with all fairness and not with discrimination.

Gentlemen, I thank you for this opportunity you have given me to try to explain our case. If there are any questions you wish to ask, I will try to answer them.

Senator BAILEY. Are there any questions?

Senator CAPPER. May I ask, is there any other station owned by labor or by an agricultural or industrial group?

Mr. LYNCH. There is no station owned by labor. I would think there are some stations that might be called agricultural stations, like WLS.

Senator CAPPER. There is no other group that you know of?

Mr. LYNCH. No.

The CHAIRMAN. The next witness is Mr. Harold A. Lafount, Washington, D. C., representing the National Independent Broadcasters.

STATEMENT OF HAROLD A. LAFOUNT, WASHINGTON, D. C., PRESIDENT, NATIONAL INDEPENDENT BROADCASTERS

Mr. LAFOUNT. Mr. Chairman, and gentlemen of the committee, my testimony before your distinguished committee will be confined to that section of the bill (H. R. 5417) which lays on a graduated tax on the net time sales of radio broadcasters. I speak as a representative of the independent stations. Before attempting to discuss the problems arising out of this proposed tax, however, I would like to state briefly my own qualifications as a witness on this subject.

Radio has been my chief interest for 20 years. From 1921 to 1927, I was engaged in the manufacture of radio equipment, particularly loud speakers. Throughout that period, too, I maintained a radio laboratory. From 1927 to 1934, I served as a member of the Federal Radio Commission. In the course of my official duties, I visited almost every radio station in the United States, assisted in the preparation of rules and regulations governing their operation and otherwise helped to administer the law which the Congress had enacted to control radio broadcasting. From 1935 to date I have had direct charge of the operation of six broadcasting stations, and this experience has given me an excellent opportunity to observe conditions within the industry, to study its problems, to understand some of its difficulties and to share in its struggle to render an outstanding public service.

Now, there are three points I would like to impress upon you gentlemen in connection with the proposal to lay a tax on the sale of broadcasting time. First, the independent stations for which I speak do not oppose the enactment of heavier taxes. We fully appreciate the necessity of raising funds to defray the expenses of our national-defense program. We want you to know, also, that we are willing to cooperate within our means and even to the extent of giving our lives, if that should be necessary, for the preservation of our democracy. We agree that everyone must sacrifice in order that our security as a nation may be assured. All we ask is that the burden of financing this gigantic national effort be equitably distributed in the true American fashion.

That brings me to my second point, which is simply this: The bill, as it stands, discriminates against the broadcasting industry. It levies a special tax on the industry's only source of revenue, which has already been depleted in some measure because of the extensive services we are rendering to the Government. The tax is levied on "net time sales," whether those sales bring us profits or losses. Please remember that nearly 300 broadcasters operate at a loss in this country. In a great many instances, therefore, title VI of this bill would have the effect of taxing losses. As a rule Congress has heretofore refused to enact revenue legislation which so clearly ignores the sound principle of taxation in accord with capacity to pay.

As you doubtless know, the broadcaster is usually incorporated. He has his corporation taxes to pay. He must share the burden of any increase in the general corporation tax that Congress may approve. Any dividends he may receive from his business are taxed as personal income by both the Federal and State Governments. If he operates at a profit, there are excess-profits taxes to pay. I want you to know that we do not object to an excess-profits tax, when and if we make any profits to be taxed. Indeed, the broadcaster is willing to pay his share

of any general tax that Congress finds it necessary to enact. But we can see no justification for imposing on him another special burden that has no relation to his capacity to pay.

I appreciate the fact that the lower-income stations are exempted from this proposed tax. It would nevertheless cut into the operating funds of independent stations whose incomes are in excess of $100,000 but whose profits are little or nothing. It is the plight of these stations which I ask you carefully to consider. You can readily see that a broadcaster who is operating at a loss acquires no special capacity to pay an extraordinary tax merely because his gross income may exceed $100,000. I find it difficult to believe that Congress will lay down a policy of exacting a special contribution from those broadcasters who are unable to make both ends meet and at the same time maintain a high standard of public service.

Now I come to my third point, which has a very direct bearing, not only upon this proposed tax, but also upon the success of the defense program in general. Let us consider for a few moments the nature of the industry on which this burdensome tax would be laid. To a large degree broadcasting stations in this country are operated as quasi public utilities. Our licenses require us to operate in the public interest, convenience, and necessity, and practically every broadcaster in the United States is determined to fulfill that obligation. It is as sacred to him as his allegiance to the flag. Every broadcaster knows, moreover, that his programs must appeal to the public or his invisible audience will be lost. So our business necessarily consists of rendering service—we have nothing else to sell. Some stations make profits and others lose money, but all must continue to render public service so long as they are on the air.

Obviously, if the broadcaster is to serve the public well, he must sell enough time to meet all his legitimate expenses. I am sure we all believe that the broadcaster is worthy of his hire, but men who do not see the industry from the inside may not know the problems it is up against. May I mention a few of them. Radio broadcasting is still a comparatively new art, and therefore its continued development necessitates frequent changes in the rules and regulations laid down by the Federal Communications Commission. New rules often mean that our equipment must be adjusted, modernized, supplemented, or replaced. In addition, we must meet the costs of attending hearings and of hiring legal and engineering talent. These extra costs may be regarded as a special burden already imposed on the broadcasting industry. To these expenses must be added fees for authors, composers, performing artists, and guilds, as well as salaries for musicians, with the rate of pay and the number of musicians to be hired dictated by the union. Then, of course, we have regular overhead expenses such as rent, power, light, heat, salaries, news services, and so forth. The difficulty of meeting these expenses has increased, moreover, because the larger number of stations now operating intensifies the competition we must meet.

Now you gentlemen know that these expenses must be paid and that the only source of revenue we have is the sale of broadcasting time. If you increase our costs of operation still further, you will compel us to sell more of our limited broadcasting time and thus impair, to that extent, the service we can render to the public. It

is this point which I ask you to weigh with special care. If money goes for taxes, it obviously cannot be used to buy news features or to purchase or produce sustaining programs. In other words, this proposed tax would, in many cases, fall upon radio listeners in the form of lower quality programs. Some of the taxes in this bill are apparently designed to cut down consumer buying of materials that are needed for defense. But surely there would be no point in curtailing the flow of good entertainment over the air. On the contrary, the present emergency has intensified the need for high quality broadcasting.

The effect of this proposed tax on the quality of programs might not be serious, except for the fact that we are giving an enormous amount of time, in this period of national crisis, to governmental activities. Radio has become one of the greatest national mediums of communication. A broadcaster has only to read the thousands of letters that often come to his station in response to some request by an announcer to realize the great power that is in his possession. As a group we are using that power in the service of the Nation. We fully appreciate the necessity of maintaining the morale of our people at a high standard, and we know how important it is, in this great democracy, to keep the people informed as to the activities of their Government. We believe that in this national emergency our stations must be ever ready to serve as an impartial link between the Government and the people. So we have allocated more time than ever before to what might be classified as "public business." It may surprise some of you gentlemen to learn that at this very minute many broadcasters are sending more words out over the air for the Federal Government and the U. S. O. than for their advertisers.

In bringing this fact to your attention, I do not wish to be misunderstood. I am not complaining because a large portion of our time is given to this "public business." But this is how it works out. Every broadcasting station operates a specified number of hours at a fixed cost, exclusive of program expenses. Our big problem is always to work into this limited period entertainment, news and other features that will hold the public interest, along with commercial programs sufficient to pay our expenses. I am sure you realize that we cannot make one announcement after another and hold a listening audience. If a broadcaster makes 20 announcements a day for the Federal Government, each one must follow, say, 10 minutes of music or some other form of entertainment. So it requires 200 minutes to present 20 Government announcements, and we pay for the entertainment as well as give up the time, which might be sold to advertisers.

Time is also given to local Government activities, the U. S. O., various relief organizations, and so forth. While these calls upon our services vary in different communities, they average another 200 minutes a day. Thus the total time available for commercial broadcast is reduced from 30 to 50 percent, depending upon the number of hours the particular station operates. Since the cost of operation, including rent, power, light, heat, salaries, and so forth remains fixed, the shorter period of time that may be sold to advertisers must bring in sufficient revenue to pay that cost and finance our sustaining programs. So you can readily see what will happen if Congress decides

to increase our expenses while we are carrying this extra load of "public business."

We sometimes hear people complain that there is too much advertising on the radio. Gentlemen, it is not our fault. If our expenses are increased and our available commercial time reduced, we simply have to crowd in the commercials. And if this practice is continued, or by necessity intensified, we shall inevitably lose; listeners cannot easily be changed. So this bill brings us face to face with a dilemma. Our loyalty to our country and our sense of public responsibility prompt us to give a large portion of our broadcasting time to the cause of national defense. If the United States should become an actual participant in the war, much greater demands upon our facilities would be made, and certainly every request would be cheerfully granted. Yet we must face the fact that costs are rapidly mounting, and incidentally we are losing some of our advertisers, because, in a few instances, raw materials are no longer available to them.

The principal thought I would like to leave with you, gentlemen, is that the broadcasting industry is already making an enormous contribution to the cause of national defense. If the independent stations were to be paid for the programs and announcements broadcast for the Government, they would be very profitable, and in that case should be taxed accordingly. But please do not require us to pay the discriminatory tax proposed in this bill—plus corporation taxes and personal income taxes—while we are giving so much free time to the Government and paying for the entertainment necessary to hold our listeners. That levy would impose an unfair burden upon an industry already making a heavy sacrifice to the cause of national unity and strength in this emergency. More important still, it would tend to impair the quality of radio programs and thus weaken a great system of public communication at a time when it should be strengthened.

In behalf of the independent broadcasters, I ask you to eliminate this discriminatory and unreasonable tax.

Senator VANDENBERG. You all put great emphasis on your public service. Did you ever try to reduce that to dollars and cents? For instance, what does a fireside chat cost all the radio broadcasters in the United States?

Mr. LAFOUNT. If it was sold at the regular price charged anyone else, of course, it would cost several thousand dollars, Senator, depending on the number of stations that carry it.

Senator VANDENBERG. Did you ever make an estimate of what it would cost?

Mr. LAFOUNT. No, sir; I have not.

Senator VANDENBERG. It would be interesting.

Senator BAILEY. Are there any further questions? If not, the next witness is Mr. Ellsworth C. Alvord, representing the National Association of Broadcasters.

STATEMENT OF ELLSWORTH C. ALVORD, WASHINGTON, D. C., NATIONAL ASSOCIATION OF BROADCASTERS

Mr. ALVORD. Mr. Chairman and gentlemen of the committee, I appear on behalf of the National Association of Broadcasters in strenuous opposition to title VI of the House bill. This title imposes the

so-called radio-broadcasting tax. I have a rather detailed memorandum, Mr. Chairman, which I do not desire to read, but which I would like to submit as a part of my remarks.

Senator BAILEY. You wish that to be put into the record?

Mr. ALVORD. I wish that to be incorporated in the record, and I trust if there is any doubt left in the minds of the committee as to the propriety of the tax, the memorandum will be studied very carefully. Certainly it answers every conceivable argument for the tax which has been made, and I might say that every basis which has been suggested is quite unjustified and inadequate.

I oppose the tax for four very substantial reasons: First, it is the first embarkation by this Congress, and the first embarkation by any Congress, with but one very minor exception, of a tax upon gross receipts. I have advocated for many, many years, various types of taxes. I trust that the demands of the Treasury will never be such that I will ever be compelled to recommend or to acquiesce in a tax upon gross receipts. Gross receipts, as you gentlemen know, merely means the number of dollars coming in. It has absolutely nothing to do with the expenditures required to bring those dollars in. It hits solely on the basis of dollars received. It has nothing to do at all with ability to pay, or any principle that I know of, or which I have read, or heard of, which could underly the taxing policy of this Government.

Second, I am quite convinced that this tax on gross receipts will impose a discriminatory tax upon a portion of the advertising expenditures of this country. So let me speak for just a moment with respect to a tax upon advertising generally, if I may.

Certainly, as I have said, there is no conceivable justification for singling out important elements in the advertising field, such as outdoor advertising and radio, and taxing them and not taxing all advertising. But let me assume that you impose a tax upon advertising generally. As Senator Johnson has already indicated, that type of tax is nothing more than a tax upon the dissemination of information, upon the dissemination of news. It would be again an unprecedented embarkation by the Congress, an embarkation upon the restriction of the free dissemination of news. Substantially every news-disseminating agency must rely for its revenues upon advertising. That is the only source from which they can receive substantial revenues. That is true of radio; that is true of newspapers; that is true of magazines. The moment you attempt to tax their principal source of receipts, once you impose a tax based solely upon the amount of their receipts, you necessarily impair the effectiveness of their service, you restrict them in their activities, and I would assume this Congress would prefer not to restrict those activities but to encourage them.

Third, as the chairman of the committee has indicated, a very substantial activity of the radio industry is directed toward the public benefit. It is rendering an important public service. For example, the use of the radio by the Government is tremendous. These Government broadcasts, the educational and cultural programs, the news broadcasts, and other spreading of information, take roughly two-thirds of the time of the radio industry, leaving to that industry but one-third of its time for commercial programs on which it receives its income. I cannot believe that the Congress would so desire to hamper,

even jeopardize, the service which the radio industry is now performing in the interest of the public.

Fourth, it is an exceedingly unfair burden to impose upon any industry a tax of this kind, and I come back somewhat now to my gross receipts feature. Every gross-receipts tax necessarily hits the winners and losers, and unfortunately, as in every industry, there are and must be a substantial number of losers, and a very substantial number on what we might call the marginal line.

For example, one network whose profit now ranges about 9 percent would be thrown substantially in the red. A tax of 15 percent on its gross receipts would convert its profit of about $155,000 into a loss of about $90,000. In addition, there are roughly 300,000 individuals in this country dependent for their livelihood on the radio industry. Again I doubt seriously whether you desire to jeopardize the welfare of those 300,000 people.

Now let me address myself, for just a minute, to the discussion which I heard before the committee this morning with respect to a franchise tax. I would assume that the radio industry could not object to a nondiscriminatory general franchise tax.

Senator VANDENBERG. If they got an important return for it.

Mr. ALVORD. That may be true, sir. However, before you decide to embark upon a general franchise tax, based upon the theory that the regulated should pay the cost of the regulation, let me point out that certainly the radio industry should not be the first industry for that experiment. The Federal Government now is regulating—perhaps it would be easier to indicate those who are not regulated—but generally, you are regulating railroads, busses, trucks, airplanes, power, public utilities, banks, investment bankers, and many others. Substantially every industry in the country is regulated, in part at least, by the Federal Government. If you were to embark upon this policy of forcing the regulated to pay for the regulation, again I say I doubt seriously whether the radio industry could object, but I would suppose, instead of being the first, it could well be the last, because again you are faced with the question whether you should attack the free dissemination of information and news.

I will be very happy to answer any questions which the committee desires to put, or attempt to answer them.

Senator VANDENBERG. Can you give me this figure? Suppose I were to buy a half hour's time on every radio station in America, how much would it cost me?

Mr. ALVORD. If that is related to the question which you asked Commissioner Lafount, I have been told the cost would be between $50,000 and $100,000; but again, bear in mind that two-thirds of the time of the radio-broadcasting industry must be spent on what is called the sustaining program.

Senator BAILEY. I think you make a distinction between radio and these other businesses which are regulated under the interstate commerce clause. I agree with you that under the new interpretation, every business and every activity in America is now subjected to regulation, and practically every business in America is dependent now upon the appropriation or the borrowed money of the Federal Government, but the radio enjoys a license, it is something in the nature of an exclusive right, or monopoly. Now that is costing the Govern-

ment $2,000,000 a year—that system. What would you say to a franchise tax properly levied, with a view to the service rendered locally and generally, to raise that $2,000,000? I do not like this tax at all, but I am thinking that we might have a tax that would discharge the Federal expense of $2,000,000.

Mr. ALVORD. Let me answer, first, that it is my estimate that not more than one-fifth, probably one-sixth, of that $2,000,000—that was Chairman Fly's estimate—is chargeable to the radio industry as such. Bear in mind that the Federal Communications Commission does a good many things other than regulate the commercial broadcasting stations.

Senator BAILEY. It does give out the frequency and the licenses.

Mr. ALVORD. It does issue the licenses governing the frequency and the power, but, as Senator Vandenberg indicated, it is a rather temporal license. Under the statute it can be no longer than 3 years. The policy of the Commission is to limit the license to 1 year, and each station must come in and prove to the Commission that it is entitled to a renewal.

Senator JOHNSON. Speaking of that, in your experience with the radio industry, can you cite many cases where the franchise has been interfered with? It is more of a club back of the door than it is a case of actually being exercised.

Mr. ALVORD. I think the club feature is perhaps the most important one, very much like the policeman: The fact you might be arrested probably keeps many of us from doing things which we might wish to do.

Senator VANDENBERG. It is very much in plain sight most of the time.

Mr. ALVORD. It is in plain sight very much of the time; yes, sir.

Senator JOHNSON. Yes; but it is necessary also.

Mr. ALVORD. Yes. I am making no objection to that in the slightest. For example, I do not believe radio has any greater monopoly than the airplane. Your airplane companies must also get licenses, they must operate at places or over routes designated in the license, their stations are designated, where they can alight, the commodities they can carry, and so forth. The railroads also must get certificates of public convenience and necessity in order to expand or contract their lines.

Senator BAILEY. Would not a reasonable license tax tend to protect the radio industry? That is, you have got an increasing demand for local stations that are coming up here from my State, and they go down to see Mr. Fly, they file an application, and you have to have some way to limit that do you not? Why would not the license tend to limit them?

Mr. ALVORD. I do not think that would be an important limitation. I think I can answer you more specifically, Senator Bailey, by saying in my opinion the industry could not justly object to a nondiscriminatory license or franchise tax imposed at nominal levels, spread equally and equitably, based upon the cost of regulation.

Senator BAILEY. If you tell me what you conceive to be a proper amendment, nondiscriminatory in character, I would be inclined to substitute it for this present section.

Mr. ALVORD. I would much prefer, if I may make the suggestion, to strike this provision out and afford to all parties interested ade-

quate time to prepare that sort of franchise tax. It is not a simple thing to do.

Senator BAILEY. You mean not for this legislation but for some future legislation?

Mr. ALVORD. Some future legislation; yes.

Senator BAILEY. We need the money right now.

Mr. ALVORD. I doubt seriously whether the demands on the Treasury are enough to justify this tax.

Senator BAILEY. I am not saying that either.

Senator JOHNSON. Mr. Alvord, can you say who will pay this tax that will be imposed by the language of this bill?

Mr. ALVORD. Senator, I think that question has got to be approached very practically. Unquestionably a very large number of stations will find it utterly impossible to pass the tax on. A few may.

Senator TAFT. You mean pass it on to the advertisers?

Mr. ALVORD. Pass it on to someone, certainly. I do not think the networks can pass it on to the stations, for example, because they are pretty well covered by contract.

Senator JOHNSON. They are pretty loose contracts.

Mr. ALVORD. That may be, but they still run quite a period of time.

Senator JOHNSON. It is a one-way contract. The contract comes from above. The station has very little to say about its contract. The network imposes the contract. It can cancel it at its leisure and pleasure. The station does not have the same right, so the station is very much at the mercy of the network, and it just occurred to me it would be perfectly natural for the network to pass on to the station the tax, since it cannot pass it on to the advertiser.

Mr. ALVORD. There are very few stations, Senator, who can afford to pay even a small part of the tax.

As to the question of passing it on to the advertisers, I think the answer to that is again a practical answer, that if radio rates could be increased, probably they would already have been increased. Advertising rates seek their own level. For advertising on the radio, for advertising in the newspapers or in the magazines, or for advertising in various other miscellaneous media the advertiser is going to pay so much, and only so much to radio as he considers justified in the light of the rates of other advertising media, as well as in the light of the results which he hopes to obtain.

Senator BAILEY. Do you think advertising appropriations or allotments are likely to be increased now or decreased?

Mr. ALVORD. I think Chairman Fly gave you the best opinion on that which there is in the industry. The future is probably more uncertain now than it ever has been.

Senator BAILEY. Going back to your experience now, in 1918 we passed the excess-profits tax for the first time.

Mr. ALVORD. In 1917, sir.

Senator BAILEY. It went into effect February 19, 1918, according to my recollection.

Mr. ALVORD. That was the 1918 act, sir; 1917 was the first one.

Senator BAILEY. Speaking of the 1918 act particularly, immediately the taxpayers saw they were going to run into excess profits they greatly increased their advertising allotments in order to keep out of the excess-profits taxes. Is that likely to happen now?

Mr. ALVORD. I have heard that statement made a good many times, Senator, but I am sorry, from the point of view of being able to predict the immediate future, I am sorry that that statement at least does not fit the statistics. You will find, I think, that there was no substantial increase in advertising. We heard a great deal about it and we know it was studied from the point of view of tax liabilities, but I do not think the figures generally show an increase.

Senator BAILEY. You do not think the statement is well founded?

Mr. ALVORD. I do not think the statement is well founded, sir. Certainly as to the immediate future, we have quite a different situation than we had back in 1918. We have priorities, we have rationing, we have probably in the future a very severely regulated system of demand and supply. I cannot conceivably understand, for example, why the manufacturers of silk hose would want to do a great deal of advertising with their silk being unavailable, other than perhaps to keep their name before the public so that some day when the supply of silk is renewed they will still have the advantage of their trade name.

I wonder if I could make one more remark concerning this tax on advertising? I should think that solely from the Treasury fiscal point of view, this committee would view with considerable caution a tax upon advertising. For example, Mr. Stam will tell you that some four or five billions of dollars are to be collected annually in the form of sales taxes. Sales follow advertising. I think that the general ratio is that for a dollar of advertising, you get about $30 worth of sales. You would not have to reduce your retail sales by more than one-half of 1 percent—and this comes back to the effect upon the Treasury, Senator—you would not have to reduce the retail sales by more than one-half of 1 percent to cost the Treasury more than the gross amount involved in this tax, 12½ million dollars.

Senator BAILEY. Are there any further questions?

Senator DANAHER. I would like to ask one, Mr. Chairman.

I wonder if you are able to give us, Mr. Alvord, the figure on the cost of the second-class mail privilege accorded to newspapers and magazines?

Mr. ALVORD. I would have to give it out of my head, Senator Danaher, but I think it would run somewhere between $80,000,000 and $85,000,000 a year.

Senator DANAHER. Which the Government pays?

Mr. ALVORD. Which is a charge against postal receipts. But there again bear in mind you do not grant second-class mail privileges based solely upon cost or lack of cost of the privilege.

Senator VANDENBERG. You might double the second-class mail rates and cut your revenue in half.

Mr. ALVORD. That is very true, sir. Certainly, as long as I have been out here, I have never heard of the second-class mail privilege discussed solely from the point of view of the revenue or expense involved.

Senator VANDENBERG. You will not so long as we have popular elections.

Mr. ALVORD. Probably so.

Thank you.

(A memorandum submited by Mr. Ellsworth C. Alvord, on behalf of the National Association of Broadcasters, is as follows:)

MEMORANDUM SUBMITTED BY ELLSWORTH C. ALVORD ON BEHALF OF THE NATIONAL ASSOCIATION OF BROADCASTERS

This memorandum is presented to the Committee on Finance on behalf of the National Association of Broadcasters, the trade association of the radio broadcasting industry. It concerns title VI of the pending revenue bill (H. R. 5417), imposing a tax on gross receipts derived from radio broadcasting. This title was added to the bill during the final stages of its consideration by the Committee on Ways and Means of the House of Representatives, and the House retained the provision.

I. THE PROPOSED TAX

The proposed tax is to be imposed upon the operators of radio broadcasting stations, and upon those engaged in network broadcasting. Although designated an excise tax, the amount of tax payable by any given station or network is measured by its gross receipts from the sale of broadcast time. These gross receipts are designated as "net time sales," and are defined to include the gross amount received or accrued from the sale of time. The amount so received or accrued cannot logically include discounts or rebates actually allowed, of course. The bill specifically provides for the deduction of a maximum of 15 percent for agency commissions, and, in the case of the networks, of any amounts paid to individual stations for the time used. No other deductions are permitted.

Where the gross receipts are between $100,000 and $500,000 per year, the tax is 5 percent of those receipts. If the receipts are between $500,000 and $1,000,000 per year, the tax is 10 percent of the receipts. If the receipts are $1,000,000 per year or over, the tax is 15 percent of the receipts. Where the gross receipts are less than $100,000 annually there is no tax.

The Committee on Ways and Means estimated that the tax would produce gross revenues of about $12,500,000 in its first full year of operation.

II. ANALYSIS OF WAYS AND MEANS COMMITTEE REPORT

The report of the Committee on Ways and Means attempts to justify this tax on three grounds:

First, that "radio broadcasters possess a valuable monopolistic privilege, awarded to them free of charge";

Second, that "the principal operators in commercial broadcasting earn high rates of return on relatively small investments" and thus "possess unusual taxpaying ability"; and

Third, that "radio broadcasting requires public regulation * * * at public expense." (See H. Rept. No. 1040, pp. 34 and 35.)

None of these alleged grounds justifies the imposition of this special tax on radio broadcasting.

1. *Monopolistic privilege.*—The committee states that because of the technical limitations of the broadcasting band, the number of broadcasters is limited, so that the right to operate in particular areas "carries with it a measure of monopolistic privilege and the opportunity for an extremely profitable investment." It asserts that by exercising this privilege and exploiting that opportunity many broadcasters make substantial profits and derive other "less tangible benefits in the form of publicity and good will."

In the first place, a license to operate a radio broadcasting station confers no monopoly on the licensee. Monopoly, of course, involves a lack of competition, and there is no lack of competition in the radio broadcasting industry today. Virtually no locality in the country lacks competitive broadcasting. No licensee has a monopoly of the listening public. Every licensee faces vigorous competition from other licensees, and some must compete with a score or more.

Secondly, under the Communications Act of 1934, licenses may not be granted for longer than 3 years; and the Communications Commission actually limits them to a single year. Renewal is more than a mere formality. It must be obtained on the merits. The licensee must show that continued operation will serve "the public interest, convenience, or necessity" (see sec. 309 (a)). Furthermore, the licenses confer no right of ownership, and can be assigned or transferred only with the consent of the Commission (see secs. 309 and 310).

Third, improvements in the art are constantly making more frequencies available, and such developments as frequency modulation promise even wider opportunities in the future. The saturation point has not yet been reached; at January 1, 1935, there were 605 licensees; at January 1, 1940, 814; today there are 903. Relatively few applicants who have the financial resources to build and maintain the physical equipment, and survive the inevitable initial operating losses, and the energy, initiative, and managerial ability necessary to operate a station have been denied licenses.

In the fourth place, the broadcasting industry's only substantial source of income is from advertising, and radio certainly has no monopoly of advertising media. Radio broadcasting must compete with the newspapers, with the magazines, including the business magazines and farm journals, with outdoor displays, with direct-mail solicitation, and with various miscellaneous devices. In 1924 the aggregate expenditure for advertising in the United States was a little more than $2,000,000,000. Radio got none of it. In 1940 the amount spent was about $1,660,000,000. Radio got about $200,000,000. Newspapers took about $560,000,000, nearly three times as much as radio. Magazines of all kinds got about $210,000,000, a little more than radio. Direct mail advertising took at least $300,000,000, one and one-half times radio's share. Radio thus commands less than one-eighth of the advertisers' dollar, and it must fight every inch of the way for that share.

It is clear that radio broadcasting is a truly competitive business which should not be singled out for special tax on the theory that it is enjoying any "measure of monopolistic privilege."

2. *Rate of return on investment.*—The second argument presented by the Committee on Ways and Means is that the principal operators in commercial broadcasting earn high rates of return on relatively small investments. This, the committee indicated, gives them "unusual taxpaying ability," and renders it proper for them to be subjected to special taxation in view of the Government's present revenue requirements.

It is true that the initial investment required to provide the physical equipment of a radio station is relatively moderate, but it is by no means insubstantial. The physical equipment for a 250-watt local station will cost at the outset perhaps $25,000. That for a 50,000-watt station, providing a much wider coverage, may require an initial outlay of as much as $500,000. However, while in some businesses the original outlay for physical equipment will suffice for many years, the radio broadcaster is in a field in which technical improvements may render his equipment obsolete almost overnight. As those improvements come along, he must put them into effect, even though a complete duplication of his physical facilities may be required. The new technique of frequency modulation, for example, has already forced extensive and costly additions to equipment.

The cost of physical equipment is not the only cash outlay required of the licensee of a new radio broadcasting enterprise. Obviously, no station can be expected to be profitable from its inception. In almost every case substantial operating deficits will be incurred for several years; and in a large number of instances these losses will continue for many years. In 1940, for example, 187 of the 765 stations in operation during the entire year incurred losses. These losses are not mere paper losses; they must be met, in cash, by the operator. They represent investment in the business just as much as the expenditure for physical equipment.

The necessity for a very substantial investment over and above the cost of physical equipment is expressly recognized by the Communications Commission. The Commission has authority to prescribe the qualifications of licensees (sec. 303 (1)); and one of the more important requirements prescribed is that the licensee establish its financial responsibility. For example, in the case of even the smallest station, the Commission will require the applicant to show that it has available, for operating capital, at least $50,000 over and above the cost of physical equipment. This operating capital must be in cash; contracts for future advertising will not suffice.

As the Senate Finance Committee has repeatedly recognized, the rate of return earned on capital invested is not a fair single test of taxpaying ability. Capital is only one income-producing factor. Far more important than capital are the intangible factors, such as energy, imagination, initiative, managerial ability, and above all, just plain hard work. A successful radio station is peculiarly the creature of these other factors. The human thought and labor

required are enormous. It would be a long backward step in tax policy to impose a discriminatory penalty on profits which are due primarily to individual effort and ability.

Furthermore, it must be borne in mind that this special tax is in addition to all other taxes. It is not imposed in lieu of any other tax. Corporate normal taxes, corporate surtaxes, corporate excess-profits taxes, and all individual taxes, continue to apply to radio broadcasters. Those taxes are intended to be graduated on the basis of ability to pay, and that they adequately reflect that ability should be a fair assumption. A gross-receipts tax is not the way to reach excess profits. If they exist in the broadcasting industry, the income and excess-profits taxes will reach them, just as they will reach the profits of every other industry.

3. *Public regulation.*—The third consideration cited by the Committee on Ways and Means was the necessity for public regulation of radio broadcasting. This regulation, at public expense, was asserted to be of great benefit to the industry, without any special costs to it.

Public regulation of the radio broadcasting industry came about for one very simple reason having nothing to do with the virtues or faults of the industry. The ether had certain limitations, just as a highway has limitations. Traffic on the ether, just as on a highway, had to be controlled so that it could proceed in an orderly and efficient manner. The Radio Act of 1927, and later the Communications Act of 1934, became the traffic law; the Radio Commission at first, and later the Communications Commission, the traffic police.

The Federal Government regulates many industries, not radio broadcasting alone. Among them are the railroads, busses, and trucks, commercial aviation, shipping, the electric-power industry, the telephone industry, and the telegraph industry. It has not been thought that the necessity for public regulation of these industries justifies a special tax upon them. The functions of the Federal Government, insofar as they represent regulation of business for the benefit of the public, have been consistently financed through general rather than special taxation. There is no valid reason for an exception in the case of the radio-broadcasting industry.

The radio-broadcasting industry will readily concede that if the long-standing policy of the Government is to be changed, and businesses regulated for the benefit of the public are to bear the cost of their own regulation, then the radio-broadcasting industry should bear its fair share. It insists, however, that it should not be singled out as the sole object of such a change in policy.

In no event can the propriety of a charge to cover the costs of regulation be offered as a justification for the tax proposed by the bill. As against the $12,500,000 to be raised by the proposed tax, the entire appropriation for all the work of the Federal Communications Commission (excluding only its special national-defense activities) for the fiscal year 1942 is only $2,340,000. This amount, of course, provides not only for the Commission's regulation of radio broadcasting, but also for its regulation of the telephone and telegraph industries, and for its regulation of amateur radio communication, as well as point-to-point and ship-to-shore communication by radio.

III. PRINCIPAL OBJECTIONS TO THE TAX

Apart from the fact that none of the justifications advanced by the Committee on Ways and Means are valid, the tax should not be imposed for the following principal reasons:

First, it is discriminatory; and second, it imposes a burden which will imperil a vital public service.

(a) Discrimination.—The tax proposed by title VI on radio broadcasting differs in one essential respect from the various excise taxes imposed by title V, namely, the ability of the primary taxpayer to pass on the tax.

The principal characteristic, and, in fact, the principal justification, of an excise tax is that it can be passed on to the ultimate user of the goods or services taxed. The excise taxes imposed on playing cards, safe-deposit boxes, distilled spirits, tires, sporting goods, luggage, refrigerators, musical instruments, club dues, admissions, communications, and on all the other articles or services listed in title V, are not intended to be absorbed by the manufacturer or enterprise singled out. They are indirect taxes on the ultimate consumer, and it is intended that they shall be added to the price of the product or service.

Thus, for example, when an individual buys a package of cigarettes, he pays 6½ cents Federal tax; when he buys a gallon of gasoline he pays 1½ cents Federal tax; when he pays 39 cents to see a motion picture, he pays 4 cents of that amount

to the Federal Government. In reality the consumer pays the tax. The cigarette manufacturer, the gasoline producer, and the motion-picture theater merely serve as convenient collection agencies. It is this feature of an excise tax—the ability to pass it along to the ultimate consumer—that prevents it from becoming an instrument of destruction and avoids hardship and discrimination against the industry manufacturing or supplying the article or service subjected to tax.

The Treasury and the Congress have studiously avoided gross-receipts taxes—excise taxes which cannot be passed on. The proposed radio-broadcasting tax would represent a departure from this sound policy, for the industry cannot pass on this tax and still maintain its competitive position.

It has already been pointed out that radio commands today a little less than one-eighth of the total amount spent by business for advertising, the remainder being distributed among newspapers, magazines of all types, outdoor displays, direct mail solicitation, and various miscellaneous media. Radio's share has been built up by vigorous effort over the past 15 years. At its inception, the very novelty of radio aided it in obtaining a foothold, and its early growth was for this reason fairly rapid. However, after the novelty wore off, radio had to meet the competition of the other media solely on the basis of its own effectiveness in the field. In recent years radio's rate of growth has shown a distinct tendency to level off.

That the competition among the several advertising media is vigorous and constant is conclusively shown by the fact that no significant changes have occurred in the past 3 years in the share of any medium. In 1938, advertisers spent a total of about $835,000,000 for advertising in newspapers, and magazines (excluding business magazines and farm journals), and over the radio. In 1939 they spent about $875,000,000, and in 1940, about $937,000,000. Newspapers accounted for 65.1 percent of the total of the three in 1938, 63.1 percent in 1939, and 60 percent in 1940; magazines for 17 percent in 1938, 17.4 percent in 1939, and 17.8 percent in 1940; radio for 18 percent in 1938, 19.5 percent in 1939, and 22.2 percent in 1940. Although newspapers lost a few percentage points of the aggregate between 1938 and 1940, both 1939 and 1940 were each better in volume than the previous year. Magazines improved their position both absolutely and relatively. Radio enjoyed a slightly larger relative gain, but this was modest.

Radio certainly has no peculiar advantage in the matter of rates. Advertising rates in each medium naturally tend to reach a level which will be in line with the other media in terms of consumers reached. A newspaper fixes its rates on the basis of its circulation. A magazine does the same. Billboard rates are determined on the basis of traffic density; and car and bus card rates on the basis of passengers carried. Similarly, radio rates are determined on the basis of listens reached. In the case of a particular station, this will depend on its frequency, its power, the attractiveness of its programs—comparable to the make-up and editorial character of a newspaper—and the habits and economic condition of the population of the area served.

In its early days, radio was able to attract many advertisers because its effectiveness was constantly increasing in terms of coverage of markets. Illustrative of this, in 1934 about 57 percent of the homes in the country had radio sets; in 1936, 71 percent; in 1938, 80 percent; in 1940, 83 percent. It is estimated that family coverage today is about 85 percent, and in the principal markets, of course, it is even higher. It is clear, certainly, that only a negligible number of new homes can be added in the future; the saturation point is near, if it has not already been reached.

Advertising managers are a hard-boiled fraternity. They will not spend more for radio advertising than it is worth. Modern surveying methods enable them to determine with uncanny accuracy the effectiveness of the various advertising media. Such surveys are being conducted constantly. When they show that radio is not producing as much per advertising dollar as another medium can produce, radio must either reduce its rates or the other medium will get the business.

There can be no question but that any effort on the part of the radio broadcasting industry to pass the burden of this proposed tax on to the advertisers will simply drive those advertisers to the use of other media not subjected to such a special tax. In order to preserve its competitive position, the industry would be forced to absorb the entire burden of the tax. As will be shown, this cannot be done without grave damage to the industry and consequent serious deterioration of the great public service which it performs.

The imposition of this special tax upon radio broadcasting, without corresponding taxes upon competing media, makes it impossible for the industry to maintain its competitive position and still pass on the tax. The same is true of the tax upon outdoor advertising, and these taxes thus repreesnt direct discriminations which cannot possibly be justified.

The only conceivable justification for a direct discriminatory tax upon any business would be that the public interest required its abolition. Radio broadcasting is at the other end of the scale. The public interest clearly requires not only its maintenance but its encouragement. Any departure from this sound policy would be disastrous. A direct discriminatory tax upon radio broadcasting would be such a departure.

(*b*) *Burden upon public service.*—The radio broadcasting industry performs an outstanding and important service to the American public. This tax would impose upon that service a heavy and unreasonable burden, which must inevitably result in the deterioration of that service, to the detriment of the public. The industry cannot look forward to increased revenues; and reduction of its expenses without adverse effects upon the service rendered is utterly impossible.

1. *Radio's public service.*—The extent of the use of radio by the American public is almost unbelievable. Some 50,000,000 receiving sets are estimated to be in use today. Eighty-five percent of the families in the country own at least 1 set. Thus about 29,000,000 American homes have direct access to radio broadcasts. Of these radio-owning families, 83 percent listen at some time every day. The average daily use, as a matter of fact, is over 4½ hours. It is more than that in the rural areas. Radio broadcasting is the principal source of information and entertainment in America today. The Elmo Roper organization recently sought the answer to the question, "From which source do you get the most of the daily news—the newspapers or radio news broadcasts?" It was found that 39.4 percent of the people on the average, and considerably more in sparsely populated sections, rely on the radio as their chief source of news; that an additional 26.2 percent rely on both radio and the newspapers; and that 31.2 percent rely mainly upon the newspapers. The same organization discovered that listening to the radio is the most popular recreation in the country today. On the average, 27.5 percent of the people, and again even more in the rural areas, enjoy listening to the radio more than any other recreation. In this respect, radio is the leader. It enjoys the favor of half again as many people as its closest competitor, the motion picture, which is the chief attraction for 19.3 percent of the people.

This immense popularity of radio did not come about by accident. It came about because the radio broadcasting industry has always had a deep sense of public responsibility, and because radio has met that responsibility. The public, after all, is the final arbiter and censor of radio service. It knows the standard of service it ought to receive; it knows whether the service measures up to that standard, and what to do if the standard is not met. In this country, the public may still listen or not, as it chooses. The simple fact that American radios can still be tuned out instantaneously does more than anything else could do to guarantee that radio will continue to serve the public interest.

Radio's public service contribution is well illustrated by the part it is playing in the national-defense program—a participation which brings radio not a dollar of revenue. First, radio provides prompt, accurate, and comprehensive news broadcasts of events at home and abroad. These give the public the information it needs to form its opinions as to what policies this country should adopt. Second, radio provides the widest possible forum for public debate. Thus the principal arguments on both sides of public issues can be fully tested, so that the final acceptance of one policy or the other can be more reliably regarded as the will of the majority. Third, radio provides education, not only for the young, but also for the adult population, in American history, in the ideals of democracy and liberty, in the workings of the Government and its agencies, and even in technical fields, many of its noncommercial educational programs being used for classroom instruction in thousands of schoolrooms. Fourth, radio provides a means, and the only means, by which, in military or other emergency, the entire Nation can be reached almost instantaneously.

Countless specific examples could be cited of the part radio plays in furthering the national-defense effort. They would include such programs as those carried out under the auspices of the Civil Service Commission, which resulted in the placement of over 500,000 skilled and technical defense workers in 1 year; those prepared and produced to assist the aluminium-collection campaign; those devoted

to the campaign for the sale of defense bonds; those given to facilitate the operation of the selective-service system; and many others. Other programs have explained the history and functioning of the Army, the Navy, and the Marine Corps. Still others have set forth the part various industries and groups play in national defense.

The War Department has already made it clear to the industry that it considers the uninterrupted maintenance of normal radio broadcasting of the utmost importance to public morale in time of emergency. To this end, and also to the end that instantaneous communication with the entire country will be possible whenever the necessity arises, the industry, in cooperation with the Defense Communications Board, has developed extensive plans to insure continuous operation of broadcasting stations under emergency conditions. A potential supernetwork is being established, with alternate interconnections and transmission facilities, so that interruptions can be minimized. Plans are being made for linking stations to defense centers, so that warnings and announcements can be instantaneously given.

These national-defense programs cost the Government nothing. The industry looks upon them as a contribution in the public interest. The attitude of the broadcasters is well expressed in a resolution recently adopted by the governing body of the National Association of Broadcasters. This resolution is as follows:

"In view of current trade publicity being given to a proposed advertising campaign in behalf of the Navy Department to be placed through one of the large advertising agencies, the executive committee feels that the purchase of time by defense agencies might tend to restrict rather than enhance the most effective utilization of broadcasting during the present emergency.

"Therefore we wish at this time to reaffirm the industry's desire to continue its present practice of making its facilities available at no cost to Government agencies engaged in promoting the national-defense program.

"To inform the public of the industry's position, it is suggested that an announcement that all Government defense programs are carried without charge be used once each day by all cooperating stations."

This policy of refusing compensation for time devoted to Government broadcasts has been an industry policy from the beginning, and it is one which the industry hopes it can maintain permanently, despite the fact that various Government agencies spend hundreds of thousands of dollars for advertising in other media.

Government programs are not the only ones which go to the public without producing revenue for the broadcaster. On the average, only about one-third of a station's operating time is devoted to commercial revenue-producing programs. The balance is devoted to noncommercial, or "sustaining" features such as educational and cultural presentations, unsponsored news broadcasts, political speeches, Government programs, national-defense features, and the like, none of which produce revenue for either the stations or the networks. Yet all these noncommercial programs are costly. They require just as much physical apparatus as the commercially sponsored programs (on occasion the expense of wire lines and similar facilities is even greater), just as many employees, just as careful planning and production, and whereas the sponsor pays the cost of talent in commercial programs, the station or network must bear the cost of any professional talent required in noncommercial programs.

Nor is radio's contribution to the public limited to what goes out over the air waves. The industry is constantly engaged in extensive and costly research looking to the improvement of transmission and reception, to the improvement of programs, to the development of new techniques, such as television, international short-wave broadcasting, frequency modulation, and the like. All this is in line with the declared policy of Congress, which in the Communications Act of 1934 admonished the Communications Commission to "generally encourage the larger and more effective use of radio in the public interest" (see sec. 301 (g)). Although their cost is enormous, these activities produce no appreciable income today, and there is no assurance that they ever will in the future. At best, it will be many years before they produce even a modest profit.

According to figures recently released by the Federal Communications Commission, some 238 broadcasting stations had net time sales, in 1940, sufficient to bring them within the orbit of this proposed tax. These stations, together with the three national and five regional networks, had net time sales of about $112,500,000 in 1940. The aggregate direct broadcast expenses of these stations and networks was about $92,500,000. This tax, if applicable in 1940, would

have imposed upon this portion of the industry an additional burden of direct expense amounting to about $11,500,000.

It is readily apparent that such an addition to the burden of direct expense which the industry already carries would inevitably do serious damage to the service which the American public expects and is entitled to receive from radio. This service, it must be remembered, is being performed today by all the stations, and not by the prosperous ones alone. The tax will be an intolerable burden upon the losing stations (the number of which will inevitably be increased), and upon the marginal stations. These stations, too, serve the public. This tax strikes hardest at them, though they are least able to stand the blow. It has no relation whatever to ability to pay.

2. *Decreased revenues in prospect.*—Since the competitive situation is such that the broadcasting industry could not reasonably expect to pass on the tax through increased rates, its only hope of absorbing it successfully would be through increased volume or a reduction of expenses. The prospect, however, is for a decline, rather than an increase, in the volume of business. Similarly, a substantial reduction of expense is not a practical possibility.

Substantially all of the revenue of the radio-broadcasting industry comes from the sale of advertising; and most advertising is done, naturally, by the sellers of consumer goods. Advertising stimulates demand; and fosters sales, distribution, and production. Supply in this country has typically outrun the effective demand, and the function of advertising has been to stimulate demand, so that production could be maintained or increased. However, when the demand is greater than the supply, it becomes uneconomic to stimulate that demand further. For this simple reason, the very real prospect is that advertising expenditures will be drastically curtailed in many lines.

The national-defense program will not benefit radio broadcasting. On the contrary, the prospect is that the effect of that program upon radio will be quite the contrary. It has been estimated that out of 100 principal national adverisers, the production of at least 24 will be seriously affected by priorities and material shortages, and 23 of these 24 are or have been important radio advertisers. Radio broadcasters can hardly assume that advertising budgets will not be affected by this situation. Nor can it be assumed that the Government's efforts to avoid inflation and control spending, by such devices as the restriction of installment buying, will not also result in the reduction of advertisig in many lines.

Unfortunately, the radio broadcasting industry cannot reasonably anticipate increased revenues during the emergency period. In many lines, advertising is sure to be cut, for obvious reasons, some of which have already been mentioned. Automobiles and oil are specific examples. In many other lines, the prospect is wholly uncertain, though the principal indications are that a decline rather than an increase is to be expected.

One further fact should be noted. Many national advertisers, finding it necessary to curtail production and thus left without any motive to stimulate the immediate sale of their product, may nevertheless engage to some extent in what is called institutional advertising, designed simply to keep the name of the product before the public with a view to reawakening demand in the future. While radio advertising is unsurpassed as a current sales stimulant, it has not yet gained popularity as a medium for institutional advertising. An occasional magazine or newspaper page will accomplish the purpose of an institutional campaign, whereas spasmodic radio programs, on the other hand, are difficult to schedule, and likely to be ineffective. Accordingly, radio cannot expect to offset its revenue losses with any substantial share of institutional advertising expenditures.

3. *Expenses cannot be reduced.*—The radio broadcasting industry is in a peculiarly difficult position in the matter of reducing expenses. It cannot offset an increase in one item by a decrease in another. It cannot hold its over-all expense down when its volume of business declines. The fact of the matter is that expenses actually increase with a decline in the volume of business.

The major networks and stations are on the air 17 hours a day, and their listeners expect them to stay on the air for this entire period. Stations which operate less than full time must nevertheless use all the time available to them or lose listeners. In addition, every Communications Commission license specifies the hours during which the station must operate, and no reduction can be made without permission from the Commission. All this makes it necessary

for radio broadcasters to provide a full schedule of programs every single day of the year. As matters stand today, only about one-third of the available broadcasting time is sold to advertisers—so that only this one-third produces any revenue. The broadcaster must fill up the balance of the time—all of it. A newspaper, faced with the loss of advertising, can drop pages, and thus effect a substantial reduction in expense. A magazine can do the same. The radio broadcaster, however, must publish the maximum number of pages every day; and in the case of the radio broadcaster, every commercial hour lost means not only reduced revenue, but a substantial additional expense, which he would not otherwise incur, in supplying a noncommercial program.

In 1939 the direct program expenses of the 519 individual stations reporting time sales of over $25,000, amounted in the aggregate to about $25,500,000. This figure includes only salaries and wages of the program departments, talent expenses, royalties and license fees, wire services, and the like, and does not include technical, promotion, or general administrative expenses (amounting in all to about $43,500,000). Some $9,500,000 of this $25,500,000 expenditure was expended for talent, but commerical sponsors reimbursed the stations for $4,500,000 of this amount, leaving a total net program expenditure of about $21,000,000. Of this amount, only $7,500,000 was attributable to commercial programs. The balance of $13,500,000 was spent for non-commercial, non-revenue-producing programs. The networks' direct program expense amounted to about $14,450,000, including about $5,375,000 for talent, of which $1,150,000 was reimbursed, leaving a net program expenditure of about $13,300,000. (Technical, etc., expense amounted to about $13,800,000.) Of this total program expense, over $9,800,000, or nearly 75 percent, was attributable to noncommercial programs.

By reason of the fact that such items as talent expense, as well as a number of others, must be borne by the broadcaster in the case of noncommercial programs, the latter cost the broadcaster considerably more to produce than commercial programs. As a consequence, any reduction of the volume of business, any reduction in commercial programs, in addition to adding to the broadcaster's over-all expense, casts a disproportionate burden upon the noncommercial programs. Such a result would be especially unfortunate in view of the fact that it is the noncommercial programs, in the main, which provide the coverage of important events, the discussion of public issues, the educational and cultural features, and the governmental and national-defense broadcasts.

Other broadcasting expenses cannot be materially reduced. Salaries and wages account for by far the greater part of the expenses of the radio broadcasting industry. In 1940 the industry employed about 22,000 full-time workers, at a weekly wage aggregating over $1,000,000. In addition, about 4,000 part-time workers were employed by the industry, and this figure does not include talent under contract to the networks, to stations, to advertising agencies, or to individual sponsors. (Most of the talent employed in important commercial programs is under contract to the advertising agencies.) It is estimated that if this talent were included, some 50,000 persons would be found to be employed by the industry directly. No reduction of employees or pay rolls can or should be made.

Indirectly, the broadcasting industry is responsible for the employment of perhaps 250,000 other workers in the radio manufacturing and distribution industries. A healthy broadcasting industry is thus the key to the livelihood of some 300,000 wage earners. They will properly challenge any threat to their security.

Similarly it is obviously not in the public interest for broadcasters to reduce the heavy expenditures they have made in the past, and budgeted for the future, for the perfection of physical apparatus, for the improvement of programs, for research and development in new fields and new techniques, such as television, international short-wave broadcasting, frequency modulation, and others. The industry, in past years, has expended large sums for improvement, research, and development along these lines, and even greater sums must be expended for many years in the future before there can be hope for any return whatever. One network, for example, has budgeted over $2,000,000 for 1942 alone for the development of television, short-wave broadcasting, and frequency modulation. Furthermore, as new techniques are developed, individual stations must be financially able to adopt them, and extend their benefits to the public. As has already been pointed out, technical improvements may require overnight replacement of equipment, at heavy cost. These expenditures are clearly in the public interest. They must be maintained and even increased. Any tax policy which creates pressure for their reduction is unsound.

IV. CONCLUSION

The Committee on Ways and Means predicted that this proposed tax will produce $12,500,000 in its first full year of operation. This figure, of course, represents the gross revenue to be produced by the tax. Since it will be deductible for income and excess-profits tax purposes, the net revenue will naturally be somewhat less.

The tax is novel in form and unsound in principle. It discriminates against and imposes an undue burden upon an industry which renders a real public service in normal times, and whose efficient functioning in times of emergency is of the utmost importance. Even without the tax, the industry is facing a difficult and uncertain period, for the defense program necessarily involves dislocations and disruptions of normal business activities. This special tax would only multiply the difficulties. Its imposition would at best be an experiment, and an experiment which even a much larger amount of revenue could not conceivably justify.

Overshadowing all these considerations is a major consideration of broad public policy. Radio broadcasting has become the most important medium of disseminating information to the public, and the greatest forum for public debate. It must be kept free; the necessity for this freedom is clearer today than ever before. This freedom cannot be preserved by special taxation.

Title VI should be stricken from the bill.

Senator BAILEY. The next witness is Mrs. Emily Holt, national executive committee, American Federation of Radio Artists.

STATEMENT OF MRS. EMILY HOLT, NEW YORK, N. Y., REPRESENTING THE AMERICAN FEDERATION OF RADIO ARTISTS

Mrs. HOLT. Mr. Chairman and gentlemen, I am here as the representative of the American Federation of Radio Artists, which is affiliated with the American Federation of Labor. I think all of you know the service which artists and performers in this country render in a community in patriotic spirit.

Presently there is a great deal of that contribution being made by our membership. Community drives, community chest drives, Red Cross drives, hospital drives—all kinds of public organizations are supported by the gratuitous services of our membership, and the use of the talent of our artists and performers is greatly increased in this day when many subscription-seeking organizations are resorting to radio.

This is related directly to the opportunities for employment which our members have. There are only so many hours of time on the air. Many are devoted to programs of civic and educational nature; more are being devoted now to benefits and drives; many are devoted to musical programs, and a few—we think too small a percentage—to talent entertainment programs.

It is our function to initiate collective bargaining agreements for our 12,000 members to insure them a living. Our members support their organization by payment of a sliding scale of dues, so we have constantly before us the evidence of their income possibilities in radio. The overwhelming majority of them are people with an income of $2,000 a year and less; then the next category brings us up to almost 85 percent of our membership, earning between $2,000 and $5,000 a year. Only between 10 and 15 percent of our people earn $10,000, $25,000, and so on up to the upper brackets. With the increased cost of living, $2,000 a year and between $2,000 and $5,000 in the different

parts of this country are not figures that our membership can look upon and not leave them disturbed at all. We think this tax will disturb us, and we shall tell you why. If the tax is imposed, as now contained in the bill, two possibilities may occur. It may be passed on, in whole or in part, to the sponsors of our employers on commercial programs. If it is, it is our considered opinion that it will curtail the existing limited opportunities of our membership. If it is absorbed in whole or in part by the management, we feel it will impair our ability to secure and maintain uniform minimum scales, especially in view of the rising costs of living. For that very simple reason, involving the livelihood of the actors, singers, announcers, and sound effects men, who entertain the public of the United States, we feel that this tax is an injustice. I have just come from our convention, our fourth annual convention in Detroit. We had delegates there from radio stations all over the country, and this matter was discussed on the floor of the convention.

I was asked to read to you the resolution which was adopted on the floor of that convention:

Resolved: That A. F. R. A. vigorously protests against the special tax levied against the radio industry, adopted by the House of Representatives in section 601 of title VI of the Revenue Act of 1941, and now under consideration by the Senate Finance Committee. This proposal is discriminatory legislation against the radio industry which therefore concerns the welfare of every radio performer, who will, in the last analysis, pay part of this tax in the form of wage adjustments. Radio performers now pay their income and emergency taxes to meet the national crisis, just as do all other loyal Americans. There is no justice or equity in imposing this special tax upon the industry in which we work, and our national executive secretary is instructed to place our organization on record before Congress in opposition to the radio tax.

I thank you very much. Are there any questions, sir?

Senator BAILEY. Any questions?

(No response.)

Senator BAILEY. Lawson Wimberly, international representative International Brotherhood of Electrical Workers. Mr. Wimberly?

STATEMENT OF LAWSON WIMBERLY, WASHINGTON, D. C., INTERNATIONAL REPRESENTATIVE, INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS

Mr. WIMBERLY. Mr. Chairman and gentlemen of the committee, my name is Lawson Wimberly. I appear here as the representative of the International Brotherhood of Electrical Workers, a labor organization affiliated with the American Federation of Labor.

We wish to be recorded as being opposed to the tax proposal contained in House bill 5417, with respect to advertising sales by radio stations. Let me make it clear, however, that we do not wish to be understood as opposing any tax that may be necessary, so long as the tax is equitable and not discriminatory.

That brings me to the basis of our opposition to the proposed tax on radio advertising. I think we should keep in mind, in that connection, some of the things which have been said by other speakers here on this subject: That there are many other forms of advertising—newspapers, magazines, streetcars, busses, and various other mediums of advertising—which the present bill does not propose to

tax. Our opposition to the tax on radio time sales is that it singles out radio advertising and burdens it with what is almost an exorbitant tax.

And there I want to say just a word about how the thought of taxing radio broadcasting originated in the House of Representatives. Mr. Connery, of Massachusetts, introduced a bill which proposed to levy "an amusement tax" on radio time sales. That bill, H. R. 4806, was never acted upon, but most of its text was incorporated in the bill now before your committee. That particular measure, H. R. 4806, was proposed by the printing-trades workmen who apparently thought they were being denied some earning opportunities, and possibly some employment opportunity, by reason of increased advertising by radio broadcasting. I think they were mistaken in that view, and I think the very fact that it is a punitive measure discredits the proposal to tax radio broadcasting advertising.

There has been some question as to the position of the American Federation of Labor on this matter, and I want to say to the committee that the executive council of the federation, in its meeting last week in Chicago, voted a resolution opposing this measure. It has been represented, as I understand it, by some of the representatives of the printing trades that the federation is in favor of this tax. That is not true, and I would be glad to furnish the committee with a copy of the resolution adopted by the federation.

Senator BAILEY. You may put it in the record.

Mr. WIMBERLY. In that connection, I would like permission to file a brief statement of our position in this matter; I realize the time which the committee has is limited here. With that statement I will include a copy of the resolution adopted by the federation.

I think I have just about outlined the basis of our opposition to this tax. I would like, however, to underline some of the things already said regarding this being a discriminatory tax. We believe it is one that will seriously impair the earning opportunities of our members in the broadcasting industry.

I wish to thank the committee very much for this courtesy.

(The resolution of the American Federation of Labor and the supplemental statement referred to above are as follows:)

EXTRACT FROM MINUTES OF THE MEETING OF THE EXECUTIVE COUNCIL, AMERICAN FEDERATION OF LABOR, CHICAGO, ILL., AUGUST 4–13, 1941

"While labor believes that the United States Government should levy extra taxes on the people to pay for defense work, we do not believe in punitive and discriminatory taxation such as a special levy on radio advertising broadcasts."

Motion carried.

STATEMENT BY LAWSON WIMBERLY ON BEHALF OF THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS (AFFILIATED A. F. OF L.)

In re H. R. 5417, title VI, Radio Broadcasting and Network Tax.

This statement is presented to the Senate Finance Committee on behalf of the International Brotherhood of Electrical Workers, and American Federation of Labor affiliate, in opposition to the proposed tax on radio-advertising sales contained in title VI of H. R. 5417. Time allotted for our appearance before the committee did not permit detailed discussion of the various phases

of this matter. We therefore wish to present some additional facts with respect to our objections to a tax being imposed only on radio advertising.

Undoubtedly everyone realizes that a radio station, like a newspaper, magazine, or any other business must compensate its employees with income from some source. A radio station, like a newspaper or a magazine, derives its principal income, with which employees are paid, from advertising sales. While in the advertising field, the radio utilizes an entirely different type or form of sales appeal, it still must compete with all the other advertising mediums. For Congress to tax one medium of advertising without taxing all would certainly be discriminatory.

It is interesting to look into the background of the proposal to tax radio advertising and not tax newspaper, magazine, or periodical advertising, which really constitutes the large volume of advertising sales. This proposal originated in the Ways and Means Committee of the House of Representatives when an agent of the International Allied Printing Trades Association, an organization of five unions in the printing industry, complained to the House committee that radio advertising was reducing the earning opportunities of members of the unions comprising the association.

The records available do not support this allegation. If we can take the record of the number of members on which these unions have paid per capita tax to the American Federation of Labor as a standard of comparison, their membership has actually increased in the period of radio's greatest expansion. The following with respect to the number of members reported is taken from the official proceedings of the American Federation of Labor for the years shown:

	Name and membership of respective unions				
	Typographical	Printing pressmen	Bookbinders	Photoengravers	Stereotypers
1925	71,000	40,000	13,600	7,200	6,800
1930	77,600	40,000	13,900	8,900	7,800
1935	73,400	42,000	11,700	6,700	7,900
1940	[1] 79,400	43,700	18,700	10,500	8,400

[1] Figure in 1939. This union not affiliated with American Federation of Labor in 1940.

It should be interesting to note the number of broadcasting stations which were licensed for operation during the above period. From reports of the Federal Communications Commission we find that the number of standard commercial broadcast stations were as follows:

	Stations licensed		Stations licensed
1925	571	1935	605
1930	612	1940	814

Figures could be given to show how the number of radio receiving sets in use in the United States has risen from a few hundred thousands to over 50,000,000 at the present time. We could also list authentic figures to show the tremendous increase in circulation of newspapers and magazines during the past 20 years; we could quote statistics to show that hundreds of thousands have been provided employment as a result of the development of radio, but we do not feel that is necessary, especially when this information is general knowledge.

The printing industry workers in attempting to have Congress enact a punitive tax on radio advertising, have selfishly disregarded these obvious facts. They have also apparently ignored the fact that the radio broadcasting industry each year spends several millions of dollars for printed promotional activities. The radio manufacturing industry spends considerably more for its sales and promotional work.

When the proposed tax was first broached, it was termed "an amusement tax" by its sponsors. The fact that it was so designated emphasizes the existence of inherent deficiencies which render such a disguise necessary. A properly formulated tax on amusement would impose the tax burden upon those who are the beneficiaries of the particular entertainment or amusement. The proposed tax would be imposed upon the broadcasting stations and networks—upon the producer, not upon the consumer—and would have a detrimental effect directly

upon employees in the broadcasting industry. The only measure of the amount of the tax would be the amount of revenue, irrespective of the quantity or quality of amusement afforded to any listener. While perhaps radio offers more entertainment with the advertising it carries than do newspapers with their advertising, there is no substantial basis upon which an amusement-tax levy could be made upon radio.

Another fact regarding radio advertising that is generally overlooked is the type of advertising carried by the radio which requires the services of many vocations, including not only technicians and engineers, but musicians, actors, script writers, announcers, and others. The annual wage bill of radio broadcasting amounts to several millions annually.

In view of these facts, we submit that there can be no justifiable reasons for taxing radio time sales unless there is an equal rate of taxation on all other forms of advertising. A radio advertising tax alone would have a very serious effect upon the earning opportunities of the members of this organization employed in the broadcasting industry, as well as thousands of others in broadcasting and other allied industries. This situation would not prevail to such a degree if the tax is made applicable to all forms of advertising.

We would like to reiterate our statement before the committee to the effect that we are not opposing any tax that may be necessary—so long as that tax is equitable and applies to all alike. We submit that the tax proposed on radio broadcasting in this bill is a punitive tax, unreasonable, discriminatory, and partaking of the character of class legislation, violative of the fundamental democratic principle of equality under law. It should be stricken from the bill.

Senator BAILEY. This finishes with the proposed radio tax. We now come back to the capital stock tax and excess-profits tax, and the next witness on the calendar is Claude Dudley, Millers' National Federation.

STATEMENT OF CLAUDE W. DUDLEY, WASHINGTON, D. C., REPRESENTING MILLERS' NATIONAL FEDERATION, CHICAGO, ILL.

Mr. DUDLEY. Mr. Chairman and committee members; my name is Claude W. Dudley, and I represent the Millers' National Federation. It is a national trade association of the flour-milling industry. We have about 480 members and produce about 80 percent of the flour commercially produced in the United States.

I want to make clear, at the outset, that we are heartily in accord with the general proposition that the revenues of the Government must be very substantially increased. Three and one-quarter billions is not too much; it may be too little. I realize full well that failure to take a realistic view of the fiscal situation at this time might lead to very serious consequences in the future.

There are only three features of this bill which I want to call to your attention this morning, and I am going to ask that I be permitted to file a statement which I shall leave here this morning.

The first of these items to which I wish to direct your attention is the capital-stock tax and the declared-value excess-profits tax. We have previously urged, and again urge, that these taxes be abolished. They are very unscientific taxes. The amount of tax which the corporation pays, either as a capital-stock tax, or as a declared-value excess-profits tax, depends not so much on the corporation's ability to pay as it does upon the good luck of its management in guessing accurately, over a period of 1 year, 2 years, or 3 years, as the case may be, the amount of its earnings. I think one of the witnesses referred to it a few days ago as a crap-shooting contest. In my opinion, the tax is

entirely unscientific. With the addition of a graduated excess-profits tax at high rates, which this bill contemplates, and which we do not oppose, the declared-value excess-profits tax serves no longer a useful purpose and it and its companion, as I have said, should be abolished.

Senator BAILEY. What would you substitute for it?

Mr. DUDLEY. Senator, I have no specific suggestion. First, I should say that the feeling we have is that something should be substituted for it because it involves $150,000,000, which we think should not be lost. Whether the committee should add to the normal and surtax rates of corporations or should add to the graduated excess-profits tax or adopt some other method, we leave to the judgment of the members of the committee.

Senator BAILEY. Your objection, primarily, is to the base?

Mr. DUDLEY. Yes; we think, as I have said, it is an unscientific tax; it is unsound.

Senator BAILEY. Just give us a little analysis on that point; just elaborate on it; tell us why you think that.

Mr. DUDLEY. We think it is unsound in this respect, Senator. We are to declare a value between now and September 29 of our capital stock. As you know, that declaration needs to be related in no way to the actual value of our capital stock. A corporation whose stock has $100,000,000 of value in the quoted security markets may, if it so desires, declare the value at $1,000,000, or may declare its value at $1,000,000,000, and the Government accepts whatever value is declared. The purpose of a corporation, in declaring a high capital-stock value, is to get a large credit for declared-value excess-profits tax purposes.

At the present time, under the present law, it is intended that that value which we declare now shall be effective for the next 3 years.

Senator BAILEY. I might say that that yield now is $215,000,000.

Mr. DUDLEY. Thank you. Now, that value which we declare now is to be effective for 1941, 1942, and 1943. Who can really estimate, with any degree of expertness at all, the earnings of any corporation for the next 3 years under such conditions as we have now? And it is that estimate or guess which determines what value a corporation shall place on its capital stock for purposes of this tax. I think, by all means, if you decide that the tax should be continued, an annual redeclaration of value should be provided for in the bill. I think that should be provided for at all times, and I think it is especially true in these times. We don't know much about what the situation will be in July 1942.

Senator BAILEY. You would be satisfied with that? With that annual declaration?

Mr. DUDLEY. Well, Senator, I think that with a graduated excess-profits tax at high rates—and they must be high—this bill contemplates rates from 35 to 60 percent—with a special excess-profits tax at some rate—10 percent it is in this bill; that tax, incidentally, we oppose—that a corporation should not have to worry with capital-stock tax and declared value excess-profits tax at all; and, incidentally, it is quite an additional worry. As you know, there is no provision for filing consolidated returns for capital-stock taxes or declared-value excess-profits tax. As you know, a railroad system, for instance

can file a consolidated return for income-tax purposes and for ordinary excess-profits tax. Every railroad system involves a number of subsidiary corporations in this, that, or another State operating a part of its lines. Everyone of those railroad systems must make, separate for each individual small company, a capital-stock return and file a declared-value excess-profits-tax return. I think the taxes should be consolidated as much as possible. We should have fewer, rather than more of them, even though it means an increase in the rates in those retained.

Now the second change to which I desire to direct your attention is the graduated excess-profits tax. The rates are graduated from 35 to 60 percent. We have no objection to that whatsoever. It is the method which we think is unsound.

As the bill stands, the rate is graduated merely upon the basis of size, dollar income, without any relation whatsoever to the percentage increase of such corporations earnings in comparison with what you might call the normal or ordinary return. The excess-profits-tax laws of 1917 and 1918 both recognized the principle, and adopted the principle that a corporation whose earnings are say, 100 percent above normal, should pay a higher rate of graduated excess-profits tax than a corporation whose earnings are say, 25 percent above normal.

Thus, two corporations might pay exactly the same tax under this bill, notwithstanding their earnings were far apart because the graudation is based upon dollar excess profits—that is, taking into consideration their credits——

Senator BAILEY (interposing). What would you suggest for normal, as to base?

Mr. DUDLEY. I think that the bill very properly recognizes two alternative bases for determining the normal; a normal net income based upon a past period, or a minimum return on invested capital, which the bill has placed at 8 percent for the first $5,000,000, and 7 percent above $5,000,000. I think we are very unfortunate in the base period which was adopted in the 1940 excess-profits-tax law. I think one of the difficulties now is due to the fact that that base period, 1936 to 1939, was very subnormal.

For instance, for the industry which I represent, the milling industry, the earnings for that industry for the base years 1936 to 1939 were far lower than they were for the previous so-called depression years of 1931 to 1935; decidedly lower, and that is true in many other industries, but I do think that an alternative base should be provided. It is perhaps too late now to have changed the base period which was adopted after very lengthy consideration last year.

Now I come to the point our industry is very, very much interested in, and that is the special 10 percent excess-profits tax which is placed upon those corporations which choose the invested-capital method of determining their excess-profits-tax crdit. That tax will fall extremely heavily on the milling industry and any other industry which happened to be unfortunate enough to have a very poor record of earnings in the base years, 1936 to 1939.

Now, to give you one or two figures from the milling industry: The mills reporting to our trade association had a net profit of 8.35 cents per barrel during the base period, 1936 to 1939. Com-

paring that with the 6 years, 1931 to 1936, which, as you gentlemen will see, included the worst depression years, the industry, as represented by these reporting mills, had a net profit of 15.7 cents per barrel in that earlier depression period.

In other words, the profits of the milling industry during the base period 1936 to 1939 were not more than half what they were during the depression, so-called, depression period.

Now one reason for that, of course, is the fact that the so-called processing tax, under the Agricultural Adjustment Act, intervened and threw the industry into confusion for a number of years. Another big reason, of course, is the fact that, throughout the base period, 1936 to 1939, you had a world-wide surplus of wheat with its attending depressing effect on the milling industry. As to return on invested capital, our reporting mills show a return of 3.04 percent on their invested capital during the base period 1936 to 1939, as compared with a return of 5.8 during the 6 years from 1931 to 1936.

Now, of course, you gentlemen realize that where you have such an average return, it must include many companies that have no net earnings at all for the entire base period 1936 to 1939.

Senator BAILEY. You are a few minutes overtime.

Mr. DUDLEY. May I have 2 minutes?

Senator BAILEY. I have already given you 2 minutes because I interrupted you. I don't like to be disagreeable but we will have to keep within the rule.

Mr. DUDLEY. May I finish with two sentences?

Senator BAILEY. Yes; two sentences.

Mr. DUDLEY. This 10-percent excess-profits tax falls most heavily on those least able to pay. For this very special reason, we urge the abandonment of that tax.

(Mr. Dudley's prepared statement is as follows:)

STATEMENT OF CLAUDE W. DUDLEY

I represent the Millers' National Federation, which is a trade association of flour milling companies. The federation has approximately 480 members, which produce approximately 80 percent of the flour commercially produced in the United States.

The federation is keenly aware of the necessity for substantially increased revenue and does not protest the increases in rates which have been generally provided for in the House bill. We realize full well that a failure to increase taxes sufficiently to pay from revenue a substantial part of the defense expenditures would invite troubles which might ultimately be far more serious than the tax burden itself. We do think, however, that a substantial reduction of nondefense expenditures should be made and hope that it may be possible for the Congress to achieve that end.

There are two features in the excess-profits tax provisions of the House bill to which I wish to direct your special attention. We think that they are inequitable and that they should be revised. The first of these relates to the special 10 percent excess-profits tax applicable to that part of the current earnings which exceeds the base period earnings but does not exceed the invested capital credit. This tax will fall extremely heavily on the milling industry and other industries which have had meager earnings during the base period. It will fall most heavily on those least able to pay. It runs directly contrary to the well-accepted principle that income taxes should be levied in accordance with the ability to pay them.

During the base period years the milling industry was seriously affected by the processing tax and the confusion resulting from its invalidation, by the large world-wide surplus of wheat, and by other factors tending to reduce profits to a minimum. The mills reporting to the federation had average net earnings of 8.35 cents per barrel of flour during the base period, as compared with 15.7

cents for the 6 years from 1931 to 1936. In other words, the base-period history for the milling industry is worse than the earlier depression years.

The reporting mills earned only 3.04 percent on their invested capital during the base period in comparison with 5.8 percent during the 6 years from 1931 to 1936.

It must be remembered that the 3.04 percent average return reflects the operations of many companies which had losses during the base period and which have no base period net earnings credit. To such mills the special 10 percent tax will apply on all their earnings (if any) for the current year. This simply means a net increase of 7 percent in the effective rate of income taxes on a class of corporations which are least able to bear a disproportionate share of the tax burden. Most of the companies which have no base period credit are small- and medium-sized companies upon whom the burden will fall very heavily.

An excess-profits tax should be based on an excess above normal, measuring the normal either in relation to a normal average net income or a normal minimum return on invested capital. Where there were no net earnings in the base perid, the tax ceases to be an excess-profits tax and becomes merely a special additional income tax.

Where the earnings of an industry for the base period are less than a necessary minimum normal return to permit continuance in business, some other method of fixing the minimum normal before applying the special 10 percent tax should be provided.

The milling industry will not benefit in any substantial measure from the defense program. The use of their products is related to national defense in that bread is a staple food which contributes to the health of the Nation, but it is not expected that the consumption of flour will be substantially increased because of the defense effort nor that any increase in profits of the milling companies as compared with the base period will be due to the defense program. If an increase of profits is effected, it will be a natural upswing from a period of abnormally low profits to a reasonably normal profit.

We oppose the imposition of any special tax on corporations which had low base period earnings and are not now earning more than a certain minimum return on invested capital. Certainly it cannot be said that a return of 4 percent on invested capital is an excess profit and we do not believe that any company which is earning less than 4 percent on its invested capital should be called on to pay an excess profits tax. Under the House bill a company which had no net earnings in the base period and which earns 1 percent on invested capital in the curent taxable year will be required to pay a special excess-profits tax of 10 percent on all of its earnings during this taxable year. We regard this as a very inequitable tax burden on those taxpayers least able to bear a special burden.

There is one other point with respect to the excess-profits tax. In the House bill the graduated excess-profits tax with rates from 35 to 60 percent is graduated merely with respect to the size of the income. We think that the graduation should be in relation to the corporation's percentage return on its invested capital. This principle was followed in the excess profits tax laws of 1917 and 1918. We regard it as sound and think that it should be restored in the current law.

Respectfully submitted.

MILLERS' NATIONAL FEDERATION,
By CLAUDE W. DUDLEY.

AUGUST 15, 1941.

Senator BAILEY. Mr. A. Harding Paul, on surtax rates, strategic metals application of capital gains tax to personal holding companies.

(Thereupon, at 11:45 a. m., Senator George resumed the chair.)

STATEMENT OF A. HARDING PAUL, ATTORNEY AT LAW, WASHINGTON, D. C.

Mr. PAUL. My name is A. Harding Paul. I am an attorney at law, practicing in Washington, D. C.

Mr. Chairman, I have adopted the expedient of making some tax notes. When the committee abbreviated the time for making the

statement to 10 minutes, I didn't think it was possible to make any complete statement, yet I would like to have incorporated in the record these tax notes which I have prepared.

The CHAIRMAN. Yes; you may do that.

Mr. PAUL. I will simply advert to two or three things contained in the notes, after which, if there are any questions, I would be happy to submit any information which I have.

I submit that the first thing of note is that Government is to be as usual, except for defense. In other words, we are making no reductions in expenditures and, for that reason, we are going to have a deficit for the fiscal year of $10,700,000,000. Any reduction in nondefense expenditures would cut that deficit. There is no program and no conceivable program which will produce the necessary revenue to bring revenues to two-thirds and borrowings to one-third during the fiscal year 1942. The necessary revenue to be collected by June 1942 would be $5,266,000,000.

The second thing of note, it seems to me, is that if we could get on a $90,000,000,000 income, the revenues which were projected in the President's Budget message of 1940, plus the amount added by the two Revenue Acts of 1940, we would get $15,400,000,000.

Now, the 1942 Budget estimates say we are only going to get $9,400,000,000. This is undoubtedly due to the fact that there have been income diversions into nontaxed or undertaxed channels. This diversion is to be seen by remembering that there is $14,000,000,000 increased income this, over last year. The Commerce Department last week issued estimates that current national income is running at the rate of $88,000,000,000 per annum and that wages, through June 30 are up $5,500,000,000 over the first 6 months of 1940. Wage increases will probably represent $12,000,000,000 of the $14,000,000,000 expected total increased income.

Now, it seems to me that if you could get, of that $14,000,000,000, one-third, or even but 10 percent of that increase, you would be able to make many changes in this bill which would bring it better in accordance with people's abilities to pay.

I have made a specific suggestion, therefore, that you impose a gross income tax and withhold it at the source, or else that you should impose—perhaps both these taxes should be imposed—an excess-profits tax upon the increased earnings.

Now, it is entirely feasible to impose this latter tax. I don't know at what rate, but I think the people who have increased earnings are better able to pay, and to meet a current tax bill, than those who have been getting along on the same income from year to year. The best way to tap this new ability to pay and reduce its inflationary spending is by an excess-profits tax directly on the increases. The public will support such tax, even at low-income levels, as the Gallup poll shows.

The argument has been made, and before this committee, that the low-income groups pay hidden taxes. That argument is contained in monograph No. 3 of the T. N. E. C., Who Pays the Taxes. This argument is based upon assumption and you cannot trust those hidden tax figures. For instance, they show that on an income of between $1,000 and $1,500, 5.6 percent in hidden taxes is paid to the Federal Government. That same monograph shows that on $20,000 incomes

and up, 37.8 percent was paid in total taxes. With 1940 and H. R. 5417 increases, the tax percentage of the latter group is up to 54 percent. Now I don't believe that anybody getting $20,000 will feel that he is to pay 54 percent in taxes, even after this bill. I don't believe you can trust these figures. They are based on too many assumptions that are theoretical. I come now to some specific suggestions.

I think it ought to be clear that alimony and separation payments should be allowed as a deduction to the person who makes those payments and taxed to the person who receives them. There are 250,000 divorces granted each year in this country, for causes, many of which are not subject to moral censure. To the extent alimony or separate maintenance is payable from current income, the payor is deprived of ability to pay taxes on amounts he cannot control. Recipients of alimony should be taxed thereon, ending one glaring tax exemption. If held not to be income to recipient, payor should be taxed on such amount separately, in recipient's rate bracket. Complete confiscation and inordinate hardship otherwise results.

The cases of *Helvering* v. *Fuller* (310 U. S. 69) and *Helvering* v. *Leonard* (310 U. S. 80) show an absurd tax pattern. Confusion in this field is now rampant. There is litigation going on every day now as to whether the man divorced in Nevada should be taxed and the man divorced in New York, exempted. It depends on where you get your divorce. If two people, neighbors in New York, get divorces, one in Nevada and the other in New York, the one who gets the Nevada divorce doesn't have to pay the income tax on his wife's alimony, but the one who lives in New York does. With the rates that you have in the bill, it leaves the man who has been generous in providing for his former wife and children at the complete mercy of these high tax rates. In some cases he has no income left. I also think that you are making a mistake in not extending the capital-gains provisions of your act applicable to corporations. You have increased the rates on corporate incomes to 30 percent. The individual can realize capital gains at the present time at 16½ percent. The corporation will be discouraged in its realization of such gains and that factor enters into your revenue. When you come to personal holding companies, you find that the rate can reach 82½ percent and I think that no one would suggest that capital gains will be realized if the person who has the privilege of saying whether or not that gain shall be taken must pay an 82½-percent tax on the amount of the gain.

There is another thing that should be done; that is, corporations should not be made to reduce earnings and profits by nontaxable capital losses so as to make it impossible to pay dividends. That is true with liquidating dividends which should be allowed as credit against any corporate undistributed—including personal holding company—income. These remedies should be retroactive to 1936 for open cases and thus end confusion arising from the decisions in the cases of *Foley Securities Corporation* v. *Commissioner* (106 Fed. (2d) 731) and *Pembroke Realty & Securities Corporation et al.* v. *Commissioner*, decided by the Circuit Court of Appeals August 4, 1941.

I think you ought to provide for consolidated returns for normal as well as excess-profits taxes. If you fail to do this, you will find that there is utter confusion in determining the credits. The bill provides

that you may spread the excess-profits tax against the normal tax but if you have a deficit corporation you cannot determine how to spread this tax.

The CHAIRMAN. Your 10 minutes is about up.

Mr. PAUL. May I have just 1 more minute in which to say a word about new corporations and companies formed during the base period?

As to these, I suggest a specific remedy. It is to take the number of years they have been in existence and provide credits based on average earnings during that period, including 1940, not exceeding 4 years, ignoring the deficit years and ignoring such years as they have not earned the minimum excess-profits tax which this bill permits them to earn. For corporations starting after 1940, where capital is not an important factor, provision should be more for 1 year's exemption from excess-profits tax unless such company's profits arise out of defense; namely, out of contracts or subcontracts for defense materials. New corporations with capital can earn 10 percent (slightly less if capital exceeds $5,000,000), but this does not help new corporations with little or no capital.

(The following additional statement was submitted by Mr. Paul:)

STATEMENT OF A. HARDING PAUL

Fiscal year 1942 expenditures:	
Latest forecast for defense	$15,000,000,000
Government—as usual	7,000,000,000
Total, not less than	22,000,000,000
Revenues expected (Budget Bureau estimate) under present laws (based on estimated income of $88,000,000,000)	9,400,000,000
Deficit	12,600,000,000
House bill (H. R. 5417) increases tax collections for fiscal year (calendar year $3,200,000,000)	1,900,000,000
Deficit, fiscal year 1942	10,700,000,000

Necessary additional tax collections to produce two-thirds expenditures by June 1942, $5,266,000,000. No revenue program advanced or suggested by Treasury, or which can conceivably be adopted at this time, can meet the formula of two-thirds taxes and one-third borrowing during the fiscal year 1942, and for the time being at least the formula should be forgotten.

There is no magic in such formula. During the last war expenditures were met by borrowing to the extent of two-thirds. Taxes produced only one-third—exact reverse of what Treasury now urges. (See report of War Policy Commission.)

Treasury requested Ways and Means Committee to increase taxes by $3,500,000,000 divided on following basis (all figures approximate):

Corporation tax	$900,000,000
Individual income, gift, and estate	1,400,000,000
Excise	1,200,000,000
Total	3,500,000,000

Ratio of ability to pay and consumption taxes, two-thirds ability to pay—one-third consumption.

House bill provides increases as follows:

Corporation tax	$1,350,000,000
Individual income, gift, and estate	1,000,000,000
Excise	875,000,000
Total	3,225,000,000

Ratio of ability to pay taxes to consumption taxes is 75 percent ability to pay—25-percent consumption.

Despite Treasury's increased estimate of expenditures from $19,000,000 to $22,000,000, Finance Committee's object should be to raise not more than $3,500,000,000 and to improve House bill.

Bring ability to pay taxes with relation to consumption taxes back to two-thirds—one-third ratio by increasing specific excises and adjusting surtax rates, i. e., revise in lower and reduce in middle brackets.

NOTE.—Pay-roll taxes are sometimes considered excises. They are, however, compulsory savings frequently wholly paid by employer for sole benefit of employee. Raising them substantially may accomplish three good purposes: First, it will reduce power to spend where it is increasing and thus reduce threat of inflation; second, it will produce substantial immediate revenue; and third, it will cushion post-defense deflation shocks.

ABILITY TO PAY IN LONG RUN RESTS ON A WILL TO PRODUCE—NO TAX LEVIED ON EARNINGS CAN BE PRODUCTIVE AT LEVELS SO HIGH INCENTIVE IS DESTROYED

Query.—Will a tax of more than 50 percent on earnings above $27,000 curtail productive effort? Prior to 1940 the highest Federal tax rate on earnings above $27,000 was 24 percent imposed by the Revenue Act of 1918, i. e., 12 percent normal—12 percent surtax. Between 1919 and 1940 the rate never exceeded 23 percent. In the latter year the rate was raised to 37.4 percent. Pending bill imposes 50.6 percent on amounts between $27,000 and $33,000 and reaches 60 percent above $45,000.

The public does not support such rates, as witness balloting of Gallup poll. On $10,000 incomes, poll suggests tax of $1,123—the bill $998; on $50,000 incomes, poll's tax is $10,000 against $19,527 under the bill.

Second query.—Can taxpayers at a $27,000 level meet personal budgets and pay a tax (most of it retroactive) equal to 30 percent of total income? Previous budgets call for taxes not in excess of 20 percent. The increase at this level is over $3,000 a year or $250 per month. This is a too severe and too sudden jump. Added to the 1940 increase of over $1,600, the total increase in 2 years is $4,500.

Suggestion.—Eliminate present earned-income credit and provide maximum rate under 50 percent for reasonable earnings, i. e., $75,000 per year and under. Keep rates on investment income as in the bill.

Excess-profits tax should apply to bracket and not dollar incomes above credits. Failure to adopt this reform merely penalizes small stockholders.

Strategic metals.—Strike out section 206 of the bill. You cannot get new necessary production in this country of tungsten, chrome, manganese, and quicksilver with an excess-profits tax leveled against the hazard of prospecting. In 1918 war law exempted profits derived from mining these metals, as did the 1940 act. The House mistakenly removed exemption. High taxation of the profits of producers of strategic metals is opposed by the Office of Production Management and the Reconstruction Finance Corporation. Further, it is a breach of faith to tax now after expenditures induced by exemption of the 1940 act have been made.

Lower surtax rates in middle brackets and impose excess-profits tax on earnings above those of highest previous year, including 1940. Or impose gross-income tax of 5 percent collectible at source on all incomes up to $5,000. Exempt salaries below $750. Lower base to $750 and $1,500. Secretary Morgenthau states there is to be $14,000,000,000 new national income this year over last. If one-third of this increase can be collected in taxes everyone should be happy. The best way to tap this new ability to pay and reduce its inflationary spending is by an excess-profits tax directly on the increases. The public will support such tax even at low-income levels, as the Gallup poll shows. The argument on hidden tax burdens of low-income groups is fallacious. Monograph No. 3 of the T. N. E. C. Who Pays the Taxes shows that on 1938-39 incomes between $1,000 and $1,500, only 5.6 percent in hidden taxes was paid to the Federal Government. It also shows that on $20,000 incomes, and up, 37.8 percent was paid in total taxes. With 1940 and H. R. 5417 increases the tax percentage of latter group is up to 54 percent. Don't trust any figures involving hidden taxes. Costs of living absorb all of them and in America wages will keep pace with cost of living.

Business expenses incurred in producing and conserving income should be deductible from gross income, otherwise gross income is taxed. This law should

be retroactive to allow continuance of Treasury practice, interrupted by the Supreme Court decision in *Higgins* v. *Commissioner* (312 U. S. 212).

Capital gains.—Make individual capital gains tax plan applicable to corporations. High rates interfere with realization of capital gains and hence reduce revenue. Personal holding companies' assets are peculiarly frozen. They cannot liquidate—they cannot operate. Result—stagnation and no revenue. Personal holding companies are in the main incorporated pocketbooks of individuals and should be taxed as individuals.

The CHAIRMAN. Mr. Alger B. Chapman, representing the Controllers Institute of America.

STATEMENT OF ALGER B. CHAPMAN, NEW YORK, N. Y., REPRESENTING THE CONTROLLERS INSTITUTE OF AMERICA

Mr. CHAPMAN. My name is Alger B. Chapman. I am appearing on behalf of the Controllers Institute of America. In view of the time limit per witness and the fact that many of the points have previously been argued before this committee, I would prefer to submit the detailed statement of the institute for the record and merely summarize the more important points that are pertinent to the pending bill.

The CHAIRMAN. You may do that. We are contemplating that witnesses would take that course.

Mr. CHAPMAN. In the first place, the institute is unalterably opposed to any application of the excess-profits tax to normal profits. It believes that the only justification for an effective corporate tax of 72 percent is to recapture excess profits which might otherwise be accumulated out of the Government's own expenditures for national defense. It submits, therefore, that the revenue-raising capacity of the excess-profits tax is limited to that which can be collected from excess profits resulting from the defense program.

Accordingly, the institute is opposed to the provision of the House bill which proposes an extra 10-percent tax on the normal earnings of invested capital corporations and an indirect reduction of the invested capital credit from 8 percent to 5.6 percent on the first $5,000,000 and 4.9 percent on the remainder. These provisions reach beyond the revenue-raising limits of a true excess-profits tax.

The institute firmly believes that this committee should approach the excess-profits-tax problem by first examining the present law, eliminating the present defects in the average earnings, invested capital, special relief, and other basic provisions, and then determine how much revenue can be collected from the excess-profits tax and how much must be collected elsewhere. By reason of the defects in these provisions, the excess-profits tax is already being imposed upon normal earnings, and this situation should be corrected.

So far as the average-earnings credit is concerned, the institute makes the following recommendations:

1. Average earnings should be determined by averaging any 3 of the 4 years in the base period. The fact that all 4 years were not average is recognized in the law, but normal earnings cannot be measured by taking 3 years, in the case of a loss year, and dividing by four.

As the chairman knows, the averaging of 3 out of 4 years in the base period was the recommendation of the Senate committee last year

and was in the bill as it passed the Senate. It was changed in conference. We think provision for a 3- out of 4-year average should be adopted now.

2. The normal-growth provision should be extended to supplement A corporations, that is, corporations which have acquired other corporations in tax-free liquidations or other tax-free reorganizations since 1936. As the law now stands, in order to use the normal-growth provision, these corporations must exclude the base-period income of their component corporations in computing their own average earnings. Supplement A is defective in many respects but this is the worst defect and the easiest one to remedy.

3. Where abnormal income is excluded from the income of the taxable year under section 721 and is attributable to a base-period year, it should increase the base-period income. As the committee knows, this treatment conforms to its own interpretation of section 721 as stated in the committee report on the 1940 act.

So far as the invested capital credit is concerned, the following principal recommendations are submitted:

1. The present rate of 8 percent should be retained and should not be reduced indirectly by a reversal of the deductions for normal and excess-profits taxes.

2. Cost rather than tax basis should be employed in determining invested capital resulting from the acquisition of property for stock.

3. Sections 718 (a) (5) and (b) (4) prescribing adjustments to a parent corporation's invested capital on account of tax-free liquidations of subsidiaries should be revised to conform to the policy adopted in the consolidated return regulations. Under the present provisions, where a corporation acquires the stock of another corporation and thereupon effects a liquidation of the latter corporation, an adjustment is required which completely distorts the invested capital of the continuing corporations.

4. Where property is acquired for stock prior to 1913, either the 1913 value should be used, or the adjustments for depreciation should be based on the original cost of the property to the taxpayer rather than the 1913 value.

The principal defect in the special relief provision is that it fails completely to afford relief to new corporations which are of a type for which the invested capital credit is not adequate, or for old corporations of this same type which have come into production after the base period. Since these corporations have no average earnings experience upon which to determine a normal profit from its current operations, a general relief provision should be included in the law which would permit a comparison to be made with other corporations in the same industry.

Senator VANDENBERG. We had that.

Mr. CHAPMAN. The old special assessment provisions used comparisons for the purpose of determining a tax rate. By reason of that feature of the earlier special relief provisions, they produced rather unsatisfactory results in a great many cases. But something has to be done for these corporations that came into existence or into production after the base period. Since these corporations have no base period earnings record of their own, I think a comparison must be made with the earnings record of other corporations in the same business.

The law should also be revised to permit adjustment for abnormalities in invested capital.

Under section 722, corporations should be permitted to pay their estimated excess-profits tax on the basis of this section in the first instance rather than the tax computed without reference to the section.

In addition to the foregoing, there are a few basic amendments such as the schedule of the graduated excess-profits tax rates which should be based on the ratio of the excess profits to the excess-profits credit and not on the dollar amount of the excess profits. If the provision of the 1940 Senate bill is adopted in lieu of the present law, the small corporation will be protected without penalizing the larger corporation.

It seems to me that the provisions of the Senate bill are meritorious and should be adopted; in order to protect small corporations, I do not think it is necessary to penalize the large one.

Section 734, the inconsistency provision, should be repealed or at least should not be retroactive beyond 1936, the beginning of the base period.

In addition to the foregoing, the detailed statement which I have asked permission to submit contains a number of additional recommendations such as repeal of the declared-value excess-profits tax, or allowance of an annual redeclaration, and restoration of the consolidated return provisions for normal tax purposes. I trust that some of the more technical recommendations contained in this statement will receive consideration when consideration is given to the bill following this pending bill.

(Mr. Chapman's detailed statement referred to is as follows:)

STATEMENT OF CONTROLLERS INSTITUTE OF AMERICA

To the COMMITTEE ON FINANCE,
United States Senate,
Washington, D. C.

The Controllers Institute of America is a professional organization composed of the chief accounting officers of corporate enterprises throughout the country. The corporate accounts are maintained and the tax returns are prepared under their supervision. Accordingly, on them falls the principal responsibility for complying with and interpreting the Federal tax statutes affecting corporations.

The members of the institute were closely associated with the workings of the 1917, 1918, and 1921 excess profits and war profits tax laws. In addition, they have given careful study and have applied as best they could the complicated provisions of the present excess-profits-tax law. They have also had experience with and observed the operation of the excess-profits-tax laws in foreign countries. The recommendations contained in this statement are based on this background of extended experience and observation.

The institute recognizes fully the magnitude of the problems with which the Congress is confronted in framing a new tax act (especially as relates to the tax on excess profits) and wishes to make it clear that it is in accord with the desire of the Government to provide as large a part of the cost of the defense program from current revenue as is consistent with the welfare of the Nation. It also recognizes that corporations must carry their fair share of the burden.

In pursuance of the policy established at the time of its organization, the institute has no comments to offer on the amount of additional revenue to be provided, nor is it making any suggestions regarding the various taxes on individuals or miscellaneous taxes proposed by the House bill.

The main purpose of this statement which has been prepared from the suggestions of our membership, is to recommend revisions in the provisions of the

House bill and the present law relating to corporate taxes, with the following objectives in mind:

(*a*) More equitable distribution of the corporate tax burden among corporate taxpayers, especially as the hardships resulting from inequities in the present act will be greatly multiplied with the increase in tax rates and the increase in amount of income subject to excess-profits tax under the House bill.

(*b*) Simplification and clarification so far as possible of the complicated and obscure provisions in the present act in order that there may be less uncertainty, delay, and litigation in the ascertainment of the tax liability (the complexities of the tax law are increased rather than reduced by the House bill).

(*c*) Improvement in the administrative provisions of the tax laws.

Specific recommendations, many of which were included in the Institute's statement of May 12, 1941, to the Ways and Means Committee of the House of Representatives, are as follows:

I. The excess-profits credits in the present act should not be reduced.

II. In ascertaining the excess-profits credit under the income method, corporations should be permitted to use any 3 of the 4 years in the base period.

III. The schedule of graduated excess-profits-tax rates should be based on the ratio of the excess profits to the excess-profits credit and not on the dollar amount of the excess profits.

IV. Where property is acquired by a corporation for stock in a transaction on which gain or loss is not recognized to the transferor, the property should be included in invested capital at the value of the stock issued for the property and not at the basis of the property to the transferor.

V. Section 734 (inconsistency provision) should be repealed or at least should not be retroactive beyond 1936, the beginning of the base period.

VI. Sections 718 (a) (5) and 718 (b) (4) prescribing adjustments to a parent corporation's invested capital on account of tax-free liquidations of subsidiaries, should be revised so as to conform to the policy adopted in the consolidated return regulations.

VII. For invested capital purposes, the basis for determining gain (not loss) should be used, or, in any event, sections 718 and 720 should be revised so that the adjustments to "unadjusted basis" will be consistent with the "unadjusted basis" to which they are applied.

VIII. The normal-growth provision should be extended to determination of average base period net income under Supplement A.

IX. Supplement A should be revised so that in the determination of average base period net income the net income or constructive net income of the taxpayer and its component corporations will be included for the entire base period.

X. The requirement for daily determination of invested capital should be repealed.

XI. Income attributable under section 721 to a base period year but not realized until a later year should be included in the base period net income.

XII. The unused excess-profits credit should be carried back (in addition to carried forward) against net income of the two previous years in the excess-profits-tax period.

XIII. Section 752 should be revised to eliminate certain unwarranted excessive reductions of highest bracket amounts.

XIV. The relief provisions in section 722 should be broadened.

XV. Corporations to which section 722 applies should be permitted to pay their estimated excess profits tax in the first instance on the basis of this section instead of the excess-profits tax computed without reference to this section.

XVI. The amortization provisions in section 124 should be simplified and the restrictions in subsection 124 (f) should be modified.

XVII. The present system of capital stock and declared value excess profits taxes should be abolished or, in the alternative, redeclaration of the capital stock values should be permitted each year and capital gains and losses should be excluded from the income subject to declared value excess profits tax.

XVIII. The general provision for consolidated income tax returns should be restored.

XIX. Worthless securities should be eliminated from the capital-asset provision.

XX. The requirement for charging-off bad debts should be eliminated or modified.

XXI. Section 719 (a) (2) which covers inclusion in borrowed capital of advances received from governments should be broadened and clarified.

XXII. No part of dividends received by one domestic company from another should be subjected to income tax.

XXIII. The law should be amended to provide that any waiver which extends the statutory period of limitation for assessment of additional taxes shall automatically extend for an equivalent time the period during which an effective claim for refund may be filed.

XXIV. The rate of interest accrued after the date of the enactment of the Revenue Act of 1941, on deficiencies should not exceed 3 per centum and when this is done the rate of interest on refunds should be reduced correspondingly.

I. RETENTION OF AT LEAST PRESENT EXCESS-PROFITS CREDITS

The Institute believes that it would be most unfair and economically unwise to reduce the 8-percent credit on invested capital or the 95-percent credit on base period income provided for in sections 713 and 714 of the Internal Revenue Code. H. R. 5417 proposes reductions in these credits, either direct or indirect, which should not be adopted.

It was stated last year that the Excess Profits Tax Act of 1940 was enacted for the purpose of preventing the "creation of new war millionaires or the further substantial enrichment of already wealthy persons because of the rearmament program" (House of Representatives, 76th Cong., 3d sess., Rept. No. 2491, p. 3; Rept. No. 2894, pp. 1, 2). It was designed to avoid excessive benefits accruing to persons directly or indirectly from spending under the defense program. On February 24, 1941, the House Ways and Means Committee again pointed out that one of the purposes of the Excess Profits Tax Act was "to prevent the rearmament program from furnishing an opportunity for the creation of new war millionaires or the further substantial enrichment of already wealthy persons" and concluded as to such act that "the weight of the burden imposed carries with it a commensurate need for restricting its application to the cases for which it was designed" (House of Representatives, 77th Cong., 1st sess., Rept. No. 146, p. 1). The report of July 24, 1941, of the same committee on H. R. 5417 (the proposed Revenue Act of 1941) seems to affirm that this still is the only scope of the act (Rept. No. 1040, pp. 23–26).

An important consideration in connection with the excess-profits tax may now be its production of revenue. However that may be, the restriction of the coverage of the Excess Profits Tax Act to cases to which it was designed to apply, it is submitted, requires at least the credits now provided in sections 713 and 714 of the code. It should be remembered that the 8-percent return on invested capital is an average for all taxpayers and is not above a normal average return. The yield of the tax as now constituted even for 1940 apparently will be substantial notwithstanding the fact that the rearmament expenditures in that year were just getting started. All indications point to a large increase in the Government's revenues from the present excess-profits tax for 1941 due to the expansion of the rearmament program.

H. R. 5417 proposes to amend section 714 of the Excess Profits Tax Act to reduce the invested capital credit from 8 percent to 7 percent on all invested capital over $5,000,000. It proposes a special 10-percent tax in the case of taxpayers using the invested capital credit, which in effect is simply a reduction of that credit. The bill proposes to prohibit in the future the deduction of the normal income tax in determining excess-profits-tax net income, regardless of which credit is to be used, and to allow instead a deduction of any excess-profits tax in arriving at income tax net income. The House Ways and Means Committee suggests in its report No. 1040 (p. 24) that such change would reduce the 8 percent invested capital credit to an effective credit of 5.6 percent and the 7 percent invested capital credit to an effective credit of 4.9 percent. Obviously, the taxpayer using the base period income credit to compute its excess-profits tax would also find its tax increased by this proposal. The House committee's reason for this change is that it "seems unfair to allow that part of the income tax which is computed on income which is not subject to the excess-profits tax to reduce the excess-profits net income" (Rept. No. 1040, p. 24). It would seem, however, that the more important consideration is how much of its net earnings a corporation shall be permitted to retain before being subjected to excess-profits tax. The Congress should not adopt any changes in the Excess Profits Tax Act of 1940 which would, directly or indirectly, reduce either the base period income credit or the invested capital credit originally enacted in that act.

The Institute is strongly of the opinion that all of the following factors must be carefully studied in determining at what point the excess-profits tax shall begin:

1. The tax should be imposed only on earnings in excess of a fair return on invested capital or in excess of normal earnings. For this purpose, the rate of return expected by the investor in a corporation is not a proper criterion because in making his investment he is guided by the average return over a period of years, good as well as bad, and not by the earnings of the corporation in peak years alone.

2. Corporations must be permitted to build up sufficient resources to withstand losses in bad years. Unfortunately, most corporations, especially those engaged in the steel and other heavy-goods industries, are of the prince and pauper variety, the poor years being more numerous than the profitable ones in recent times. The failure to provide out of profits for ensuing losses will lead to many bankruptcies and will intensify the unemployment problem after the present peak production.

3. If a grossly disproportionate part of earnings in good years must be turned over to the Government, many corporations will be unable to pay even a meager return to their stockholders and investors in unprofitable years. This would give rise to a serious economic problem.

4. As shown in point IV below, under the present act, many corporations must use in the determination of their invested capital the cost of the property to those from whom it was purchased for stock and not its value when acquired by the present owner. In these cases, even an 8 percent return on statutory invested capital is equivalent to only a much smaller rate on the actual invested capital.

5. Any reduction directly or indirectly of the present excess-profits credits under sections 713 and 714 would not only intensify the so-called hardship cases already abundant but will add a flood of new hardship cases. This will necessarily call for added relief provisions which because of their very nature must be complicated as evidenced by the present act.

If due consideration is to be given to the foregoing factors, a reduction in the present excess-profits credits cannot be justified.

II. AVERAGE BASE PERIOD NET INCOME

Under the Excess Profits Tax Act of 1940 as originally adopted the average base-period net income was the average for the years 1936 to 1939, inclusive, except that if there was a deficit for 1 or more of these years zero could be substituted for the year of the largest deficit.

The excess-profits-tax amendments of 1941 recognized that in many cases this method did not result in a fair yardstick for measuring normal earnings. However, these amendments provided correction for only the following situations:

1. Where the income for the second 2 years of the base period exceeded the income for the first 2 years (sec. 713 (f)).

2. Where the character of the business on January 1, 1940, had changed, from that engaged in during one or more of the years in the base period or where in one or more of such years production, output, or operation was interrupted or diminished because of the occurrence of events abnormal in the case of such taxpayer (sec. 722). In these cases, provision was made for constructing the income that would have been realized had the operations during the years 1936 to 1939, inclusive, been typical.

In 1936 we were only emerging from a long depression, and for many industries earnings for the period 1936 to 1939, inclusive, were on the average far below normal. Section 713 (f) provides some adjustment for companies with larger earnings in the second half of the base period than in the first half. However, because the earnings for the year 1938 were subnormal for many industries, especially the heavy-goods industries, section 713 (f) will have only limited application. In order to offset in part inequities which will result in case of those companies which are now required to use the actual income for the full 1936–39 period for determining base period earnings, the Institute urges that corporations be permitted to use any 3 of these 4 years. As indicative of the soundness of this recommendation, it is noted that the Canadian excess-profits-tax law was recently amended to provide that in determining average profits for the standard period (1936 to 1939, inclusive) the taxpayers shall be

given the choice of its 3 best years if the profits of the fourth standard year were less than 50 percent of the average of the profits of the other standard years.

Except where section 713 (f) is applicable, the present act provides for the substitution of zero for the year of largest deficit in the base period but requires dividing the resultant aggregate net income for the 4 years by four. As a result, the determination of the normal rate of earnings is distorted. This defect would be corrected if the act is amended as suggested herein to permit the use of the average earnings for 3 out of the 4 years in the base period.

III. SCHEDULE OF EXCESS PROFITS TAX RATES

The schedule of graduated excess profits tax rates under the present act and under the House bill is based on the amount of excess profits rather than on the ratio of the excess profits to the excess-profits credit. In other words, two corporations with the same amount of excess profits are required to pay the same excess-profits tax even though one of them earns, say, many times 8 percent on its invested capital or its base period earnings whereas the other corporation earns only slightly more than the amount of its exemptions. Under a true excess-profits tax law, it would be eminently more equitable to base the excess-profits tax rates on the ratio of the excess profits to the excess-profits credit provided a fair amount of the excess profits is allocated to the lower brackets of tax. This basis was recommended to the House Ways and Means Committee on page 8 of the report dated August 8, 1940, by their subcommittee and the same principle was adopted in the excess-profits tax laws of 1917, 1918, and 1921, and in the recommendations made to the House Ways and Means Committee on May 19, 1941, by Hon. John L. Sullivan, Assistant Secretary of the Treasury.

When the conference report on the second revenue bill of 1940 was under consideration by the Senate, Senator George made the following statement concerning the inequity of applying the graduated excess-profits tax rates on the basis of the dollar amounts of excess profits. (Congressional Record of October 1, 1940, p. 19503):

"While I have agreed to the report upon the basis that there must be agreement in order to obtain a report, I want my record to be perfectly clear, that this arrangement of the excess profits upon a mere dollar-bracket basis, is one of the most unsound, one of the most inequitable, and one of the most indefensible provisions that ever was written into a harsh bill such as the excess profits tax bill, and it is done for the sole purpose of taxing bigness according to somebody's idea of bigness, without any possible consideration of how the burden falls upon the individual owner of stock which must be made less valuable and less productive under such a crude arrangement as this."

If it is desired not to subject small corporations to the excess profits tax rates in the higher brackets, this could be accomplished by adopting a schedule of alternative excess profits tax rates based on dollar amounts of excess profits or their ratio to the excess-profits credit. This method was used in section 710 of the excess profits tax bill of 1940 as passed by the Senate last September.

IV. USE OF TRANSFEROR'S BASIS WHERE PROPERTY ACQUIRED BY CORPORATION IN TRANSACTION ON WHICH GAIN OR LOSS IS NOT RECOGNIZED

We urge that certain modifications should be made in section 718 (a) (2). Under this section property paid into a corporation in a transaction where the gain or loss to the seller is not recognized, must be included in invested capital not at the amount by which the capital of the corporation is actually increased, but the basis of the property to the seller.

For example, a corporation acquires a plant by issuing its own stock to the seller. Clearly the corporation's actual capital is increased by what it paid for the plant; namely, the then value of the stock issued therefor. However, because the transaction was a reorganization where the gain or loss to the seller was not recognized, the act includes the plant in the purchasing corporation's invested capital, not at its cost to the corporation but at its basis in the hands of the transferor which might have been much less. The property might have been acquired by the transferor many years previously.

The whole concept of the act is that invested capital should be computed at the money or money's worth actually invested in the corporation. Property purchased by a corporation in exchange for its own stock is an addition to capital

(in the amount of its cost) just as much as additional cash paid in for stock. There is no justification whatsoever, so far as an excess-profits tax is concerned, for going back of the cost of the property which is being added. Purchases by corporations for their own stock in transactions where the intent is to avoid excess-profits tax should, of course, be disregarded, and the cost to the transferor govern. Obviously, this limitation should not apply to acquisitions made long before the excess-profits tax was even thought of, because otherwise the acquiring corporation and a large proportion of its stockholders would be penalized for a nontaxable transaction in whose benefits they did not share.

The income-tax law applicable to the calculation of gains and losses on the sale of capital assets (gains and losses which are not subject to the excess-profits tax) should not be applied to a definition of invested capital. If property is added to the capital of a corporation, invested capital should be increased by the value added, and it should make no difference whatsoever whether the seller of the property or its stockholder did or did not realize taxable gain or loss when the property was transferred to the corporation.

It is true that in an exchange where gain or loss is not recognized the transferor is not required to pay income tax on the appreciation in the value of the property transferred. However, it must not be overlooked that when the transferor disposes of the securities he received in this transaction, the previously untaxed profit on the exchange becomes subject to tax. The stockholders of our corporations, other than close corporations, keep constantly changing.

Inasmuch as tax on the profit to the transferor on a transaction such as that herein described is ultimately imposed, the denial to the transferee of the right to include in invested capital the actual cost to it of the property at the time of the exchange, in effect results in double taxation. Furthermore, if the excess-profits tax which under the House bill runs as high as 60 percent is to be imposed in accordance with the taxpayer's ability to pay, the excess profits of the transferee should be measured by its own investment and not by what the transferor paid for the property many years ago.

The report (No. 1040) of the House Ways and Means Committee on the revenue bill of 1941 contains the following on page 23:

"It is well recognized that there has been a large turn-over in the stock of many corporations. The present owners in many instances acquired such stock on the basis of the earning record of the corporation at the time of purchase. To conclude that they have realized excess profits on the basis of what the original owners paid for the stock seems contrary to equity and justice."

It is equally contrary to equity and justice to conclude that a corporation has realized excess profits on the basis of what the previous owners from whom the property was acquired by the corporation paid for the property many years ago.

Accordingly, the institute recommends that property paid in to a corporation for its own stock be included in invested capital at the cost of the property to it, which is the true measure of the addition to invested capital where property is acquired for stock.

Failing relief, as prayed for above, then it would seem that the least the taxpayer could expect in fairness is that for invested capital puroses, the basis for property previously paid in for stock should be determined and fixed in accordance with the law in force for the year the property was paid in and not under modifications made in the law for subsequent years. In this connection, it would appear that all that would be necessary to accomplish this small measure of justice to the taxpayer would be to add, after the second sentence of section 718 (a) (2), the following:

"For invested-capital purposes, such basis shall be determined and fixed in accordance with the law in force at the time said property was paid in."

V. INCONSISTENCY PROVISION

Section 734 added to the Excess Profits Tax Act of 1940 by the 1941 amendments provides that if in the determination of the excess-profits credit (measured by base period income or invested capital) an item is treated in a manner inconsistent with the treatment accorded such item in the computation of the income tax or wartime excess-profits-tax liability of a corporation, or even a predecessor, for the years 1913 to 1939 inclusive, the tax returns for any of these years shall be reopened to correct the improper treatment of the item

and the additional tax shall be paid or refund made, together with interest thereon, as a part of the excess-profits tax. These adjustments are to be made only if the party, the taxpayer, or the Commissioner, who asserts or maintains the inconsistent position in the determination of the excess-profits tax under the 1940 act is the one who would be adversely affected by reopening the returns for the earlier years.

Section 734 is directly contrary to the logical and fair principle expressed in the following provision originally in section 711(b)-1 of Regulations 109 issued by the Treasury Department under the Excess Profits Tax Act of 1940:

"The amount to be used in the correct normal tax net income or special class net income, as the case may be, regardless of the amount shown in the return for such year and regardless of the fact that the assessment of a deficiency or the allowance of a refund may be barred by the statute of limitations."

As a result of the adoption of section 734, the Commissioner has eliminated the above provision from Regulations 109.

For many years our revenue acts have recognized through the statute-of-limitations provisions that within a reasonable period the taxpayer and the Treasury Department shall know with finality the amount of tax due. This policy is essential in order that the taxpayer will know what its financial condition is and in order that the Government will be able to ascertain its revenues. Yet section 734 ignores this policy and in effect, reopens tax returns for years as far back as 1913 to correct errors which occurred in these determinations. It must be remembered that the final settlements of the tax liability for the earlier years were made in the light of the then interpretations of the law and that neither the taxpayer nor the Commissioner should be penalized because these interpretations later proved incorrect. In addition, in many cases, the taxpayer or the Commissioner yields on an item affecting its tax liability as a compromise for another doubtful item in order to effect a final determination of the tax liability. Furthermore, it must not be overlooked that the use of the base period income or invested capital in the determination of excess-profits tax under the 1940 act is solely for the purpose of determining the normal earnings of a corporation or a fair return on its capital. The fact that the taxable income of the corporation as previously agreed upon for earlier years between the taxpayer and the Commissioner was understated or overstated should not be used to distort this purpose. Section 734 is therefore believed to be indefensible and the Institute urges that it be repealed.

The Commissioner's regulations under the excess-profits-tax amendments of 1941 do not define the term "item" as used in section 734. Section 3801 of the Code also provides for reopening tax returns for earlier years to correct inconsistent treatment but the items to which the section applies are specifically mentioned therein. In addition, under section 3801, returns for years prior to 1932 cannot be reopened. If section 734 is retained, its application should be made definite and it should not be retroactive beyond 1936, the beginning of the base period.

Section 734 provides for not only an adjustment of tax for the earlier years but also for the payment of interest by the taxpayer or the Commissioner on such adjustment. However, the interest paid by the taxpayer is not allowed as a deduction from taxable income nor is the interest paid by the Commissioner treated as taxable income. This is contrary to the treatment of interest on tax adjustments for years on which the statute of limitations has not yet tolled. There is no reason for a contrary treatment of the interest under section 734.

VI. RESTRICTION OF SECTIONS 718 (A) (5) AND 718 (B) (4) SOLELY TO CASES WHERE PROPERTY ACQUIRED FROM SUBSIDIARY IS THEREAFTER DISPOSED OF

Sections 718 (a) (5) and 718 (b) (4) of the present act require the adjustment of invested capital by the difference between the cost of the stock of a subsidiary liquidated under section 112 (b) (6) and the basis to the subsidiary of the net assets conveyed to the parent company in the liquidation. Thus, for example, where one company acquires the stock of another company and thereupon liquidates it, there is included in the invested capital of the acquiring company not the amount it has paid for the stock of the liquidated company but the cost or other tax basis of the assets to the liquidated company. This is contrary to the principle adopted by the Commissioner in the consolidated excess-profits tax regulations which include in invested capital the amount paid by the parent company for the stock of a subsidiary and not the cost of the assets of the subsidiary.

There is no apparent reason why this principle of the consolidated excess-profits tax regulations should not apply also to the determination of invested capital of a company acquiring the assets of another in the manner described above. Adjustments should be made only for any increase or decrease in the aggregate tax basis of the assets in the hands of the liquidated company from the date of the acquisition of its stock by the parent company to the date of liquidation.

VII. USE OF BASIS FOR DETERMINING GAIN (NOT LOSS) OR, IN ANY EVENT, REVISION OF SECTIONS 718 AND 720 TO PRESCRIBE PROPER BASIS ADJUSTMENTS

The Institute urges that, if the original property paid into a corporation was acquired prior to March 1, 1913, when our income-tax form of taxation was adopted, the corporation should be permitted to include such property in invested capital at its March 1, 1913, value. (March 1, 1913, values are usually available because of their use for depreciation and depletion purposes.) This result can be obtained by providing for use of the basis for determining gain, rather than for determining loss.

If the present law is not changed in this respect, however, then, in any event, sections 718 (a) (2), 718 (a) (5), 718 (b) (4), and 720, to the extent they provide for use of adjusted basis, should be revised to prescribe adjustments which would be consistent with the use of the basis for determining loss. For example, assume that after March 1, 1913, the taxpayer corporation acquired property in a tax-free reorganization from a predecessor corporation which had originally acquired the property prior to March 1, 1913. The original cost of the property to the predecessor was $100,000 and its March 1, 1913, value was $200,000. If, at the date of acquisition by the taxpayer, the depletion adjustment for the period since March 1, 1913, amounted to $60,000 based on cost, then it would amount to $120,000 based on March 1, 1913, value. (For the sake of simplicity, it is assumed no depletion was sustained prior to March 1, 1913.) As section 718 (a) (2) now reads, the taxpayer would be required to start with the $100,000 cost basis in determining invested capital and then adjust for $120,000 of depletion—thereby producing a zero invested capital.

It is believed that this incongruous result under section 718 (a) (2) is due to an oversight in drafting. In any event, it should be corrected, and similar corrections should be made in the other sections referred to above.

VIII. EXTENSION OF THE NORMAL GROWTH PROVISION TO DETERMINATION OF AVERAGE BASE PERIOD NET INCOME UNDER SUPPLEMENT A

Section 713 (f) added to the Excess-Profits Tax Act by the excess-profits tax amendments of 1941 very wisely permits the determination of average base period net income in a special manner in cases where the net income for the last 2 years of the base period exceeded the net income for the first 2 years of such period. Section 713 (f) is essential to a fair determination of the normal earning capacity of the so-called normal-growth corporations.

There is no apparent reason why the principle of section 713 (f) should not be extended to acquiring corporations which under Supplement A of the present act include in their base period net income the earnings of their predecessors during this period.

IX. INCLUSION IN BASE PERIOD NET INCOME OF NET INCOME OR CONSTRUCTIVE NET INCOME OF THE TAXPAYER AND ITS COMPONENT CORPORATIONS FOR ENTIRE BASE PERIOD

The purpose of the base period net income method of determining the excess-profits credit is to obtain a measure of the normal earnings of the corporation prior to the emergency period to be compared with the present earnings. To accomplish this purpose in the case of a corporation which has acquired in transactions described in section 740, a business in existence during any part of the 4-year base period, the net income of the former owners from this business during the base period should be included in determining the average base period net income of the acquiring corporation.

The exclusion of any part of the net income of the acquiring corporation or its predecessors during the base period results in a distorted measure of the normal earning capacity of the business now conducted by the acquiring corporation. Yet this is precisely the effect of the following sections of the present act:

Section 742 (a) (2) which permits the inclusion in the base period net income of the acquiring corporation of the income during such period of a component corporation only if the latter is a qualified component corporation. A qualified component corporation is defined in sec. 740 (c) as a corporation which was in existence on the date of the beginning of the base period of the acquiring corporation or had acquired the assets of another component corporation in existence on the aforementioned date.

Section 742 (f) which excludes from the base period net income:

"(*a*) The net income of an acquiring corporation not actually in existence at the beginning of the base period, for the portion of the base period before it first became an acquired corporation.

"(*b*) The net income of a component corporation which became a qualified component corporation by reason of having acquired a component corporation in existence at the beginning of the base period, for the period before it became an acquiring corporation."

These limitations were consistent with the policy in the excess-profits tax bill of 1940 as passed by the House, which did not permit the use of the base period net income method unless the corporation was actually in existence at the beginning of its base period or had acquired the assets of a corporation actually in existence on such date. However, in the Excess-Profits Tax Act of 1940 as finally adopted, the use of the base period net income method was extended in section 713 to corporations in existence during only a part of the base period and as a matter of fact such corporations were permitted to compute constructive income for the portion of the base period they were not in existence.

It is true an acquiring corporation is given the option of determining its average base period net income under the general provision in section 713 without reference to the base period net income of its component corporations. However, the use of section 713 in such a case does not produce a fair measure of the normal earning capacity of the present business because the net income of the component corporations is excluded.

Accordingly, the aforementioned limitations in sections 742 (a) (2) and 742 (f) are inconsistent with the general policy of the act and should be repealed. Furthermore, in order to effectuate the policy of the act, constructive income should be provided for the component and acquiring corporations for the portions of the base period prior to the time they came into existence, to the extent this would not give rise to duplication.

X. ELIMINATION OF REQUIREMENT FOR DAILY DETERMINATION OF INVESTED CAPITAL

Section 716 requires the determination for each day of equity invested capital and also of borrowed capital. In addition, corporations having inadmissible assets are called upon to determine their admissible assets and their inadmissible assets for each day. This means making daily determinations of inventories, all other assets and depreciation, amortization and depletion, sustained to the end of each day. This is impossible because, except in an insignificant number of cases, the accounts of corporations are not maintained in a manner to reflect this information. In addition, even if it were possible to make these daily computations, it would involve hundreds of thousands of calculations. The capital invested in a business cannot be determined with complete accuracy regardless of how many technical and involved formulae are prescribed. Therefore, the daily computations of invested capital can only serve to increase the uncertainty of the final tax liability and to make the preparation of excess profits tax returns a nightmare.

Section 715 now provides:

"If the Commissioner finds that in any case the determination of invested capital, on a basis other than a daily basis, will produce an invested capital differing by not more than $1,000 from an invested capital determined on a daily basis, he may under regulations prescribed by him with the approval of the Secretary, provide for such determination on such other basis."

This provision is not of much help because to determine whether or not the difference in invested capital would be more than $1,000, practically all the work involved in making the daily computations would be necessary anyway.

Recognizing the almost impossible task involved in the requirement for daily computations, the Commissioner, in his regulations, has provided in some measure for practicable compliance with this requirement. However, this solves the problem only partially.

The Institute recommends therefore that there be adopted the following amendment approved by the Senate when the 1940 Excess Profits Tax Act was before it last September:

"The Commissioner may, under regulations prescribed by him with the approval of the Secretary, permit, in the computation of invested capital, the use of averages or ratios on a monthly, annual, or other appropriate basis, where in his opinion the circumstances do not require daily computations."

XI. INCOME ATTRIBUTABLE TO A BASE PERIOD YEAR BUT NOT REALIZED UNTIL A LATER YEAR

Section 721 of the Excess Profits Tax Act wisely makes provision for transferring certain classes of income received in one year to either the prior or subsequent years to which the income is attributable. In this connection, the Senate Finance Committee Report No. 2114, p. 16 contains the following:

"If it is determined that the income received in the taxable year is attributable to years in the base period, the amount of such income so attributable to such years will have the effect of increasing the base period net income and thus the credit under the average-earnings method."

This treatment is entirely proper because the income is attributed to an earlier year only because it is deemed properly includible for that year.

However, section 721-1 of Regulations 109 issued by the Treasury Department provides that:

"SEC. 721 has no effect upon the computation of base period net income or of earnings and profits and therefore does not affect the computation of the excess-profits credit."

There is no apparent justifiable reason for this regulation and it is directly contrary to the clearly expressed intent of Congress. It is recommended, therefore, that a clarifying amendment be made to the act in order to make certain this intent will be carried out in the administration of the law.

XII. APPLICATION OF UNUSED EXCESS PROFITS CREDIT AGAINST INCOME OF TWO PREVIOUS YEARS IN EXCESS-PROFITS TAX PERIOD

For accounting to stockholders, reports to various governmental agencies, and for taxation, corporations must prepare income statements for each year. However, it is realized that except in the simplest form of enterprise, the determination of income on an annual basis must depend in a large measure on estimates and at best does not produce an accurate picture.

The imposition of excess-profits tax at very high rates solely on an annual basis is clearly unjustifiable. In one year, a corporation might have substantial earnings in excess of the excess-profits tax exemption, whereas in another year its earnings might be far below the exemption. To subject the earnings of the very profitable year to an onerous excess-profits tax without reduction by reason of the meager earnings for the other year is contrary to the ability to pay principle.

The amendment adopted in 1941 permitting the unused excess-profits credit to be carried forward for a period of 2 years represents only partial recognition by Congress that for excess-profits-tax purposes the emergency period should be considered as a whole. Thus, in order to give full effect to this principle, the Institute recommends that in addition the unused excess-profits credit should be carried back for at least 2 years.

XIII. REVISION OF SECTION 752 TO ELIMINATE CERTAIN UNWARRANTED EXCESSIVE REDUCTIONS OF HIGHEST BRACKET AMOUNTS

The purpose of the highest bracket amount provisions in section 752 of the present act is to prevent corporations from obtaining multiple advantage from the lower excess-profits tax rates applicable to excess profits of less than $500,000 by reorganizing, by nontaxable transactions, into groups of small corporations. The Institute is in accord with this purpose.

However, in their actual application, the provisions of section 752 result in some cases in unwarranted and probably unintended penalties. For example, if a corporation transfers property (in a transaction to which sec. 752 applies) to another corporation the highest bracket amount of the transferor is reduced (except in certain of the cases falling under sec. 752 (b) (3))

even though the transferee corporation has excess profits on properties already owned of more than $500,000, and therefore the excess-profits tax on the earnings from the properties acquired from the transferor corporation is no less than if the properties had remained with the transferor.

Section 752 fixes the highest bracket amount of the transferee. In certain cases such highest bracket amount will be less than the amount the transferee was entitled to before receiving additional properties from a transferor, even though the transferee has excess profits on properties already owned of more than $500,000. In addition, section 752 does not provide for any future change in the highest bracket amount of the transferee established by that section unless it is a party to another exchange falling under section 752. In other words, the highest bracket amount of the transferee fixed under section 752 will not be increased even though, subsequent to the transaction dealt with in that section, the invested capital of the transferee is increased as a result of properties acquired in transactions to which section 752 does not apply.

Sections 752 (b) (4) and (c) (4) also work out inequitably insofar as they apply to transactions where one or more individuals in addition to one or more corporations are involved in a section 112 (b) (5) transfer to a corporation. Each of the corporate transferors is required to contribute a portion of its highest bracket amount to the transferee, the aggregate amount so contributed not to exceed $500,000. However, even where the aggregate amount of the highest bracket amount so contributed is less than $500,000 no additional highest bracket amount is allowed the transferee notwithstanding the fact that some of its earnings are from properties received from the transferors who are individuals. If only individual transferors were involved the full highest bracket amount would be allowed to the transferee. Accordingly, the effect of the formula prescribed in sections 752 (b) (4) and (c) (4) is to allow the transferee an insufficient highest bracket amount (where the amount allowed is less than $500,000) and to deprive the corporate transferors of more of their highest bracket amounts than they should logically be called upon to surrender.

Therefore, the institute recommends that section 752 be amended so that—

(1) The highest bracket amount of a corporate transferor will not be reduced in cases where no saving in excess-profits tax will result to the transferor and the transferee combined from the transfer of the property.

(2) Where the transferors include both individuals and corporations the highest bracket amounts of the transferors and transferee will be fairly determined in such a manner as to give recognition to the fact that individuals also contributed property to the transferee in the section 112 (b) (5) transaction. For this purpose the ratios of the property contributed by the corporate transferors and by the individuals would afford a fair basis for making an equitable adjustment of the highest bracket amounts of the corporate transferors and the transferee.

XIV. ADDITIONAL RELIEF PROVISIONS

The relief provisions in the excess-profits tax amendments of 1941 represented an improvement over those in the original act in that they made the application of these provisions more definite. The act in its present form provides some relief in the following cases:

1. Where companies had either abnormal deductions in the base period, or abnormal income in the taxable year.

2. Where the character of the business on January 1, 1940, had changed from that engaged in during one or more of the years in the base period or where in one or more of such years production, output or operation was interrupted or diminished because of the occurrence of events abnormal in the case of the taxpayer.

However, the relief provisions of the present act leave a wide gap with respect to many meritorious cases not specifically provided for therein. Among these are the following taxpayers:

(*a*) Taxpayers which by reason of old long-term contracts or other causes (not now provided for in the act) had inadequate earnings during all or a part of the base period.

(*b*) Taxpayers which as a result of special situations had unsatisfactory earnings during the base period as compared with other companies in the same industry.

(c) Taxpayers which acquired property for securities prior to the enactment of the excess-profits tax and are required to use transferor's basis for determining their invested capital.

(d) Taxpayers deriving income subsequent to January 1, 1940, from natural resources which were in the development stage or undeveloped as of January 1, 1940, but had no earnings from such properties during the base period.

In addition, it is not possible to anticipate all cases of abnormal situations for which relief should be provided.

At the time Congress adopted the 1941 amendments it recognized it had not dealt with all cases entitled to relief and indicated it would make additional provision for these situations if a further study showed the necessity for such action. Possibly, the most practical solution would be for the addition to the present act of a general relief provision patterned somewhat along the lines of section 722 of the original 1940 Excess-Profits Tax Act to be effective only upon application of the taxpayer, with appeal from the Commissioner's decision permitted to the Board of Tax Appeals.

XV. PAYMENT OF TAX IN CASES TO WHICH SECTION 722 APPLIES

Section 722 (e) of the present act prohibits a corporation to which the relief provisions of section 722 apply from estimating the tax on this basis in its original return. Instead it is required to pay the tax in the first instance without reference to these relief provisions and to later submit application for determination of the reduced tax under section 722. The only exception provided for is that where the average base-period net income of the taxpayer is finally determined under section 722 for 1 year, or if permission is granted by the Commissioner of Internal Revenue after a determination which has not become final, such taxpayer may use the average base-period net income so determined, in computing its excess-profits tax in any return required to be filed thereafter.

In some cases, the operations of a taxpayer will be seriously impeded due to lack of working capital if it is required to overpay its tax and to wait for a refund under section 722 until the Commissioner has acted on its application for relief under that section.

The Institute recommends, therefore, that the act be amended to permit a corporation affected by section 722 to pay its tax originally on the basis of a reasonable percentage of its net income, the amount so payable in no event to be less than the amount that would be payable if the application for relief is granted in full. Such a provision should not, of course, apply to cases where collection of any additional tax due would be jeopardized by a delay in collection.

XVI. MODIFICATION OF THE ADMINISTRATIVE PROVISIONS AND RESTRICTIONS RELATING TO AMORTIZATION DEDUCTIONS

We urge that section 124 be modified in order to improve and simplify the administrative provisions. Numerous restrictions which bar deductions for amortization contrary to the implied congressional intent should be amended or removed.

We believe that section 124 should be simplified to secure a clearer enunciation of the principle of allowing equitable deductions for amortization of defense facilities against the related taxable income. Among other changes, we suggest the repeal of subsection (i) which is essentially impracticable of administration. It also unnecessarily embraces in a tax statute a provision relating purely to procurement policy. This could be more appropriately fulfilled through direct contract provisions in procurement, as indicated by Hon. William S. Knudsen, Hon. John D. Biggers, and Hon. Leon Henderson, of the Advisory Commission to the Counsel of National Defense, in their testimony before your committee at the hearings during September 1940 on the Second Revenue Act of 1940 and in the letters addressed to your committee under date of September 5, 1940, by Hon. Henry L. Stimson, Secretary of War, and Hon. James Forrestal, Assistant Secretary of the Navy.

While the draft of the joint resolution recently submitted by the Secretary of War and Secretary of the Navy to the Speaker of the House of Representatives contains many desirable revisions of section 124, it will not provide a satisfactory solution of the problem presented by subsection (i) of that section.

XVII. ABOLITION OF PRESENT SYSTEM OF CAPITAL STOCK AND DECLARED VALUE EXCESS-PROFITS TAXES OR, IN THE ALTERNATIVE, PROVISION FOR ANNUAL REDECLARATIONS AND EXCLUSION FROM INCOME SUBJECT TO DECLARED VALUE EXCESS-PROFITS TAX OF CAPITAL GAINS AND LOSSES

The capital-stock tax and the related declared value excess-profits tax should be abolished. The high rate of income and excess-profits taxes has greatly weakened the effective yield of the capital-stock tax and thus there remains, even under today's need for revenue, little to commend the continuance of this guesswork tax.

The capital-stock and declared value excess-profits taxes are universally recognized as wrong in principle because they are predicated on the taxpayer's guesswork. In July of each year when capital-stock tax returns are normally due it is difficult enough to attempt a forecast of the earnings for the balance of that year without having to guess what they will be for the ensuing year or two. This has been true in recent years because of the wide swings in business activity and profits and because of the disturbed world conditions in the years immediately ahead, forecasts of future earnings are impossible. The inclusion of capital gains and losses in income, which in most cases are unpredictable, adds to the inequity of this part of our present revenue system.

Under the code, corporations are required to declare a value for their capital stock in their 1941 capital-stock tax returns and such value with certain adjustments is binding in their 1942 and 1943 capital-stock tax returns. In 1938, corporations were last required to declare capital-stock values for a 3-year period but in 1939 the law was amended to give corporations the option of increasing in that year and in 1940 the capital-stock values which they would otherwise have been required to use for these years based on the values declared in 1938. However, as the law now stands, the 1941 values will govern for 1942 and 1943 also.

The Institute urges that the capital-stock and declared value excess-profits taxes be abolished from our revenue system. If, however, this does not commend itself to the Congress, a redeclaration of the capital-stock value, either up or down, should be permitted every year and the taxable income for declared value excess-profits tax purposes should be computed without reference to capital gains and losses.

XVIII. RESTORATION OF THE GENERAL PROVISION FOR CONSOLIDATED INCOME-TAX RETURNS

The reasons which actuated Congress to permit an affiliated group of corporations to file consolidated excess-profits tax returns apply with equal force to income-tax returns. Therefore, the Institute urges that the consolidated return privilege be extended to income-tax returns.

Primarily as a result of the tax on intercompany dividends which became effective in 1936, many companies have integrated their business through the dissolution of their subsidiaries wherever it was practicable to do so. The Institute believes that generally where the subsidiary has been retained its dissolution has been found impracticable either because of legal requirements or business necessity.

A consolidated statement is not only ordinary business practice for a related group of corporations; it is regarded by businessmen, accountants, stock exchanges, and the Securities and Exchange Commission as essential to the fair presentation of the financial position and earnings of a consolidated group. It is only logical that this should be the rule, because a subsidiary which is owned 95 percent or more by the parent company is generally to all intents and purposes merely a branch of the business and should be treated in the same manner as a separate department of a single company.

The Institute is without information as to whether the abolition of the consolidated-income-tax-return privilege has brought the Treasury substantial, if any, additional revenue. The taxation of a group of related companies on a separate return basis has the effect of taxing intercompany profits and allowing intercompany losses which may never be realized, considering the business as a whole. Regardless of the effect on the revenue, however, the denial of the consolidated return privilege is basically wrong and results in an unwarranted penalty on corporations which are compelled to conduct a part of their operations through subsidiary companies.

The requirement for separate returns has in many cases complicated the preparation of income-tax returns and probably increased the amount of tax litigation. In addition, it has made the audit of income-tax returns more cumbersome, because more returns must be reviewed and the auditor must be satisfied that transactions among members of the group have been on an arms-length basis.

The determination of the income-tax liability of an affiliated group of corporations on a consolidated basis would also simplify the administration of the consolidated excess-profits tax provision of the act.

XIX. ELIMINATION OF WORTHLESS SECURITIES FROM THE CAPITAL-ASSET PROVISION

Prior to 1938, the losses on corporate securities which became worthless were allowed without limitation. However, by sections 23 (g) and 23 (k) of the 1938 act, these losses were placed in the same category as sales and exchanges of capital assets. The result now is that where a corporate security held by a corporation for 18 months or less becomes worthless, the loss is subject to the limitations of section 117 and thta if the corporate security is held for more than 18 months the loss is unallowable for excess-profits-tax purposes. There is a fundamental distinction between a loss on a sale or exchange and a loss from worthlessness of securities. The time to make a sale or exchange lies within the discretion of the owner and may be made at a time calculated to yield the least tax. However, in case of worthless obligations or stocks, the loss itself or the time of its occurrence is beyond the control of the owner.

The institute recommends therefore that sections 23 (g) (2) and (3) and 23 (k) (2) and (3) be repealed so that losses from worthless securities will be allowable without limitation for normal income-tax and excess-profits-tax purposes.

XX. ELIMINATION OR MODIFICATION OF REQUIREMENT FOR CHARGING OFF BAD DEBTS

A large percentage of the disagreements between the Commissioner and the taxpayer and also of tax litigation involves the question of the year in which debts became uncollectible and securities worthless. In some cases, these facts can be ascertained with almost mathematical accuracy because of some identifiable event, such as a bankruptcy, which ordinarily unmistakably established the year when these losses were sustained. However, in other instances, the situation is not clear and the year of loss is a matter of opinion.

In many cases the Commissioner of Internal Revenue denies the bad debt or security loss in the year claimed on the ground it was sustained in some other year, usually one in which the taxpayer cannot have the benefit of the loss because of the statute of limitations or for some other reason. In this way, the taxpayer is deprived of its right, contrary at least to the spirit of the tax law, to deduct losses from bad debts and worthless securities in the ascertainment of its taxable income, even though the Commissioner agrees that the taxpayer actually suffered these losses. The bad debt deduction has been disallowed by the Commissioner even in cases where the taxpayer charged it off in his accounts prior to the year it was ultimately held sustained for tax purposes.

To bring relief to the taxpayer from this inequitable treatment, never intended by the framers of the revenue acts, the institute makes the following recommendations:

(*a*) Removal of the charge-off requirement from section 23 (k) of the Internal Revenue Code, or, in the alternative, revise the section to require that the charge-off be made not later than the time when the taxpayer first claims the loss. This alternative would afford sufficient confirmation of the taxpayer's sincerity in its allegation that the debt is uncollectible.

(*b*) Broaden section 3801 of the Internal Revenue Code to permit reopening a year closed by the statute of limitations if bad-debt and worthless-security losses claimed by the taxpayer in another year are denied on the ground they belong in the closed year.

OTHER RECOMMENDATIONS

Other improvements which the institute recommends and which were included in its memorandum of May 12, 1941, to the House Ways and Means Committee are as follows:

XXI. Section 719 (a) (2), which covers inclusion in borrowed capital of advances received from governments, should be broadened and clarified.

XXII. No part of dividends received by one domestic company from another should be subjected to income tax.

XXIII. The law should be amended to provide that any waiver which extends the statutory period of limitation for assessment of additional taxes shall automatically extend for an equivalent time the period during which an effective claim for refund may be filed.

XXIV. The rate of interest accrued after the date of the enactment of the Revenue Act of 1941, on deficiencies should not exceed 3 percent and when this is done the rate of interest on refunds should be reduced correspondingly.

Respectfully submitted.

CONTROLLERS INSTITUTE OF AMERICA.

The CHAIRMAN. Ed Kuykendall, president, Motion Picture Theater Owners of America.

STATEMENT OF ED KUYKENDALL, COLUMBUS, MISS., PRESIDENT, MOTION PICTURE THEATER OWNERS OF AMERICA

The CHAIRMAN. You are appearing for the motion-picture theaters?

Mr. KUYKENDALL. That is right.

The CHAIRMAN. Which organization?

Mr. KUYKENDALL. Motion Picture Theater Owners of America.

The CHAIRMAN. You are president of that organization?

Mr. KUYKENDALL. Yes.

The CHAIRMAN. They are the exhibitors?

Mr. KUYKENDALL. May I explain, Mr. Chairman, my name is Ed Kuykendall. I live in Columbus, Miss., and I am president of the Motion Picture Theater Owners of America. I have a very brief prepared statement. I know you are very busy and my presentation is brief and there is nothing complicated in it.

The Motion Picture Theater Owners of America is a national organization of theater owners with representation in every State of the Union. It is a voluntary trade association by which theater owners hope, by advisement and cooperation with each other, to better serve their communities as a group and we yield to no one when it comes to a matter of patriotic service to our country.

I come before you in reference to the admission tax, not to ask any special consideration, but merely for the correction of what, to us theater owners, is a serious injustice. We are not here to oppose the admission tax as such. The attendance at theaters during recent months has decreased considerably and what I propose to you here will be most helpful to us in bringing back this attendance to a normal average. What I refer to is the text of the proposed admission tax that you gentlemen are now considering wherein we are forced to collect whatever the top bracket of admission tax happen to be on so-called reduced admission prices. As an example, if we offer a reduced price to those of juvenile age, such as high-school students, and so forth, we are forced to collect from them a tax on whatever the highest admission price may happen to be. In further explanation, if we admit the high-school student for 20 cents and the established top admission is 40 cents, the law forces us to collect a tax on the 40-cent admission basis. This is manifestly unfair.

The CHAIRMAN. You say that is the way the present law works out?

Mr. KUYKENDALL. That is the way it works out.

Senator JOHNSON. You mean you are asked to collect the tax, not on the actual admission, but on the theoretical tax?

Mr. KUYKENDALL. That is right.

The tax should be based on whatever the admission charge may be. I further emphasize the importance of this by calling to the attention of gentlemen the fact that when a child of 12 years and under grows out of this age your proposed law forces us to immediately charge them with a tax, based on a 40-cent admission, as an example—this youngster jumped from a 1-cent tax to a 4-cent tax. The shock and difficulty of this proves a detriment to their continued attendance and helps to restrict their theater-going habits. Theaters everywhere, both large and small, are starting a so-called junior admission price schedule, same being a reduction of the top admission price.

Wherever this has been tried it has brought about a wholesale increase in attendance at the theaters involved. We, the theaters, are badly in need of this increase and it would naturally increase admission tax revenue. Therefore, rather than taking away from the revenue derived it will increase this tax revenue.

I further call to this committee's attention that thousands of theaters in this country do not have a balcony or separate section in which these reduced admissions could be seated.

Time prohibits my going into detail as to section 1700 of the Internal Revenue Code as amended. There are many angles to it that really should be discussed, but I know your time is limited. Again, may I remind you that we are not trying to evade any tax whatsoever but merely trying to distribute it properly in such a way that the revenue which you gentlemen are charged with the responsibility of raising will not be adversely affected; but in our sincere and honest opinion, will be increased, and at the same time the theaters will materially benefit by it.

May I again emphasize that the basic thought I am trying to convey to this committee is that the tax charged should be based absolutely on the admission price charged. If there is something I have left out because of the time limit given me in making this staement I shall be delighted to furnish any member of this committee any such information he may desire either by mail or in person.

May I also respectfully call the attention of this committee to the provision in the proposed new tax schedule wherein 9-cent tickets are exempted from taxation. This, in our humble opinion, is a serious mistake. This, in our humble opinion, is a serious mistake. The tax should apply down to the last penny and I submit that language similar to the following should be written in this—

That there be a tax of 1 cent on each 10 cents or fraction thereof, eliminating entirely in this way the 9-cent exemption which will deprive you of revenue and cause considerable competitive confusion.

I don't presume to tell these distinguished gentlemen what to write in the tax bill, but I respectfully suggest that what I have suggested will eliminate considerable competitive confusion.

I deeply appreciate the consideration given me before this committee and with the permission of the Chair I would like to leave this statement for the record.

Senator RADCLIFFE. In the hearings before the House what argument was advanced for the proposition that the tax should be levied on

the highest admission price rather than on the reduced price charged?

Mr. KUYKENDALL. We have never heard a reasonable argument on that, sir. I have never known of and have never been able to obtain a satisfactory explanation of the reasons for any such tax.

Senator RADCLIFFE. You say that you haven't heard any reasonable argument on the point: Was any argument advanced at all why the tax should be based that way?

Mr. KUYKENDALL. I don't have any knowledge of any such argument; if it was made I never heard it.

Senator RADCLIFFE. Was it discussed in the hearing?

Mr. KUYKENDALL. I don't know of any such discussion.

Senator TAFT. Is it possible to administer an exemption for the benefit of children under 12; would it create confusion at the administrative end?

Mr. KUYKENDALL. I know of no reason why it should.

Senator TAFT. What about exempting soldiers and sailors?

Mr. KUYKENDALL. There has been no confusion in that connection; we are glad and willing to do it.

The CHAIRMAN. That exemption is in the bill as it came from the House, Senator, at the reduced rate.

Thank you very much, sir. Mr. Ebersole?

STATEMENT OF ROBERT L. McKEEVER, WASHINGTON, D. C.

Mr. MCKEEVER. Mr. Ebersole thought it would be better to have an actual alley operator speak to your committee, gentlemen. Mr. Ebersole has a memorandum or brief which he would like to file with you for such consideration as you may desire to give it. We say we the representing the duck pin industry. "Industry" is too big a name for the bowling alley business. "Industry" conveys the thought of a big business and we are a little business. I think I will convince you of that when I give you some of the figures as to the volume of business done by our different establishments.

The CHAIRMAN. How do you describe your business?

Mr. MCKEEVER. It is a bowling alley business wherein alleys on which small balls and small pins, instead of large ones, such as are employed in the tenpin industry, are used.

The CHAIRMAN. Alleys for children and old men?

Mr. MCKEEVER. I find it is pretty strenuous, just about as much so as the large ones.

We realize the need for increased taxes and are perfectly willing to do our part, but there are two different taxes imposed by this bill, an excise tax adding 10 percent on the cost of our supplies and there is a second tax—I don't know what you call it—a privilege tax putting $15 in taxes on each alley bed, so that a 10-alley bed establishment would, under this bill, have to pay a tax of $150 annually.

Senator CLARK. A use tax.

Mr. MCKEEVER. Maybe, but I don't know why it should be on an alley and not on a drug store or shoe store or some other sort of store. We don't object to the first tax but we do to the second because we think it is discriminating and unfair.

I would like to give the committee some slight history of this industry. Twenty-five years ago bowling alleys were conducted under

such conditions that when you thought of a bowling alley you thought of a barroom. Something happened about 20 years ago when the duck pin and bowling alleys were put in and installed separate and apart from the old barroom; separate from the poolroom, and it became a different kind of business entirely. Then about 10 years ago they started improving the atmosphere of these places, dressing them up; and prior to that time we saw very few women patrons. Today 40 to 50 percent of the business comes from women and you find a better class of people seeking recreation in healthful, pleasant surroundings in bowling alleys throughout this country.

In the duckpin business there are approximately 7,000 alley beds in 615 or 620 establishments. Some few of those establishments have as high as 30 or 40 beds and I believe one or two of them 50 alley beds.

Senator TAFT. Why do you speak of the duckpin business solely?

Mr. MCKEEVER. I am speaking only for the duckpin industry and am only trying to speak for that, because I will be followed by a representative of the tenpin industry. In addition to the 7,000 duckpin beds for which I speak, there are also two or three thousand additional beds that are unrecognized, one- or two-bed establishments in a club, in connection with a grocery store or school, or something like that. In the tenpin industry, I believe, they have 35,000 beds, approximately, so that the total number of beds involved is somewhere between 45,000 and 50,000—or a little more. That means that the total amount of taxes, based on this $15 use or privilege tax, would only be $700,000 or $750,000. We pay all the other taxes that any other businessman pays.

Senator TAFT. $750,000 or $7,500,000?

Mr. MCKEEVER. $750,000. I want to show you how small this is, taking every bed. We pay all the other taxes and when we realize that prices on all supplies and materials, such as pins, and so forth, have already advanced 40 percent since the close of last season, and to this cost is added the 10 percent tax, embodied in another section of this tax bill, which will add an average of well over $10 annual tax per alley bed in addition to the already existing taxes and this additional $15 per alley bed tax, which actually means double taxation, we find that we will be burdened with a total tax of $25 additional tax per alley bed; in all, about $70 a bed, which is a pretty big burden on a small alley.

Eighty percent of all the alleys in the duckpin industry are 4-, 6-, 8-, 10-alley establishments. In the States where the duckpin industry is operating, from Vermont to Florida, there are 616 bowling establishments accounting for 7,000 beds. Of this number, 78 larger establishments account for 2,100 beds while 538 small plants account for 4,900 beds, an average over the entire territory of 7 beds per establishment. There are two or three thousand additional alley beds in other States, and of substandard equipment, but among these the trend will be to an even lesser number of beds per establishment. In breaking down the alleys in one State, for example, Virginia was taken which has 950 beds in a total of 85 establishments, 220 of these beds are in 8 establishments while the other 730 beds are divided among 77 establishments.

All other States are in the same proportion with the exception of Connecticut and Florida and these States have a much greater

number of 4-, 6-, and 8-alley establishments. The majority of these places are located in the smaller cities, towns, and rural communities and by virtue of their size are restricted to a definite maximum as to the amount of business they can do. In all such localities the hours of business are confined to the evening, from approximately 7 to 11 p. m., and it is a well-established fact that in the rural communities people do not bowl or participate in sports until as late an hour as in the cities. It is also a seasonal business everywhere, but more particularly in these rural sections, from September 15 to May 15, a great majority of places closing down for the summer, even in the cities.

Granting that an establishment has capacity business every day in the week during these hours, for the full 8-month period of 39 weeks, allowing six games per alley per hour, which is the proven average over many years of operating, and at 15 cents per game, and many small operators are not able to get that much, it would give the operator of such plants a gross receipt of $800 to $835 annually per alley bed, and checking from many operators' statements that is a very fair average as many operators do not gross that much. Attached to the brief is a break-down of the cost of operation of the average eight-alley bed establishment.

In addition to this large numbers of people are leaving these communities and going to the industrial cities where defense work is located, taking that source of revenue away from the community entirely. Selectees leaving for camp leave a further gap in the available spending money in the community, due to that withdrawal from their families of the money they had previously been receiving.

The CHAIRMAN. You were taxed $10 per alley in the World War, I believe.

Mr. MCKEEVER. Well, it was right after that that a great many of our alleys found it necessary to close. I don't know that it was due to that reason many of our alleys folded up, had to go out of business, but that is the fact, they did. Now, we have gotten back on our feet to the extent that we are operating. We also invite attention to the fact that these alleys furnish employment for a certain type, particularly pin boys, and so forth, who can do little else and the average establishment uses 1 pin boy for each alley bed. This would mean an average of about 11 employees for each 8-alley plant, who would have have to find employment elsewhere if these establishments could not remain in operation. A very sizable number when taking the industry as a whole.

We respectfully invite attention to the fact that bowling is considered, by practically every physician, one of the best forms of physical exercise and during the past several years hundreds of high schools have recognized this and have put bowling on the regular curriculum in their physical-culture subjects, the students receiving regular credits just as in their other studies, and the entire bowling industry has been furnishing this bowling to these students at actual cost. It would be an undue hardship to require these thousands upon thousands of youngsters to pay the additional cost which must necessarily be obtained from them if the burden of operation is made too heavy. We also wish to point out that the physical upkeep and operation of a bowling establishment is far more expensive than the

average amusement establishment and that the popularity of the bowling game is primarily due to the fact that it costs the participant only the actual cost of the game, no expensive accessories to buy, such as golf clubs, tennis rackets, baseball uniforms, and so forth, or skates to rent, but if the price of the game is increased to any great extent, this appeal of a comparatively inexpensive exercise and recreation will be lost with the consequent rapidly declining business.

It is worthy of note that the class of men employed in this industry would probably be on relief if they were not so engaged. I refer to pin setters. It requires no education; it requires a strong back and a pretty tough head.

Senator RADCLIFFE. Are the majority of them minors?

Mr. MCKEEVER. No; in my own establishment I should think that the average age would be 40. You can't work minors except with a special work permit but you will find old pin boys doing that: They call them "boys" but they are boys of 55 or 60. I think I have one or two who are beyond the age on which you have to pay—what is it, old age or Social Security?

I am trying to give you a picture of the industry. Even in the large establishments, the total amount of business done would not be over $2,000 an alley bed, so if you take a 30-alley bed establishment, it would be $60,000 a year, and I think you would find the owner of that place would not be making very much. His tax would be $450 under this proposed bill, plus excises on his pins and other material. You are putting a special tax on him not being paid by any other businessman. That, we naturally feel, is unfair; but I am particularly and principally interested in the cases of the small establishments scattered throughout the country where they have 4, 6, 8, or 10 alleys; and I don't want to the committee to forget the example I gave you of the 8-alley establishment where the owner makes approximately $1,200 a year. If he only had four alleys, unless he did all the work himself, including the reconditioning of the alleys, he certainly wouldn't be making over $700 a year; and if you tax him $60 a year for special use tax for that privilege, it does look like it is soaking the little man. I have heard it said that these bowling alleys are gold mines. I have seen some of the Congressmen—I don't know whether any Members of the Senate have visited the bowling establishment operated by me—and they come in there and find it crowded. It is true we are crowded at certain times of the day, but all the rest of the day we are idle; and in the summer we operate and put air conditioning plants in our places of business. I operated at a loss last month of $1,000 in order to keep my establishment open and keep these employees. I figured it was better to operate at a loss such as that rather than to close. I just want to tell you what the situation is. I would be glad to answer any questions you may have to suggest, if there are any. I have this prepared statement.

The CHAIRMAN. You want this to go in the record?

Mr. MCKEEVER. Yes; I would like to have it in the record and there is attached to the back of that a sample of a balance sheet of receipts and expenditures of the average eight-alley bed establishment.

(The sheet referred to follows:)

A break-down of receipts and expenditures of the average 8-alley-bed establishment

Granting probable maximum receipts per single alley bed		$825
Pin boys at 0.03½ cents per game (in many places this cost is higher)	$200	
Present tax average per bed	70	
Pins used per bed per year (figured at an absolute minimum)	60	
Resurfacing bed annually (a universal price everywhere)	35	
Shellac, score sheets, and all other accessories	15	
Bowling balls (figured at present price of $44 per dozen—3 balls per alley and on the basis of one-third cost—usual life 3 years)	4	
		384
Net receipts per alley bed before rent, light, heat, and help		431
This would make a total for eight alleys		3,528
Additional necessary expenses:		
Rent figured at $50 per month for 12 months	$600	
Help for 8 months, covering actual full operating season, $25 per week for 39 weeks	975	
Porter for 39 weeks at $15 per week	585	
Light, $30 per month for only 8 months	240	
Heat, 6 months only at $15 per month	90	
		2,490
Net receipts for 8 months		1,038
Granting the operator will keep open 3 of the 4 remaining months, without help of any kind as he would have very little regular or so-called rush business, he may be able to net a total of $75 per month for these 3 months		250
Making a total net income (for a man with a family)		1,288

From this net income must now be taken the 10-percent tax on pins and balls as in the present bill which will amount to $7.90 per bed, a total of $63.20 for the eight alleys and if the $15 is also added, making another addition of $120 for eight alleys a total of $183.20 will have to be taken, in taxes, from the $1,288 which will leave a net income of $1,104.90, for a full year's business. And all this provided costs, labor, and so forth, do not advance above the present level.

NOTE.—Nothing is deducted in the above statement for depreciation nor is any allowance made for interest on the owner's investment. The cost of the average bowling alley bed being $1,250 per bed.

It should also be mentioned that rent figured in the above is very low and will vary greatly in the many towns and communities as will the item of help to a certain degree.

There is one last thing I would like to suggest to the committee: It is, if you could reduce that $15 proposed tax to $5, we would want to go along and pay that $5 per alley, but we do think it is a discriminatory tax and it is a little unfair that we should be required to pay any tax which the next-door merchant is not asked to pay.

STATEMENT OF CHARLES V. FALKENBERG, CHICAGO, ILL., LEGAL COUNSEL, BOWLING PROPRIETORS' ASSOCIATION OF AMERICA, INC.

Mr. FALKENBERG. I appear here on behalf of the Bowling Proprietors' Association of America, Inc., an association of 1,500 operators of tenpin bowling alleys. That is the alley using 16-pound balls and 3-pound 10-ounce pins.

In the United States at present there are, according to the figures of the American Bowling Congress, which I have asked permission of the chair to insert in the record, 5,005 establishments, sanctioned establishments operating. There are 35,550 bowling alleys or beds in these establishments; the average number of alleys in each establishment in the 48 States is 7.1 alleys per establishment.

We are affected by two provisions of the tax bill:

Section 555 relates to coin-operated amusement and gaming devices and amends the Internal Revenue Code and provides:

(a) Every person who maintains for use, or permits the use of, on any place or premises occupied by him, a coin-operated amusement or gaming device, shall pay a special tax of $25 per year in respect of such device, and shall pay an additional special tax of $25 per year for each additional such device so maintained or the use of which is so permitted.

and we are willing to pay that tax.

Senator TAFT. That is on what? Slot machines?

Mr. FALKENBERG. That is the amusement tax on games where you put in a nickel and try your luck at registering a high count or score but receive no prize or reward therefor.

If one such device is replaced by another, such other device shall not be considered an additional device.

(c) Applicability of administrative provisions.

An operator of a place of premises who maintains for use or permits the use of any coin-operated device shall be considered for the purposes of subchapter B to be engaged in a trade or business in respect of each such device.

To this tax we do not object.

Section 556 relates to bowling alleys and billiard and pool tables, and it is provided in paragraph (a) thereof as follows:

Rate.—Every person who operates a bowling alley, billiard room, or pool room shall pay a special tax of $15 per year for each bowling alley, billiard table, or pool table. Every building or place where balls are thrown or where games of billiards or pool are played, except in private homes, shall be regarded as a bowling alley, billiard room, or pool room, respectively.

A Summary of Bowling Alley Establishments in the United States, as compiled by the American Bowling Congress, Inc., in May 1939, and in January 1941, appears on page 3 of the A. B. C.'s official publication, Bowling, volume 7, No. 11, issued January 16, 1941, and is attached to this statement as exhibit A.

It shows that in January 1941 there were 5,005 tenpin bowling alley establishments in the United States, with a total of 35,550 certified alley beds or lanes, and with an average of 7.1 beds or lanes in these establishments.

The Bowling Proprietors' Association and the quoted summary of the A. B. C. are interested in and refer only to tenpin bowling alley establishments, as distinguished from duckpin establishments, who are represented before this committee by the National Duckpin Bowling Congress.

It is the studied opinion of the officers and directors of our association that at the present time the proposed tax of $15 for each alley and for each table is excessive and in many instances might prove confiscatory, and that for the reasons hereinafter set forth the tax should be reduced so that the operator would pay not more than $5 per alley and $5 per table.

An overwhelming majority of the members of our association have in their establishments billiard tables and pocket tables (which in the past were commonly known as pool tables), which they operate in conjunction with their tenpin bowling alleys. Practically all tables are 10, 15, or 20 years of age. They are rarely in use and are retained chiefly because the proprietory bought them years ago and owns them. The tax on tables would, in effect, be a use tax on nonremunerative personal property.

That the industry of tenpin bowling has enjoyed a phenomenal growth in recent years is evidenced from the summary found in the exhibit attached. From this summary it is seen that whereas 3,880 establishments, with 25,797 certified alley beds or lanes were in operation in May 1939, the number had increased 28 percent, to 5,005 establishments, by January of 1941, and had increased by 37.7 percent to 35,550 certified alley beds or lanes by that last date.

Twelve States have 81 percent of the establishments and an approximate like amount of alley beds or lanes, viz:

	Establishments			Establishments	
	1939	1941		1939	1941
California	95	179	New Jersey	379	475
Illinois	423	529	New York	743	875
Indiana	114	178	Ohio	340	404
Iowa	86	103	Pennsylvania	355	483
Michigan	255	335	Wisconsin	375	439
Minnesota	108	212			
Missouri	119	137	Total	3,422	4,349

Tenpin bowling has grown from a recreation in which a very small proportion of the public indulged, into one of the major recreations of the Nation.

Bowling is a "participant" sport, as distinguished from a "spectator" sport and is one of the very few recreations that offers physical exercise as well as mental relaxation to persons of both sexes and of all ages.

Tenpin bowling alley operators do not sell a "commodity" to the public; they sell a "service." A service, in the very nature of things, must be offered at a much lower unit cost to the public than a commodity, because after spending his money in bowling, the patron takes nothing with him of a tangible nature to his home, as he does when merchandise is purchased. For illustration—movies or talkies, amusement parks, roller coasters, dance halls, or roller and ice skating rinks in the average city cannot charge more than 10 cents or 25 cents for each unit of service without suffering a very sharp decline in business.

The public regards these diversions and recreations as something they should receive without too great a cost. These diversions and recreations, including tenpin bowling, are therefore dependent on a very large number of unit sales, if they are to realize any appreciable profit.

The average tenpin bowling establishment in the United States consists of 7.1 alley beds or lanes, and occupies about 6,000 to 8,000

square feet of floor space. Building costs or rental is therefore a large factor in computing the fixed overhead for each such establishment.

A representative financial picture for an average 10-lane establishment is somewhat as follows:

Income: 10,000 lines or games per month from Sept. 15 to May 15, or 80,000 lines or games per year, at 25 cents per game, yield a total gross revenue of	$20,000
(98 percent of the establishments are not open for business from May 10 to Sept. 10 of any year.)	
Expense: Because of the labor shortage, due to national-defense work, pin boys to spot the pins will receive during the coming season an average of 7½ cents per game or line. This amounts to 30 percent of the gross, which in the instant case would amount to $6,000 per year for only 1 group of employees, an unusual condition, we submit	6,000
Rental is normally figured at $25 per month per alley lane, or $250 per month, or a total yearly rental of	3,000
Porter hire amounts to (per year)	800
A counterman receives (per year)	800
An alley mechanic at (per year)	1,500
Total in wages, in addition to the $6,000 paid to pin boys	3,100
Light bills each year approximate	800
Heat for a year will cost	400
The price of supplies, such as tenpins, bowling balls, lacquer, etc., has increased 35 percent in the last 8 months, and during the coming year in a 10-alley establishment will cost	1,500
Advertising and business promotion for a year will average	500
State and municipal taxes vary in the several States, but in Michigan, for instance, the personal-property taxes on the equipment would amount to	330
In Chicago, tenpin alleys, 1 to 3 years of age, and tables 10 years of age (in addition to the city-license fee of $5 per alley and table) will pay a yearly personal tax of	310–400
In Michigan permits and licenses, per year, cost	25
Because of the lack of steady employment in bowling establishments, an unemployment-compensation tax of 4 percent on the total pay roll must be made to the State of Michigan, hence on the hypothetical total pay roll of $9,100, this latter tax each year amounts to	564
The Federal annuity tax of 1 percent under Social Security, title IX, for the year amounts to	91
The initial cost of the 10 bowling alleys with return chutes, etc., amounts to a minimum of	15,000
Tables, spectator's seats, scoreboards, benches, counters, showcases, lockers, etc., will cost an extra	7,500–12,500

From the foregoing we find a gross income of $20,000 against a total operating overhead of $16,000 to $18,000, or a net maximum profit of $4,000 on an investment of $22,500 to $27,500, not including as part of the investment the cost of the building. This profit includes the full-time services of the owner-operator to supervise the establishment.

This, we submit, is a bare living for the average bowling operator, and he can ill afford any additional tax or charge in his business.

In Chicago the operator is faced with the following taxes and fees:

Retail liquor license to the city, $100 per year for each bar.
Retail liquor license to the State, $50 per year for each bar.
Retail liquor tax, Federal, $25 per year.
Cigarette license to the city, $100.
Retail sales tax paid to the State, 2 percent of gross sales.

Sign inspection, elevator inspection, and fan inspection, city, $15 to $40 per year. Corporate franchise tax to the State, Federal corporate stock tax, unemployment-compensation tax, old-age insurance tax, personal property tax and city license fee per unit, personal income tax, corporate income tax—these charges vary with the capital structure and volume of business or income done by the individual establishment.

Comparable taxes are paid by each operator in all other metropolitan cities in the Unted States.

Tenpin bowling establishments might well be divided into two categories, viz:

1. Those in metropolitan centers like Chicago, New York, Detroit, St. Louis, and Los Angeles; and

2. Those in the rural sections.

Those in each section could again be divided into—

(*a*) Air-conditioned, soundproof, streamlined establishments located in the so-called single-purpose building, i. e., a building constructed for the express purpose of operating a tenpin bowling establishment therein, and unless completely rebuilt usable for no other purpose; and

(*b*) The non-sound-proof, non-air-conditioned, old-time establishment, generally located on the second floor of some building, or in a remodeled garage, or in the basement of some large building.

The great majority of these newer, up-to-date establishments, constructed in the past 3 or 4 years, experienced great difficulty in financing the construction of their single-purpose building and the procurement and installation of the bowling alley equipment. These number less than 5 percent of all tenpin establishments in the 48 States.

Classified by every lender of money as a single-purpose building, construction loans could not be obtained from the local bank, from the investment banker, from the private lender of money, from the insurance companies, from the R. F. C., from the F. H. A., or from any other private or public lending agency, and when the average loan was finally obtained, it was generally for a substantial commission, at a high rate of interest, and under exacting terms. Cost of an air-conditioned, sound-proof, one-story building with half or full basement, including plot of ground 135 by 125 feet will be a minimum of $120,000 to $225,000, exclusive of equipment; interest therefor is $7,200 to $13,500 per year without depreciation.

The equipping of the establishment was another financial problem. For practical purposes, 24 alleys or lanes on one floor, free from posts, are needed. Tournaments, sweepstakes, and championships require multiples of six alleys. The cost of equipping a 24-lane establishment would approximate $100,000, which could be financed only by paying 25 to 35 percent down and the balance in equal monthly installments over a period of 3 to 5 years. Interest alone on equipment is $6,000 per year, without depreciation. Repayments on loans or contract would be $13,000 to $22,000 per year.

Stock companies or syndicates of small operators had to be formed to provide adequate capital for these 24 alley ventures. In self-protection, having no alternative, except to go out of business, these operators, who, for 20 or 25 years had pioneered recreational bowling, had to band together so as to meet the ruinous competition presented by a half a dozen or more newcomers in the field of bowling, who saw an opportunity to capitalize quickly and profitably on the years

of constructive effort of the small bowling operator, he possessing an establishment of 4, 6, 8, or 10 alleys. Unfortunately, other newcomers entered into the competition and it soon became a small but vicious serious circle of action. These were practically all constructed or started prior to the present European-Asiatic conflict. Hence we have the completed building and the completed enterprise on our hands and are faced with the necessity of meeting interest charges and prepayments on principal, even though the business is closed.

In hearings before the then N. R. A. Administrator, Gen. Hugh Johnson, figures and facts were presented by this association indicating:

(*a*) That the then approximately 1,500 member tenpin bowling establishments in the United States charged an average of 20 cents per game or line for tenpin bowling.

(*b*) That the profit to the operator approximated three-quarters of a cent to 1½ cents per line or game.

(*c*) That tenpin boys were paid 4 cents per game for spotting pins.

(*d*) That not one billiard or pocket billiard table had for 5 years or more earned sufficient money to offset the rental charge for the space the table occupied in the establishment.

Today bowling is 20 cents per line each afternoon until 5 o'clock. Three games for 50 cents is the charge for high-school boys and girls Saturday and afternoons. Bowling is an accredited "subject" in Chicago's public high schools. Twenty-five cents per line is charged in most establishments after 5 p. m.

The bulk of bowling is done by members of leagues, under signed agreements, commencing the 1, 2, 3, or 4 days following Labor Day of each year, for 31 to 37 weeks.

The charge for league bowling is approximately 3 lines for 75 cents (some agreements provided 3 games for 67½ cents), out of which the operator now pays:

Six to eight cents per line to the pin boy for spotting pins (with an occasional guaranty of $2 or more per day if the boy is called to report for work and there is no work, or but an hour's work for him). Where 10 or more boys are involved (generally 1½ to 2 boys must be held for call for each alley), this guaranty, paid to tenpin boys who sit around and do no work, frequently wipes out the entire day's profit for the operator. Four dollars per day guaranty is threatened in half a dozen States to be demanded by pin boys.

Two dollars per year for each league sanction to the American Bowling Congress.

One dollar to one dollar and fifty cents each 2 hours to a foul line man for each eight teams bowling on eight alleys in league play. (This is $9 to $13.50 per night at a 24-alley establishment.)

As promotional expense, each proprietor must and does pay the entry fee of from 5 to 20 teams in each city tournament, each State tournament, each A. B. C. national tournament, and like tournaments for the Women's Bowling Association. All tournaments are held annually.

They must, in addition, buy lettered shirts for the different league bowlers to advertise the establishment, and must pay entry fees in the various types of bowling sweepstakes staged periodically in the year, and last, but not least, conduct bowling classics—leagues, individual championships, and team championships—in which the participants are the outstanding bowlers in each city.

These agreements signed by bowling leagues have in practically every instance already been signed for the coming season by the leagues and the operators, and in many instances for the next two seasons. The bowling operator finds it an utter impossibility to now change his agreement so that he might require the bowler to pay an increased charge, sufficient to permit the proprietor to absorb the proposed $15 tax or fee on each table or alley.

At the time of our appearance before General Johnson, it was, and at the present time it is, a rare occasion when a patron rented a table, either billiard or pocket, for an hour. The patron occasionally picks up a cue to casually knock the balls around the table for the 15 or 20 minutes that he must wait until his alley is free or until the arrival of the time his league commences to bowl. About half the tables never are used from year to year.

Other taxes which he must now pay and which have been added since the N. R. A., include: (1) Unemployment compensation; (2) old-age insurance.

Before we were aware of the proposed tax on alleys or tables, the Bowling Proprietors' Association in convention assembled at Louisville, Ky., on June 10 and 11, 1941, adopted a resolution binding upon all members that:

> During the period of the present emergency the price of bowling to all uniformed members of the armed forces of the United States will be 15 cents per game or line.

During the war of 1917–18, the several city or local associations contributed to the different cantonments completely equipped bowling alleys, without cost to the Government or any other cantonment agency.

Unsuccessful in their efforts to make like contributions this year, they adopted the alternative above set out, a reduction of 40 percent in the cost of bowling to the service man, and at the reduced price they assume a loss of 5 to 7 cents per game, as their contribution to the recreational activities of the service men on leave.

The old establishments in metropolitan centers are, like those in the rural districts, finding it daily more difficult to obtain tenpin spotters, for the reason that these boys can earn double the wages in factories or in defense industries than they can earn by spotting pins ($1.80 to $3 per league night, Monday through Friday, plus open play afternoons, Saturdays and Sundays).

The selective-service law has hit tenpin establishments a heavy financial blow, because a great many young men in the draft age, accompanied by their girl companions, were in the past regular bowlers. Now he is in the service and she remains at home.

Most of the 48 States have safety laws and health laws, reinforced by city ordinances, prohibiting the use of boys under 18 years of age,

or high-school boys, for spotting pins, and where an exception is permitted, the authorities limit their services to 11 o'clock at night.

All profit in the average establishment is in the "open play," that is, nonleague play in the afternoon and at night after the leagues have bowled; that is, after 11 o'clock at night, but unless pin boys are available, this open play cannot be obtained, and many nights they are unavailable and the customer is lost to the operator.

It is feared by many smaller operators that because of the attractiveness of the newer, air-conditioned establishments, a great percentage of the patrons of the smaller, older establishments will be attracted to the newer places, and that in self defense the older, smaller operator will be forced to cut his price to 15 cents per game in the afternoon and 20 cents per game in the evening, and this notwithstanding the fact that it actually costs him 20 or 22 cents per game to operate, without considering the tax under discussion, or any other taxes which the city or the State will undoubtedly levy and collect. This will be pure suicide, but he will have no alternative but to close his place of business. Our officers are now seeking another solution.

Unless the proprietor can retain his patrons and keep the price at its present level (because of their tremendous overhead the newer men cannot cut the price and survive), it is inevitable that a great number of these smaller operators, possibly a majority of them, will find it necessary to close their doors, just as they did in 1931, 1932, 1933, and 1934, during which period so many tenpin establishments went out of business and returned their unpaid-for equipment to the manufacturer, that all manufacturers' warehouses were loaded to capacity with section-cut tenpin alleys, and these manufacturers pleaded with the operator to retain the alleys in his establishment, even though he made no payments thereon for months or years, but only protected the alleys against unnecessary depreciation.

Tenpin alleys are, on a small scale, operated in scores of Y. M. C. A. and like enterprises. All profits are used for aiding underprivileged children. This tax would practically eliminate their entire profit, and the many boys and girls and activities heretofore aided by them would henceforth be cut off from such aid.

If, unfortunately, this occurs, the very purpose of House Resolution 5417, namely, to raise revenue, will thereby be frustrated.

Assuming that each alley of the 5,005 establishments, or 35,550 lanes, were to pay $15 per year each, the total revenue to the Federal Government would amount, at a maximum, to $533,250. There is grave danger that this additional Federal tax imposition might cause the closing of the businesses of so many of both the smaller and the newer operators that the losses to the Government in income tax, in various types of social security tax and other fees and charges would more than equal the amount of the revenue which might, as a maximum, be realized under this proposal.

As intimated above, each member of our organization is not opposed, if there is no other way for these expenses to be met, to being called upon to contribute something extra toward the heavy, current expense of government, but each believes that if they must pay an added excise tax, that the sum of $5 per alley or lane, and $5 per table for the first 2

years of the proposed legislation, would be the maximum that they should be called upon to pay. This price they could by further sacrifice meet without great danger of closing their doors.

In behalf of the members of the association, we very respectfully recommend that if the proposed tax cannot be eliminated entirely it be changed from $15 per alley and per table to $5 per alley and per table.

Sometime after the armistice in 1918 a Federal tax was levied on bowling alleys. This tax remained in effect but a very short time, because the operators convincingly demonstrated to the Members of the Congress that their business was so small that they could not possibly pay the tax, and it was quickly repealed.

We are deeply obligated to the committee for their courtesy in permitting us this opportunity to present to them the views of the operators of tenpin bowling alley establishments in the United States.

(Mr. Falkenberg submitted the following table, referred to in his statement as exhibit A.)

EXHIBIT A.—*Summary of bowling alley establishments and alley beds certified by the American Bowling Congress*

State	Establishments				Certified alley beds				Average beds per establishment	
	May 1939	Janu-1941	Increase		May 1939	Janu-1941	Increase		May 1939	Janu-1941
			Number	Percent			Number	Percent

(Whereupon, at 12:25 p. m., the hearing was recessed until 2 p. m.)

AFTERNOON SESSION

(Pursuant to the adjournment for the noon recess, the committee reconvened at 2 p. m., Senator Walter F. George (chairman) presiding.)

The CHAIRMAN. Dr. Compton, will you come around, please?

STATEMENT OF DR. WILSON COMPTON, WASHINGTON, D. C., REPRESENTING THE NATIONAL LUMBER MANUFACTURERS ASSOCIATION

The CHAIRMAN. You are representing the National Lumber Manufacturers Association?

Dr. COMPTON. That is right, Mr. Chairman.

The CHAIRMAN. And you have a brief, I presume?

Dr. COMPTON. I have a short statement here, which, if it is agreeable, I would like to base my few remarks upon. In fact, I might save you time, and my own, by just following this.

The CHAIRMAN. It is very much against our will, but in order to accommodate as many of the industries and taxpayers as possible, we had to put a limitation of 10 minutes on the time. From your brief, however, you will not consume more than that.

Dr. COMPTON. I will not occupy 10 minutes.

I noticed while I was sitting here, Senator, a table on page 578 of the hearings which you held, and I would like to have my remarks to be related to the table entitled "Table B—Sawmills and Planing Mills, per Income Returns," that appears on that page.

The CHAIRMAN. Very well, that will be so noted.

Dr. COMPTON. My name is Wilson Compton. I am the secretary and manager of the National Lumber Manufacturers Association and

vice president of American Forest Products Industries, Inc. I have sought an opportunity in behalf of the major lumber and timber products industries to ask your consideration of an important, somewhat paradoxical, and I think an undesired discrimination in the pending tax bill. It has been brought to your attention by spokesmen for the coal industry, the railroads, the timber industries of the West and others. I wish to put before you a summary of its unfair and discriminatory effects upon the lumber and timber products industries in all regions, South, North, and West.

This discrimination is in section 201 (a) of the bill. In subdivision (2) of that section is provided a "special rule in certain cases where invested capital credit is used" in the computation of excess-profits taxes. This provision would apply to all companies which, during the period 1936 to 1939 showed earnings less than 8 percent of invested capital. Especially will it apply in the natural resources industries with their comparatively large invested capital and their comparatively low earnings in recent years.

This proposed special rule is a penalty tax applicable in fact only to corporations with no earnings or small earnings during the base period, and applicable to them for no other reason than that during the base period they were unable to show substantial earnings. It would not even apply to a new corporation which was not in operation during that period. And to that point I would like to call especial attention.

The lumber industry during recent years has been notoriously unprofitable. Income-tax data published by the Bureau of Internal Revenue indicates a total net income for the base period for companies in lumber and timber products industries amounting to less than 1½ percent annually of their assets admissible in the computation of invested capital. At that point, could I refer to this table on page 578 of the hearings?

The CHAIRMAN. Yes.

Dr. COMPTON. To illustrate specifically the effect of this penalty tax on the lumber manufacturing industry may I cite three examples, and these are all drawn from the published reports of the Bureau of Internal Revenue. All I have to say is predicated upon the publication of the Bureau, and that is based, in turn, on the income returns filed with them.

First, 55 percent of the income-tax returns for corporations in this industry during the 4-year base period reported no net income. Data on assets is available for only 3 of the 4 years. But these no-net-income corporations in the 3 years for which data are available, had average assets totaling $448,000,000 after deducting items not considered as part of invested capital for the purposes of this law.

Eight percent of their admissible assets of $448,000,000 amounts to $35,824,000. This theoretically is their invested capital credit or exemption from the excess-profits tax. But on this credit the pending bill proposed a tax of 10 percent. These corporations would, therefore, be taxed $3,582,000 on their exemption.

Second, the remainder of the lumber companies, accounting for approximately 45 percent of the returns reported a net profit in the base period. Their average invested capital, computed from the available data published by the Bureau is $598,000,000. Most of these

are companies of comparatively small or moderate size. Most would be entitled, under the standards contained in the pending bill, to an 8 percent excess-profits tax credit on an aggregate of $47,845,000. During the base period these companies had a net income before income taxes equivalent to 6.39 percent of their admissible invested capital or an aggregate of $37,512,000. The difference between the invested capital credit and the earnings credit thus computed is $10,333,000. This, too, by the terms of the proposed special provision would be subject to a penalty tax of 10 percent or $1,033,376.

Third, the lumber manufacturing corporations making Federal income tax returns total about 3,000. Their combined admissible invested capital is about $1,046,000,000. Their average yearly net income during the 4-year base period, without subtracting the $12,500,000 deficit in 1938 was less than $17,800,000, less than 1¾ percent of the invested capital. Assuming that these companies will use the invested capital credit option, that credit in the national industry aggregate would be about $83,600,000. Subtracting from that amount—if perchance such an amount were earned in 1941—the average earnings of $17,800,000 would leave $65,800,000, subject, therefore, to a 10 percent penalty tax or a tax of $6,580,000.

These examples, of course, are not totally accurate. The available data are not complete. The specific exemptions would somewhat reduce the tax but would not substantially modify the extent of the discrimination resulting from this special tax.

Nor does this discrimination exist merely in national industry averages. For example in Wisconsin in 1936, the only year of the 4-year base period for which this information is now available, 49 companies earned an average of 4.3 percent of invested capital; 55 others had a deficit of 6 percent. In North Carolina during the same year 74 companies earned an average of 6.4 percent and 50 had a deficit of 11.8 percent. In Oregon 65 companies earned 5.4 percent; and 114 companies lost 4.3 percent. In Texas, 40 companies with admissible invested capital of $10,200,000 had a profit of 12.2 percent and 33 others with an invested capital of $24,200,000 had a deficit of 2.9 percent. In Virginia 54 companies, including those which operated at a profit and those which operated at a loss, earned 3.9 percent; in Georgia 94 companies earned 4.2 percent; in Washington 246 companies earned 3.3 percent. These companies if they use the invested capital credit option, as most of them will, will be subject, under this special provision, to a penalty tax on the difference between these amounts and 8 percent (or 7 percent as the case may be) on their invested capital. To many of these companies which have been financially impoverished during most of the past 10 years, these are very considerable amounts. Most of them will have enough difficulty in paying their share of the fair taxes imposed on them. They should not in addition be asked to pay unfair taxes which penalize them for no reason except that in recent years they have been unable to show a more impressive earnings record.

We are not objecting to the tax rates. We know that the bills must be paid and that to do this the taxes must be high. But we are objecting to inequality of taxation and to discriminatory penalty taxes on companies with large investments merely because their operations during the recent so-called base period have been generally unprofitable. We hope that this inequitable provision of the pending

bill will have your earnest consideration, and that it may be eliminated before the revenue bill is reported to the Senate.

The CHAIRMAN. Are there any questions by any members of the committee of Dr. Compton? If not, Doctor, thank you very much for your appearance.

Dr. COMPTON. Thank you.

The CHAIRMAN. Mr. Thomas Young, of Salt Lake City.

STATEMENT OF THOMAS YOUNG, SALT LAKE CITY, UTAH, REPRESENTING THE NATIONAL SIGN ASSOCIATION, INC.

The CHAIRMAN. You appear on the tax on the electric signs?

Mr. YOUNG. Yes, sir.

The CHAIRMAN. I believe your appearance is for the National Sign Association, Inc., is that correct?

Mr. YOUNG. That is right.

The CHAIRMAN. All right, sir, Mr. Young.

Mr. YOUNG. Mr. Chairman and gentlemen, I am president and manager of the Young Electric Sign Co., in Salt Lake, and also president of the National Sign Association.

As president of the National Sign Association, I speak in behalf of an industry comprised of some 3,500 small manufacturers, who are performing a service primarily adapted to the needs of the local merchant and businessman.

We are opposed to the imposition of an excise tax on advertising in any form, since such a tax will place a handicap on the expansion of business necessary to produce the means required to meet the defense program. The reasons why this tax should not be imposed on neon and electric signs, however, are of a special and important nature.

First, I wish to state our industry realizes, as do all others, that a state of emergency exists and that taxes must be levied in order to carry out the defense program. We are not opposed to paying our full share of any equitable tax, even to the full extent of our profits, if necessary, but we are opposed to the suggested tax under consideration, which will inflict an unjust burden on the development and proper use of our medium and inhibit the effort of the small businessman in adjusting himself to conditions he is now facing.

For a large percentage of small businessmen, our medium is the chief form of advertising used, and for many the only form used. Please remember that most neon and electric signs are installed on the merchant's place of business, and are the means by which the merchant can best identify his place of business, and thereby sell his merchandise. For the great majority, the neon and electric sign represents the only means of forming a contact between prospect and himself—the only means of securing business. Usually his trade is drawn from a relatively small area, and in more cases than may be realized, the sign is the first and only contact available to those passing in his vicinity. For this reason no other medium of advertising is available for his use. All other media of wider circulation would represent an economic waste, which makes their use not only impractical but impossible. Handicap the small businessman (and by this the large majority of all business establishments) with this tax, and you make it difficult to

readily readjust his business to the present program, and may even cause conditions that will force him out of the enterprise in which he is engaged.

Not less severe is the effect on our own industry, which gives employment to more than 50,000 persons, most of whom are highly skilled in their specific trades, and so specialized as to make them unsuited to any demands of the defense industry. In the present trade their wages and working conditions are above the average for industry. Signs are custom-built and, therefore, require a much higher percentage of labor to the finished product than those products produced by quantity methods. Our plants do not have the type of equipment or machinery required for defense products. Our margin of profit is small, and any appreciable diminution of business will result in loss of employment, elimination of profits, and consequent loss of expected revenue.

It is our belief that the total amount of revenue which could be collected would be small, and that the cost of its collection from so many firms would net a very much smaller net income to the Government. There is, perhaps, a smaller volume of business in new signs produced than might be expected. Because signs are, by their very nature and purpose, placed in positions of visible recognition, the amount and quantity is always overestimated by the general observer. The total revenue of the sign industry in all its ramifications reaches a figure much less than that of an oil company in one of our States. The work being custom-built, is distributed between an estimated 3,500 firms, the greatest majority of which employ few individuals. The companies reaching a volume of $100,000 in a year or over, will not exceed more than 40 to 50 in number, and according to a Government census report, only 1,386 even enjoy a business of over $5.000 a year.

Because this tax would impose a hardship on thousands of small businessmen, would throw many specialized men out of employment, and would not net an important gross revenue, we register our earnest opposition. These objections are in addition to the fact that the very theory of an excise tax on advertising will be a tax on business development.

Senator CONNALLY. Do you know of any tax that is not?

Mr. YOUNG. How is that?

Senator CONNALLY. You say it is a tax on business development. Do you know any tax that is not a burden on business in some way?

Mr. YOUNG. I do not, Senator.

Senator CLARK. No tax really encourages the development of business.

Mr. YOUNG. Let me say at this moment, however, that while I am speaking of a struggling business, I am practically speaking with 25 years or so behind my record. As I appear here before you gentlemen my mind goes back to the struggling existence of this industry in the days when we were manufacturing what was known as bulb-type signs, and how difficult it was for the industry to get its product on the market by reason of the high cost of operation, and then, after the war days, the last war days, the inception of gaseous-tube signs came into being, and the general acceptance of the public was somewhat retarded by reason of engineering

and by reason of its being of a highly specialized nature, and it too some time before this medium was generally accepted.

The neon sign, as my report indicated, is a beautiful thing to look at. Many people take the position that in looking at a neon sign, because of its beauty and enhancement of color, every time it holds the eye there is a profit made.

Since the adoption of the neon tube and the neon sign into the life of the American business many developments have been made in the use of fluorescence. It is an accepted thing. Our people in business want it. It is inexpensive to operate and it has done considerable to enhance the communities and cities and highways where these signs are erected, and for that reason it is a spectacular business and is something that should be considered as being of importance in all its ramifications.

Senator TAFT. You do not think it differs from all the rest of the outdoor advertising, do you? I mean, you cannot distinguish between the different kinds of outdoor advertising?

Mr. YOUNG. Outdoor advertising, in a measure, is relatively connected with this business. Neon tubes are used in connection with outdoor advertising on signboards.

Senator TAFT. Are you objecting to a tax on any electric signs?

Mr. YOUNG. I am objecting to a tax on any electric signs.

The CHAIRMAN. The manufacturers' sales tax?

Mr. YOUNG. Or a manufacturers' sales tax. The fact that it is a highly specialized product in labor, and the increasing demands of labor from time to time, by reason of increased cost of living, warrant the consideration of this matter.

In addition to that, we are confronted throughout the United States with the everrising taxes of cities. Communities and municipalities are constantly raising taxes on the electric sign, and in order to climax my remarks, I would like to make this impression, that if the statistics are followed, you will find that the small manufacturers, the neon sign manufacturer, is not in the position to even own his own buildings. Many are compelled to lease their property and rent from month to month.

Are there any questions that I could answer?

The CHAIRMAN. Are there any questions from any member of the committee? If not, thank you very much.

We were not able to reach some of the witnesses on Friday. One was Mr. Edward O'Neal, president of the American Farm Bureau Federation. Mr. O'Neal, will you come around, please, sir?

We have not finished today's list but then, since you were on the list on Friday, and were not reached, I understand you are free this afternoon to go ahead.

STATEMENT OF EDWARD A. O'NEAL, CHICAGO, ILL., PRESIDENT, AMERICAN FARM BUREAU FEDERATION

Mr. O'NEAL. Thank you, Senator. I am sorry that I had to lose my place Friday afternoon, but I am afraid I was too frank. I thought it would take 35 minutes.

The CHAIRMAN. You were too honest.

Mr. O'NEAL. Too honest at one time, and honesty does not pay.

Senator BARKLEY. Is that a habit of yours, or just a casual occurrence?

Mr. O'NEAL. It is casual, I assure you. I would very much like to have the time, but if you will buckle me down to 10 minutes, I will not have the time to go through this brief here. It will take me about 35 minutes.

The CHAIRMAN. Of course, you can put your brief in the record. If you cannot confine yourself to a briefer period in your statement, we will not count it against you if any questions are asked, because you were to go on on Friday.

Mr. O'NEAL. Thank you, Senator George. I appreciate this opportunity, because my organization is very, very vitally interested in taxes.

Farmers pay the heaviest percentage of taxes of any group in the United States, and it is of vital importance to us all. If you want to cut me off now, and confine me to 10 minutes, I would like to pick out a couple of points. I have four recommendations that I want you gentlemen to consider.

The CHAIRMAN. Mr. O'Neal, in the interest of these other gentlemen here, your whole brief will go in the record. Now you may discuss such parts as you can in the 10 or 15 minutes that have been allotted.

Senator HERRING. I suggest we give Mr. O'Neal some of Mr. Alvord's time that was not used last Friday.

Mr. O'NEAL. The Chamber of Commerce had 3 hours, and I hope we may have a little time to cover our subject.

The CHAIRMAN. We will not be very rigid with you.

Mr. O'NEAL. The farm people, who constitute one-fourth of the Nation's population, have a vital concern in the Nation's tax policies. Agriculture is a $38,000,000,000 industry. A farm purchase by an operator is the investment of a life-time's earnings; all he has earned to date and hopes to earn in the future. No other large group with comparable incomes has as high long-term investments as farmers. We have sought consistently to view national tax policies from the broad standpoint of the public welfare and not from a narrow, class, selfish point of view.

The general policy of the American Farm Bureau Federation on Federal taxes is set forth in the following resolution adopted at our twenty-second annual convention, held in Baltimore, in December 1940:

> The national defense program is placing new and greatly increased burdens upon the Federal Budget. In affirmation of the policies set forward by the board of directors, we support higher taxes to meet a proper share of this added expenditure. We will oppose efforts to raise this revenue from excise or consumption taxes. The corporate and personal income tax must be the main source of revenue and the excess-profits tax should be tightened and maximum rates of profit established above which all revenues will be considered as excess profits and be taxable as such. Only by such tax policies can profiteering be forestalled and the defense program financed on the basis of ability to pay.

At a meeting of the three largest national farm organizations, the National Grange, the American Farm Bureau Federation, and the National Council of Farmer Cooperatives, in Chicago on June 5 last, called to discuss the problems facing the farmers, organized agricul-

ture was united in adopting the following statement of policy with respect to national defense and taxation:

> In order to prevent dangerous inflation and an undue accumulation of debts as a result of the enormous expenditures for national defense, we urge that, insofar as practicable, the costs of the defense program be paid from current income. This requires a tax program with a broad base, in which everyone will take part in accordance with ability to pay. In this emergency all unwarranted profits of industry, labor, and agriculture should be recaptured by appropriate taxation to help pay the cost of the defense program.

The proposed revenue bill of 1941, as passed by the House, fails to meet adequately our present fiscal requirements to finance the national defense program and to check runaway inflation. In order to meet this need, the American Farm Bureau Federation proposes the following recommendations:

1. The proposed bill should provide more revenue, in order to pay as we go a larger proportion of the cost of the defense program while the Nation is able to pay.
2. The proposed bill should be amended so as to require everyone to contribute to national defense according to his or her ability to pay.
3. Stop profiteering at the expense of national defense and security.
4. Use tax powers to check inflation. This is the most effective way to prevent disastrous inflation.
5. We are strongly opposed to increased excise taxes, a general sales tax, or a manufacturers' tax; at least until other tax sources have been more nearly exhausted; and favor, instead, increased taxes based upon ability to pay.

I wish, Mr. Chairman and gentlemen, to discuss briefly these five recommendations.

1. The proposed bill should provide more revenue. This measure does not raise enough money either to cope adequately with the fiscal requirements for financing the national defense program or to provide an effective check against excessive inflation.

The estimated national debt now is approximately $50,000,000,000. Already we have either expended or obligated approximately $50,000,000,000 for the national defense program.

If the war continues, it is not unlikely that the total cost of our national-defense program may amount to $100,000,000,000. We certainly ought to pay at least two-thirds of this cost as we go. According to Treasury Department estimates, the total Federal expenditures during the fiscal year ending June 30, 1942, will amount to $22,169,000,000; and total receipts without this bill will amount to $9,402,000,000, leaving an estimated deficit of $12,767,000,000.

It is estimated that this bill will provide $3,236,700,000 of additional revenue on a full year's basis. Even if this were raised to 3½ billion dollars, the total estimated Federal deficit for the current fiscal year would amount to $9,267,000,000. If our national expenditures are going to continue at these levels, it is vitally important—both from the standpoint of a sound fiscal policy and from the standpoint of preventing an orgy of inflation, with the inevitable disastrous consequences of deflation that will follow—to recapture a larger percentage of increased profits and earnings that result from the enormous defense expenditures. We ought to pay a larger share of the cost of the defense program out of those increased profits and earnings instead of depending so heavily upon borrowing.

It is estimated that the national income for 1941 is at a level of about $88,000,000,000, about $12,000,000,000 above last year. If additional taxes are equitably distributed and levied, we should be able to recapture a larger percentage of these increased profits and earnings than the 3½ billion dollars proposed.

The Nation is better able to pay a larger share of the cost of the defense program now, when profits and earnings are greatly increased, than it will be in the difficult years of post-war readjustment. Too much borrowing, resulting in inflation, will certainly get the whole economic machine out of gear as it did in the first World War. All of these expenditures have got to be paid for some time. It is better to pay for them now as far as we can out of increased incomes, than to postpone payment until a later period when the national income may be much lower than it is now.

2. The proposed bill should be amended so as to require everyone to contribute to national defense according to his or her ability to pay.

I agree with the statement made by Secretary Morgenthau to this committee that we need an "all-out tax program" on the basis of ability to pay; that our tax program has not kept pace with the defense program; and that the people of this country have never been more ready to make sacrifices for the common good.

The proposed bill does not meet this objection of an all-out tax program based on ability to pay. According to the estimates of the Treasury Department, the present bill proposes to obtain from individual income taxes $864,800,000, or 26.7 percent of the total yield; from corporation taxes $1,345,200,000, or 41.6 percent; from estate and gift taxes $151,900,000, or 4.7 percent; and from increased taxes $874,800,000, or 27.0 percent.

The time has come when we must face the fiscal situation frankly and courageously, and provide a system of taxation that will properly finance our defense program on a fair basis to all. Let's stop straining at gnats by hunting up all kinds of little vexatious excise taxes that raise comparatively little revenue but cause a lot of irritation and tend to discredit our national fiscal policy. Let us give the American people a chance to do their part for national defense and national security. I believe the great masses of the American people are ready to do their part and to help pay for the defense program provided it is put on the basis of ability to pay.

A Gallup poll taken last May indicates that the American people are willing to pay, each his individual share, of the defense costs. Fifty-eight percent of the people interviewed were in favor of every family with an income of $1,000 paying at least $10 a year, and larger amounts for families with larger incomes. Fifty-nine percent said they would be willing to pay the equivalent of 2 weeks' salary in addition to taxes they were then paying. Seventy percent said they thought defense costs should be met chiefly by taxation, rather than by borrowing.

A later Gallup poll, reported in this morning's Washington Post, indicates that the general public's views are:

1. To make families now exempt pay at least something.
2. To levy a higher tax than at present on incomes between $3,000 and $10,000, and
3. To lower the tax on families earning over $10,000.

The general public favored an income tax of $6 on a net family income of $1,000; $17 on an income of $1,500; and $55 on an income of $2,000—all of which would be exempt from income taxes under the present bill.

A Gallup poll taken of Who's Who showed a vote of 53 percent for and 37 percent against a proposal that every family not on relief should be required to pay a Federal income tax. It looks like every group, from top to bottom, of our income strata believes in this objective.

In the past several months I have talked to a great many people on the farm and off the farm—farmers, businessmen, taxi drivers, workers, and others—and universally I find a willingness to pay their fair share of the defense program. Our boys are making their contribution to the national security by leaving their jobs and giving at least a year of active military training—and it may be several years. They are risking their lives as well as making sacrifices of income. It is the patriotic duty of other citizens engaged in civilian occupations to be prepared to do their part in supporting the national-defense program. Let us give the American people a chance to demonstrate their patriotism by providing a simple income tax, graduated on the basis of ability to pay, so that they can all help finance the defense program in accordance with their means. This tax—particularly in the lower brackets—should be made simple so that the taxpayer can compute his taxes readily.

Such a tax would give every citizen a chance to participate in the responsibilities of government, which is fundamental to the preservation and successful functioning of a democracy.

The proposed bill exempts entirely the great bulk of wage earners and other income earners from income taxes. Under its terms a single person with a net income of $800 and with no dependents would pay no tax; a married person with a net income of $2,800 and with two dependent children is exempt from all income taxes; and if he has four dependent children, he would pay no tax even though his income is $3,600.

There are 45,000,000 to 50,000,000 persons gainfully employed or receiving substantial incomes in the United States; yet it is estimated that this bill will collect income taxes from only 10,925,000 persons, or about one-fifth of the total number of persons earning wages or incomes. And it is estimated that out of 17,100,000 who will file returns, more than 6,000,000 will pay no tax.

Our tax base is too narrow. When the national income is $90,000,000,000, the income-tax base under 1940 exemption would be about $13,000,000,000. Seventy-seven billion dollars is outside the income-tax base. One of the most effective ways to increase the base is to lower exemptions.

According to the studies made by the Iowa State College, lowering the exemptions by half would add a total of $11,000,000,000 to the tax base, of which $9,800,000,000 is between the income levels of $2,000 and $10,000, and the remainder would be added from incomes above $10,000. Their studies show that low-income families would be better off under an income tax without any exemptions at all than under a sales tax, because low-income families spent so much on items subject to sales tax. Their studies further show that an adequate tax

base can be obtained by cutting present exemptions by half. This would still leave much of the population nontaxable.

If we are going to obtain the large amount of increased revenue needed to properly finance the national-defense program, the most equitable way to accomplish this is to broaden the income-tax base by reducing the exemptions. The only other way we can raise this much additional revenue is through a general sales tax. The studies of the Iowa State College show that the sales-tax route would be much more burdensome to the lowest income groups than the proposal to cut exemptions one-half. (Pt. XIII, report prepared for the American Farm Bureau Federation, March 29, 1941, by members of the economics staff, Iowa State College, Ames, Iowa.)

We therefore wish to respectfully recommend that the present exemptions of $800 for single persons, $2,000 for married persons and $400 for each dependent be reduced at least to half of these levels. I believe the American people would support a readjustment of the income-tax rates and exemptions so that every gainfully employed person would pay some tax for defense and would know that he is paying such tax.

If the use of the taxing powers is to be effective in checking inflation, it is essential to tax the excess earnings wherever they are. According to a study made by the Brookings Institution (America's Capacity to Consume, 1934) 42 percent of all families in the United States received incomes less than $1,500, and more than 70 percent had incomes less than $2,500. That is why it is essential to lower exemptions and require all to contribute in accordance with their ability to pay. The great mass of buying power which will create the greatest inflationary pressure, is contained in the income groups below $2.500.

According to a study by the National Resources Board, nearly two-thirds of the total consumer income went to persons receiving incomes under $2,600, who made up nine-tenths of all consumers and 63 percent of the total consumer expenditures went for food, clothing, and housing. (Structure of the American Economy, National Resources Board, pp. 9–11, June 1939.)

3. Stop profiteering at the expense of national defense and security. The present so-called excess-profits tax on corporate income is inadequate. Under the average-earnings option, a corporation is exempted from all excess-profits taxes whatsoever no matter how high its earnings may be, so long as its earnings do not exceed the average earnings during the base period, 1936-39. In addition, corporations are permitted, under the amortization provisions, to write off their entire extra investment due to defense at the rate of 20 percent a year so that, at the end of 5 years (or less, if the emergency ends sooner) they will have paid the entire cost of the additional plant expansion, out of the profits of Government contracts. In the case of profits in excess of the average earnings, the Government recaptures at the maximum 60 percent of the excess, under the proposed bill.

Merely because a corporation enjoyed an exceptionally favorable position during the period 1936–39, is no justification to give such corporation preferential treatment. It is unfair to the rest of the taxpayers to permit these favored corporations to enjoy their average earnings without limit, and escape any excess-profits tax on these profits.

We respectfully urge that the rates on corporate income be graduated upward to recapture a larger percentage of excess profits; and that the average earnings option be modified to provide that all profits above a reasonable maximum return on investment be considered as excess profits and subjected to the same schedule of rates as applied to all other corporations.

It is also essential that we prevent profiteering in wages and salaries. Millions of persons are receiving very substantially increased incomes as a result of the enormous expenditures for defense. All should contribute their equitable share toward helping to finance this program. American agriculture does not ask any special preferred positions; farmers are ready to do their part. We are against profiteering at the expense of national defense—whether it be in agriculture, industry, or labor. American farmers will match dollar for dollar on the basis of ability to pay and sacrifice for sacrifice with labor and industry to help finance the national-defense program.

We recommend that the committee give consideration to a greater graduation in the corporate income-tax schedule. The proposed bill provides for an increase of 5 percent on the first $25,000 of surtax net income, and 6 percent on the balance. A larger upward graduation would appear desirable in keeping with the principle of ability to pay and the further objective of preventing the growth of monopolies and the undue concentration of control of our economic resources. Statistics of corporate income issued by the Treasury Department show that most of the corporate income is earned by a comparatively small number of large corporations. For example, in 1937—out of 192,000 corporations making tax returns—169,623 had incomes less than $25,000 and that 22,399 corporations which earned more than $25,000, each earned 93.39 percent of the income of all corporations making returns. A total of 1,294 corporations earning $1,000,000 and over, received 61.89 percent of all the corporate income of corporations making returns. In addition, there were 285,840 corporations which had no net taxable income.

Furthermore, the present policy of concentrating defense contracts among a few large firms tends to increase costs, to cause undue concentration of population with serious housing and transportation problems, and to build up monopolies and further concentrate control of our economic system into the hands of a few great corporate enterprises. With one arm of the Government we are trying to break up monopolies and monopolistic practices, while we are building up monopolies in the defense program.

According to an announcement issued by the O. P. M. on July 26, 1941, 6 large corporations had 31.3 percent of all defense supply orders and 56 corporations had almost three-fourths of the total dollar volume of all War and Navy Department defense supply contracts.

It is imperative for the success of our all-out defense program and to the preservation of independent enterprise in America, that the defense program be decentralized. Thousands of small factories and firms are ready and anxious to help with this program, if they are given an opportunity. Decentralization of defense contracts among industry throughout the Nation would not only greatly strengthen our defense but would greatly stabilize our whole economy, and render less difficult the post-war readjustments.

There is a provision in existing law for a special national-defense tax equal to 10 percent of the total amount of other taxes to be paid. In the proposed bill these defense taxes which were imposed for a 5-year period by the Revenue Act of 1940 would be made permanent. I do not believe that it is desirable to add this special tax permanently to the tax structure, as it unnecessarily complicates the computation of taxes and it ceases to have much of its inherent value as a special emergency defense tax. I believe it would be much more desirable to continue the defense tax as a special temporary tax, but increase it sufficiently, when coupled with the graduated income taxes, so as to effectively recapture excess income.

4. Use tax powers to check inflation. We cannot stop inflation by merely putting ceilings on a few commodities, or even on all commodities. We must control the run-away wages as well as the run-away prices. It is essential that we use the tax powers to recapture excess earnings due to defense if we are to prevent inflation.

I hope you will turn and look at exhibit 4, which shows wages and salaries constitute 64 percent of the national income.

Unless we have the courage to act now to drain off a substantial part of the twelve to fifteen billion dollars increased national income, either into enforced savings or taxes, this greatly expanded consumers' purchasing power will compete for a greatly reduced volume of civilian goods, and it will be difficult—if not impossible—to prevent this competitive pressure from pushing up prices and wages.

In this connection, I wish to quote from the August 8 statement issued by the Office of Government Reports, as follows:

> The Federal Reserve Board issued a report predicting that unless an unusually large part of consumer income is saved or paid out in taxes, price inflation will grow. The Board said: National income payments by June jumped to a rate of about $88,000,000,000 a year—a $14,000,000,000 or 19 percent rise over the rate for May 1940; wage and salary payments rose 25 percent since May 1940, due to increase of numbers employed and hours worked; profits of large industrial corporations rose 25 percent since the first half of 1940 and dividend disbursements of all corporations increased 15 percent notwithstanding increases in taxes or other costs; commodity prices as a group were 25 percent higher in late July than early March and 50 percent above pre-war levels.

The Secretary of Labor reported on July 16 that hourly and weekly earnings in manufacturing industries in May registered a sharp advance. I quote from this statement:

> The rise in earnings to new high levels in May resulted from widespread wage increases and extension of overtime operations in many industries. During the past 2 months general wage-rate increases affecting nearly 1,500,000 workers have been reported to the Bureau of Labor Statistics.
>
> Wage-rate increases from April 15 to May 15 averaging 8.9 percent for more than 700,000 wage earners were reported by 1,026 manufacturing plants out of a reporting sample of 33,791 plants employing 7,105,000 wage earners.

Despite increases in prices of farm products in recent months, retail food costs still are low relative to the earnings of nonfarm workers compared with 1929, due to increased earnings of workers in recent months. With their earnings well above the 1929 level, factory workers in mid-1941 could buy 58 foods at retail for about one-fifth less than in 1929. I quote the following extract from the statement issued on August 14, by the United States Department of Agriculture:

> The average factory worker in 1929 had to spend about a third of his wages on a standard food budget (58 items); so far this year he has had to spend about a fourth, according to Department of Agriculture Economist Louis H.

Bean. This means, Mr. Bean points out, that the average factory worker, after taking care of his food budget, has almost a fifth more to spend on commodities other than food than he had in 1929. The gain in purchasing power has been even greater than the gain in dollars since most nonfood items cost less now. So far this year, the average employed factory worker has been able to buy 35 percent more in the way of goods other than food than in 1929. For other wage-earning groups, however, the gain in purchasing power has been smaller.

Farmers know the evils of inflation and deflation because they have suffered more than any other single economic group from the disastrous consequences of the deflation which inevitably follows inflation. It has taken American agriculture 20 years to recover from the staggering blows it received as a result of the deflation which followed the World War. In fact, we are not yet fully recovered. If you will look at exhibits 2 and 3, you will see how far we have gotten in our recovery. We are willing to support effective controls and effective tax measures to prevent inflation, provided these controls are applied all the way across the board to all economic groups, including both industry and labor as well as agriculture, and provided taxes are equitably distributed on the basis of ability to pay.

5. We are strongly opposed to increased excise taxes, a general sales tax, or a manufacturers' tax; at least until other tax sources have been more nearly exhausted; and favor, instead, increased taxes based upon ability to pay.

One weakness in our present tax structure is that we have complicated it and have unfairly distributed the tax burdens by resorting to all kinds of taxes which are calculated to delude the citizens into believing they are not paying any taxes. I believe the average citizen would rather pay his share of the taxes based upon his income, and know that he is paying it than to pay a lot of indirect taxes which, though hidden, in many cases impose burdens out of all proportion to ability to pay. For that reason, we are strongly opposed to increasing the excise taxes at this time, as proposed in this bill; and respectfully urge that the increased income be sought out of individual income taxes, corporate income taxes, excess-profits taxes, and the like.

For similar reasons we are strongly opposed to a general sales tax or a manufacturers' excise tax at this time. They tend to raise prices and the cost of living and to encourage pyramiding of prices. They also impose burdens out of all proportion to ability to pay. We do not need to resort to such tax devices at this time, when the country as a whole is enjoying very large increases in income. We are also strongly opposed to making present excise taxes permanent, as proposed in this bill.

Most of the existing taxes will expire in 1945, under the present law. Because these taxes are not based upon ability to pay and because no one can foresee what our fiscal requirements are going to be several years hence, we believe it is unwise to establish these taxes now as a permanent part of our Federal tax structure.

Senator TAFT. Mr. O'Neal, your idea of reaching the increased wages is simply through lowering the exemption, is that the suggestion?

Mr. O'NEAL. Yes, Senator Taft.

Senator TAFT. It does not produce any money to speak of, according to the general report.

Mr. O'NEAL. As I understand it, we asked the Iowa State College to make an economic study of taxes and, as I understand it, it does. It raises a considerable amount of money.

Senator TAFT. You do not state that.

Mr. O'NEAL. In other words, if you lower the exemption, as I suggested there, showed by the Gallup poll, indicating there that the American people were perfectly willing to pay the taxes, if they knew they were going for defense purposes, I do not think there is any question about it.

Senator CLARK. Mr. O'Neal, when you lower the exemption the Treasury not only profits by the amount which is brought in by the new taxpayers, but by reducing the exemption you lower the surtax base of the other taxpayers who pay at the higher rate bracket. So that is where the money comes from, rather than the relatively small amount of money that comes from the new class of taxpayers that are brought in. You also increase automatically the surtax on every other taxpayer.

Mr. O'NEAL. That is true as to the bracket from $2,500 and $5,000 on up.

I really think, gentlemen, we need in this democracy a tax consciousness. I think we should have it. I am very frank and honest. I think the Gallup poll is 100 percent right. I do not think I have seen a single person—and I run across some isolationists now and then—that do not believe in the defense program, so to speak, and they all say, in fact, I never had one not to say, "Well, I would contribute," even the bootblack, "I would be glad to contribute my part to a defense program."

Senator VANDENBERG. I think you are right, Mr. O'Neal. Everybody that appeared before the committee was in favor of taxes, excepting the particular ones applying to him.

Mr. O'NEAL. Senator Vandenberg, I will plead guilty. I will say for the farmer—let me repeat, I am the exception now to the whole rule—the farmer pays more taxes than any group in the United States, and speaking for my crowd—and we are people in the lower income group, Senator Vandenberg—we are willing to pay our fair share. It will hit us more than any group in this country.

Senator CLARK. Unfortunately, Mr. O'Neal, the farmer does feel the effects of inflation last, that is, any benefits that come out of inflation, and the deteriorating influence of deflation first. That was proved at the last war.

Mr. O'NEAL. Yes. Sam Houston used to talk about the tax board and William "Poison Gas" Harding, you remember that. As the chart shows you, we went way up there. When food and fiber get too high, it is just as certain as the laws of the Medes and Persians, just as sure as death and taxes, as to what will happen to us. It hits us. The labor stayed up there, industry stayed up there—the record is here—but it hit us. We are deathly afraid of what may happen at this time.

I remember on several occasions I went down to see President Coolidge. I pleaded with him after the aftermath of the other World War. Immediately after the other World War, I pleaded with him to lead the procession begging Congress to let us pay the taxes while everybody had the money. I forget who on this committee were here at that time. Senator La Follette, you and Senator

George probably remember, and Senator Barkley. They had 2,000 millionaires as the result of the last World War—I forget what it was, but there was great wealth made, and we all said, "Let us go and pay the public debt now and get rid of it, while you have got the money to pay it with."

Senator BARKLEY. There are about 6,000,000 farmers in this country, are there not?

Mr. O'NEAL. About six and a quarter million.

Senator BARKLEY. Six and a quarter million. Of course, the large majority of them are heads of families, they are married.

Mr. O'NEAL. That is right.

Senator BARKLEY. Do you know what proportion of them are there who are married and have dependents?

Mr. O'NEAL. No; I really do not.

Senator BARKLEY. Assuming that the committee should recommend a reduction of 50 percent in the exemptions, bringing the head of the house down to $1,000, how many farmers, heads of families, would be affected and required to pay an income tax?

Mr. O'NEAL. It would hit a good many of them, since you and the Congress have been so good in giving us these parities, the parity laws, and if you see that the administration carries out the laws the farmer is better able to pay, and his income has been increased by so much.

Senator BARKLEY. I am trying to get, if you have any figures on it, out of the 6,000,000 farmers, how many would be affected.

Mr. O'NEAL. I really do not know, Senator Barkley. A good many. You see, Senator Barkley, in 1940 the per capita income of the farmers was $183.

Senator BARKLEY. Per year?

Mr. O'NEAL. Per capita; yes. You multiply it by 4 up here; in Alabama you may multiply it by 6 or 8, and in Georgia, and there is $732. That would be about the average. The average farm family, I think, is about 4¼, so you just multiply the $183 by 4¼, and that would run to $732.

Senator BARKLEY. What I am trying to get at is what seems to me to be obvious, that out of the 6,000,000 farmers there would be a small proportion of them whose net income, after all deductions, would be more than $1,000.

Mr. O'NEAL. Well, I think under this parity concept that we are working under now—I call it the $2,000,000,000 Bankhead bill that you passed—you are going to find that the income of agriculture will run about ten and one-half or eleven billion dollars this year, maybe a little higher, and it is going to raise the income of agriculture very effectively.

Senator BARKLEY. Well, I hope you are right. I am for that, as you know.

Mr. O'NEAL. Yes. Of course, what hits the farmer so terrifically is the ad valorem tax of the State, which takes everything that the farmer owns except the smoke that runs out of his chimney.

Senator BARKLEY. Due to the Bankhead program there will not be very much smoke coming out of the chimney.

Mr. O'NEAL. That is right, but they still use the smoke in the smokehouse for smoking meat in your State, Senator.

Senator BARKLEY. The best meat in the world, too.

Mr. O'NEAL. It sure is.

Senator VANDENBERG. On page 6, in stating your objection to the general manufacturers' sales tax, you say that it is because the low-income families spend so much on items subject to sales taxes.

Mr. O'NEAL. That is right.

Senator VANDENBERG. Well, on page 7 you say nine-tenths of all consumers and 63 percent of the total consumer expenditures went for food, clothing, and housing,

Mr. O NEAL. Yes.

Senator VANDENBERG. If we had a general manufacturers' sales tax which exempted food, clothing, and medicine, the exempted items, including some others that fall into no tax anyway, would be about 80 percent. That would leave about 20 percent taxable. Would that be particularly burdensome and unfair, in view of your general approval of passing this burden around?

Mr. O'NEAL. I think this, Senator Vandenberg: I watched the sales tax working in the States, and I have helped the legislatures sometimes, where we had no income and you know the States have gone to sales taxes, many of them.

Senator VANDENBERG. Yes.

Mr. O'NEAL. I, as a farmer and representative of farmers' organizations, said: "Do not exempt food. Do not exempt it. Whenever you start a tax and begin putting exemptions in there, your tax is going to fail to carry out its purpose." I doubt if the manufacturers sales tax would raise anything much, if you begin to exempt these various things.

Senator VANDENBERG. By substituting the 5-percent manufacturers sales tax, with those exemptions, as an alternative for all of these new nuisance taxes against which you complain, we would get a billion and a quarter dollars out of that.

Mr. O'NEAL. Yes.

Senator VANDENBERG. What I am inquiring is, Would you rather sustain a challenge to the equity of that sort of a tax on the basis of its being prejudicial to low-income families when your own figures show 75 or 80 percent of low incomes would not be touched by it at all? Do not you think under those circumstances that the challenge would scarcely lie against that sort of program?

Mr. O'NEAL. I think the principle is wrong.

Senator VANDENBERG. We are talking about the mathematics.

Mr. O'NEAL. The mathematics? You know they are using logarithms now and various things in the mathematics to work these various things up.

Senator VANDENBERG. I want to find out how you would work it yourself.

Mr. O'NEAL. I want to work it so that every fellow out here who pays the tax knows that he is paying it. I want to say to you, Senator, you will find in your great State of Michigan that the people themselves like that sort of tax. They hate the sneaking tax that goes underneath. Some fellow will give you a ticket when you buy a quart of liquor, and then the other fellow will put it in the price

of the quart. You are not any worse off. Of course, you do not know after you drink the liquor as to what happens, but the point is, I fundamentally believe the American people want to pay this tax. They want total defense. They want to know that they pay for it, and they want it in a direct way.

Senator VANDENBERG. I think you are going to get your wish on their knowing that they are going to pay it.

Mr. O'NEAL. I hope so. I think they are able to do it. I think the American people are patriotic. They believe in total defense, and they question sometimes why they are not getting it any faster than they are.

Senator SMATHERS. Mr. O'Neal, if we lower the income tax to $500 on a single individual, that is, the exemption, what do you think he ought to pay on that $500? How much money do you think he ought to pay?

Mr. O'NEAL. I rather approve of the Gallup poll. What to do, they say? I think it is about $8 or $4. I believe they would pay that much, gladly pay that much, or more. I really think so.

Senator TAFT. Mr. O'Neal, what bothers me is this: You do not want the excise tax from which we get eight or nine hundred million dollars, you want to lower the exemptions. I question very much whether by lowering the exemptions you would make up what you lose in excise taxes, and yet you want to raise more money than this bill is raising. I think, to be fair with us, you ought to state what can be raised by these exemptions, because I do not think it meets the requirements that you yourself laid out.

Mr. O'NEAL. I do not want to take the time of the committee, but I refer there to the study at Ames College. If you will let me put it in the record, I will be glad to do it.

Senator TAFT. That is what I am suggesting. If you do that, I would appreciate it.

Mr. O'NEAL. Showing how you broaden the base and raise the money.

The CHAIRMAN. Yes.

Mr. O'NEAL. Halving the exemptions would add about $537,000,000 to tax revenue at existing rates; about $1,042,000,000 at proposed rates.

Senator TAFT. Would you tax at higher rates? This bill would start at 9 percent, about, from the present exemptions. Would you tax those people more? Would you raise those rates besides lowering the exemptions?

Mr. O'NEAL. Yes, sir; it is going to hit you and I, it is going to hit us all as we go along.

Senator TAFT. In other words, you think the rates in this bill are not high enough as well as the exemptions being too high?

Mr. O'NEAL. That is right.

The CHAIRMAN. Mr. O'Neal, thank you.

Mr. O'NEAL. Thank you, Senator George. I appreciate very much the opportunity of appearing before you.

(Mr. O'Neal submitted the following figures and exhibits:)

TABLE J-3.—*Percentage of incomes of each income class taken by present taxes and by various hypothetical taxes each adding $4,000,000,000 to revenue*

Income class	Percent of income taken by present taxes [1] (1)	Percent of income taken by sales tax A [2] (2)	Total of columns (1)+(2) (3)	Percent of income taken by sales tax B [3] (4)	Total of columns (1)+(4) (5)	Percent of income taken by income tax A [4] (6)	Total of columns (1)+(6) (7)	Percent of income taken by income tax B [5] (8)	Total of columns (1)+(8) (9)
Under $500	22.5	8.0	30.5	6.4	28.9	0	22.5	0	22.5
$500 to $1,000	18.7	6.0	24.7	5.1	23.8	0	18.7	.9	19.6
$1,000 to $1,500	18.1	5.7	23.8	5.2	23.3	.9	19.0	1.4	19.5
$1,500 to $2,000	18.7	5.5	24.2	5.3	24.0	1.5	20.2	1.5	20.2
$2,000 to $3,000	18.5	5.2	23.7	5.3	23.8	2.0	20.5	3.4	21.9
$3,000 to $5,000	19.0	4.6	23.6	5.1	24.1	2.5	21.5	5.8	24.8
$5,000 to $10,000	19.3	3.9	23.2	4.5	23.8	8.4	27.7	8.0	27.3
$10,000 to $15,000	28.3	3.2	31.5	3.8	32.1	10.1	38.4	8.3	36.6
$15,000 to $20,000	35.7	3.1	38.8	3.8	39.5	11.5	47.2	8.7	44.4
$20,000 and over	43.2	2.1	45.3	2.7	45.9	15.7	58.9	9.2	52.4

[1] G. Colm and H. Tarasov, Who Pays the Taxes? These estimates include the defense taxes of 1940.
[2] 8.9-percent tax on all sales except housing, medical care, and education.
[3] 15.4-percent tax on all sales except food, housing, medical care, and education.
[4] 25.5-percent increase in normal tax on personal incomes and minor adjustments in surtax rates at higher levels, new normal rate being 29.5 percent.
[5] 14.3-percent increase in normal tax rate accompanied by lowered exemptions, these being $1,000 for a married couple, $500 for a single person, and $200 for each dependent. The new normal rate would be 18.3 percent.

TABLE J-4.—*Total amount paid by consumer units in each income class under alternative taxes*

Income class	Number of consumer units [1] (in millions)	Amount paid under sales tax A [2] (millions of dollars)	Amount paid under sales tax B [3] (millions of dollars)	Amount paid under income tax A [4] (millions of dollars)	Amount paid under income tax B [5] (millions of dollars)
Under $500	4.0	97	75	.....	.....
$500 to $1,000	9.0	428	353	.....	66
$1,000 to $5,000	8.3	575	514	93	146
$1,500 to $2,000	6.3	594	567	165	162
$2,000 to $3,000	7.2	891	895	352	599
$3,000 to $5,000	4.3	729	785	399	935
$5,000 to $10,000	1.2	312	353	684	650
$10,000 to $15,000	.2	75	89	246	201

Total	40.8	4,000	4,000	4,000	4,000

[1] Consumer units include all families and all single individuals not living in a family group.
[2] 8.9 percent tax on all sales except housing, medical care, and education.
[3] 15.4 percent tax on all sales except food, housing, medical care, and education.
[4] 25.5 percent increase in normal tax on personal incomes and minor adjustments in surtax rates at higher levels, new normal rate being 29.5 percent.
[5] 14.3 percent increase in normal tax rate accompanied by lowered exemptions, these being $1,000 for a married couple, $500 for a single person, and $200 for each dependent. The new normal rate would be 18.3 percent.

TABLE J-5.—*Average amounts taken from consumer units in each income group by present taxes [1] and by alternative additional taxes*

Income class	Average income per consumer unit [2]	Average amount taken by present taxes	Average sum left after payment of present taxes	Average additional tax under sales tax A [3]	Average additional tax under sales tax B [4]	Average additional tax under income tax A [5]	Average additional tax under income tax B [6]
Under $500	$302	$68	$234	$24.20	$19.30	0	0
$500 to $1,000	796	149	647	47.80	40.60	0	$7.30
$1,500 to $1,500	1,227	222	1,005	69.90	63.80	$11.20	17.60
$1,500 to $2,000	1,734	324	1,410	95.40	91.90	26.10	25.80
$2,000 to $3,000	2,415	447	1,968	125.60	128.00	48.80	83.20
$3,000 to $5,000	3,735	710	3,025	171.80	190.50	93.50	218.30
$5,000 to $10,000	6,842	1,321	5,521	266.80	307.90	574.40	515.80
$10,000 to $15,000	11,510	3,257	8,253	368.30	437.40	1,164.00	951.20
$15,000 to $20,000	17,010	6,073	10,937	527.30	646.40	1,961.90	1,471.40
$20,000 and over	60,654	26,203	34,451	1,273.70	1,637.70	9,525 60	5,575.90
All groups [7]	2,134	469	1,665	[8] 98.10	[8] 98.10	[8] 98.10	[8] 98.10

[1] Includes Federal, State, and local taxes.

[2] A consumer unit is a spending unit, that is—either a family, or a single individual who is not a member of any family group.

[3] 8.9 percent tax on all sales except housing, medical care, and education.

[4] 15.4 percent tax on all sales except food, housing, medical care, and education.

[5] 25.5 percent increase in normal tax on personal incomes and minor adjustments in surtax rates at higher levels, new normal rate being 29.5 percent.

[6] 14.3 percent increase in normal tax rate accompanied by lowered exemptions, these being $1,000 for a married couple, $500 for a single person, and $200 for each dependent. The new normal rate would be 18.3 percent.

[7] These, including other figures in the tables, are estimates based on the assumption of a national income of $88,000,000,000.

[8] These must be the same since sales tax A, sales tax B, income tax A, and income tax B were all designed to add $4,000,000,000 to tax revenue.

NOTE.—Consumers with incomes of $2,000 to $2,500 expend 13.1 percent of the aggregate expenditures for automobiles. This is the largest percentage of any single income group.

The CHAIRMAN. Mr. Charles W. Green.

STATEMENT OF CHARLES W. GREEN, SEDALIA, MO., PRESIDENT, INTERNATIONAL ASSOCIATION OF FAIRS AND EXPOSITIONS

The CHAIRMAN. Mr. Green, will you give your address and for whom you appear, and in what interest you appear?

Mr. GREEN. I am president of the International Association of Fairs and Expositions. I live at Sedalia, Mo.

The CHAIRMAN. You are addressing your statement before the committee to what particular thing, Mr. Green?

Mr. GREEN. Mr. Chairman, and gentlemen, we earnestly urge that you reinstate in this section 1701 of the Internal Revenue Code subsection (b) as concerns the agricultural fairs. We in the fair business are not asking for anything individually. We in the fair world are community builders. The county fair, the community fair, the State fair, and regional fair are for the good of the various communities in which we live.

All of you know, most of you I am sure know, about the State or county fairs, and you know that they have a tough time existing, and if you put this admission tax on us now you are going to put an added burden on us in the operation of these fairs that we are trying to do good with in our various communities.

Senator Vandenberg, in your State there are something like 90 county fairs.

Senator VANDENBERG. I am very well aware of that. I have attended each one of them.

Mr. GREEN. In Senator Taft's State there more county fairs than in any State in the Union. In our State of Missouri, where Senator Clark and I live, we only have 20 left. I used to go to Bowling Green, to the county fair, and it died because they did not have money to operate with.

Most of the people in the county fairs give their time and their energy and their money to build these fairs for the community good. The agricultural fair evidently does a definite good in our country, because they have existed as long as the human race.

Senator VANDENBERG. What is the average admission price?

Mr. GREEN. 25 cents, I would say.

Senator VANDENBERG. What would the tax be on this?

Mr. GREEN. It would be 3 cents, making a total of 28 cents. If you put this tax on, you might say that we could pass it on. If we pass it on to the patron it is going to come back to us. Those of us who operate the fair know that. It is for this reason, that it will come back to us in operation costs. We just simply cannot pass it on.

A million boys and girls in this United States today are in the 4-H club work that was started by the United States Department of Agriculture, and contrary to what many people might believe, most of those boys and girls come from families of very meager circumstances. It is the greatest movement for the youth that we have, and they come to us, and they have a tough time getting along, and we have a tough time getting along, we in the county fairs and even in the State fairs. Down in Senator Barkley's State, I happened to have been to his fair a lot of times, they get a small appropriation.

We operate on an appropriation, the State fairs do. I happen to manage a State fair. We operate on an appropriation, plus our earnings.

The fair business is a seasonal business, it is a business where all of the activities are focused on 1 week in the year absolutely. We have to make long-time contracts in spite of the weather. We set a date in December or August, and we just hope it will be good. There are 51 weeks in between the fairs, and we pick one out to make the fifty-second week. We just cannot change the contracts.

This is going to put an added burden on our fairs that we are trying to do a definite good with in our various communities.

Senator VANDENBERG. I do not think you made it quite clear as to why you cannot pass the tax on to the patron.

Mr. GREEN. I will tell you why, Senator Vandenberg, because of the various things about this tax it is just bound to come back, and it is in this way, that it will cut down our attendance. We might build the best fair in the world for a great educational and instructive program, and without attendance it all goes to naught.

Senator VANDENBERG. You mean people at this particular moment would go to a fair for 25 cents that would not go to a fair for 28 cents when the other 3 cents was in support of national defense?

Mr. GREEN. Every single individual fair officer—I believe I have talked with all of them individually—and the rest of us are in favor of the defense program, but we, as a body of people, may I say, are community builders, and you are spreading that out. So many of these people just simply will not come. We have to absorb it in a lot of ways, and it adds to the administrative cost of our own fairs that we now operate, and we are just up to the limit now. Eighty-five percent of the county fairs of the State of Pennsylvania are in the red now. We have only 22 county fairs left in my State, and I think that is true in most of the States.

Up in Senator La Follette's State, I am not so sure what your county fairs are doing up there, but if they tried to pass this on its cuts them down in their attendance.

Senator VANDENBERG. Then your answer to my question is people will not go to a fair for 28 cents when they will for 25 cents, even though the other 3 cents is for national defense?

Mr. GREEN. Not exactly, Senator. You just do not have any idea at all how tough it is to get them to come even at 25 cents.

Senator CONNALLY. Why do not you get a football game to attract attendance?

Mr. GREEN. Senator, I have been to a football game at your State fair, in the Cotton Bowl at Dallas. It is a great thing.

Senator CONNALLY. Plenty of them come.

Mr. GREEN. Yes; they do, but you know fairs were built primarily for agriculture and livestock. There are just two basic principles for the fairs, the agricultural and livestock, and then the recreational and entertainment is the other one, and that is only to draw the attendance, not to help us to pay these premiums. If we pass the tax on, we are going to have to cut down. We are very liable to have to cut down on the premium money that we set up for these people.

Senator VANDENBERG. If you pass it on, why do you have to cut down on premiums?

Mr. GREEN. They just simply will not pay it. We have tried it in various different ways. We tried to raise the admission fee from 25 cents to 30 cents, and every time we do that we decrease our attendance at the fair.

Senator VANDENBERG. You do not have the patriotic appeal then if you have a great mass unwillingness to pay.

Mr. GREEN. Individually, we will still pay it, Senator. Individually, we want to do that. We have got 30 or 40 people putting up the money for the fair, their money has gone into it. That is true of most of the county fairs and a good many of the State fairs. Senator Connally's State fair is owned by representative businessmen of Dallas, Tex., it is called the State Fair of Texas, but it is not owned by the State.

Senator CONNALLY. The ground is owned by the city of Dallas.

Mr. GREEN. They call it the State Fair of Texas, and it is known as the largest State fair in the United States.

Senator BARKLEY. Where would you draw a line between admissions that ought to be taxed and admission that ought not to be taxed?

Mr. GREEN. We are already contributing some money, Senator, for tax in commodity sales, and in midways and carnivals that we have in our fair grounds, but we are just struggling to keep living, to keep going.

Senator BARKLEY. You probably did not understand my question. We have a great many admission taxes on moving-picture theaters and all sorts of entertainment, fairs of various kinds. Where would you draw the line by saying "These shall be taxed and these others shall not be taxed"?

Mr. GREEN. Senator, the moving-picture man is operating a business for his own private gain.

Senator BARKLEY. You would tax him?

Mr. GREEN. We in the fair business are not trying to make money we are not operating for money.

Senator BARKLEY. You think a tax on the theater is justified?

Mr. GREEN. I think a tax on any business is justified, but this business is a community business. Each of us in the various sections around there, we give our time, our money, and our energy to keep the fairs going.

Senator BARKLEY. Would you think the average man or woman would rather pay this 3 cents, or whatever it is, for admission or have his or her exemptions reduced by 50 percent?

Mr. GREEN. I would not say anything about that, Senator Barkley, but I am only thinking from the standpoint of the fair business, and trying to keep them going and keep them from folding up, in other words.

The CHAIRMAN. You merely want this provision put back in the law which was stricken out by the House bill:

Any admission to agricultural fairs, if no part of the net earnings thereof inures to the benefit of any stockholders or members of the association conducting the same, or admissions to any exhibit, entertainment, or other pay feature conducted by such association as part of any such fair, if the proceeds therefrom are used exclusively for the improvement, maintenance, and operation of such agricultural fairs.

That is all you ask?

Mr. GREEN. That is right.

Senator BARKLEY. Does that apply to midways and sideshows within the fairgrounds or just the gate admission?

Mr. GREEN. What we are talking about is just the outside gate admissions and any grandstand admissions we might have.

Senator BARKLEY. It does not apply, then, to any concessions?

Mr. GREEN. No, sir; not to any concessions; not at all. We are simply trying to keep our American fairs living, to keep them from folding up.

Senator CONNALLY. Is not your chief difficulty not from the price of admission as much as it is from competition from other forms of amusement, the automobile, for instance?

Mr. GREEN. We are competing with the radio entertainment, yes, and the screen entertainment. Absolutely we are.

Senator BARKLEY. You do not compete except for 1 week, though, out of the 52 weeks?

Mr. GREEN. That is right. We are the biggest gamblers in the world.

Senator CONNALLY. Would a tax of 3 cents cause you to fold up?

Mr. GREEN. We have tried to build our plant up. A man goes to our fair and he sees a bull or a cow, or chickens, or a pig, or something that his neighbor has—we live by comparison anyway—he sees a better one here and that will stimulate that man to be a better farmer, to grow better corn, to have better stock. You know President McKinley, I believe, said the fairs were the show window of agriculture. Our fairs were founded on agriculture, and we have had to add to these fairs some sort of amusement, some sort of entertainment, which only helps us to draw in a gate that will help pay these premiums, that we think are doing so much good.

The CHAIRMAN. Sometimes political speeches are made inside the fairs.

Mr. GREEN. Senator La Follette's fair is going on right this week, and so is our fair. The Governor will be down there, he will be telling about a lot of grand things that we are going to do, and we are going to listen to him, we are going to "hurrah," and then we are going to the next fair. We want them and we need them.

Gentlemen, the fairs are helping the defense program pretty much and the O. P. M. has recently approved fairs very much. Over at the Eastern States Exposition right now the Governor has sent in a big exhibit there, a tremendous exhibit. I tried to get one at Sedalia, but I did not get along very well with it. I think every fair in the United States wants to help in the defense program. We have an Army recruiting station in my fair grounds right now. My fair started yesterday.

Senator CLARK. This bill will not catch us this year.

Mr. GREEN. Senator, we do not want it to catch us any time. We want to keep these fairs going. You know they have been going a long time. They must be pretty good, because you go back to Genesis and you read about the fairs at Tarshish.

Senator CONNALLY. Those fairs that you talk about charged 15-cent admissions.

Mr. GREEN. They did not have any then, Senator.

Senator CONNALLY. I know they did not.

Mr. GREEN. I mean way back there. I am going back in history. They were simply trade fairs, industrial fairs, things like that then. They just moved about the country. Now we have them in permanent places. Most of the fairs in the United States look like a widow woman's place.

Senator CLARK. I have got four shares of stock that I will give you.

Mr. GREEN. I know you would not ask me much for them.

Thank you very much, gentlemen. We would like the privilege of submitting a brief, more in detail in support of our earnest wish, and hope that you will help us in the fair world to keep these fairs going.

The CHAIRMAN. Yes, sir; get it in this week.

Mr. GREEN. Thank you very much.

The CHAIRMAN. Mr. Courtland Jones, of Denver, Colo.

Senator JOHNSON. Mr. Chairman, Mr. Cortland Jones is in the room, but in order to conserve the time of the committee he simply wishes to say he concurs in the testimony offered by Mr. Green, that he does not care to urge the matter further. The subject has been well covered by Mr. Green.

The CHAIRMAN. I thank you very much, Senator. If Mr. Jones should desire to, he may file a memorandum.

(The following letter was submitted for the record:)

INTERNATIONAL ASSOCIATION OF FAIRS AND EXPOSITIONS,
Richmond, Va., August 22, 1941.

SENATE FINANCE COMMITTEE,
United States Senate, Washington, D. C.

GENTLEMEN: This brief supports the verbal testimony made by Mr. Charles W. Green before your committee on Monday, August 18, 1941.

This association wishes to be placed on record as opposed to that part of the revenue bill of 1941 which takes away the present exemption on the payment of admission taxes now enjoyed by agricultural fairs. Specifically, we would like restored to the revenue bill of 1941 section 1701 of the Internal Revenue Code, subsection B, agricultural fairs.

In order to tell you how the present revenue bill would affect all fairs, if enacted, permit us first to outline briefly what our purposes and accomplishments are.

What are our purposes?

Our basic function is to provide a medium for mass education through observation, comparison, and study.

To accomplish this—

1. We must have an adequate physical plant and facilities. In a great many States, the State itself has erected a substantial plant, using State funds. In many other States, counties, municipalities, and individuals have erected plants. Many of these large plants are actually owned by either the State, county, or city.

2. We must have sufficient income to accomplish these objects. For a long period of years States, counties, and cities have substantially appropriated funds to carry out this work. The remaining revenue needs must practically all come from the sale of admission tickets.

What do fairs accomplish?

1. They furnish the major medium for 4-H Club members to present their results and accomplishments annually. Started by the United States Department of Agriculture, the 4-H Clubs now have over 1,000,000 members.

2. They offer their facilities and prize money as encouragement to other boys' and girls' movements, such as the Future Farmers of America, vocational agricultural schools, and public-school students both rural and urban.

3. Because of substantial cash prizes livestock exhibitors compete and from this, improved breeding methods and livestock methods are attained. At no other place can a farmer see so many kinds of livestock and talk to many exhibitors who are showing the actual product as at a fair. Livestock is still considered the basic element of agriculture.

4. Agricultural products on display promote improved agriculture both in methods and production. Within the last month Secretary of Agriculture Claude Wickard said "Food will win the war."

5. Fairs provide the vehicle for the display and study of modern methods in home economics, home management, and home making.

6. Fairs furnish an important medium for Federal, State, and county agencies to reach the public directly, an invaluable method of contact for disseminating factual and educational material.

The United States Department of Agriculture Office of Exhibits, State agricultural colleges, county agents, and other governmental bureaus in every State use the fairs as a means of reaching people.

What our Government thought of fairs in 1917

In 1917 the fairs offered their services to the Federal Government. The President of the United States, the Federal Food Administrator, the Secretary of War, and the Federal Railroad Administrator, all urged the fairs to continue operation as a means of--

1. Encouraging food production.
2. Maintaining national morale.

What the fairs can do in the present crisis

1. Keep up the morale of our citizens by providing wholesome diversion, clean recreation, and public interest.

2. Furnish a medium for the Federal and State governments to popularize the defense program. As one example, the President, Secretaries Knox and Stimson have approved the huge 6-acre defense exhibit at the Eastern States Exposition and for some time have had a staff of Army officers planning this exhibit.

3. All fairs have offered their facilities to Government agencies in furthering and promoting defense activities.

What would be the effect of a tax?

1. It would reduce the attendance.

(*a*) Actual experience of many of our large State fairs show that people do compare entertainment offered at a theater, for instance, with air conditioning and other conveniences in comparison to an outdoor fair with weather which may be too hot or too cold, or rainy, pushing crowds, and traffic problems in getting to the fair.

(*b*) If the proposed gasoline rationing does go into effect on the eastern seaboard it will definitely hurt the Sunday attendance at many fairs and in some cases will result in a financial loss because Sunday is a big day.

(*c*) Because of the things mentioned above a substantial number of State fairs have reduced their outside gate admission to 25 cents. It has made a difference between a profit and a loss to many fairs.

2. It would reduce revenue of a fair.

This would mean fewer patrons which would mean—

(*a*) Fairs would be forced to reduce prize money. It can be proven statistically a thousand times over that the volume of exhibitors in every department, including the boys and girls departments, are definitely influenced by the amount of prize money offered.

(*b*) A reduced number of patrons would lessen the values of a fair to everyone, not only the patrons but to exhibitors, which would include many Federal and State departments.

(*c*) The reduced values to everyone concerned would mean the closing of many fairs, especially the smaller fairs of which there are over 1,500.

(*d*) We have written statements from a large number of fairs stating that they could not pass the tax along to their patrons, they could not absorb it and they definitely would not hold a fair if required to pay a tax.

(*e*) The tax would penalize an institution which for every reason should be encouraged.

3. Present hazards of fair operation are almost insurmountable.

(*a*) No fair is organized to make money, and very few actually make money. The best men in every community are its directors because it is considered a community builder.

(*b*) A large number of our State fairs are financed by the State because they are considered educational.

(*c*) Fairs operate for 1 week out of 52.

(1) A date once set cannot be changed.

(2) Long-term contracts must be made in order to have certain departments.

(3) Premium offerings must be announced early in the year so that farmers and others can grow the crops to be exhibited.

(4) Because of these commitments, quick adjustments by a fair are absolutely impossible.

(5) Every year many fairs show a financial loss solely because of the weather. There is nothing a fair can do to protect itself. When this occurs either the taxpayers' money is taken out of the State treasury to pay the loss or private individuals do the same.

To summarize

1. All fairs are operated as educational institutions.

(*a*) Without this background States, counties, and cities would not continue to finance their operations, and their losses.

(*b*) Without this background the Federal and State governments, State colleges, and others would take no part in them. Neither would every type of youth-work organizations.

2. The first and major step will be the reduction of premiums offered. This will affect the exhibits, will in turn affect the interest of the patrons, and will definitely reduce the attendance. By the time the cycle is completed there is no question but that many fairs will be closed.

3. Up to this date and after repeated Federal hearings over a period of years, the Federal Government has recognized the values of a fair and have not imposed an admission tax. Without a fair's inherent soundness a tax would have been imposed years ago.

4. If a tax is finally imposed it will do the following:

(*a*) A substantial number of small fairs will go out of business rather than try to operate. A number of them have gone on record stating that this will be their decision. All of the State and regional fairs will try to rearrange their budgets so as to try to live.

Experienced fair men have found that fair operation is different in many respects than the operation of other lines of business. We have found that a difference in the amount of prize money offered can quickly and definitely and completely change the appearance and enthusiasm for a fair. We have found that the admission price does affect the volume of patronage. Unlike a theater where people are buying entertainment only, a fair must have a popular price and it must be low. Approximately half of the State fairs now have a 25-cent gate. They have been forced to drop from $1 to 25 cents. The admission charges at our grandstands have gone through the same evolution. Every time the revenue is decreased the services we offer must necessarily be decreased. The only fairs that can overcome this condition are the State fairs where an additional appropriation from the State treasury can be made. All other fairs must suffer.

Respectfully submitted.

INTERNATIONAL ASSOCIATION OF FAIRS AND EXPOSITIONS,
CHAS. A. SOMMA,
Chairman, Government Relations Committee.

Mr. W. F. Satterthwaite? Is Mr. Satterthwaite in the committee room?

(No response.)

The CHAIRMAN. Mr. Charles Gold, of New York City?

Mr. Gold.

Mr. GOLD. Mr. Chairman, may I point out that three witnesses supporting the present proposal testified last Thursday and took some 2 hours of the committee's time. I know that since then a new rule has been invoked limiting the time of speakers to 10 minutes. I am asking the chairman if I may have my time extended to one-half hour and I have arranged with the two subsequent speakers to waive their time in my favor, if the chairman will permit.

The CHAIRMAN. You are speaking for all three?

Mr. GOLD. I am speaking for all three.

Senator CONNALLY. We usually charge 10 straight and 3 for a quarter.

Mr. GOLD. I will be happy to limit my time to 25 minutes.

STATEMENT OF CHARLES GOLD, NEW YORK, N. Y., REPRESENTING RETAIL MANUFACTURING FURRIERS OF AMERICA, INC.

Mr. GOLD. My name is Charles Gold, I am from New York City, and I appear for and on behalf of the fur tax committee which represents and speaks for the Nation-wide retail fur industry. This committee is sponsored by the only Nation-wide fur association, the Retail and Manufacturing Furriers of America, which is a non-profit-making incorporated association made up of the following affiliated associations:

Greater New York Retail Furriers Associations, Inc.;
Chicago Retail Manufacturing Furriers' Association;
Milwaukee Retail Manufacturing Furriers' Association;
Master Furriers' Guild, of Washington, D. C.;
Furriers' Association, of Baltimore, Md.;
Iowa-Nebraska Retail Furriers' Association;
State of New Jersey Retail Manufacturing Furriers' Association;
Indiana Sales Retail Fur Merchants' Association;
Manufacturing Furriers' Association of Pittsburgh;
Buffalo Fur Merchants' Association;
Albany Retail Furriers' Association;
Furriers' Guild of Hartford;
Retail Fur Merchants of New Haven;
Colorado Springs Retail Fur Association;
Furriers' Guild of Boston;
Greater Cincinnati Retail Furriers' Association;
Cleveland Retail Furriers' Association.

Senator CONNALLY. It is a sort of holding company?

Mr. GOLD. No; it is an association which enjoys a membership of furriers in many cities, among them Chicago, Milwaukee, Washington, D. C., Baltimore, and the other cities in the list I have enumerated. Those are the membership associations affiliated with the parent body.

In addition, the committee is supported by associations in Detroit, San Francisco, Portland, Spokane, St. Louis, Seattle, St. Paul, and Minneapolis, besides a great many individual retail furriers unaffiliated with any association for the simple reason that there are no associations in their vicinity.

I have been associated with the retail fur industry for many years and, therefore, know something of it for that reason, as well as the fact that my wife has been and is actively engaged in operating her own retail fur establishment, continuing an enterprise which is more than 50 years of age.

Senator CONNALLY. Are you counsel for this organization?

Mr. GOLD. Yes.

Senator CONNALLY. You are a lawyer, aren't you?

Mr. GOLD. Yes; I am, sir. We come here to suggest that for one time the Government can use a bottleneck to its own advantage, which I hope to establish to the satisfaction of this committee.

We oppose section 2401 of the proposed law, which is the section pertaining to the tax on furs. We feel that the proposal is uneconomic, inequitable, and so difficult of collection that it would prove unprofitable to the Government.

That, too, we hope to establish to your satisfaction.

The CHAIRMAN. You favor putting it on the manufacturer or wholesaler?

Mr. GOLD. No, sir; only as a second alternative. We go beyond that. We submit that the tax should be placed at the point where there are just 111 handlers of furs—the dressers or curers of the furs.

In other words, we suggest the levy be made at the bottleneck of the industry; the place through which all skins must pass, and we point out in that connection that no skins can be used for any purpose, whether in fur coats, gloves, trimmings, millinery, and so forth, unless it is first subjected to a curing treatment.

The CHAIRMAN. I don't want to anticipate you, but the dressers own the furs, skins?

Mr. GOLD. No, sir.

The CHAIRMAN. But you want to tax at that point?

Mr. GOLD. Yes; we submit this plan: That the tax be 10 percent at the point of dressing, computed on the value of the skins, plus the dressing charge; the tax to be paid at the time of dressing and curing by the skin owner, whether he be a manufacturer or skin dealer. At the same time he would file duplicate affidavit of value with the dresser; the dresser, in turn, would collect the tax and pay it over to the Government.

Senator BARKLEY. How does the value of that skin at that particular point compare with its value after it is finished and ready for a garment?

Mr. GOLD. Well, our calculation is some 35 percent, on the general average; perhaps as high as 40 percent of the price at which they are sold to the consumer; but there are many considerations which we think weigh in our favor.

Senator CONNALLY. Let me ask you this: Don't many of the manufacturers of furs do their own dressing? They would if you made the tax at the point of dressing, as you suggest?

Mr. GOLD. No; it takes a lot of equipment and considerable skill, and there is an awful lot of risk involved in that, and I doubt very much that they would take the risk of dressing, themselves.

Senator CONNALLY. These muskrats we have in the South, Louisiana, where do they dress those?

Mr. GOLD. They find their way, in most instances, to the markets in Chicago and New York, where they are sold in auction lots, large quantities, and then the purchasers send them out to a dresser for dressing or curing.

Senator DAVIS. How many manufacturers of furs are there in the United States?

Mr. GOLD. There are some 2,300 manufacturing furriers and over 4,000 retail furriers. There are, if my recollection serves me well, 25,000-odd specialty shops as well as 5,000 department stores who might be handling furs and fur-trimmed garments. Under the proposed tax the manufacturers of fur coats, fur-trimmed coats, and everyone in the various categories selling fur garments must report to the Treasury Department their sales made directly to the consumer.

Senator DAVIS. How much do you suppose it would cost to collect that tax?

Mr. GOLD. I would not venture a guess. It would take a great deal of money and manpower to collect this tax in view of the fact that there would be involved millions of pairs of fur gloves, gloves made of fur, which are sold in small ware stores and shops, there are thousands of these little ladies stores and shops that sell this item who would have to report under the proposed law. We figure that, in addition to those outlets, there would be the stores which sell furred millinery and other fur novelties; in all, upward of 70,000 reporting outlets.

Senator DAVIS. If taxed at the source, how many outlets would you say there would be from which the tax would be collected?

Mr. GOLD. All told, there are 111 fur dressers who process skins for the entire market, made up of manufacturers in the big cities, some skin dealers, and a few custom furriers; but all told, there are only some 1,500 who own the skins and send them to the processors for dressing.

Senator BARKLEY. Why do you suggest that this 10 percent be levied on the value of the raw skin, instead of waiting until it is processed and levying a tax after that operation, when its value is thereby enhanced?

Mr. GOLD. We do; not on the resale price, but on the value of the skin and on the charge made for the dressing.

Senator CLARK. You are not objecting, then, to the payment of a tax of 30 percent at the time of dressing rather than a 10-percent tax at retail?

Mr. GOLD. I don't think there is need for that amount of tax. We say that at the point of retail sale, the resistance we will meet from customers; the evasions which will take place in the industry on the part of unscrupulous merchants, and by those many outlets who will not even know there is a tax, such as these little shops, we say that all these will serve to reduce the amount collected to a point where it will not exceed the revenue obtainable under our plan by which all those unsatisfactory conditions would be obviated, by a tax at the point of dressing.

Senator CLARK. Then the tax would be 30 percent instead of 10 percent?

Mr. GOLD. You see, under the retail sales tax, if the fur be worth more than the other items of value in the garment, in other words, if it is not the component of chief value the tax provision does not apply. Under the old manufacturers' tax, manufacturers developed garments wherein the fur going into the garment was worth less than the cloth, and they had that skill developed so well the Treasury Department admitted then the tax was not worth while. Chairman Doughton, in 1938, reported that the tax occasioned numerous difficulties, and finally recommended that it be removed. Now, I respectfully ask if it caused so much trouble dealing directly with the manufacturer under the old tax, how much more difficult would it be to determine the question which must be decided under the proposed bill, namely, the component material of chief value in the garment. The retailer knows nothing at all about the cost of production and the manufacturer will not give him the information; it is a trade secret.

Senator RADCLIFFE. I understand your objection to the tax on the retailer is based on the cost of collection and also on sales resistance?

On what distinction would you attempt to place the question of sales resistance in the matter of a fur item and other commodities that might be subject to retail taxes? In other words, is there anything in the nature of that business, your business, that would justify such a distinction?

Mr. GOLD. Well, to begin with, it is here proposed to levy a tax of 10 percent. Furs usually run pretty high——

Senator RADCLIFFE (interposing). I mean in the nature of the business itself. Do you feel that the sales resistance in regard to a matter of furs in the case of retail sales would be greater than that to be found in the sale of other commodities? Is there anything distinctive to the fur business that would accentuate such resistance in the sale of those items?

Mr. GOLD. Yes; I imagine the higher price of furs. Women might consider they were buying something in the nature of a luxury, and adding 10 percent would make it seem very much a luxury and in many instances push the price beyond their ability to buy, and they would decline to purchase.

Senator RADCLIFFE. Is that because furs are regarded as a luxury?

Mr. GOLD. The better-priced furs are so regarded, and the proposed tax might serve to convince the buyer. Talking of the lower-priced furs, they are not luxuries and, in that respect, cheap fur coats, selling at $59 and $49 would bear a tax, whereas cloth garments trimmed with fur and selling for $300 and $400 under the present law, might not, in many instances, be subject to such a tax. That is true for the simple reason that every item of expense going into such a fur-trimmed garment, the material itself, the items of operation, cutting, tailoring, sewing, sponging, everything, every conceivable expense, by the ruling of the Treasury Department, would be figured into the value of the cloth skeleton. It has happened in the past and I can see that it will happen again, that very expensive cloth coats will not bear any part of the tax and $59 fur coats will.

Senator RADCLIFFE. If there must be a tax, you prefer it at the point of the dresser and, if that is not practicable, at the point of manufacture, rather than the retailer?

Mr. GOLD. By all means. It has been said we are merely trying to shift this tax from the point of retail to the point of the dresser. Now, the manufacturer made that statement and goes on to say that the retail sales tax is the easiest method of all to collect for those engaged in the industry, for the simple reason that no one will be required to pay a tax until the item is sold to the consumer.

Senator BARKLEY. This item under your proposal would raise only one-third of the revenue?

Mr. GOLD. That is not so, sir. We will be catching all the furs used in trimming cloth garments, which otherwise might escape, especially in view of the way they are planning these cloth garments. We will be catching all the skins used in millinery lines; we will be catching all the skins sold by the tax evader, and, we know there would be plenty of those; and we will be leveling off the competition of wholesalers who will thus be unable to pass on the savings in taxes. So the customers' resistance, the evasions, the skins that are lost in the trimming of cloth garments, the skins used in millinery and gloves, and there are millions of those—all of those items will earn a revenue for the Government; whereas, under the revenue bill as now written, they will bring nothing.

Senator CONNALLY. It helps your business to tax a garment, not of fur, because it helps to sell a garment all fur?

Mr. GOLD. I didn't catch that.

Senator CONNALLY. I say it helps your business to have a tax on cloth garments—garments not of fur, because it helps to sell a garment, a fur garment?

Mr. GOLD. Oh, yes.

Senator CONNALLY. That is true?

Mr. GOLD. Yes.

Senator CONNALLY. So you have a double purpose—you get rid of the retail tax and you hurt your competitor under this plan?

Mr. GOLD. We put our competitor on an even, level basis.

Senator CONNALLY. That is true. Now, you speak about this sales resistance. You are going to have an increased price under this tax, regardless of where paid. Wouldn't the prospective customer just feel as well about it, be just as happy, if she knew the price was less but she was also paying a 10 percent tax in there, than if you told her the tax was already placed and had been figured in the price? Wouldn't she sort of say, "Well, this coat is only worth $150, but I have to pay $15 tax?"

Mr. GOLD. The reaction is not that at all, sir. We know that where there are sales taxes, a great many of these women make an effort to devise schemes to avoid the tax. I am told that these women resort to the practice of having such things sent to their country homes, and ordered from their country homes, to get away from the city limits, and thereby avoid paying a 2 or 3 percent sales tax.

Senator CONNALLY. They could not go to Europe to avoid the United States tax?

Senator BAILEY. That is only in New York.

Senator DANAHER. Mr. Gold, I have here a splendid letter, and I want to check the facts as stated in it. The writer says there are less than 120 skin dressers in the United States, most of them located in the cities of Chicago and New York. Is that correct?

Mr. GOLD. That is a matter of fact, sir. That is substantially correct; and we can go one step further and say 90 percent of the furs processed in this country are dressed by 25 firms in 2 metropolitan areas, New York and Chicago; and if the Government wished to go that far, they might place experts in those places and have a guaranteed collection of 90 percent of that tax.

Senator DANAHER. I understand in Canada the tax is levied on the dresser and the Canadian Government has found it works successfully.

Mr. GOLD. Yes; that is so and has been so for 22 years.

Senator DANAHER. And articles of which the fur is the chief component of value would not be then left to any such uncertain and indeterminate test as under this tax at retail?

Mr. GOLD. Yes; that is true. I might point out, in the same connection that Mr. Printz, speaking the other day, stated that one storekeeper might have in his establishment two cloth-skin garments, so resembling each other that the experts even could not differentiate between them in point of value, and that, nevertheless, one might be taxable and the other not taxable, as the cost might have varied due to the fact that skins might have been purchased in different seasons, and because of other conditions.

Senator RADCLIFFE. Mr. Gold, do you happen to know whether the skin dressers have expressed any opinion as to where this tax should be collected?

Mr. GOLD. Some of the dressers have, but the largest dressing and dyeing association, representing some eight or nine who do about 75 or 80 percent of the dressing and dyeing of furs in this country, have not gone on record either way. As a matter of fact their largest member was the chairman of a committee which was sponsoring the very thing I am supporting here today; a dressing tax.

Senator RADCLIFFE. Do you know of any argument the manufacturers have advanced as to why the tax should not be levied on them?

Mr. GOLD. Yes; their main argument is, first, that no one need finance the tax until the garment is sold to the customer when, for the first time, the tax will be payable. We say we are ready to advance whatever moneys are necessary toward financing the tax to avoid the resistance which would inevitably follow an attempt to collect the tax at retail, and the many other difficulties we experienced at the time the last tax was in effect. Then, we submit that the Government will get as much money from collecting from 111 sources as they would get from the 70,000 to 75,000 potential retailers even though the rate be 10 percent.

Senator TAFT. What about the difficulty of valuing at the time of dressing?

Mr. GOLD. There are three or four answers to that. First of all, we are convinced that the values will be accurate and correct, because the skin owner will be committed to his own value and will be limited by those values, in the event he presents a claim for damage or loss occasioned by dressing.

Second, his own purchase bill in the auction rooms will be persuasive evidence, and I might say a good portion of the skins used in this country are so bought. His own bills can be used to refute a false valuation.

Thirdly, we say that if he values his skins at less than the true value, the Government will not be out of pocket because at the end of the year, he will show a greater profit for income-tax purposes. So I think it is more than likely he would prefer to make proper and accurate valuation rather than to pay the increased income tax in higher brackets at the end of the year.

The CHAIRMAN. From whom do you propose to get this tax?

Mr. GOLD. We propose that the tax be collected from the 1,500 skin owners who send these skins to be dressed.

The CHAIRMAN. You don't propose that the dresser pay the tax?

Mr. GOLD. No, sir. I might say that the NRDGA—that is, the National Retail Drygoods Association—supports our viewpoint even though they appeared here and suggested a manufacturers' tax. We have a letter from their secretary so stating, and their attitude is the same as ours; they want to avoid all these things I have told you about.

Now, the tax, if and when imposed—and I sincerely hope it will be imposed—will be quite simple to collect.

Senator BARKLEY. Your tax is on the raw pelt?

Mr. GOLD. The raw pelt, plus the dressing charge.

Senator BARKLEY. How is the owner going to know what the ultimate charge will be?

Mr. GOLD. When he sends the skin in, he sends it at a fixed charge; the value of the skin he already knows because he has bought it.

Senator BARKLEY. They are just raw skins and he takes them into the skin dresser and the skin dresser tells him how much he is going to charge for the service of dressing. The tax is then paid on the value of the raw pelt and on the dressing charge?

Mr. GOLD. Yes; without speculating as to the enhancement in the value of the fur, but we may take it for granted that the value is well known to the owner for the reasons I have mentioned.

Senator CONNALLY. What percentage of the cost of the finished garment is the undressed skin?

Mr. GOLD. About 35 percent.

Senator CONNALLY. Exactly; so we would lose 65 percent, wouldn't we?

Mr. GOLD. I think, Senator Connally, the expense involved in collecting the tax, the reduced volume by the legitimate merchant, the fact that the skins will find their ways into channels for sale without any tax being paid on them, and the other reasons which I have enumerated, all support our position that there will be no loss in revenue under our plan. The net result in those cases where there is evasion on the tax is that it results not only in the loss of the fur-tax revenue but that man cheats the Government out of income tax with the legitimate merchant suffering at the same time and to the same extent by having reduced business volume and lower income tax.

Senator BARKLEY. Do you know to what extent or whether the further down the line of the finished garment or finishing process you will locate this tax the greater is the opportunity for pyramiding it after it leaves the original point?

Mr. GOLD. That is an argument that has been advanced by the manufacturers. We say that if the market will permit, you may trust the skin owner or manufacturer to find the highest selling level; he need have no excuse for bringing it up to that level. When they come here

and say any such thing, we question it because we all know that manufacturers like all others seek to make a profit. Should the market go the other way, we have good reasons to believe and hope that everyone along the line from the dresser to the retailer will help to absorb that tax.

Senator BARKLEY. I am wondering whether instead of absorbing the tax he adds to and thereby increases his own profit?

Mr. GOLD. I will assume there may be some pyramiding, yet the mark-ups are not so great as to penalize the customer. I think the Government would wind up with more under our proposed plan; under the present bill too many skins would escape; too many problems of administration are involved, and a great many fur-trimmed cloth coats would be so constructed as to have skins of less value than the cloth. Under such circumstances the competitive feature becomes involved. The Government not collecting on the large volume of fur-trimmed cloth and many novelty items, its income would be reduced to that extent. Under my plan, I am convinced that every one of those skins going into every one of those fur-trimmed garments would bring their share of the revenue into the Treasury.

Senator DANAHER. May I have one further moment to submit this thought, as contained in this letter:

> The proposed tax law imposes the retail sales tax on "articles made of fur on the hide or pelt, and articles of which such fur is the component material of chief value."

My correspondent says:

> Who shall determine whether the fur on a fur-trimmed garment is the component material of chief value? The retailer would have to make an estimate of the value of such fur, which in most cases would be a mere guess on his part. The manufacturer would not want to disclose the value of the fur on such garments, unless the statute makes such disclosure mandatory on the part of the manufacturer. The confusion that is created leaves a legal loophole for the unscrupulous merchant to place a low appraisal on the fur in fur-trimmed cloth coats. With the tax collected at the point of dressing all fur will pay the tax, regardless of where or how it is used, or how much or how little is used in a garment.

Is that a fair and correct appraisal of the situation?

Mr. GOLD. I agree with it wholeheartedly. It is a very fine statement of the situation.

Senator CONNALLY. Have you any statistics as to the value of the annual sale of fur coats?

Mr. GOLD. It is our opinion that without the resistance that would follow this kind of a tax, I should say, $400,000,000; $350,000,000 to $400,000,000; I have been corrected on that—$350,000,000.

The CHAIRMAN. The estimate on this item figures $20,700,000 at 10 percent.

Mr. GOLD. Yes; I am aware of that.

Senator CONNALLY. You sold more last year than the year before?

Mr. GOLD. Yes; I think 1940 was better than 1939. I might point out that there was a similar tax between the years 1932 and 1938, a 10-percent tax. The gross revenue at no time exceeded $7,765,000, and it was admitted generally that it was a very difficult tax to collect. In addition, it presented a great many administrative problems.

The CHAIRMAN. That was a manufacturer's tax?

Mr. GOLD. Yes; it was a manufacturer's tax and by certain regulation of the Treasury Department, we can pretty much know that if it

had been at retail and there were no greater evasions it would have brought 10½ or 11 million dollars, because the Treasury Department ruled that the manufacturers' selling price are about 65 percent of the retail selling price, and so scaling the figures to make allowances for that, the tax would have brought 10½ to 11 million dollars; that is not making any provision for evasions and the difficulties presented by this tax which would stimulate evasions.

Now, may I just point out that Chairman Doughton of the Ways and Means Committee stated in 1938 with respect to this tax that he favored repeal——

Senator CONNALLY (interposing). Was that with respect to the tax on all furs?

Mr. GOLD. The tax on fur garments plus fur-trimmed items.

Senator CONNALLY. Was he advocating repeal of the tax on the whole fur garment or simply clothing with fur on it?

Mr. GOLD. The entire tax, and the reason he advanced was there were so many administrative problems present, especially in determining which was the component part of chief value, that the tax, in his opinion, should be removed, and he did state that the tax was unprofitable in the same report.

Now, in the recent report submitted by the congressional Ways and Means Committee, they made a statement along the same line. As a matter of fact, when one first reads the report one is led to believe they were going to wind up urging the adoption of the plan which we are advocating. Then, after recognizing the difficulties of a manufacturer's tax, they suggest a provision which involves collecting from some seventy to seventy-five thousand outlets of fur, which is so much more difficult. In addition, under this proposed plan, it is necessary to assume that the retailer would be able to determine whether fur is the component material of chief value of cloth garments trimmed with fur.

Now, as to the records being made available to these storekeepers, Mr. Printz testified here last Thursday and made it pretty clear that they would not wish to make known to their outlets, the storekeepers, the mark-up of their merchandise. As a matter of fact, that was the reason that prompted him to submit a plan that all fur coats selling under $71 be deemed to be such that the component material of chief value in them was not fur and be exempt, and that all fur-trimmed cloth garments selling in excess of that amount be placed in the other category and pay a tax. Then the suggestion came from one of the Senators for the limitation of $50.

I have here a fur-trimmed coat which sells for $68, and also a fur coat which sells for some $35 or $38, and the fur coat is of a much poorer quality than the fur on the cloth coat, yet the former would bring a tax while the latter would not. The furs on this cloth coat should bring a larger tax at the point of dressing, but the way it is made up it would escape a tax, unless there was an exemption plan used. Now if that was used, we will have two difficulties still; the difficulty of determining whether the fur in a more expensive cloth garment is the commodity of chief value or the cloth, and if you make a blanket catch-all provision that all fur-trimmed coats selling over $71 will pay a tax, you run into two problems again: First, that you would be taxing a cloth coat in which the fur might be of less value

than the cloth and be confronted with legal attack on the charge of discrimination; second, a great deal of fur trimmings would escape the tax.

Senator GEORGE. You have occupied 35 minutes.

Mr. GOLD. As a matter of fact, I imagine I have not been able to get very far with the points I wished to discuss, due to my answering questions. May I have a moment to peruse this?

The CHAIRMAN. Have you a written brief?

Mr. GOLD. I have a statement here which is quite lengthy. I have not filed it because it would take longer than the prescribed time. I want to say that the National Retail Dry Goods Association has expressed complete accord with our proposition. They told me—their secretary in conversing with me said—they are in favor of the tax at the point of dressing. The only reason they came here and proposed a manufacturer's tax was that they felt there might be some legal obstacles to a point of dressing tax. When I explained to them that the tax would not be paid by the dresser, but that it would be paid by the titleholder of the skin for the privilege of submitting it to a processing operation, he said, in his opinion, that removed the question of illegality, if there was any, and that we had his wholehearted support. I have here a letter showing Mr. Hahn's total agreement with our suggestion.

The CHAIRMAN. You may put it in the record.

Mr. GOLD. Yes. Furthermore, the Fox-Breeders Association, which represents the breeders who breed more than 80 or 85 percent of all animals bred in this country, are in total agreement with us. Three or four of the largest jobbers are in agreement with us that the tax at the point of retail sale will bring us the same experience which we had before, added sales resistance resulting in curtailed sales by at least 25 percent. I tell you this, gentlemen: My own wife told me that customers have said that if there is going to be a tax on furs, they would buy cloth coats. Now, I hesitated to tell that to members of the committee yet, strange as it may seem, at breakfast only today the chairman of our tax committee from Baltimore made just the same statement. He said his customers have said that if the tax on furs is imposed, they will buy cloth coats.

The CHAIRMAN. Of course, taxes do generate some resistance. I want to ask you this: When it comes to an importer of dressed fur, finished furs, ready to go into a garment, the Treasury is going to be pretty much at a disadvantage in determining the value of that coat; is it not?

Mr. GOLD. As to imported skins?

The CHAIRMAN. Yes.

Mr. GOLD. Those already dressed before they come into the country?

The CHAIRMAN. Yes.

Mr. GOLD. There is a tariff on that type of skin.

The CHAIRMAN. Yes; I know that, but this tax bill imposes a levy on all manufactured furs. If you transfer the tax as you suggest you would have importers of dressed furs bringing skins in here that could not be valued without considerable effort and difficulty on the part of the Treasury; there wouldn't be much way of checking it.

Mr. GOLD. I might point out that the Government has experts who could very well do that.

The CHAIRMAN. I know, but I doubt if there are very many Government experts who could differentiate between furs in many instances from a value standpoint. They might have some idea, but the difficulty still appears to me to be there.

Mr. GOLD. I might point that these skins that come in are all purchased in the markets abroad and are valued by the owners at the time they are bought.

The CHAIRMAN. But our Government would not be able to keep much of a check on those who might want to take advantage of the Government by importing skins, as I have mentioned.

Mr. GOLD. My statement on that is that a duty could be imposed. Checking up on values is not difficult. There are many experts in our market who could place an accurate value on such skins. As a matter of fact, they would welcome the opportunity to do it for the Government. All those skins are purchased either for resale or for manufacture and carry a definite value.

The CHAIRMAN. Supposing that you had somebody who purchased some skins outside the United States, in Canada for instance, and he brings in already finished furs at low valuation? I mean the fellow who wants to smuggle them in; he brings them in, and pays the duty?

Mr. GOLD. We have the same problem with finished garments. There are any number of our workers who, despite the prohibition in union agreements not to do so, make a practice of turning out garments for friends and relatives, in their own homes.

The CHAIRMAN. I was asking the question for information, but in the case of a high-priced fur, where the temptation is so great to get them dressed outside and bring them in, the Government would have to have some finished experts.

Mr. GOLD. Of course, there are duties now.

The CHAIRMAN. I understand that, but you are arguing against this retail tax. It is the 10 percent on the retail sale. That is one of the things which must be in the Treasury's mind; the difficulty of fixing the correct value on the furs.

Mr. GOLD. They can get that information; there are thousands of experts in our markets.

The CHAIRMAN. If you have anything else to put in, you may do so.

Senator BARKLEY. All furs that come into this country pay a tariff?

Mr. GOLD. Yes.

Senator BARKLEY. And under your plan the tax would be paid at the point of dressing?

Mr. GOLD. Oh, I think adjustments must be made to increase the tax on dressed furs that come in.

The CHAIRMAN. Then you would have the difficulty of ascertaining what was paid for the dressing service. You are proposing to tax this fur when it reaches the hands of the dresser.

Mr. GOLD. I am addressing myself to the major problem.

The CHAIRMAN. Wouldn't that raise a very great difficulty for the Treasury?

Mr. GOLD. I don't think so. I think when you consider the savings in time and manpower in collecting from only 111 dressers as compared with some 75,000 outlets, and surmounting the other difficulties which I have mentioned, that on the whole the Treasury's burden would be lightened.

The CHAIRMAN. Well, Mr. Gold, if you have any additional statement, you may put it in the record.

Senator JOHNSON. Did I understand you to say that 80 percent of the producers of fox pelts favor your plan? I am quite interested in that. As I understand your plan it could be very well that the tax would be passed on to the producers of pelts. I am sort of surprised at that statement.

Mr. GOLD. Well, I have here something on that.

Senator JOHNSON. Put that in the record; so that the producers favor the plan you have suggested.

Mr. GOLD. Yes; the breeders of over 80 to 85 percent of the skins favor it.

Senator DAVIS. The retailers favor the plan of collecting at the source?

Mr. GOLD. At the point of dressing. The retailers; the department stores; three or four of the largest jobbers of furs; the breeders are in favor of it, and I am hoping, of course, that we are making a good enough showing here to have the members of the committee favor it.

Now, the telegram sent to us which explains my previous statement is this: It is written by Dr. L. J. O'Reilley, president, American National Fur Breeders Association.

The American National Fur Breeders Association offers full cooperation to RMFA fur tax committee. We feel not only ourselves but the entire fur industry would suffer greatly from proposed retail tax.

Senator JOHNSON. That is saying he opposes the retail tax, but there is nothing in it to indicate that he supports your plan.

Mr. GOLD. Dr. O'Reilley attended a convention in Milwaukee June 18-21 at which I was present. He spoke, and he approves of our plan wholeheartedly.

Senator JOHNSON. Are you going to put something in the record to that effect?

Mr. GOLD. I have nothing more but this telegram; but with the permission of the chairman I can get within the course of a day or two, something more from Dr. O'Reilley or the association; and, with the permission of the committee, I should like to have it in the record.

The CHAIRMAN. Any reasonable extension of your remarks you wish to put in the record you may do so.

Senator DANAHER. I would like very much to incorporate this letter dated August 15, 1941, from the Buffalo Fur Merchants Association in the record.

The CHAIRMAN. Yes; it will be put in the record.

(The letter submitted by Senator Danaher is as follows:)

BUFFALO FUR MERCHANTS ASSOCIATION, INC.,
Buffalo, N. Y., August 15, 1941.

The HONORABLE JOHN A. DANAHER,
The United States Senate, Washington, D. C.

DEAR SIR: In the tax bill now under consideration by the Senate Finance Committee a tax is imposed on the retail sales of furs. The retail fur industry, as a whole, has no objection to a tax being placed on furs under the present emergency, provided that such tax is imposed in such manner that it will bring the largest amount of revenue to the Government after the cost of collection is deducted, without discrimination and injury to the retail fur industry. The tax on furs should be imposed at the point of dressing of skins for the following reasons:

1. *Ease of collection.*—There are less than 120 skin dressers in the United States, most of whom are located in the vicinity of New York City and Chicago. These dressers are well-established concerns, which maintain adequate bookkeeping systems, so that the auditing of the tax would be quite simple and inexpensive to the Government. On the other hand, there are over 40,000 retail fur outlets in the United States, many of whom do not maintain adequate books, if any. It is an irresistible conclusion that the cost of supervision and collection from 120 tax sources will be infinitesimal as compared to the cost of supervision and collection from forty-odd-thousand tax sources.

2. *Eliminates discrimination.*—A tax placed on the retail sales of fur coats discriminates unfairly against the fur coat, which is admittedly a necessity in northern climates. Millions of dollars worth of fur is used annually for trimming cloth coats; the fur so used will escape the retail-sales tax entirely, if the fur is not the component material of chief value. The bulk of fur coats sold cost less than $100, and are not a luxury to the women who wear them, as these cheap fur coats may be the only warm garments many women possess. Thousands of fur-trimmed cloth coats sell for $200—even up to $500. Yet all such fur-trimmed garments and the fur thereon will be sold tax-free, even if the value of the fur equals 49 percent of the total cost of the garment. And who is to determine the value of the fur on a fur-trimmed cloth coat to decide whether it should be sold tax-free or subject to tax? By having the tax collected at the point of dressing, all fur would pay its share of the tax, regardless of whether it was used for a fur coat or a fur-trimmed coat.

3. *Prevents fur bootlegging and unfair competition.*—Among the forty-odd-thousand retail fur outlets, there are bound to be some chiselers, who will evade the tax through fraud and improper records. Undoubtedly the Internal Revenue Bureau can cite innumerable instances discovered when the previous fur tax was in force. It is undoubtedly a safe estimate to say that for every instance caught by the Revenue Bureau, there were at least 10 who were not detected. In addition, there are many people who do fur work at home, as well as some stores who sell an occasional fur coat. These outlets cannot be checked by the Revenue Bureau except at great expense, and because of lack of proper books, evasion of the tax cannot be proven. Yet these sales, often made without the addition of the sales tax, compete unfairly with the legitimate retailer, who conscientiously adds the tax to every sale. The fur dressers on the other hand, are well-established, reputable concerns, who would not stoop to tax evasion.

4. *Will not injure fur industry.*—The placing of the tax on retail fur sales will curtail the sale of furs and fur coats. When a similar tax was imposed on retail fur sales in Canada, a large department store in Toronto reports that its sales of fur garments dropped 50 percent, and when the tax was transferred to the dressers, the volume of sales of fur coats increased immediately. There was the same reaction in the United States when the last fur tax was imposed on retail sales. The imposition of a tax on the retail-sales price creates a tremendous sales resistance in the mind of the prospective customer. When the sales of fur garments are decreased, the whole fur industry suffers, including trappers and fur farmers, dressers, skin dealers, and fur-coat manufacturers, as well as retail furriers and department stores.

5. *Does not create confusion.*—The proposed tax law (sec. 2401) imposes the retail-sales tax on "Articles made of fur on the hide or pelt, and articles of which such fur is the component material of chief value." Who shall determine whether the fur on a fur-trimmed garment is the component material of chief value? The retailer would have to make an estimate of the value of such fur, which in most cases would be a mere guess on his part. The manufacturer would not want to disclose the value of the fur on such garments, unless the statute made such disclosure mandatory on the part of the manufacturer. The confusion thus created leaves a legal loophole for the unscrupulous merchant to place a low appraisal on the fur in fur-trimmed cloth coats. With the tax collected at the point of dressing, all fur will pay the tax, regardless of where or how it is used, or how much or how little is used in a garment.

The fur dressers, wholesale skin dealers and coat manufacturers, especially the fur-trimmed cloth coat manufacturers, are using the pressure of their various organizations to have the tax imposed on retail sales, in utter disregard of the fact it will produce less revenue for the Government and do considerable injury to the industry, as a whole.

This organization, composed of retail furriers in the city of Buffalo, is giving you the above information so that you may be thoroughly cognizant of the disastrous effect of a fur tax placed on retail sales. The furriers of Buffalo feel certain that you will realize the justice and fairness of their position, and urge you to use your influence, as a member of the Senate Finance Committee, to see that the tax on furs is collected at the point of dressing, where it rightfully and logically belongs.

Very truly yours,

GASTON ROSENTIEL.

Mr. GOLD. May I read just one very brief statement, in view of the testimony given here last Thursday before your committee? In which it was claimed that 3,000 members of the fur industry, which I represent, are making a national effort to obtain public and congressional approval of a fur tax which will benefit the Government by adequate taxes, and the consumers by holding down prices, and the fur workers by removing the threat to their employment, and our industry, to which you gentlemen are looking for tax revenue in this emergency.

Yes; to the limited extent of our small resources, we are doing our best to that end. I should like you gentlemen to see for yourselves the advertisements we have placed in the trade paper Women's Wear Daily. In fact, it will be a privilege to us if you will examine these advertisements; you will find in them restatements of the facts which have made the Canadian method a success for over 20 years—a method we urge you to adopt.

Our dues are $5 a year, obviously most insufficient to engage in expensive efforts. Those advertisements, the inescapable expenses of arousing the members of an industry to the threat that faces them, are being supported by voluntary contributions averaging less than $15 and all going to the fur-tax committee, not to the treasurer of the R. M. F. A. If we succeed, we believe we shall have performed a service for the fur industry.

I might point out in this connection that the chairman of the tax committee is Mr. Jack Fine, of Baltimore, his cochairman is Mr. P. W. Wilderson, general manager of Cownie Furs, of Des Moines, Iowa; and the rest of the committee embraces members from many parts of the country, consisting of reputable business people.

Senator CLARK. What does that fund amount to?

Mr. GOLD. Some $6,000.

Senator CLARK. Some $35,000 has been mentioned here.

Mr. GOLD. I have given you the correct amount, sir.

The CHAIRMAN. Thank you, Mr. Gold.

(Through an extension of remarks permitted by the chairman, Mr. Gold submits the following briefs, telegrams, and excerpts from advertisements placed by the fur-tax committee, Retail Manufacturing Furriers of America, Inc., in trade papers, referred to in his testimony:)

[Telegram]

WAUSAU, WIS., *August 20, 1941.*

IRVING GENFAN,

Retail Manufacturing Furriers of America, Inc., Tax Committee:

Clarifying previous wire of position this association representing 90 percent fur breeders of the United States unqualifyingly support, endorse, and plea action your committee will be successful in having tax placed at point of dressing.

DR. L. J. OREILLEY,

President, American National Fur Breeders Association.

[Telegram]

NEW YORK, N. Y., *August 19, 1941.*

CHARLES GOLD,
Capitol Park Hotel, Washington, D. C.:

In answer to your telegram, may I state that the tax committee collected so far about $5,800. The average contribution is less than $15 which includes contributions from fur jobbers, skin dealers, and specialty shops who are in full accord with our purpose and plan that the tax be placed at the point of dressing to insure complete collection by the Government at a minimum cost. This will eliminate unscrupulous methods through outlets especially fur trimmed cloth coats, fur trimmings, hats, gloves, slippers, and every conceivable fur article sold to the consumer. We estimate that through this recommendation of ours, at least $75,000,000 worth of fur will become taxable which ordinarily would escape taxation. Under our proposal, evasion of tax payments, unscrupulous competition, and consumer resistance will be eliminated.

LOUIS KROLL,
Treasurer, Retail Manufacturing Furriers of America, Inc., Tax Committee.

Excerpts from advertisement in Fur Trade Review, July 31, 1941:

The American National Fur Breeders Association offers full cooperation to Retail Manufacturing Furriers of America fur tax committee. We feel not only ourselves but the entire fur industry would suffer greatly from proposed retail tax.

AMERICAN NATIONAL FUR BREEDERS ASSOCIATION,
By DR. L. J. O'REILLEY, *President.*

In place of collecting from nearly 15,000 retail shops in Canada we collect from only 14 places—the dressers. It requires very few inspectors to check our records. The collection of the tax at the point of dressing is the simplest, sanest, and most economical procedure known. Canadian authorities would not entertain any other method.

F. D. BURKHOLDER, LTD.,
By FRANKLIN D. BURKHOLDER.

Excerpt from advertisement in Women's Wear Daily, Tuesday, July 22, 1941:

[Pencil notation: "Largest Fur Jobbers in United States"]

KRUSAL & KRUSAL, INC.,
New York, July 21, 1941.

Mr. SIDNEY A. HAAS,
Retail Manufacturing Furriers of America Fur Tax Committee,
New York, N. Y.

DEAR MR. HAAS: In answer to your inquiry, we believe the proposed retail tax threatens to reduce the volume of the entire fur industry to such an extent as to cause severe losses to many of its members.

We support the Government in its defense program and believe the fur industry should carry its share of the burden. To achieve this end, we support a tax at the point of dressing which we feel will prove more desirable for the Government, the fur industry, and the public.

Very truly yours,

KRUSKAL & KRUSKAL, INC.,
By J. W. KRUSKAL, *President.*

Excerpt from a letter reproduced in an advertisement in the Women's Wear Daily, Friday, July 25, 1941 (on letterhead of executive offices, National Retail Dry Goods Association, 101 West Thirty-first Street, New York), addressed to Retail Manufacturing Furriers Association, 16 East Fiftieth Street, New York, N. Y., signed by Lew Hahn:

When the new revenue bill goes to the Senate Finance Committee our taxation chairman will unquestionably address himself to the fur tax. I am sure that retailers generally will agree that the logical place for a fur tax is where the fewest possible number of business concerns will be obliged to serve as tax collectors. That would be, of course, at the point of the final dressing of the pelt.

Excerpt from an advertisement in Women's Wear Daily, Friday, August 1, 1941:

WHAT THE PROPOSED RETAIL TAX MEANS TO EVERY FURRIER

Collecting 10 percent above the price of every fur garment in addition to existing sales taxes.

Fur-trimmed garments of which fur is the component part of less value will escape taxation and therefore compete unfairly with fur garments.

Additional bookkeeping, reports, and inspections.

Unethical competition from unscrupulous wholesalers and retailers.

An increase in competition from home shops and tailors who are not established firms.

A decrease in sales of furs which will not only shrink your volume and profit, but the volume of the entire industry.

Loss of customer good will because consumer will inadvertently feel animosity at your collecting the tax.

A large portion of the gross revenue collected will be dissipated by the high cost of collecting, litigation, and policing necessary on the part of the Government and will never reach the Treasury.

Collecting the tax on repairs which would entail complete itemizing of all materials to the customer.

Payment of the tax to the Government each month even if garment is unpaid for by the customer or only partly paid for.

BRIEF SUBMITTED IN BEHALF OF THE NATION-WIDE RETAIL FUR INDUSTRY BY CHARLES GOLD, GENERAL COUNSEL FOR RETAIL MANUFACTURING FURRIERS OF AMERICA, INC.

THIS BRIEF PROPOSES THAT THE TAX ON FUR BE PLACED AT THE POINT OF DRESSING

Prefatory statement.—This brief is submitted in support of certain proposals made by the proponent for the placing of any projected tax on furs at the point of dressing.

The retail fur industry is fully aware of the Government's urgent need for additional revenue in connection with the proposed emergency defense measures. The retail fur industry furthermore is of the opinion that the entire fur industry is able to contribute to the country's great need for additional funds.

It is respectfully submitted, however, that the tax should be so imposed as to work as little hardship on the consumer and the fur industry or any portion thereof as may be possible.

This brief sets forth a plan by which the tax can be spread over the whole industry without imposing too great a burden on any one branch thereof.

The proponent, an incorporated trade association, has affiliated with it 19 incorporated retail furrier associations, and a large number of individual retail furriers, in various sections of the country. The names of the affiliated associations follow:

Greater New York Retail Furriers Association, Inc.
Chicago Retail Mfg. Furriers' Association.
Milwaukee Retail Mfg. Furriers' Association.
Master Furriers' Guild of Washington, D. C.
Furriers' Association of Baltimore, Md.
Iowa-Nebraska Retail Furriers' Association.

State of N. J. Retail Mfg. Furriers' Association.
Indiana Sales Retail Fur Merchants' Association.
Manufacturing Furriers' Association of Pittsburg.
Buffalo Fur Merchants' Association.
Albany Retail Furriers' Association.
Furriers' Guild of Hartford.
Retail Fur Merchants of New Haven.
Colorado Springs Retail Fur Association.
Southern California Retail Fur Merchants' Association.
Furriers' Guild of Boston.
Greater Cincinnati Retail Furriers' Association.
Cleveland Retail Furriers' Association.

Thus, it appears that petitioner represents the interests of the retail furriers in all sections of the country.

The proponent, in order to ascertain the opinion generally entertained by retail furriers throughout the United States, has caused certain canvasses to be made and has invited expressions of sentiment. The petitioner is now in a position to state that the entire retail fur industry clearly favors the following plan for taxing furs:

The retail fur industry is fully aware of the Government's urgent need for additional revenue, and it is in full accord with the Government's intentions to levy a tax on furs. However, the retail fur industry, mindful of its experiences and occurrences under previous taxes, urges upon the Government:

First. That the tax should not be imposed at the point of retail sale.

Second. That the tax should be imposed at the point of dressing of fur skins.

Reason A.—In view of the limited revenue to be derived from a tax at the point of retail sale, policing and collecting the tax from possibly more than 70,000 outlets would prove an insuperable problem and most costly to the Government.

There are presently more than 18,000 establishments which sell furs directly to the consumer. In addition, there are more than 24,000 establishments which are potential outlets of furs to the consumer.

There are between 70,000 and 75,000 actual and potential retail outlets of furs to the consumer consisting of:

Wholesale fur manufacturers practically all of whom engage in direct-to-consumer business	2,290
Wholesale manufacturers of fur-trimmed cloth coats, many of whom do a large volume of direct-to-consumer business	4,400
Women's read-to-wear shops—many presently retailers of furs—all of them potential retailers of furs	25,820
Department stores	4,074
Retail furriers (exclusive of specialty stores)	4,918
Small ware stores, millinery stores, and others selling furs or articles made of or containing	30,000
Total	41,502

The foregoing takes into account tailor-furriers who make new garments and remodel old ones; home-furriers, most of whom have no established or discernible place of business and who remodel and make furs for the consumer. Many of this latter group studiously avoid disclosing their activities as they are union members and face the loss of their union cards if found to be engaged in their own business.

It is reasonable to state that furred millinery and furred gloves and other fur-trimmed novelties are being sold each year in upward of 25,000 such establishments.

In addition to these there is on the fringe of the retail fur industry a group of racketeering clothiers and furriers who employ prepossessing women as "fronts" to insert in newspapers "personal ads" purporting to be from women who "must sacrifice wardrobe, only slightly worn, at a mere fraction of the purchase price.

The latter group would find a business stimulating and further encouragement for their activities in a retail-sales tax, as they would be able to offer additional inducements, while enlarging in fact on their fraud of the public by pretending to their innocent customers that the sales were not taxable as the furs were second hand.

Needless to say, home furriers and racketeering furriers, though they are not to be classed together, offer very unwholesome and in almost all instances unfair and unethical competition to the legitimate fur establishment. This competition would undoubtedly become even more unfair were the tax placed at the point of retail sale.

It must appear quite clearly that finding many of these outlets, not to speak of policing, examining, and collecting a tax from them, would be nearly impossible and very costly to the Government.

In short, if the tax were levied at the point of retail sale, the Government would be confronted with the tremendously difficult task of policing and collecting from possibly 42,000 recognizable direct-to-consumer fur outlets and many thousands of tailor furriers and home furriers.

As to the cost of enforcing a tax at the point of retail sale, it may be pointed out that the Treasury Department conceded during the last excise tax (1932–38) which was payable by the manufacturer of the fur article that enforcement was so difficult and the cost so high as to make the tax unsound.

In fact, these two factors and certain problems of interpretation led to the repeal of the tax. (See report of House Ways and Means Committee, No. 1860, dated March 1, 1938.)

Reason B.—A tax at the point of retail sale may offer temptations to violate the law to consumers and merchants (wholesale manufacturers, jobbers, and retailers) alike.

While the fur excise tax was in effect (1932–38) it was alleged and in many cases established that numerous wholesalers and retailers of furs omitted to pay the tax.

This memorandum will neither discourse on the reasons, philosophic and psychologic, which explain these failures to pay the tax, nor will it endeavor any extenuation thereof. Suffice it to say that in some instances the temptation to pocket the tax was too great. In other instances consumers, sensing or knowing the financial embarrassment of sorely pressed merchants, induced them to engage in cash, unrecorded transactions free of tax. In some cases the merchant could not, because of poor production equipment or management, continue in business unless he compromised his honesty and conscience and pocketed the tax.

Regardless of what prompted the evasion of tax, the Government was the loser thereby, and law-abiding merchants found it more difficult daily to compete and to continue in business.

Almost all wholesale fur manufacturers are engaged in the direct-to-consumer business. In many instances during the last tax some wholesalers, to obtain more direct-to-consumer business, held out the promise of a wholesale price and the illegal lure of a tax-free transaction which was consummated by an unrecorded all-cash transaction.

It is self-evident that the merchant who charges, collects, and pays to the Government a tax cannot compete against the merchant who waives the tax or who pockets a collected tax.

That these things occurred under the old tax is proof sufficient that they would reoccur under a new similar tax.

All legitimate retail furriers are especially anxious to avoid the repetition of these destructive practices in the future. A legitimate merchant has no means of competing against such practices.

These could be avoided by use of proponent's proposal to tax at the "point of dressing." The inducement to the unscrupulous customers and merchants to avoid the tax would not be present.

Reason C.—A tax at the point of dressing lessens the likelihood of income-tax fraud.

The Department will readily recognize that under a retail sales tax the unscrupulous merchant who neglects or omits to pay his fur tax, either with or without the connivance of his customers, will surely not include such transactions in his income-tax report.

Thus, the Government likewise would sustain a loss in respect of such firm's income taxes (corporate and individual).

Reason D.—A tax at the point of retail sale would result in numerous inequities which should be avoided.

In addition to the objections inherent in the foregoing arguments, the following should be given consideration:

(*a*) A tax at the point of retail sales places the wholesaler who sells at retail at an advantage over the custom furrier.

(*b*) Should the law provide (as in the past) certain exemptions for fur-trimmed cloth coats, the inexpensive fur coats would be at a disadvantage.

Under the previous law, where a fur trimming was less valuable than the skeleton cloth coat, the transaction was nontaxable. Thus it frequently happened that a $60 or $70 fur collar was used to trim a $75 cloth skeleton and the entire garment was exempt. Nevertheless a fur coat wholesaling for $89 was taxed.

(*c*) Each year a retailer, however small, enters into hundreds of transactions ranging from a few dollars upward. The larger furrier engages in thousands of such transactions. It would impose untold hardships upon them to require that they maintain detailed records for tax purposes, all of which could be avoided by a tax at the point of dressing.

(*d*) Certain possible regulations would impose great hardships upon retailers

The Revenue Department in the past required a tax to be paid on repairs and alterations of furs on the whole charge therefor unless the customer was given an itemized bill showing the number of skins used, the charge for each, and the charge for labor.

The Department might require this once again under the new law. It is impossible to portray adequately the hardship resulting from such a regulation.

To enumerate the number of skins used invites lengthy discussions on the charge for labor and the charge per skin.

To omit the enumeration of skins from the bill would subject the furrier to the payment of a tax on the whole bill.

This too could readily be avoided by the use of the proponent's plan.

The retail fur industry urges that the tax be at the point of dressing

The tax plan would be as follows:

1. The tax would be 10 percent on the value or of the skin owners' cost for the skins, inclusive of dressing charges. If deemed necessary by the Government this tax might even be made 10 percent, to insure reaching thereby the quota on furs suggested by the Treasury Department.

2. The owner of the skins would be required to deliver to the dresser (together with the skins) an affidavit of valuation in duplicate.

3. The dresser would forward periodically to the Internal Revenue Department the original valuation affidavits, together with a statement of charges for dressing of all skins and a check for the payment of taxes collected by him from the skin owner.

This plan is submitted by the retail fur industry as the most logical taxation plan for the following reasons:

Reason 1.—Policing and collecting the tax under this plan would be quite simple, as there are only 111 fur dressers.

At this point it might be advisable to direct attention to the fact that all fur articles and garments are made of dressed furs. The dressed fur skins find their way into the finished garments and other articles made of or trimmed with fur in the following manner:

The fur skin is first trapped and then sold to a collector of skins, who ships it, along with others, to the fur auction or to the skin dealer, who in turn sells these skins to the wholesale fur manufacturer or to the custom retailer. The retailer deals directly with the consumer, whereas the wholesale manufacturer deals with the jobber of furs, the retail storekeeper, and the consumer.

However, before these skins can be manufactured into complete garments or used in other articles or as trimmings they must be dressed.

Statistics regarding the dressing of fur skins:

1. Seventy percent of all skins are dressed for wholesale manufacturers.
2. Twenty-five percent are dressed for skin merchants.
3. Five percent are dressed for custom retailers.
4. All these skins are dressed for less than 1,500 firms.
5. All these skins are dressed by 111 fur-dressing firms.
6. Eighty percent of the fur-dressing business is done by firms located within 25 miles of the heart of New York City.
7. Ten percent of the furs are dressed in the vicinity of Chicago, and the balance of less than 10 percent in other portions of the United States.

It immediately becomes apparent that collecting a tax on fur skins which must pass through 111 establishments for dressing, at the request of less than

1,500 skin owners, is quite simple and in direct contrast to the gigantic problem of ascertaining the identities of the tens of thousands of retail outlets (of manufactured furs), policing them, examining them, and collecting the tax from them.

The simplicity of collecting the tax at the point-of-dressing plan is further emphasized by the fact that 83 percent of all skins dressed are dressed within 25 miles of the New York City fur market, and by the further fact that over 90 percent of all skins dressed are dressed by less than 25 fur dressers.

The close cooperation of the Internal Revenue Department with these 25 fur dressers would insure the collection of over 90 percent of the tax. Insofar as the balance of the skins dressed at the other 86 plants (consisting of about 10 percent of all skins dressed) are concerned there could be no evasion worth mentioning.

Reason II.—Administration problems and costs would be at a minimum.

The ease of collecting a tax at the point dressing of furs is so manifest as to require but little discussion. Checking the books and records of the 1,500 skin owners, all identified, is both simple and inexpensive.

This is especially so when it is borne in mind that the large bulk of the dressing processes is done for a small group of wholesale manufacturers and skin dealers.

Contrast to the economy and ease of administration of this proposed tax the great problems and the great expense inherent in the proposed retail-sales tax, which would require the examination of a maze of transactions, schemes, and tax-evasion devices engaged in by the unscrupulous persons who might be found in any and all branches of all of the fur industries.

Reason III.—A tax at the point of dressing of fur skins would bring a larger sum of money to the Government than a retail-sales tax (or a manufacturers' sales tax).

The total value of skins dressed, inclusive of dressing charges, is $200,000,000. The Government would obtain, by imposing a 10 percent tax at this point, the sum of $20,000,000. Very little expense would be required for the enforcement of the said tax, thus leaving the Government practically the whole amount received.

A tax upon the retail sale or manufacturers' sale would bring considerably less than $20,000,000, as evidenced by the experience of the Government under the last tax.

During the period that the last fur excise tax was in effect (1932–38) the Government never obtained in any one year even as much as $8,000,000. The tax at that time was on the sale by the manufacturer of an article made of fur. The Government received the following revenues annually from the said tax:

Year:	*Amount*
1932–33	$7,546,275
1933–34	7,655,000
1934–35	2,675,732
1935–36	3,321,057
1936–37	5,919,329
1937–38	5,368,398

Reason IV.—A tax at the point of dressing of fur skins is equitable, in that it secures participation from all branches of the fur industry.

If the tax were placed at the point of dressing, all persons engaged in the fur industry from the skin dealer to the retailer, and every user of fur as trimming in any industry, such as gloves, millinery, slippers, coats, etc., might participate in the absorption of the tax. In other words, if at any time the detail market were not favorable, all divisions engaged in the fur industry and other fur-using industries might absorb part of the tax by making proper adjustments in their calculations to offset part of the tax item.

On the other hand, if the tax were imposed at the point of retail sale, none of the other divisions of the industry would make any contributions to this end and were the consumer demand to be weak the retailer himself would be forced to absorb this tax item by making the retail selling price sufficiently attractive so as to encourage sales.

Reason V.—The affidavits of valuation would be accurate.

The valuations furnished to the dresser would of necessity be true valuations as they would be the basis of all claims by the owner for loss by fire, theft, and more important from damage during dressing process. Furthermore checking these valuations would be a simple matter for the Government.

The skin owner's cost bills representing purchases (which are almost always made at large auction sales) could always be utilized to refute false valuations and false low valuation would result in large profits and high income taxes—less desirable to the skin dealer and manufacturer (most of whom pay income taxes in the higher brackets) than paying the proper dressing tax.

Under the most unfavorable circumstances, the Government would have no greater problem than to make a careful check of the activities of the 111 fur industries.

Reason VI.—A tax on fur skins at the point of dressing would be constitutional.

Revenue acts of the past have repeatedly utilized a processing tax or a tax at the point of processing as a means of obtaining revenue.

The Revenue Act of 1939 contains a number of so-called processing taxes. See section 2470 (a) (1) which imposes a processing tax on coconut palm and palm-kernel oils, fatty acids, etc.

In the case of *Cincinnati Soap Co.* v. *United States* (301 U. S., 308, 81 Law Ed. 1122), the Court was called upon to determine the constitutionality of the tax imposed by section 602½ (a) of the Revenue Act of 1934 which was the predecessor of section 2470 of the Revenue Act of 1939.

The Court held that the tax imposed upon the first processing of oil was a valid tax upon a manufacturing process for revenue purposes and did not violate the due-process clause of the fifth or tenth amendments.

Likewise processing taxes have been imposed upon lubricating oils, sugar, oleomargarine, and renovated butter. These taxes and taxes of a like nature have repeatedly been held to be constitutional.

The Treasury Department is too familiar with these holdings to require further enlargement on the subject.

The decision of the Supreme Court in the case of *United States* v. *Butler, et al.*, which declared unconstitutional the processing tax under the Agricultural Adjustment Act has no bearing upon the instant matter.

In the *Butler case* (297 U. S. 1), the Court held that the purpose and plan of regulating the activities of farmers was an invasion by the Federal Government of the jurisdiction of various States and thus unconstitutional.

Finding that the underlying motive of the act was illegal and that the use of moneys in the furtherance of this purpose was improper, the tax by which the moneys themselves were to be raised was likewise and for that reason only found to be unconstitutional.

Although the A. A. A. was a tax at the point of process or manufacture, nothing in either the majority or minority opinions in the *Butler case* held the tax as such to be unconstitutional.

Reason VII.—A tax at the point of dressing has proved successful in Canada.

The Canadian Government has employed a point of dressing tax on fur skins for the past 22 years with eminent success.

Furthermore, the tax in Canada was approximately the same as that recommended by proponent.

From the year 1926 to the year 1939, the tax was 8 percent. It was in 1939 that the tax was raised to 12 percent. Section 86, subsection 4a of the Special War Revenue Act reads as follows:

"There shall be imposed, levied, and collected a consumption or sales tax of 12 percent upon the current market value of all furs dressed and/or dyed in Canada payable by the dresser or dyer at the time of delivery by him."

Surely the success of the Canadian fur dressing tax should constitute conclusive proof of the efficacy of this procedure.

Proponent for the reasons set forth above urges:

First. That the tax should not be imposed at the point of retail sale.

Second. That the tax should be imposed on the dressing of fur skins.

Respectfully submitted.

CHARLES GOLD,

General Counsel for Retail Manufacturing Furriers of America, Inc.

WHY A TAX ON FUR AT POINT-OF-SALE IS UNFAIR TO CONSUMER, WILL INJURE THE INDUSTRY AND BE COSTLY TO ADMINISTER; WHEREAS: AN ALTERNATIVE TAX, AT POINT-OF-DRESSING, WOULD YIELD MORE REVENUE TO THE GOVERNMENT WITHOUT HARMFUL EFFECT UPON THE CONSUMER OR THE INDUSTRY

A proposal, submitted by 3,000 members of the fur industry, and unique in that here an industry virtually volunteers to be subject to taxation.

The more than 3,000 members of the retail fur industry, represented by the undersigned, are aware of the existing national emergency, acknowledge the necessity for special taxation, and want to contribute their share.

To this end, on behalf of the fur industry, they propose that a tax be levied on the industry which will be absorbed by it and not assessed directly against the consumer.

Such a tax can be set up if levied at the point of dressing the fur skins.

And, in the opinion of 3,000 fur men, this is a more effective alternative than the now existing proposal to tax at point of retail sale, for these reasons:

1. It will benefit the consumer.
2. It will be simpler to police and collect.
3. It will cost less to police and collect.
4. It will result in more revenue to the Government.
5. It will apply equally to all fur users.
6. It will insure accurate valuations.
7. It will be in the best interests of labor, defense, and the industry.
8. It has worked in Canada and will work here.

1. THE CONSUMER WILL BE BENEFITED BY THE TAX ON FURS IF IT IS IMPOSED AT POINT OF DRESSING INSTEAD OF AT POINT OF SALES

This is the confirmed opinion of more than 3,000 qualified members of the fur industry.

There was a time when furs were exclusively the privilege and raiment of the rich. This is no longer true.

Today, the fur industry could not exist if it had to depend on the rich alone for its business.

Today, it is the average American woman, the woman of modest means, who does the bulk of the fur buying.

This is obviously as it should be.

The wealthy woman, who lives in comfortable homes and who spends her outdoor moments in heated cars, actually has no need of a fur coat from the standpoint of basic necessity. The value of furs to her is one of prestige, of the accenting of beauty, and the enjoyment of lavish wardrobes.

But to the working girl, the housewife, the student, a fur coat is not a luxury but a very basic necessity. It is she who must walk for blocks in driving rain or pelting snow to reach the bus or the train or the streetcar she can afford to use. It is a plain matter of keeping warm, of protecting health, so that the daily job of earning a living or caring for those who do or preparing to do so can go on during the months when bad weather complicates living.

The fur industry, sensing its social obligation, recognizes the right of the woman of poor or modest means to buy fur garments as a basic and prior right over that of all other consumers.

It is she whom the industry increasingly seeks to serve.

And in thus serving her, it serves itself—a perfect case of enlightened self-interest.

Now, if, as is proposed, the cost of a fur garment is raised by 10 percent by the imposition of a point-of-sale tax, the average American woman, whom we have seen to be the one who needs the comfort, warmth, protection, and beauty of furs in her life, is sure to suffer.

A 10-percent increase may mean that she can no longer afford to have a fur coat at all.

She, who needs it most, may have to be satisfied with a cloth coat which gives her neither the service nor protection of a fur garment.

The retail fur industry wants to make it possible for the average American woman to continue to own and enjoy furs.

It can only do this with the cooperation of the Government in securing a tax fair to consumer, industry, and Government alike.

The proposed 10-percent tax at point of retail sale is not fair. It places the entire burden on the consumer.

The tax at point of dressing is fair. For, with the tax placed here, the entire fur industry from raw fur source to retailer can and will bear a portion of the tax load in order to lighten the burden on the consumer and thus keep demand for furs high, business active, profits and subsequent tax gains to the Government assured.

2. A TAX AT POINT OF DRESSING CAN BE POLICED AND COLLECTED EFFICIENTLY AND SIMPLY

Why? Because it's the bottleneck of the industry. There are only 111 dressing plants, but there are 70,000 to 75,000 potential fur outlets for fur articles.

You can't police a huge metropolis with a village constable!

And it's impossible to keep check on 75,000 establishments without a large and expensive force of collectors, bookkeepers, clerks, inspectors, etc.

Much criticism has been leveled at bottlenecks in industry.

Yet here is one bottleneck which can serve to advantage!

Let us pause for a moment and consider what is meant by dressing a fur.

When a pelt is sold at one of the big auctions to which thousands of trappers send their furs, it is in a raw state.

Before the skin can be made into a coat it must be "cured." This is one of the jobs done by the dresser. The skin is made pliable, given toughness and wearing quality, and processed so the hairs will not shed.

Another service performed by the dresser is to dye the skin. The shade and blend is usually prescribed by the owner. The dresser does not own or deal in skins. He is merely a processor.

An undressed skin is a raw skin and one which cannot be used in manufacture.

On either side of the point of dressing, the business of getting fur from animal to coats for consumers, fans out from and into the hands of thousands of people involved in various aspects of the fur industry.

To place a tax at any other point is to create a gigantic problem.

This inefficient and unnecessary complication of admistration is one of the chief objections to the proposal for a tax at point of retail sale.

The simplicity of collecting the tax at the point of dressing is further emphasized by the fact that 80 percent of all skins are dressed within 25 miles of the New York City fur market.

Furthermore, more than 90 percent of all skins dressed are handled by less than 25 percent of the total of 111 fur dressers.

The close cooperation of the Internal Revenue Department with these 25 fur dressers would insure the collection of more than 90 percent of the potential tax.

3. COST OF COLLECTING A TAX AT THE POINT OF DRESSING WOULD BE AT A MINIMUM

One of the main advantages of the tax at point of dressing would be that it would take the impost out of the tin-cup collection class and make it a profitable and just levy.

The ease of collecting a tax at the point of dressing of furs through the existing 111 firms handling this business is obvious.

Contrast with the economy and ease of administration of the point of dressing tax the numerous problems and the great expense inherent in the proposed point of retail sale tax. This would require the examination of a maze of transactions, possible schemes, and tax-evasion devices, and a general policing of tens of thousands of retail fur outlets.

4. INCOME TO THE GOVERMENT FROM A TAX AT POINT OF DRESSING WOULD FAR EXCEED ANY OTHER TYPE OF TAX ON FURS

This point needs no support. The tax that yields the greatest revenue—and still is fair and equitable—is preferable, although still painful.

It was once said that "taxation without representation is tyranny." It is equally true that taxation without effective administration and maximum return is an abuse of serious nature.

The total value of skins dressed, inclusive of dressing charges, is $200,000,000 annually.

The Government would obtain, by imposing a 10-percent tax at the point of dressing, the sum of $20,000,000. A 10-percent tax at the point of dressing would net more than the Government is seeking.

Since so very little expense would be required for the enforcement of the point of dressing tax, the Government would receive and benefit by practically this whole amount.

A tax imposed at the point of retail sale would bring considerably less than $20,000,000, as is evidenced by the experience of the Government under the last fur tax.

During the period that the last fur excise tax was in effect (1932-38) the Government did not obtain in any 1 year even as much as $8,000,000. At that time the tax was levied on the sale by the manufacturer of an article made of fur. The Government received the following revenues annually from this tax:

Year:	*Income*	Year—Continued.	*Income*
1932-33	$7,546,275	1935-36	$3,321,057
1933-34	7,655,000	1936-37	5,919,329
1934-35	2,675,732	1937-38	5,368,398

5. A TAX AT POINT OF DRESSING WOULD INSURE EQUITABLE AND INCLUSIVE ASSESSMENT

Under the proposed point of retail sale tax, the manufacturer of cloth garments which are fur trimmed escapes assessment. Thus he will be enabled to price his fur-trimmed cloth coat at an even lower figure when he competes with the furrier in the retail field.

This is unfair and will tend to depress the fur market.

A tax at point of dressing will be collected from all users of furs, for whatever purpose.

Obviously this is both fair and democratic.

6. A TAX AT POINT OF DRESSING WOULD INSURE ACCURATE VALUATIONS BEING PLACED ON THE FURS FOR TAX PURPOSES

When the owner of a fur sends it to the dresser a certain valuation is placed on it.

This valuation is the basis for any claims which might be made later because of loss from fire, theft, or damage during the dressing process.

Obviously the owner of the fur is going to declare it at its full and accurate value. His statement of their worth, fixed at point of dressing, would then provide the Government with a fair and accurate estimate for taxation purposes.

Furthermore, checking these valuations would be a simple matter for the Government.

It would be simple because the tax-collection agency would need check only the books of the comparatively small group of 111 dressers.

Such a task is insignificant compared to the work and expense of checking these valuations individually with thousands and thousands of retailers.

The skin owner's cost bills representing purchases (which are almost always made at large auction sales) could always be utilized to refute false valuations and false low valuation would result in large profits and high income taxes—less desirable to the skin dealer and manufacturer (most of whom pay income taxes in the higher brackets) than paying the proper dressing tax.

It also follows that it is much more difficult to arrive at a fair and accurate valuation at point of retail sale. This is because so many variables have entered into the picture. A finished coat can be priced anywhere within a considerable range. But a skin has a definite price tag.

Taking the valuation of the furs at point of dressing is the only way to secure a fair and accurate valuation.

This is not true of the proposal to tax at point of retail sale.

7. A TAX AT POINT OF DRESSING WOULD BE IN THE BEST INTERESTS OF DEFENSE, LABOR, AND THE INDUSTRY

The fur industry is a highly specialized field.

Trappers, fur fabricators, dyers, and dressers cannot apply their experience in other fields.

This means industrial maladjustment, unemployment, and a decrease in national production if an unfair tax jeopardizes the fur industry.

Nor can the skilled workmen employed in the fur industry be classified among those whose talents can be converted to defense work.

A jeweler can use his talents in making instruments for flying or navigation. A machinist can be converted into an expert airplane worker.

But a breeder, trapper, or skin dresser operates in such a specialized field that their experience and skill cannot be diverted into other channels.

In connection with this picture, it should also be noted that the fur industry indirectly contributes to the defense picture by freeing materials vital to preparedness. Huge amounts of wool, leather, cotton, and other fabrics are made available for uniforms and other purposes as a result.

For these additional reasons, then, it is important that a tax on the fur industry be one which does not threaten its very existence.

This means it should be a tax at point of dressing.

8. A TAX AT POINT OF DRESSING HAS ALREADY PROVEN ITSELF SUCCESSFUL IN CANADA

It is only common sense to profit by somebody else's experience.

The proposal to tax furs at point of dressing works.

A tax at point of retail sale is an experiment and might be a failure.

In fact the former excise tax on furs—repealed in 1938 because it was impractical and too costly to administer—revealed the same weakness in structure that would occur if an attempt were made to tax furs at point of retail sale.

The oil tax, collected from fur manufacturers, proved unsound because there were too many outlets to police and collect from.

Yet a tax at point of retail sale would expand even that unwieldy set-up.

Let us take a look at the point of dressing tax employed by the Canadian Government.

It is approximately identical with the one herein recommended.

From 1926 to 1929 the Canadian tax was 8 percent. In 1939 it was raised to 12 percent. Section 86 of the special War Revenue Act reads as follows: "There shall be imposed, levied, and collected a consumption or sales tax of 12 percent upon the current market value of all furs dressed and/or dyed in Canada, payable by the dresser or dyer at the time of delivery by him."

This plan has proved eminently successful. It has yielded revenue beyond expectation. It has been economical to administer. It has worked no injustice to consumer or industry.

The success of the Canadian fur dressing constitutes conclusive proof of the foregoing reasons in favor of a tax at point of dressing.

RETAIL MANUFACTURING FURRIERS OF AMERICA, INC.,
FUR TAX COMMITTEE,

(Signed) JACK FINE, *Chairman, Baltimore, Md.*
P. W. WILDERSON, *Co-chairman, Des Moines, Iowa.*
LOUIS KROLL, *Treasurer, New York City.*

The foregoing subscribed to by leading associations, such as the National Fox Breeders' Association, leading firms and individuals within the entire fur industry, and such interested organizations as the National Retail Dry Goods Association.

TAX COMMITTEE, RETAIL MANUFACTURING FURRIERS OF AMERICA, INC.,
New York, N. Y., August 19, 1941.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: Yesterday I promised that I would present to you additional data on the question of imported furs.

At the present time, there is a tariff on the importation of dressed skins, paragraph 1519 (a). This duty is 25 percent ad valorem. There is no tax on undressed (raw) furs.

Clearly, the importer would not be inclined to import dressed skins in preference to undressed skins for the simple reason that he would be compelled to pay a 25-percent duty. As to the imported undressed skins, they would pay their share of the tax when dressed or cured, under our proposal.

At this very moment the Government has in its employ a number of experts who determine the values of imported dressed fur in order to insure the collection of the full duty.

We believe that placing the fur tax at the point of dressing will benefit the Government—by adequate taxes—and the consumers—by holding down prices—and the fur workers—by removing the threat to their employment—and our industry—to whom you gentlemen are looking for tax revenue in this emergency.

Although I fear that the pressure of time upon your committee does not permit it, I do wish you and your colleague Senators would have an expression from a Canadian official of their satisfaction with the more than 22-year successful operation of their fur tax—operated on the basis we now recommend.

Respectfully yours,

CHARLES GOLD, *General Counsel.*

The CHAIRMAN. Mr. Zachry.

STATEMENT OF A. L. ZACHRY, ATLANTA, GA., PRESIDENT, ATLANTA RETAIL MERCHANTS ASSOCIATION

Mr. ZACHRY. Mr. Chairman and gentlemen of the committee, my name is A. L. Zachry. I am president of the Atlanta Retail Merchants Association and a director of the Georgia Mercantile Association. I am appearing here in behalf of the Georgia retailers.

I shall confine my remarks to the retailers' excise taxes.

I shall present three reasons why the proposed taxes on jewelry, furs, and toilet preparations should be imposed at the level of manufacturing rather than at the retail level.

Let me say at once that retail merchants are completely willing to pay their share of the national-defense effort. But the proposed retail excise taxes will not be paid by the retailer. He cannot afford to absorb a 10-percent tax, because he does not make anywhere near that much net profit. He must, therefore, pass the tax along to the public.

The three reasons are: First, an excise tax at the manufacturing level will be easier to administer and will offer less chance for evasion. Second, they will be cheaper to collect. Third, the burden of determining the exact amount of the tax is tremendously easier for manufacturers than for retailers.

I should like to discuss each of these reasons briefly.

1. The tax at the manufacturing level is easier to administer. Obviously, there are fewer manufacturers producing these lines than there are retailers selling them, and there will be fewer returns to audit. More careful auditing will prevent evasion, and the more efficient collection will undoubtedly yield a larger net return to the Government. Take furs, for example. You have already been told that there are more than 40,000 retail fur outlets in this country, about 1,500 fur manufacturers. To impose the fur tax at the manufacturing level would require the auditing of about 1,500 returns as compared with more than 40,000, a ratio of about 1 to 25. This example is conservative. Furs are a specialized business.

Many kinds of retail units sell jewelry and practically all of them sell toilet preparations: Department stores, drug stores, 5-and-10-cent stores, crossroads stores, wayside stands, beauty parlors, and barber shops.

Moreover, the retail store carries a tremendously larger number of different items than are made by a single manufacturer. For instance, of the large number of different items carried by such units as department stores, drug stores, and variety stores, some would be taxable and some would not. It is inevitable that many retailers, with no intention whatever of evading taxes, would fail to report the sales of tax-

able items, simply because of the sheer size of the physical job of classification. The manufacturer specializes in a few items and, therefore, could make the determination with relative ease.

2. The tax at the manufacturing level is cheaper to collect. This is closely related, of course, to the first reason. The Government is interested most of all in net revenue. That is why this is worth separating as a special reason. Mr. Sullivan, Assistant Secretary of the Treasury, in his own testimony before your committee, gave an excellent illustration which proves that the tax would be cheaper to collect at the manufacturing level than at the retail level. He said that 3,800 extra employees would be required to collect the proposed use tax on automobiles, which was expected to yield $160,000,000. He contrasted this with the gasoline tax, which yields $343,000,000 and is collected by 15 employees, and with the tobacco tax, which yields $698,000,000 and is collected by 88 employees. The contrast might not be so startling with the jewelry, fur, and toilet preparations taxes, but if you combine the evasion possibilities with collection costs, it is reasonable to suppose that a larger net revenue would come from taxes at the manufacturing level.

The cost of collecting these retail taxes from the wide variety of retail outlets would be tremendous. We are in sympathy with the fact that a certain amount of revenue must accrue from these taxes. We do not believe that the net result of a retail tax on these items will be as great as a tax placed at the manufacturing level because of the excessive cost of collection. We are as interested as you are, in being sure that the money raised by any such tax will go primarily to defense projects and that too much of it will not be absorbed by administrative costs.

3. The determination of the tax is easy for manufacturers and may be impossible for retailers. The third and last reason can be illustrated best by simple illustration. Suppose that a retailer is selling some costume jewelry, say a necklace, for 25 cents. He cannot collect 2½ cents as tax. He must either collect 2 cents or 3 cents. If he collects only 2 cents, he must himself absorb a portion of the tax, a half-cent, which is 2 percent of the selling price, or approximately his net profit. If he collects 3 cents, there will be plenty of customers to complain and accuse him of gouging them. But, under the bill, as passed by the House, the retailer would be compelled to take one course or the other. On the other hand, the manufacturer sells these necklaces by the dozen. The retailer will probably pay somewhere between $1.80 and $2.40 a dozen for these necklaces which he retails for 25 cents each. You can readily see that it will be a simple matter for the manufacturer to compute and remit the exact tax on any such amount.

These examples could be cited without end. It would be particularly illuminating if you would take a personal trip through the toilet preparations departments of department stores, variety stores, or drug stores. But since the principle should now be clear, I will not take up your time with more examples.

You will hear, of course, that since the manufacturer's price is inevitably lower than the retail price, the Government's revenue would be less from a tax at the manufacturing level. That depends in part upon the rate of the tax imposed.

Nevertheless, I wish to emphasize again that even at the same rate the net revenue to the Government will be greater, after taking into consideration the simplicity of administration and audit, the cheapness of collection, and the questions involved in determining the exact amount of the tax.

For these reasons, I urge you to change the House bill by placing the jewelry, fur, and toilet preparations taxes at the manufacturing level.

The CHAIRMAN. Any questions?

(No response.)

The CHAIRMAN. There are no other witnesses here this afternoon. We will recess until 10 o'clock tomorrow morning.

(Whereupon, at 4:25 p. m., a recess was taken until 10 a. m., Tuesday, August 19, 1941.)

REVENUE ACT OF 1941

AUGUST 19, 1941

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order.

The first witness this morning is Mr. Livingston W. Houston, of Troy, N. Y.

STATEMENT OF LIVINGSTON W. HOUSTON, TROY, N. Y., CHAIRMAN, COMMITTEE ON GOVERNMENT FINANCE, NATIONAL ASSOCIATION OF MANUFACTURERS

The CHAIRMAN. You are appearing for the Committee on Government Finance, of which you are chairman, of the National Association of Manufacturers?

Mr. HOUSTON. That is correct, sir.

The CHAIRMAN. You may proceed.

Mr. HOUSTON. My name is Livingston W. Houston, Troy, N. Y.

In order to help conserve time we have prepared a number of charts which will be presented to you as I proceed. I think it will be helpful.

The National Association of Manufacturers, through its committee on Government finance, has carefully studied the major task of financing the tremendous cost of national defense. The association has a membership of about 8,000 active companies, which employ about two-thirds of the total number of those gainfully employed in manufacturing industry. It is also probable that most of the companies now producing for national defense are represented in our association.

May we assure your committee that in addition to considering its responsibilities to productive enterprise specifically, the association has been constantly mindful in its study of the fiscal problems of Government, of the general good of the entire Nation, and the need to subordinate all private interests to our major task of building an unsurpassed bulwark of defensive strength.

A financial program to meet the present defense needs should be so planned that a substantial portion of Government costs be paid from current receipts, that a maximum number of citizens contribute their fair share, that a general rise in prices be avoided as far as possible, that post-defense adjustments be not made unnecessarily difficult, and that the maximum defense effort be not curtailed.

We, therefore, suggest that the fiscal program required to place the finances of the Government on a sound basis during this emergency cover the following four main points:

1. The establishment of most stringent economy in the ordinary expenditures of Government through savings in all nonessential items of nondefense spending.

2. Securing additional revenue from taxes in a form and by rates which will neither interfere with national productivity, dry up the sources of Government revenue, or intensify the difficulty of post-defense adjustments.

3. The correction of unsound features of the tax structure whose deterrent effects have been distorted by recent increases in rates and whose inequities will be further amplified by proposed increases in rates now under consideration.

4. The required remainder of funds not secured through economies in spending and by additional taxes should be met by borrowing, designed in such manner that it be subscribed to as far as possible by individual investors out of current earnings.

Critical need for Government economy.—It does not seem just for Congress to consider tremendous new tax burdens without taking prompt and decisive action to eliminate nonessential Government spending. (See chart No. 1.) We urge Congress at this time, when it is demanding great sacrifices from the people, to slash every possible dollar of nonessential spending.

We feel Congress may well approach today's nonmilitary spending as any good business manager approaches his budget in times of emergency. The new items added to fundamental costs are those which should be examined first in seeking to reduce over-all expenses. In the last decade Federal civil spending has expanded over 100 percent. (See chart No. 2.) An item-by-item examination of Federal costs over the period 1932–42 shows an aggregate of $3,665,197,000 of added nonmilitary expenditures in 114 specific categories.

These added costs are here arranged for you in a tree-like structure to symbolize the obvious need to prune Government outlays in the interest of its taxpaying citizens.

The less that is spent for nonessentials by the Government the easier will be the task of your committee in its search for required revenue. Economy ranks first as a means of securing funds to finance today's national emergency.

A healthy tax burden.—Earlier this year and entirely independent of recommendations of the Treasury Department and Congress, the association approved the raising of three and one-half billion dollars additional revenue through taxation in the current fiscal year. In reaching this conclusion, we were guided by the principle that the Government should impose the greatest tax burden possible without disrupting productive enterprise and the defense efforts of the Nation. (See chart No. 3.)

The maximum amount of taxes which may be imposed without harmful effect to a Nation cannot be determined with certainty in advance. But there is some evidence to show that only about one-fourth of the national income can be continually diverted to Government without harmful results to the Nation. For example, the available data on the ratio of taxes to national income in France, Germany, and England shows that they have rather consistently maintained about this 25-percent ratio.

We call your attention to this chart showing the amount of Federal taxes required to attain a 25-percent ration of all taxes—Federal, State, and local—to various assumed levels of national income. For example, with national income at its present level of about $85,000,000,000, and taking into consideration an estimated eight and one-half billion dollars of State and local taxes which must be paid, Federal taxes of twelve and three-fourths billion dollars can be imposed within the 25-percent ratio.

On June 1 the Treasury estimated that the total receipts of the Federal Government for the current fiscal year 1942 would be slightly over $10,000,000,000, under the present law. To attain a 25-percent ratio of all United States taxes to the current $85,000,000,000 level of national income, there remains an additional 2¾ billion dollars to be collected from new taxes in the current fiscal year. The Treasury Department's estimate of the revenue to be collected during the 1942 fiscal year from the new tax bill is almost a billion dollars less than this amount of 2¾ billion dollars, but there is a possibility that these revenue estimates may be understated in the light of the rapidly rising trend of national income.

Where present taxes fall.—A careful examination of the sources of Federal revenue leads to the inevitable conclusion that corporations and a comparatively small group of individual taxpayers have been depended on to carry the major share of record-breaking tax loads. (See chart No. 4.)

Corporations have assumed their full share of the increased tax burden of recent years. The corporate form of business enterprise has become the chief source of Federal revenues, as well as a major source of income to individuals in the form of dividends, salaries, and wages. In 1933 the corporation-income, excess-profits, and capital-stock taxes brought in 19.8 percent of the total receipts of the Federal Government. By 1936 this proportion had grown to 21.4 percent, and corporations are now being counted upon to contribute the largest portion of this year's receipts, with 31.1 percent of the total. Corporations are also subject to State and local taxation equal on the average to more than a third of the net profits before Federal taxes apply.

The present individual income-tax structure is erected on a very small base, taking in only about one-sixth of all possible taxpaying units. (See chart No. 5.) As the need for revenue increased with expanded Government activities, the relatively few have borne greater and greater tax burdens. Tax act after tax act has imposed heavier rates, so that the schedule proposed by the bill now under consideration would be appreciably higher than in the World War period. We have skimmed most of the tax cream from the fairly well-off income groups.

New sources of tax revenue needed.—A calm appraisal of the long-used tax reservoirs finds them drained fairly dry. Sheer necessity should now force the Nation to look for new tax sources. While moderate increases in some of the present taxes may be in order, we have reached the conclusion that the additional revenue required by the Government to finance the defense program may be most easily and fairly achieved through—

1. Some increase in the existing rate upon normal corporate income;
2. An increase in the present 4-percent rate on individual normal income;

3. A broadening of the tax base through a decrease in the individual income-tax exemptions and credits; and

4. A form of general sales tax.

As representatives of industry we are pleased to express our acceptance of a heavier rate upon the normal income of corporations even though, under the proposed new rates, almost one-third of such normal earnings will be handed over to the Federal Government.

In these days of heavy taxes on business earnings, it is important to realize that profits seldom exist entirely in the form of cash. Quite frequently, a very large proportion of profits may be tied up in the form of receivables, inventories, or capital accounts and are not available in cash form. This is particularly true with many companies at the present time because of the tremendous expansion in production due to the defense program. Under such conditions, Congress should consider that many companies may encounter a very serious problem in trying to provide the cash with which to pay present heavy profits taxes.

A very serious consequence of unduly heavy taxation of corporation is the depletion of cash surplus or reserves which may make it very difficult, if not impossible, to live through any prolonged post-defense depression which is almost sure to come.

The entire amount of the combined net income of all profitable corporations in the United States during the present year is estimated to be $15,000,000,000 before the application of anticipated normal and excess-profits taxes of approximately $4,000,000,000. (See chart No. 6.) If the practice of past years continue, more than 70 percent of this aggregate net income will be distributed as dividends during the coming year leaving only some $3,000,000,000 out of a great business of probably more than $150,000,000,000 in the hands of corporations for necessary expansion and for a cushion against the hardships of the post-defense period. This slim margin should be carefully protected in the general interest of the entire Nation, and is a main reason why we urge no increased taxation of so-called excess profits at this time. Congress may well consider some special incentive to business organizations to stimulate the building of reserves to be used to cushion the coming post-defense emergency.

Also, it must be appreciated that the taxation of income in the hands of a corporation is not the final time it is taxed, but the same income is also subject to both the normal tax and surtaxes when received by the individual owners of the corporations.

Under existing conditions ability to pay is rapidly being shifted from corporations to individuals. This is an important reason for broadening the individual tax base. The need for revenue is so great that the great mass of people in the lower brackets must be called upon to contribute their share of needed taxes. Corporations and those in the upper brackets should pay their full share, but their ability to carry additional tax loads is comparatively limited.

Reliable analysis of the national income shows that 75 percent of all incomes received are in the hands of those with incomes of less than $5,000, which are relatively untouched by Federal taxation. (See chart No. 7.) This great group of individuals also are the purchasers of the great bulk of goods consumed in the country and must be considered first in any contemplated check of inflation. The real danger of price inflation lies in increasing tremendously the money in the

hands of this great section of the public in relation to a limited supply of goods.

This is no plea to relieve the well to do from their just taxation. It is merely a recitation of the facts in regard to the limited taxpaying ability of corporations and those with better-than-average earnings. A very substantial part of large incomes now goes into Government coffers. There is general acceptance in and out of Government that present heavy rates on the upper brackets have long since passed the point of diminishing returns.

We recognize that through hidden taxes the average person is already contributing a sizable percentage of his income to Government and we would not here advocate any increase in this present tax burden if the tremendous sums required by national defense could be soundly raised without calling for sacrifice on the part of every person in the United States. (See chart No. 7a.) A relatively small contribution from the great number of average Americans will help produce the great additional tax revenue the armament program demands, and at the same time the people will have a better appreciation of how the Government requires their support.

A sounder tax bill.—The tax bill now before you may be substantially improved in two major ways:

1. By a broadening of the tax base and a lowering of exemptions for the purpose of the normal tax upon individual incomes. (See chart No. 8.)

2. By the enactment of a general sales tax as a major source of Federal revenue and as an effective means of spreading the cost of national defense over the great body of our people.

We commend the retention in the new tax bill of the two yardsticks for measurement of excess-profits taxes. This optional method is required by the basically unsound nature of excess-profits taxation in its application to our intricate and sensitive structure of business. The excess-profits tax should aim at profits derived from the defense program. It should not be used as a vehicle of business control of social reform.

Although we approve the suggested increase to 30 percent of the corporation normal tax in this emergency, we are of the opinion that the present excess-profits-tax rates are now about as high as they should go. As a matter of basic principle, we consider the proposed method of computing excess-profits taxes without giving effect to normal taxes as unsound, because this method will consider as "excess" earnings which are actually normal. The proposed new method also is a subterfuge by which the effective rates of tax upon so-called excess earnings are increased.

In the present intensive search for Government revenue matters of long-standing tax inequity have received scant attention. However, we ask leave to submit for the record a list of suggested amendments to the law which will be constructive and in the long run tend to bring in a greater amount of revenue to the Government.

Among the most unsound features of our corporate-tax structure are the capital-stock and related declared-value excess-profits tax. They do not belong in an equitable tax structure under any circumstances. As a matter of common fairness, if they are not repealed, and particularly in view of the proposed increase in the capital-stock tax, provision should be made to allow an annual declaration of stock value.

The CHAIRMAN. Mr. Hester, will you give your name to the reporter?

STATEMENT OF CLINTON M. HESTER, WASHINGTON, D. C., WASHINGTON COUNSEL, UNITED STATES BREWERS' ASSOCIATION

Mr. HESTER. My name is Clinton M. Hester, Washington, D. C. I am the Washington counsel for the United States Brewers' Association, with headquarters at 21 East Fortieth Street, New York City. This association has been in continuous operation since 1862 and is the only national trade association representing the brewing industry. Its membership comprises about three-quarters of the industry measured on a production-volume basis.

Early this year the United States Brewers' Association selected the firm of Ford, Bacon & Davis, Inc., nationally known engineers of New York City, established in 1894, to make an economic survey of the brewing industry. As a result of this study Ford, Bacon & Davis determined that the Federal and State Governments would have received approximately $10,000,000 more in tax revenue from the brewing industry than they did receive last year had there been no increase in the excise tax on July 1, 1940. In addition, the loss in volume of beer sold following the imposition of this tax has driven many small breweries out of business.

Senator CLARK. Let me ask you, Mr. Hester, the brewing industry made no opposition to the increase in the tax in 1940, did it?

Mr. HESTER. That is right; it gladly accepted it, and found out afterward that it affected the industry seriously.

This $10,000,000 loss to Government is due to the fact that tax rates on beer have increased to the point of diminishing returns. The purpose, of course, of any increase in tax rate is to produce more tax revenue. If, by reason of increasing the tax rate on a product, the amount sold decreases to such an extent that there is no increase in tax revenue as a result, then the point of diminishing returns has been reached.

Experience indicates that the sales volume of mass consumed commodities follows the trend of national-income payments. For example, during the past 5 years there has been a close correlation between national-income payments and the volume of beer sold. In other words, in years when national-income payments rose beer sales increased, and when national-income payments declined beer sales likewise declined in approximately the same proportion.

However, this relationship of beer sales to income payments ceased with the imposition of the dollar defense tax on July 1, 1940. Since that date national-income payments have increased so that the fiscal year just ended has been 16.3 percent higher than the average of the preceding 5 years. On the other hand, during this same year beer sales lagged, and the year closed with a decrease in sales amounting to 1.4 percent below the preceding year and about 0.6 percent below the average of the preceding 5 years.

If beer sales had followed the trend of national-income payments during the fiscal year 1941 and increased 16.3 percent, as did national-income payments, there would have been sold a total of 61,164,000 barrels instead of 52,289,000 barrels which were sold.

On the basis of actual sales, the Federal and State Governments received $380,000,000 in excise taxes. This was at the rate of $6 Federal and $1.26 weighted average State tax, making a total of $7.26 per barrel. Had there been no increase in the excise-tax rate last year and had beer sales followed the upward trend of national-income payments, the 61,164,000 barrels would have returned a tax revenue to Government at the $5 Federal rate existing prior to July 1, 1940, plus the $1.26 State rate, of $383,000,000, or $3,000,000 more than was actually collected.

This is not all of the loss to Government. The loss in beer sales has resulted in a reduction of net earnings to the industry estimated at $27,000,000. The combined income- and excess-profits tax rate for the Federal and State Governments for the calendar year 1940 was 24.9 percent. Thus there was an additional loss to Government from income and excess-profits taxes estimated at $6,700,000, which, added to the $3,000,000 loss in excise taxes sustained last year, makes a total loss to Government of about $10,000,000. This does not take into account additional revenue from income and excess-profits taxes which would have been received by Government if the 61,164,000 barrels had been sold.

From this it is evident that the point of diminishing returns has not only been reached, but passed, and once it has been passed further increases in excise tax rates on beer may be expected to result in further decreases in tax revenue to Government.

Looking at the year just commencing, the national income, according to recent Government figures, is presently running at the annual rate of $87,000,000,000 as compared to $80,000,000,000 at the close of 1940. If beer sales for the full fiscal year 1942 should follow the presently indicated projected rise in national income, they would be at the annual rate of 66,000,000 barrels. This would yield to Government an excise tax revenue of $410,000,000, computed at the tax rates of $5 Federal and $1.26 State. This would be $30,000,000 more in excise tax revenue alone, than was actually collected for the fiscal year just ended.

This anticipated sale of beer is indeed not out of line. Twenty-seven years ago, in the year 1914, more than 66,000,000 barrels of beer were sold to a population of only 97,000,000 people, whereas the population today is over one-third greater.

Senator CLARK. What was the tax at that time?

Mr. HESTER. The tax was a dollar. The Federal tax has increased 600 percent. The total taxes have risen from $1 in 1914 to $7.26 today.

Senator CLARK. You had no State taxes, either.

Mr. HESTER. That is correct.

Senator DANAHER. And beer only cost a nickel.

Mr. HESTER. Yes. There is an apparent ceiling in the consumer price of beer, to go beyond which results in a disproportionate loss in the volume of beer sold. Following the tax rise last year the brewers passed on about 80 percent of the increase to the retailers. In turn about half of the retailers increased the price of beer to the consumer, either by using a smaller glass, or increasing the unit price. This resulted in a major loss in volume of beer sold by the industry.

The increase in the unit price of bottled and canned beer worked a particular hardship on the small local brewer, since it brought his product directly into price competition with the nationally advertised brands.

We make no attempt to defend those retailers who increased the price of their beer in excess of the amount of the tax increase. Of course, the brewers are prohibited by Federal and State law from having any control over the retail distribution of their product. However, in justice to the retailers it should be pointed out that they operate on a small margin which is indicated by the heavy mortality among them. Moreover, the loss in sales volume, due to the increased price, may well offset the apparent profit indicated by the increased prices.

If excise taxes are further increased and passed on to the consumer, as they must be, this practice of increasing retail prices, resulting in reduced volume, will undoubtedly continue and spread throughout the retail trade to the further detriment of the industry and Government alike.

Our problem, in a sense, is a mutual one. The Government and the brewing industry are partners in an $894,000,000 sales volume business. These two partners divided $428,000,000 in the fiscal year 1941, Government receiving for excise, income, and excess-profits taxes alone $395,000,000, and the brewers $33,000,000, or an average of 63 cents a barrel for the industry as a whole. The remaining $466,000,000 went for wages, farm produce, local taxes, the purchase of other materials, and all other costs necessary to make and sell the beer.

Senator BROWN. Mr. Hester, those figures indicate to me in a general way that the Federal and State tax is 50 percent of the purchase price; is that correct?

Mr. HESTER. That is correct.

Senator BROWN. In other words, beer sells for around $15, and the tax is somewhere around $7.25, a barrel.

Mr. HESTER. It is a little higher than that, it is somewhere around $16.

The industry is not a profitable one, generally speaking. A few companies make most of the profits and the largest number make little or no profits. It is a hazardous industry from the financial standpoint, as is well known.

We are firmly of the opinion that the industry will be seriously crippled by an increased excise tax on beer and that neither Government nor the industry will receive as much in revenue as they would if no further increase in excise tax is imposed.

The brewing industry is not competitive with national-defense industries, and it fits into the economy of the Nation at this time as well as in normal times.

We respectfully submit to you that no further increase in excise tax should be imposed on beer.

Mr. Chairman, Ford, Bacon & Davis made a report, referred to in my testimony, dated March 27, and a supplement to that report, dated May 7, which were based upon the past and current data up to the end of the calendar year 1940. These reports were submitted by me as part of my testimony before the Ways and Means Committee on May 14, 1941.

I wish to submit these reports to this committee, but in the spirit of economy, I will not ask to have these reports reprinted, but instead I will ask that the record show that they may be found in full on pages 1080 to 1106, inclusive, volume 2, in the hearings of the Committee on Ways and Means, Revenue Revision of 1941. I recommend the reading of these reports as they are germane to this case.

Since our appearance before the Ways and Means Committee, the fiscal year of June 30, 1941, has been completed, and Ford, Bacon & Davis has prepared another supplement that brings the essential information in the earlier reports down to date, as of June 30, 1941. This supplement is dated August 6, 1941, which I ask to have included as a part of my testimony before this committee.

In addition to the afore-mentioned reports submitted to the Ways and Means Committee was also a country-wide survey prepared by Opinion Research Corporation which was a study made by a series of interviews with retailers serving beer for on-premises consumption, which shows that 49 percent of the retailers called on increased the price of beer to the consumers either by reducing the size of the glass or increasing the unit price in the case of bottled and canned beer. This report is also germane to the case and is published in the hearings of the Ways and Means Committee above referred to, on pages beginning with 1107 to 1111, inclusive.

The Director of Opinion Research Corporation, Dr. Claude Robinson, was formerly director of Dr. Gallup's well-known Institute of Public Opinion.

(The supplement to the report of Ford, Bacon & Davis is as follows:)

UNITED STATES BREWERS' ASSOCIATION,
New York, N. Y.

DEAR SIRS: Since the preparation of our main report, Effect of Excise Taxes on the Brewing Industry, dated March 27, 1941, and the supplement to that report dated May 7, 1941, the fiscal year July 1, 1940, to June 30, 1941, has ended and additional information has been made available.

For the purpose of bringing down to date the information on the subjects of beer consumption, national income, and taxation contained in these reports, this supplement has been prepared. It should be read in conjunction with the previous reports.

With the close of June 1941 the first full year's effect of the excise tax increase of $1 per barrel of beer, effective July 1, 1940, can be analyzed. Since this supplemental report immediately follows the end of the fiscal year 1941, the data prepared herein are on the basis of fiscal years ended June 30, whereas the exhibits in the earlier reports, based on data as of December 31, 1940, were generally on the calendar-year basis.

We make no attempt to defend those retailers who increased the price of their beer in excess of the amount of the tax increase. Of course, the brewers are prohibited by Federal and State law from having any control over the retail distribution of their product. However, in justice to the retailers it should be pointed out that they operate on a small margin which is indicated by the heavy mortality among them. Moreover, the loss in sales volume, due to the increased price, may well offset the apparent profit indicated by the increased prices.

If excise taxes are further increased and passed on to the consumer, as they must be, this practice of increasing retail prices, resulting in reduced volume, will undoubtedly continue and spread throughout the retail trade to the further detriment of the industry and Government alike.

Our problem, in a sense, is a mutual one. The Government and the brewing industry are partners in an $894,000,000 sales volume business. These two partners divided $428,000,000 in the fiscal year 1941, Government receiving for excise, income, and excess-profits taxes alone $395,000,000, and the brewers $33,000,000, or an average of 63 cents a barrel for the industry as a whole. The remaining $466,000,000 went for wages, farm produce, local taxes, the purchase of other materials, and all other costs necessary to make and sell the beer.

Senator BROWN. Mr. Hester, those figures indicate to me in a general way that the Federal and State tax is 50 percent of the purchase price; is that correct?

Mr. HESTER. That is correct.

Senator BROWN. In other words, beer sells for around $15, and the tax is somewhere around $7.25, a barrel.

Mr. HESTER. It is a little higher than that, it is somewhere around $16.

The industry is not a profitable one, generally speaking. A few companies make most of the profits and the largest number make little or no profits. It is a hazardous industry from the financial standpoint, as is well known.

We are firmly of the opinion that the industry will be seriously crippled by an increased excise tax on beer and that neither Government nor the industry will receive as much in revenue as they would if no further increase in excise tax is imposed.

The brewing industry is not competitive with national-defense industries, and it fits into the economy of the Nation at this time as well as in normal times.

We respectfully submit to you that no further increase in excise tax should be imposed on beer.

Mr. Chairman, Ford, Bacon & Davis made a report, referred to in my testimony, dated March 27, and a supplement to that report, dated May 7, which were based upon the past and current data up to the end of the calendar year 1940. These reports were submitted by me as part of my testimony before the Ways and Means Committee on May 14, 1941.

I wish to submit these reports to this committee, but in the spirit of economy, I will not ask to have these reports reprinted, but instead I will ask that the record show that they may be found in full on pages 1080 to 1106, inclusive, volume 2, in the hearings of the Committee on Ways and Means, Revenue Revision of 1941. FORD, BACON & DAVIS, INC.,
New York, N. Y., August 6, 1941.

UNITED STATES BREWERS' ASSOCIATION,
New York, N. Y.

DEAR SIRS: Since the preparation of our main report, Effect of Excise Taxes on the Brewing Industry, dated March 27, 1941, and the supplement to that report dated May 7, 1941, the fiscal year July 1, 1940, to June 30, 1941, has ended and additional information has been made available.

For the purpose of bringing down to date the information on the subjects of beer consumption, national income, and taxation contained in these reports, this supplement has been prepared. It should be read in conjunction with the previous reports.

With the close of June 1941 the first full year's effect of the excise tax increase of $1 per barrel of beer, effective July 1, 1940, can be analyzed. Since this supplemental report immediately follows the end of the fiscal year 1941, the data prepared herein are on the basis of fiscal years ended June 30, whereas the exhibits in the earlier reports, based on data as of December 31, 1940, were generally on the calendar-year basis.

BEER CONSUMPTION DECREASES

Exhibit No. 1 shows the withdrawals or apparent consumption of beer by fiscal years 1905 to 1941, inclusive, in barrels and in gallons per capita.

An analysis of exhibit No. 1 shows the withdrawals or apparent consumption of beer for the fiscal year 1941 was less than 1940 by 725,000 barrels, and less than the average of the 5 preceding years by about 300,000 barrels.

NATIONAL INCOME PAYMENTS INCREASE

This decrease in beer sales has been despite the increase in national income payments and the increase in salaries and wages as reported by the Department of Commerce in the Survey of Current Business.

The following table, based on indices representing total income payments by months for the fiscal years of 1940 and 1941, published by the Department of Commerce, is evidence that the national income has been constantly increasing since the spring of 1940, when defense expenditures began to assume real importance. The monthly average income-payment index has increased from 109 to 120 between the fiscal years of 1940 and 1941, an increase of approximately 10 percent.

Month	Adjusted indexes representing total income payments, 1935-39=100		Month	Adjusted indexes representing total income payments, 1935-39=100	
	Fiscal year ended June 30, 1940	Fiscal year ended June 30, 1941		Fiscal year ended June 30, 1940	Fiscal year ended June 30, 1941
July	104.6	111.7	February	110.1	123.0
August	106.5	113.3	March	108.8	123.7
September	107.8	114.6	April	109.1	124.5
October	109.1	115.8	May	110.1	127.7
November	109.9	116.6	June	110.2	[1] 128.3
December	111.2	119.0			
January	110.6	121.3	Monthly average	109.0	120.0

[1] Estimated.

Despite this increase in national purchasing power, beer sales decreased in the year following the excise-tax increase of July 1, 1940.

GOVERNMENTAL REVENUE FROM BEER EXCISE TAX DECREASES

On pages 11 to 14 in our main report we presented a discussion that shows that the trend of beer consumption since 1935, after the industry became stabilized, was closely related to the trend of national income payments. This relationship remained fairly constant up to July 1, 1940, at which time the $1 per barrel increase in Federal excise tax became effective. In the fiscal year of 1941, following this tax increase, this relationship between the trends of beer sales and national income ceased. Beer sales in 1941 were actually considerably lower than in the fiscal year 1940 but slightly lower than for the average of the 5 preceding years, whereas income payments resulting principally from defense expenditures increased materially in the fiscal year 1941.

It is entirely reasonable to assume that the established relationship of beer sales to national income would continue unless disturbed by other factors such as the excise tax increase referred to.

As a result of this actual decrease in beer sales, the amount of revenue derived from excise taxes from the brewing industry by Government was actually less with the increased tax rate in effect than it would have been had the old tax been retained permitting beer sales to increase proportionally with the increased national purchasing power.

The following table is a computation to show the effect of the increased excise tax and the estimated consumption of beer that should result from the increased purchasing power in the fiscal year of 1941 had there been no tax increase last year:

	National income payments, million dollars	Beer consumption	
		Thousand barrels	Barrels per $1,000 of income payments
5-year average, fiscal years 1936 to 1940, inclusive	68,925	52,582	0.763
1941, actual	80,162	52,289	.652
1941, estimated on basis of no increase in tax as of July 1, 1940	80,162	[1] 61,164	.763

[1] Computed. This computed figure of 61,164,000 barrels of beer is determined by multiplying the 5-year average beer consumption factor per $1,000 of income payments (0.763) by $80,162,000,000, the estimate of income payments in the fiscal year 1941 prepared by the Department of Commerce.

The total Government tax revenue for the fiscal year ended June 30, 1941, with a $1-per-barrel Federal tax and a weighted average State tax of $1.26 was approximately:

$$52{,}289{,}000 \text{ barrels} \times \$7.26 = \$380{,}000{,}000$$

Had there been no increase in excise taxes last year, and if beer sales had increased proportionately to income payments, there would have been over 61,000,000 barrels of beer sold. The tax rates would then have been $5 per barrel Federal, plus $1.26 State taxes, making a total of—

$$61{,}164{,}000 \text{ barrels} \times \$6.26 = \$383{,}000{,}000$$

From this computation it is seen that Government actually lost about $3,000,000 in excise-tax collections in the first full year following the increase in excise tax and because of the lower volume of beer sold.

This anticipated sale of beer is indeed not out of line, as 27 years ago, in the year 1914, more than 66,000,000 barrels of beer were sold to a population of only 97,000,000 people, whereas the current population is over one-third greater.

GOVERNMENT LOSES INCOME TAXES

This indicated $3,000,000 loss in excise-tax revenue to Government is not all. In our former report we analyzed the corporate earnings of industry based on the questionnaires received and determined that the loss in net earnings to the industry after the curtailment of consumption following the increase in excise tax, resulted in a decrease in income and excess-profits-tax revenue to Government of at least $6,700,000.[1] This amount, added to the indicated loss in excise-tax revenue, is approximately $10,000,000, due entirely to lower earnings because of the decreased consumption of beer.

If, on the other hand, beer sales had followed the trend of national purchasing power and had increased 10 percent the corporate earnings of the industry would naturally have increased and the income-tax revenue, instead of decreasing, would have been substantially greater.

From this we conclude that the critical point in beer taxation has been passed and the law of diminishing returns has operated to the detriment of Government income.

By this we mean that the increased tax of $1 per barrel effective during the last fiscal year, during which time there was a 10-percent increase in consumer purchasing power, that Government has received less revenue in excise and income taxes by at least $10,000,000 with the increased rate in effect than it would have received had the old rate been retained.

Once the point of diminishing returns has been passed further increases in tax rates may be expected to result in further decreases in tax revenue to Government.

A CEILING TO CONSUMER PRICES

In our previous report we stated that the majority of the brewers attempted to pass on the tax increase of July 1, 1940, because they could not absorb the

[1] Computed at the rate of 24.9 percent (the industry's average income and excess-profits tax rate in the calendar year 1940) on the estimated reduction of $27,000,000 in net earnings which followed the tax rise of $1 per barrel of July 1940. This will be greater if based upon the probable higher income and excess-profits tax rate that will prevail on 1941 earnings.

additional burden; that the tax was passed on to the retailers by the wholesalers because the operating margin of the wholesaler was too small to absorb this tax; and that a large part of the retailers passed the tax on to the consumers either through charging more per unit of sales or by cutting the size of the glass used for the same price.

The basis for these statements was an analysis of the 217 usable returns as stated in our earlier report of March 27, 1941, and supplement of May 7, 1941, representing 67 percent of the industry based on volume of sales in 1940. The answers to the questions asked were made by the brewers from their observations following the tax increase of July 1940, in the territories served by them.

The answers naturally varied in importance as a large brewer may serve several States and a small brewer may be confined to a few counties. These answers indicated the following broad trends in price changes to consumers following the Federal tax increase of July 1, 1940:

ON-PREMISE CONSUMPTION

Draft beer.—Majority indicated no change in unit price of 5 cents for a "short" beer and 10 cents for a "regular."

Majority indicated a reduction in size of glass of from 1 to 4 ounces, generally averaging a reduction of about 15 to 20 percent.

Packaged beer.—About half indicated an increase in price per bottle usually from 10 to 15 cents and half indicated no change in price. No one reported increases involving odd-cent prices.

OFF-PREMISE CONSUMPTION

Packaged beer.—Majority indicated that almost the exact amount of the tax increase was passed on which was equivalent to 1 cent per three 12-ounce packages. The use of odd-cent prices for delicatessen and grocery-store merchants was common.

Subsequent to the issuance of our main and supplemental reports, the Opinion Research Corporation made a study of beer retailers and issued a report dated May 10, 1941. This study was reported as a survey made by personally interviewing proprietors of retail beer-dispensing places (other than cocktail lounges or de luxe establishments) in 29 cities of the United States where draft beer is sold. The purpose of the survey was to determine whether and how the retailers passed on the tax increase of July 1940 to the consumers. The report stated that the survey was made in a manner to insure a representative cross section or sampling. The principal findings reported in the Opinion Research survey are as follows:

On-premise consumption

	Percent
Draft beer:	
Retailers that reduced size of glass used for draft beer	29
Retailers that reduced amount of beer sold per unit presumably by drawing a larger head	8
Total reducing size of unit sold for former unit price	37
Packaged beer: Price of unit reported as increased	32

Eliminating duplications, the report stated that 49 percent of the retailers called on, increased the prices of draft beer, packaged beer or both. It was also stated that the interviewers experienced considerable reluctance on the part of the retailers interviewed in admitting that they had reduced the amount of beer sold for the former unit price. For this reason the percentages reported may be an understatement of the actual situation.

The facts and findings of this report by Opinion Research Corporation confirm the statements of the brewers in the questionnaire survey made by us.

A study of all of this information, obtained from entirely different and independent sources, and made by different procedures substantiates the conclusion in our earlier report and supplement to the effect that there is a ceiling that limits further advances in the consumer price without a disproportionate loss in volume of sales.

EFFECT ON THE BREWING INDUSTRY

The foregoing arguments against further increases in excise taxes on beer have been based purely on the effect on tax revenue to the Federal and State

Governments. No mention has been made of the effect of the increasing taxes on the brewing industry itself.

The curtailment of beer sales, however, has wrought considerable damage to the industry, particularly the small brewers.

In our supplementary report of May 7, 1941, we analyzed the financial returns of breweries representing 67 percent of the volume of sales in the calendar year 1940. Over 40 percent of the number analyzed producing 14 percent of the beer sold in 1940 sustained an actual loss of 58 cents per barrel in that year. Since most of the companies that did not return questionnaires averaged sales of less than 50,000 barrels per year, and were smaller than the average loss companies analyzed, the assumption follows that over 50 percent of the brewers producing nearly half of the beer sold operated at a net loss in 1940 and that moderate profits were made by only a relatively few companies.

Such a situation naturally might be expected to lead to business failures. The number of brewers has been decreasing since 1935. The reduction in the number of breweries operating has been as great in the year 1940 as in the 4 preceding years and the number of breweries operating is currently decreasing. As reported by the Treasury Department the number of operating breweries since 1935 is—

Year:	*Number of operating breweries*
1935	750
1936	732
1937	720
1938	696
1939	[1] 653
1940 (December)	[2] 559
1941 (June)	[3] 539

[1] Reduction of 97 since 1935.
[2] Reduction of 94 since 1939.
[3] Reduction of 20 in 6 months and of 114 since 1939.

DISPOSITION OF THE BREWERY SALES DOLLAR

Based on the available information the total estimated wholesale sales of the brewing industry for the fiscal year 1941 was $894,000,000.

The cost of producing and selling the beer including the purchase of over $160,000,000 of farm products such as barley malt, hops, corn, rice, etc., and the wages, salaries, miscellaneous taxes, and other expenses incident to manufacture absorbed $466,000,000, or 52 percent of the gross sales amount.

The remaining $428,000,000 was divided between the Federal and State Governments as excise and income taxes and the brewers as a profit on their business venture. This division was:

To Government	$395,000,000
To the brewers	33,000,000

The following table states this break-down in total amounts, in amounts per barrel of beer sold and in percent of total sales:

Profit-and-loss statement for brewing industry estimate for fiscal year ended June 30, 1941

	Total amount	Amount per barrel	Percent
Total wholesale sales of 52,289,000 barrels of beer	$894,000,000	$17.10	100.0
Cost of production and selling	466,000,000	8.91	52.1
Amount divided between Government and brewers	428,000,000	8.19	47.9
Federal and State Government excise and income-tax receipts	395,000,000	7.56	44.2
Profit to the brewers	33,000,000	.63	3.7

This table is graphically illustrated by chart A appended to this supplement.

It is apparent from this analysis that Government has about 12 times the interest in maintaining the industry than the brewers who own the businesses.

SUMMARY

The analyses of the facts revealed in the first full year of operation following the Federal tax increase of July 1940 fully substantiate the findings made in our earlier reports.

The last fiscal year has reflected a steady increase in the rate of national income amounting to an average of about 10 percent. Beer sales which followed the trend of national earnings up to July 1, 1940, actually decreased following the tax increase both as compared to 1940 and to the average of recent preceding years.

A computation of beer tax revenue based on the actual fiscal year figure indicates that Government received about $10,000,000 less money with the increased rate than it would have received with the increased volume of sales had no increase in rate been imposed. This indicates that the point of diminishing returns for beer sales and tax revenue has been passed.

Most of the last beer tax increase was passed on to the consumer either in increased prices or smaller amounts sold at the former unit prices both of which resulted in decreased sales. The extent to which the tax increase was passed on to the consumer has been established by the independent survey of retailers by Opinion Research Corporation. If further increases in excise taxes are imposed this trend of increasing consumer prices and decreasing volume may be expected to continue and become a greater factor to the detriment of the industry and to Government.

CONCLUSIONS

From a review of our findings as presented in our previous report and supplement and in the light of the additional information presented in this second supplement, we are of the opinion that our previous conclusions as stated below have been substantiated. These are:

1. There is a ceiling limiting further advances in the price to the consumer without a disproportionate loss in volume of beer sold.

2. The tax level has reached a point where more revenue to Government cannot be anticipated through a further increase in present tax rates; in fact, it seems probable that less revenue would result should an increase in rates be imposed.

Very truly yours,

(Signed) FORD, BACON & DAVIS, INC.

EXHIBIT No. 1 (August 1941).—*Withdrawals of beer in fiscal years 1905 to 1941, inclusive, omitting prohibition years*

Fiscal year ended June 30	Population of United States	Withdrawals of beer	
		Barrels	Per capita (gallons)
1905	83,983,420	49,460,000	18.3
1906	85,581,189	54,052,000	19.8
1907	87,178,958	58,546,000	20.8
1908	88,776,727	58,748,000	20.5
1909	90,374,496	56,303,000	19.3
1910	91,972,266	59,485,000	20.0
1911	93,346,101	63,217,000	21.0
1912	94,719,936	62,109,000	20.3
1913	96,093,771	65,246,000	21.0
1914	97,467,606	66,105,000	21.0
1915	98,841,441	59,747,000	18.7
1916	100,215,276	58,584,000	18.1
1917	101,589,111	60,730,000	18.5
1918	102,962,946	50,175,000	15.1
1919 [1]	104,336,781	30,540,000	9.1
1934 [1]	126,332,738	32,266,000	7.9
1935	127,222,161	42,229,000	10.3
1936	128,111,584	48,760,000	11.8
1937	129,001,007	55,302,000	13.3
1938	129,890,430	53,926,000	12.9
1939	130,779,853	51,817,000	12.3
1940	131,669,275	53,014,000	12.5
1941	132,600,000	52,289,000	12.2

[1] Prohibition years 1920 to 1933 omitted.

61977—41——56

Senator CLARK. You spoke of large breweries and small breweries. Have you any way of breaking down what you call large breweries and small breweries as to the number?

Mr. HESTER. There are about 50 large breweries and about 480 small breweries.

Senator CLARK. When you say "small breweries" you mean local breweries, breweries doing local trade?

Mr. HESTER. That is right; the local business.

Senator GUFFEY. How many of the small breweries closed in the last 2 or 3 years?

Mr. HESTER. In 1935 there were 750 breweries in this country. I might say in 1914 there were about 1600. Today there are less than 540 breweries, and in the past year there have been about 40 brewery failures.

Senator LA FOLLETTE. Mr. Hester, may I ask were Ford, Bacon & Davis given a free hand in making this study?

Mr. HESTER. Their study was absolutely objective. As a matter of fact, it was made in this way: They handled it entirely with the industry and the association had nothing to do with it.

Some of the information upon which their findings were based is information which is contained in the income-tax returns of the brewers to the Treasury Department. Senator La Follette, we would be pleased to have this committee inspect the income-tax returns of every brewing corporation in this country.

Senator CLARK. Mr. Hester, I read some place that the sales of beer for June of this year were very much below the sales of beer for June of last year, and, on the other hand, the sales of beer for July were very much above the sales of beer for July last year. Is that correct?

Mr. HESTER. I am glad you brought that question up.

The Treasury has not released its official figures yet, but the situation is this: In June of this year beer sales were 4 percent below beer sales of June of last year. Last year beer sales were way up because of the fact that Congress did not impose any tax, any floor-stock tax, on the retailer, so they bought up. Consequently this adversely affected beer sales in July of last year.

For July last year beer sales were 5.6 percent below the previous July. This year the sales are way up for July. As a matter of fact, we estimate they are up 20 percent for July, but in June they were down 4 percent. Weather influences beer sales. Weather averaged 4 percent warmer this July than July last year. April, May, and June of this year were very much warmer than the corresponding months of last year. In January this year beer sales were up 9 percent, then in February and March they were down 1½ percent, and in April they went up about 8 percent, and in May 10 percent, and then went down again in June, and for the fiscal year, this year—this is the amazing thing about it, and I think it is the focal point in the whole case—where the national income has gone up tremendously beer sales for the past year were actually 1.60 percent below the fiscal year 1940. National defense expenditures are affecting beer sales and if it had not been for such expenditures beer sales would have been still lower than last year.

The CHAIRMAN. Thank you very much, Mr. Hester.

Senator CLARK. I want to ask one other question, Mr. Chairman.

Mr. Hester, you spoke a while ago of the method by which the retailer absorbs this increased price of beer, by cutting down the size of his glass or increasing the price of the bottle.

Have you got any way of showing what the actual effect has been since this increase in tax on the size of the glass and the price of the container?

Mr. HESTER. The situation is this, the United States Brewers' Association employed Opinion Research Corporation, whose director is Dr. Claude Robinson, former director of the Gallup Institute poll, to make a survey throughout this country and determine just what was done by the retailer, and they found that 50 percent of the retailers either cut the size of the glass or increased the price of the bottled beer, and that was the cause of the loss in volume which so seriously affected particularly the small brewer.

Senator CLARK. Have you got that report, Mr. Hester?

Mr. HESTER. Yes; I just asked the chairman if I could incorporate it in the record by reference to volume 2, page 1107, of the House hearings.

The CHAIRMAN. Yes; it may be included in that manner.

Mr. HESTER. In conclusion I would like to suggest that the more money our Government has to raise for national-defense purposes, the more it should give consideration to the operation of the law of diminishing returns.

The CHAIRMAN. Thank you very much.

Mr. Joseph Obergfell.

STATEMENT OF JOSEPH OBERGFELL, CINCINNATI, OHIO, GENERAL SECRETARY AND TREASURER, BREWERY WORKERS' INTERNATIONAL UNION, AND FIRST VICE PRESIDENT, UNION LABEL TRADES DEPARTMENT, AMERICAN FEDERATION OF LABOR

The CHAIRMAN. Mr. Obergfell, you are general secretary and treasurer of the Brewery Workers' Union of the American Federation of Labor?

Mr. OBERGFELL. Yes, sir.

The CHAIRMAN. You are appearing on the beer tax?

Mr. OBERGFELL. Yes, sir.

The CHAIRMAN. All right, you may proceed.

Mr. OBERGFELL. My name is Joseph Obergfell and I appear before you as the general secretary and treasurer of the Brewery Workers' International Union and first vice president of the Union Label Trades Department of the American Federation of Labor and the wage earners in general, in protest against any increase in tax on beer.

In doing so, we are mindful of the great task confronting you, to provide funds to enable our Government to carry out the tremendous defense program.

It is not because we seek to shirk any personal responsibility in these critical times that we are concerned over and opposed to any increase in the tax on beer. Our concern and our opposition arise solely from the realization that an added Federal tax on beer will not only not bring about the results desired by our Government, but

will work to the economic disadvantage of thousands of loyal Americans.

The restoration of the brewing industry created employment opportunity for more than a million wage earners.

In addition to employment opportunity to workers engaged directly in the brewing industry, there are more than 10,000 wholesalers, and approximately 330,000 retailers, affording a widespread volume of employment.

Many thousands of employees were added by allied industries engaged in supplying and servicing the brewing industry affording employment to building tradesmen, employed in maintenance and new construction work; metal tradesmen, employed in the maintenance and construction of new machinery; printing tradesmen, printing billions of labels used on bottle beer, plus other printing matter used in the brewing industry; glass-bottle blowers; coopers; box makers; carton manufacturers; and many others, too numerous to mention.

In addition, more than 100,000 full-time farm workers are engaged in the production of brewery crops, consisting of barley malt, corn, rice, and hops, as well as workers engaged in the processing of grain used in the brewing industry.

Beer is the beverage of moderation, consumed largely by the wage earners—the workers who, with limited earnings, cannot purchase a commodity priced beyond their means.

Proof of this was witnessed following the $1 Federal-tax increase in July 1940. Many breweries throughout the country were financially unable to absorb this added tax, and were forced to pass it on to the consumer. The result was that consumption of beer declined. Over 725,000 barrels in the first fiscal year following the tax increase. And this was directly responsible for the closing of 43 breweries, and the ensuing loss of employment to countless workers in the brewing and allied industries. This despite the fact that industrial employment and pay rolls were constantly reaching new heights, and industrial activity in general was at an all-time high.

The brewing industry cannot absorb a further increased tax on beer, and will be compelled to pass it on to the consumer, hence a further decline in the consumption is certain to follow. More breweries will be forced to suspend operations, and still more workers will be thrown out of employment.

From the viewpoint of the worker, this is serious enough, but there is still that other important factor to be considered.

A further tax increase would, unquestionably, reduce the sales, since even with the added tax, less revenue would be derived by the Government, so that under those conditions no one would benefit, least of all, the Government.

There are certain facts concerning the present proposed beer tax which should be considered in the interest of all concerned.

In the first place, the tax is now so high that no further increase in tax to the Government can be expected from an increase in the tax, and in all probability, if an additional tax is placed on beer the revenue will actually diminish.

We view with apprehension any increase in Federal tax on beer, and are firmly convinced that it would bring about an unwholesome

condition, such as prevailed during the prohibition era, namely, home brewing would, unquestionably, be revived, with all its attendant evils.

I direct the committee's attention to the fact that the brewing industry pays in excess of $1,000,000 in Federal taxes daily.

Certainly any additional tax on beer, which has already reached a point of diminishing returns, is inadvisable.

Brewery pay rolls totaled approximately $100,000,000 in 1940, based on the record of the United States Department of Labor.

Speaking for the workers—we know they are ready and eager to pay their full share of our national-defense costs. They are willing to make whatever personal sacrifices may be necessary for the welfare and safety of our country; even greater sacrifices than they have so far been called upon to make.

I most respectfully urge that the committee give consideration to this protest, which is made in all sincerity.

The CHAIRMAN. Are there any questions, gentlemen?

Senator CLARK. Mr. Obergfell, you represent the Brewery Workers' International Union?

Mr. OBERGFELL. The Brewery Workers' International Union.

Senator CLARK. What is the state of unionization in the brewing industry?

Mr. OBERGFELL. How is that?

Senator CLARK. To what extent is the brewery industry unionized?

Mr. OBERGFELL. One hundred percent, practically.

Senator CLARK. What is the record of the industry with regard to industrial strife?

Mr. OBERGFELL. It has been free of industrial strife, I can safely say.

Senator CLARK. What can you tell us about the average age of the brewery workers, taking them by and large?

Mr. OBERGFELL. The average age of brewery workers is approximately 56. Forty percent are above 56 years of age. The men are required to serve an apprenticeship. With prohibition, naturally there was practically no apprenticeship, and hence we have the number of older men who were working in the brewery industry at that time. The younger men have now reached the age average of 56 years, the men that were in the brewery industry before prohibition.

Senator CLARK. Are those men readily adaptable to other employment if they were thrown out of employment as brewery workers?

Mr. OBERGFELL. No; they are not. They cannot very well go into defense industries. Then, too, in the closing of these 43 plants that I referred to in the last year, many of them are the smaller plants located in small cities where there are no industries in which these men might find suitable employment for men in that age.

Senator CLARK. It is not so easy for a man 56 years of age, who devoted his life to one industry, to adjust himself to another industry?

Mr. OBERGFELL. No.

Senator CLARK. Has the American Federation of Labor given any consideration to these studies that have been made as to the effect of excise taxes on the brewery industry?

Mr. OBERGFELL. Yes; it has; and I may say that Mr. I. M. Orenburn, secretary and treasurer of the Labor Trades Department, who usually speaks for the federation in these matters, was to speak on behalf of the federation's position in this instance, but Mr. Orenburn had to leave the city.

Senator CLARK. That is all.

The CHAIRMAN. All right; we thank you very much, Mr. Obergfell.

Mr. Henry B. Fernald.

STATEMENT OF HENRY B. FERNALD, MONTCLAIR, N. J., CHAIRMAN, TAX COMMITTEE, AMERICAN MINING CONGRESS

The CHAIRMAN. You are appearing on behalf of the tax committee, American Mining Congress?

Mr. FERNALD. I am Henry B. Fernald, of Montclair, N. J., chairman of the tax committee of the American Mining Congress.

I am appearing before you representing the mining industry to speak regarding certain features of the corporate income and profits taxes.

We make no protest against the proposed increase in tax rates. We recognize the needs for revenue and the conditions which call for high rates of taxation. Questions we raise are as to the substantive basis on which such rates are to be imposed. The importance of these substantive questions is greatly increased with the increase in rates. Matters of relatively minor importance under the 6- or 12-percent income-tax rates of 1917 and 1918 become of great importance under the proposed 30-percent income-tax rate of this bill. Even some of the questions which we urged as important under the 24-percent income-tax rate and the 25- to 50-percent excess-profits-tax rates of the 1940 act become of even greater importance under the proposed 30-percent income-tax and 35- to 60-percent excess-profits-tax rates.

We stand on the following principles:

1. The income tax should be applied only to true net income.

2. The excess-profits tax should be applied only to true excess profits and should not be imposed on what are in fact only normal profits.

3. No desire for revenue justifies imposing a crushing tax burden on some who may be caught by technicalities of the law, which is intended to deal fairly and on an equitable basis with all taxpayers.

Our recommendations are all intended to make these principles effective in the law. The points which we urge are as follows:

I. *Need for immediate amendment.*—Some of the points we mention are pure technicalities but technicalities are not merely academic problems for the taxpayer. A few words difference in technical provisions of this law may fall with heavy impact on a taxpayer. If he sees them meaning ruin to him it is small consolation that to other taxpayers they are not of major importance.

These matters are of vital present importance. The taxpayer must now look to see what this law will mean to him and his affairs in its practical application. Inevitably he finds a paralysis of effort if he must fear that in spite of all he can do the technicalities of this tax law will probably mean ruin for him.

Some points we urged for your consideration last year and were then told that in the pressure for revenue they could not be adequately considered at that time but as soon as that Act was passed, they would be considered and could be enacted before time for filing the 1940 tax returns. Then, in March of this year, we were told that only a few most important amendments could be considered at that time but that other matters would be considered and could be included with retroactive effect when the new revenue bill came up within the next few weeks. Now we are told again that, in the pressure for revenue, the present bill must be speeded to prompt enactment without consideration of many of these amendments, and that there will be opportunity for their consideration in a new bill, perhaps in October. We recognize the urgency of the situation and the problems before you. We realize that the act cannot at the present moment be given the general revision it should have, but we do urge most earnestly upon you the importance of acting now upon some of these amendments.

They are not merely administrative in their nature. They relate to the very substance to which the heavy tax rates of this bill are to be applied. The words of the tax bill and the methods of computation under it are not the mere academic papers of a college student. When enacted by the Congress, they carry the sovereign authority of the Government, with the power of taxation to destroy. So we urge you, with the solemn thought of the power which rests in your hands and your duties to the people of the country, now to make those changes in substance of this bill which are necessary to keep it from being a crushing burden on those to whom it will apply.

II. *As to the excess profits of mines.*—I can only briefly refer to the general situation of mines at the present time. The Government is urging and the mines are trying to provide maximum increases of output to meet our terrible shortage of metals for defense needs. The need is not merely for direct munitions' use but for all the tremendous increase which indirectly arises incidental to the defense effort. Buildings, machinery, machinery to make machinery, power, housing, water and sewer facilities, transportation, and practically everything else in all the ramifications of providing facilities for defense production, as well as the vast output needed for defense production itself, are calling for increased metal and mineral output. The mines of the country recognize their special defense job, vital and overwhelming, to try to meet the challenge of this demand. I say to you for the mining industry that, regardless of what you do in this tax bill, we are going to continue to try to meet this challenge, but what you do in this tax bill may make it harder for us to do what you want us to do and what we take pride in trying to do. I know you do not want to place in our way the stumbling blocks of tax provisions which will interfere with this duty we have to perform, or will divert our energy and attention from the main job we have to do, or will make ruinous pitfalls for us when the job is done.

I think the situation is wholly unintended, but this is the situation. The excess-profits tax is imposed upon the income for the taxable year which exceeds the amount of a somewhat arbitrary credit. If the income for the taxable year exceeds such credit, that excess is treated as excess profits. The result is that a mere increase in the rate of extraction of a mineral deposit, limited in quantity, may result

in an excess-profits tax, even though no more than a normal profit per unit of production is realized. Thus the mere realization in this year of the profits which in normal course would be realized in a later year will make the subject to the impact of the excess-profits tax.

We make no protest against the imposition of the excess-profits tax in any case where the profits realized on output are more than normal profits. The Government is trying to hold metal prices to a normal standard. It may not be able to do so and still bring out all the marginal or submarginal production it needs. We do not know what we may have to face in increased costs. In some mines and within certain limitations, increased production may give reduced unit cost. In other mines, or when the point of maximum operating efficiency has been passed or where increased production comes from lower-grade ores, increased output can only be obtained at increased cost. If in any particular case, the profit per unit of output is more than normal, we expect the excess-profits tax to apply. We urge it should not apply when all that happens is that we will recover in this year the same profit which under normal conditions we would expect to realize later.

In the special situation in which the mines find themselves placed by the Government demands upon them for increased production, we urge that an amendment now be made which will allow to mining companies an excess-profits credit equal to the normal profit per unit of production.

III. *Depreciation and amortization.*—This problem is serious for the mining industry at the present time. Mines are not lightly adding plant and equipment today, or even replacing existing equipment. It is virtually impossible to do so in the priorities situation as it now stands unless the defense authorities recognize the facilities as needed for defense. Perhaps some of the additional plant and equipment may be expected to have a useful life after the emergency. Most of it, however, will simply be surplusage when the present emergency ends.

Under the law and regulations we believe there is no reason why the cost should not be written off over such probable useful life—whether that be 2, 3, 4, or 5 years—as ordinary depreciation (which under the statute is intended to cover exhaustion, wear and tear, and obsolescence). This is merely the recognition of sound accounting and business practices: The cost of facilities must be recovered from the profits they produce. The Treasury Department, however, has recently seemed doubtful about interpreting ordinary depreciation allowances in this way without clear indication that this is the intent of Congress.

It was largely for this reason that the special provisions for amortization were written into the law last year. Briefly those were intended to provide, in lieu of depreciation, for definite allowances to write off over 5 years (or less if the emergency should earlier terminate) the cost of emergency facilities provided by the taxpayer which the defense authorities certified as necessary in the interest of national defense. Under these provisions a taxpayer who had installed emergency facilities which were so certified by defense authorities would have its right to this special amortization. The provisions are fairly simply and reasonable so long as the taxpayer has no Government contracts.

If, in response to the urge of the defense authorities, a mining company constructs or installs additional facilities, receiving the so-called certificate of necessity, it will be entitled to write these off and deduct them from net income over the emergency period. Sometimes this may not be an adequate provision because some of these facilities will not be in use for the entire emergency period. We may have met the present desperate shortage before the emergency has ended. However, we may assume that the amortization provisions in many cases will reasonably care for the situation so long as the mining company sells none of its products to the Government but only sells its products through normal trade channels.

If, however, at any time the Government calls on the mining company for metal to be sold to any Government department or agency or asks the mining company to place itself in the position of a subcontractor (which demand the company probably could not reasonably refuse) then the provisions of section 124 (i), with regard to Government contracts, will come into force. If now or at any future date the taxpayer has a Government contract—and apparently every sale to a Government agency under a bid and its acceptance constitutes a contract—then the taxpayer cannot receive amortization allowances unless it obtains a certificate of nonreimbursement or a certificate of Government protection.

Even if the product supplied on a Government contract is only a small fraction of the total output from the property, the provisions of subsection (i) are effective as to the entire cost of the facilities.

I cannot take time to discuss all the technicalities which in practice have been imposed on obtaining certificates of nonreimbursement or certificates of Government protection. It is sufficient to point out that practically no certificates of nonreimbursement have yet been issued, even in those cases where the price under the Government contract was simply a going open market price or the Government-fixed price with no provision whatever in a contract or a bid with respect to reimbursement of any part of the cost of the facilities. The one seeking such certificate of nonreimbursement is required to prove that even an open-market price for his product does not take into account as a factor anything more than normal exhaustion, wear and tear. This is practically impossible for the taxpayer to prove.

On the other hand, to obtain the certificate of Government protection, a mining company must apparently enter into obligations which are virtually impracticable, if not impossible, to observe and efficiently operate the property. Perhaps the provisions are not unreasonable when a wholly separate plant is being constructed, but they cannot be satisfactorily applied to additional plant and equipment such as might be scattered here and there round the mine or in the mill or smelter in order to increase the production from existing facilities.

So long as subdivision (i) stays in the law the mining company must consider it has litle chance of coming under the amortization provisions. Certainly this was not the intention of the Congress last fall.

We hardly need argue whether it is sensible to say that so long as a mining company can avoid being in the position of having a Government contract it can obtain the benefit of the amortization provisions, but that if it responds to a Government request and

places itself in the position of having a Government contract it will be denied the rights it would otherwise have. I do not think we can afford to say we will force such a penalty on one who responds to a Government request for metals.

The entire subsection (i) should be eliminated from section 124.

Of course, if the Government is in fact reimbursing the taxpayer for the cost of the facilities so that the Government has an interest therein which should be protected, the place to provide for the protection of its interest is in the contract itself. We trust our defense agencies to spend the billions of dollars which they are spending—and I believe we rightly trust them—and we should be able to trust them in the relatively minor situations where the present subsection (i) might be applicable.

Actually, in the mining industry, we doubt if the amortization provisions are really the right basis for allowances to cover what is, after all, merely the depreciation of the additional facilities over their useful life. We would rather see a congressional declaration in the law which would give to the Treasury a clear expression of congressional intent that additional facilities, constructed or installed to meet an emergency demand, and any facilities which will have doubtful value by reason of overcapacity in the industry, should be subject to depreciation over the estimated period of their emergency use, with right of the taxpayer to claim revision of the original allowances if the emergency period proved shorter than originally estimated.

This we believe is simply the intent of the present law and regulations, but since the Treasury Department seems doubtful of its authority so to interpret and apply them, we urge such a congressional declaration to remove any question.

IV. *Rate schedule.*—The proposed rate schedule which appears in section 201 of the bill, amending section 710 (a) of the code, increases the rates of tax but still adheres to the schedule of dollar brackets of the present law.

For small corporations the schedule of dollar brackets is desirable so that the increasing rates of this graduated tax will not too quickly reach maximum severity over relatively small differences in amounts of income. While the schedule of dollar brackets does this for the smaller corporations, it has the wholly contrary effect for others.

An initial bracket of $20,000 is entirely too narrow a bracket to be appropriately applied to income of any substantial size. If income is $1,000,000, the first bracket will represent only 2 percent of the net income. This is too narrow a percentage to be made critical in determining the tax rate to be applied. On $5,000,000 of invested capital—which the bill recognizes is not to be considered that of a large corporation—the $20,000 bracket represents less than one-half of 1 percent on the invested capital.

Under the 1917 and 1918 acts, the brackets were broad. These were stated in terms of percentages of invested capital, but the brackets can just as readily be stated as percentages of excess-profits credit. The narrowest bracket in these earlier acts was equivalent to 40 percent of the credit, and the broadest over 100 percent of the credit.

With these percentages in mind, we believe the percentage brackets of the Senate rate schedule last year are as narrow as such brack-

ets should be. We accordingly urge the adoption in section 201 of this bill, of the bracket schedule of the Senate amendment of last year, but with the increased rates under the present bill applied thereto.

V. *Special 10 percent tax under section 201.*—This proposal to impose a special 10 percent excess-profits tax on the difference between the amount computed on the income method and the amount computed on the invested-capital method is a clear violation of the principle that normal profits should not be subjected to an excess-profits tax.

If and to the extent that profits are not in excess of the allowable credit they should not be taxed as excess profits. We believe it has been amply demonstrated by the testimony before your committee and before the committee on Ways and Means that it is essential to have the alternative allowances for an income credit and for an invested-capital credit, together with so-called special relief provisions, to avoid gross inequities. Whichever credit basis a corporation uses, it is only applying a basis which the law provides in order that normal profits shall not be subjected to an excess-profits tax.

Generally this proposed 10 percent tax would fall on corporations which had the misfortune not to have reasonable earnings on invested capital during the base period years. The bill proposes that because of their misfortune they are now to be penalized.

It even goes further. Because the law only allows the excess-profits credit for 95 percent of average base period earnings, the 5 percent arbitrarily disallowed is in effect now to be subjected to the 10 percent penalty. This is wholly unreasonable. To the extent that any corporation is entitled to the invested capital credit, it should not have all or a part of the amount of such credit subjected to a special penalty tax.

There is no sound reason for this special tax. It is not imposed upon a corporation which was not in existence during the base period, but is limited to those in existence (actually or constructively) before January 1, 1940. The new corporation, which had no base-period earnings because it was not then in existence, is not subject to this tax. The corporation in existence during the base period, which had no average base-period net income because it was then only developing its business or because it was so unfortunate as to have losses which wiped out its net income, would have the 10-percent tax apply to its entire earnings of the taxable year.

If a corporation formed in 1935 struggled for 4 years, barely managing to break even, then in December 1939, having proven it had a worth-while project, raised $1,000,000 additional capital, the special 10-percent tax might apply to its entire invested-capital credit. If the $1,000,000 new capital had not been obtained until 1940, the income credit would be increased by 8 percent of the new capital and the special 10-percent tax might not apply.

The reasons for not imposing such a tax are wholly apart from the difficulty, confusion, and involvements that such tax computations introduce into an already indefensibly complicated and obscure tax structure.

Section 710 (a) (2) should not be enacted.

If this special 10-percent tax is not imposed there will be no question for the amendments by section 202 with respect to disclaimer of credit.

VI. *Rate of return on invested capital.*—By section 201 (b) it is proposed to amend section 714 so as to cut down the credit for invested capital over $5,000,000 to a 7-percent rate; but continuing the 8-percent rate for invested capital not over $5,000,000. This 8-percent rate is generally far too low for a reasonable average return in the mining industry. It certainly should not be further reduced to 7 percent. We shall later refer to the total inadequacy of these rates under the proposed plan for computing excess-profits tax.

VII. *Denial of deduction of income tax in determining excess-profits tax.*—The bill proposed in section 204 a series of involved amendments to provide that the income tax shall not be allowed as a deduction in computing excess-profits net income. The difficulties in phrasing and applying these amendments would alone be ground for questioning their propriety.

The more serious ground for opposition is that the proposed plan of imposing the excess-profits tax without allowing deduction for income tax gives an unfair standard for determining the amount to which an excess-profits tax should apply. With regard to this we urge the following considerations:

(*a*) The earnings of any business are to be determined after deducting the income tax. This has long been recognized as the appropriate rule. It is the rule applied in determining earnings and profits for distribution as dividends under section 115. It is the business rule insisted upon by the Securities and Exchange Commission. It is the manifestly sensible rule. The amount of income which the Government takes in income taxes does not represent earnings which accrue to the benefit of the corporation. Excess profits should be determined only after the income tax has been deducted.

(*b*) The fact that under the 1917–18 laws the excess profits were determined without deducting the income tax furnishes no adequate precedent. Those acts were recognized as being so unfair and undesirable that even the Treasury Department itself recommended the repeal of the excess-profits tax.

In any event, an important difference in the situation is that for 1917 the income tax was only 6 percent; for 1918, 12 percent; and for 1919 and 1920, only 10 percent. The rate now proposed is 30 percent. Under the income-tax rates of 1917 to 1920 it was relatively unimportant whether the income tax was first computed and allowed as a deduction in computing excess-profits tax, or whether the excess-profits tax was first computed and allowed as a deduction in computing the income tax. There is a serious difference when the income-tax rate is raised to 30 percent. We should not treat, as subject to excess-profits tax, the 30 percent of corporate income which is payable to the Government as income tax.

A 9-percent allowance on invested capital for 1917, decreased by the 6-percent income tax, was an effective allowance of over 8½ percent. Where the allowance under the 1917 act was only 7 percent, this was equivalent to 6.65 percent after deducting the income tax. For 1918, the 8-percent rate of excess-profits allowance was equivalent to 8.8 percent after income tax. Under the bill the proposed rates of 8 and 7 percent are equivalent to wholly inadequate rates of 5.6 and 4.9 percent after deduction of normal tax.

These figures evidence (1) that the method which was relatively unimportant under the 1917–18 acts is exceedingly important under

the proposed bill; and (2) that a proposed effective allowance on invested capital of only 4.9 or 5.6 percent is a wholly inadequate allowance for normal profits. Certainly this is true as to the mining industry. Mining investments would not be made on any such basis of estimated net return.

A further important point regarding the 1917–18 acts is that, as heretofore stated, the brackets of excess-profits tax returns were relatively broad. Under the 1917 act the first bracket of 20 percent was equal to from 67 to 114 percent of the amount of the credit. The maximum rate did not apply unless earnings were about four times the amount of the credit.

Under the 1918 act the first excess-profits bracket was generally equivalent to about 150 percent of the credit. Even if the war-profits tax was applicable, only the minimum 30-percent rate would apply unless the total net income exceeded by more than 40 percent the amount of the exemption.

Consequently, in a majority of cases we were dealing under the 1917–18 acts with an income tax of from 6 to 12 percent and an excess-profits tax of 20 or 30 percent. Such a situation is no precedent for a tax bill where the income-tax rate alone is 30 percent and the excess-profits tax quickly rises to 60 percent.

The bill itself recognizes that under this plan it will give a wholly inadequate return for new money. Under Secretary Sullivan in his statement before the Ways and Means Committee (pp. 1338–1339 of the record of hearings) stated the Treasury recognized that 8 to 10 percent was probably the minimum rate which should be allowed for new money. He said:

> Under the 1940 Treasury proposal it was recognized that if business is to expand and investors are to put money into new corporations, an opportunity must be allowed to earn an adequate rate of return on new capital. The plan allowed an 8 percent return on new capital, with a 10 percent return up to $500,000, regardless of the earnings experienced during the base period on old capital.
>
> * * * We would suggest also that the rate allowed on new capital be the same as that originally suggested; namely, 8 percent, with 10 percent for additions to capital that do not bring the total invested capital about $500,000. Any maximum return on capital must be a somewhat arbitrary figure because businesses differ widely in the degree of risk they face. Accordingly, it is desirable not to set too low a maximum of return.

To approach this rate under the method of this bill a special provision of section 205 would amend section 718 of the law so as to allow as invested capital 125 percent of any new capital paid in. This would give effective rates on new money equivalent to 7 percent on the first $5,000,000 and to 61.125 percent on the remainder. It becomes a rather ridiculous procedure to say that we will adopt a method which we recognize will give an unreasonably low effective rate on capital, and then, because we realize this is an inadequate allowance, we will introduce the artificiality of allowing 125 percent of the amount of any new money. It is not the forthright position which the Government should take toward its people in a tax law. It cannot be expected to create confidence in investments.

We submit that excess profits should be measured only by what remains after payment to the Government of its income tax.

VIII. *Effect of this method on "Charitable, etc., deductions."*—Section 204 (d) makes certain amendments under the heading "Compu-

tation of charitable, etc., deductions" which are apparently intended to leave the computation of the deductions as at present with respect to the 15 percent allowable for charitable deductions, the 85 percent allowance for dividends received credit and the 50 percent net income limitation on percentage depletion. However, the inference of this provision—taken in connection with the changes made by section 204 (a)—seems to be that in computing the income tax the amount of the percentage allowable in each of these cases is to be computed on net income after deducting the amount of the excess-profits tax. We protest particularly that there should be no change in the limitation on the percentage depletion allowance as an income-tax deduction, nor in the dividends received credit.

The substance of section 204 (d) should have been inserted as a new subsection or paragraph in section 23, rather than a new subsection of section 711 (a) (1) and (2). However, if the method of the present law for computing excess-profits net income is continued there will be no occasion for the proposed change.

IX. *Excess-profits credit carry-over.*—Section 204 (e) proposes to amend section 710 (c) (1) defining the unused excess-profits credit, so as to require a recomputation of the amount of excess profits net income and excess-profits credit for 1940 as they would be under the law applicable in 1941.

This will mean to a considerable extent a complete recomputation for the year 1940. It will place a great burden on the taxpayer in preparing all the new recomputations for 1940 and on the Treasury Department in reauditing them.

However, the more serious objection is its manifest unfairness. The object of this carry-over is to place corporations as nearly as may be in a relatively equitable position. If a corporation had a larger excess-profits credit for 1940 than the amount of its income for that year, it was to have the benefit of the excess 1940 credit carried forward as a credit in the subsequent year. Corporations which had income equal to or more than the amount of their excess-profits credit for that year were entitled to have full allowance for the amount of that credit. This should not be changed by reason of any changes which might be made in the 1941 law. A corporation that had an excess profits net carry-over should not be denied the full amount of its credit for that year simply because changes are made in the method and amount of making the 1941 computations.

X. *Base period income.*—(*a*) *Average two out of 4 years' earnings.*—The present law requires the use of the average earnings for the 4 years 1936 to 1939 in determining the base period credit. If 1 year was a year of loss and only 3 years were years of income, the income amounts for the 3 years are to be used, but the total for these 3 years is to be divided by four (instead of by three) to get the average. If more than 1 year was a year of loss, the largest loss is to be disregarded, the loss for the other year or years is to be subtracted from the income of the years of income, and the net result is to be divided by four, to get the so-called average income. We believe this procedure is illogical and unfair. The worst that should be done is to divide 3 years to get the average.

These years 1936 to 1939 were not a period of normal earnings. 1938 was generally a poor year; often a year of loss; never a year

representative of normal profits. 1939 was generally a very subnormal year. Only 2 years of the base period can generally be considered as reasonably representative of normal earnings. We accordingly urge that the taxpayer should be permitted to take the average of 2 years of the base period as representing average base period income and that the 2 years' result should be divided by two to get the average.

(*b*) *Full allowance for average earnings.*—The present law allows only 95 percent of the average base period income to be used as an excess-profits credit. The sole apparent reason for this is the urge that it will yield more revenue.

No urge for revenue should be made an excuse for imposing the excess-profits tax on normal earnings. The whole principle of the excess-profits tax is violated when, in desire for revenue, we bow to false or arbitrary definitions or formulas in order to subject normal income to excess-profits tax. We cannot have a fair and sound excess-profits act if we set up a fixed goal of the amount of revenue which such a tax is to yield and then adopt such arbitrary definitions or plans of computation as will raise that revenue. The essential thing is to give the proper definitions and methods of computation for taxation of true excess profits. Then we may apply the rates and determine the expected yield.

(*c*) *Income attributable to base-period year.*—Where income of a taxable year is determined under section 721 to be attributable to a base-period year, the Finance Committee Report No. 2114, page 16 asserted that such income would be included in base-period income in computing the income credit. Treasury Regulations 109, section 30.721–1 state to the contrary. The law should be specifically amended to accord with the Finance Committee's report.

XI. *Invested capital.*—The present law uses the so-called tax basis for computing loss, as the basis for the invested-capital computations. The most that can be said for it is that it is a doctrine of convenience in spite of all its involvements and difficulties. Even this is doubtful.

Actually the best measure of invested capital to be applied to an excess-profits tax would be the value of the capital employed at the beginning of the excess-profits tax period. In no event should the invested capital attributable to property paid in for stock, be less than the value of the stock issued for it. Certainly the tax basis to the present company or to a predecessor on assets acquired many years ago has really no bearing in determining a present fair allowance for normal earnings. In addition, the present law (including the amendments proposed by the House bill) has certain serious defects.

(*a*) *Adjustments in case of a substituted or adjusted basis.*—Section 718 (a) (2), (a) (5), and (b) (4), and section 720 (b)—together with certain other sections of the law—provide for the use of a substituted or adjusted basis for the property. We believe it was a pure oversight in the drafting of these provisions that there was not included such a provision as was included in section 501 to insure that the adjustments to be made should be those appropriate to the basis which was used. Manifestly if the basis to be used was cost, the adjustments should be those based on cost. The wording of the law is capable of a contrary interpretation, which the Treasury has adopted that the adjustments under section 113 (b) of the code are in all cases to be

applied in determining a substituted or adjusted basis, even though they are not the adjustments appropriate to the cost or other basis which is made the starting point for these invested capital computations. The law should be immediately amended, and with retroactive effect, to make this clear.

(*b*) *Basis for computing gain should be used.*—The present law provides that the basis for computing invested capital should be the basis for computing loss. The object of the invested capital computations is to determine a taxable gain or profit. For this reason alone the property basis for computing gain should be used in computing invested capital. This is fair and in many cases will greatly simplify the computations.

(*c*) *Use of invested capital previously determined.*—Many bothersome and difficult questions regarding invested capital were determined under the 1917, 1918, and 1921 laws. It should not be necessary to go back for factual redetermination of all these questions when the lapse of time alone may make them much more difficult to prove. The invested capital as defined under the law is at best a rather uncertain measure of a reasonable excess-profits credit, and no great harm would be done if the taxpayer were now given the right to adopt the determinations of invested capital previously made and bring them down to date. This could probably not be made a universal rule because in some cases there would be more difficulty in bringing the earlier determinations down to date than in making the required new computations; and in others changes in the law might make new determinations appropriate. Furthermore, some taxpayers, after accepting earlier determinations, may have found that they failed to receive the allowances to which they were really entitled. Accordingly the provision to allow the use of the prior invested capital computations appropriately brought down to date should be an option granted to the taxpayer rather than a requirement of the law. It is the taxpayer who has the burden in the first instance of making all these invested-capital computations. If the taxpayer can simplify this work and wishes to simplify his difficulties by adopting the prior determinations, he should be permitted to do so.

(*d*) *Borrowed capital.*—The taxpayer should be allowed to include in invested capital the full amount of borrowed capital (whether this is represented by notes or is on open account).

(*e*) *Dividends in first 60 days of year.*—The special rule as to distributions during the first 60 days of the year is contrary to the principles applicable to dividend determinations under section 115 (a), will cause unsolvable conflict and confusion in the computations, and should be repealed.

(*f*) *Sansome earnings.*—With all the uncertainties and indefiniteness as to just what are to be included in the taxpayer's earnings and profits for the so-called "Sansome earnings," the provisions of section 718 (b) (3) should be changed so as to provide for their exclusion, instead of providing, as is now done, that they are in the first instance to be included in earnings and profits, and are then to be deducted as a separate item.

(*g*) *Distributions not out of accumulated earnings and profits.*—Section 718 (b) (1) provides for reduction of invested capital on account of the distributions which were not out of "accumulated earn-

ings and profits." Question has arisen as to the meaning of this term in view of the provisions of section 115, which provide for distributions as dividends out of the earnings and profits of the taxable year, even though no balance of accumulated earnings and profits may have at that time remained.

There seems no question that it was intended to reduce invested capital only to the extent the distribution was not out of earnings and profits, and not to require reduction on account of dividends out of the earnings and profits of the year when paid under the special provisions of section 115 (a) (2), which have stood in the law since 1936.

The question should be clarified by eliminating the word "accumulated" in section 718 (b) (1).

XII. *Special relief.*—In addition to the special provision we have recommended to allow an excess-profits credit based on normal earnings per unit of mine production, we urge the following more general provisions:

(*a*) There should be provision for special relief as to invested capital as well as with respect to income. Adequate provisions should be made to cover cases where capital is not a material income-producing factor and which are not cared for under the special provisions of section 725 regarding personal service corporations.

(*b*) There should be provisions for special relief in the case of a corporation formed after the end of the base period.

(*c*) Section 722 (b) (1) excludes from consideration low selling price of the product, low volume of sales, etc. Instead of specifically excluding these factors, they should be specifically included as grounds for granting relief.

(*d*) There should be no penalty tax when special relief is granted. There may be ground for the limitations in section 722 (c) as to the conditions under which special relief should be granted, but when the corporation has once established that it is entitled to special relief there is no sound reason for surcharging the corporation with an additional tax, as is done by the present section 722 (d).

(*e*) Adequate provision should be made for limiting the amount of tax required to be paid in the first instance where bona fide claims for relief under section 722 are filed.

XIII. *Supplements A and B.*—There is need that these supplements should be generally rewritten to state principles rather than the maze of specific formulae—in some cases almost unintelligible—which they now contain. Again realizing that this is probably impossible at the present time, we urge only the following amendments:

(*a*) Section 742 (f) should be eliminated as not in harmony with the other present provisions of this law and as not justified. There is no adequate reason for excluding the taxpayer's own base period net income for the period prior to its becoming an acquiring corporation under supplement A.

(*b*) The definition of "acquiring corporation" should be broadened to include the case where a corporation has acquired for its stock or securities a mine or plant unit as a going concern from two or more owners, which is not permitted under the now specified technical conditions.

XIV. *Carry-forward and backward of credit.*—The provisions of section 710 (b) (3) for an unused excess-profits credit carry-over

for 2 years should be extended to 5 years and provision should also be made for a carry-backward allowance. The present net loss carry-over should be extended to at least 5 years.

XV. *Daily computations.*—Section 715 of the law limits the cases in which daily computations of invested capital may be waived by the Commissioner to those where the difference will amount to not more than $1,000 of invested capital. The taxpayer should not be required to make hundreds or thousands of computations to get within a $50 margin of accuracy in amount of tax. The $1,000 limitation should be stricken from the law.

XVI. *Strategic metals.*—The bill in section 206 proposes to repeal the present section 731 which exempts from excess profits tax certain so-called strategic metals. This subject has been or will be presented to the committee by others. It seems unnecessary for me here to repeat the reasons why section 731 should be retained. We join with others who urge a continuation of this exemption.

XVII. *Capital stock taxes.*—We urge that provision should be made for annual declaration of capital stock value. We have urged this on prior occasions but the present situation makes it even more imperative.

The essence of the capital stock tax is the declaration of a value and the payment of a tax thereon which will give an exemption from the declared value excess profits tax. It carries the implied assumption that the declared value should be based on estimated future earnings of the succeeding 3-year period. Under stable conditions corporations might perhaps be expected to make some reasonable estimate of prospective earnings over a 3-year period. However, no corporation can hope to do that today. It is bad enough for the corporation, under present conditions, to try to estimate earnings 6 months in advance. If it fails to estimate high enough, it will have to pay a relatively high declared value excess-profits tax; if it overestimates the amount of probable earnings it will pay an unnecessarily large capital stock tax. It is simply impossible for businessmen to try to estimate what will be a fair declared value for capital stock which will give adequate allowance for the declared value excess profits tax for the next 3 years.

Under these conditions corporations should be given the right to make annual declarations, unless the capital stock tax is repealed.

The bill proposes to increase the capital stock tax rate to $1.25 per thousand dollars of declared value capital stock. To this we enter no protest. We do urge that, unless the tax is repealed, the increased rate carry with it the specification of the right to make annual declarations of capital stock value.

XVIII. *Section 734, Adjustment for inconsistencies.*—It is the duty of the Commissioner, under section 57 of the code to "determine the correct amount of tax." The new section 734, of the excess-profits-tax amendments of 1941, requires that the amount of the excess-profits tax shall take into account the amount of any adjustment in case of a position inconsistent with prior income-tax liability.

Speaking broadly, you have made it the duty of the Commissioner to determine whether any item affecting the determination of the excess-profits credit is treated in a manner inconsistent with the treatment accorded such item in the determination of the income or

excess-profits-tax liability of such taxpayer or a predecessor, in any prior year from 1913 to date, which is otherwise not open for redetermination; then to determine whether such prior inconsistent determination was or was not correct under the law applicable to such prior year. Since the invested capital credit involves the amount of accumulated earnings and profits, and the amount of distributions not out of earnings and profits, it is virtually made the duty of the Commissioner to reaudit all prior tax returns of the taxpayer to determine whether every item of income or deductions, every item of nonallowable losses or expenses, every distribution to stockholders, and even every income tax paid (which taken together will affect the amount of accumulated earnings and profits, or will determine the amount, if any, of distributions not out of earnings and profits), was correctly treated or computed as to law and amounts in prior tax settlements. Added to this reaudit of the taxpayer's returns will be the supplemental examination of any "predecessor's" returns.

This is quite apart from the reconsideration which must be given to every reorganization or exchange to determine its correct status under the law as now interpreted, and the amount, if any, of gain or loss which should have been recognized. The "adjusted basis" for every property item, as it is concerned in determining admissible and inadmissible assets, must be reexamined and traced back to see if it involves any "inconsistencies" as to prior years of taxpayer or predecessor. Certainly Congress did not intend this when it enacted section 734; yet this seems to be the requirement of the section as it stands in the law. It is unbelievable that Congress should allow the section to continue in the law. There can be no expectation that the Commissioner will not enforce this section to the full extent of the authority it gives and the duty it imposes.

Actually there is no real reason for section 734 in the excess-profits tax law. The question of whether or not prior years' tax liabilities were correctly determined has no bearing upon the question of the reasonable normal earnings of the current year, which is the determination now to be made for excess-profits tax purposes.

Section ought to be promptly repealed, with retroactive effect.

XIX. *Consolidated returns.*—Consolidated returns should be allowed for income-tax purposes. Congress has rightly recognized that for computing excess-profits tax it is fair that consolidated income of an affiliated group should be the basis. This same principle should be applied to income subject to normal tax.

This was recognized in 1918 when the income tax was only 12 percent and in subsequent years when the income tax was between 10 and 15 percent. It should certainly be recognized when we are to have an income tax of 30 percent. This high rate serves to magnify all the artificialities of the separate corporate returns, where the real net income of an affiliated group is that shown by the consolidated return.

XX. *Depletion.*—The Secretary of the Treasury has suggested possible revision of the depletion provisions. We naturally urge that no change in existing provisions should be made without opportunity for a full hearing thereon. We are confident we can at that time satisfy the committee, as we have on previous occasions, that the present provisions are no more than mines are fairly entitled to. If any change is to be made it should be to remedy some of the present provisions of law

and regulations which fail to grant, in some instances at least, the full depletion allowance which mines should really have to compensate for capital exhaustion.

XXI. *Government expenditures.*—We urge that nondefense expenditures be reduced to the minimum, and waste and extravagance in defense expenditures be avoided. The essential objectives of defense expenditures are not helped by waste and extravagance; nor by including in the name of "defense" expenditures which are not essential for that purpose.

In an "all-out" defense effort we should cut nondefense expenditures by $2,000,000,000, rather than raise this by present or future taxes from the people. We should not ask this generation or the next to pay for unnecessary costs of these years.

We can more easily and equitably cut $2,000,000,000 from our nondefense expenditures than we can raise that much in additional taxes.

Certainly we should not use the pressure for funds for avoidable expenditures as a reason for denying relief from inequitable provisions of our present tax laws or for imposing unfair provisions in the pending bill.

The best estimates we have indicate $90,000,000,000 or more of national income for the present calendar year. At that income level it is estimated that the present law would yield over $11,000,000,000 of revenue. The proposed increases of rates in this bill, even after making all the amendments we have urged, should still give an adequate yield.

We must not wreck the businesses whose profits are counted upon to yield these revenues. This is true as to revenues during the emergency and as to the revenues which we shall still need in the post-emergency years. We believe the recommendations we have made will serve not merely to deal fairly and justly with taxpayers, but will contribute to the stream of revenue which we need continually flowing into the Treasury.

Accordingly we urge that the amendments here recommended be made in the pending bill.

I again call attention to the provision regarding daily computations in section 715, where, through some mistake, the limitation of $1,000 of invested capital, which would mean a difference of less than $50 in tax, was inserted. It ought to be cut out, because you cannot ask people to make hundreds and thousands of computations in order to try to get within $50 of what would be a theoretically correct tax.

Thank you very much.

The CHAIRMAN. Thank you.

Mr. E. E. Raymond, Saginaw, Mich.

STATEMENT OF EARL E. RAYMOND, PRESIDENT, RAYMOND PRODUCTS CORPORATION, SAGINAW, MICH., AND PRESIDENT, TRAILER COACH MANUFACTURERS ASSOCIATION

The CHAIRMAN. Mr. Raymond, will you give your name to the reporter?

Mr. RAYMOND. I am E. E. Raymond, president of the Raymond Products Corporation, Saginaw, Mich., and also president of the Trailer Coach Manufacturers Association.

The Trailer Coach Manufacturers Association, by the way, represents about 70 percent of the units produced by the manufacturers in the trailer industry.

The CHAIRMAN. About 70 percent?

Mr. RAYMOND. About 70 percent; yes, sir.

The CHAIRMAN. All right, you may proceed with your statement.

Mr. RAYMOND. After having both read and listened to the testimony of representatives of several other industries who have appeared before your committee to register objections to provisions proposed in the revenue bill of 1941 for their industries, we are rather hopeful that what we will have to say in the few minutes accorded us will prove refreshing.

We are here to suggest an alternative arrangement under which substantially more revenue can be realized from our little industry than can be obtained from the proposed 7 percent excise tax.

And, incidentally, to call to your attention the extremely desirable advantage which this alternative proposal will have in spreading this tax burden over the many rather than on the few at an almost prohibitive rate.

May I digress to say that when I left Saginaw Sunday evening I was under the impression that the only purpose of the current revenue bill was to raise needed revenue, and it was on that basis that I came prepared to make my statements and offer our suggestions to you.

Yesterday, however, in reading the report of Secretary Morgenthau's testimony before your committee on August 8 I was somewhat surprised to learn that other considerations appear to be involved—at least, to the extent of bearing down rather heavily in the tax program on industries producing products not generally regarded as essential and which use raw materials vital for defense needs.

When I tell you that approximately 95 percent of the trailer coaches being produced today are going directly into use for the temporary housing of defense-project workers we trust that you will agree with us in our position that trailer coaches cannot be considered, by any stretch of the imagination, as a luxury type of product nor one which should be called upon to carry an extra tax burden.

As a matter of fact, it seems to us that just the opposite position should be taken. Since the first of this year, in addition to the 15 percent of our output which has been taken by the Government, upward of 80 percent of all trailer coaches manufactured have gone directly to defense workers, who have taken the initiative in providing for themselves, at their own expense, temporary housing facilities at no cost to the Government.

You, of course, are aware that the Coordinator of Housing already has recognized both the economy and desirability of trailer coaches for mobile emergency-defense housing. Our industry has supplied over 4,000 trailer coaches so far this year in his temporary-shelter program—and this, by the way, at a cost of less than $300 per person, including furniture—everything needed except bed linen, dishes, and cooking utensils. We cite this figure in comparison of the per capita cost of housing our soldiers in training camps as well as in comparison with what is being spent on a per capita basis on housing-defense projects throughout the country.

From a strictly housing angle—mobile housing though it is—we perhaps should be here appealing to you to accord to the trailer-coach

owners of the country the same consideration you expect to give the individual home owner, who, without hesitancy, provides shelter for himself and his dependents, at his own expense and at no cost to the Government.

If the alert and independent defense workers who will purchase trailer homes for themselves this next year were organized and in position to send a spokesman to present their views to you, we are sure their earnest plea would be: "Give us the same treatment you give to the other householders—no better and no worse."

Now, from our own angle as manufacturers of trailer coaches, may I say this: If revenue is the sole object of the new tax bill, the proposed 7-percent excise tax on trailers, as conditions now stand, scarcely warrants consideration. Due to impending restrictions on materials and the proposed restrictions on installment sales, the total output of factory-built jobs during 1942 may drop to a mere fraction of our present production. The withdrawal of credit in 1937 cut us down from around 12,000 to less than 3,000 units.

Under the most favorable conditions, namely, a high priority rating, a favorable financing set-up along with further orders from the Government itself, we doubt if to exceed 25,000 units could be expected during 1942. By eliminating 5,000 that the Government could use to advantage, this leaves around 20,000, at the most, on which the proposed tax could be levied. The average manufacturer's net price is now around $600. You have, therefore, a possible minimum sales volume, based on 3,000 units, of $1,800,000, which would produce a tax revenue of only $126,000 under restricted operating conditions, and a maximum of $12,000,000 in sales volume on which the maximum tax revenue would be $840,000.

The full burden, in either event, will fall on those who purchase trailer coaches in 1942, practically every one of whom will be making his investment to provide a roof over his head. When it is remembered that there are now in use as regularly occupied mobile homes upward of 200,000 trailer coaches—the bulk of them in defense or other areas where housing shortages exist—it's not easy to cite sound reasons why the comparative few who will buy trailer homes during 1942 should be asked to provide the $126,000 to $840,000 in taxes projected for the trailer-coach industry.

By entirely eliminating the proposed 7-percent exise tax from trailer coaches and substituting, for instance, a use tax of $5, such as is proposed for motor vehicles and boats, you not only would obtain materially more revenue under the most favorable conditions we now can envision—far more than we believe will come to pass—but also would spread the levy so broadly that no one could suffer from it.

In our endeavor to condense our statement to comply with the time limit given us, we have been forced to omit mention of several important points which properly should be developed, such as—

1. The proper clasification of trailer coaches as distinguished from other types of trailers used in connection with passenger automobiles;
2. The erroneous data on which the Treasury Department based its estimates;
3. The factual data in the form of statistics showing the rapid growth of this, a new depression-born industry; and
4. Sociological aspects.

We therefore request that the proposed exise tax be eliminated from trailer coaches and recommend in its stead a use tax such as is proposed in section 3540 on the use of motor vehicles.

The CHAIRMAN. Are there any questions?

Senator DANAHER. One question, Mr. Chairman.

Suppose, as you remark on the first page here of your prepared statement, that there are other considerations than merely raising the revenue involved in this proposed excise tax, what defense production could you engage in if you were driven out of the motor-trailer business and into some defense production?

Mr. RAYMOND. The majority of the trailer plants are plants that have been organized particularly for the construction of trailers; their equipment is rather light, because the materials of which they build trailers is light material—plywood, masonite, and such materials. There are none of the trailer manufacturers that I can recall offhand that actually build the heavy units going into their production, such as axles and wheels, and things of that sort; they manufacture only the lighter parts, so that their equipment is, therefore, very light. Their buildings are quite roomy, because their product is a large product requiring room. The type of work that they go into is rather difficut to think of right at this time. I cannot think of any, at least.

Senator DANAHER. They could not make trucks for the Signal Corps, or anything like that?

Mr. RAYMOND. Their room would be sufficient to do so in some cases, but their equipment would not in any way, shape, or manner.

Senator CONNALLY. May I ask a question?

Mr. RAYMOND. Yes.

Senator CONNALLY. If a passenger automobile pays a 7-percent tax, why should not a trailer pay it?

Mr. RAYMOND. Why should not it?

Senator CONNALLY. Yes.

Mr. RAYMOND. That is what we propose.

Senator CONNALLY. You mean the excise tax or the use tax?

Senator BROWN. He is for the $5 use tax instead of the 7-percent trailer tax.

Senator CONNALLY. I am talking about the 7-percent excise tax. If the automobile pays 7 percent, why should not the trailer pay 7 percent?

Mr. RAYMOND. We think that the automobile, in a good many cases, at least, beyond the proportion of the trailer coaches, is used for pleasure purposes. Trailer coaches, according to our statistics on it, are used, particularly in this last year, 95 percent as homes.

Senator CONNALLY. All right. You want to treat it as a home? That kind of a home has a big advantage over my home, or over the ordinary home, because you can move it around; you can take it anywhere. It is a fine privilege, and you ought to pay something for it. I have got a home, and I cannot move it; I cannot budge it; it stays where it is; and this other fellow has got a trailer—he can go wherever he wants to and set up his home.

Mr. RAYMOND. That is right.

Senator CONNALLY. That is an advantage over the ordinary home. Why should not he pay a tax for that privilege?

Mr. RAYMOND. We suggest that he pay $5—that all trailer owners do that.

Senator CONNALY. Oh, $5. He will probably pay that, too, in this bill.

Senator BROWN. As I get it, Mr. Raymond, your idea is you will get somewhere around $800,000 tax, perhaps, for the Treasury?

Mr. RAYMOND. That would be the maximum.

Senator BROWN. And $120,000 is the minimum?

Mr. RAYMOND. That is right.

Senator BROWN. That tax will come entirely from buyers of new trailers?

Mr. RAYMOND. Yes.

Senator BROWN. Your idea is if we go back and reach those who bought the trailers through the years, the trailers that are still in existence, and charge them $5, you figure that would bring in more money?

Mr. RAYMOND. Yes.

Senator BROWN. I think you say $1,000,000.

Mr. RAYMOND. Yes.

Senator BROWN. That is more than the estimate on the 7-percent excise tax?

Mr. RAYMOND. Yes.

Senator BROWN. I think your idea is a very sensible one.

Mr. RAYMOND. If I might add, we realize the owner of the coach has advantages in economies due to the fact that he is living in his coach, but he does not only pay the $5 for the 1 year, by the way, he possibly will have to pay that as a use tax for some time. He may eventually pay even more than the 7-percent excise tax, so possibly it will be more of a burden, but it will be distributed in such a way that it would not affect his initial purchase.

Senator BROWN. Of course, he is paying taxes in various States in the form of a license.

Mr. RAYMOND. A license tax; yes, sir.

I thank you.

The CHAIRMAN. Thank you, Mr. Raymond.

Mr. Thomas S. Hammond is not here.

Next is Mr. O. L. Weber.

STATEMENT OF OSCAR L. WEBER, PRESIDENT, WEBER LIFELIKE FLY CO., STEVENS POINT, WIS., REPRESENTING ASSOCIATED FISHING TACKLE MANUFACTURERS

The CHAIRMAN. Mr. Weber, you may proceed.

Mr. WEBER. Mr. Chairman and members of the committee: My name is Oscar L. Weber, president of the Weber Lifelike Fly Co., Stevens Point, Wis. I represent the fly and bait division of the Associated Fishing Tackle Manufacturers and hundreds of other small companies. I am here to request a change in H. R. 5417, section 3406, page 72, lines 2 and 3. This change would call for the elimination of "artificial lures, baits, and flies," as taxable items in this bill. In addition to my oral testimony, I should like to file a written statement.

The CHAIRMAN. Yes, sir; you will have that privilege, Mr. Weber.

Mr. WEBER. I wish to call your attention to the thousands of individuals producing flies and baits as a home or spare-time industry, selling to other individuals or to one or two stores in their com-

munity, from whom it would be practically impossible to collect an excise tax. This imposes an unfair burden on organized tackle manufacturers.

Senator CLARK. Do you know what that tax is estimated to raise?

Mr. WEBER. A million and a half sales.

Senator CLARK. I say, do you know how much revenue it is estimated to raise?

Mr. WEBER. Yes; I figure a million and half sales, and at 10-percent tax would be a million and a half.

Senator CONNALLY. $1.50 on each sale?

Mr. WEBER. Probably I do not get your question.

Senator BROWN. The question is, what would the tax raise in money?

Mr. WEBER. I figure that the tax that we are objecting to would bring a million and a half sales.

Senator CONNALLY. He wants to know how much money the Treasury would get.

Mr. WEBER. They would get 10 percent.

Senator CONNALLY. How much would the sale be for? You might sell a fly for a nickel.

Mr. WEBER. Yes; flies do sell for a nickel, from 5 cents up.

Senator CONNALLY. In my opinion, they sell for too much, all of them.

Mr. WEBER. For too much? What part of the country do you come from? You come from the South, where they sell bass flies.

Senator CONNALLY. I was on the Chesapeake, and a fisherman had a whole trunk full of flies, and yet the fish did not bite any better.

Mr. WEBER. The chances are they were all homemade flies, too.

Senator CONNALLY. No; they were not. They were the fancy reels and rods, and all these fancy flies, a whole trunk full of them; they were folded in the lockers, 4 or 5 drawers. That is a luxury. Why should not we tax those flies?

I would be in favor of taxing all kinds of flies.

Mr. WEBER. The trouble, Senator, is you have a trunk full of fishing tackle, but the investment in cash was all in the rods and reels, you did not have the investment in the flies.

The CHAIRMAN. You were asking to strike out what particular words?

Mr. WEBER. I did not want anything struck out.

The CHAIRMAN. I mean, out of the bill.

Mr. WEBER. Oh; page 72, lines 2 and 3. This change would call for the elimination of "artificial lures and flies."

The CHAIRMAN. Page 63 in this present bill here. I simply want to get your language. You are not asking that anything else be stricken out in that sporting-goods section?

Mr. WEBER. No.

The CHAIRMAN. Except the artificial lures, bait, and flies?

Mr. WEBER. That is all.

The CHAIRMAN. Yes, sir.

Mr. WEBER. There is no opposition to the excise tax on rods, reels, and creels which represent the large volume in fishing-tackle sales, but we are opposed to taxing artificial lures, flies, and baits because the small volume of sales does not justify the expense involved in collecting the tax.

In the Revenue Act of 1932, a 10-percent tax was imposed on rods and reels and all similar articles commonly or commercially known as sporting goods. Realizing the difficulties in the collection of a tax a ruling was made that the tax be confined to rods and reels only.

In the Report of the Subcommittee of the Committee on Ways and Means of the House of Representatives, proposing revision of the revenue laws of 1938, there is a statement on page 63 as follows: "The tax on sporting goods has caused administrative difficulties out of proportion to the revenue received." Gentlemen, if this has been true of sporting goods as a whole the difficulties will be multiplied many times in the collection of a tax on flies and baits.

Gentlemen, as this bill now reads it taxes the barefoot boy and the commercial fisherman as well as the sportsman. A lure may be anything attached to the end of a fishing line. This would include spinners and spoon hooks which are used as widely as natural bait.

The imposition of this tax will advance the price of artificial lures, flies, and baits. This will increase the use of live bait such as frogs, minnows, crawfish, and helgramites. The traffic in live bait is the most serious cause for the depletion of our game fish as it robs these fish of their natural food.

We do not wish to shirk our duties in the support of an adequate tax plan but we believe the elimination of artificial lures, baits, and flies in this tax bill will be of mutual benefit.

Senator LA FOLLETTE. Mr. Weber, have you any estimate on what proportion of the artificial lures and flies that are used are produced as a home industry?

Mr. WEBER. I would think more than 50 percent.

The CHAIRMAN. All right, Mr. Weber. Thank you.

(The statement referred to by Mr. Weber is as follows:)

STATEMENT OF THE FLY AND BAIT DIVISION OF THE ASSOCIATED FISHING TACKLE MANUFACTURERS

Realizing the critical need for a tremendous increase in tax revenue at this time, when the country is dedicated to a gigantic national-defense program, the Fly and Bait Division of the Associated Fishing Tackle Manufacturers desires, through this statement, to go on record as supporting the President of the United States in all defense measures. At the same time, pursuant to the testimony offered by Mr. Oscar L. Weber, our representative, who appeared before the Senate Finance Committee, we feel it incumbent upon us to state in detail our objections to an excise tax on artificial lures, baits, and flies.

In H. R. 5417, now under consideration by the Senate Finance Committee, lines 2 and 3 on page 72, fishing rods, creels, reels, and artificial lures, baits, and flies are listed as taxable items under the general heading of "Sporting goods," which is included in section 3406, excise taxes imposed by the Revenue Act of 1941. Rods and reels have been taxed on two previous occasions, but artificial lures, baits, and flies never have been included in previous tax bills. One of the reasons for not taxing these latter items is the difficulty of collecting revenue, inasmuch as thousands of small manufacturers—in many cases families—impose upon the Federal revenue-collecting agency a task which is far more costly than the income derived, even if they could be located, and that is an impossibility.

We quote from the 1938 report of the subcommittee of the Committee on Ways and Means of the House of Representatives on the proposed revision of the revenue laws, in which it was stated:

"The tax on sporting goods has caused administrative difficulties out of proportion to the revenue received."

In requesting the committee to eliminate, on page 72, lines 2 and 3, H. R. 5417, "artificial lures, baits, and flies," we should like to list the following points for consideration:

1. Fishing tackle mainly is divided into three classes: (*a*) Rods and reels; (*b*) lines; and (*c*) artificial lures, baits, and flies.

2. Sales of artificial lures, baits, and flies are one-third in dollar volume of the sales of rods and reels and about one-half in dollar volume of fishing-line sales. Bait-casting lures are primarily the poor man's lures and are more widely used for the poorer class of commercial fishermen.

3. Thousands of small, insignificant manufacturers and sellers of artificial lures, baits, and flies cannot be reached by the Commissioner of Internal Revenue for the collection of such a tax as H. R. 5417 imposes. Consequently the collection of such a tax will strike only the larger and more widely recognized producers of such items, a condition which sets up an unfair tax burden. The back-room producers of artificial lures, baits, and flies have been able to spring up because the manufacture of these items on a small scale requires almost no capital investment.

4. Imposition of any tax on "artificial lures, baits, and flies" is certain to create a tendency toward price advances for these items. This being true, fishermen will use more live bait, i. e., frogs, minnows, and crawfish, which constitute the natural food of fish. Widespread use of live bait is opposed to the recognized principles of conservation and the fly and bait division of the Associated Fishing Tackle Manufacturers is opposed to a violation of any sound principle of conservation.

5. Since no opposition to the proposed tax on rods and reels is on record, it is suggested that the committee give consideration to a higher tax on these items—let us say 12 percent instead of 10 percent, which would produce a greater tax revenue than would be lost by removing the tax on "artificial lures, baits, and flies." Rods and reels are produced by recognized manufacturers whose identity and places of manufacture are well known and by producers who keep complete statistics on their daily production and daily sales.

6. In addition to the above, the industry is threatened with a proposed 10-percent tax on all fishing tackle for conservation purposes under H. R. 3301 and S. 1614, companion bills.

This committee cannot help but be aware of the fact that any tax imposition, even in a period of dire emergency burdens the fishing-tackle industry with extra duties, additional expense, and loss of time. It is our desire and wish to cooperate with the Federal Government to the very fullest extent, but, since we have presumed to make these suggestions to the Senate Finance Committee in a hope that "artificial lures, baits, and flies" will be eliminated from the text of the tax bill as passed by the House. We believe that our reasons are cogent, particularly since they point out that the revenue-collecting process on these items will involve such a high cost that the imposition of any tax will, in final analysis, nullify itself and fail to produce the return the Government expects.

(Signed) OSCAR L. WEBER,
President, Weber Lifelike Fly Co., Stevens Point, Wis.
(Signed) L. J. WOOSTER,
Vice President, James Heddons' Sons, Dowagiac, Mich.

The CHAIRMAN. Mr. Dahmen.

STATEMENT OF L. C. DAHMEN, OLEAN, N. Y., REPRESENTING THE DAYSTROM CORPORATION

Mr. DAHMEN. Mr. Chairman and gentlemen, I speak for the Daystrom Corporation, what might be called a medium-sized corporation, and I suspect there are thousands of corporations in this country in the same position in which we find ourselves.

The CHAIRMAN. What do you produce?

Mr. DAHMEN. Metal furniture, some plastics, steel tubing for furniture, dinettes, and furniture of that type.

The CHAIRMAN. What is the particular thing you are going to speak to?

Mr. DAHMEN. The general effect of the tax bill on the medium-sized corporations.

The CHAIRMAN. I see; not with respect to any specific excise tax?

Mr. DAHMEN. No; just the general provisions of the bill.

Senator BARKLEY. Excess profits?

Mr. DAHMEN. Excess profits; everything that is included in it.

The CHAIRMAN. All right. Go ahead.

Mr. DAHMEN. A small or medium-sized corporation has three general sources where it can get capital. As it grows it requires more capital. The more successful a corporation the more capital it requires. If it is unsuccessful, it goes into liquidation, and dies; but our corporation, and thousands of others like it, are what you might call successful. Starting out 10 years ago with 5 employees, today it employs 500, and it is still growing.

Now, we have three sources from which we can get capital. First, we can sell stock, but we fall into that unfortunate classification as do hundreds of others where S. E. C. restrictions on the sale of stock make that method cumbersome and inadvisable. We tried it many times and each time gave it up because of the cost and expense, and the fact that we do not fit in that classification of small corporations where a few thousands of dollars of local money will help us; on the other hand, we do not fit into the classification where we can go into the larger money markets, in Wall Street, to be financed. We have a second source of obtaining money, and that is borrowing, and, of course, you are all familiar with the limitations on capital borrowing. You can borrow for short-term needs, bue not for expansion and growth. That leaves one source for obtaining capital for growth, and that is earnings, and that has been the source that our company and thousands of others like us have obtained our money.

Now, we find ourselves in this position: Under this proposed tax law that source is being rapidly depleted and dried up. Net income, as pointed out many times today, does not necessarily mean that it is cash. It goes into brick, mortar, machines, and that type of thing, and at the present time we find ourselves in the position, gentlemen, where although highly successful for 10 years, we are actually borrowing money to anticipate and meet tax payments as well as to meet the increased demands of the requirements of our business.

Now, it seems to me, and I am not a tax expert, that the following of this procedure is going to ultimately result in weakened, sick corporations of this class. We are not going to be strong, and instead of being able to collect taxes from us on a reasonable basis your tax collections are going to be smaller and smaller. In other words, the old fable "The goose is being killed" by this type of taxation is pertinent.

Senator CONNALLY. Let me ask you this: You say you are borrowing money to pay taxes. What do you do with the money you make; what do you do, buy these supplies? Why don't you borrow the money to pay the bill for the brick, mortar, and machinery and pay the taxes with the cash?

Mr. DAHMEN. We would be very glad to borrow the money to buy those things, but it is not feasible to do so.

Senator BARKLEY. Do you have any more difficulty borrowing money for tax purposes than for the purchase of materials?

Mr. DAHMEN. I should say that borrowing money for taxes, unless you can show an immediate method of liquidation, is pretty nearly impossible.

Senator BARKLEY. Yet you say you borrow money to anticipate and meet tax payments. I asked you whether it was more difficult to do that than it would to borrow money for the purchase of the supplies.

Mr. DAHMEN. Well, if you wish me to go into it, I might say that the Daystrom Corporation has a hundred thousand dollar indebtedness against it.

Senator BARKLEY. I don't want to go into that. I am not trying to pry into your private finances, but I don't see where it would be any more difficult to borrow for your capital purposes than for your taxes.

Senator GERRY. One is short term, the other long term.

Mr. DAHMEN. That is true on many items of value such as buildings, equipment, and so on, but——

Senator BARKLEY. Then it ought to be easier to borrow for capital purposes than for tax purposes?

Mr. DAHMEN. No; it is not.

Senator BARKLEY. In other words, it is easier to borrow where you have no security than where you have?

Mr. DAHMEN. Of course, banks are limited naturally in the making of these loans.

Senator BARKLEY. It has no relationship to this bill, but you said you borrowed for tax purposes and that you could not borrow to provide capital funds.

Mr. DAHMEN. We borrowed for machinery and taxes. Giving you an honest answer to your question, some of the borrowing has been occasioned by the larger requirements of inventory, by the necessity of making purchases due to the condition of the market.

Senator BARKLEY. That has been made necessary by your larger business?

Mr. DAHMEN. Yes; and also by the uneven flow of material. A couple of years ago you could buy piecemeal; today you cannot do that.

Senator TAFT. The main point is, you haven't any means of financing your expansion?

Mr. DAHMEN. That is true, and if a corporation doesn't expand and grow it stands still and goes backward, and from your point of view, if you do not keep alive and strong these businesses, you are not going to be able to tax them, even on a lower basis. The amount on which you can successfully tax is going to be less than if you allow corporations to reinvest. Taking our corporation in particular, in 10 years there has never been a cash dividend paid which stockholders could put in their pockets. He has to put it back in the business. And that is true to a large extent of our executive salaries.

Finally, a method of taxation is coming along which gives us apprehension for the future. I am not disputing the need for the money but rather pointing out the result of getting it in this fashion where the corporations in this class, and there are thousands like ours, instead of being strong are going to be weak, and that is not mentioning the fact that thousands of businesses are in a very precarious condition already. We have had fair earnings this year but as the year progresses the availability of material is becoming less and less and the immediate prospects for profits, or even break-even operations, are becoming more restricted.

Senator VANDENBERG. Are not priorities a greater threat than taxation?

Mr. DAHMEN. I think you cannot isolate one thing and say it is that one thing; it is a multiplicity of things acting simultaneously to create a result, and this tax problem is one of them.

Senator BARKLEY. Of course, the question of priority is frequently brought into this matter here and undoubtedly the restriction of necessary material to industries not engaged in national-defense production is a hardship.

Mr. DAHMEN. Yes.

Senator BARKLEY. But is not that all due to the lack of foresight on the part of the American people as a whole in that they have not laid sufficient warehouses of such materials in the years past, and we have now to decide between some of our industries and the defense program, which, I suppose, most people feel is entitled to priority?

Mr. DAHMEN. Yes. I don't think that business generally is objecting to these priorities because we know after all we have a big stake in this thing.

Senator CLARK. Of course, priorities do enter into the tax situation in that the ability to pay taxes may be completely frustrated by inability to get materials.

Mr. DAHMEN. Yes; and further than that, during these periods of shifting, changing conditions, where one day we have one material and the next day another material is available, we must shift our equipment facilities in order to use available materials, and each time we make that change we have to invest more capital money to make that shift, with the net result that if I, as a manager of this company, wanted to limit my capital expenditures in order to pay taxes, I would be faced with the choice of either liquidating and closing down because I wouldn't have materials or doing the next best thing, attempting to meet another front.

Senator BARKLEY. What do you make?

Mr. DAHMEN. Steel tubing for furniture, dinettes, plastic, various parts of such things. The difficulty with our type of business is that we are not big enough in any one thing to be sufficient on that alone.

Senator CONNALLY. You are a hundred times bigger than when you started?

Mr. DAHMEN. Yes; we are going along pretty well.

Senator CONNALLY. And expanding regardless of how you are getting the money?

Mr. DAHMEN. Yes; we have been, but the question is whether you want us to grow; whether you want us to continue to be something you can tax or put us under such a burden that we cannot do so.

Senator BARKLEY. Where is your plant?

Mr. DAHMEN. Olean, N. Y.

Senator GUFFEY. Do you feel that this inability to get finances is due to conditions inherent in your business or are you basing your contention entirely on general conditions?

Mr. DAHMEN. I think it is general. I have no criticism with the S. E. C. program; it is necessary and is a very fine thing, but it has an effect and there is no loophole for a business which is not big enough to be able to afford to pay 30 percent to get some money.

Senator TAFT. I suppose you find difficulty in getting individual investors interested?

Mr. DAHMEN. Yes. Very frankly, the man with real investment capital today can invest in a large corporation, many of whose stocks are selling at liquidating prices. His inducement to invest in that type of business is far greater than is his inducement to invest in our

type of business, which is so personal. The death of myself, or my partner, or certain key men in our organization might destroy his investment; therefore, that type of individual is seeking the larger corporations. The small corporations are engaged in fabricating basic materials which are created by the larger corporations. The larger corporations do not go generally into producing the consumer goods. They produce the raw materials and it is a better investment for an investor.

Senator GUFFEY. How many employees have you now?

Mr. DAHMEN. About 500.

Senator GUFFEY. And you have been in business 10 years?

Mr. DAHMEN. Yes.

Senator GUFFEY. What was your capital originally?

Mr. DAHMEN. Just a very few dollars.

Senator GUFFEY. And how many men were there originally?

Mr. DAHMEN. Just myself and two others.

Senator GUFFEY. And now you have 500?

Mr. DAHMEN. Yes.

Senator GUFFEY. Then you cannot complain at the tax laws?

Mr. DAHMEN. I am not complaining at what the taxes have been; I am addressing myself to the projected taxes for the effect I fear they will have on the future well-being of corporations such as ours.

Senator GUFFEY. You don't see the ghosts before you reach the graveyard, do you?

Mr. DAHMEN. Unfortunately, if we don't see some of the ghosts, we are going to be in the graveyard.

The CHAIRMAN. That is the thought: You are trying to convey that thought. In other words, your credit position under this proposed tax is so circumscribed that you cannot any longer go into the money market and get the money for your expansion with hope of paying it back, and therefore you cannot get the money?

Mr. DAHMEN. That is the situation we are in.

The CHAIRMAN. Mr. Charles F. Willis.

STATEMENT OF CHARLES F. WILLIS, PHOENIX, ARIZ., STATE SECRETARY, ARIZONA SMALL MINE OPERATORS ASSOCIATION, AND CHAIRMAN, ARIZONA MINERAL RESOURCES BOARD

Senator HAYDEN. Mr. Chairman, while Mr. Willis is taking the stand, I should like to say that in addition to being the secretary of the Arizona Small Mine Operators Association and chairman of the Arizona Mineral Resources Board, Mr. Willis is also the publisher of the leading mining journal of the Rocky Mountain region. I am sure that any representations he may make should be given serious consideration.

Mr. WILLIS. My name is Charles F. Willis, of Phoenix, Ariz., and I am State secretary of the Arizona Small Mine Operators Association and chairman of the board of governors of the Arizona Department of Mineral Resources.

The Arizona Small Mine Operators Association is an organization of approximately 4,300 members, most of them operating small marginal or submarginal mines; many of them engaged in the development or production of the strategic and critical minerals which are so urgently being sought by the Government for defense pur-

poses. They are willing and anxious to do their part in providing raw material for the defense program and the mining of minerals and metals is the one place in which Arizona can fit, in a substantial way and do a splendid part.

I am speaking primarily on that amendment to the revenue bill—repealing section 731—which exempted the corporate producers of strategic and critical minerals from the provisions of the excess-profits taxes, although I will comment briefly upon certain other phases of the excess-profits taxes as they affect the mining industry and apply to other metals and minerals as well as those specified as strategic.

We in Arizona are fully in accord with the principles and objectives of the excess-profits taxes and the fact that an attempt is being honestly made to prevent profiteering on the defense program. We feel, however, that great care should be taken to make certain that the taxes being imposed are on true excess profits rather than upon profits that are actually normal or subnormal. Under the limitations as stated in this proposed law much of the possible strategic mineral production would be abnormally and unfairly taxed and be put out of business by burdens that could not be carried and therefore would not be assumed.

While Arizona is best known for its production of copper, it has large resources of many other metals, notably manganese, quicksilver, tungsten, vanadium, asbestos, and others. We have a deposit that has been stated on good authority to be one of the largest deposits of manganese ore in the United States, yet it is idle today, and the country badly needs manganese. I am reliably informed that the owners are awaiting your action, as that will determine whether it is to be a possible success or a certain failure.

The years 1936 to 1939 selected as the base period for a measure of normal earnings were not true normal earning periods even for the mines that were fortunate enough to be able to work during those years. Metal prices generally were far below average, and the small demand for metals caused the working at reduced capacity, and this meant higher per-ton or per-pound costs. The year 1937 was the only one of the base period that even approached normal. Many mines were shut down during substantial parts of that period.

During this base period many other mines were operated at a loss much of the time simply because it was less expensive to continue operation than to assume a shut-down expense. Mines that are shut down often require a large expenditure to maintain the property for future use, and if this is not done the available ore may be lost forever.

Most of the mines to which I refer are those on which there are no base-period earnings, as they were not producing or were only making preparations to produce during the period from 1936 to 1939. Therefore they would be forced to select the provision for basing profits on invested capital.

Mines are not made ordinarily through direct invested capital in the form of money, but by long periods of hard work, sacrifice, and stick-to-it-ive-ness. In many cases the invested capital of any individual mine, as ordinarily interpreted, is relatively small compared to its value.

The history of the development of a mine that ultimately becomes profitable is one of investment, operation, failure, reorganization with additional new capital, with the former owners retaining a part inter-

est; then further development, expenditure of the new capital raised, refinancing again, and it is frequent that this cycle may be repeated many times before the mine ultimately gets to profitable production. Each reorganization and refinancing buys in the results of the work of previous holders at a small fraction of the cost of the work done. Thus, the final invested capital, when it reaches the production stage, is relatively small as compared with the total that has been invested in different forms in the property.

There are many properties in which investments are made that never do reach the period of ultimate profitable production but stop forever at points along the route. The risks are great, the failures and losses frequent and it is only by normal profits being permitted on those that are lucky enough to make a success that the losses on the unsuccessful can be recovered.

Since the passage of the Second Revenue Act of 1940, there has been much search for and development of properties of strategic minerals in Arizona and production is now beginning to show in a substantial way, particularly in manganese, quicksilver, tungsten, and asbestos. The recent investments in these properties were primarily made because of the recognition by the Government of the critical need of stimulating production of these particular minerals and metals. The Second Revenue Act of 1940 exempted from the provisions of the excess-profits tax law these minerals and metals and, on the basis of that recognition, mines were prepared for production, plants were started and substantial investments made.

Many of the strategic mineral operations now under way were based upon contracts with the Metals Reserve Company or R. F. C. and, in making those contracts and setting prices thereon, consideration was given to the fact that the Second Revenue Act of 1940 exempted them from the excess-profits taxes. The removal of these exemptions will require that new contracts be made and the increased costs due to the larger taxes will have to be added to the prices. Thus, the revenue from them that might be obtained from this provision of the law would be consumed by the higher prices of the commodity and even more if they were on a cost-plus basis.

It is distinctly unfair and might be considered to be a lack of good faith on the part of the Government, to eliminate that clause in the Second Revenue Act of 1940 upon which these investments were encouraged. Those mines would have no alternative but to determine whether they are in sufficiently deep to keep on, assume additional risks and attempt to recover a portion of the investments made or to quit and take their loss now. Except in the rare cases of bonanza discoveries a loss will be taken and the question is as to which route means the lesser loss.

In some cases companies planning to mine strategic minerals have held up plants to be erected for production because of the fact that the proposal this year was not to exempt them from the provisions of the excess-profits taxes. They feel that they cannot afford to make the substantial capital outlay necessary until they know where they are going and what they have to look forward to. They are waiting your action and yet the country sadly needs manganese, quicksilver, asbestos, tungsten, and other metals and minerals which they might be producing.

It must be recognized that it would require a most adventurous mining organization to make investments in strategic anud critical minerals on any basis of paying a normal corporation tax of 80 percent and then an excess-profits tax, from which the normal tax is not deductible, and have the excess-profits tax based upon 8 percent of the invested capital—knowing very definitely that, except in a very few isolated cases, the entire investment will be useless and unrecoverable when the defense period is over. It simply cannot be expected to be done.

Mining, and particularly the strategic mineral production, is an industry of great risks and financial hazards. Under the Second Revenue Act of 1940, the Government said "You take the risk as we badly need that which you propose to produce. If you are successful in producing it we will grant you certain preferential treatment in the form of excess-profits-tax exemption." And now it is proposed that the preferential treatment, upon which they confidently made their investment and based their operations, be withdrawn.

It is probably true that, out of the many mining properties which will be developed as a result of the defense-program demands, there will be a few that will be able to operate after the defense program is over. Continued operation may get costs down to a point where they can survive the post-war domestic competition and that which will come from the low-cost production of foreign countries, but those cases will be few and far between.

The normal development procedure for any mine, and this applies to all mining as well as those of the strategic materials, is to work on a small scale and plow operating income back into the ground for additional development work, thereby opening the mine gradually for ultimate larger-scale operation and the handling of greater tonnage. They depend upon the future larger-tonnage operation, when the mine is ready for regular production, for the return of the capital and the profits, if any. They may, at any time, find that they have reached their economic production limit and have to stop there.

Under the proposed excess-profits-tax provisions, as I understand them, this is not recognized. When any mine increases its production capacity during the latter part of the base-period years or since and does not make any greater profit per ton of ore mined or per pound of metal produced, it is not making excess profits, but it is only putting into the current year those profits which would normally be made in later years as the ore was taken out in a more orderly and leisurely manner, and it is probable that even less profit would result from more rapid extraction.

A mining property has within its borders very definite limitations of its ore bodies. If that ore body is mined within 5 years, simply because of the extraordinary demands of the defense program and the urgency of the Government requirements, the net income during the 5-year period would naturally be greater, yet it would be far less than if the same ore body were extended in production to a period which coincided with the life of the plants and equipment necessary to extract it or the allowable period of amortization. Instead of being excess profits it would not be up to normal profits, and yet under the provisions of this law the excess-profits tax would be imposed.

Therefore, it could hardly be expected that mines could afford to increase their capacity and make the investments necessary thereto

and pay the penalties imposed under these provisions of the revenue bill under consideration. They are quite willing to patriotically deplete their ore bodies and shorten their life but could not be expected to pay a premium for doing it.

A manufacturing enterprise is very different than a mining company because of the fact that a mine depletes, and ultimately exhausts, its assets; has definite limitations as to life and during its life must obtain a full recovery of the capital investment before a penny of actual profit is made. If the life is shortened, because of the emergency demands, the opportunity for recovery of capital and an adequate return is lessened.

An excess-profits tax on mine products without consideration of the conditions set forth will produce an inevitable waste of the Nation's resources because increased costs will make it necessary to seek and mine only the higher-grade ores, those which can stand the increased load. Thus, lower-grade ores must be passed by and, when this happens, they are frequently irrecoverable. The lower-grade ores, and there are many different grades in most mines, can only be worked during a period of increased demand and higher prices or lower costs. The present proposal forces upon the mine operators, the taking of the cream, and the leaving of only the skimmed milk for the future—a program which may prove disastrous.

There very definitely should be written into this law a provision applying to mining that bases excess profits upon the additional financial recovery per ton of ore mined or per pound of metal produced. It obviously is inequitable in mining to base it upon the aggregate income of the producing company.

The excess-profits tax as written and as applied to mining discriminates against corporate development. The tax applies only to corporations. Yet corporate development is the only way we can possibly get the quantity production of strategic and critical minerals required.

Mines ordinarily start as individual enterprises. The individual carries them to a point of promise and need of greater capital requirements. The risks of mining can be lessened by capital spreading itself thinly over many units anticipating that the profits of one will overtake the losses of many. The risks are too great for a concentration of capital on single units. Therefore corporate development may serve to minimize the risks by spreading the load.

By penalizing and discriminating against corporate development you restrict new mining activities, which are very necessary if the defense-program requirements are to be fulfilled, to small and individual producers which ordinarily have far higher unit costs than larger-scale operations. Thus the prices on the metals and minerals necessarily must be higher in order to bring out the production required.

The amount of revenue that will be raised by the excess-profits tax coming from those engaged in strategic mineral production is an inconsequential part of the revenue to be obtained under this bill, because it must come entirely from the going mines of today which cannot, under the proposed law, expand their operations because of the confiscatory penalties imposed. They will curtail expansion of production from old mines; they will stop a search for new mines; they will decrease production of much-needed materials and, unless

relief is granted, they will seriously handicap the defense program because the strategic minerals are those which are absolutely necessary to the defense program yet have not been opened to produce an amount sufficient for the Nation's needs.

Senator JOHNSON. Mr. Willis, will you permit an interjection right there?

Mr. WILLIS. Yes.

Senator JOHNSON. This committee has heard with regularity complaints about priorities and the effect priorities will have on businesses to be taxed. I think we are all convinced that priorities are a very serious threat to many industries in this country. Now, you are proposing that the very things that cause these priorities—shortage of these essential minerals—that production be encouraged so that the blow of such priorities will not be so severe.

Mr. WILLIS. We are proposing a method by which the strategic metals, so necessary for national defense, may be brought out. You must remember it is a new industry in this country because we have an insufficient production of them.

Senator JOHNSON. And the encouragement you are giving to the production of these strategic minerals is the only answer that can be given to the problem of priorities?

Mr WILLIS. I cannot say the only answer but insofar as they are used in the manufacture of machinery that is true.

Senator JOHNSON. Well at is why we are having priorities, the shortage in the essential metals.

Mr. WILLIS. Yes; it is; because of that shortage, and yet under the proposal in this law of eliminating the exemption of excess profits from them it will cut down the strategic minerals supply.

Senator JOHNSON. I think that is a fine case of killing the goose that lays the golden egg.

Senator TAFT. Can you estimate the amount involved in this provision?

Mr. WILLIS. No; we cannot; there is no possible way to. I don't think it was ever segregated in any of the reports. I doubt very much whether it would amount to a million dollars; it is extremely small.

Senator TAFT. It couldn't exceed a million dollars; it is limited to seven minerals, of which three or four are most essential.

Mr. WILLIS. No; there are others but those are the chief ones.

Senator TAFT. Is tin being produced?

Mr. WILLIS. No; but there are several possibilities that are being looked into now. The Government is spending a world of money to bring out these minerals and yet with the knowledge that they have to go through a period of basing their profits as provided in the act, and with the knowledge that after the emergency is over their investment is useless, operators just can't see their way clear to do it.

Senator JOHNSON. The revenue to the Treasury isn't great, but the effect upon industry is——

Mr. WILLIS. Tremendous. Although there is no possible way of proving the statement, it is believed that the revenue to be obtained by the 30-percent normal taxes on new mining units of strategic minerals would be far greater than that which could be obtained from the few who are now producing insufficient quantities for de-

fense and, at the same time, the requirements of the Government would be much nearer fulfillment. In other words, if there was this exemption applied you would have new mines and new production. They would, of course, pay the normal tax, and the 30-percent tax to be obtained from them would in my estimation far exceed the amount of exemption from excess-profits tax from those now producing for the Nation's needs.

The CHAIRMAN. Your time has expired, but you may proceed if you will only take a few more minutes.

Mr. WILLIS. As a matter of fact, there are very little, if any, true excess profits in mining as the prices of the metals have largely been "pegged," whereas costs have not been similarly limited. That small margin between costs and selling price is becoming smaller and smaller as the costs increase and the additional normal taxes are being imposed.

It is inequitable to limit prices without limiting the factors that go to make up those prices. In mining approximately 40 percent of the costs are in wages and it is felt that we very definitely cannot expect them to be "pegged." Mine wages are bound to increase and, while mining was once considered to be a high-wage industry, it has been so far outstripped by those working on direct defense projects that the mines of Arizona are rapidly losing their labor to the defense industries in the Pacific Coast States.

While this is the situation relating primarily to the large copper mines and will, in time adversely affect copper production, it has its very direct bearing upon the mines producing strategic minerals in that the mining wage scale of the State is regulated to a very considerable extent by the wages paid at the larger copper mines. They must all pay the prevailing scale or they cannot get labor. Thus new production of strategic minerals has additional cost burdens piled upon it with more to come.

The shortage of metals is critical. This shortage does not only apply to those listed as critical or strategic metals and minerals but likewise applies to many of those in which there are ample resources in this country but which have not been made ready for production beyond peace-time demands.

Ore in the ground is worth nothing. It only has value when the necessary capital, labor, engineering and management are applied to bringing it out in a form of a useful commodity. The Western States have great potential resources of these minerals and metals. They are desirous of contributing them to the defense program with no thought or desire of abnormal or unusual profits. Capital is required to do so yet, under the present conditions, capital cannot possibly afford to assume the risks involved under such conditions as are proposed.

We are not isolationists in the currently accepted meaning of that word but we do believe that we should be ready for such isolation as may be forced upon us. There are many directions from which it may come. We must develop and make ready our resources to fulfill the national needs. We must have an inventory of our mineral resources and know to what extent those resources can be counted upon to serve useful purposes but it can never be done if prospecting and new mine development is penalized. If these strategic metals are not

produced by individual initiative and private capital they will have to be brought out by the Government at an immeasurably greater expense than the revenues which will be obtained from this bill and it is very certain that they must be produced.

The Arizona Small Mine Operators Association therefore appeal to you to make it possible for us to contribute our part to the defense program and urge upon you the continuation of the exemption of the excess profits taxes for production of the strategic and critical minerals and that the milling and preparation for the market be included.

We further urge that consideration be given to a method of recognizing that true excess profits from mines comes only from increased prices or decreased costs and not from a larger number of units produced as this merely anticipates later normal profits.

The CHAIRMAN. Thank you, Mr. Willis. Are there any other questions of Mr. Willis?

(No response.)

The CHAIRMAN. I understand there will be no business transacted in the Senate. Senator Barkley advises that there may be a confirmation of one or two nominations; beyond that there will be nothing of a controversial nature. I think we might run until about 12:30 if that is agreeable to the committee.

Mr. Martin Popper, Washington, D. C.

(No response.)

The CHAIRMAN. Mr. Richard B. Barker.

STATEMENT OF RICHARD B. BARKER, WASHINGTON, D. C., REPRESENTING CHINA GROVE COTTON MILL, CHINA GROVE, N. C., AND GASTONIA FULL-FASHIONED HOSIERY MILL, GASTONIA, N. C.

Mr. BARKER. My name is Richard B. Barker, Washington, D. C. I am here representing the China Grove Cotton Mills, of China Grove, N. C., and the Gastonia Full-Fashioned Hosiery Mill, Gastonia, N. C.

I wish to speak to the committee on the declared value excess-profits tax. This is not the excess-profits tax enacted last year and should not be confused with it. This is the tax enacted in 1933 wherein corporations were required to declare a value on their capital stock and allowed 10 percent of such value against income; any amount in excess of that was taxed at the 6 and 12 percent income tax rates. My suggested amendment to this is that corporations be allowed to declare their capital stock annually rather than for a 3-year period. Historically the amendment I am asking is nothing more than the Senate and Congress has done in practical effect in the last 8 years, or since 1933. The Congress has recognized that it is unfair and impracticable to make a coporation guess as to what its future profits will be, and if it makes a bad guess to exact a penalty tax from it. It has been stressed to this committee time and time again that taxes should be based on ability to pay, especially when you have high rates of taxation, and I cannot emphasize enough to this committee that the present declared value capital stock excess profits tax law which requires the corporation to declare capital stock for 3 years in advance is not in any way based on ability to pay, but is based entirely, 100 percent, on ability to guess.

Let me illustrate: Suppose two corporations, corporations A and B, each over a period of 3 years earn $3,000,000. Corporation A earns $1,000,000 a year for 3 years and corporation B loses money the first and second years and makes money the third year, $3,000,000 the third year. Both corporations have the same amount of income at the end of that period. Corporation A will only pay $30,000 of capital-stock tax during those 3 years; corporation B, in order to protect itself from the penalty, and assuming that corporation B can make a perfect guess, will have to pay $90,000 under the present rate.

In other words, corporation B will have to pay three times as much tax on the same income as corporation A if it is to avoid the penalty tax, and, of course, under those circumstances it would be very unlikely that corporation B could make a perfect guess; so we say it is only fair when you have those high rates to distribute the burden among all corporations. Nevertheless, some corporations cannot make as good a guess as others; that is why you will notice from the charts before you—the first chart, the textile industry net income—you will notice that it is an extremely volatile industry, with profits jumping up and down. It is the kind of corporation, the kind of industry, that enjoys what is known as a short feast and long famine.

Skip the next set of figures and look at the next chart. That chart applies to the cotton-goods manufacturers, and again you will note that rather than being steady income, it is really the opposite situation, an extremely volatile situation.

Now, on the third chart, which I think is the most important one for comparative purposes, I have set forth the percent of net income to net worth of the tobacco industry, the utilities industry, and the textile industry. You will note that whereas tobacco and utilities have fairly steady profits and can forecast with a reasonable degree of accuracy their profits, the textile industry cannot, and it must make, in the nature of things, far worse guesses than the other industries.

In other words, you are taxing the volatile at the expense of the steady industries. The T. N. E. C. report shows practically all the excess-profits tax, penalty tax—or a large proportion of it—is collected from corporations whose income is under $50,000 a year, and gradually progresses downward until on very large corporations practically no such tax is collected.

That same report shows that in these volatile industries most of the taxes are collected, whereas on the tobacco and utilities industries, the steady ones, no excess-profits tax is collected. Under those circumstances we feel it is only fair not necessarily to repeal the tax, as Secretary of the Treasury Morgenthau recommended a few years ago—you need the revenue—but do as you have in the past; give us an annual declaration each year. I emphasize this and ask that it be done at the present time, because the Commissioner of Internal Revenue has extended the time within which to file our capital-stock returns until September 29, but by September 29 we must know whether we are going to have to guess again with reference to our profits for the next 3 years.

Gentlemen, you won't lose any revenue over what you have collected in the past but you will cut out this vicious penalty tax and especially in those industries where you have priorities.

Let me repeat: The fact is that where you have a situation such as we have in Gastonia at the Full-Fashioned Hosiery Mill, it seems unfair

to say on the one hand "You must guess what your profits will be for the next 3 years, and if you guess badly we are going to put a terrific penalty on you," and on the other hand say, "We are going to have the right to shut down your plant and make you guess badly."

Under those circumstances, we cannot make a decent guess. We are pilloried on this priority problem and there are hundreds of otherwise likewise. Base your tax, base your rate on ability to pay, please cut out penalty taxation. I can advise the committee that we have discussed this matter with the Treasury; that while the Treasury officials say they are not in a position to recommend the change we ask, they do say that they do not oppose it.

Now I ask permission to have a memorandum setting forth the technical language that would effect this change filed—this memorandum and the historical approach to it—and inserted in the record.

Senator BAILEY. What would you say as to the substitution of a capital investment base for it?

Mr. BARKER. We already have that in this last year's excess profits tax.

Senator BAILEY. The capital investment base could be carried——

Mr. BARKER. The trouble with that is that the reason they put in this declared capital stock value tax in 1933 was in order to avoid the bitter disputes that arose under the old provision. Now, of course, you have to make the determination.

Senator BAILEY. You don't think that substitution would work?

Mr. BARKER. There is no logic to this thing whatsoever.

Senator BAILEY. I agree with you as to that.

Mr. BARKER. We believe that what we are here proposing would be much fairer than this penalty situation that exists today. That is true because if we make a bad guess, which we are bound to do, it is going to result in terrific hardship. It may be the proverbial straw that can well break the camel's back.

The CHAIRMAN. You may insert anything further that you wish in the record.

Mr. BARKER. I have here a memorandum in support of the amendment which we propose to the capital stock tax law, together with some charts and figures relevant to the textile industry from 1920 to 1938. I should like to have the memorandum incorporated in the record.

The CHAIRMAN. Yes; it will be put in the record.

(The memorandum referred to follows:)

MEMORANDUM IN RE CAPITAL STOCK TAX AMENDMENT

In Monograph No. 9, entitled "Taxation of Corporate Enterprise," published by the Temporary National Economic Committee, at page 118, the following remark is made with respect to the capital stock and declared value excess-profits taxes:

"CAPITAL STOCK AND EXCESS-PROFITS TAXES

"The Federal capital stock tax is based upon an evaluation of capital in terms of corporate earning power rather than in terms of the capital actually invested or tangible net worth. The present 'excess-profits' tax is nothing more than a penalty tax on those corporations which guess badly in declaring their capital stock for tax purposes. Despite its name the tax has nothing to do with 'monopoly' profits.

"The compound capital stock-excess-profits taxes discriminate markedly against corporate enterprises with fluctuating profits, including small corporations and

corporations in particular industries, the profits of which cannot be accurately forecast. The excess-profits tax is substantially nonexistent on most large corporations."

See also pages 67-69, where the following remarks are made:

"The present excess-profits tax, which was initially enacted by the National Industrial Recovery Act of 1933, is an excess-profits tax in name only, thoroughly unlike its namesake of the war period. Essentially the present excess-profits tax is the lesser of a pair of Siamese twins, the better half of which is the capital-stock tax enacted at the same time, and functions as a whipping boy for the latter" (p. 67).

"The selection of favorable capitalization figures depends obviously on the accuracy with which earnings may be forecasted, a factor which varies with the economic skill of the corporate managers, the stability or fluctuation of corporate profits in different industries, and the chances of a particular corporation to make profits in any given year" (p. 68).

"From this chart it appears that the excess-profits tax shows a very marked tendency to vary inversely with corporate size, while the capital-stock-tax pattern characteristically exhibits only slight size variations" (p. 69).

(Mr. Barker also submitted the following memorandum, charts, and tables:)

MEMORANDUM IN SUPPORT OF AMENDMENT TO CAPITAL STOCK TAX LAW

This memorandum is submitted in support of a proposed amendment to section 1202 of the Internal Revenue Code under which corporations would be permitted, in computing their liability for capital-stock taxes, to redeclare the value of their capital stock each year, rather than every third year, as required under the present law.

Section 1202 of the Internal Revenue Code now provides as follows:

"SEC. 1202. *Adjusted declared value*—(a) *Declaration year.*—(1) The adjusted declared value shall be determined with respect to three-year periods beginning with the year ending June 30, 1938, and each third year thereafter. The first year of each such three-year period, or, in case of a corporation not subject to the tax imposed for such year, the first year of such three-year period for which the corporation is subject to such tax, shall constitute a 'declaration year.'

"(2) For the declaration year of the first three-year period the adjusted declared value shall be the value as declared by the corporation in its return under section 601 of the Revenue Act of 1938, 52 Stat. 565, for the year ended June 30, 1938, or in the case of a corporation not subject to the tax imposed for such year, the value as declared in its return filed under this chapter for the first year with respect to which it is subject to the tax. For each subsequent three-year period, the adjusted declared value for a declaration year shall be the value as declared by the corporation in its return for such declaration year. The value declared by a corporation in its return for a declaration year (which declaration of value cannot be amended) shall be as of the close of its last income-tax taxable year ending with or prior to the close of such declaration year (or as of the date of organization in the case of a corporation having no income-tax taxable year ending with or prior to the close of such declaration year).

"(b) *Subsequent years.*—(1) *Domestic corporations.*—For each year of any three-year period subsequent to the declaration year, the adjusted declared value in the case of a domestic corporation shall be the value declared in the return for the declaration year plus—

"(A) the cash, and the fair market value of property, paid in for stock or shares,

"(B) paid-in surplus and contributions to capital,

"(C) its net income,

"(D) its income wholly exempt from Federal income tax, and

"(E) the amount, if any, by which the deduction for depletion exceeds the amount which would be allowable if computed without regard to discovery value or to percentage depletion, under section 114 (b) (2), (3), or (4) of chapter 1 or a corresponding section of a later Revenue Act; and minus—

"(i) the cash, and the fair market value of property, distributed to shareholders,

"(ii) the amount disallowed as a deduction by section 24 (a) (5) of chapter 1 or a corresponding provision of a later Revenue Act, and

"(iii) the excess of the deductions allowable for income-tax purposes over its gross income.

"The adjustments provided in this paragraph shall be made for each income-tax taxable year included in the three-year period from the date as of which the value was declared in the return for the declaration year to the close of the last income-tax taxable year ending with or prior to the close of the year for which the tax is imposed by this section. The amount of such adjustment for each such year shall be computed (on the basis of a separate return) according to the income-tax law applicable to such year.

"(2) *Foreign corporations.*—For each year of any three-year period subsequent to the declaration year, the adjusted declared value in the case of a foreign corporation shall be the value declared in the return for the declaration year adjusted (for the same income-tax taxable years as in the case of a domestic corporation), in accordance with regulations prescribed by the Commissioner with the approval of the Secretary, to reflect increases or decreases in the capital employed in the transaction of its business in the United States.

"(c) *Corporations in bankruptcy or receivership.*—The capital-stock tax year beginning with or within an income-tax taxable year within which bankruptcy or receivership, due to insolvency of a domestic corporation, is terminated shall constitute a declaration year. In such case the adjusted declared value for any subsequent year of the three-year period shall be determined on the basis of the value declared in the return for such declaration year.

"(d) *Credit for China Trade Act corporations.*—For the purpose of the tax imposed by section 1200 there shall be allowed in the case of a corporation organized under the China Trade Act, 1922, 42 Stat. 849 (U. S. C., Title 15, c. 4), as a credit against the adjusted declared value of its capital stock, an amount equal to the proportion of such adjusted declared value which the par value of the shares of stock of the corporation, owned on the last day of the taxable year by (1) persons resident in China, the United States, or possessions of the United States, and (2) individual citizens of the United States or China wherever resident, bears to the par value of the whole number of shares of stock of the corporation outstanding on such date. For the purposes of this subsection shares of stock of a corporation shall be considered to be owned by the person in whom the equitable right to the income from such shares is in good faith vested; and as used in this subsection, the term "China" shall have the same meaning as when used in the China Trade Act, 1922.

"(e) *Additional declaration years.*—In the case of any domestic corporation, the year ending June 30, 1939, and the year ending June 30, 1940, shall each, if not otherwise a declaration year, constitute an additional declaration year if with respect to such year (1) the taxpayer so elects (which election cannot be changed) in its return filed before the expiration of the statutory filing period or any authorized extension thereof, and (2) the value declared by the taxpayer is in excess of the adjusted declared value computed under paragraph (1) of subsection (b). If, under this subsection, the year ending June 30, 1939, is a declaration year, the computation, under paragraph (1) of subsection (b), of the adjusted declared value for the year ending June 30, 1940, shall be made on the basis of the value declared for the year ending June 30, 1939."

It is suggested that this section be amended by striking out sections 1202 (a), 1202 (b), 1202 (c), 1202 (e) and substituting the following language:

SEC. 1202. (a) The declared value of the capital stock of a corporation shall be the value as declared by the corporation in its return for each year. The value declared by a corporation in its return each year shall be as of the close of its last income-tax taxable year ending with or prior to the close of the year for which such return is filed (or as of the date of organization in the case of corporations having no income-tax taxable year ending with or prior to the close of such year).[1]

The sole effect of the adoption of the above amendment would be to allow corporations to declare the value of their capital stock each year instead of every third year. This would not only simplify the computation of the capital stock and/or the declared value excess profits tax but would also eliminate a great deal of the uncertainty which is forced on taxpayers by the provisions of the present law. It would not seriously reduce the revenue.

The present capital stock tax, together with its complement, the declared value excess-profits tax, originated in the National Industrial Recovery Act of 1933 (secs. 215 and 216). Under the provisions of that act, a tax of $1 for each $1,000 was imposed upon the value of the capital stock as declared by the corporation. An

[1] As a result of this amendment it would become necessary to substitute the phrase "declared value" for the phrase "adjusted declared value" in secs. 1200 and 1202 (d) as well as in secs. 600 and 601 (where such phrase is used in connection with the declared value excess-profits tax). It would also be necessary to change the present number of sec. 1202 (d) to sec. 1202 (b).

excess-profits tax was imposed on all income in excess of 12½ percent of the declared value in order to prevent a corporation from undervaluing its stock. The Senate Finance Committee report (77d Cong., 1st sess., S. Rept. 114) stated the taxing scheme in these words:

"In order to avoid controversy as to the value of the capital stock, the tax is imposed on the value declared by the corporation. A reasonable value, is, however, assured by means of an excess-profits tax imposed by section 215 and based on the relation of the net income of the corporation to such declared value."

Under the act of 1933 no provision was made for redeclaring the value of the capital stock. After the first declaration year the taxable value was to be determined by adding to or subtracting from the original declared value any additions to or withdrawals from the capital of the corporation. As sated in the Senate Finance Committee report (*supra*):

"A value once having been declared, such value may not be subsequently changed except for bona fide changes in the capital structure."

The capital stock and excess-profits taxes were reimposed in the Revenue Act of 1934 (sec. 701 and 702), and a new declaration of value was permitted for the first year under the new statute. However, under the terms of the 1934 act the value of the capital stock as declared in the first year under that act could not be changed in later years except for specific changes in the capital structure of the corporation.

In the Revenue Act of 1935 the House proposed to increase the rate of the excess-profits tax and reduce the exemption from 12½ percent of the adjusted declared value of the capital stock to 8 percent of such declared value without allowing a new declaration of value. The Senate refused to agree to this, however, and the statute as passed permitted a new declaration of value.

Although three new declaration years were allowed during the first 5 years of the capital stock tax, it was not until the 1938 act that Congress incorporated into the statute a provision permitting a periodic redeclaration of value. In the Revenue Act of 1938 (sec. 601) Congress provided that every third year (beginning with the year ending June 30, 1938) should be a declaration year in which a corporation could declare a new value for its capital stock. The Senate bill provided for a redeclaration every 2 years, but the Senate receded in conference and approved the three year period. The reason for allowing periodic redeclarations of value was stated by the Ways and Means Committee in its report (75th Cong., 3d sess., H. Rept. 1860).

"Under the 1935 act, as amended, the valuation fixed by the corporation may not be changed for later years except that adjustments for later years are to be made as increase or decrease of corporate property occurs. In view of the changing business conditions to which business is subject, it seems that some opportunity for revaluation of the capital stock at reasonable intervals should be afforded."

It was found, however, that the "changing business conditions" referred to in the committee report changed faster than anticipated, so that the 3-year interval between declarations was too long. In the Revenue Act of 1939 Congress recognized this fact and allowed corporations to redeclare upwards in both 1939 and 1940, which were nondeclaration years according to the Revenue Act of 1938. The Secretary of the Treasury appeared before the Ways and Means Committee on May 27, 1939, and advocated the repeal of the capital stock excess profits tax on the ground that it was a "tax irritant." He said:

"Under the present law the capital-stock tax is based upon a declared capital stock value which the taxpayer may revise every 3 years. The declared value may be any figure that the taxpayer desires to submit, regardless of the actual value of the stock. The excess-profits tax applies to profits in excess of 10 percent of such a declared value. The taxes are thus not really taxes on the value of capital stock or on excessive profits. Their major defect is that they operate very erratically. The tax liability they impose depends on the taxpayer's ability to forecast profits for the next 3 years as well as upon the amount of profits actually realized during each of the 3 years. Forecasts of earnings are particularly difficult to make in the case of new businesses and these with unstable incomes such as the capital-goods industries, with the result that taxes imposed on such businesses are at times inordinately high."

Although the committee decided to retain the tax, the statute was amended to allow a redeclaration upwards in 1939 and 1940. This action is explained in the committee report (76th Cong., 1st sess., H. Rept. 855) in the following words:

"As the main hardship arising from this feature of the tax law is due to the fact that a corporation is unable to forecast its profits accurately over a 3-year

period, it is believed that the situation can be remedied by permitting these corporations which declared a too low value for capital-stock tax purposes to increase such value for the capital-stock tax years ending June 30, 1939, and June 30, 1940. This will permit corporations that have been unable to forecast their profits accurately to be relieved of a large excess-profits-tax liability for the excess-profits-tax years ending after June 30, 1939, and June 30, 1940, respectively. Since corporations are entitled to a new declaration for the capital-stock-tax year ending June 30, 1941, this declaration will afford them relief from any hardship arising from an underestimate of profits for at least a 3-year period."

From this review of the legislative history of the capital stock-excess profits tax, it is seen that, as a practical matter, during the 9 years of this tax, there have been 7 declaration years. These new declarations have been permitted from year to year, not according to any intelligent, well-considered plan, but because of economic factors which could not be ignored without creating an injustice. Congress has recognized the necessity of permitting frequent redeclarations of value, but the hand-to-mouth character of its recognition has subjected taxpayers to great uncertainty. Why would it not be more sensible to recognize openly and deliberately the actual situation and the true purpose of the tax by making a specific statutory provision for yearly declarations?

As the Secretary of the Treasury stated in his appearance before the Ways and Means Committee on May 27, 1939, the capital stock-excess profits tax is neither a tax on the value of capital stock nor a tax on excess profits. In effect, the tax is imposed on the capitalization of a taxpayer's guess as to his future income. Because of international conditions and the defense program, business at the present time is faced with uncertainty to a degree unparalleled in recent years. Under these conditions, even large and well-established corporations are wholly unable to make an accurate forecast of their earnings 3 years hence. And for a new corporation or for the small or medium sized corporation which is called upon to embark on a new enterprise, a forecast even approaching accuracy is utterly impossible. Such a corporation has no way of knowing the extent to which it will be called upon to participate in the defense program. It has no way of anticipating the effect on its earnings of priorities which are now being put into operation in the interests of national defense. Nor does it have any way of knowing what will happen to its business in the event of a sudden cessation of hostilities abroad; a declaration of war by or against the United States; or even the effect of future taxing statutes, Federal or State. All these factors combine to make it difficult for a well-established business, and impossible for a new business, to make an intelligent forecast of its earnings 2 or 3 years hence.

In the Senate Finance Committee report on the Revenue Act of 1934 (73d Cong., 2d sess., S. Rept. 558) the purpose of the declared value excess-profits tax was described as follows:

"The primary purpose of this tax is to induce corporations automatically to declare a fair value for their corporate stock under section 701. The rate is 5 percent on the portion of the net income in excess of 12½ percent of the adjusted declared value of the stock of the corporation. The secondary object of the tax is to subject to a somewhat higher rate of tax abnormal profits which are out of proportion to the capital of the corporation."

It is seen, therefore, that even at its inception, the declared value excess-profits tax was not so much a tax on excess profits as it was an inducement to a fair declaration of value for capital-stock-tax purposes. If it is anything except a penalty for undervaluation, the declared excess-profits tax was and is a tax on unexpected profits rather than excess profits. A corporation can earn any rate of return upon its actual capital without being subject to the declared value excess-profits tax if it can anticipate this profit and declare the value of its capital stock accordingly. It is only the unexpected profits which are reached.

Whatever necessity there was in 1934 for a tax to reach excess profits, there is surely no such necessity at the present time. There is now a real excess-profits tax, imposing a tax on an excessive return on invested capital. Consequently, at the present time, the only conceivable purpose of the declared value excess-profits tax is to prevent a corporation from undervaluing its stock. If the only problem is one of insuring a fair declaration of value it would appear that this could be accomplished more fairly and more precisely by allowing a corporation to reexamine its business situation each year and place a value on its capital stock. If the business conditions in 1939 were so uncertain

as to prompt Congress to allow redeclarations in 1939 and 1940, surely they are sufficiently uncertain now to make it imperative that the statute provide specifically and definitely for annual redeclarations of value.

The only possible objection to the allowance of annual redeclarations of value is that a small loss of revenue might result. It is indeed true that some part of the revenue now obtained from the capital stock and declared value excess-profits tax results from bad guesses by taxpayers as to future earnings. If taxpayers could redeclare every year there would be fewer bad guesses and hence less revenue. However, considering the Federal tax policy as a whole, the very slight loss in revenue which might result from allowing yearly redeclarations of value would be more than offset by the elimination of the irritating uncertainty to which taxpayers are subject under the present law and the inequities of taxation which result.[2] All successful taxing statutes represent a reasonable compromise between revenue for the Government on the one hand and fairness to taxpayers on the other. The intolerable uncertainty to which corporations, particularly new corporations, are subjected under the present law is all out of proportion to the revenue produced under the law. Corporations which are alike in their capitalization and earnings are subjected to greatly varying taxes depending upon the luck of their officials in forecasting future conditions. If annual redeclarations were permitted, most of the uncertainty and inequities would disappear, with only a slight decrease in revenue.

It should not be overlooked, moreover, that the adoption of annual declarations of value would greatly simplify the collection of the capital-stock tax both from the point of view of the Government and from the point of view of the taxpayer. Under the present law, the "adjusted declared value" in nondeclaration years is computed by adjusting the declared value for reductions from or additions to invested capital. These changes in capital structure are often complicated, and consequently present questions for litigation and dispute between the taxpayer and the Bureau of Internal Revenue. The necessity of making this involved computation of tax liability places just another burden on taxpayers who already must spend a great deal of time and money computing their tax liability under other taxing statutes. Many taxpayers complain more about the difficulty of computing their proper tax liability than about the amount of the tax. The adoption of the proposed amendment to the capital stock tax law would not only eliminate all controversy as to the adjusted declared value but would release for more productive work the time and energy of corporation executives who now spend too much effort merely computing the tax liability of their corporations.

Many of the inequities of the present law apply to all corporations alike. However, as mentioned previously, the present law is particularly hard on new corporations and old corporations branching off into new lines of business. The large and well-established corporation has a long experience from which to draw in forecasting future earnings for purposes of valuing its capital stock. While it may be very difficult even for a well-established corporation, in view of the rapidly changing economic conditions, at least there is some basis for making an intelligent guess. In the case of a new business, however, there is not even a basis for a guess. And the penalties for a bad guess are great enough to impair seriously the limited working capital of a new business. It is submitted, therefore, that this penalty on new corporations should be removed by amending the present capital stock tax law so as to allow annual declarations of value.

There is a further consideration which is probably of less weight. Many businesses and businessmen are being called upon to expand their operations or enter upon new and untried fields. There is a natural reluctance on the part of corporate directors to risk the capital entrusted to them by their stockholders in new ventures. The uncertainty or burden of this tax may well be a factor which will weigh against changes or expansion, especially after June 30, 1941, when the capital-stock value will have been declared and cannot again be declared for 3 years. There should be, at the very least, the opportunity to increase the value each year, and to redeclare the value at 3-year intervals.

RICHARD B. BARKER.

---

[2] That penalties for bad guesses have no place in tax laws was recognized by Congress in passing the excess-profits tax amendments of 1941. Under the prior law a corporation was bound by its first election as to the method of computing its excess-profits tax credit. The provision was amended so that the tax is based on the method which shows the lesser amount of tax, thus eliminating the penalty imposed on corporations making unwise elections.

The CHAIRMAN. Mr. R. C. Rolfing.

STATEMENT OF R. C. ROLFING, REPRESENTING THE NATIONAL PIANO MANUFACTURERS ASSOCIATION OF AMERICA, INC.

Mr. ROLFING. My name is R. C. Rolfing; I am president of the Rudolph Wurlitzer Co., of Cincinnati, Ohio, and president of the National Piano Manufacturers Association of America. I have a brief statement, Mr. Chairman, that I would like to read.

The CHAIRMAN. Yes. Can you do it in 10 minutes?

Mr. ROLFING. Yes; it will take about 4 minutes.

Mr. Chairman and gentlemen, 1. I wish to say at the very outset of my brief statement to your committee that the piano manufacturers of America, for whom I am speaking today, are conscious of the state of emergency which exists in our country and that these manufacturers are desirous of carrying their fair share of the burden which the people of this country must bear. Although I represent the piano manufacturers of America, what I have to say applies generally to the entire musical-instrument industry.

2. Our industry, as you gentlemen no doubt know, is small but important to the Nation as a whole. Music is as old as the hills, and people through the generations have learned that they cannot live without it. Music and musical instruments are not luxuries but important necessities to any nation at peace or at war.

3. It probably is not necessary for me to plead the cause of music and its effect on the lives of any free, intelligent people. Our national, State, and local governments have never been blind to this fact. On the contrary, they have sought throughout the entire history of our country to encourage music and musical education in a variety of ways. Educational institutions have always been encouraged by relief from taxation in its various forms, and no one denies that music is a part of our general educational program. Likewise, it is an important part of the religious life of a free people.

4. Furthermore, you and I know that the appeal of music is universal. It is not merely for those people who can afford it or who have time for it or who have special aptitude for it. It is estimated that in 1939 in the United States alone 4,000,000 children in public, parochial, and private schools, and 9,000,000 children and adults outside of these schools, were playing and learning to play the piano. The existence of thousands of music schools or music departments in public and parochial schools, choral societies, community groups, symphony, concert, and band or orchestras certainly lends much force to what I am saying to you today.

5. In appraising the broad subject of music, it must be remembered that a large proportion of the buyers of musical instruments and pianos come from the lower income groups. Many thousands of these people who work in the shops and factories and on the farms of this country deny themselves comforts, and even what we might agree are necessities, so that their children may have the educational and cultural advantages of music. In doing so they are not and they do not regard themselves as indulging in luxury.

6. There is evidence to show that the Federal Government, through the War Department, considers music essential. The mimeographed

forms of advice given to selectees by the draft boards name those articles which may be taken to camp and those which are prohibited. These forms state that "musical instruments such as guitars, banjos, and so forth, should be taken." Likewise, there are in the Army camps of the Nation today literally hundreds of pianos, most of which have been purchased by the service men themselves in order that they may enjoy music, which is so essential in building up and maintaining the morale of any armed force.

7. According to the Department of Commerce (Census of Manufacturing, 1940), the total value of musical instruments, including pianos, produced in 1939 was $31,000,000, of which, roughly, $20,000,000 represented the value of pianos. The 1940 figures are not available, but would probably be slightly higher. The proposed 10-percent manufacturers excise tax on musical instruments and piano sales is estimated by the Treasury to yield no more than $3,600,000 annually in taxes for the Federal Government, or about one-tenth of 1 percent of the total amount of the revenue-raising program of the Treasury.

8. Much has been said and written recently about the phenomenal growth of the piano industry during the past few years. True, there has been a substantial increase in production due largely to the increase in employment during the past few years, which has permitted thousands of people of moderate means to acquire a piano so that their children may have the advantage of a musical education. This increase in production was also due to the ingenuity of piano manufacturers in making smaller and better pianos at lower prices, but even in 1939 the industry produced only one-third the number of pianos it produced in 1923, when 343,000 pianos were made.

9. Please do not misunderstand me. I am not suggesting that the imposition of a 10-percent excise tax would completely ruin the piano and musical-instrument business, but I do say that it would be a step in the wrong direction, and one that certainly should not be taken at this time. The amount of revenue a 10-percent excise tax would raise is only a small fraction of 1 percent of the total amount of the revenue-raising program of the Treasury; but if in the final analysis Congress should conclude that pianos must be taxed, then I would urge upon you the desirability of imposing an excise tax of not more than 5 percent, the same as was imposed by Congress on February 15, 1919, after the first World War.

10. In conclusion, gentlemen, let me say that in my judgment the proposed 10 percent manufacturers excise is undesirable (1) because it probably will not produce the desired revenue, (2) because it will do serious damage to an industry which has its part to play in the life of this country, and (3) because it will impede the progress of musical education and culture so necessary to the people in times of great emergency.

11. Music in Great Britain has had a magnificent part to play and its practical value in times of great emergency is considered almost priceless. Let us not forget that national defense demands music. The support of strong public morale at this time is as vital as the maintenance of national-defense measures.

The CHAIRMAN. Any questions?

Mr. ROLFING. Mr. Chairman, I have just one short matter.

The CHAIRMAN. Yes; all right. I thought you had concluded.

Mr. ROLFING. I have with that part of it.

As president of the Rudolf Wurlitzer Co., an individual manufacturer, I would also like to offer an objection to the retroactive and discriminatory features of section 549 of the act, which taxes installment sales entered into after July 1, 1941, and before the effective date of the act. I have prepared a very brief memorandum on this subject which I ask permission to file with the clerk of the committee. I request that this memorandum be made a part of the record of these proceedings.

(The prepared statement of Mr. Rolfing is as follows:)

STATEMENT OF R. C. ROLFING, PRESIDENT, THE RUDOLF WURLITZER CO.

RETROACTIVE EFFECT OF INSTALLMENT SALES PROVISION

Section 549 of the pending revenue bill (see p. 56 of Senate print) imposes a manufacturers' sales tax in respect of articles sold under installment-sales contracts entered into prior to the effective date of the act. In the case of articles not taxable under the law in existence on July 1, 1941, the tax is imposed on such articles sold under installment sales contracts where delivery of the article was made on or after July 1, 1941. But such tax is imposed only in respect of installments paid after the effective date of the act. (See subparagraph (3) on p. 57.)

The practical effect of this provision is to impose retroactively an excise tax upon sales made by manufacturers under contracts entered into in the ordinary course of business on or after July 1, 1941, and before the effective date of the act.

To apply the tax retroactively is directly at variance with the policy expressed by the Secretary of the Treasury in his statement before the Finance Committee. (See p. 1 of unrevised print, part 1, of Finance Committee hearings on H. R. 5417.)

Manufacturers who have their own retail outlets have, in the regular course of business, entered into many binding sales contracts since July 1, 1941. Those contracts have been made at a fixed sales price that cannot now be changed. Yet, under the provisions of section 549, which never was publicly disclosed until the bill was reported to the House, the few manufacturers thus affected now find themselves faced with the imposition of a tax on contracts already entered into in respect of merchandise already delivered months before the effective date of the act. And they cannot collect that tax from the vendees.

The inequity of the situation can be demonstrated by pointing out that where sales have been made by a manufacturer to a retailer—say on July 15, 1941—and the retailer then sold the article under an installment sales contract to the consumer, no tax is imposed in respect to the installments paid by the consumer after the effective date of the act, even though the contract was entered into prior to the effective date of the act and after July 1, 1941. But if the manufacturer who happens to operate his own retail outlet makes a similar sale to the consumer on the same day (before the effective date of the act) all installments paid by the consumer after the effective date of the act bear their proportionate share of the tax. The tax is, therefore, not only retroactive but also highly discriminatory. The few manufacturers who sell direct to the consumer are heavily penalized, the large proportion of manufacturers who sell to distributors or retail dealers are not.

It would be no solution to the problem to impose a tax liability on the vendee in such circumstances, because the burden of the discriminatory levy would be shifted merely to another class of taxpayers who are entitled equally to protection against retroactive taxation.

Moreover, complex questions would arise in the case of successive and multiple purchases, some taxable and some not, but all incorporated into a single running account. The problems of administration would multiply out of all proportion to the tax involved.

If the intent of the act is to reach contracts for future delivery in order to prevent anticipatory buying, then the date of delivery, not the passage of title under a conditional sales contract (which is purely a security device), should

be the test of taxability. Something of a parallel situation was presented under the 1932 act, wherein it was provided, in a section directed at executory contracts, that if the vendor could not pass on the tax under the sales contract entered into prior to the effective date of the act, then the tax should be imposed upon the vendee. (See sec. 625, Revenue Act of 1932.) In order to further clarify this provision and to prevent any inequitable burden on the vendee, Congress, on June 13, 1932, 7 days after the passage of the act, by joint resolution of June 13, 1932, provided that if delivery were made prior to the effective date of the act (June 21, 1932) the tax should not be collected. This still permitted collection of the tax in respect of deliveries made after the effective date of the act, such tax to be paid by the vendor if, under his contract, he could add it to his sale price, or if not, then from the vendee.[1]

We believe that neither Congress nor the Treasury Department has any desire to impose a retroactive, unjust, or discriminatory tax upon either the manufacturers or the consumers of products upon which excise taxes are levied, and we therefore earnestly request that section 519 be amended so as to tax bona fide sales entered into in the ordinary course of business only where deliveries are made on or after the effective date of the act.

The CHAIRMAN. Mr. Martin Popper. Come around, Mr. Popper. You weren't here when you were called.

Mr. POPPER. I wish to beg the committee's pardon for being late, but my plane was grounded.

The CHAIRMAN. That is all right; we are glad you got here.

Mr. POPPER. Thank you.

STATEMENT OF MARTIN POPPER, WASHINGTON, D. C., SECRETARY, NATIONAL LAWYERS GUILD

Mr. POPPER. I am Martin Popper of Washington, D. C., and am secretary of the National Lawyers Guild.

We are in complete accord with the statement of the Assistant Secretary of the Treasury, John L. Sullivan, that our tax system must be designed to enhance our national unity in this critical period of world history when our very national existence is imperiled. National unity can be enhanced by extending and preserving in our tax system the democratic principles of taxation according to ability to pay. Taxation in a democracy should aim to "promote the general welfare, and secure the blessings of our economy and of our resources to ourselves and our posterity," to paraphrase the Constitution.

We agree with the objective declared by Secretary Morgenthau that the needed revenue "should come from all sources where there is ability to pay." But the determination of "sources with ability to pay" requires careful and realistic analysis of the economic and fiscal situation. We fully concur that five of the six proposals of Secretary Morgenthau would tax sources with ability to pay, which are now escaping their fair share of taxes. These five sources which should be fully tapped are:

1. An effective excess-profits tax on excess profits now exempt.
2. Mandatory joint returns to eliminate a highly important tax avoidance device and to terminate discrimination favoring married persons in community-property States.
3. Elimination of tax-exemption privilege from governmental securities.
4. Increased estate and gift taxation.

[1] The last sentence in sec. 3447 of the Internal Revenue Code is the portion added by the joint resolution of June 13, 1932. The balance of the section is the original sec. 625 of the 1932 Revenue Act.

5. Reduction in depletion allowances.

1. Personal income-tax exemptions.—However, we are unalterably opposed to any lowering of the personal income-tax exemptions in the face of the increasing cost of living, for such a change would depress further the standard of living of the American people which is, in fact, direly in need of improvement. How can one justify the lowering of personal exemptions when, in the words of Secretary Morgenthau, "prices and the cost of living have increased at an accelerated rate"? Manifestly, a family requires greater income, not reduced income, to maintain its standard of living with prices rising. The report of the House Ways and Means Committee, in rejecting efforts to lower personal exemptions, courageously declared:

> Your committee feels that a further reduction in these exemptions is not warranted at this time especially in view of the rising cost of living.

According to studies made in prior years by Dr. Mordecai Ezekiel, Department of Agriculture economist, $2,500 was needed to maintain an average worker's family at the barest level of health and decency; $2,200 according to the Heller committee of the University of Southern California. The United States Bureau of Labor Statistics fixed the sum of $2,015 as the necessary minimum annually for maintaining an American standard of living. In view of the rising cost of living and the substantial increase in the tax burden on the low-income groups, it is obvious that the American family will need substantially more than these amounts to maintain a decent standard of living. The proposal to lower exemptions to $1,500 would cut into the standard of living of the American people—a standard far too low already.

Taxes in the brackets below $2,000 will mean less food, clothing, and shelter for the great majority of the American people.

The advocates of broadening the tax base forget that the lower income groups represent the cornerstone of our economy. There are 33,000,000 consumer units in the United States, each earning less than $2,000 annually. They purchase 60 percent of the Nation's goods. Impose more taxes on them and you dry up the well that feeds the industrial machine. Those who think that defense orders may keep industry moving at top speed, regardless of the extent to which the buying of the consumers is cut, will soon discover their error—to the detriment of our economy. Taxing the lower income groups will dislocate the existing consumer industries. It will intensify the post-war depression for it should not be forgotten that 80 percent of the consumer units are represented in the group with incomes under $2,000.

There are those who have the idea that the lower income groups do not pay taxes. The fact is that those who earn as little as $500 a year pay 20 percent of their incomes to the city, State, and Federal Governments in the form of taxes. Thus, it appears that the poor pay out 1 cent in taxes every time they spend a nickel. This is also true of those who earn up to $2,000 a year.

We cannot over emphasize the significant statement made by the House Ways and Means Committee in its report, which declared:

> It should be remembered that because an individual is exempt from the individual income tax does not mean that he is free from taxation. The revenue system includes many taxes which directly and indirectly burden these lower income classes. In this connection it is important to consider, not the

Federal taxes alone, but also the State and local taxes which on the whole are less progressive than the taxes imposed by the Federal Government. Furthermore, several of the excise taxes will in substantial part fall upon individuals not reached by the income tax. Moreover, the proposed use tax on automobiles will result in collecting at least $5 from many individuals who are not subject to the income tax. Statistics indicate that over 50 percent of the passenger automobiles are owned by individuals with incomes of $2,000 or less and over 18 percent are owned by individuals with incomes of $1,000 or less.

As pointed out by the House committee:

The additional revenue resulting from reduced exemptions comes almost entirely, not from new taxpayers, but from individuals already subject to the income tax.

Assistant Secretary of the Treasury, John L. Sullivan, in his testimony before the Senate committee, stated that:

Of the $303,000,000 we anticipate we will gain, as a result of lowering the exemptions, the overwhelming portion comes from the people who today, last year, for the last few years have already been on the tax roll.

Senator Brown has pointed out that when the exemptions were cut in 1940 from $2,500 to $2,000 for married persons and from $1,000 to $800 for single individuals, the new group of lower bracket taxpayers provided only $19,000,000 in revenue and that it will cost $15,000,000 to collect that revenue. As Senator Brown has so wisely stated:

The additional revenue we would gain from a further cut wouldn't amount to anything and we would merely be harassing a group of already distressed people (New York Times, August 10, 1941).

The fact is, as Mr. Sullivan pointed out, the bulk of the revenues derived from the lowering of exemptions, comes from existing taxpayers:

When you lower the personal exemption for married people $500 as you did last year, one of the results of that is that the married person who is already paying a tax has $500 removed from his exemption and put on his income at the very top bracket.

But this additional income could be secured by a more equitable method, rather than reducing exemptions. Instead of allowing personal exemptions as a credit against net income, which reduces the income in the highest bracket, the personal exemptions should be allowed as a deduction in the lowest surtax bracket—or as a credit against the tax, rather than against net income.

Thus, under existing law, the $2,000 personal exemption results in a tax saving only $80 (4 percent of $2,000) to a married man with an income of $2,500. However, to a man in the top bracket, it results in a tax saving of $1,580 (79 percent of $2,000). The wealthy taxpayers, possessing ability to pay, thus accrue from the exemption a decidedly greater reduction in actual taxes than the low-income taxpayers. Surely, this inequity in the income-tax structure favoring the wealthier taxpayer should be removed in the Revenue Act of 1941.

The principle here proposed has been strongly endorsed by Colin F. Stam, chief of staff of the Joint Committee on Internal Revenue Taxation, in his testimony before the House committee, and it has also been recommended by Dr. Magill, representing the Treasury Department, in his testimony before the House committee in 1934,

as well as Dr. Dewey Anderson, executive secretary of of the T. N. E. C., in his monograph, Taxation, Recovery, and Defense (p. 263).

By adopting this change we would add greater equity to the income-tax structure and at the same time derive very substantial revenues from a source possessing ability to pay. A reduction of $500 would subject only $500 to the top-bracket rates—while the proposal here made would subject $2,000 to the difference in rates between the top bracket and the lowest brackets.

Since the surtax under the revised schedule applies to the first dollar of surtax net income, whereas under existing law the first $4,000 of surtax net income is free from surtax, the lower income groups would be subject to very substantial income tax increases. In fact, a single person earning $1,000 a year and a married person earning $2,500 a year will pay 3½ times the income tax he now pays.

A sound tax program, concerned with the welfare of the American people and the maintaining of morale in this period of world crisis, would restore the $1,000, $2,500 personal exemptions and reject proposals to lower the existing exemptions. The impact of the proposed surtaxes would thereby be cushioned so as not to depress further the standard of living of the low-income groups.

If the personal exemptions were reduced in the face of the rapidly rising cost of living, it would constitute a pincer movement against the standard of living of the American people.

The argument is advanced that added taxation would decrease purchasing power and thereby tend to counteract inflationary price rises. But surely the pending price-and-rent-control bill is a more effective and democratic instrumentality to prevent inflationary price rises. What is more, the low income groups, whose purchasing power has already been reduced by the higher cost of living, would have their standard of living further jeopardized by added tax burdens. The new tax burdens would surely not nullify the price rises already borne by the low-income groups.

According to the July 1941 issue of the Labor Information Bulletin, published by the Department of Labor, the cost of living in 20 large cities increased 6.1 percent during the period from August 15, 1939, to June 15, 1941—in Buffalo the increase was as high as 8.9 percent, in Detroit 8 percent.

Since the cost of living consumes, in most if not all cases, the earnings of families with incomes under $2,000, the increase in the cost of living in this period has already taken $120 on the average from such families. Shall we aggravate the situation further by lowering exemptions?

The Senate committee should reject, as courageously as did the House committee, the proposals made to lower personal exemptions.

For the same reasons suggestions that the social security old-age benefits tax be increased must be rejected. If the 1-percent tax were increased to 2 percent, about a billion and a half dollars would be taken in largest measure from the lower-income groups. This provision is particularly retrogressive since the ceiling is fixed at $3,000 per year, so that earnings beyond this figure are free from social security taxation.

Despite the heavy tax burden on the lower-income groups, there are those who are clamoring for a general Federal sales tax. Studies of the sales-tax burden show that it rests hardest on the "ill fed, ill

clad, and ill housed." According to the Tax Policy League, a 2-percent sales tax will take $12 from a man earning $1,000 a year, but will only take $0.25 a $1,000 from a man with $1,000,000 a year (Where the Sales Tax Falls, 1934). David Cushman Coyle in his enlightening booklet, Why Pay Taxes, vigorously condemns sales taxation as "a graduated income tax in reverse."

To achieve a defensible tax program proposals to lower exemptions, excise taxes on consumer necessities, sales taxes, taxes on salaries and wages which would increase the tax burdens on persons whose present incomes do not permit a minimum standard of living, must be rejected and repudiated. Instead, increased taxation should be placed on the shoulders of those best able to carry it.

2. *Mandatory joint returns.*—Although the mandatory joint-return provision constituted the greatest contribution of the House committee's tax bill to a sound, progressive tax system, arguments without real foundation led to its defeat. It has been repeatedly pointed out that wealthy taxpayers escape the higher surtaxes by transferring their properties to their wives. Thus a wealthy stockholder receiving annually $200,000 from his stocks would pay a surtax of $108,320 under the pending bill. But if he transfers half his stocks to his wife, he will pay only $45,820 surtax on his $100,000, and his wife, by filing a separate return, would pay the same, thus avoiding $16,680 in surtaxes (excluding the 10-percent supertax). The splitting of incomes in community-property States is a serious discrimination against the rest of the population—a discrimination which should be terminated without delay. Considering that the mandatory joint-return requirement would affect only 153,000 couples, or 175,000 at most (excluding community-property returns) and that the expected yield is about $300,000,000, it is obvious how glaring is the loophole now existing—and how lucrative the fruit. This tax-avoidance device should be eliminated in this bill. The argument that mandatory joint returns will destroy the institution of marriage, lead to immorality, and send women back to marital slavery is sheer poppycock.

The CHAIRMAN. Your time is up. We don't want to cut you off, but don't extend your remarks more than necessary; you can file your brief if you so desire.

Mr. POPPER. I will leave out substantial portions of the statement.

Despite the utter necessity for the mandatory joint requirement, opponents of this progressive measure have suggested a proposal the very reverse thereof. This retrogressive suggestion would permit all married persons, in every State in the Union, to split their income 50–50 for tax purposes. Under the banner of "tax equalization," all the evils and inequities arising from the privilege of filing separate returns and the splitting of incomes by taxpayers in the eight or nine community-property States would be made universal.

The mandatory joint-return requirement should be restored in the 1941 Revenue Act, with or without the liberalization requested by the President and the Secretary of the Treasury, where both husband and wife work outside the home. The provision as adopted by the House committee was estimated to yield $287,200,000 net as compared with the $252,000,000 net estimated to be raised by the Treasury proposal. The difference in yield is not of very great consequence—the important thing is to incorporate the mandatory joint return requirement into the tax measure.

3. *An effective excess-profits tax.*—The principal feature of a democratically conceived Federal tax program, in an era in which billions of dollars of public funds are pouring into defense and other industries profiting by the war boom, should be a stringent and effective excess-profits tax. An effective excess-profits tax should be the keystone of a sound tax program based on ability to pay. We cannot afford to forget the reports of the Nye committee, which investigated the munitions industry and which revealed the exorbitant profits earned by the armament manufacturers in the first World War.

Current financial reports indicate that industry is duplicating if not bettering these tremendous profits. The National City Bank letter for August 1941 shows that 360 leading companies engaged in manufacturing, mining, trade, service, and construction showed combined net profits, less deficits, of approximately $785,000,000 after taxes in the first 6 months of 1941, which compares with $652,000,000 for the same companies in the first half of 1940, representing an increase of 20 percent. This tabulation also showed that 26 iron and steel companies more than doubled their profits in this period—from $61,915,000 in the first half of 1940 to $126,111,000 for the first half of 1941. And this tabulation shows that 9 automobile companies with profits of $125,860,000 are earning an annual rate of return of 21.1 percent (after taxes) on their net worth. These figures, representing profits after taxes, are the clearest evidence that the existing excess-profits tax is failing to recapture for the Government the abundant profits now being harvested by the large corporations.

In the formulation of a real excess-profits tax, there should be a ceiling based on a fair return of capital, above which all profits should be subject to excess-profits taxation. One of the most important loopholes in the existing excess-profits tax is that it exempts tremendous profits by corporations which had very prosperous earnings during the period 1936–39, while corporations which were making only modest earnings during that period are subject to excess-profits taxation. The highly prosperous, well-established corporations which have been making 30, 40, 50 percent or more on their invested capital in the 1935–39 period escape excess-profits taxation.

Secretary Morgenthau, in his memorandum of July 31, 1941, to the President, cited the case of an automobile company whose earnings in 1940, after the payment of taxes, will be approximately 26 percent of its invested capital. And Assistant Secretary of the Treasury John L. Sullivan testified before the House committee that—

> One company whose profits in 1940 were more than 3,000 percent larger than in 1939 is subject to no excess-profits tax whatever on 1940 earnings and yet this is a company which has thus far received over $70,000,000 of defense contracts.

The first step in achieving an excess-profits tax worthy of the name is the elimination of the average-earnings option. Senator La Follette has aptly declared that the existing excess-profits tax gives corporations a heads-they-win, tails-the-Treasury-loses alternative.

The excess-profits tax should apply to profits in excess of a reasonable return on invested capital. The Treasury has consistently adhered to this position.

The CHAIRMAN. Do you know how many corporations you would put out of business if you abolished that; if the average-earnings choice were eliminated?

Mr. POPPER. No, sir; I am not aware of how many would be put out of business.

The CHAIRMAN. Utilizing that as a base?

Mr. POPPER. Utilizing that as a base makes it impossible to collect the excess tax and at the same time elimination of it will bring into the Treasury a huge revenue which it is losing.

What rate of return on invested capital should be allowed before taxing profits as excess? A reasonable rate of return on capital, today, cannot be determined in the light of customary notions of either the financial or legal community. It must be determined in the light of the fact that close to a million men annually are giving, as their patriotic contribution, up to 2½ years of their lives to military training. The cost to them is leaving jobs, careers, and homes—their return is $1 a day. Surely it is hardly an unequal sacrifice, on the part of industry, to require profits of industry to become excess at a return of 4 or 5 percent. A rate of 4 percent would be more than twice the average 1.7 percent return on capital earned by corporations during the years 1926–37. A rate of 5 percent would be equal to industry's 1929 return on capital.

At what rate should such excess profits be taxed? In determining a proper rate, we must consider which corporations are reaping the bulk of excess profits.

For 1937, which is the latest year for which a comprehensive analysis is available, the total net income of the 479,000 American corporations was $7,306,000,000. Slightly less than one-half of these companies having assets of less than $50,000 each showed a total deficit of $132,000,000. The other 250,000 companies earned nearly $7,500,000,000 and paid income taxes of $1,250,000,000.

The most striking feature of corporate net income is that, whereas the small corporation suffered losses, the largest corporations—2 percent of them—accounted for nearly two-thirds of the entire $7,307,000,000 of corporate net income. This reflects not only the now generally recognized fact of enormous concentration of wealth in a handful of companies, but the equally significant fact of the heavy concentration of profitable enterprises in the few large companies. It is these corporations, therefore, which will presumably receive two-thirds of the entire profits arising from the defense program and the war boom. Indeed, their proportion of current profits is likely to be even greater than two-thirds, in view of the fact that the largest companies are receiving the lion's share of the billions in defense contracts being negotiated.

In determining a proper rate schedule of excess-profits tax, we are thus confronted with economic problems which transcend questions of pure and simple tax policy. We are dealing with the entire gamut of problems created by the concentration of corporate wealth—monopolies, the wide powers wielded by managers of industrial empires, corporate mismanagement of undistributed surpluses, and so forth. It is precisely because the concentration of wealth and the concentration of profits go hand-in-hand that the excess-profits tax is a particularly effective instrument for curbing the power of large corporate industry, for redistributing the surpluses of these vast aggregates of wealth, and at the same time for forcing large-scale industry to make its just contribution to national defense.

The tax rate imposed upon excess profits by the 1918 War and Excess Profits Tax Acts was 80 percent. A rate of 80 percent imposed upon excess profits, defined as suggested above, would reflect the beginnings of a rejection of the current philosophy of "regressive sacrifice" for national defense—to borrow a tax term—which asks of men military service at $1 a day and allows industry a minimum 8-percent return or their 1936-39 profits, if higher, before taxing its profits as excess.

To those who fear that industry will refuse to accept defense contracts or will sabotage the defense program if profits are limited to 5 percent and the type of excess-profits tax here being advocated is adopted, it should be pointed out that there are two effective weapons—conscription of industry and Government operation of defense plants—which it is already in a very large measure financing. We venture the suggestion that it would hardly be necessary to conscript industry or take over defense plants in order to obtain speedy acceptance of defense orders; it would only be necessary to call industry's bluff, with conscription and Government operation as the unused trump cards. The line of industry's representatives clamoring for Government contracts would form quickly outside the offices of the Office of Production Management and War and Navy Departments.

The CHAIRMAN. Your time is up. We will be glad to have you include your statement in the record.

Mr. POPPER. I will only take 2 or 3 minutes more to conclude.

The CHAIRMAN. We are indulging you considerably already and if we do it with one it is difficult to avoid it with others.

Mr. POPPER. It will take a minute and a half for me to summarize.

The CHAIRMAN. Well, if you can do it in a minute and a half, you may.

Mr. POPPER. 4. *Elimination of amortization privilege.*—The amortization privilege was granted to industry because industry had waged a sit-down strike and had refused to give workers the signal to start the wheels of production for rearmament until Congress yielded to its demands for the amortization privilege and the suspension of the profit limitations on naval and aircraft contracts. (Aviation's Sit-down Strike, 86th Congressional Record; 76th Cong., 3d sess., p. 16372 et seq.)

The amortization privilege is nothing more or less than a tax subsidy to industry—a tax subsidy which has no justification in this era of colossal profits.

The amortization privilege, granting a flat, arbitrary deduction of 20 percent (instead of the ordinary depreciation) of the cost of property should therefore be repealed.

5. *Profit limitation on defense contracts.*—Industry's second demand as its price for cooperating in national preparedness was the suspension of the limitations on profits imposed by the Vinson-Trammell Act. Originally enacted in 1934, it was last amended in June 1940, so that any profit in excess of 8 percent on competitively bid contracts for ships or plans (7 percent on negotiated contracts) must be repaid in the Treasury. The loud clamors of industry's representatives for generous profits received the strong sympathy of War and Navy Department officials.

The First World War experience is a striking testimonial to the need for limitations on profits on Government contracts in order to recapture profits attributable to excessively high prices and to corrupt practices. The Wall Street Journal (July 3, 1940) estimated that, notwithstanding a 7-percent contract price limitation, aircraft plants would still earn 9.4 to 28 percent on their capital investments.

While workers are conscripted with no guaranty of wages previously paid, no Government financing of the obligations left behind which the draftees will face on their return, capital is being assured soaring profits and the elimination of even existing profits limitations.

A democratic defense program would require capital to make sacrifices at least equal to those exacted from labor—would require the extension of profit limitations. It is ironical that the profit-limitations mechanism, steadfastly operating in predefense days, should have been abandoned at the very start of the gigantic defense program—when it is most needed to reduce the cost of defense to the Government—to the people. And the irony is climaxed by the fact that the profit-limitations mechanism was scrapped on the alleged ground that the enactment of a general excess-profits tax rendered unnecessary the profit-limitation apparatus. Experience has shown that the existing excess-profits tax is decrepid and sorely in need of overhauling. The profit-limitation provisions of the Vinson-Trammell Act (suspended October 1940) should be revived and extended to cover all defense contracts, with profits limited to 8 percent of the invested capital employed in the performance of the contract.

6. *Restoration of corporate undistributed-profits tax.*—The undistributed-profits tax is one of the most effective instruments to make effective the graduated surtax rates of the personal-income tax. Corporate directors often choose to withhold earnings and accumulate surplus rather than increase dividends to the stockholders. Thus, by paying out earnings only as those in control of the corporation elect, stockholders may avoid the personal-income surtax rates—thus dividends paid to stockholders with net incomes over a million dollars would be subject to a tax of 76 percent, which may be avoided by the nondeclaration of such dividends. This results in unfairness to the small stockholders, and it reduces the yield of the income tax.

In Lincoln's administration the principles of the undistributed-profits tax were incorporated in our first income-tax law (1861) which provided that the gains and profits of corporations should be included in the annual taxable income of any person entitled to them, whether distributed or undistributed.

The immediate restoration of the undistributed-profits tax is all the more important in a war-boom period, for it would reduce the opportunities for tax avoidance and tax evasion, would grant greater protection to the interests of the small stockholders, would tend to stabilize revenues and further the democratic principle of levying taxes in accordance with ability to pay.

Either the corporate undistributed-profits tax should be restored or stockholders should be required to include as taxable income these undivided profits.

7. *Taxation of governmental securities.*—Dewey Anderson, executive secretary of T. N. E. C., in his monograph Taxation, Recovery, and Defense (p. 189), has declared:

A most reprehensible form of tax favoritism benefiting the wealthy, who need such favors least of any group in the population, is the issuance of tax-exempt Government securities.

Paul Studenski, tax consultant for various State and Federal Government agencies and professor of public finance at New York University, appearing before the Senate Committee on Taxation of Governmental Securities and Salaries in 1939, said:

We cannot profess to be taxing in accordance with ability to pay while we are offering a wide loophole to our wealthy citizens to avoid the application of this principle by investing some of their wealth in wholly exempt securities. (Hearings before the Special Committee on Taxation of Governmental Securities and Salaries, Senate, 76th Con., 1st sess., 1939, p. 553.)

Several months ago Congress eliminated the tax-exemption privilege from new issues of Federal securities. The first step has thus been taken in the elimination of one of the most flagrant and unwarranted loopholes in the tax laws.

The loopholes should be completely closed through the taxation of the income of all presently outstanding Federal securities and of all presently outstanding and future issues of State and local securities.

8. *An integrated estate-and-gift-tax system with a single exemption of $10,000, plus a $10,000 life-insurance exemption.*—The estate-and-gift-tax changes in the pending bill, estimated to yield $151,900,000, are limited to rate increases. The Treasury's recommendations that the $40,000 insurance exclusion under the estate tax and the $40,000 specific exemption under the estate and gift taxes be reduced to $25,000 each, were not incorporated in the bill. As the bill now stands an estate of $100,000 can completely escape estate-gift taxation ($40,000 gift exemption, $40,000 insurance exclusion, $40,000 estate exemption). The rates fixed in the pending bill are, moreover, very substantially less than the rates proposed by the Treasury.

Estate and gifts constitute the most desirable sources possessing greatest ability to pay. What is vitally needed is an integrated estate and tax system with a single exemption of $10,000 (plus a $10,000 life-insurance exclusion) with a single set of rates, drastically increased above the rates in the pending bill. Thereunder, gifts made during the life of the donor would be included in the taxable estate, assessing the tax against the total estate, and permitting credit for taxes paid previously on the gifts. Thus, under existing law, a gift of $10,000 from an estate which, at the death of the donor, will amount to somewhat more than $1,000,000 avoids a prospective estates tax of $3,200 while paying a gift of only $150. The integrated estate-and-gift-tax system would close this loophole.

Considering that the Treasury estate-and-gift tax recommendations would yield about $200,000,000 more than the estate-and-gift-tax changes made in the pending bill, an integrated gift-and-estate-tax system with a single exemption of $10,000 plus a $10,000 life-insurance exclusion would yield revenues far in excess of this additional $200,000,000.

Democracy in taxation.—Democracy in taxation and the maintenance of a stable economy through increases in the purchasing power of workers and farmers require that taxes be collected from those able to pay, and especially from those corporations which are reaping swollen profits from the armament program. Taxation which lowers the standard of living of our people—and the very great majority of our

people have incomes below $2,500—is repugnant to the basic concept of democracy.

To achieve a defensible tax program, proposals such as consumption taxes, excise taxes on consumer necessities, sales taxes, taxes on salaries and wages, lowered personal income-tax exemptions which would increase the burdens on persons whose present incomes do not permit a minimum standard of living must be repudiated and defeated. Instead the increased tax burdens should be placed on the shoulders of those best able to carry them.

An effective excess-profits tax should be enacted. The amortization privilege should be repealed and stringent profits limitations on Government contracts should be adopted. The undistributed profits tax should be restored to reduce opportunities for tax avoidance or stockholders should be required to include undivided profits as taxable income. The income from Federal, State, and local securities (outstanding and future issues) should be taxed.

The $2,500 and $1,000 personal exemptions should be restored. Capital gains should be taxed at full rates and capital loss deductions against ordinary income should be disallowed. The Federal estate tax and gift tax should be integrated into a single tax system with a single exemption and a single set of graduated rates, drastically increased for all brackets, so as to prevent estate-tax reductions through gifts. Finally, no increase can be tolerated in the tax burden imposed on the millions of people who are "ill-fed, ill-clad, and ill-housed" until corporate industry and persons with "comfortable and large" incomes have been taxed to the very limit of their capacity to pay. Such would be the direction of a democratic tax program.

The National Lawyers Guild has presented a program for the equitable distribution of the financial burden of defense to enhance our national unity. In the words of Leon Henderson, Administrator of O. P. A. C. S., taken from his testimony before the House committee:

> This claim for equitable distribution of the financial burden of defense is not motivated only by an idealistic yearning for justice. It is an essential condition for the success of an all-out defense program. The battle of production can be won only if we all participate in it to the fullest. The people will willingly participate without reservations in that battle only if they are satisfied that the burdens are equitably distributed and that nobody is permitted to make excessive and unjustified profits out of the gravest emergency which we have faced in many generations.

The CHAIRMAN. Any questions?

Mr. POPPER. Do I understand that I have permission to include in the record the memorandum of the tax committee of the Guild, plus a definite proposal for legislation which I have not had time here to read?

The CHAIRMAN. Just give it to the stenographer. We will take a recess until 2 o'clock.

(Mr. Popper submitted the following memorandum and the pamphlet, entitled "A Democratic Tax Program for the American People.")

EIGHT POINT FEDERAL TAX PROGRAM ADVOCATED BY THE NATIONAL LAWYERS GUILD

1. *Personal income tax.*—The $1,000 personal exemption for single persons and the $2,500 personal exemption for married persons and family heads should be restored.

2. *Corporate taxes.*—An effective excess-profits tax of 80 percent on profits above 5 percent of invested capital should be adopted. The "average earnings" option of computing the excess-profits credit should be eliminated. Borrowed

capital should be excluded in determining the amount of invested capital. The 20-percent amortization privilege should be repealed; profit limitations on all defense contracts should be restored; the undistributed-profits tax should be reenacted or stockholders required to include undivided profits as taxable income.

3. *Estate and gift taxes.*—An integrated estate-and-gift-tax system with a single exemption of $10,000 (plus $10,000 life-insurance exemption) and a single set of graduated rates drastically increased for all brackets should be adopted.

4. *Government securities.*—Income from all outstanding and future governmental securities should be taxed.

5. *Capital gains.*—Capital gains should be taxed at full rates and capital loss deductions against ordinary income should be disallowed.

6. *Consumers' taxes.*—All proposals to increase or add excise or consumption taxes on consumers' necessities must be rejected and defeated. A general sales tax is indefensible.

7. *Reduction in depletion allowances.*—Concerns engaged in extracting certain of our natural resources, particularly oil, have been granted unjustifiable and excessive allowances for depletion. This unwarranted privilege of tax escape should be removed.

8. *Mandatory joint returns.*—Immediate adoption of mandatory joint-return requirement, thereby eliminating a highly important tax-avoidance device and ending the discrimination favoring married persons in community-property States.

A DEMOCRATIC TAX PROGRAM FOR THE AMERICAN PEOPLE

By NATIONAL COMMITTEE ON TAXATION

of the

NATIONAL LAWYERS GUILD

A DEMOCRATIC TAX PROGRAM

1. *Personal income tax.*—The $1,000 personal exemption for single persons and the $2,500 personal exemption for married persons and family heads should be restored.

2. *Corporate taxes.*—An effective excess-profits tax of 80 percent on profits above 5 percent of invested capital should be adopted. The "average-earnings" option of computing the excess-profits credit should be eliminated. Borrowed capital should be excluded in determining the amount of invested capital. The 20-percent amortization privilege should be repealed; profit limitations on all defense contracts should be restored; the undistributed-profits tax should be reenacted or stockholders required to include undivided profits as taxable income.

3. *Estate and gift taxes.*—An integrated estate-and-gift tax system with a single exemption of $10,000 (plus $10,000 life insurance exemption) and a single set of graduated rates drastically increased for all brackets should be adopted.

4. *Government securities.*—Income from all outstanding and future governmental securities should be taxed.

5. *Capital gains.*—Capital gains should be taxed at full rates and capital loss deductions against ordinary income should be disallowed.

6. *Consumers' taxes.*—All proposals to increase or add excise or consumption taxes on consumers' necessities must be rejected and defeated. A general sales tax is indefensible.

7. *Reduction in depletion allowances.*—Concerns engaged in extracting certain of our natural resources, particularly oil, have been granted unjustifiable and excessive allowances for depletion. This unwarranted privilege of tax escape should be removed.

8. *Mandatory joint returns.*—Immediate adoption of mandatory joint return requirement, thereby eliminating a highly important tax avoidance device and ending the discrimination favoring married persons in community-property States.

THE REVENUE BILL OF 1941

After 3 months of deliberation, the House Committee on Ways and Means introduced the revenue bill of 1941, H. R. 5417, designed to raise $3,500,000,000 which has certain commendable features.

As introduced in the House, the committee's tax bill would have raised the revenue from the following sources:

1. One billion three hundred and twenty-two million nine hundred thousand dollars in increased taxes on corporations.

2. About $323,000,000 through the mandatory joint return requirement, thereby eliminating a highly important tax avoidance device, ending a serious discrimination against earned income, and terminating the discrimination favoring married persons in the eight community property States.

3. Eight hundred and twenty-nine million dollars in higher surtaxes on individuals.

4. About $900,000,000 in excise taxes which would not affect the lower income groups except for the lowering of exemptions on admissions, the tax on soft drinks and the added taxes on radios and mechanical refrigerators.

5. One hundred and fifty-two million dollars in additional estate and gift taxes.

The House committee resisted the attempts to impose a general sales tax, to add taxes to the poor man's table, and to lower personal income-tax exemptions. These should be marked down on the favorable side of the balance sheet of the House committee's tax bill.

The 1941 revenue bill, however, does not meet two major objectives which a tax measure based on the democratic principle of taxation according to ability to pay should in these times contain:

1. It does not propose an effective stringent excess-profits tax which will recapture the large profits being made by corporate industry as a result of the billions pouring out of the Treasury and by foreign governments to meet war and defense needs. The committee rejected the sound proposal that the average-earnings basis of computing excess-profits credits be eliminated. The bill allows a 7–8 percent return on invested capital or 95 percent of the average-earnings during 1936–39 as an excess profits credit.

2. The bill retains the $800 and $2,000 personal income tax exemptions which were lowered in the First Revenue Act of 1940, and repeals the existing exemption of $4,000 against surtaxes. The result would be that surtaxes, until now paid only by the well-to-do, would fall on those in the lower income brackets who now file returns.

A single person earning $1,000 or a married person earning $2,500 a year would pay three and one-half times the income tax he now pays, so steep is the increase in the lower-income groups.

In the House, after a barrage of misleading and baseless propaganda as to the effects of mandatory joint returns upon the home, woman's status in society, the divorce rate, etc., the mandatory joint-return provision was defeated. This is one of the soundest features of the Ways and Means Committee's bill and deserves the support of every progressive-minded citizen. It is common knowledge that wealthy persons escape the higher surtaxes by transferring their properties to their wives. Thus a wealthy stockholder receiving annually $200,000 from his stocks would pay a surtax of $108,320 under the pending bill. But if he transfers half his stocks to his wife he will pay only $45,820 surtax on his $100,000, and his wife, by filing a separate return, would pay the same, thus avoiding $16,680 in surtaxes (excluding the 10 percent supertax thereon). The revenue which would be derived from the mandatory joint-return requirement would come from families possessing ability to pay, since only 158,000 persons would thereby be affected, and the tax of any family whose combined income is less than $4,000 would not be increased. The argument that joint tax returns will destroy the institute of marriage, lead to immorality, send women back to marital slavery, is sheer poppycock. As the House committee's report showed in Great Britain, where compulsory joint returns have been required since 1914, the number of divorces for each 1,000 marriages was, in 1935, 12 divorces for each 1,000 marriages, while in the United States 164 divorces for each 1,000 marriages.

Despite the need of a mandatory joint-return requirement, opponents of this progressive measure have suggested a proposal the very reverse thereof.

This retrogressive suggestion would permit all married persons to split their income 50–50 for tax purposes. Under the banner of "tax equalization" all the evils and inequities arising from the privilege of filing separate returns and splitting incomes by taxpayers in the eight community-property States would be made universal. If the ability to pay principle is to be advanced, the mandatory joint-return requirement must be included in the law.

We propose the following changes in the House committee's bill:

I. AN EFFECTIVE EXCESS PROFITS TAX

In these days of vast expenditures for defense and war preparation, an effective, stringent excess-profits tax, designed to recapture the unparalleled profits being made by industry as a result of the threat to our national safety, should be the cornerstone of the Federal tax program. Profits should be treated as excess when they exceed a reasonable return on the capital invested. Credit for borrowed capital should be disallowed, since the return on borrowed capital is adequately provided for by interest deductions.

The retention of the average-earnings method permits many corporations with very substantial defense contracts to escape entirely the payment of excess-profits taxes. Assistant Secretary of the Treasury John L. Sullivan, in his testimony before the House Ways and Means Committee, testified that an examination of actual tax returns filed in 1941 showed that—

"One company whose profits in 1940 were more than 3,000 percent larger than in 1939 is subject to no excess-profits tax whatever on 1940 earnings, and yet this is a company which has thus far received over $70,000,000 of defense contracts.

"A large industrial company which has received over $250,000,000 of defense contracts and had earnings in 1940 of nearly 200 percent larger than in 1939 will pay no excess-profits tax."

Little wonder, then, that the Assistant Secretary of the Treasury concluded:

"We now have on the statute books a tax which is called an excess-profits tax, and which the country believes is an excess-profits tax. The truth of the matter is that the law we call an excess-profits tax does not tax excess profits at all."

Senator La Follette has aptly declared that existing excess-profits tax gives corporations a "heads-they-win-tails-the-Treasury-loses alternative."

Excess profits taxation should apply to profits in excess of a reasonable return on invested capital. A "reasonable" rate of return on capital cannot be determined in the light of customary notions of either the financial or legal community. It must be determined in the light of the fact that close to a million men annually are being asked, as their patriotic contribution, and are being required by conscription, to give a year or more of their lives to military training. The cost to them is leaving jobs, careers and homes, their "return" is $1 a day. It must be determined in the light of the fact that a large part of the increased profits will be "earned" by corporations without substantial capital risk—the risks in a large measure being taken by the Federal Government.

In these circumstances, we suggest that the profits of industry become excess at a return of 4 or 5 percent. A rate of 4 percent would be more than twice the average 1.7 percent return on invested capital earned by corporations during the years 1926–1937. A rate of 5 percent would be equal to industry's 1929 return on invested capital. For 1937, which is the latest year for which a comprehensive analysis is available, the total net income of the 479,000 American corporations was $7,300,000,000. Slightly less than one-half of these companies having assets of less than $50,000 each showed a total deficit of $132,000,000. The other 250,000 companies earned nearly $7,500,000,000 and paid income taxes of $1,250,000,000.

The most striking feature of corporate net income is that whereas the small corporation suffered losses, the largest corporations—2 percent of them—accounted for nearly two-thirds of the entire $7,300,000 000 of corporate net income. This reflects not only the now generally recognized fact of enormous concentration of wealth in a handful of companies, but the equally significant fact of the heavy concentration of profitable enterprises in the few large companies. It is these corporations, therefore, which will presumably receive two-thirds of the entire profits arising from the defense program and the war boom. Indeed, their proportion of current profits is likely to be even greater than two-thirds, in view of the fact that the largest companies are receiving the lion's share of the billions in defense contracts being negotiated.

In determining a proper rate schedule of excess-profits tax, we are thus confronted with economic problems which transcend questions of pure and simple tax policy. We are dealing with the entire gamut of problems created by the concentration of corporate wealth—monopolies, the wide powers wielded by managers of industrial empires, corporate mismanagement of undistributed surpluses, etc. It is precisely because the concentration of wealth and the concentration of profits go hand in hand that the excess-profits tax is a particularly effective instrument for curbing the power of large corporate industry, for redistributing the surpluses of these vast aggregates of wealth and at the same time for forcing large-scale industry to make its just contribution to national defense.

The tax rate imposed upon excess profits by the 1918 war- and excess-profits tax acts was 80 percent. A rate of 80 percent imposed upon excess profits, defined as suggested above, would reflect the beginnings of a rejection of the current philosophy of "regressive sacrifice" for national defense—to borrow a tax term which asks of men military service at $1 a day and allows industry a minimum 8 percent return or their 1936-39 profits, if higher, before taxing its profits as excess.

To those who fear that industry will refuse to accept defense contracts or will sabotage the defense program if profits are limited to 5 percent, and the type of excess-profits tax here being advocated is adopted, it should be pointed out that Congress has two effective weapons—conscription of industry and Government operation of defense plants, which it is already in a very large measure financing. We venture the suggestion that it would hardly be necessary to conscript industry or take over defense plants in order to obtain speedy acceptance of defense orders—it would only be necessary to call industry's bluff, with conscription and Government operation as the unused trump cards. The line of industry's representatives clamoring for Government contracts would form quickly outside the offices of the Office of Production Management and the War and Navy Departments.

II. THE RESTORATION OF PERSONAL EXEMPTIONS TO $1,000 AND $2,500

At the present time the low-income groups are paying very heavy taxes which are passed on to the consumer in higher prices for articles and services. Senator O'Mahoney, of the Temporary National Economic Committee, has pointed out that 26 percent of all taxes imposed by Federal, State, and local Governments were in 1939 paid by persons whose incomes were less than $1,000 a year. This means that a person with $800 annual income (the personal exemption now allowed single persons) paid out in 1939 and $208 in Federal, State, and local taxes. Persons with incomes under $500 a year paid out 21.9 percent of their incomes, or more than $100 in taxes in 1938-39 (Colm and Tarasov, Who Pays Taxes, Temporary National Economic Committee Monograph No. 3). These figures, based on 1939 tax payments do not take into account the increased tax burden levied under the Revenue Act of 1940, which was to raise an additional $375,000,000 in consumer taxes and another $375,000,000 in personal income taxes, much of which will come out of the pockets of the consumer and the low-bracket taxpayer since personal exemptions were reduced from $1,000 to $800 for the single person and from $2,500 to $2,000 for married persons in the same Revenue Act of 1940.

According to studies made in previous years by Dr. Mordecai Ezekiel, Department of Agriculture economist, $2,500 was needed to maintain an average worker's family at the barest level of health and decency; $2,200 according to the Heller committee of the University of Southern California. In view of the rising cost of living and the existing increased tax burden on the low-income groups, it is obvious that the American family will need substantially more than the $2,200 to $2,500 figure to maintain a decent standard of living.

Each dollar of tax placed upon such low incomes cuts into the standard of living of the American people—a standard far too low.

Thus taxes in the brackets below $2,200 to $2,500 do not mean less savings or fewer luxuries—they mean less food, clothing and shelter. The maintenance of morale in this present crucial time is hardly advanced by depressing the standard of living of the American people.

A sound tax program concerned with the welfare of the American people and the maintenance of morale in this period of unlimited national emergency would restore the $1,000 personal exemption for single persons and the $2,500 personal exemption for married couples. The impact of the proposed surtaxes would thereby be cushioned so as not to depress further the standard of living of the low-income groups. Restoration of the $1,000 to $2,500 personal exemptions would serve to reestablish the personal income tax as a progressive tax based on genuine ability to pay.

III. THE INTEGRATION OF ESTATE AND GIFT TAXES WITH A SINGLE EXEMPTION OF $10,000, PLUS A $10,000 LIFE-INSURANCE EXEMPTION

The Treasury had proposed to raise $347,000,000 in increased estate and gift taxes by increasing the estate-and-gift-tax rates, and by reducing from $40,000 to $25,000 the specific exemption under the estate tax and gift tax, and the insurance exemption under the estate tax.

The House Committee on Ways and Means increased the estate and gift rates to yield $152,000,000 additional revenue.

The House committee's decision would therefore yield about $200,000,000 less than the Treasury's proposals from a source very able to pay increased taxation. The House committee refused to reduce the existing $40,000 exemptions. As the bill now stands an estate of $120,000 completely escapes estate-gift taxation ($40,000 gift exemption, $40,000 insurance exclusion, $40,000 estate exemption). The rates fixed by the House committee are very substantially less than the rates proposed by the Treasury.

At a time when the low-income groups of all classes of society, including laborers and farmers, are called upon to bear an ever-increasing tax burden, when personal income tax exemptions are reduced to an $800 figure, they will hardly be convinced that burdens are being distributed according to ability to bear them when an estate of $120,000 is still permitted to escape estate-gift taxation. An integrated estate and gift-tax system with a single exemption of $10,000 (plus a $10,000 life insurance exclusion) should be adopted with drastically increased rates.

IV. TAXATION OF INTERGOVERNMENTAL SECURITIES

The first step in the elimination of one of the most flagrant and unwarranted loopholes in the tax laws, tax-exempt securities, has been taken through the provisions for taxing the income from future issues of Federal securities. The loophole should be completely closed through the taxation of the income of all presently outstanding Federal securities and of all presently outstanding and future issues of State and local securities.

V. ELIMINATION OF AMORTIZATION PRIVILEGE

The amortization privilege was granted to industry because industry had waged a sit-down strike and had refused to give workers the signal to start the wheels of production for rearmament until Congress yielded to its demands for the amortization privilege and the suspension of the profit limitations on naval and aircraft contracts. (Aviation's Sit-Down Strike, 86 Cong. Rec. (76th Cong., 3d sess.), pp. 16372 et seq.) Under the Federal income-tax laws, annual deductions may be taken for depreciation of plant, equipment, and other property used in business (6 percent depreciation rate for manufacturing plans represents a rough average).

The amortization privilege is nothing more nor less than a tax subsidy to industry—a tax subsidy which has no justification in this era of colossal profits.

The amortization privilege, granting a flat, arbitrary deduction of 20 percent (instead of the ordinary depreciation) of the cost of property should therefore be repealed.

VI. PROFIT LIMITATIONS ON DEFENSE CONTRACTS

Industry's second demand as its price for cooperating in national preparedness was the suspension of the limitations on profits imposed by the Vinson-Trammell Act. Originally enacted in 1934, it was last amended in June 1940 so that any profit in excess of 8 percent on competitively bid contracts for ships or planes (7 percent on negotiated contracts) must be repaid in the Treasury. The loud clamors of industry's representatives for generous profits received the strong sympathy of War and Navy Department officials.

The first World War experience is a striking testimonial to the need for limitations on profits on Government contracts in order to recapture profits attributable to excessively high prices and to corrupt practices. The Wall Street Journal (July 3, 1940) estimated that, notwithstanding a 7 percent contract price limitation, aircraft plants would still earn 9.4 to 28 percent on their capital investments.

While workers are conscripted with no guaranty of wages previously paid, no Government financing of the obligations left behind which the draftees will face on their return, capital is being assured soaring profits and the elimination of even existing profits limitations.

A democratic defense program would require capital to make sacrifices at least equal to those exacted from labor—would require the extension of profit limitations to all Government contracts, not the suspension of profit limitations.

The profit limitation provisions of the Vinson-Trammell Act (suspended October 1940) should be revived and extended to cover all defense contracts, with profits limited to 8 percent of the invested capital employed in the performance of the contract.

VII. RESTORATION OF CORPORATE UNDISTRIBUTED-PROFITS TAX

The undistributed-profits tax is one of the most effective instruments to make effective the graduated surtax rates of the personal income tax. Corporate directors often choose to withhold earnings and accumulate surplus rather than increase dividends to the stockholders. Thus, by paying out earnings only as those in control of the corporation elect, stockholders may avoid the personal income surtax rates—thus dividends paid to stockholders with net incomes over a million dollars would be subject to a tax of 76 percent, which may be avoided by the nondeclaration of such dividends. This results in unfairness to the small stockholders and it reduces the yield of the income tax.

In Lincoln's administration the principles of the undistributed-profits tax were incorporated in our first income-tax law (1861) which provided that the gains and profits of corporations should be included in the annual taxable income of any person entitled to them, whether distributed or undistributed.

The immediate restoration of the undistributed profits tax is all the more important in a war boom period, for it would reduce the opportunities for tax avoidance and tax evasion, would grant greater protection to the interests of the small stockholders, would tend to stabilize revenues and further the democratic principle of levying taxes in accordance with ability to pay.

Either the corporate undistributed profits tax should be restored, or stockholders should be required to include as taxable income these undivided profits.

VII. COMPUTATION OF PERSONAL EXEMPTIONS

Under existing law, personal exemptions are allowed as a credit against net income. They therefore apply not only for the purpose of the normal tax but also for surtax purposes. This makes the benefit of the exemption unequal with respect to different classes of taxpayers, since it operates to reduce the top bracket of the taxpayer's income.

Thus the $2,000 personal exemption results in a tax savings of only $80 (4 percent of $2,000) to a married man with an income of $2,500. However, to a man in the top bracket it results in a tax saving of $1,580 (79 percent of $2,000). The wealthy taxpayer thus secures a decidedly greater reduction in actual taxes paid than the small taxpayer.

This inequity in the income-tax structure should be removed in the Revenue Act of 1941. This discrimination in favor of the upper-bracket taxpayers can be eliminated by allowing personal exemptions (and credit for dependents) to be deducted in the lowest surtax brackets—or as a credit against the tax, rather than against net income.

The principle here proposed has been strongly endorsed by Colin F. Stam, chief of staff of the Joint Committee on Internal Revenue Taxation, in his testimony before the House Committee on Ways and Means in its hearings on the pending bill (hearings, pp. 84–85). It has also been recommended by Dr. Magill, representing the Treasury Department, in his testimony before the House committee in 1934, and also by Dr. Dewey Anderson, executive secretary of the Temporary National Economic Committee, in his monograph, Taxation, Recovery, and Defense (p. 263).

DEMOCRACY IN TAXATION

Democracy in taxation and the maintenance of a stable economy through increases in the purchasing power of workers and farmers require that taxes be collected from those able to pay, and especially from those corporations which are reaping swollen profits from the armament program. Taxation which lowers the standard of living of our people and the very great majority of our people have incomes below $2,500—is repugnant to the basic concept of democracy.

To achieve a defensible tax program, proposals such as "consumption" taxes, excise taxes on consumer necessities, sales taxes, taxes on salaries and wages, lowered personal income-tax exemption, which would increase the burdens on persons whose present incomes do not permit a minimum standard of living,

must be repudiated and defeated. Instead, the increased tax burdens should be placed on the shoulders of those best able to carry them.

An effective excess-profits tax should be enacted. The amortization privilege should be repealed and stringent profits limitations on Government contracts should be adopted. The undistributed profits tax should be restored to reduce opportunities for tax avoidance or stockholders should be required to include undivided profits as taxable income. The income from Federal, State, and local securities (outstanding and future issues) should be taxed.

The $2,500 and $1,000 personal exemptions should be restored. Capital gains should be taxed at full rates and capital loss deductions against ordinary income should be disallowed. The Federal estate tax and gift tax should be integrated into a single-tax system with a single exemption and a single set of graduated rates drastically increased for all brackets, so as to prevent estate tax reductions through gifts. Finally, no increase can be tolerated in the tax burden imposed on the millions of people who are "ill-fed, ill-clad, and ill-housed" until corporate industry and persons with "comfortable and large" incomes have been taxed to the very limit of their capacity to pay. Such would be the direction of a democratic tax program.

NATIONAL COMMITTEE ON TAXATION, NATIONAL LAWYERS GUILD.

(Mr. Popper subsequently submitted for the record the following proposed amendments:)

TITLE I

SECTION 1. PERSONAL EXEMPTION.

(a) Section 25 (b) (1) of the Internal Revenue Code is amended to read as follows:

"(1) PERSONAL EXEMPTION.—In the case of a single person or a married person not living with husband or wife, a personal exemption of $1,000; or in the case of the head of a family or a married person living with husband or wife, a personal exemption of $2,500. A husband and wife living together shall receive but one personal exemption. The amount of such personal exemption shall be $2,500. If such husband and wife make separate returns, the personal exemption may be taken by either or divided between them."

(b) Section 251 (f) of the Internal Revenue Code (relating to personal exemption of citizens entitled to benefits of Section 251) is amended by striking out "$806" and inserting in lieu thereof "$1,000."

SEC. 2. RETURNS OF INCOME TAX.

(a) INDIVIDUAL RETURNS.—Section 51 (a) of the Internal Revenue Code is amended to read as follows:

"(a) REQUIREMENT.—The following individuals shall each make under oath a return stating specifically the items of his gross income and the deductions and credits allowed under this chapter and such other information for the purpose of carrying out the provisions of this chapter as the Commissioner, with the approval of the Secretary, may by regulations prescribe—

"(1) Every individual who is single or who is married but not living with husband or wife, if having a gross income for the taxable year of $1,000 or over.

"(2) Every individual who is married and living with husband or wife, if no joint return is made under subsection (b) and if—

"(A) Such individual has for the taxable year a gross income of $2,500 or over and the other spouse has no gross income; or

"(B) Such individual and his spouse each has for the taxable year a gross income and the aggregate gross income is $2,500 or over."

(b) INFORMATION RETURNS.—Section 147 (a) of the Internal Revenue Code (relating to information at the source) is amended by striking out "$800" wherever occurring therein and inserting in lieu thereof "$1,000."

SEC. 3. TAXABLE YEARS TO WHICH APPLICABLE.

The amendments made by this title shall be applicable only with respect to taxable years beginning after December 31, 1940.

AN ACT To provide revenue, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

* * * * * * *

TITLE II.—EXCESS PROFITS TAX

SECTION 201. EXCESS PROFITS TAX.

"Subchapter E—Excess Profits Tax" of Chapter 2 of the Internal Revenue Code is amended to read as follows:

"SUBCHAPTER E—EXCESS PROFITS TAX

"SECTION 710. IMPOSITION OF TAX.

"(a) IMPOSITION.—There shall be levied, collected, and paid, for each taxable year, beginning after December 31, 1940, on the adjusted excess profits net income, as defined in subsection (b), of every corporation (except a corporation exempt under section 727) a tax of 80 per centum of the adjusted excess-profits net income.

"(b) DEFINITION OF ADJUSTED EXCESS PROFITS NET INCOME.—As used in this section, the term 'adjusted excess profits net income' in the case of any taxable year means the excess profits net income (as defined in section 711) minus:

"(1) A specific exemption of $25,000, or

"(2) The amount of the excess profits credit

allowed under section 712, whichever is greater.

"SEC. 711. EXCESS PROFITS NET INCOME.

"TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1940.—The excess profits net income for any taxable year beginning after December 31, 1940, shall be the normal-tax net income, as defined in section 13 (a) (2), for such year except that the following adjustments shall be made:

"(1) EXCESS PROFITS CREDIT COMPUTED UNDER INVESTED CAPITAL CREDIT.—

"(A) DIVIDENDS RECEIVED.—The credit for dividends received shall apply, without limitation, to all dividends on stock of all corporations, except dividends (actual or constructive) on stock of foreign personal holding companies, and except dividends (actual or constructive) on stock which is not a capital asset;

"(B) INCOME TAXES.—The deduction for taxes shall be increased by an amount equal to the tax (not including the tax under section 102) under Chapter 1 for such taxable year;

"(C) LONG-TERM GAINS AND LOSSES.—There shall be excluded long-term capital gains and losses. There shall be excluded the excess of gains from the sale or exchange of property held for more than eighteen months which is of a character which is subject to the allowance for depreciation provided in section 23 (l) over the losses from the sale or exchange of such property;

"(D) INCOME FROM RETIREMENT OR DISCHARGE OF BONDS, AND SO FORTH.—There shall be excluded, in the case of any taxpayer, income derived from the retirement or discharge by the taxpayer of any bond, debenture, note, or certificate or other evidence of indebtedness, if the obligation of the taxpayer has been outstanding for more than 18 months, including, in case the issuance was at a premium, the amount includible in income for such year solely because of such retirement or discharge;

"(E) REFUNDS AND INTEREST ON AGRICULTURAL ADJUSTMENT ACT TAXES.—There shall be excluded income attributable to refund of tax paid under the Agricultural Adjustment Act of 1933, as amended, and interest upon any such refund;

"(F) INTEREST ON CERTAIN GOVERNMENT OBLIGATIONS.—The normal-tax net income shall be increased by an amount equal to the amount of the interest on obligations held during the taxable year which are described in section 22 (b) (4) any part of the interest from which is excludible from gross income or allowable as a credit against net income, if the taxpayer has so elected under section 720 (d); and

"(G) RECOVERIES OF BAD DEBTS.—There shall be excluded income attributable to the recovery of a bad debt if a deduction with reference to such debt was allowable from gross income for any taxable year beginning prior to January 1, 1940.

"(2) TAXABLE YEAR LESS THAN TWELVE MONTHS.—If the taxable year is a period of less than twelve months, the excess-profits net income shall be placed on an

annual basis by multiplying the amount thereof by the number of days in the twelve months ending with the close of the taxable year and dividing by the number of days in the taxable year. The tax shall be such part of the tax computed on such annual basis as the number of days in the taxable year is of the number of days in the twelve months ending with the close of the taxable year.

"SEC. 712. EXCESS-PROFITS CREDIT—BASED ON INVESTED CAPITAL.

"The excess-profits credit, for any taxable year, shall be an amount equal to 4 per centum of the taxpayer's invested capital for the taxable year, determined under section 713.

"SEC. 713. DEFINITION OF INVESTED CAPITAL.

"For the purposes of this subchapter the invested capital for any taxable year shall be the average invested capital for such year, determined under section 714, reduced by an amount computed under section 720 (relating to inadmissible assets). If the Commissioner finds that in any case the determination of invested capital, on a basis other than a daily basis, will produce an invested capital differing by not more than $1,000 from an invested capital determined on a daily basis, he may, under regulations prescribed by him with the approval of the Secretary, provide for such determination on such other basis. (For computation of invested capital in case of foreign corporations and corporations entitled to the benefits of section 251, see section 720.)

"SEC. 714. AVERAGE INVESTED CAPITAL.

"The average invested capital for any taxable year shall be the aggregate of the daily invested capital for each day of such taxable year, divided by the number of days in such taxable year.

"SEC. 715. DAILY INVESTED CAPITAL.

"The daily invested capital for any day of the taxable year shall be the equity invested capital for such day.

"SEC. 716. EQUITY INVESTED CAPITAL.

"(a) DEFINITION.—The equity invested capital for any day of any taxable year shall be determined as of the beginning of such day and shall be the sum of the following amounts, reduced as provided in subsection (b):

"(1) MONEY PAID IN.—Money previously paid in for stock, or as paid-in surplus, or as a contribution to capital;

"(2) PROPERTY PAID IN.—Property (other than money) previously paid in (regardless of the time paid in) for stock or as paid-in surplus, or as a contribution to capital. Such property shall be included in an amount equal to its basis (unadjusted) for determining loss upon sale or exchange. If the property was disposed of before such taxable year, such basis shall be determined in the same manner as if the property were still held at the beginning of such taxable year. If such unadjusted basis is a substituted basis, it shall be adjusted, with respect to the period before the property was paid in, in the manner provided in section 113 (b) (2);

"(3) DISTRIBUTIONS IN STOCK.—Distributions in stock.—

"(A) Made prior to such taxable year to the extent to which they are considered distributions of earnings and profits; and

"(B) Previously made during such taxable year to the extent to which they are considered distributions of earnings and profits other than earnings and profits of such taxable year;

"(4) EARNINGS AND PROFITS AT BEGINNING OF YEAR.—The accumulated earnings and profits as of the beginning of such taxable year; and

"(5) INCREASE ON ACCOUNT OF GAIN ON TAX-FREE LIQUIDATION.—In the case of the previous receipt of property (other than property described in the last sentence of section 113 (a) (15) by the taxpayer in complete liquidation of another corporation under section 112 (b) (6), or the corresponding provision of a prior revenue law, an amount, with respect to each such liquidation, equal to the amount by which the aggregate of the amount of the money so received and of the adjusted basis, at the time of receipt, of all property (other than money) so received, exceeds the sum of—

"(A) The aggregate of the adjusted basis of each share of stock with respect to which such property was received; such adjusted basis of each share

to be determined immediately prior to the receipt of any property in such liquidation with respect to such share; and

"(B) The aggregate of the liabilities of such other corporation assumed by the taxpayer in connection with the receipt of such property, of the liabilities (not assumed by the taxpayer) to which such property so received was subject, and of any other consideration (other than the stock with respect to which such property was received) given by the taxpayer for such property so received.

"(b) REDUCTION IN EQUITY INVESTED CAPITAL.—The amount by which the equity invested capital for any day shall be reduced as provided in subsection (a) shall be the sum of the following amounts:

"(1) DISTRIBUTIONS IN PREVIOUS YEARS.—Distributions made prior to such taxable year which were not out of accumulated earnings and profits;

"(2) DISTRIBUTIONS DURING THE YEAR.—Distributions previously made during such taxable year which are not out of the earnings and profits of such taxable year;

"(3) EARNINGS AND PROFITS OF ANOTHER CORPORATION.—The earnings and profits of another corporation which previously at any time were included in accumulated earnings and profits by reason of a transaction described in section 112 (b) to (e), both inclusive, or in the corresponding provision of a prior revenue law, or by reason of the transfer by such other corporation to the taxpayer of property the basis of which in the hands of the taxpayer is or was determined with reference to its basis in the hands of such other corporation, or would have been so determined if the property had been other than money; and

"(4) REDUCTION ON ACCOUNT OF LOSS ON TAX-FREE LIQUIDATION.—In the case of the previous receipt of property (other than property described in the last sentence of section 113 (a) (15) by the taxpayer in complete liquidation of another corporation under section 112 (b) (6), or the corresponding provision of a prior revenue law, an amount, with respect to each such liquidation, equal to the amount by which the sum of—

"(A) The aggregate of the adjusted basis of each share of stock with respect to which such property was received; such adjusted basis of each share to be determined immediately prior to the receipt of any property in such liquidation with respect to such share, and

"(B) The aggregate of the liabilities of such other corporation assumed by the taxpayer in connection with the receipt of such property, of the liabilities (not assumed by the taxpayer) to which such property so received was subject, and of any other consideration (other than the stock with respect to which such property was received), given by the taxpayer for such property so received,

exceeds the aggregate of the amount of the money so received and of the adjusted basis, at the time of receipt, of all property (other than money) so received. The amount of the reduction under this paragraph shall not exceed the accumulated earnings and profits as of the beginning of such taxable year.

"(c) RULES FOR APPLICATION OF SUBSECTIONS (A) AND (B).—For the purposes of subsections (a) and (b)—

"(1) DISTRIBUTIONS TO SHAREHOLDERS.—The term 'distribution' means a distribution by a corporation to its shareholders, and the term 'distribution in stock' means a distribution by a corporation in its stock or rights to acquire its stock. To the extent that a distribution in stock is not considered a distribution of earnings and profits it shall not be considered a distribution. A distribution in stock shall not be regarded as money or property paid in for stock, or as paid-in surplus, or as a contribution to capital.

"(2) DISTRIBUTIONS IN FIRST SIXTY DAYS OF TAXABLE YEAR.—In the application of such subsections to any taxable year beginning after December 31, 1940, so much of the distributions (taken in the order of time) made during the first sixty days thereof as does not exceed the accumulated earnings and profits as of the beginning thereof (computed without regard to this paragraph) shall be considered to have been made on the last day of the preceding taxable year.

"(3) COMPUTATION OF EARNINGS AND PROFITS OF TAXABLE YEAR.—For the purposes of subsections (a) (3) (B) and (b) (2) in determining whether a distribution is out of the earnings and profits of any taxable year, such earnings and profits shall be computed as of the close of such taxable year without diminution by reason of any distribution made during such taxable year or by reason of the

tax under this subchapter for such year and the determination shall be made without regard to the amount of earnings and profits at the time the distribution was made.

"(4) STOCK IN CASE OF MERGER OR CONSOLIDATION.—If a corporation owns stock in another corporation, and—

"(A) such corporations are merged or consolidated in a statutory merger or consolidation, or

"(B) such corporations are parties to a transaction which results in the elimination of such stock in a manner similar to that resulting from a statutory merger or consolidation,

then such stock shall not be considered as property paid in for stock of or as paid-in surplus of, or as a contribution to capital of, the corporation resulting from the transaction referred to in subparagraph (A) or (B).

"(d) For special rules affecting computation of property paid in for stock in connection with certain exchanges and liquidations, see section 751 (a).

"(e) For determination of equity invested capital in special cases, see section 719.

"SEC. 717. ADMISSIBLE AND INADMISSIBLE ASSETS.

"(a) DEFINITIONS.—For the purposes of this subchapter—

"(1) The term 'inadmissible assets' means—

"(A) Stock in corporations except stock in a foreign personal-holding company, and except stock which is not a capital asset; and

"(B) Except as provided in subsection (d), obligations described in section 22 (b) (4) any part of the interest from which is excludible from gross income or allowable as a credit against net income.

"(2) The term 'admissible assets' means all assets other than inadmissible assets.

"(b) RATIO OF INADMISSIBLE TO TOTAL ASSETS.—The amount by which the average invested capital for any taxable year shall be reduced as provided in section 713 shall be an amount which is the same percentage of such average invested capital as the percentage which the total of the inadmissible assets is of the total of admissible and inadmissible assets. For such purposes, the amount attributable to each asset held at any time during such taxable year shall be determined by ascertaining the adjusted basis thereof (or, in the case of money, the amount thereof) for each day of such taxable year so held and adding such daily amounts. The determination of such daily amounts shall be made under regulations prescribed by the Commissioner with the approval of the Secretary. The adjusted basis shall be the adjusted basis for determining loss upon sale or exchange as determined under section 113.

"(c) COMPUTATION IF SHORT-TERM CAPITAL GAIN.—If during the taxable year there has been a short-term capital gain with respect to an inadmissible asset, then so much of the amount attributable to such inadmissible asset under subsection (b) as bears the same ratio thereto as such gain bears to the sum of such gain plus the dividends and interest on such asset for such year, shall, for the purpose of determining the ratio of inadmissible assets to the total of admissible and inadmissible assets, be added to the total of admissible assets and subtracted from the total of inadmissible assets.

"(d) TREATMENT OF GOVERNMENT OBLIGATIONS AS ADMISSIBLE ASSETS.—If the excess-profits credit for any taxable year is computed under section 714, the taxpayer may in its return for such year elect to increase its normal-tax net income for such taxable year by an amount equal to the amount of the interest on all obligations held during the taxable year which are described in section 22 (b) (4) any part of the interest from which is excludible from gross income or allowable as a credit against net income. In such case, for the purposes of this section, the term 'admissible assets' includes such obligations, and the term 'inadmissible assets' does not include such obligations.

"SEC. 721. ABNORMALITIES IN INCOME IN TAXABLE PERIOD.

"(a) DEFINITIONS.—For the purposes of this section—

"(1) ABNORMAL INCOME.—The term 'abnormal income' means income of any class includible in the gross income of the taxpayer for any taxable year under this subchapter if it is abnormal for the taxpayer to derive income of such class, or, if the taxpayer normally derives income of such class but the amount of such income of such class includible in the gross income of the

taxable year is in excess of 125 per centum of the average amount of the gross income of the same class for the four previous taxable years, or, if the taxpayer was not in existence for four previous taxable years, the taxable years during which the taxpayer was in existence.

"(2) SEPARATE CLASSES OF INCOME.—Each of the following subparagraphs shall be held to describe a separate class of income:

"(A) Income arising out of a claim, award, judgment, or decree, or interest on any of the foregoing; or

"(B) Income constituting an amount payable under a contract the performance of which required more than 12 months; or

"(C) Income resulting from exploration, discovery, prospecting, research, or development of tangible property, patents, formulae, or processes, or any combination of the foregoing, extending over a period of more than 12 months; or

"(D) Income includible in gross income for the taxable year rather than for a different taxable year by reason of a change in the taxpayer's accounting period or method of accounting; or

"(E) In the case of a lessor of real property, income included in gross income for the taxable year by reason of the termination of the lease; or

"(F) Income consisting of dividends on stock of foreign corporations, except foreign personal holding companies.

All the income which is classifiable in more than one of such subparagraphs shall be classified under the one which the taxpayer irrevocably elects. The classification of income of any class not described in subparagraphs (A) to (F), inclusive, shall be subject to regulations prescribed by the Commissioner with the approval of the Secretary.

"(3) NET ABNORMAL INCOME.—The term 'net abnormal income' means the amount of the abnormal income less, under regulations prescribed by the Commissioner with the approval of the Secretary, (A) 125 per centum of the average amount of the gross income of the same class determined under paragraph (1) and (B) an amount which bears the same ratio to the amount of any direct costs or expenses, deductible in determining the normal-tax net income of the taxable year, through the expenditure of which such abnormal income was in whole or in part derived as the excess of the amount of such abnormal income over 125 per centum of such average amount bears to the amount of such abnormal income.

"(b) AMOUNT ATTRIBUTABLE TO OTHER YEARS.—The amount of the net abnormal income that is attributable to any previous or future taxable year or years shall be determined under regulations prescribed by the Commissioner with the approval of the Secretary. In the case of amounts otherwise attributable to future taxable years, if the taxpayer either transfers substantially all its properties or distributes any property in complete liquidation, then there shall be attributable to the first taxable year in which such transfer or distribution occurs (or if such year is previous to the taxable year in which the abnormal income is includible in gross income, to such latter taxable year) all amounts so attributable to future taxable years not included in the gross income of a previous taxable year.

"(c) COMPUTATION OF TAX FOR CURRENT TAXABLE YEAR.—The tax under this subchapter for the taxable year, in which the whole of such abnormal income would be without regard to this section be includible, shall not exceed the sum of—

"(1) The tax under this subchapter for such taxable year computed without the inclusion in gross income of the portion of the net abnormal income which is attributable to any other taxable year, and

"(2) The aggregate of the increase in the tax under this subchapter which would have resulted for each previous taxable year to which any portion of such net abnormal income is attributable, computed as if an amount equal to such portion had been included in the gross income for such previous taxable year.

"(d) COMPUTATION OF TAX FOR FUTURE TAXABLE YEAR.—The amount of the net abnormal income attributable to any future taxable year shall, for the purposes of this subchapter, be included in the gross income for such taxable year. The tax under this subchapter for such future taxable year shall not exceed the sum of—

"(1) the tax under this subchapter for such future taxable year computed without the inclusion in excess profits net income of the portion of such net abnormal income which is attributable to such year, and

"(2) the decrease in the tax under this subchapter for the previous taxable year in which the whole of such abnormal income would without regard to this section be includible, which resulted by reason of the exclusion of the whole or a part of the abnormal income from the gross income for such previous taxable year; but the amount of such decrease shall be diminished by the aggregate of the increases in the tax under this subchapter which have resulted for the taxable years intervening between such previous taxable year and such future taxable year because of the inclusion in the gross income of the portions of such net abnormal income attributable to such intervening years.

"SEC. 719. EQUITY INVESTED CAPITAL IN SPECIAL CASES.

"Where the Commissioner determines that the equity invested capital as of the beginning of the taxpayer's first taxable year under this subchapter cannot be determined in accordance with section 716, the equity invested capital as of the beginning of such year shall be an amount equal to the sum of (a) the money plus (b) the aggregate of the adjusted basis of the assets of the taxpayer held by the taxpayer at such time, such sum being reduced by the indebtedness outstanding at such time. The amount of the money, assets, and indebtedness at such time shall be determined in accordance with rules and regulations prescribed by the Commissioner with the approval of the Secretary. In such case, the equity invested capital for each day after the beginning of the taxpayer's first taxable year under this subchapter shall be determined, in accordance with rules and regulations prescribed by the Commissioner with the approval of the Secretary, using as the basic figure the equity invested capital as so determined.

"SEC. 720. FOREIGN CORPORATIONS AND CORPORATIONS ENTITLED TO BENEFITS OF SECTION 251—INVESTED CAPITAL.

"Notwithstanding section 713, in the case of a foreign corporation engaged in trade or business within the United States or having an office or place of business therein, and in the case of a corporation entitled to the benefits of section 251, the invested capital for any taxable year shall be determined in accordance with rules and regulations prescribed by the Commissioner with the approval of the Secretary under which—

"(a) GENERAL RULE.—The daily invested capital for any day of the taxable year shall be the aggregate of the adjusted basis of each United States asset held by the taxpayer on the beginning of such day. In the application of section 717 in reduction of the average invested capital (determined on the basis of such daily invested capital), the terms 'admissible assets' and 'inadmissible assets' shall include only United States assets; or

"(b) EXCEPTION.—If the Commissioner determines that the United States assets of the taxpayer cannot satisfactorily be segregated from its other assets, the invested capital for the taxable year shall be an amount which is the same percentage of the aggregate of the adjusted basis of all assets held by the taxpayer as of the end of the last day of the taxable year which the net income for the taxable year from sources within the United States is of the total net income of the taxpayer for such year.

"(c) DEFINITION OF UNITED STATES ASSET.—As used in this subsection, the term 'United States asset' means an asset held by the taxpayer in the United States, determined in accordance with rules and regulations prescribed by the Commissioner with the approval of the Secretary.

"SEC. 721. PERSONAL SERVICE CORPORATIONS.

"(a) DEFINITION.—As used in this subchapter, the term 'personal service corporation' means a corporation whose income is to be ascribed primarily to the activities of shareholders who are regularly engaged in the active conduct of the affairs of the corporation and are the owners at all times during the taxable year of at least 70 per centum in value of each class of stock of the corporation, and in which capital is not a material income-producing factor; but does not include any foreign corporation, nor any corporation 50 per centum or more of whose gross income consists of gains, profits, or income derived from trading as a principal. For the purposes of this subsection, an individual shall be considered as owning, at any time, the stock owned at such time by his spouse or minor child or by any guardian or trustee representing them.

"(b) ELECTION AS TO TAXABILITY.—If a personal service corporation signifies, in its return under Chapter 1 for any taxable year, its desire not to be subject

to the tax imposed under this subchapter for such taxable year, it shall be exempt from such tax for such year, and the provisions of Supplement S of Chapter 1 shall apply to the shareholders in such corporation who were such shareholders on the last day of such taxable year of the corporation.

"SEC. 722. CORPORATIONS COMPLETING CONTRACTS UNDER MERCHANT MARINE ACT, 1936.

"(a) If the United States Maritime Commission certifies to the Commissioner that the taxpayer has completed within the taxable year any contracts or subcontracts which are subject to the provisions of section 505 (b) of the Merchant Marine Act of 1936, as mended, then the tax imposed by this subchapter for such taxable year shall be, in lieu of a tax computed under section 710, a tax computed under subsection (b) of this section, if, and only if, the tax computed under subsection (b) is less than the tax computed under section 710.

"(b) The tax computed under this subsection shall be the excess of—

"(1) A tentative tax computed under section 710 with the normal-tax net income increased by the amount of any payments made, or to be made, to the United States Maritime Commission with respect to such contracts or subcontracts, over

"(2) The amount of such payments.

"SEC. 723. EXEMPT CORPORATIONS.

"The following corporations shall be exempt from the tax imposed by this subchapter:

"(a) Corporations exempt under Section 101 from the tax imposed by Chapter 1.

"(b) Foreign personal-holding companies, as defined in section 331.

"(c) Mutual investment companies, as defined in section 361.

"(d) Investment companies which under the Investment Company Act of 1940 are registered as diversified companies at all times during the taxable year. For the purposes of this subsection, if a company is so registered before July 1, 1941, it shall be considered as so registered at all times prior to the date of such registration.

"(e) Personal-holding companies, as defined in section 501.

"(f) Foreign corporations not engaged in trade or business within the United States and not having an office or place of business therein.

"(g) Domestic corporations satisfying the following conditions:

"(1) If 95 per centum or more of the gross income of such domestic corporation for the three-year period immediately preceding the close of the taxable year (or for such part of such period during which the corporation was in existence) was derived from sources other than sources within the United States; and

"(2) If 50 per centum or more of its gross income for such period or such part thereof was derived from the active conduct of a trade or business.

"(h) Any corporation subject to the provisions of Title IV of the Civil Aeronautics Act of 1938, in the gross income of which for any taxable year beginning after December 31, 1939, there is includible compensation received from the United States for the transportation of mail by aircraft, if, after excluding from its gross income such compensation, its adjusted excess profits net income for such year is zero or less.

"SEC. 724. MEANING OF TERMS USED.

"The terms used in this subchapter shall have the same meaning as when used in Chapter 1.

"SEC. 725. LAWS APPLICABLE.

"(a) GENERAL RULE.—All provisions of law (including penalties) applicable in respect of the taxes imposed by Chapter 1, shall, insofar as not inconsistent with this subchapter, be applicable in respect of the tax imposed by this subchapter.

"(b) RETURNS.—Notwithstanding subsection (a), no return under section 52 (a) shall be required to be filed by any taxpayer under this subchapter for any taxable year for which its excess profits net income, computed with the adjustments provided in section 711 (a) (1) and placed on an annual basis as provided in section 711 (a) (2), is not greater than $5,000.

"(c) FOREIGN TAXES PAID.—In the application of section 131 for the purposes

of this subchapter the tax paid or accrued to any country shall be deemed to be the amount of such tax reduced by the amount of the credit allowed with respect to such tax against the tax imposed by Chapter 1.

"(d) LIMITATIONS ON AMOUNT OF FOREIGN TAX CREDIT.—The amount of the credit taken under this section shall be subject to each of the following limitations:

"(1) The amount of the credit in respect of the tax paid or accrued to any country shall not exceed the same proportion of the tax against which such credit is taken, which the taxpayer's excess profits net income from sources within such country bears to its entire excess profits net income for the same taxable year; and

"(2) The total amount of the credit shall not exceed the same proportion of the tax against which such credit is taken, which the taxpayer's excess profits net income from sources without the United States bears to its entire excess profits net income for the same taxable year."

SEC. 202. TAXABLE YEARS TO WHICH AMENDMENTS APPLICABLE.

The Amendments made by this title shall be applicable only with respect to taxable years beginning after December 31, 1940.

TITLE VII.—DISCONTINUANCE OF AMORTIZATION DEDUCTION

SEC. 701. DISCONTINUANCE OF AMORTIZATION DEDUCTION.

(a) Section 23 (t) and section 124 of the Internal Revenue Act, with respect to the allowance of amortization deduction, are hereby repealed.

(b) Subsection (a) shall be effective only with respect to taxable years beginning after December 31, 1940.

TITLE VIII.—RESTORATION OF PROFIT LIMITATIONS OF THE VINSON ACT AND CERTAIN PROVISIONS OF THE MERCHANT MARINE ACT, 1936

SEC. 801. RESTORATION OF PROFIT LIMITATIONS.

(a) Title IV of the Second Revenue Act of 1940, with respect to the "suspension of profit limitations of the Vinson Act and certain provisions of the Merchant Marine Act, 1936," is hereby repealed.

(b) Subsection (a) shall apply to contracts or subcontracts for the construction or manufacture of any complete naval vessel or any Army or Navy aircraft, or any portion thereof, which are entered into after the date of the enactment of this title.

(Thereupon, at 12:25 p. m., the hearing was recessed until 2 p. m.)

AFTERNOON SESSION

(Pursuant to the adjournment for the noon recess, the committee reconvened at 2 p. m.)

The CHAIRMAN. Mr. Vallee, you may proceed.

STATEMENT OF E. A. VALLEE, MILWAUKEE, WIS., PRESIDENT, REFRIGERATION EQUIPMENT MANUFACTURERS ASSOCIATION

Mr. VALLEE. My name is E. A. Vallee. I am vice president of the Automatic Products Co. of Milwaukee, Wis., and I am speaking as president of the Refrigeration Equipment Manufacturers Association. We represent about 56 manufacturers of refrigeration equipment as described in paragraph (b) of section 3405 of the bill, H. R. 5417. We also manufacture the majority of the parts, supplies, and controls used in the servicing and maintenance of existing refrigeration equipment. I have several of my associates with me who may be able to answer any questions that I may not be able to answer.

Our group is willing to share in the burden of the national defense program, but the purpose of this tax seems to include other factors than the raising of revenue.

Discrimination against mechanical commercial refrigeration.—It singles out mechanical refrigeration from all other kinds of commercial and industrial machinery such as is used by service stations—air compressors, gasoline pumps, automobile lifts, lubrication equipment, and so forth.

Apparently commercial refrigeration equipment is the only commercial or industrial equipment (excepting automobile trucks and laundry machinery) on which an excise tax is proposed.

No provision is made to tax ice refrigeration even though a good share of it is manufactured with mechanical equipment. Incidentally, this presents another inconsistency in the bill.

A butcher's walk-in cooler may be cooled either by ice or a mechanical unit. In either case the box is the same.

If mechanical refrigeration is used to cool the box the entire installation is subject to the full excise tax. If ice is used no tax is involved. The box itself may well represent two or three times the cost of the refrigerating unit.

Isn't this discrimination of a nature never intended by the committee, and a hardship to the user who does not have ice available?

The bulk of ice used today is manufactured ice. This calls for mechanical refrigerating equipment using parts manufactured by our group. True the ice manufacturer will pay the excise tax on his original equipment which he uses every day in making ice which is, so far, tax free.

This places the ice manufacturer in those sections where natural ice can be cut at a disadvantage in addition to placing the members of our group in a noncompetitive position.

Commercial refrigeration is not a luxury product.—If commercial refrigeration equipment has been included in this bill on the premise that it is in the luxury group of consumer goods requiring sales curbs as an inflation control, we doubt if the proposed application of the tax to our products will accomplish that purpose.

A tax on commercial refrigeration is a tax on food.—A tax on the butcher's walk-in box, the grocer's storage refrigerator for milk, butter, and other perishables, the ice-cream dispenser's cabinet, etc., will logically lead to higher consumer prices on the products dispensed from such equipment.

If the intent of the bill is directed toward air-conditioning equipment as a luxury item, we respectfully refer to the statement of John W. Hart, beginning with page 206 of your hearings on this bill, which shows a total value for air-conditioning items in the bill of approximately 5 percent of the total refrigeration equipment proposed for taxation.

Surely an entire industry should not be asked to carry an excise-tax burden on the strength of a desire to penalize so small a portion of it which may be regarded as nonessential.

If and when you have heard from the manufacturers of air-conditioning machinery, we venture that you will conclude that air-conditioning itself seems a far more vital function than mere comfort cooling.

Danger of possible pyramiding of this tax.—From the present wording of the bill, it is not clear to us whether this tax on components of refrigerating equipment can be administered without pyramiding the tax as our products move through resale channels. We do not feel that it is the intention to have the act work that way so hope that your committee will see to it that this point is clarified.

If it is deemed necessary to raise extra revenue through an excise tax on food-handling equipment, then we believe that a similar tax should be imposed on all other types of mechanical equipment as previously mentioned.

Instead of an excise tax on products of this nature we feel that a sales tax imposed on the finished product or installation in which components are involved would be eminently more equitable and more economical to administer.

Therefore, it is our recommendation that the proposed excise tax on components manufactured by our group be eliminated, and that, if it is regarded as necessary to raise a specified quota from the mechanical-refrigeration industry that the proposed percentage on the finished units be increased slightly to meet the quota.

Senator LA FOLLETTE. Have you any views as to whether this tax might be pyramided if it stays in the bill?

Mr. VALLEE. We think as it is written it might.

Senator LA FOLLETTE. What leads you to that conclusion?

Mr. VALLEE. In our group we make, for example, belts, controls, coils, and if the taxes apply on each item and then on the finished product it might pyramid three or four times. Do I make that clear?

Senator LA FOLLETTE. Yes, sir.

Is there anything else?

Mr. VALLEE. That is all I have.

The CHAIRMAN. Thank you very much, Mr. Vallee.

Mr. Brown, do you have any questions?

Senator BROWN. No, Mr. Chairman.

The CHAIRMAN. Mr. FitzGerald.

STATEMENT OF CHARLES D. WOODRUFF, CHICAGO, ILL., NATIONAL RESTAURANT ASSOCIATION

Mr. WOODRUFF. I am appearing in place of Mr. FitzGerald. I am Charles D. Woodruff, general attorney for the National Restaurant Association.

The CHAIRMAN. Your address is in Washington?

Mr. WOODRUFF. In Chicago.

The National Restaurant Association is the one trade group, national trade group representing restaurants, and comprises in membership the operators of some 10,000 restaurants throughout the country of all kinds and types. Generally speaking, our members are the operators of the leading and larger restaurants. Nevertheless, we feel that we are representative of the industry and fairly well qualified to speak on behalf of the more than 600,000 employees and the more than 170,000 actively engaged proprietors.

It is not our purpose to complain about the new and higher taxes, nor is it our purpose to object to bearing our fair share or even a little more than our share of the tax burden. We recognize the need

for the revenue which the pending proposal is designed to raise, even the need for more than it is expected to bring in. We have sought this hearing in order to bring to your attention what seems to us to be inequalities in the proposed measure and to point out some ways in which we feel it would not operate as it appears it was intended it should.

Our objections are directed particularly to the various excise taxes. The restaurant industry has many peculiarities, and because of that fact it is affected by an unusually large number of these excise taxes which would be imposed. Of them, we would mention the taxes on refrigerators and air-conditioning equipment, matches, soft drinks, electrical appliances, electric signs, business and store machines, rubber articles, washing machines, jewelry, coin-operated gaming and amusement devices, cigarettes, liquors, wines and beer, electrical energy, admissions and radios, phonographs and records, all of these being things which are being used widely in restaurants. We wish to mention certain of them in particular.

The preceding speaker mentioned the 10-percent tax on refrigerators and air-conditioning equipment. There presently is a manufacturers' excise tax of 5½ percent on refrigerators of the household type. The proposed revenue act would impose a tax of 10 percent on all refrigerators, parts, and so on, and upon air conditioners and components. We understand that in early drafts of this measure the tax was simply increased to 10 percent. It was left applying only to household refrigerators. Then, because of the extent of the commercial uses of refrigerators and air conditioners, and the importance of air conditioning in its commercial uses to public comfort, welfare, health, and efficiency and of refrigeration in the storing and processing of food and so to the public health, we urge the removal of this tax on refrigerators and air conditioners. At least insofar as the tax has been made to apply to the commercial uses of such equipment.

Another tax which we will point to particularly is the proposed excise tax of 10 percent on electrical appliances as provided in section 3406 of the proposed measure.

Listed in the section are flatirons, heaters, heating pads, blankets, household-type vacuum cleaners, and so on. From this list we have been led to feel that these taxes were intended to reach electrical appliances intended for home use, but when they reach the many uses which we have for electrical appliances they discriminate against our business and add to the already large burden of taxes which we have. When these electrical appliances are used in restaurants they are in no sense luxuries, they are essential to the proper conduct of the business, the proper preparation of food.

Much the same thing can be said with regard to the new chapter 19 imposing a new retailers' excise tax on jewelry, and so forth, on furs and on toilet preparations, and so on. Buried in the list of items taxed is silver-plated ware. Very obviously this section was intended to reach luxury items. Yet the tax imposed on silverware is a tax on an item which is used in large quantities in restaurants and for which there seems to be no satisfactory substitute. Silverware is an item of which large purchases are continually necessary

because of wearing out and damage, and because of the quantities of silver which are taken away from restaurants by customers.

Finally, among the taxes we mentioned specifically, we join with the American Hotel Association in protesting the change in the tax on cabarets which imposes the tax on the owner of the cabaret instead of upon the customer as heretofore. This change simply makes it more difficult for the cabaret operator to pass the tax on, and in effect imposes a 5 percent gross receipts tax on food, beverages, and other merchandise sold, when the tax supposedly is one on persons who seek admission to places where entertainment is provided. That is true at a time when cabaret owners are having difficulty enough in raising their prices to take care of advancing costs of food and labor. All of the other admission taxes are specifically applicable to the person paying the admission, and, in fact, are required to be set forth on the ticket purchased. No other admission tax is imposed in this manner. We think it is apparent that restaurants of necessity must spend large sums for electric signs, business and store machines, rubber articles, matches, washing machines, electrical energy, radios, phonographs, records, and that many of them will be seriously affected by the increased taxes on cigarettes, liquors, wines, beer, and soft drinks, not to mention the effect which many of the new and increased taxes will have upon restaurants.

Thus we plead with you for your particular consideration of the tax on mechanical refrigeration and air conditioning, on electrical appliances, on silver-plated ware, and the new admissions tax, the cabaret tax, because we feel that the first three were not intended to apply to commercial uses, and that they single us out unduly, because we feel that the burden of taxes already being imposed on the industry is too great.

The restaurant industry at the present time is suffering very grave problems as the result of the national-defense efforts, food costs, and wage costs which have increased and are increasing very rapidly, as is true of the cost of equipment used in restaurants. For several months now the industry has been confronted with an acute shortage of workers. There probably is no restaurant employment office in the country—and I note specifically the office here in Washington and one in Chicago—which is able to supply the demands upon it for workers. Everywhere restaurants are being forced to operate short of help and with a terrific turn-over.

I have mentioned that the burden of taxes on restaurants is heavy. State taxes alone have increased more than 10 times in the space of 6 or 7 years, an increase of over twice as much as has taken place in other retail lines.

The restaurant industry leads all retail business in the percentage of sales income which is devoted to taxes. This is true because it is partly a manufacturing industry or processing industry and partly a selling industry. So that taxes come from both sides.

The mortality rate of restaurants is ordinarily very high. One Government study showed that 50 percent of all restaurants go out of business or change hands every year. That is the highest rate of any retail business, and probably of any business. Many new problems that are confronting them, including increased costs which this proposed tax measure will place upon them, will presumably make for an even higher mortality rate.

We feel, therefore, that no unequal or unfair tax burden should be imposed upon the restaurant industry, such as those we have pointed out. We think this being a time when everyone is becoming more and more concerned about unemployment in nondefense industries, it is a time when the interests of an industry such as the restaurant industry should be considered.

Therefore, in the interests of probably in excess of a million people that depend upon the restaurant industry for their livelihood, and in the interest of public health, we respectfully ask your consideration of these taxes. We beg that this committee make as many changes in the pending revenue measure as it can which will ease the burden on the restaurant industry of the taxes to be imposed.

The CHAIRMAN. Thank you very much. Are there any questions of this witness?

(No response.)

(The following supplemental statement was submitted for the record:)

SUPPLEMENTAL STATEMENT OF NATIONAL RESTAURANT ASSOCIATION ON REVENUE ACT OF 1941

To Committee on Finance, United States Senate:

In supplementing the statement made on behalf of the National Restaurant Association on August 19, 1941, we wish particularly to stress the effect which certain of the proposed excise taxes would have on the price of food to the general public. This effect we regard, and believe you will, as most important at a time when inflation threatens and when adequate food at lowest possible prices is desired in the interests of the general welfare and national defense.

The 10-percent manufacturers excise tax, which would be imposed by section 546 of H. R. 5417 on refrigerating apparatus and air conditioners and components, is in effect a tax on the storage and processing of food. Witnesses appearing on behalf of manufacturers and jobbers stated that the present wording of this section would work a compounding of the tax in many instances. Whether or not the language of the section does so, there would, as a practical matter be a compounding of the tax. Whatever the language of the section, the tax would be compounded many times, when applied to commercial refrigerators. This would be true because most food products before reaching the table for consumption have, in the course of transportation and processing, undergone refrigeration not once but many times. At each resting point and processing step between the field or the slaughteringhouse this proposed tax would again and again be added into the cost of the ultimate food product.

We submit that no such tax as that on refrigeration and air conditioning, singling out an item so essential to the feeding of the Nation, should be imposed at this time, be its effect on the price of food little or great. It appears that this tax would have a substantial effect on food prices.

The importance of food to national defense was emphasized when President Roosevelt called the national Conference on Nutrition for Defense. Proper food is an essential for defense workers and nondefense workers. At the same time milk for babies is indispensable, children must be adequately fed with food which has been properly preserved by refrigeration. Specifically, food such as meat, dairy products, vegetables, and some fruits must be refrigerated. The increased cost of food, which would result from the imposition of this tax on refrigeration and air conditioning, would fall most heavily on those in the lower income brackets with their large families.

Thus far we have spoken only of the one proposed tax which would effect food prices generally, but we believe the numerous other taxes which will effect prices of food in restaurants also merit the committee's consideration. The figure of 7,000,000,000 meals per year served in restaurants, cited in our original statement was based on the census figures for 170,000 "eating places" in the country, did not take into consideration the many meals served in the 136,217 places classified as "drinking places," although many of these are, in fact, restaurants with

liquor service, nor did it take into consideration the lunches served by the 33,257 drug stores having soda fountains. What menu prices are to be in all of these establishments serving meals or lunches is certainly of great importance. Taking all of them into consideration, the total number of meals served must certainly exceed 10,000,000,000 per year. In this connection it is to be remembered that a very large portion of these meals are served to working people, who eat all or a large part of their meals away from home. In turn, a large portion of these working people are engaged in defense production.

These many people who rely on restaurants to such a large extent will be faced with higher menu prices as food prices go up and operating costs increase. Restaurant operators have no choice in the matter. The tax on refrigeration and air conditioning will mean higher food costs to them. This tax and the other excise taxes on equipment used in restaurants will make for higher operating costs. Painful and disruptive as the raising of menu prices is, it will have to be done in order to stay in business.

We would add that these representations are made on behalf of an industry which is doing all it can in the interest of the health and general welfare of our people and for national defense. As recently as 2 weeks ago the Office of Price Administration and Civilian Supply called on the industry through the National Restaurant Association to see that adequate, inexpensive eating facilities for defense workers are provided in the vicinity of defense housing projects now being built. In addition to cooperating in this phase of national defense, the restaurant industry has been acting in an advisory capacity to the Army and Navy at Army camps and naval bases, has actually trained a large number of Navy cooks in private restaurants, has completed a first draft of a revised cook book for the Navy, is working with the Health and Welfare Division of the Federal Security Agency in carrying out the program launched at the National Conference on Nutrition for Defense, and is about to begin cooperation with the Treasury Department in the sale of defense savings stamps.

Thus, speaking on behalf of an exceedingly defense-conscious and active industry, we ask in the interest of good health through good food at minimum prices and national defense, for your reconsideration particularly of the tax imposed on refrigeration and air conditioning, but also of the other proposed excise taxes.

The CHAIRMAN. Mr. William B. Henderson, from Washington, D. C.

STATEMENT OF WILLIAM B. HENDERSON, WASHINGTON, D. C., EXECUTIVE VICE PRESIDENT, AIR CONDITIONING AND REFRIGERATING MACHINERY ASSOCIATION, INC.

The CHAIRMAN. Mr. Henderson, you are appearing on behalf of the Air Conditioning and Refrigerating Machinery Association?

Mr. HENDERSON. Yes, sir.

The CHAIRMAN. All right; you may proceed.

Mr. HENDERSON. The revenue bill of 1941, as passed by the House of Representatives, contains a substantial inequity and an obviously unfair discrimination against the users and manufacturers of refrigerating and air-conditioning machinery by proposing a 10-percent excise tax on the sale of all refrigerating and air conditioning machinery. The machinery of which I am speaking is typified by those pictures, Mr. Chairman [indicating]—and I would draw your attention particularly to them because there is so much misunderstanding, of refrigeration as applied to the household box, with which you are so familiar, and the commercial type of refrigerating machinery so largely used in restaurants and similar places, and heavy industrial types of refrigerating machinery such as are used in packing plants, terminal storage warehouses, fruit-packing plants, ice-making plants, and so forth.

As the members of the Finance Committee undoubtedly are aware, few items of mechanical equipment are as essential to the national

welfare and to the national economy as the refrigerating machinery used for commercial and industrial purposes. Controlled temperatures and humidity are required for the processing of hundreds of products in common daily use. To illustrate: Controlled temperatures and humidity are essential to the output of many chemical products; of most drugs, medicines, serums, and vaccines; of explosives; of petroleum products (particularly high octane aviation gasoline); of synthetic products such as nylon, rayon, and neoprene; or precisions instruments, range finders, bombsights, airplane instruments, optical goods, and many other products.

Important though refrigerating and air-conditioning machinery is to American industry, refrigeration is of indispensable importance in maintaining and protecting the health of the civilian population and the armed forces of the United States.

Without refrigeration, very little meat could be moved from the farm to the consumer. Each year more than 80,000,000 animals go from the farmers' pasture land to 1,500 meat-packing centers with their huge installations of refrigerating machinery. From those packing houses, refrigerated railroad cars and motor-trucks take the meat to over 200,000 meat stores and the thousands of cold-storage warehouses and locker-storage plants throughout the country. Each step of the way, from the farm to the consumer's table, the 17,000,000,000 pounds of meat consumed annually in the United States are protected by the operation of industrial and commercial refrigerating machinery.

Milk is the largest single source of cash income on 5,000,000 United States farms. Annually, 25,000,000 cows produce some 50,000,000,000 quarts of milk. The milk goes from the farm to 13,000 dairies, 6,700 ice-cream plants, and 11,000 manufacturers of other dairy products to be processed for the ultimate consumer. Each day 45,000,000 quarts of fluid milk alone are used in homes, restaurants, hotels, and schools Without refrigeration, the modern dairy industry could not exist.

Millions of tons of fresh fruits and vegetables move each year from farms and plantations to cities and towns throughout the Nation. It is commonplace for highly perishable fruits and vegetables to be moved thousands of miles from the point of origin to the markets where the housewife buys them in practically as fresh and nutritious a condition as the day they were picked. This miracle of distribution would be impossible without commercial and industrial refrigeration.

In the revenue bill of 1941, as passed by the House of Representatives, it is proposed to levy a 10-percent excise tax on all types of refrigerating and air-conditioning machinery, whether used in the home, in the meat-packing plant, in the dairy, or in the munitions factory. Refrigerating and air-conditioning machinery is the only type of industrial machinery singled out for taxation in H. R. 5417. Refrigerating and air-conditioning machinery for commercial and industrial purposes is the only industrial machinery on which it is proposed to level an excise tax in the House bill, and with only two exceptions it is the only commercial machinery on which it is proposed to levy an excise tax.

Senator DANAHER. You might include business machines.

Mr. HENDERSON. When I was speaking of the commercial machinery, Senator, it was of the automotive-truck type of equipment. I think of business machinery as appliances rather than machinery.

Senator BROWN. Well, we have been taxing automobiles, and things of that kind.

Mr. HENDERSON. Yes, it is proposed to tax a commercial truck. I say that that and commercial laundry machinery are the only types in addition to commercial refrigerating machinery on which it is proposed to levy a tax.

Now, the manufacturers of refrigerating and air-conditioning machinery cannot understand why their equipment, which is so indispensable, so vital to the national welfare and public health, should be singled out for this tax when there are hundreds of other types of machinery which are not so fundamentally essential to our national welfare which are not proposed to be taxed.

Senator BROWN. Did you include photographic apparatus also? That is taxed.

Mr. HENDERSON. No; I did not, Senator.

Again, that is more an appliance than a machinery item. My thought may be wrong.

Senator BROWN. Optical equipment is also taxed.

Mr. HENDERSON. Yes.

Senator LA FOLLETTE. Mr. Henderson, does the refrigerating industry use any more so-called strategic defense materials than any other machinery-manufacturing industry?

Mr. HENDERSON. We use a great deal, Senator La Follette. We do not use more than the general run of machinery industry.

Senator LA FOLLETTE. The only explanation I have heard anybody give—I am not sure it is an explanation—for singling out some of these things for taxing was that they interfere with the defense program. I cannot see how this particular industry has any more materials for defense, unless you know of some reason, than some other industry turning out machinery which is not taxed.

Mr. HENDERSON. That is perfectly right, Senator La Follette.

Senator LA FOLLETTE. You do not have to have any special kind of metals, do you?

Mr. HENDERSON. No; not any more than the general run of machinery, I would say.

Senator LA FOLLETTE. That is what I am driving at.

Mr. HENDERSON. Yes; that is what we cannot understand, Senator, why we should be singled out over all these other types of machinery to bear this tax.

Senator LA FOLLETTE. Maybe somebody used a method of taking a number from 1 to 10.

Mr. HENDERSON. It may be; yes. I might say a great deal of our production now, better than 40 percent, is going into defense. By that I mean the Army and Navy, the merchant marine, the munitions factories, and other direct and indirect defense users are the heaviest customers today.

Senator BARKLEY. Is it not a fact, too, that such metal as you do use in the commercial refrigerating plant is only a small percentage of the total used by refrigerating plants generally? I am including the household box.

Mr. HENDERSON. We would almost have to take a specific metal, Senator, to answer that exactly, because some manufacturers use a particular metal in their machine which another might not use. For example, one might use an aluminum-alloy piston and another a cast-iron piston.

Our industry is not objecting to this tax per se, because we are willing to pay our fair share. We do realize there are tremendous expenditures which have to be met in the defense program and that it does call for heavier taxation. We are willing to bear our fair share. We do think the gentlemen of the committee will agree that the singling out of this one industry above all others is manifestly unfair. We do ask that the 10-percent excise tax on the sale of commercial and industrial refrigerating and air-conditioning machinery be eliminated from the revenue bill of 1941.

I would be glad, Mr. Chairman, to answer any questions which the members of the committee might have.

The CHAIRMAN. Are there any questions?

Senator LA FOLLETTE. There is one other thing I would like to ask you. There is a tax here on household refrigerators, is there not?

Mr. HENDERSON. I believe there is, Senator; yes; in the revenue bill. That is something which I have not brought up particularly. My interest is in the commercial and industrial types of refrigerating machinery.

Senator LA FOLLETTE. You make the machinery with which the ice manufacturers will have to make the ice, do you not?

Mr. HENDERSON. That is true; yes.

The CHAIRMAN. Very well, Mr. Henderson. Thank you very much.

Senator BROWN. I was to ask him one question.

The CHAIRMAN. All right, Senator.

Senator BROWN. When you sell machinery under this present 5½-percent tax, the household-equipment tax under the old revenue law, you add that to the price, don't you, just as the automobile manufacturer adds it to the price of the automobile?

Mr. HENDERSON. It will be added, I should imagine.

Senator BROWN. I mean, you have been doing it in the past.

Mr. HENDERSON. I could not say, because the manufacturers which I represent do not make the domestic type of refrigerating machinery; it is more the heavier type.

Senator BROWN. You are not complaining about paying the tax because the consumers are going to pay the tax. You do feel it is going to diminish your business by making the equipment which you sell more expensive?

Mr. HENDERSON. It is not that, Senator Brown; no. It will be the farmers, the industrial people, and people like the gentlemen from the resaurant association, who has just spoken to you, who are going to be unfairly hit, whereas the users of the hundreds of other types of machinery are not going to be taxed.

Senator BROWN. That is discrimination; is it not?

Mr. HENDERSON. That is discrimination, sir.

Senator BROWN. But the consumers generally are going to pay the tax. You are not going to pay.

Mr. HENDERSON. That is right.

Senator TAFT. It really increases the cost of distribution of all the food products.

Mr. HENDERSON. That is right, Senator; yes.

The CHAIRMAN. Very well, Mr. Henderson, thank you.

Mr. Holcombe.

STATEMENT OF A. H. HOLCOMBE, JR., PHILADELPHIA, PA., REPRESENTING NATIONAL REFRIGERATION SUPPLY JOBBERS ASSOCIATION

The CHAIRMAN. Mr. Holcombe, you are appearing in the place of Mr. Borden?

Mr. HOLCOMBE. Yes, sir.

The CHAIRMAN. All right, sir.

Will you state to the stenographer there, your name and address and for whom you appear?

Mr. HOLCOMBE. My name is A. H. Holcombe, Jr. I am the proprietor of Victor Sales & Supply Co., and vice president of the National Refrigeration Supply Jobbers Association. We are interested in a change in section 3405 of the proposed Internal Revenue Code amendment.

Our position in the mechanical-refrigeration and air-conditioning industry is that we are a group of independent, privately owned wholesalers who carry the stocks of equipment and supplies needed to service the refrigeration requirements of the country. We buy from the independent manufacturers and sell to the local refrigeration mechanics who do the actual service and repair work. There are approximately 250 such independent wholesalers distributed as needed throughout the entire country. This group has developed from scratch within the last 5 years, and become useful, self-sustaining, small business organizations in their communities.

Because of the distribution structure of our industry some companies will be favored and others penalized. By this I mean that those who both manufacture and merchandise direct to the consumer will pay the tax but once. The manufacturers' sales through independent wholesalers will be taxed 2 and 3 times. The above-mentioned 250 independent wholesalers represent the lifeblood of the industry as they form the bulk of the distribution channels.

As has been mentioned in previous briefs this tax is inflationary in trend as affecting food costs. Mechanical refrigeration only is being taxed and not its competitor, ice refrigeration.

The cost of mechanical refrigeration equipment in many cases is approximately 50-percent material and 50-percent labor of installation and service.

Mechanical refrigeration is essential in modern industry. Many of the common articles used in our daily life depend on it for mass production at low prices. Soap, movie film, medical supplies, chemicals, all of these and many others would be affected by increased costs. None of these items could be considered luxuries as could comfort cooling of offices and stores. Even this has been proved medically helpful as well as an aid to efficiency.

Mechanical refrigeration equipment as now scheduled will not compete with the national-defense program, but will supplement it.

Our industry is already feeling the impact of the defense program seriously and will need all of its resources in order to keep existing food preservation equipment in operation.

We favor a general manufacturers' sales tax to be collected at the source on all commodities, exempting certain foods. This will spread the effect evenly throughout all industry and bring in a more substantial revenue compared with the relatively small amount expected from this section of this bill.

Senator BROWN. I want to interrupt a moment. You say you fear this tax is going to be pyramided. The manufacturer will pay the taxes, then the wholesaler will also pay the taxes.

Mr. HOLCOMBE. Yes, sir.

Senator BROWN. That is not true in regard to paying the automobile tax. It is just paid once. This section 3406 says:

> There shall be imposed on the following articles, sold by the manufacturer, producer, or importer, a tax equivalent to the rate on the price for which sold, set forth in the following paragraphs.

Then, it includes sporting goods, luggage, and the electrical appliances that you are talking about. I do not think there is any double taxation there.

Mr. HOLCOMBE. We are thinking of the component parts that go to make up the servicing of this refrigeration equipment rather than the equipment itself. There would only be one tax on the complete unit, refrigerating unit, such as we had a picture of here a few minutes ago.

Senator BROWN. It seems to me that could pretty well be covered by regulation. I do not think it is the intent of this committee to pyramid that tax. I think it should be paid once and for all. I am glad you brought it up, because it ought to be clarified. It seems to me as it is now it is only one tax.

The CHAIRMAN. Is there something else you wish to put in?

Mr. HOLCOMBE. The previous speaker was asked about the amount of metal that had to do with national defense. We would like to enter into the record here some figures which have been collected showing the amount of the common metals that are used as compared to the amount of the same metals that are required for one battleship. Could we enter that into the record?

The CHAIRMAN. You mean that whole paper?

Mr. HOLCOMBE. Just this sheet, which illustrates the facts that are on there, not the diagrams.

Senator TAFT. I suggest he make a summary statement and put it in the record.

The CHAIRMAN. You may do that, if you wish to. You simply want to show the quantity of material used, do you not?

Mr. HOLCOMBE. That is right. The question came up about steel, for instance. The steel that is required by the commercial refrigerating machine manufacturers is the steel required for one-fifth of a battleship.

Senator BROWN. You mean that is all the steel that is used in one year?

Mr. HOLCOMBE. That is right. We will make such a table.

The CHAIRMAN. Yes.

Mr. HOLCOMBE. Thank you, sir.

(The table referred to by Mr. Holcombe is as follows:)

There were 361,000 commercial refrigerating machines sold in 1940. To make these requires:

28 tons of tin=that required in 7/10 of a battleship=3/10000 United States consumption.

153 tons of zinc=that required in 3/10 of a battleship=1/5000 United States consumption.

187 tons of aluminum=that required in 2/5 of a battleship=9/10000 United States consumption.

232 tons of rubber=that required in 2 9/10 battleships=2/5000 United States consumption.

1,072 tons of copper=that required in 1 battleship=1/1000 United States consumption.

5,729 tons of steel=that required in ⅕ of a battleship=1/5000 United States consumption.

The CHAIRMAN. Mr. Donald Callahan.

STATEMENT OF DONALD A. CALLAHAN, WALLACE, IDAHO, REPRESENTING THE IDAHO MINING ASSOCIATION

Mr. CALLAHAN. My name is Donald A. Callahan. I live at Wallace, Idaho, and I am representing here the Idaho Mining Association.

This association comprises several hundred mining operators in the State of Idaho, those who have producing mines and those who are still engaged in the ceaseless search for metals of commercial value.

Idaho is a State producing many metals—lead, zinc, copper among the base metals, and silver and gold among those of a more precious character. In addition to this, there is a great variety of what are known as strategic and critical minerals to be found in the forbidding mountains of the State.

I have read, or rather tried to read, section 204 of the House bill. It has to do with deduction of excess-profits tax and apparently reverses the procedure in the present law. As I read it, if this bill becomes law, the taxpayer must first deduct the excess-profits tax in computing net income. So, we find this confusing situation, as I see it. I cannot determine my excess-profits tax until I have determined my net income which tells me how much I have made that is subject to excess-profits tax. And I cannot determine my net income until I have deducted the excess-profits tax which cannot be determined until I have determined the net income which determines whether I have made any profits which are subject to the excess-profits tax. Can you imagine the bookkeeper of one of our isolated mining companies trying to make sense out of this section?

It reminds me of a statute passed by the legislature of one of our Western States a few years ago. The statute was a safety measure intending to do away with accidents where two railroads crossed one another. The provision was simple and highly effective. Upon the approach to the intersection of trains on each track, neither was to proceed until the other had passed.

In considering the bill which is before you, I am going to take a text. It is a quotation from Montesquieu's Spirit of the Laws, that

eighteenth century treatise on government which had such a tremendous influence upon the men who founded this Republic. I am going to quote an entire chapter of that book, chapter 13, which is subtitled "An Idea of Despotic Power." This is the shortest chapter in the book, consisting of but a few lines, but they are full of meaning. Here they are:

> When the savages of Louisiana are desirous of fruit, they cut the tree to the root, and gather the fruit. This is an emblem of despotic government.

I have chosen this text because I believe sincerely that the bill before you does that very thing. The object of the bill, of course, is revenue, and the framers of the bill have set themselves a goal, a very definite goal. They are seeking to gather for the use of the Government a large share of the fruits of the labor, the sacrifices, the genius and the perseverance of those who are engaged in business throughout this Nation. Our industry is willing to give its share of these fruits. It hopes, however, that in order to gather this fruit, they do not lay the ax to the roots of business itself.

In his statement before your committee the Assistant Secretary of the Treasury, Mr. Sullivan, set forth that of the total amount to be realized under the bill, 26.7 percent will be derived from increases in individual income taxes, 41.6 percent from increases in corporation taxes, 4.7 percent from increases in estate and gift taxes, and 27 percent from new excise and increases in existing excises. We can add together the percentage from increases in corporation taxes and that from excise taxes, and put down as the direct increase in taxes upon business under this bill 68.6 percent of the total amount to be realized under the bill. This is essentially a bill to tax business. While the excise taxes in many instances will be passed on to the ultimate consumers, the first impact is upon business, and business must adjust itself to it.

The Secretary of the Treasury is right when he says that people are willing to pay increased taxes to meet the cost of this defense program. I know that this is true among the people whom I represent. I am here not to protest against the amount of the revenue to be derived under this bill; I am here rather to call your attention to certain inescapable facts as to the effect of the method provided in this bill for levying these taxes upon the business which I represent. I am here to call your attention to the inequitable effects of the provisions of this bill as they are applied to the mining industry. I am here to tell you that the effect of this bill will be to seriously hamper and cripple an industry which is essential to defense and to the continued material welfare of the people of this Nation.

I do not set myself up as that superman who can truthfully say that he understands all the provisions of this bill. I most humbly take my hat off and bow before the genius who can put together words and figures in the manner in which they are combined in this piece of legislation. The men who framed this bill are not only clever, but they had a singleness of purpose, an objective, and that objective was to raise money for the support of Government, and particularly to pay a part of the cost of defending the institutions

of America. Within the spacious rooms of our beautiful Government buildings it was easy to sit down, far removed from the worry, the toil and sweat of producing those things so necessary to defense and common welfare, and exert their genius only upon the object of getting money into the public treasury. Now that they have finished their work, those of us who have tried to reach a conclusion as to the effect of such a bill, if it becomes law, come to you, the representatives not only of the Government but of the people and the business of the Nation, and ask you to give very careful consideration to certain interpretations which we give as to the effects of this legislation. We know the disadvantage under which we labor, but we also have firm faith and confidence in your desire to prevent the swivel-chair experts of the Government from seriously crippling the business of the Nation. We know that you do not want to have these expert marksmen kill the geese that lay the golden eggs of revenue. The Government is going to need revenue even after the emergency has passed.

Now, getting down to the particular business which I represent, the mining business. It differs, perhaps, from any other business in the Nation. First of all, it is an extractive industry, dealing with natural resources. It does not create the basic values of the mines. A wise Providence put the real values into the metals which we extract from the ground. Patient, toiling men found them in the most forbidding places. Trained engineers and geologists gave of their talents to extracting these metals from the earth. Brilliant, hard-working, patient metallurgists tested and tried until they found the best means of recovery of these metals in order that they might be placed in commerce.

In this age and under the conditions of modern warfare there is no industry so essential to our future safety and happiness as the mining industry. Every nation in the world is seeking the sources of metals with which to shape their engines of destruction. Our own Government has appropriated large sums of money to search for certain metals within our own domain, and to acquire stock piles of critical and strategic metals from abroad. We must not, through a measure such as this, destroy one single incentive to search for, to extract, to benefit, and to utilize the precious stores of metals with which this country of ours has been blessed. If we are to continue to be the arsenal of the democracies, our basic supplies of these metals must not be curtailed. We must have increased production.

A steady production of base metals depends upon exploration and development of additional ore bodies. This requires an unremitting program entailing the expenditure of vast sums of money which may never be returned, and an unceasing and expensive search for metallurgical processes which will make low-grade ore deposits commercially profitable. Accordingly, any tax bill which does not recognize the necessity for putting back into exploration and research a certain proportion of the amount realized from the extraction of ores is absolutely destructive.

Why is this policy so essential? It is because mining is a devastating industry. The nature of mine property differs from other forms of fixed property in that the mine property itself is reasonably consumed

in providing what we are accustomed to call operating profit. A mine is not a permanent property whereof the fruit only provides profit; on the contrary, in the mine the capital itself is necessarily consumed for the purpose of profit. No matter how extensive an ore body, it has its limits. Not man but nature formed the metals which are used in commerce. It has been given only to man to find the minerals in which these metals are contained, bring them to the surface of the earth, and extract the metal content from them. In this process the miner is necessarily using up his capital, that is, the units of metal which go to make it up. He cannot re-create them. It may be that there are more units of metal in the property than he anticipated. It may be that there are less. In either event they are limited. One day they will all be extracted and used up if his production program continues. A tax bill seeking not only revenue but to promote the effectiveness of a defense program must recognize this fact. This tax bill does not recognize this fact. It recognizes no difference between the business of mining and that of any other industry.

The mining industry is in a unique position. In the first place it is cooperating patriotically in the policy of the Government to maintain a ceiling on metal prices, thereby preventing a runaway market, and making it possible for the Government to secure its necessary metal supplies at a price which is practically the average price for base metals over a period of 40 years. There is no profiteering in the metal industry.

At the same time the Government is urging an increased production. There is a department in the Office of Production Management which has to do with the accumulation of strategic and critical metals and which is using every means within its power to bring about increased production from existing mines, and to encourage development and exploration of new ore bodies. So critical has the metal situation become that we find the Government contracting for the importation of large supplies of metals to be allocated to the various defense industries. We also find a very determined effort being made to suspend tariffs on metals until the passing of the emergency. In the meantime the Government itself is paying the tariffs upon the metals imported. All of these facts go to show that the metal situation in the United States is critical and deserves special consideration upon the part of this body before it finally determines just what treatment to accord the mining industry under the provisions of this bill.

Now let us consider the position of the prudent mine operator, caught between two fires. On the one hand his patriotic cooperation in maintaining a normal price level per unit of production; on the other, the demand of the Government for increased production and the expenditure of large sums of money in exploration and development and provision for additional plant facilities. This operator realizes that the production of additional units of metal in response to this urgent demand results in a using up of his capital. If he produces them now they are gone from him forever and cannot be replaced. Naturally, other things being equal, he will increase his production and extend his plant facilities, although he knows that when

the emergency passes those facilities will be useless to him. But there is a job to be done, and he is one of the essential factors in getting this job of defense accomplished in a thorough manner. Perhaps he thrills at the idea of being able to aid so materially in this all-out effort.

Now along comes this tax business. If he doubles or trebles the number of units produced in any year he will double or treble his income from the property for that year, even if he will receive no more per unit than the average over a long period of years. When he comes to make up his tax return he will find that this increased revenue has brought about what the Government calls excess profits. His patriotic willingness to take a risk in expending money for exploration, development and new plant facilities, his using up of the capital which can never be replaced, has resulted in putting him in a position where he must pay over to the Government, depending, of course, upon the tax credit which varies so greatly in individual mining enterprises, and the total amount of his income, a proportion of his earnings which can reach the staggering figure of more than 70 percent.

Now, if it were a business which does not consume its capital in its operation, the operator could very well say, "I will be as well off after the emergency passes as I was before, because I can continue my business, secure new raw material, and produce according to the demands of the market." But not so with the miner. His units have been used up; his capital has been exhausted. He finds a depleted mine and useless plant facilities.

This is inevitably having the effect of retarding the investment of money in mining enterprises. It is offering the temptation to hold down on production. It is offering such a barrier to the all-out production which the Office of Production Management desires that that branch of the Government is tremendously concerned. You members of this committee and the Congress of the United States have the answer to this problem, and you are the only ones who can remedy the situation presented by the program of the Treasury Department. You are standing here between this tax-collecting bureau and an essential industry of the Nation, and you must consider, in the decision which you finally make, the effect which that decision is going to have upon the defense program, which is the first consideration of our Government and its people at this moment.

I am going to offer a suggestion as to how you can correct the situation implicit in the bill before you. You have ample warrant for treating the mining industry as to the production of metals so necessary at this time in a manner different from that of any other industry. Your warrant is the necessity of production for our defense program, coupled with the fact that in providing the metals the mining industry is exhausting the units of metal which are its capital. Here is the proposal:

The mining industry should be asked to pay an excess-profits tax for additional production over its normal production during the past 4 years only upon the excess created by an increase in the profit per unit produced and sold. The profits resulting from an increased production should be subject only to normal tax, which, believe me, in the case of mines is very high.

It may be said that a formula to bring this about would be very difficult. I said in the beginning that I have utmost admiration for the ability of the experts who write these tax bills. If they can put words and figures together as they have to squeeze out of the taxpayer the last possible penny of revenue, they surely have genius enough to use the same words and figures to meet a peculiar situation which is so important to the welfare of our Nation. Tell them that your want such a formula written, and they will bring it back.

Secondly, it has been pointed out to you that because of the condition of the mining industry during the past several years the tax credit, before the imposition of excess-profits tax, works a distinct hardship upon individual mining properties and penalizes them to an extent which in many cases practically puts them out of business. Under previous excess-profits-tax laws machinery was provided for the treatment of special cases of this character. Suggestion has been made to you of a means by which this can be brought about, not only as affecting the mining industry but many other industries similarly placed. I do not like to call this special relief. The word "relief" in a situation such as we have confronting us in this Nation has a sinister sound. I would rather say that there should be a means provided for affording equitable adjustment of abnormal tax situations.

Thirdly, a provision should be made for giving credit for obsolescence of plants erected specifically to meet this emergency. It can be done very easily by providing for special deductions over the period in which it is anticipated these facilities will be used. A mining plant located perhaps in an inaccessible section of the country will have no value whatever once the production which warranted its erection has ceased.

In conclusion, I want to say this: The mining industry stands ready and has been ready and willing and anxious to assist and to give all it has in this great defense effort. I know that even if you do not see fit to recognize the peculiar conditions which I have tried to call attention to, and permit this bill or something similar to it to practically eat up the substance of our mining properties, the mining industry will not go on strike. But it should not be asked to make such a sacrifice. It should not be forced to make decisions such as will be required if this tax bill is passed in its present form. Its managements are loyal. They love the institutions of this country, because they believe they are the fairest and the best of any government in all the world. You do not want that faith shaken and destroyed. You want to encourage it, and you have the power to do so.

Everybody is asked to make sacrifices and concessions in this great emergency, in this all-out effort to defend our beloved country. Everybody, I say, except the Government itself. It goes on its merry way, and men and women toil and accumulate incomes which are to be taxed; business executives give up their work of lifetimes and come into the Government to assist with whatever genius they possess; men go down into the bowels of the earth to take out these important metals; men go into the forest to hew the trees and convert them into lumber so essential; railroad executives bend every effort to afford transportation of military and nonmilitary commodities. Everybody

is giving up something important in his life. Everybody except the Government. Its hordes of public servants crowd the streets of Washington and many of our other cities. Its beautiful buildings are filled and filling still more with civil servants. Its agents are traveling up and down the face of the earth regulating and regimenting the industry of the Nation. It is not too much for those of us who have to do with a production so essential for the defense of this Nation that we ask also for a little sacrifice upon the part of the Government, a little tightening of the purse strings, a little lessening of the all-out effort to control and regiment a business which must be free now in an hour of emergency to provide those goods and services so essential to the preservation of this Nation. You men of this committee, the Congress of the United States, in my humble opinion, should give some thought to this.

I am attaching hereto certain examples of the effect this bill would have upon actual mining enterprises in my State. I hope that you can find time to examine them.

EXAMPLES OF THE EFFECT OF PROVISIONS OF THIS BILL UPON ACTUAL MINING ENTERPRISES

Let us presume five different mines contiguous to each other and competing in the same market. The mines have exactly similar ore bodies. Each produces 100,000 tons of ore per annum.

The base period income of those corporations which were in production during all or part of the base period was the rate $150,000 per annum; it is presumed that those corporations which were not in production during any part of the base period would have had similar earnings if they had been in production. During the excess-profits period—say, 1941—each makes $300,000 per annum before taxes, and, presumably, each will pay to the Federal Treasury the same amount of tax.

But, unfortunately, this is only a presumption. Actually, the taxable status of each is quite different, due to accidental factors which have not even a remote relationship to true excess profits, or to any profits whatever arising from the defense program.

Mine A was purchased in 1929 at the peak of prices; it has invested capital of $3,000,000. It has base-period earnings of $150,000.

Mine B was purchased on January 1, 1940; its invested capital is $3,000,000 and has no election between credit based on invested capital or base period. It must use invested capital.

Mine C was purchased in 1932, at the depth of the depression, and has invested capital of $500,000. It also had base-period earnings of $150,000.

Mine D was discovered by the taxpayer, and came into operation during the base period; its base-period earnings are $75,000, and its invested capital is $250,000.

Mine E was discovered; it has invested capital of $250,000, but the corporation was not organized until January 1940. Therefore, it is compelled to use invested capital in computing its excess-profits credit.

The total of normal and excess-profits taxes to be paid by each corporation under proposed 1941 rates would be as follows:

Mine	Income before taxes	Total tax	Effective tax rate, percent	Tax per ton of output
A	$300,000	$112,050	37.23	$1.12
B	300,000	104,875	34.96	1.05
C	300,000	137,423	45.81	1.37
D	300,000	162,363	54.12	1.62
E	300,000	181,175	60.39	1.81

The fact that such widely varying results are obtained in computing the tax on what is in effect the same income brings forcefully to mind the absolute necessity for some form of special relief. There seems little either of equity or common sense in a rigid tax law that takes 60 cents out of each dollar of income accruing to E and only takes 35 cents from B. Particularly is this true when it is considered that the profits of each are won under identical conditions.

Recently much has been heard of the necessity of increasing the production of materials entering into the defense work, and particular attention has been paid to increased production of metals.

The mining industry as an industry is thoroughly alive to the necessity of increasing production. When, however, as to an individual taxpayer, the result of increasing production is the payment of excess-profits taxes on what are in reality normal profits, such a taxpayer is rather heavily penalized if he does give the cooperation he would like to give to increase production.

Illustrative of this statement, a computation has been made of the tax result in the case of the five mines instanced above of a 40-percent increase in output and profit. The profit of each corporation would be increased by $120,000, and the tax result would be as follows:

Mine	Increase in annual profit	Increase in tax	Effective tax rate on profit increase, percent	Tax per ton of increased output
A	$120,000	$76,425	63.69	$1.91
B	120,000	75,425	63.69	1.91
C	120,000	78,787	65.66	1.97
D	120,000	81,281	67.73	2.03
E	120,000	82,200	68.50	2.07

On the increased output of 40,000 tons, however, the amounts remaining to the different taxpayers after payment of taxes are as shown:

Tax per ton of output

Mine	Ordinary production (100,000 tons)		Increased production (40,000 tons)	
	Tax	Net to taxpayer	Tax	Net to taxpayer
A	$1.12	$1.68	$1.91	$1.09
B	1.05	1.95	1.91	1.09
C	1.37	1.63	1.97	1.03
D	1.62	1.38	2.03	.97
E	1.81	1.19	2.07	.93

A final table is appended, illustrating not only the unfair competitive condition created by the excess-profits tax, but the increasing tax cost of increased production. This table follows:

Tax per dollar of profit

Mine	Ordinary production (100,000 tons)	Increased production (40,000 tons)	Average on total production (140,000 tons)
	Cents	*Cents*	*Cents*
A	37	64	45
B	35	64	43
C	46	66	51
D	54	68	58
E	60	69	63

From the above it is quite apparent that the proposed rates and provisions definitely impose an excess-profits tax on normal profits, and the tax is imposed at such high rates that there cannot but be a definite reluctance to dissipating an ore body of limited extent without even a normal profit.

Now, then, we are faced with this unique situation: The Government, as I said, is urging us to increase production. On the other hand, the industry is cooperating with the Government in keeping down the price of metals. There is no profiteering in the mining industry at all. The price now is only a little above the average price for base metals over a period of 40 years. That policy has been continued during all this defense effort, and will be continued, I believe, because the mining industry is cooperating, together with the petroleum industry, in the effort to keep the prices down in the very essential materials.

Here is our situation: If we increase the production of units of metal in response to the Government's demand and at the same time do not receive any more per unit, we are still faced with the fact that at the end of the year, when we come to make up our tax return, because of the increased volume of production due to this demand we have made what might be called a larger profit. In doing this we have used up our capital; in doing this we are taking out the units that might have been left there for future years, and in doing this we are adding to what may be called profits because they are coming in this year's business, added to what we had before, but they are not actually excess profits, because the price of the unit has not been increased. These profits, if there are any, simply come from increasing the number of units that you produce during the year.

Senator GERRY. Are not you in much the same condition as the coal companies?

Mr. CALLAHAN. Yes, indeed. I cannot see any difference, except, perhaps, that coal seems to have an almost inexhaustible supply ahead of them. In the mining business, our mine bodies are developed for a certain period. It is not good practice, and it has not been, to develop too far ahead of your operation. We do not know how many there are there; we do not know anything about the content of the ore body. The geologist and engineer may make an estimate, but it is only an estimate. The ore we take out today can never be replaced, it never grows again. Consequently, we must add new ore bodies; we must keep developing those we have. In doing that, of course, we are reaching the point where we are going to mine what might be called marginal bodies of ore, where the cost of production is very much greater.

In addition to that, in order to take out this increased production we must build additional facilities to treat the increased production, and those increased facilities will be absolutely of no value to the mining company after the emergency which demands the increased production has passed. Therefore, I want to endorse what Mr. Fernald for the American Mining Congress said this morning, that opportunity be given to depreciate the additional facilities over the reasonable life of the use of the facilities that are provided.

The CHAIRMAN. Before you go, there might be some questions that somebody might desire to ask you.

Mr. CALLAHAN. Yes.

The CHAIRMAN. You do have a depletion allowance, do you not, against your investment?

Mr. CALLAHAN. We have a depletion allowance, but you remember that depletion allowances should be allowed against production even if excess profits do not apply.

The CHAIRMAN. Yes; of course.

Mr. CALLAHAN. That would be allowed just the same after the passage of the emergency if the ore were taken out.

The CHAIRMAN. Let me ask you, generally speaking, taking the small and medium-size mining operations, are they almost compelled to adopt the prior-earnings base credit, rather than the invested-capital base?

Mr. CALLAHAN. Practically so. One reason was given very clearly by Mr. Willis this morning as to the difficulty of having the invested capital base, because of the fact that so much goes into the opening up and bringing into production of the mine, which is really its capital investment, but is not in dollars and cents.

The CHAIRMAN. It is not kind of capital investment that the Treasury allows?

Mr. CALLAHAN. No; they do not allow that kind of capital investment at all.

The CHAIRMAN. Are there any further questions?

Senator TAFT. You are against eliminating that exemption of the strategic materials?

Mr. CALLAHAN. Very definitely; yes.

Senator TAFT. Is your company concerned with those materials?

Mr. CALLAHAN. My company is not; no. In the particular district in which we live we do not have any of those strategic metals, but we have in central Idaho, and we have vast potentialities in that direction. As a matter of fact, the United States Bureau of Mines and Geological Survey, under its appropriation of $500,000 a year which was made several years ago, has been making some intensive examinations down there that we believe have uncovered some sources of those very valuable strategic metals.

I want to endorse heartily what Mr. Willis said with regard to that this morning. I think it is extremely important that that section be put into the bill.

The CHAIRMAN. Thank you very much for your appearance.

Mr. Leo J. Hoban.

STATEMENT OF LEO J. HOBAN, WALLACE, IDAHO, TREASURER, SULLIVAN MINING CO.

Mr. HOBAN. My name is Leo J. Hoban. I am treasurer of Sullivan Mining Co., the main office of which is located at Wallace, Idaho. Sullivan Mining Co. owns a zinc-lead mine, located near Burke, Idaho, and an electrolytic zinc smelter, located at Silver King, Idaho.

My purpose in requesting a hearing before this committee is to point out the manner in which the Second Revenue Act of 1940, both as at present constituted and as proposed in the House bill now under consideration, inflicts almost confiscatory taxes on Sullivan Mining Co., thereby impairing our competitive position in the industry.

In discussing this matter I will confine my presentation to the affairs of the company with which I am connected, and with whose affairs I am familiar; however, my conversations with the representatives of other small companies in the industry convince me that many small taxpayers have the same sort of problem and are subject to the same sort of discrimination as Sullivan Mining Co.

History of Sullivan Mining Co.—Sullivan Mining Co. was organized in 1917, and after years of development, the Star ore body was discovered in December 1924. There was no domestic outlet, on a reasonable basis, for the zinc concentrate production, and for several years we were compelled to ship these concentrates to Belgian smelters. This was an unsatisfactory situation, and in 1926, even this market having been cut off, construction of an electrolytic zinc smelter was started, which was completed and put into operation during October 1928.

The mine has not been profitable at ordinary metal prices; the smelter has been profitable, except during periods of depression. Due to large losses suffered during the depression, and which were never recouped, the corporation had an operating deficit at December 31, 1939, of $1,035,000, and the investment in the mine and smelter was about $9,000,000.

Operations during base period—Star mine.—On January 1, 1936, the Star mine was operating; its output was about 375 tons per day; the ores were beneficiated in a leased concentrator. The mine was forced to close in December 1936, when the leased concentrator was no longer available. By the time the shut-down occurred the output of the mine had increased to 600 tons per day. Upon loss of the use of the leased concentrator, construction of our own concentrator, with a capacity of 850 tons per day, was authorized, and it was placed in operation in August 1937. The mine was again forced to suspend operations in February 1938, due to low metal prices incident to the depression that started about that time. Production was resumed in September 1939 and has since continued at a rate of 850 tons per day.

Electrolytic zinc smelter.—Early in 1937 an increase of the productive capacity of the smelter was authorized to provide for the expected increase in production from the Star mine. The new unit was completed in February 1938, but the shut-down of the Star mine left it without a supply of concentrates on which to operate. The new unit was compelled to lie idle, therefore; in fact, by April 1938 it became necessary to shut down one of the two units of the original plant. In September 1939 the second unit resumed operation, and the new third unit was placed in operation for the first time on December 1, 1939.

Senator DANAHER. Will you pardon the interruption? Over that interim, from 1938 to September 1939, was zinc being imported into this country?

Mr. HOBAN. I think in 1937 there was some importation of zinc, but that was not due to lack of capacity of the zinc industry, it was due to the shortage of water which cut off electric power at the zinc plant in Montana. We were not handicapped in that manner.

Senator DANAHER. Thank you.

Mr. HOBAN. Inadequacy and discriminatory nature of base-period credits:

There are a number of reasons why the excess-profits credits based on the average income method are unsatisfactory and discriminatory

as applied to Sullivan Mining Co. Principally these reasons are as follows:

(*a*) The period 1936–39 was distinctly a subnormal period in the zinc-lead industry.

The base period years, 1936 to 1939, inclusive, were not average years for either zinc or lead. Almost any combination of years, except pure depression years, would have given a more reasonable average.

The arithmetical average St. Louis price for zinc for the base period years was 5.29 cents per pound.

Following are the averages for other periods:

	Cents
1904 to 1913	5.57
1914 to 1918	9.47
1919 to 1935	5.61
1936 to 1939	[1] 5.29
1904 to 1935	6.20
1904 to 1935 [2]	5.60
1904 to 1939	6.10
1904 to 1939 [2]	5.56

[1] Base period average.
[2] Excluding 1914 to 1918.

The years 1904 to 1913 are the 10 years preceding the first World War. They include the short-lived prosperity extending through 1906 and the first three quarters of 1907 and the years of stagnant business thereafter. There was no income tax in effect prior to March 1, 1913, and thereafter was a rate of only 1 percent. There was no National Labor Relations Act, no restrictions on wages and hours, no reciprocal trade program, no capital-stock tax, and no social-security tax; yet during that period the price for zinc was 0.29 cent per pound higher than during the selected base period.

The years 1914 to 1918 were the war years, when prices reached fantastic levels. The average of these years is set down here merely to complete the record.

The years 1919 to 1935 included the short boom after 1918, the depression of the early twenties, the prosperity of the middle and late twenties, the devastating depression after 1929 when metal prices reached the lowest level in recorded history, and the first 3 of the recovery years. The average price during this long period of 17 years was 5.61 cents—0.32 cent per pound more than the selected base period years.

The grand average for the years 1904 to 1935, inclusive, is 6.20 cents per pound, 0.91 cents per pound more than the average for the base-period years; even if we exclude the high prices for the years 1914 to 1918 but leave in the average low levels of the 1929 and later depression years, the average is found to be 5.6 cents per pound, an excess over the base-period years of 0.31 cents per pound.

The grand average for the years 1904 to 1939, inclusive, is 6.10 cents per pound, and if we exclude 1914 to 1918 we find the average is 5.56 cents per pound, an excess over the base-period years of 0.27 cents per pound.

The comparative figures for lead, New York price, are as follows:

	Cents
1904 to 1913	4.62
1914 to 1918	6.21
1919 to 1935	5.97
1936 to 1939	[1] 5.13
1904 to 1935	5.59
1904 to 1935 [2]	5.47
1904 to 1939	5.54
1904 to 1939 [2]	5.43

[1] Base period average.
[2] Excluding 1914 to 1918.

It will be seen that, except as to lead for the period 1904 to 1913, every period stated above, and every combination of periods, gave a higher average result than is the case in the selected base-period years.

It is quite apparent, therefore, that 1936 to 1939 were not representative years either as to zinc or lead, and that excess-profits taxes, at extremely high rates, are being paid by the zinc and lead miners on what are in reality merely normal profits.

Senator BROWN. We recognized that possibility when we wrote the last tax law. A great deal of effort was made by this committee to enact a hardship statute to cover that situation. One was adopted on the floor of the Senate; and then the chairman, the present chairman, Mr. George, largely was responsible for rewriting that section when the bill went to conference; and when it came out we thought we had a reasonably good hardship statute. I note in reading on a little ahead that that did not aid you any.

Mr. HOBAN. That did not aid us any.

Senator BROWN. My question is: Why could not you use it?

Mr. HOBAN. You mean what, Senator?

Senator BROWN. The hardship statute. I think it is section 722.

Mr. HOBAN. I am just coming to that, sir.

I give you two good examples of why that does not do us a bit of good.

(*b*) The limitation in section 722 (b) (4) effectively prevents Sullivan Mining Co. from obtaining recognition of its increase in capacity during the base period.

That is what you refer to, Senator.

The CHAIRMAN. That is it; yes.

Mr. HOBAN. During the base period, Sullivan Mining Co. increased its productive capacity at the mine from 375 tons per day to 850 tons per day. It also increased its smaller capacity from 65 tons per day to 115 tons per day.

Section 722, relating to adjustment of abnormal base period net income specifically recognizes a difference in the capacity for production as one of the abnormalities which justify adjustment of the base period income. However, section 722 (b) (4) further provides that the base period income so adjusted shall not exceed its excess-profits net income as adjusted for the last year in the base period. Since 1939 was for Sullivan Mining Co. the poorest year in the base period, with the exception of 1938, which was a deficit year, and since all the additions to productive capacity had been made prior to 1939, and, therefore, that year is not seemingly subject to adjustment, the net results is that the entire increase in productive capacity is subject to excess-profits taxes, since the base period net income of Sullivan

Mining Co., computed under section 713 (d) is greater than the excess-profits net income for the year 1939.

Senator BROWN. Did you hear that, Mr. Stam?

Mr. STAM. What?

Senator BROWN. Do you understand what Mr. Hoban was saying here about a criticism of our hardship statute?

Mr. STAM. Yes.

Senator BROWN. Do you agree with what he says, that it was impossible for them under those circumstances to get relief?

Mr. STAM. The only thought I had in mind was that possibly he is taking the position that it is the actual income for that last year of the base period that he had to take, and under the statute as written it seems to me that he could construct a proper income for that last year of the base period, and that would be his credit. In other words, the credit could not exceed the income for the last year of the base period, but it must be constructed rather than actually for that last year. In other words, if these same conditions had been eliminated, this strike and everything in the last year of the base period, he might have had a higher base period income than he actually showed, and that would be the limitation rather than the actual income.

Mr. HOBAN. I would be very happy if that were true, Mr. Stam, but these facilities were all constructed, and in being prior to January 1, 1939. That being the case, and they were not in use in 1939, is it your opinion that we could reconstruct 1939?

Mr. STAM. I think there is a chance that you could; yes.

Mr. HOBAN. All right, sir.

It the investment in increased capacity had been made in 1940, rather than during the base period, section 714 (a) (1) (B) would have allowed an addition to the base-period earnings, excess-profits credit of $128,000, being 8 percent of the investment, $1,600,000. When it is considered that the concentrator operated for only 9 months and the new smelter capacity for only 1 month, of the base period, and, therefore, added only negligibly to base-period earnings, it would seem that something less than justice is being accorded Sullivan Mining Co.

Section 722 (a) (2) would seemingly allow Sullivan Mining Co. an adjustment of base-period earnings, since there was an abnormal shut-down due to the loss of use of the leased concentrator. However, section 722 (b) (4) again intervenes, and for the same reasons outlined above as to increased capacity, any adjustment is denied.

Undoubtedly it was the intent of Congress to recognize abnormalities such as those described above, and to provide equitable relief, but the provisions for relief were so circumscribed and limited that many taxpayers are deprived of the relief to which they are equitably entitled.

Senator BROWN. That is exactly what we tried to do.

Mr. HOBAN. I will discuss this, Senator, with Mr. Stam. If I made a misstatement here, I would like to have an opportunity to correct it.

Senator BROWN. I grant we did go into it at considerable length.

Mr. HOBAN. The limitation of the last year in the base period is what ruins us.

Senator BROWN. The original idea was to leave a great deal of discretion in the Commissioner, but subsequently we were persuaded, as

I said, to put limitations upon that discretionary power. I still think the only way it would tend to work out to meet the many abnormal cases that arise is by the provision which was in the law in 1918.

Mr. HOBAN. Yes; in 1917 and 1918.

Senator BROWN. We are very much interested in that problem.

The CHAIRMAN. Mr. Hoban, I might say that originally when the bill was on the floor of the Senate an amendment was put in that would have covered your case, but as Senator Brown has pointed out, subsequently in conference were not able to get through the provision that many others on this committee and in the Senate wished.

Mr. HOBAN. I hope you have better luck this year, Senator.

The CHAIRMAN. I think you should talk with Mr. Stam and the Treasury. It is quite probable that you are entitled to relief that you do not think now you are entitled to.

Mr. HOBAN. I would be happy to find that out.

The CHAIRMAN. You would not object to it?

Mr. HOBAN. Not a bit.

Senator BROWN. There is an excellent case, in his case, I will say that.

Mr. HOBAN. May I proceed?

The CHAIRMAN. Yes; you may proceed.

Mr. HOBAN. (*c*) No provision of the law provides for adjustment of base period earnings, where income in the excess profits period is increased by reduction of expense.

Two typical examples affecting Sullivan Mining Co. follow:

1. *Shut-down expenses.*—In the case of mines with many openings, shut-down expenses are very heavy. This is particularly true of the Star Mine, which has been opened up on 15 levels, through a vertical area of 3,100 feet. It has an 8,500 foot haulage tunnel, 2 shafts totaling 3,100 feet, and numerous stopes and cross-cuts. All the openings must be kept in repair during a shut-down, pumping, hoisting, mechanical, and electrical crews must be maintained, taxes, rentals, and other overhead expenses must be paid. The shut-down cost in the Star Mine is about $15,000 per month and when it is considered that the Star Mine was shut down for 27 out of the 48 months in the base period, it can be readily seen that the reduction in base period income, through failure to allow elimination of this abnormal expense, has resulted in a very substantial reduction in base period earnings.

Since the Star Mine resumed operations in September 1939, thereby eliminating the shut-down expense, it cannot be contended that this saving in expense has any connection with an increase in metal prices due to the defese program. It is difficult to understand how a saving in expense in 1939 becomes excess profits in 1940 and succeeding years. Yet there is nothing in section 711 (a) (1) which provides any adjustment of base period income on this account.

2. *Elimination of royalty payments, due to expiration of patents.*—In the construction of the electrolytic smelter, a patented process was used; royalties were paid regularly to and including April 1941, when the patent contract expired. The cost in 1940, that is, the cost of royalties, exceeded $42,000.

Here again it cannot be contended that this augmentation of income had anything to do either with increased metal prices, or national defense. Yet, under the law, the entire amount automatically

becomes excess profits net income, taxable in the highest bracket—a tax of 72 percent, combined excess profits and normal tax.

Inadequacy of excess profits credit based on invested capital.—The Second Revenue Act of 1940 allowed an excess profits credit of 8 percent on invested capital. This allowance was wholly inadequate to measure the profits of the mining industry which, in all of its phases from prospecting, through discovery, development, and operation, is a more than ordinarily risky business as far as capital is concerned. It is grossly unfair to lump all industry in a catch-all average rate. The use of an average rate results in an overallowance to certain classes of industry, whereas, other industries will receive less than a proper allowance. Evidently, it is already realized that some industries have been given an overallowance, hence the proposal for a special 10 percent excess-profits tax. Seemingly, however, there is no intention of extending relief to the industries which have received an inadequate allowance.

Quite the contrary, in fact. The House bill proposes a new method of computing the excess-profits tax. The report of the Ways and Means Committee is quite lengthy in explaining what could have been explained in a very few words—merely that the 8-percent allowance was being reduced to 5.6 percent on capital up to $5,000,000 and to 4.9 percent on capital in excess of that amount.

The equity of reducing by 30 percent an allowance already grossly inadequate needs no extended discussion. The 1940 provisions for levying the excess-profits tax on the excess profits net income, rather than on the normal net income as proposed in the House bill, should be continued.

Special 10-percent tax.—Sullivan Mining Co., will, in addition to a large tax at the highest bracket rates, be subject to the proposed special 10-percent excise-profits tax on the difference between the excess-profits credit on base-period earnings and the credit on invested capital.

Included in this tax is a relatively small amount which, however, is so inequitable that attention is called to it. In the use of the base-period-earnings method for computing the excess-profits credit, the credit is limited to 95 percent of the determined average. The limitation to 95 percent is strictly a penalty on the use of the average-earnings method.

The effect of the present proposal is to levy a tax of 10 percent on the 5-percent reduction of base period earnings even though the corporation has elected invested capital, and has no reason to expect to pay a penalty tax on the use of the invested-capital method.

Due to the limitations outlined in the discussion of the average-earnings method of computing the excess-profits credit, this special tax will be especially burdensome to Sullivan Mining Co.

Sullivan Mining Co. is not objecting to the rates of tax in the House bill. It realizes that the need for revenue necessitates high rates. It does feel, however, that revision of the law to remove inequities incident to its faulty construction are the more urgent at these high rates than when the rates were lower.

Most of the competitive disadvantages pointed out would disappear if provision were made in the case of mines for an excess-profits credit based on normal profit per unit of output. This would put

similarly situated competitors on the same plane, and more important than all else would remove the hesitancy on the part of the mine to dissipate an ore body and account for the profit at almost confiscatory tax rates.

The necessities of national defense are more important at this time than the need for revenue, urgent as that is. The need for revenue should not, at any time, obscure the necessity for fair tax laws, equitably applied. In addition, it is particularly important now that the operation of a tax law should not act as a brake on production, which is already far below our requirements.

The CHAIRMAN. Are there any questions?

Senator BROWN. I want to ask one more question, Mr. Chairman. I think you made an excellent case. You do not say very much about the reason you did not adopt the invested-capital theory.

Mr. HOBAN. We did adopt the invested-capital theory.

Senator BROWN. You did?

Mr. HOBAN. We did. Now, we have to compute our base-period earnings.

The CHAIRMAN. That seems peculiarly illogical to you, does it not, Mr. Hoban?

Mr. HOBAN. I agree with you, Senator.

The CHAIRMAN. That is, that you are on the invested capital base and you have no occasion to resort to the average earnings method, you could not use it. Your capital structure was such, and your prior history was such that you had to take the invested capital method.

Mr. HOBAN. That is so.

The CHAIRMAN. And the illogical situation arises because you were then referred to a credit base which you had never used, had not intended to use, to wit, your normal earnings, to determine on what sum you should pay this additional 10 percent, although you did not reach your minimum credit, your base credit under the invested capital.

Mr. HOBAN. That is true. It is only since I have been here in Washington studying this thing that I find all these inequities that I point out here. In attempting to compute the base period earnings I ran into all these different things.

The CHAIRMAN. You probably know the argument that was submitted before the House. I have every respect for these conscientious and able men who compose the House Ways and Means Committee and the Treasury. Although you have not earned, say, your 8 percent, or, say, 7 percent, or even the reduced percentage under the present method of computing, 4.9 and 5.6, although you have not reached that, since you have made more than you were making in the base period you should pay the 10 percent.

Mr. HOBAN. In other words, it is a good deal like using the unfortunate experience of past years to take a little bit more.

The CHAIRMAN. I have not been able myself to see how it can be logically justified, nor actually justified as it may be applied to a business, any kind of a business that cannot use the average earnings, has no occasion to use the average earnings, that has used the invested capital, and until it has made earnings in excess of its credit under

that system, even though you may say that it has profited some by the general defense program, the general spending on the part of the Government, that it should suffer that special tax of 10 percent.

Mr. HOBAN. It has profited through the increased price, but, on the other hand, it is being hurt very badly because of our inability to have recognized, as normal profits in the excess-profits period, the profit from the production of these units which result from an increase of productive capacity which was completed during the base period.

You asked Mr. Callahan a question as to whether or not it was not almost necessary for most mines to adopt base-period earnings rather than invested capital. I am also treasurer of another mine, a rather old mine, the Hecla Mining Co., which will probably have its ore body worked out next year. It adopted the unit method of depreciation and depletion, which means that, as you get to the end of the life of a mine, your invested capital in plant facilities practically disappears. Hecla Mining Company has a $2,000,000 plant. So long as there is ore to be extracted, it must have such a plant, even to the last day of the operation of the mine. On its books, however, the plant has a depreciated value of only $350,000, due to the gradual diminution of its book value through use of the unit method of depreciation.

The CHAIRMAN. Your capital has been depleted?

Mr. HOBAN. Yes.

The CHAIRMAN. You are obliged to diminish the capital earnings to stay in business at all?

Mr. HOBAN. That is right.

Senator JOHNSON. Mr. Hoban, after your conversation with Mr. Stam and the Treasury, if you find that you are mistaken in your statement here, you will give us a corrected statement, will you?

Mr. HOBAN. I will do so.

Senator JOHNSON. Because this is a point of tremendous importance, as you know, to the whole mining industry. I am sure this committee wants to be very sure of its ground.

Mr. HOBAN. I will be glad to do that, Senator.

Senator BROWN. Mr. Stam handed me the report of this committee headed by Senator Harrison in February of this year, in which the precise subject matter is discussed in that report.

Mr. HOBAN. I have a copy of that. I would not presume to get into a discussion with Mr. Stam, for whose ability I have too much respect. I will be glad, however, to discuss this. My own opinion, after reading this thing very carefully, is that the limiting provision that your base-period average shall not exceed the adjusted average of the last year is the thing that puts us out of business.

The CHAIRMAN. I am not at all sure that you are not right, Mr. Hoban, but I do think it worth while for you to talk with Mr. Stam and with the Treasury and see if you might not be permitted to reconstruct your last year in such a way as to afford you some additional relief.

Mr. HOBAN. I will be glad to do that. Thank you, sir.

The CHAIRMAN. Thank you very much for your appearance.

(The letter referred to follows:)

AUGUST 21, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: In the course of my appearance before the committee on August 19, I pointed out some of the difficulties confronting Sullivan Mining Co. The difficulties arise from what I consider unreasonable limitations of the abnormality relief provisions of section 722, and specifically section 722 (b) (4). A difference of opinion arose as to whether or not this taxpayer is entitled to relief under this section and it was suggested by Senator Johnson that Mr. Stam and I have a conference on the subject, and that the committee be informed by letter as to the result.

This conference has been held and the particular circumstances affecting this company were rather thoroughly reviewed. I think Mr. Stam and I are now agreed that relief might be granted in this case under section 722 but the relief extended would depend on administrative interpretation of the section, particularly as to the combined effect of the reference in section 722 (b) 1 to low prices and volume, and the limitation in section 722 (b) (4) as to 1939 income.

We are also in agreement that there is enough doubt as to the meaning of certain of the provisions of the section to call for clarification by appropriate amendment.

May I ask that this letter be made part of the record following my testimony?

Yours truly,

LEO J. HOBAN,
Treasurer, Sullivan Mining Co.

Copies to:
Committee members.
Colin F. Stam.

The CHAIRMAN. Mr. Maurice Thorner.

STATEMENT OF MAURICE THORNER, ATTORNEY AT LAW, LOS ANGELES, CALIF.

Mr. THORNER. My name is Maurice Thorner. I am an attorney representing small producers of tungsten in California.

The CHAIRMAN. And your address is West Los Angeles?

Mr. THORNER. Los Angeles.

The CHAIRMAN. Yes; you may proceed.

Mr. THORNER. I wish to present to the committee my views relative to but a single feature of the revenue measure now under consideration. Last year Congress, in pursuance of its well-conceived policy of fostering and encouraging the discovery and exploitation of certain strategic and critical metals, decided to exempt from the provisions of the excess-profits tax any income derived from the production of these metals. I refer specifically to section 731 of the Internal Revenue Code, granting this exemption to "tungsten, quicksilver, manganese, antimony, platinum, chromite, and tin." This was a wise decision on the part of Congress because it produced precisely the result everyone wanted. It immediately stimulated and encouraged prospectors to scour the western country in search for these mineral deposits, and if the momentum given by the adoption of the exemption last year is not interfered with, it is the opinion of competent mining engineers that in the course of

a few years the United States can become self-sustaining with respect to most of the metal mentioned.

Mining is a risky and hazardous business, and without some special incentive it will never be possible to increase our domestic production of these rare metals. Congress last year by section 731 attempted to supply this extra incentive for the investment of time and money in an effort to increase our domestic production. The problem of getting "venture capital" to go to work is a serious one, and the T. N. E. C., as a result of its extensive studies, has frankly recognized that fact. Bear in mind that the odds against the discovery of new ore bodies that are any good is very high. Only 1 out of 20 properties that are turned up by prospectors prove to be workable. Consequently, new capital is very shy, and the rate of return on the 1 property in 20 that really has an ore body must be very much higher than the return on a conventional investment, because the risk of loss is that much greater. And it is no use suggesting that the Government, through the R. F. C., will invest the necessary capital and take the risk, because they will not do so. Before the R. F. C. will go into a property it must be practically proven beyond doubt, and there must be blocked out ore in sight.

If there is anything more important to our defense program than these strategic metals, I don't know what it is. The O. P. M. are constantly clamoring for these metals. They are the lifeblood of the steel industry. Without an assured supply of them our great steel industry would bog down, and all of us know, that at the present time we are still pretty much dependent upon the outside world for these vital supplies. Let us look at a few of them for a minute: Twelve and one-half pounds of manganese is needed to desulfurize and deoxidize every ton of steel produced, most of it is imported from India, South Africa, and Cuba, and substitution is extremely difficult, if not impossible. Tungsten is imported from Indochina and Bolivia and Argentina, and without it we cannot make our high-speed steels. Quicksilver, most of which formerly came from countries now controlled by the Axis Powers (Italy and Spain), is badly needed for pharmaceuticals, for the manufacture of torpedoes, and for our shipbuilding program, for mercurial paints, which prevent barnacles from forming on ships.

Now, the House of Representatives has with one fell swoop wiped out this exemption. They did it by section 206 of the revenue law passed several weeks ago. I cannot believe that it could have received the careful attention in the House that it deserved. I am sure that the practical aspects of this problem have been overlooked altogether in their understandable anxiety to find new sources of revenue. I realize full well the seriousness of the times and the great necessity of taxing everything and everybody until it hurts. I agree with that policy. But when you begin to levy taxes which will, in actual operation, have the effect of throttling and choking off vital production you are losing sight of the larger question involved, and that is the efficient and increased production for national defense, before which everything must give way.

I think Senator Johnson this morning accurately termed this "killing the goose that lays the golden egg."

There are several outstanding reasons for refusing to disturb the exemption to strategic metals, and I will urge this committee to give them careful study and consideration.

First. I think it would be an act of bad faith toward the many small corporations, with small capitalizations, who relied upon the assurance implicit in section 731 of the Internal Revenue Code, and have gone ahead with expensive research and development work, looking to the discovery and production of these minerals.

Second. It would result almost at once in the discontinuance of further prospecting for these ore bodies, and the stoppage of production from many sources in the United States. Thousands of prospectors have spent their time and their money searching for these badly needed metals during the past year. This was done because of the incentive given them last year. This was done because it was generally believed that the exemption granted by section 731 established a principle which would be adhered to, until such time as we as a nation had uncovered a sufficient supply of these metals to warrant a different policy.

Third. I contend that the Treasury will not derive any appreciable revenue by repealing this exemption. This is a revenue measure we are talking about here, and the problem must be examined from that point of view. I wonder if the Treasury experts, or the experts for the committee, have taken the trouble to study last year's tax returns and on the basis of those returns submitted to you any estimate of the additional tax collections, if any, to be obtained by this repeal? I venture to guess that they have submitted no such estimate. Why do I say that? I have before me some figures, compiled from the records made available by the Bureau of Mines for the year 1940. I wonder if it is generally realized that the total value of all of these minerals produced in the United States during 1940—and I think this answers the question that Senator Taft asked earlier today of a previous witness—was in the neighborhood of $20,000,000?

Senator DANAHER. What percentage of the total of such minerals used in this country does that represent?

Mr. THORNER. I think we use nearer $50,000,000 worth of these rare metals annually.

Senator DANAHER. So we are getting up to 40, 50 percent of our needs?

Mr. THORNER. Yes.

If it is assumed that the average net profit on such production is about $5,000,000, I know that the Treasury experts will readily agree that at least one-half of that amount would be attributable to individuals and partnerships, with whom we are not concerned in this discussion. As to the other half, $2,500,000, you can quickly see that after (1) normal corporate taxes, plus (2) capital-stock taxes, plus (3) defense taxes, plus (4) State corporate income taxes, amounting in all roughly to about 40 percent or more, are deducted, that the "net profit" remaining subject to excess-profits schedules would be almost negligible. On the contrary, to continue the exemption is much more likely to increase the revenues from the normal corporate taxes because

of the increased production brought about through the attraction of new-venture capital and the discovery of new ore bodies.

And, finally, I wish to conclude my argument as I began, with the assertion that the five, ten, or fifteen million dollars worth of new production of tungsten, quicksilver, and manganese that will be mined and brought into use as a result of the incentive given to prospectors by section 731 is infinitely more important to us right now because of the dire need of these metals in our armament program than any small additional revenue that might be obtained by the Treasury. If we look at this problem in its right perspective we will not sacrifice this production for the tenuous hope of a little revenue.

I appreciate very much the opportunity to appear before your committee, and I am satisfied that this problem will receive your careful study.

The CHAIRMAN. Mr. Thorner, it is probably true that the trouble with the producers of these particular strategic metals—tungsten, manganese, quicksilver, and so forth—got hit in the eye because some producers of other metals, say, copper, wanted to have the same exemption from excess-profits tax.

Mr. THORNER. Frankly, I don't know how it landed in the House bill, because I very carefully followed the testimony coming before the Ways and Means Committee in May and June and not a single word was uttered on the subject one way or the other.

The CHAIRMAN. I say that it is very probable how the trouble commenced and resulted in the elimination of the whole thing rather than to justify the exclusion of other vital metals. Of course, in the case of copper, while you might make a very good case for the exemption of all excess profits for minerals, in the case of copper, where you have a fully developed production in this country, or a large production, the situation is quite different.

Mr. THORNER. I agree it is.

The CHAIRMAN. I think that is very likely. Mr. Stam, has any estimate been made of the loss of revenue by virtue of 731?

Mr. STAM. No; so far as I know, no estimate.

The CHAIRMAN. It is not high; it is not great in any event.

Mr. STAM. Well, I am inclined to believe Mr. Thorner's testimony, and on that basis the loss is not very great.

Mr. THORNER. I don't see how it could be very great.

The CHAIRMAN. Any further questions?

(No response.)

The CHAIRMAN. Mr. J. Carson Adkerson, American Manganese Producers Association.

STATEMENT OF J. CARSON ADKERSON, WOODSTOCK, VA., PRESIDENT, AMERICAN MANGANESE PRODUCERS ASSOCIATION

Mr. ADKERSON. My name is J. Carson Adkerson; home address, Woodstock, Va.; office, National Press Building, Washington, D. C.

I appear as president of the American Manganese Producers Association, representing the majority of manganese producers in the United States. I have listened to the testimony which has already been given regarding the strategic-minerals item of the bill and I

wish to say that is the only item in which I am interested at the present time. That is section 206, which, in effect, eliminates the section carried in the previous bill. We are in favor of a similar exemption being granted in this bill for strategic minerals; I am appearing only on behalf of the manganese producers and represent only one of these strategic minerals.

Manganese is the No. 1 strategic mineral largely for the reason that we consume over 1,000,000 tons of manganese a year. The Bureau of Mines' figures for the year 1940, just released, show that the consumption for 1940 was 1,322,202 tons. Domestic production was only 40,000 tons. I think that sufficiently serves to emphasize the need for giving every encouragement possible to the development of manganese in the United States. We have not had all the encouragement which we thought the industry deserved. I have been before this committee before and representatives of the manganese industry have joined with me from time to time trying to point out to the committee the problem and possibility of an emergency where foreign sources of supply would be cut off; and we have tried to bring forth the development of American resources. We are now facing that situation. During the last year or so, there have been substantial investments in manganese. They have not yet gotten into production. The exemption from excess-profits tax, as provided in the law of 1940, would greatly encourage private capital investments in further development, whereas if that exemption is thrown out not only would it discourage further capital, it will and has caused the suspension of operations already under way. I feel that this committee understands that; I think that the witnesses who have preceded me have brought those facts out. I just want to let you know that manganese is of tremendous importance because of the distances from which this material is brought, and also for the fact that last year we actually consumed, as indicated by the Bureau of Mines' reports, 1,322,202 tons, while domestic production was 40,000 tons.

That concludes my statement.

I would like to insert in the written record something further on the subject which I believe will be of interest to the members of the committee.

The CHAIRMAN. You may do so.

Senator GUFFEY. Has anything developed in Virginia as started during the last war?

Mr. ADKERSON. There are a number of developments in Virginia, in the Shenandoah Valley area and also at other places. Virginia, up to the last war, was the leading manganese producing State in the United States. Since that time Montana has forged ahead but all of them are now more or less at a standstill except some operators in Montana who have been given Government contracts and have been financed and have gone ahead. All of them thought they had this exemption under the act of 1940 and if it is removed the only alternative would be Government money for the development of the properties and the installation of the necessary equipment. Private industry would like to go in and do it and will if that exemption is continued and other Government policies are favorable.

Now, answering that question as to the location of the deposits, I have a recent map of the United States Bureau of Mines, copies of which I would like to leave with each member of the committee. This is the latest map made by any Government bureau I know of. It shows the location of the larger known deposits of manganese in the United States.

Senator TAFT. What is it used for?

Mr. ADKERSON. Largely in the manufacture of steel and dry-cell batteries; manufacture of brick and paints. The primary use is for steel.

Senator GUFFEY. Have they found any large bodies of manganese in this country?

Mr. ADKERSON. Yes; one of the largest is now under development at Artillery Peak, Ariz.; the next is at Chamberlin, S. Dak., and the third is in Minnesota, and then the Appalachian area. Most of those deposits are low grade, but through the efforts of the producers with the help of the Bureau of Mines there have been developed processes which raise those ores to higher grades than any other known in the world. For instance, in Montana they are now mining low grade, normally running 25 to 30 percent manganese. With a new process, flotation process, a concentrate running around 60 percent manganese is being produced.

Senator GUFFEY. What does the imported ore run?

Mr. ADKERSON. Normally, around 48 percent. Now, in one of the specifications issued by the Government they asked for 48 percent and the call was upon all domestic producers to give them that or not deliver. The producers did take contracts to deliver that grade but only the ones able to put in plants at a cost of say a million dollars have been able to go ahead on those contracts, others have not been able to provide the funds necessary to build the plants to raise the ore up to the necessary 48 percent; others have tried to raise funds by operating on a small scale. Then we heard that the Government had let some contracts in favor of foreign producers and had obtained some ore from foreign producers running less than 48 percent. That has been confirmed, and in view of that, and then throwing out this exemption, most of the producers who have been going ahead have come to a standstill to find out first what is the Government's policy. Does the Government want private capital to go ahead or are we to stand back and let the Government do it?

Senator GUFFEY. What is the price of 48-percent manganese?

Mr. ADKERSON. Senator, Mr. Henderson of the Metals Reserve Company testified before the Military Affairs Committee that the price given the foreign producer was 59 cents and the price for the domestic was 61 cents; that is, 59 cents and a fraction and 61 cents and a fraction, per unit of manganese.

Senator GUFFEY. For what unit?

Mr. ADKERSON. All above 48; a unit is 22.4 pounds of metallic manganese.

Senator BYRD. What do you estimate the requirements of this country for next year?

Mr. ADKERSON. Last year, as shown by the Bureau of Mines report, they indicated consumption for 1940 as 1,322,202 tons. I have

just recently given a release to the press that sometime during the year 1942 we may reach a consumption at the rate of 1,500,000 tons per year, and have asked where is it coming from.

Senator BYRD. Are you president of the association?

Mr. ADKERSON. Yes.

Senator BYRD. What do you think will be the production in 1942 under the present plans?

Mr. ADKERSON. The best answer is that for the present year at the rate we were going ahead the total production would be 100,000 tons for 1941. Consumption, now mind you, was over 1,300,000 tons total last year. Production, balance of the year estimated, will be 100,000 tons.

Senator BYRD. Where do you propose to get the balance?

Mr. ADKERSON. From foreign sources and increased domestic production, provided sufficient encouragement is given.

Senator BYRD. You say there is 3 cents difference between foreign and domestic in price?

Mr. ADKERSON. That is the testimony of Mr. Henderson of the R. F. C.

Senator BYRD. In other words, the American manganese would only cost 3 cents more?

Mr. ADKERSON. That is the quotation, and efforts are being made to bring it forward at that price but we are not getting the production.

Senator BYRD. You say you are only going to produce 100,000 tons and you need 1,500,000 tons for the year?

Mr. ADKERSON. Yes. Testimony has been given before this committee—I have said it all the way along—that with some encouragement we could increase that production at the rate of 100,000 tons a year; with high speed and Government aid within a few years we could produce 600,000 tons per year but again we ask, where is the balance coming from? It behooves this committee, as I have pointed out and as producers have constantly howled, to recognize that it takes time to produce this metal. There must be the mine development and it takes time to work out the process for each individual deposit, and you shouldn't lose a day now to speed that up. What we have tried to emphasize is that this development should go forward in peacetime; we should not wait for the emergency.

Senator BYRD. You have been urging that for years.

Mr. ADKERSON. I have; I have even been to the White House. I took a petition signed by 186 Members of Congress including 41 Senators to the President back in 1934 and 1935, during the depression, and for national-defense purposes and to help meet the depression we asked serious consideration be given to the development of these resources at that time because it takes time to develop these properties; work out processes; and build plants.

Senator GERRY. Did the Government lay up any supply before the war started?

Mr. ADKERSON. Yes; they have around 320,000 tons reserve. They have authorized purchase of 1,000,000 tons or more. At the committee hearings last year you will recall I gave testimony that the Government had authorized and was trying to buy 1,000,000 tons of

manganese. At that time, my testimony was the Government could not get a million tons of the grade desired from all sources, foreign and domestic; it wasn't available, and time has borne me out.

Now we are face to face with a situation where you should encourage us in every way possible to stimulate production in the United States. Fortunately there are rather substantial reserves in this country now, however, because private industry has been buying. Stocks in bond, as shown by the Bureau of Mines, are 913,000 tons of ore, whereas consumption for 1940 was over 1,300,000 tons. Those were the figures as of the beginning of 1941. There are some stocks in consumers' hands. Ordinarily those stocks are not large because as the ore is used it is reported and withdrawn from bond and it remains in bonded warehouses until consumed.

So all I want to do is emphasize to you that anything that can be done to encourage and stimulate the investment of private capital in the development of manganese should be done; and this exemption from tax will help, because some of the mines which have gotten under way have now suspended. They have asked me to determine what the Government's policy will be. It is this one day, and tomorrow it is something else. The first thing we heard was that the Government has been buying foreign ores at specifications lower than they have asked us domestic producers to meet. The next thing is they encouraged us with the financing through the elimination of the excess-profits tax, and now they have swept this away with the new bill of 1941. You have to have the manganese. I ask the question, where is that tonnage coming from? For years and years past domestic producers have been anxious and willing to speed production. We have brought it to the attention of all interested parties, and now we are face to face with the situation which we had hoped would not happen—that is, interference with the sea lanes, foreign shipping—and even though it were possible to get foreign ores from some other country, a million or a million and a half tons of manganese is a large tonnage when it comes to shipping.

Senator GUFFEY. Where do you get it from?

Mr. ADKERSON. The larger part of the supply in former years came from Russia; that is cut off. Second in importance is Africa, third is India, and fourth is Brazil, and the next is Cuba.

Senator GUFFEY. How many tons would it take to haul that; I mean tons of shipping?

Mr. ADKERSON. Well, it is 1,000,000 to 1,500,000. And, regardless of the ships, you cannot get anything from Russia today. Regardless of the ships, you would have to go all the way around the cape to get it from India, and today it is difficult to get it from Africa. You have to depend on Brazil and Cuba and the United States, and United States production is constantly faced with this and that discouragement, which leaves the producers confused as to whether the Government's policy is "Go ahead and produce," or whether the Government intends itself to do that.

Senator GERRY. Is there any difference between the ores—are they all equally good?

Mr. ADKERSON. Well, manganese is manganese, the same as gold is gold, lead is lead, and zinc is zinc. It is just a matter of concentration

by throwing out the waste material. The process means concentrating the manganese to a richness of 40 percent and above. That can be done with domestic ores or foreign ores. In some foreign countries—in India, for instance—they employ labor at 1½ cents an hour, employing the natives to pick out by hand the high-grade pieces of ore. In this country we have to employ machinery to pick those lumps, to concentrate the ore to a richness we desire, say, 45 or 48 percent or above, like at Butte and Anaconda, Mont., where today we raise it up to 60 percent, whereas as it comes out of the ground it is about 25 percent. Through this process it is raised to 60 percent, which is the highest grade in the world. That shows what can be done. We have an abundance of it here; it has not been developed. We have the process; it is not being utilized.

Senator DAVIS. Are you of the opinion that we have sufficient manganese to supply the United States if developed?

Mr. ADKERSON. I will say this, as I have said throughout: That we can increase production in the United States at the rate of 100,000 tons a year if the proper market is supplied. That means 100,000 tons this year, 200,000 the next, 300,000 the next, and so on.

Senator DAVIS. How would it work in competition with the Chilean and Brazilian manganese being shipped, in view of our higher production cost?

Mr. ADKERSON. Our costs would be greater; that is, wage and freight costs would be greater than those of foreign countries. During normal times foreign countries can supply it at a price lower than we can compete with, but the essence is—and what we have been trying to point out—that as long as that continues, all right; but what are you going to do if this foreign source is cut off? The question is, Where are you going to get your manganese?

Senator GUFFEY. How much differential would there be between what the American producer should get for his manganese of 48 percent compared with what we pay for the foreign? What is the average? The figures you gave indicated there was a 3 cents' difference.

Mr. ADKERSON. That doesn't amount to a thing. We should have had the tariff differential which would have amounted to 11 cents. The "buy American" law also should have made a differential of 25 percent effective. If we had had that, you would have had greater stimulation of the domestic development now.

Senator GUFFEY. What does that all mean in the price of an imported ton of ore as compared with the domestic ton?

Mr. ADKERSON. That would figure out about 88 cents for domestic as against 60 cents for foreign.

The CHAIRMAN. Thank you very much.

(A summary of the statement by Mr. Adkerson is as follows:)

SUMMARY OF STATEMENT OF J. CARSON ADKERSON, PRESIDENT, AMERICAN MANGANESE PRODUCERS ASSOCIATION

RE H. R. 5417, SECTION 206: CORPORATIONS ENGAGED IN MINING STRATEGIC METALS

Manganese is the No. 1 strategic mineral.

The Second Revenue Act of 1940 provided for the exemption, from the excess-profits-tax law, of domestic corporations mining strategic minerals.

Section 206 of H. R. 5417, as now written, will in effect nullify the excess-profits-tax exemption granted strategic minerals in the Second Revenue Act of 1940. It will discourage further investment of private capital in the develop-

ment of domestic manganese for national defense and will cause suspension of many new developments already under way.

The United States Bureau of Mines Bulletin, Manganese and Manganiferous Ores, Review of 1940, recently released, shows that stocks of manganese ore in bonded warehouses at the end of 1940 were 913,016 long tons and indicated consumption for the year 1940 was 1,322,202 tons. (See table, p. 568.)

Domestic production for the entire 12-month period of the current year will be approximately 100,000 tons, or only 8 percent of our present annual requirements.

During the next year our consumption of manganese ore may reach the record high of 1,500,000 tons annually.

Due to an increasing shortage of ships, there is increasing danger of a shortage of manganese. Additional new sources of supply must be developed.

During the war year 1918, domestic mines produced 305,000 tons of ore, averaging 40 percent metallic manganese. Most of it came from small producers and pioneer developments in mountain areas. With proper plants or equipment, domestic ores can be concentrated to 48 percent, as now desired by the Government. It takes time and money, and plenty of both.

One new domestic beneficiation plant at Anaconda, Mont., is just starting production of an estimated 100,000 tons per year of concentrates, running around 60 percent manganese.

However, in the face of Government action unfavorable to domestic manganese, private capital will not invest in additional plants.

To encourage and stimulate domestic developments, manganese should be exempt from the excess-profits-tax laws.

The CHAIRMAN. Senator Bunker, of Nevada.

STATEMENT OF HON. BERKELEY L. BUNKER, UNITED STATES SENATOR FROM THE STATE OF NEVADA

Senator BUNKER. Mr. Chairman, gentlemen, I am appearing on behalf of my State of Nevada, to speak particularly upon two points of deep interest to the people of my State. It is true that these two points affect only the mining industry, but whatever affects the mining industry affects the entire State of Nevada.

First, the bill before you repeals section 731 of the existing excess-profits-tax bill, which exempted the income from the production and sale of certain strategic minerals, namely, tungsten, quicksilver, manganese, platinum, antimony, chromite, and tin, from excess-profits taxes. Every reason which existed for writing this section into the Second Revenue Act of 1940 still exists; and, as a matter of fact, these reasons are more urgent now than they were when that law was written.

Second, the provisions of the law which subject to excess-profits tax the increased income due to increased production of metals is having a disastrous effect upon the mining business generally and, if incorporated in the new law which you are considering, together with the other adverse provisions of that law, will seriously retard the production of the metals so necessary to national defense.

Third, the fact that in the mining industry few corporations have reasonable earnings or invested-capital credits has subjected the mining industry to an excessive tax in comparison with other industries.

Fourth, the fact that the production of metals results in a using up of the capital of the mining corporation which can never be replaced must be taken into consideration in the imposition of excess-profits taxes.

Accordingly, I urge—

First. That the provisions of section 731 of the present law be restored.

Second. A formula should be written into the bill which will provide for subjection to excess-profits tax only so much of the income of a mining corporation as is derived from an increased price for the units mined. In other words, increase due to increased production and not increased price should not be treated as excess profits.

Third. Provision should be made for special treatment of cases where insufficient tax credits exist. In other words, there should be provided a tribunal which will adjust inequities due to abnormal situations.

There is no reason now for repeal of section 731. That section was put in the law because of the crying need for development of strategic minerals. Even before the present emergency became acute the Strategic Metals Act was passed. This provided for expenditure of $500,000 a year, for the years 1940, 1941, 1942, and 1943, to search for and appraise ore deposits containing metals which had been designated as strategic, this work to be done by the United States Bureau of Mines and the Geological Survey.

The Minerals Division of the Office of Production Management has been exerting every effort to bring about increased production of these strategic metals and to acquire stock piles by importations from abroad. A special corporation in R. F. C. has been formed to purchase metals and to allocate them among the defense industries. The situation as regards practically all metals has become acute.

Many mining companies have made contracts to furnish certain tonnages of metals and have gone to great expense in expanding plant facilities in order to fulfill these contracts. These contracts were made upon the theory that the proceeds would not be subject to excess-profits tax because of the passage of section 731. It was because of the situation then existing that the Congress made this exemption, realizing that only some extraordinary incentive could bring about domestic production of the metals listed in the exemption. It was attempted to supply this incentive for the investment of time and money in the attempt to increase domestic production. In effect, the Government said to the taxpayer: "You gamble your time and money in the effort to increase the production of these essential minerals, and if you are successful, the Government will give you preferential treatment, not as to normal taxes, but as to excess-profits taxes. The Government realizes that you are embarking upon an extremely risky and hazardous business. If you are unsuccessful, you lose your investment, and there is nothing we can do about it. But we do extend to you the promise of exemption from the excess-profits taxes if you are successful. We hope that you will be successful, because only through your success can we attain our objective—an increased production of these essential minerals."

If this section is repealed, the Government will gain little, if anything, in additional revenue, because unquestionably it will lose much of the normal tax that would have been levied upon metals produced because of the exemption. The defense authorities are crying out for these metals. It is important that the Congress continue this exemption which will assist so materially in providing what the defense authorities need.

To my mind it is unreasonable to subject to excess-profits tax the increased profits of the mining industry, which are brought about only by increased production and not through increased price per unit.

Mining is an industry which uses up its capital in the very process of production. The units extracted this year can never be replaced. Consequently, it is unfair, in my judgment, for the Government to urge the miner to produce more, thereby diminishing his capital, and at the same time levy a severe tax upon the increased production because of the miner's response to his Government's request. Of course, I do not mean that increased profit due to increased price per unit should not be subjected to excess-profits tax, but where the price is stabilized as it is at the present time, again in response to the Government's request, the miner should not be penalized for taking out more units when the Government needs them. Remember this, there are only so many units of metal in a mine. There may be more units than the miner anticipates; there may be less, but it is certain that the number is limited, and when they are exhausted the mine is done. A manufacturer or processor may increase his production and pay excess-profits taxes upon the increased profit therefrom, but after the emergency has passed he can purchase new raw materials, shape them into articles of commerce, and place them on the market. The situation is entirely different.

There should be provided a special tribunal of some kind to take care of special situations which are due to abnormal conditions. I understand such provisions were written into the excess-profits tax laws in effect during the first World War. I do not believe this Congress wishes to destroy any essential industry. I do not believe this Congress wishes to so cripple any essential industry that, when the emergency is over, it will not be able to proceed in an orderly manner to produce the goods necessary for our American way of life.

It is a fact that there are many mines in my State which suffered grievously from the depression and had no adequate earnings for the years 1936 to 1939. It is a fact that few, if any, mines in my State would have an adequate invested-capital allowance under the technical provisions of this act by which to measure the normal profits which should be exempt from the excess-profits tax. In this respect there is a wide difference among mining corporations, and the smaller corporations suffer most. Two, at least, of the base period years provided in this act were years of actual depression in the mining industry, and in none of the years was there anything above normal return. Consequently I believe that in all justice, at least as affects mining corporations, they should be permitted to select any 3 of those 4 base period years and to take the average of those 3 years in computing normal earnings.

Perhaps I am asking you to do the impossible in view of the heavy task which confronts you in the consideration of this bill. But I would like to refer you to the testimony of Charles B. Henderson, president of the Metals Reserve Company in the R. F. C., which testimony was given before a subcommittee of the Committee on Military Affairs on May 19, 1941, and will be found in the published hearings on Strategic and Critical Materials beginning at page 73. From this testimony you can secure a picture of the necessity for extraordinary measures to secure these all-important materials. In addition to the testimony of Mr. Henderson, there also appear statements of numerous other persons, completely informed upon this very important subject. I recommend your study of this testimony before you take the serious step of voting to repeal section 731.

The CHAIRMAN. Thank you, Senator Bunker. Mr. Evan Just?

(No response.)

The CHAIRMAN. Any other witnesses in the room who wish to be heard?

Senator DANAHER. Mr. Chairman, will you excuse me a minute?

The CHAIRMAN. Yes. That exhausts the list of witnesses. If there are other witnesses here who would like to appear, we will be glad to hear them. If Senator Danaher has anyone, he may come forward.

Senator TAFT. Mr. Schieffelin is here.

Mr. SCHIEFFELIN. I notice that the list of witnesses for tomorrow is considerable and I should like the opportunity if the committee desires to hear me, to be heard today. I have three copies here of a statement, copies of which I have for all members of the committee which I will have furnished to them.

Senator TAFT. Mr. Schieffelin represents the New York State Chamber of Commerce.

The CHAIRMAN. All right, Mr. Schieffelin, proceed.

STATEMENT OF W. J. SCHIEFFELIN, JR., CHAIRMAN, COMMITTEE ON TAXATION, CHAMBER OF COMMERCE OF THE STATE OF NEW YORK, NEW YORK, N. Y.

Mr. SCHIEFFELIN. My name is W. J. Schieffelin, Jr., my address 16 Cooper Square, New York City. I am chairman of the committee on taxation of the Chamber of Commerce of the State of New York. With your permission, I will go straight ahead to save your time.

The CHAIRMAN. Yes.

Mr. SCHIEFFELIN. Mr. Chairman and gentlemen, I represent the oldest commercial organization in our country, the Chamber of Commerce of the State of New York, with over 1,200 members responsible for the livelihood of hundreds of thousands of citizens working in scores of our Nation's leading industries.

The New York chamber fully endorses raising three and one-half billions of new revenue in the fiscal year ending June 30, 1942, and we record that weeks before Mr. Morgenthau made this proposal we asked Congress to raise "not less than three billion additional dollars." We congratulate both major parties that this has been made a nonpartisan issue, and we submit that recent appropriations perhaps make advisable the raising of an even larger sum this year.

We also endorse Mr. Morgenthau's clear statement to the Ways and Means Committee in April as to the four objectives of the new tax bill:

1. To pay two-thirds of the expected expenditures;
2. To provide that all sections of the people shall bear their fair share of the burden;
3. To help mobilize our resources for defense by reducing the amount of money that the public can spend for comparatively less important things; and
4. To prevent a general price rise by keeping the volume of purchasing power from outrunning production.

The present bill before you will not now accomplish (1), to pay two-thirds of the present expected expenditures. The principle, however, is still sound and our proposals will raise the additional

billions if Congress finds such immediate action desirable. We submit that such action would stave off inflation more simply and surely than any tinkering with the price structure.

We believe that neither the Treasury's proposals nor the House bill before you will accomplish the other three major objectives. In fact, the destructive practices which (3) and (4) are designed to prevent, are already well under way.

Before stating the reasons for our belief that the House bill fails to accomplish these purposes, and before presenting our specific program which we believe will accomplish these purposes, I should like to say a personal word.

I had the privilege of fighting in our Second Division, and my battalion commander was Major "Pa" Watson, now General Watson, aide to the President. As a man now medically unfit for active service, I am chairman of one of your 6,000 draft boards. After 9 months' experience I am happy to testify to the satisfaction of working as an administrator of the splendid, fair, democratic draft law you enacted.

In these ways I have tried to do my part for the country, and as one who has worked steadily to earn his living, I mention them to indicate that the harsh words to follow are offered not on behalf of any class or group, but for the benefit of every citizen.

We have all heard and perhaps approve the old statement that no tax is a good tax; yet today conditions force us to raise sums hitherto undreamed of. The New York Chamber's criticisms and concrete proposals are made from the point of view that the best interest of the Nation will be served first by increasing the yield from the present tax structure only to the maximum point which will not interfere with nor discourage national productivity, nor begin to dry up these existing sources of Government revenue; second, by entirely new taxes never heretofore levied by the Federal Government. This second step we believe essential, for our judgment is confirmed by many that the present structure cannot be safely expanded sufficiently to maintain the Nation's credit in the face of its obligations.

Now, first, for criticism of this bill. It appears to us that the House has completely failed to realize that an extension of the present too complicated, patchwork tax structure is not enough. This bill will neither prevent inflation nor carry the Nation's credit unimpaired through the critical days ahead.

While there is courage in this administration and in Congress, we see only one evidence of it on the part of the House in this bill; namely, the retention of the alternative method for computing excess profits tax. We are glad to extend our sincere thanks and appreciation to the Ways and Means Committee and to the House for this sound and just decision. We understand that the Senate is disposed to confirm it. If any serious conflict arises before you on this point we ask the privilege of again appearing before you to present compelling arguments for its retention.

On the other provisions of this bill both the Treasury and the House seem to be making a last frantic attempt to squeeze the major part of the new revenue out of one-tenth of the votes, all of whose property in toto is not enough to pay the expenditures. Realizing this stern fact the House has travailed to find ways to sugarcoat the

levies which can only be paid by the 90-odd percent of the voters who receive 70 percent of the national income. Unwilling as yet to tax this majority openly, the House refuses to broaden the base and imposes a hodgepodge of hidden sales or excise taxes on hundreds of products bought by almost all our people. While such taxes tend to lay the blame on business for increased retail prices, they actually increase costs to consumers far more than the actual amount of the taxes, due to trade discount schedules which cannot be changed without disrupting distribution. For a short arithmetical demonstration of this fact please see appendix II, appended to and made a part of this testimony.

Furthermore, in imposing these hidden sales taxes, the House has neglected to follow the recommendations (sound if such taxes are to be imposed at all) of Messrs. Eccles and Henderson that they apply only to articles the ingredients of which are needed for defense production, leaving increased purchasing power free to buy products which do not compete with national defense.

Senator BROWN. Before you leave the broadening of the base, are there any figures as to what we would gain thereby?

Mr. SCHIEFFELIN. I haven't any detailed figures on that.

Senator BROWN. Well, the Treasury has got them and they were available a while back. Though I am not opposed to it if it will produce the results, I am not at all sure that broadening the base would yield the proportionately increased income. My recollection is that the increased revenue, the major part of the $65,000,000 received after the last amendment came from those who were already taxpayers but whose exemptions were lower. My recollection further—and Mr. Stam can check me on this—is that the Treasury people testified that we got $19,000,000 from new taxpayers but it cost us $14,000,000 to collect it, and we made a net addition of $5,000,000. It is the revenue we are after and it doesn't seem to me we are doing a very wise thing in creating this huge class of new taxpayers from whom we may expect a yield of 75 cents to $1.50 and finally resulting in no substantial gain, as was the experience in the last bill. I grant that there is argument on the basis of making them tax conscious. The essential need, however, at this time is to raise money and we are not going to get it simply by broadening the base.

Mr. SCHIEFFELIN. You say, in effect, that the major part of the money comes from the existing taxpayers and that you would get more if these additional taxpayers were included but the collection problem is such as not to recommend their inclusion. I think it was Senator Connally who suggested a few days ago that if that were done those who paid wages, disbursed dividends, and so forth be made the tax collector, which would bring in considerably more money. Of course, if you make the reduction as suggested, you are going to get a considerably bigger figure and if it is done as the Senator recommends it is going to be practically net income to the Government.

The CHAIRMAN. I think, Senator Brown, that by lowering the base, I think if the base is lowered, the Treasury estimates $300,000,000 in new taxes.

Perhaps our staff has estimated it a little higher, but undoubtedly the great bulk of that would come out of the taxpayers already on the rolls.

Senator BROWN. My thought is it could be done without going to those people in the $750 class and thereabouts. You might increase the rate on those already taxed.

Mr. SCHIEFFELIN. May I say there that one of the arguments of our chamber is that it is a fairer way to get taxes from those people directly by lowering the exemptions, than by this hodgepodge method; I think that is a proper word for it—hodgepodge of hidden or excise taxes on hundreds of products bought by almost all our people, and on some of which the Government is already getting a large tax.

The CHAIRMAN. The House has one tax that directly affects the low income group as well as the high, and that is this use tax on automobiles.

Mr. SCHIEFFELIN. And that tax, I was happy to see, the Senate was considering eliminating; and if they broaden the base, they can eliminate it. By broadening the base you would get a fair proportion of revenue from these people.

Senator BROWN. I am not yet ready to advocate a sales tax, but I am ready for excise taxes on luxuries, but there is an argument there from the tax collectors' standpoint. It doesn't cost very much money to collect the revenue in that form.

Mr. SCHIEFFELIN. We are coming to that a little later, if I may proceed.

The CHAIRMAN. You may proceed.

Mr. SCHIEFFELIN. As for mandatory joint returns for husbands and wives, the House wisely yielded to the sound arguments against it, but threw in your laps the raising of the additional revenue lost by retaining the present alternative provision. Broadening the base and our proposal below for a brand-new tax will do it.

If joint returns pop up as a live issue before the Senate, we again ask the privilege of appearing before you to oppose it.

Final general criticism—and for this the administration must bear even greater blame than the House and the Senate—the House and you have failed to make even the billion-dollar economy recommended by Mr. Morgenthau. Only those who think you can have your cake and eat it too can support continuation of the present scale of nondefense expenditure. Close to 2 billions can be saved without interfering with essential Government functions. (See National Economy League publication, Indefensible Spending, sent months ago to every Member of Congress.)

Unless we are to have inflation, major economy has become a must. Inflation is partial national bankruptcy, taking from every worker and other citizen part of his property. It is the refuge and then usually the downfall of governments without the political courage to cut expenses to the bone and to tax widely and heavily enough to maintain national credit. It would make a hollow sham and quibble of the President's and the Treasury's promise that our citizens will be repaid by their Government all that they lend it.

To keep away this grim destroyer of the people's security and happiness, and to insure a sound foundation for the Nation's gigantic defense tax, the Chamber of Commerce of the State of New York presents the following twofold program and calls on Congress to enact its major provisions:

Federal taxation for national defense.—Resolved, That the Chamber of Commerce of the State of New York reaffirms its action of January 9, 1941, entitled

"Suggestions on Taxation," which are reproduced herewith as appendix No. 1; and be it

Resolved, That the chamber reaffirms its action on several other occasions as well opposing any new manufacturers' excise or sales taxes or any increase in present excise or sales taxes, because such taxes pyramid costs to consumers far more than the actual amount of tax. (See appendix No. 2.)

Senator TAFT. How do you feel as between this excise-tax program and a general manufacturers' sales tax?

Mr. SCHIEFFELIN. We think a manufacturers' sales tax has all the objections that a miscellaneous set of excise taxes has because it is hidden and actually increases the cost to consumers far more than the actual amount of the taxes.

Appendix 1 explains the arithmetical method of that. There are trade-discount schedules which are such an essential part of business that they cannot be materially changed without disrupting all distribution. The wholesaler is used to a 16½-percent discount and when he sells to the retailer the price is again pyramided; the retailer gets 40 percent, and with this 40 percent to the retailer and 16 percent to the wholesaler, the price increase paid by the consumer is far more than the actual amount of the tax. Our chamber opposes both the manufacturers' sales tax and excise taxes and in one moment I will be up to where we recommend two alternatives, entirely new taxes—retailers' sales tax where the consumer pays exactly what the Government gets and doesn't have the cost pyramided; and, too, a defense tax collected at the source on all gross income paid out to individuals. Those are the two new taxes we advocate.

The CHAIRMAN. Now, you would impose that on all income?

Mr. SCHIEFFELIN. That is the purpose, sir, based on the principle that the existing tax structure has gone to its safe maximum limit. It is a defense tax, purely and simply, a temporary tax only imposed for national credit security.

The CHAIRMAN. That would work fine in organized industry or in the case of disbursements made to collectors. When you come to apply it to several million farmers around the country you have a headache.

Mr. SCHIEFFELIN. That would be harder. It has been brought out that, in the cases of doctors, lawyers, and members of partnerships there would be difficulty. The law would have to be drawn as in the detailed study by Professor Lutz to provide for a check on withdrawals by members of partnerships, doctors, lawyers, and small businessmen.

The CHAIRMAN. I would be willing to go for that kind of a tax because I had the Treasury look into it months ago, but I must recognize the difficulties when you try to apply it to domestics, farmers, and where you can't have it withheld at the source. It would be a terrifically burdensome thing.

Mr. SCHIEFFELIN. Mr. Chairman, we admit that and I have said there would be some evasion there.

The CHAIRMAN. It is not so much a matter of evasion; it is the mechanics of the thing.

Mr. SCHIEFFELIN. It is strictly an emergency levy.

Senator BROWN. Would that be figured on the national income, say, $80,000,000,000? You would just take 4 percent or 5 percent of that?

Mr. SCHIEFFELIN. Yes; and we don't expect to get it all for the reasons the chairman has mentioned.

May I make one comment: The point has been raised also against this that it doesn't seem a fair tax because it doesn't take into account ability to pay; no exemption. Now, if this were the only tax to be paid by individuals, we would agree with that, but take a man that earns $100 a month and under this tax he would pay 5 percent or $5. It has been said that it is harder for a man receiving $100 to pay $5 of it than it is for a man earning $1,000 to pay $50. We agree with that but whereas the first man pays no income tax if married and pays only this $5 tax, the man receiving $1,000 pays, in addition to the $50 a month, another steeply graded income tax; and, in our judgment, that makes for fairness. We recommend this tax only as an emergency tax to be paid on a flat percentage basis by everybody because we feel that Federal credit is more important than the hardship such a tax would impose.

The CHAIRMAN. There would be no difference of agreement on it as an emergency or defense tax. There isn't anything our people couldn't bear. Of course it would work a greater burden on a man earning $25 or $50 a week income than on a man with a larger income. Nevertheless, it could be borne, but if you impose it the burden will be on the Treasury to collect it uniformly throughout this vast country and you have a large number of people with some cash income, personal income from many sources, who are not accustomed to paying a tax and making returns to the Government and others whose income is not in the form of cash; it is in the form of something produced which they take to the market to sell. That terrific burden would be more difficult to so many of our people than the actual cost; and that is the thing that has worried me about the suggestion.

Mr. SCHIEFFELIN. You have put your finger on the weakest part of this tax. At the other end I have taken the other example; tremendous sums would come in from corporations——

The CHAIRMAN. There would be no trouble from corporations; salaries or from lawyers, doctors, or organized industry; there would be no considerable trouble wherever you could have the tax withheld without throwing the burden on a vast number of small earners.

Mr. SCHIEFFELIN. Well, we weighed just those things and our chamber has recommended either a tax on retail sales or a defense tax collected at the source on all gross income paid out to individuals. Our taxation committee, however, though not by formal action of our chamber, thought there were fewer objections to this gross tax on income than this retailers' sales tax so that our official recommendation is one of the other of them with all their objections.

Mr. Robertson, of the House Ways and Means Committee, asked me how high a retail sales tax would have to be in order to bring in the $2,400,000,000. I didn't have the figures then but got estimates from the Department of Commerce. The last figures they give show $39,000,000,000 of retail sales for the year 1937, I think. Judged on the increased national income, Mr. Robertson agreed with me that probably $50,000,000,000 of retail sales for this year would be fair. Now, on that basis, to raise over $2,000,000,000, you would have to have a retail tax of just over 4 percent.

Senator BROWN. With food or clothing exempted?

Mr. SCHIEFFELIN. On everything. If you exempt food, clothing, and medicine, immediately to raise the revenue, the rate on everything else has to go up. It is a terrible dilemma. We thought however, that with all its faults, in a year or two these people whom you speak of, who for the first year would not pay, or who would experience difficulty in paying the tax—they are the one with the smallest incomes anyway—we feel slightly leaning toward this tax.

Senator TAFT. I would like to suggest two things: In the first place, we are going to get something like 17,000,000 individual returns and I doubt whether, out of this 17,000,000, there will be many who will not be the ones making the disbursement of wages. I don't see why, on their annual income tax return, you couldn't require an additional return by them of money paid out for wages, particularly any wages paid under say $500.

Mr. SCHIEFFELIN. Well, this proposal contemplates that every employer, paying wages to anybody—assuming you want to start at, say 2 percent—will withhold the amount of the tax.

Senator TAFT. I am referring to the cook, for instance. Most anybody paying a cook would probably be paying a personal income tax and I should think that a slight addition to their return would take care of the withheld tax in such a case; it would probably have to be done on an annual basis. The other point is, I think you would have to exempt rents. I don't see how you are going to make people pay a tax on the rents they pay. I think you would have to exempt them entirely from the withholding tax.

Mr. SCHIEFFELIN. Well, in almost all of these instances mentioned if a retail tax were imposed probably, as a practical matter, some basic essentials would have to be exempted but, as I said before, wherever you exempt, if you are going to raise a sum of money, you have to charge that much more some place else. I didn't follow your point, what you said concerning the case of a cook.

Senator TAFT. I am saying that the thought occurs to me that there are a number of those people, a very large number, and it is going to be difficult to have them make monthly returns—that is the employers of such domestics—but it occurs to me they would be practically all making annual returns in any event and could, as a part of such return, pay over to the Government the tax withheld by them.

Mr. SCHIEFFELIN. That is a very practical point. I think obviously, in the case of people such as you mentioned, the plan suggested by you would take care of the situation by withholding the tax and making annual or quarterly or semiannual returns to the Government. Everyone employed by anyone else would never receive this part of his income and that, I have understood, would be one of the strongest things to help keep down this inflation which seems on the way.

Mr. Chairman, I have only our conclusion to come to. Now, back again to what our chamber has finally and unanimously approved.

The chamber believes that the time has come for Congress to impose one or the other of these new taxes, not both; or such other tax as Congress may devise outside of and in addition to the present tax structure.

Let us again record our conviction that the people of our country are ready to undergo the sacrifices required by much higher taxes, as soon as they see sincere and effective action to put into effect the President's plea months ago that all nonessential Federal expenditures be cut to the bone.

In conclusion, let us summarize the three steps we believe necessary to put Federal finances on the firm basis required to carry our Nation through the critical days ahead:

I. *Stringent economy.*—Deferment and cessation of all nondefense capital and public works projects, holding these in abeyance as a backlog to help stabilize employment and business during the major readjustments of post-war reconstruction, such capital outlays being especially suitable for this purpose.

Close supervision of defense expenditures to keep necessary waste through haste to a minimum.

II. Increased and new taxes as presented in the Resolutions below, such taxes being designed for maximum yield consistent with minimum interference with national productivity.

III. *Borrowing.*—The required balance of funds not secured by economy and taxation can only be met by borrowing. Such borrowing should be kept to a minimum and so designed as to be subscribed to as far as possible by millions of individuals out of current earnings.

The defense bonds fulfill this requirement, and we congratulate the Treasury on this sound method of financing deficits. We call on all citizens to buy more of these bonds and to join us in insisting that Congress both economize and tax us the people more widely and heavily as urged herein. Economy and more taxes are all that will keep even United States obligations good.

(The resolutions and appendixes referred to are as follows:)

TAX PROGRAM

PART I

To make our recommendations specific for action by this Congress: Be it *Resolved*, That the Chamber urges Congress to—

(1) Decrease exemptions on individual incomes.

(2) Increase normal tax on individual incomes from present 4 percent to 6 percent (a 50 percent increase).

(3) Abolish capital-stock tax and the related declared value excess-profits tax on corporations, and increase present normal rate on net incomes of corporations from 24 percent to a figure not to exceed 30 percent. (This is almost a 67 percent increase over rates in effect before the Revenue Act of 1940, just over a year ago.)

In the judgment of the chamber these increases in the present tax structure will bring the yield to the maximum point which will not interfere with national productivity nor begin to dry up these sources of Government revenue.

We realize that the sound maximum return from the present tax structure presents debatable points. This House bill taxes individuals, particularly in the middle brackets, far higher than we recommend. As the financial picture has expanded so much since we testified before the Ways and Means Committee in April, we today concede that individual income taxes can perhaps safely as well as productively be increased somewhat over our above recommendation (2). We submit, however, that the refusal of the House to lower exemptions and thus tap directly the greatest source of increased national income, plus the raising of so much of the new revenue from present income-tax payers, will have far-reaching pernicious effects not only on the payers of these taxes but on that vast majority of wage-earning voters, now apparently sacrosanct, as well.

We feel the House underrates the intelligence and patriotism of its wage-earning constituents. We are convinced that these fine citizens are ready to undergo the sacrifices direct taxes will require of them. A few days ago the President himself called on the House to impose such taxes by lowering present exemptions.

True, these citizens will begin to say, "Stop wasting my money." Any member of the administration, any Member of Congress, who in the present world cataclysm continues to let fear of this result sway his influence or vote deserves to be returned to the private life the voters may send him to if refusal to economize and to tax widely and soundly now brings inflation.

Gentlemen, we verily believe our free Nation stands at a crossroads. More direct taxpayers, courageously legislated into existence by you, will help you stop the flagrant, spendthrift spending which persists to this day.

In spite of our concession above as to present income-tax paying individuals, it is our sincere belief that enactment in this bill of one of the two alternatives in part II below of our program will raise the needed revenue without going beyond our part I recommendations; and that parts I and II together constitute the soundest and fairest program we have seen, and one so flexible and simple that the ever higher taxes the President has said we must have every year in the near future can be raised without the months of hearings and hard work we are all going through now. This statement will be amplified below in our comments on part II B.

PART II

It is further the considered judgment of the chamber that the time has arrived for Congress to impose entirely new taxes never heretofore levied by the Federal Government.

Such taxes will bear heavily on the low- as well as on the high-income groups in our population. The chamber believes that no part of our people can be shielded from bearing a share of the defense burden. The chamber believes that the low-income group will be hurt less by paying more cash now than by a continuation of accelerated borrowing, with its inevitable inflationary effect of higher prices: Therefore be it

Resolved, That the chamber urges Congress to enact an entirely new tax to be paid by all the people, which added to the three increases recommended above should be at a rate designed to raise not less than 3½ billion additional dollars in the coming fiscal year ending June 30, 1942.

Either one of two new taxes will accomplish this result:

(A) A Federal tax on retail sales.

(B) A defense tax collected at the source on all gross incomes paid out to individuals.

This tax (B) is explained in detail by Prof. Harley L. Lutz in a publication of the National Economy League entitled "Financing the Defense Program," though the chamber does not now recommend as high a rate as proposed by Professor Lutz. This publication has been sent to every Member of the Congress and copies may be secured upon application to the National Economy League, 280 Madison Avenue, New York City.

This tax (B) is far more than a so-called pay-roll tax. It is a tax on all dividends, interest, rents, and all other cash income received by individuals. It is even better than pay as you go: Actually the Government receives it without the taxpayer ever having had it, as all payers of income become the tax collectors. For example, the American Telephone & Telegraph would deduct from its dividend checks the percentage imposed by Congress, and send to the Treasury in one check the taxes of each of its 630,000 stockholders.

While there might be some evasion as in most taxes, yet on an estimated 90 billion national income a 2% rate should raise close to 1½ billions. And here we come to the flexibility and simplicity referred to above. Impose this tax at whatever low rate you require to raise the amount you want this year, over and above whatever increases you make in the existing tax structure, which we assume will be pushed to the safe maximum limit. Then next year and the year after, if even greater revenues are required, all you have to do is to pass a one sentence tax bill: "Gross individual income tax for this year shall be 3, 4, 5, or 6 percent." No hearings, no months of head-scratching.

While this principle also applies to a retail sales tax which our chamber presents as an alternative, our tax committee feels that this tax on all gross incomes paid out to individuals is free from many of the disadvantages urged

against a retail sales tax. We therefore, though without formal action by our whole membership, recommend this gross individual income tax as the soundest and fairest method we have seen of raising the additional sums the present tax structure cannot stand.

Now back again finally to what our chamber has formally and unanimously approved:

The chamber believes that the time has come for Congress to impose one or the other of these new taxes, not both; or such other tax as Congress may devise outside of and in addition to the present tax structure.

Let us again record our conviction that the people of our country are ready to undergo the sacrifices required by much higher taxes, as soon as they see sincere and effective action to put into effect the President's plea months ago that all nonessential Federal expenditures be cut to the bone.

In conclusion, let us summarize the three steps we believe necessary to put Federal finances on the firm basis required to carry our Nation through the critical days ahead:

I. *Stringent economy.*—Deferment and cessation of all nondefense capital and public-works projects, holding these in abeyance as a backlog to help stabilize employment and business during the major readjustments of post-war reconstruction, such capital outlays being especially suitable for this purpose. Close supervision of defense expenditures to keep necessary waste through haste to a minimum.

II. Increased and new taxes as presented in the resolutions above, such taxes being designed for maximum yield consistent with minimum interference with national productivity.

III. *Borrowing.*—The required balance of funds not secured by economy and taxation can only be met by borrowing. Such borrowing should be kept to a minimum and so designed as to be subscribed to as far as possible by millions of individuals out of current earnings.

The defense bonds fulfill this requirement, and we congratulate the Treasury on this sound method of financing deficits. We call on all citizens to buy more of these bonds and to join us in insisting that Congress both economize and tax us the people more widely and heavily as urged herein. Economy and more taxes are all that will keep even United States obligations good.

APPENDIX No. 1

At the regular monthly meeting of the Chamber of Commerce of the State of New York, held January 9, 1941, the following resolution and report, submitted by its committee on taxation, were unanimously adopted:

To the Chamber of Commerce:

The committee on taxation offers the following resolution:

Resolved, That the Chamber of Commerce of the State of New York directs that the following suggestions on taxation be sent to the President and the Members of Congress and to other chambers, business associations, and labor organizations throughout the United States:

SUGGESTIONS ON TAXATION

With the Nation united in demanding and supporting adequate defense, it is far from united on how to pay the cost. Following the President's call for "great sacrifice," it is not yet facing the individual sacrifices, inconveniences, and self-denial which must be grimly and, if possible, cheerfully accepted. To the New York chamber it appears that a major task before organizations of labor and business is to convince the people that even desirable public improvements, such as highways, parks, new school buildings, and many other things for the public welfare, must be put off until the world is again at peace; that the alternative is national bankruptcy, with its destructive effect on the life and home of every citizen. Organizations can undertake this task through their memberships and local newspapers.

After the fall of France the great defender of Verdun, Marshal Petain, on June 20, 1940, broadcast the following to his people:

"We should learn a lesson from the battle which has been lost. Since the victory (of 1918) the spirit of pleasure has prevailed over the spirit of sacrifice. People have demanded more than they have given. They have wanted to spare themselves effort."

The larger taxes to pay for our defense can only be made supportable if other expenditures which cause taxation are reduced. They cannot be reduced enough to pay fully for our armaments, in spite of great relief savings due to increased employment. Unless local and State and all Federal expenditures except for defense, are cut to the bone, it is our judgment that the present rate of expenditure by these three forms of government, plus rearmament, will bring national and personal financial ruin.

As a program for business and labor organizations to work on side by side we bring forward the following proposals:

1. Nation-wide campaign to bring public to realization that the only way to reduce taxes is for the people to demand deferment of even desirable public improvements. Nondefense expenditures can be cut by billions, but only when the majority of citizens realize that they must wait for many things they would like to have.

2. State and local taxes and expenditures must be reduced to make possible the payment of the huge costs of defense, which the Nation is united in demanding.

3. National Budget on sound accounting principles. All Federal income and expenditures should be on condensed income and expense statement for the Nation's stockholders—the people—with the same completeness of disclosure required of business by the Securities and Exchange Commission.

4. Tax program:

A. Lower personal income-tax exemptions still further. Reduce highest bracket individual surtaxes, as long advocated by tax experts, congressional leaders, and others.

B. Abolish capital-gains-and-loss taxes.

C. Abolish Federal capital-stock tax.

D. Increase flat corporation income tax by more than enough to make up the loss of revenue from these simplifying reductions. Corporations can in our opinion pay such higher tax if they are relieved of present harassing and time-wasting provisions such as the capital-stock tax.

E. Oppose manufacturers' sales tax and larger excise taxes. Such taxes pyramid costs to consumers far more than the actual amount of tax, due to trade-discount schedules which are such an essential part of business that they cannot be materially changed without disrupting all distribution.

5. This suggestion touches on a controversial subject. It embodies our belief that it is of such importance it should be discussed. While not advocating a Nation-wide retail-sales tax at this time, we recommend the spreading of the knowledge that this is the ultimate means for our Government to collect revenue if the time comes when such action is necessary. This tax will bring tax consciousness to every citizen. While it bears proportionately harder on the poor than on the rich, it does not bear so hard on the poor in increasing prices as present hidden indirect taxes, for the reason explained in 4–E above. By itself a retail-sales tax would be neither just nor tolerable, yet superimposed on the graduated-income and corporation taxes, this unfairness is to a large degree wiped out. It should be considered a last resort to maintain national credit and used only when other taxes based on ability to pay have reached or passed the point of diminishing returns, or serve to increase unemployment.

Conclusion.—While these suggestions do not pretend to be all-inclusive, they are presented in the belief that the world emergency calls for coordinated action by the leaders of labor and business.

Suggestions 1, 2, and 3 of the above program appear to us to contain general principles on which all can unite.

No. 4—the tax program—epitomizes our own present thoughts for constructive Federal action. To attain unanimity over the country is a gigantic task which we feel must be tackled. We are ready to accept and support sound modifications of the proposals outlined. We send them to you with the urgent request that you bring them before your membership and your local press, and notify us of their reactions and suggestions.

Then we may all be able to back our elected representatives in producing a sound tax law, which only means one that is best for the future of every human being in our country.

Respectfully submitted.

Executive Vice President.

Attest:
B. COLWELL DAVIS, JR.,
Secretary.

NEW YORK, *January 9, 1941.*

APPENDIX NO. 2

Comments by W. J. Schieffelin, Jr., on retail sales tax versus manufacturers' sales tax and excise taxes at the monthly meeting of the chamber January 9, 1941:

Mr. President, since so much discussion has come up on the question of the sales tax, might I be permitted about 3 minutes, for the sake of the record, to make a short clarfying statement, answering a number of questions which were asked me about 4–E, opposing manufacturers' sales tax and larger excise taxes.

Gentlemen, if you approve it, finally, this report is going all over the country, and this statement about manufacturers' sales taxes pyramiding the price to consumers far more than the extent of the tax is not fully understood by a good many people.

Here is a short arithmetical example. Take an item that retails at a dollar, and, to take a rather extreme but simple case, assume that the retailer receives a 40-percent discount. He pays 60 cents to the wholesaler. Take 16⅔ off that. A sixth off 60 gives you 50 cents that the manufacturer gets. The manufacturer gets half what the public pays.

Now, assume a 10-cent manufacturers' sales tax added to the 50 cents. It means that the manufacturer receives 60 cents from the wholesaler. On the scale of discounts, 40 and 10⅔, on which that whole trade is based, the public is going to pay double that, or $1.20. A 10-cent tax makes the public pay 20 cents more for the item.

The additional 10 cents goes to the wholesaler and the retailer, but is not net addition to their profit, because their accounts payable are bigger, their accounts receivable are bigger, and, more important than all, that big increase of 20 percent in retail price has an effect on the sale of that item. If sales go down materially, the Government loses as well as the wholesaler, retailer, and manufacturer, by having their profits and income taxes reduced.

Now, take that 10-cent tax, which is all the Government gets out of this 20-cent increase that the public pays, and tack it on as a retail sales tax at the last point of sale (in the form of stamps, if you like, as was done in the Spanish-American War, making it easy of collection). The manufacturer, wholesaler, and retailer do not upset their prices at all. The price to the public is still listed as $1, plus a 10-cent tax.

The public pays exactly the 10 cents that the Government gets, and the price to the consumer has gone up the exact amount of the tax instead of double the amount of the tax.

Now, in all trade discount schedules less than 40 and 16, the public pays more than the amount of any manufacturers' sales tax. It is not double, but in every case it is more than the amount of the tax, and that is one reason, in addition to making the public realize that they are paying the tax, in this case for defense purposes, why actually a retail sales tax saves the public money over a manufacturers' sales tax or an excise tax.

The figures I have given are true of existing manufacturers' sales taxes on cosmetics and other things, and the high present excise taxes.

Thank you for letting me make that statement.

The CHAIRMAN. Thank you very much. Any questions?

(No response.)

Senator HERRING. Mr. Chairman, I wish to have incorporated in the record, for the consideration of the committee, a statement prepared by Mr. E. H. Pollard, of Fort Madison, Iowa, on behalf of the W. A. Sheaffer Pen Co. of that city. Mr. Pollard is submitting this statement or brief in lieu of a personal appearance.

The CHAIRMAN. It will be incorporated in the record.

(The statement by Mr. Pollard is as follows:)

STATEMENT BY E. H. POLLARD ON BEHALF OF W. A. SHEAFFER PEN CO., FORT MADISON, IOWA

Section 2400 of the revenue bill of 1941 as passed by the House subjects to a 10-percent retail sales tax: "Articles made of, or ornamented, mounted or fitted with, precious metals or imitations thereof."

The "engine" of the fountain pen—the part that makes smooth and easy writing possible—is the nib or pen point. This nib is likewise the part which is subjected to the greatest amount of wear. No material has ever been developed which is comparable to a gold nib suitably tipped with precious metals of the greatest hardness—not a gold plated nib or gold washed but of at least 12-karat gold throughout and the best nibs of 14 karat. No other nib wears as long or is as noncorrosive when in contact with writing fluids. A stainless steel nib has to a limited degree these same qualities; but a good gold nib will outlast literally dozens of such steel nibs.

The W. A. Sheaffer Pen Co. and the Parker Pen Co. guarantee their best quality fountain pens for the life of the purchaser; the only requirement imposed for the fulfillment of the guaranty is a service charge of 35 cents to partially defray the cost of postage and handling. The average life of the nibs in the pens thus guaranteed is many, many years, and these nibs under normal usage do not wear out during the life of the purchasers. Other fountain-pen companies give guaranties of equal or even greater length. It will not be possible to give such guaranties or service contracts unless gold nibs are used.

It will therefore be apparent:

1. No long-life fountain pen can be made without making the nib or pen point of gold.

2. Such long-life fountain pens will therefore be subject to the 10-percent retail sales tax of section 2400 no matter how the fountain pen is ornamented—in fact, even though it is not ornamented in any way, let alone with precious metals or imitations thereof.

3. The solid gold nib or pen point in a fountain pen serves a utilitarian and not an ornamental purpose. A fountain pen is therefore not properly included under section 2400 which is directed primarily at articles of an ornamental character.

4. Frames or mounting for spectacles or eye glasses are excluded by section 2400. The same reasons or grounds exist for exempting fountain pens, viz, that they are necessary and useful articles. There is also the additional reason that frames or mountings for spectacles or eye glasses can be made just as well out of many materials other than gold or any precious metal or imitation thereof.

5. There is no shortage of gold. It is not a priority material. The solid gold nib will replace many pen points or nibs made of such material as stainless steel for which a demand exists for defense purposes.

In addition to the foregoing reasons applicable to fountain pens the following reasons exist for exempting mechanical pencils and fountain pen desk sets as well as fountain pens:

(*a*) They are all time saving, efficiency producing articles—a fact not to be ignored in any office force or on the desk of a busy executive, particularly in a factory engaged in defense work. Management tools are as essential for production as production tools.

(*b*) If it is desired to discourage through taxation consumer purchasing of articles which use a large amount of defense and priority materials such as

automobiles, this objective can be furthered if other articles are available toward which the increased purchasing power of the public can be directed. Unless such other articles are available, purchases of articles using a large amount of defense materials will not be effectively discouraged even though the price of such articles is materially increased.

(c) The amount of revenue derived by this tax will be very small, if the industry changes over its mechanical pencils, desk sets, and cheaper and shorter-lived fountain pens to avoid the use of ornamentation, mountings, or fittings with precious metals or imitations thereof.

(d) The largest portion of the sales of fountain pens, mechanical pencils, and desk sets takes place in stationery stores, department stores, and drug stores. In these retail stores there will be relatively few articles in the same price class which compete with writing instruments for the purchaser's dollar and which are subject to this special and very high tax. In practical operation the tax will be almost double the 10-percent manufacturers' sales taxes imposed by section 3406 of the House bill. In jewelry stores there will be a substantial percentage of competing articles bearing this same retail sales tax but only a relatively small part of fountain pens, mechanical pencils, and desk sets are sold in jewelry stores.

It is suggested that section 2400 be amended by striking out the period at the end thereof and inserting in lieu thereof: ", or to fountain pens, mechanical pencils, or fountain pen desk sets."

As a minimum of relief from the discriminatory effect of this section the retail sales tax should be reduced to 5 percent and the following words should be added to the end of the section, viz: "or to fountain pens," even if the committee does not see fit to exempt mechanical pencils and desk sets as well as fountain pens.

Respectfully submitted.

W. A. SHEAFFER PEN CO.,
By E. H. POLLARD.

The CHAIRMAN. The committee will recess until 10 o'clock tomorrow morning.

(Whereupon, at 4:30 p. m., a recess was taken until 10 a. m., Wednesday, August 20, 1941.)

REVENUE ACT OF 1941

AUGUST 20, 1941

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee, at 10 a. m., pursuant to adjournment, met in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Mr. Ray Murphy.

Mr. Murphy, will you please, sir, give your name to the reporter?

Mr. MURPHY. My name is Ray Murphy. I am assistant general manager of the Association of Casualty and Surety Executives, New York City.

The CHAIRMAN. You may proceed.

STATEMENT OF RAY MURPHY, NEW YORK, N. Y., ASSISTANT GENERAL MANAGER OF THE ASSOCIATION OF CASUALTY AND SURETY EXECUTIVES

Mr. MURPHY. Gentlemen of the committee, my appearance is on behalf of the Association of Casualty and Surety Executives, a group of capital stock casualty insurance and surety companies.

Perhaps the majority of witnesses appearing before this committee, not denying the necessity of raising large sums of money by means of the 1941 revenue bill, have nevertheless contented themselves with attempting to demonstrate why the levy of the proposed tax upon their particular groups will be inequitable. Varying the procedure, and, frankly, affected by a competitive condition, it is the purpose of this association to point out a source of revenue which has been virtually untapped, consisting of a group which each year shows large incomes and yet contributes but a pittance to the cost of operation of the Federal Government.

For many years a discrimination favorable to large commercial mutual casualty, fire, and surety companies has existed, due in part to provisions of law and in part to interpretations thereof, by reason of which capital-stock casualty, fire, and surety companies have been required to pay the same rates of taxation as are applied to corporations in other fields of industry, whereas such large commercial mutual companies almost completely escape the payment of Federal income taxes. Such nontaxpaying commercial mutuals are directly competitive with the taxpaying capital-stock companies. The capital-stock companies are subject to the laws pertaining to excess-

profits taxes; the mutual companies paying practically no income taxes, of course, pay no excess-profits taxes.

At a time when the efforts of the Government and our people are directed to all-out national defense, capital-stock companies pay taxes as prescribed by law for the support of those efforts, including taxes on any profits from national-defense projects. Mutual companies pay none, yet they receive a part, and for a time it seemed would receive all, of the casualty insurance and surety business incident to national-defense contracts.

This presentation is directed toward that group of mutual casualty and surety companies which are strictly commercial and national in scope, and not toward the local organizations whose reason for existence is to provide insurance at cost to persons located within limited territories.

During the years 1936, 1937, and 1938 the commercial mutual casualty insurance and surety companies of the United States, as shown by exhibit 1 hereof, had total investment and underwriting profits of approximately $140,000,000 and paid a total combined Federal income tax of less than $25,000 per annum.[1] An individual example is as follows: In the year 1938 a certain capital-stock casualty company had earned premiums of $37,500,000; a certain mutual company had earned premiums of $40,200,000; the stock company had an underwriting gain of $4,170,000; the mutual company had an underwriting gain of $9,365,000; the capital-stock company had an investment gain of $1,790,000; the mutual company had an investment gain of $1,768,000. On such business the capital stock company in 1939 paid Federal income tax of $891,000; on such business in 1939 the mutual company paid Federal income tax of $8,245.

The basis of this virtual exemption from income tax of these mutual insurance companies is section 207 (c) (3) of the Internal Revenue Code, which provides that such companies, in computing their taxable net incomes, shall be allowed to deduct from the gross:

(1) "The amount of premium deposits returned to their policyholders," by reason of which dividends paid to policyholders are now deductible.

(2) "The amount of premium deposits retained for the payment of losses, expenses, and reinsurance reserves"; that is, all profits which are added to their surpluses. In practice, and as a consequence of a Treasury Department regulation under section 207 (c) (3),[2] these mutual companies are further allowed to deduct.

---

[1] 1936, 1937, and 1938 are the last years for which complete income and tax figures are available. The statements of mutual companies for the years 1939 and 1940 probably show greater profits than in the years considered, with a correspondingly greater disparity between total profits and Federal taxes.

Attached hereto as exhibit 1 is a chart showing the incomes and Federal taxes of the stock and mutual casualty and surety companies during the years 1936 to 1938, their Federal tax payments, and an estimate of what the taxes of the mutual companies would be if taxed on the basis suggested by us in this statement. The source and significance of the figures therein contained are explained in a memorandum attached to the chart. Unless otherwise specified all further aggregate figures contained in this statement are from the annexed chart. Unless otherwise specified all further aggregate figures contained in this statement are from the annexed chart and explanatory memorandum.

[2] Sec. 19.207-6, Regulations 103, which provides that "In determining the amount of premium deposits retained by a mutual fire or a mutual casualty and surety company for the payment of losses, expenses, and reinsurance reserves, it will be presumed that losses and expenses have been paid out of earnings and profits other than premiums to the extent of such earnings and profits * * *." Pursuant to this rule, a mutual company, in computing its taxable income, is permitted to apply its investment gains to the payment of losses. An amount of premium deposit equal to its investment gains is thus released to be added to nontaxable "premium deposits retained for the payment of losses, expenses, and reinsurance reserves." Thus its investment gains are exempted from the income tax.

(3) Their profits from investments. The net result is that no taxable income remains and the mutual companies are, therefore, practically exempt from the Federal income tax law.

We propose that section 207 (c) (3) be amended so as to put commercial mutual casualty and surety companies on the same basis for tax purposes as capital stock insurance companies writing the same lines of business. If the profits of these mutual companies during each of the years 1936, 1937, and 1938 had been taxed on the same basis as those of their stock company competitors, they would have contributed $5,000,000 annually to the Treasury instead of the negligible amounts paid.

This estimate does not include the possible tax income from commercial, national mutual fire insurance companies, to which the principles of this brief apply as well.

There is no equitable reason why the large commercial mutuals should be allowed these deductions in computing their taxable incomes. Dividends paid to policyholders come from the profits of these companies just as do the dividends to stockholders of stock companies. To argue that, in computing their incomes for tax purposes, stock companies should be allowed first to deduct dividends paid, would be patently absurd. Equally is this so in the case of mutual company dividends.

"The deduction of the amount of premium deposits retained for the payment of losses, expenses, and reinsurance reserves," as permitted by section 207 (c) (3) of the Internal Revenue Code, is a euphemism to describe deduction of additions to surplus. These sums represent profits of mutual companies no less than do the stock companies' additions to their surpluses. Short of a catastrophe comparable to another Biblical flood, these surpluses, which have grown by the millions of dollars through tax-free additions thereto in recent years, will in large part never be touched by policy claims. In any event, these surpluses are sufficiently large so that there will be no prejudice to policyholders if additions thereto are taxed on a fair and equitable basis. It should further be borne in mind that these mutual companies have already set aside in their liabilities all of the necessary additions to reserves for losses and expenses and reinsurance reserves, and are allowed such additions as deductions in the computation of their net incomes.

The case for taxing the interest, dividends, and rents derived from the investments made by these large commercial mutual companies is such an obvious one as to need no laboring. It is questionable whether the Congress ever intended that these profits be exempted from tax, but, if not, by regulation of the Treasury Department, this result is achieved. Amendment of section 207 (c) (3) as suggested, would eliminate the present exemption.

In making the suggestion that the Internal Revenue Code be amended as above, this association, as heretofore indicated, has not been unmindful of the fact that, as distinct from the large commercial mutuals, there are a vast number of small, genuinely "mutual" and "nonprofit" insurance companies, serving their policyholders at cost, for which the Congress had provided special consideration in the matter of Federal income tax. The larger number of these companies are already completely exempted from income tax by subdivision (11)

of section 101 of the Internal Revenue Code.[3] Further to insure that no mutual, whose principal objective is to sell insurance at cost but which, incidental to its operation during a particular year, may show some profit, shall be subject to tax, this association proposed that, coincidentally with the amendment of section 207 (c) (3), section 207 (a), which fixes the rate of tax upon commercial mutual insurance companies, other than life and marine, be amended so as to provide that such a company be allowed a credit of $100,000 against net income.

Surely the allowance of such a generous credit will provide more than ample protection for the local mutuals. And to the end that no commercial mutuals shall be permitted to come within the provisions of section 101 (11) of the Code, we further suggest that such subsection be amended to provide clearly that no company with a net income in excess of $100,000 shall be exempted thereunder.

I am not going to take the time of the committee, I am sure, to refer further to the exhibits attached to the statement, but I would like to have them inserted in the record.

The CHAIRMAN. That will be done. Did you appear before the Ways and Means Committee, Mr. Murphy?

Mr. MURPHY. I did not, sir.

The CHAIRMAN. This matter was not opened up before the Ways and Means Committee; that is, your suggestion?

Mr. MURPHY. Not to my knowledge.

(The exhibit and table referred to are as follows:)

EXHIBIT 1.—FEDERAL TAX PAYMENTS, 1936-38, STOCK AND MUTUAL CASUALTY AND SURETY COMPANIES

The table attached hereto is based upon a study of the Federal income tax payments of 58 stock and 10 mutual casualty and surety companies on business done during the 3-year period ending December 31, 1938. These 58 stock casualty and surety companies wrote approximately 70 percent of the total business written by all stock casualty and surety companies and the 10 mutual companies wrote 75 percent of the total business written by all mutual companies for the same 3-year period in the United States. As is indicated by this table, during the period covered, the stock companies had a total of investment and underwriting gains of approximately $174,000,000 (item A (4)) on which they paid an income tax to the Federal Government of approximately $19,000,000 (item A (5)). The mutual companies had corresponding aggregate investment and underwriting gains of approximately $105,000,000 (item B (4)). On these net investment and underwriting gains of $105,000,000 mutual companies paid a total income tax, for the 3 years, of only $50,000.

The taxes of $19,000,000 paid by the stock casualty companies represented approximately 11 percent of their total gains of $174,000,000. The mutual companies, writing 75 percent of the total business written by all mutual companies, had total gains of $105,000,000. Thus it may be estimated that all mutual causalty companies combined had total investment and underwriting gains of $140,000,000. If mutuals had been taxed on the same basis as stock companies during these years, they would have paid in Federal income taxes approximately 11 percent on this total of $140,000,000, or $15,400,000. Their total combined taxes for 1 year would have been approximately $5,000,000.

[3] "SEC. 101. EXEMPTIONS FROM TAX ON CORPORATIONS.—The following organizations shall be exempt from taxation under the chapter—

"* * * (11) Farmers' or other mutual hail, cyclone, casualty, or fire insurance companies or associations (including interinsurers and reciprocal underwriters) the income of which is used or held for the purpose of paying losses or expenses; * * *."

Federal income taxes, 1936–38

A. 58 STOCK CASUALTY AND SURETY COMPANIES

	Premium income (1)	Underwriting gain (2)	Investment gain (3)	Total gain (cols. 2 and 3) (4)	Federal taxes paid (5)
1936	$579,447,925	$24,354,320	$65,144,551	$89,498,871	[1] $5,306,008
1937	631,942,270	38,214,596	−43,307,020	−5,092,424	7,327,853
1938	614,572,164	41,077,098	48,515,500	89,592,598	[2] 9,102,563
Total	1,825,962,359	103,646,014	70,353,031	173,999,045	[2] 22,279,853

B. 19 MUTUAL CASUALTY AND SURETY COMPANIES

1936	$142,826,209	$24,171,654	$8,883,326	$33,054,980	$229,722
1937	171,265,803	32,736,054	−1,114,268	31,621,786	220,690
1938	169,855,992	33,677,683	6,743,797	40,421,480	[3] 281,800
Total	483,948,004	90,585,391	14,512,855	105,098,246	[3] 732,212

[1] 1937 statement.

Federal tax payments of a company on business of a particular year appear in the annual statement for the following year. Thus taxes of 1936 business appear in the statement of 1937 business, etc. Column 5 reflects this fact.

[2] Of which $1,102,563 was Social Security.

[3] Of which $265,110 was Social Security.

The 1939 annual convention statements indicated what part of the companies' Federal tax payments was for the Social Security taxes. Employing as a guide the ratio between Social Security and income taxes there indicated, it may be estimated that the 58 stock companies, on 1936–38 business, paid income taxes aggregating approximately $19,000,000; the 19 mutuals paid about $50,000 taxes on income during those years.

Senator DANAHER. Mr. Chairman.

The CHAIRMAN. Senator Danaher.

Senator DANAHER. Who gets the advantage of the earnings that thus are not taxed, Mr. Murphy, in the mutual companies?

Mr. MURPHY. The advantage, of course, inures to those to whom the so-called dividends are returned, and then, of course, there is the addition to surplus. No individual gets any particular benefit from that, I assume.

Senator DANAHER. Do the policyholders get the benefit of it?

Mr. MURPHY. They get the benefit to the extent that their policies, I assume, are made more secure by the addition to surplus, but they get no distribution of that money.

Senator DANAHER. Do they get an advantage in lower rates?

Mr. MURPHY. They do when dividends are returned.

Senator DANAHER. Are not dividends returned when earned?

Mr. MURPHY. When earned, usually I assume so, yes. In the case of all these so-called larger commercial mutual companies, I should say they are uniformly returned.

Senator DANAHER. Then when dividends are earned and are returned to the policyholders, are they not taxable to the policyholders?

Mr. MURPHY. I assume they are, the same as the dividend returned by the stock companies, that are returned to their stockholders.

Senator DANAHER. So that they are subject to tax on that extent anyway?

Mr. MURPHY. In the hands of the individual, assuming he pays an income tax, they would be. That same thing is true, Senator, as I say, of the dividends paids to stockholders of the stock com-

panies. At the same time those dividends are already previously taxed by payment of the tax to the Federal Government.

In the one case, we might assume there is a double tax, and in the other, there is the ordinary tax paid by the individual.

Senator DANAHER. Granting that the earnings are carried over to surplus, or are distributed to policyholders as earned, where is there any advantage to the company, the Mutual Co.?

Mr. MURPHY. The advantage to the company is, I assume, a competitive one, showing that they have a strength comparable to their competitors.

Senator DANAHER. Thank you, sir.

Senator VANDENBERG. The net results is a competitive advantage in rates in the final analysis?

Mr. MURPHY. That is one of the net results, Senator. A net result, of course, is that no tax is paid to the Government.

The CHAIRMAN. Thank you kindly for your appearance.

The CHAIRMAN. Mr. Paul W. Adams.

STATEMENT OF PAUL W. ADAMS, HARTFORD, CONN., COUNSEL FOR MANUFACTURERS ASSOCIATION OF CONNECTICUT

Mr. ADAMS. My name is Paul W. Adams. I am counsel for the Manufacturers Association of Connecticut, Hartford, Conn.

The CHAIRMAN. Yes, sir. Mr. Adams, you may proceed with your statement.

Mr. ADAMS. Our association represents practically all of the bona fide manufacturers in Connecticut, and their employment includes approximately 95 percent of the total manufacturing employment in Connecticut.

We have studied very carefully the bill as passed by the House and we have several items which we would like to present to your committe for consideration in your action on this bill.

First, we are very much concerned in the matter of the average-earnings method of computing the credit, and we hope that your committee will see it possible to include that alternative method as the House bill does. If it is not retained, many Connecticut manufacturers will suffer great hardship as the result of this.

Second, we believe that the present rates, based on the amount of excess profits, work a great hardship to the stockholders, particularly in the large corporations, or corporations who have large earnings, and we hope that this committe will again give favorable consideration to the matter of basing the excess-profits tax rate on the ratio of the profits to their average earnings, or to their credit.

The CHAIRMAN. We did that last year.

Mr. ADAMS. Yes, sir.

The CHAIRMAN. We did not have any luck in the House.

Mr. ADAMS. We hope that you will have some luck this year. If you will present it to the Senate for consideration.

It has been demonstrated that the effect of this is to take from the stockholders' return on his capital investment, a larger portion where the amount of the earnings is large than where the earnings are small.

I have a statement which I would like to file with the clerk as a part of the record.

The CHAIRMAN. We will be pleased to have you put it in the record; yes.

Mr. ADAMS. With that statement is a chart, showing the effect and the impact of this rate provision.

The CHAIRMAN. I do not think there could be any doubt about that, in fact, I think this committee thoroughly agreed with you in the past. We were not able to get it, because one of the great difficulties always in getting a sound principle frequently is we are going to lose a lot of revenue and that deters us, it enables the House to stand out against it. I do not think the House would approve the present bracketing on the dollar basis any more than we would and, at the same time, there is tremendous revenue involved. There cannot be any doubt in the world that it will adversely affect the stockholder in a corporation, having large incomes most adversely, as against the stockholder having the same amount of stock in a small corporation, or a corporation that does not have very heavy earnings.

Mr. ADAMS. In the matter of revenue, it would seem that if the rates were made on the ratio basis, that could be greatly increased by taxing at higher rates, profits in excess of a reasonable ratio of earnings.

The CHAIRMAN. It could be made up by stepping up the rates, of course.

Mr. ADAMS. Yes; without sacrificing revenue.

The CHAIRMAN. We would be glad if you would file the chart or memorandum that you have on that point showing the inequality, as it actually works itself out against the stockholders.

Mr. ADAMS. We are also concerned about the 10-percent penalty tax which the House imposed on corporations computing their credit on the invested-capital method if they had had earnings in the taxable year in excess of their average earnings over the base period. That would, in most cases be a severe penalty to the corporation having a high capitalization, and not being very successful in making earnings, but suddenly being able to earn. And it seems also that it is contrary to the basis of our excess-profits tax, that is, allowing a normal return on investments, or the alternative, allowing them to earn their average earnings over a base period before the tax is imposed.

We believe also that the deduction of the normal tax in the computation of the excess-profits tax should be retained. The effect of this, of course, is simply to add the tax—I will say it differently; the effect of not deducting the normal tax in the computation of the excess-profits tax is to add the amount of the normal tax to the taxpayer's bill at the highest bracket rate. It seems manifestly unfair to require the taxpayer to pay, at the high excess-profits tax rate, a tax on the amount of his normal tax.

We are very much in favor of the provision allowing for greater credit on new capital, as provided in the House bill, and we hope your committee will see fit to retain it.

At the present time the excess-profits tax provides for an adjustment for abnormalities in the case of the average-earnings method of computing the credit. There have come to our attention numerous examples where abnormalities have occurred in the case of a corporation which would like to use the invested-capital method, and they are not able to make those adjustments. We believe that this extension should be made for them.

On the matter of the capital-stock tax and declared-value excess-profits tax, it has always been a gamble with corporations to guess a declared value high enough to cover their anticipated profits, and they guess low at their peril.

We hope that this committee will see fit to repeal the declared-value excess-profits tax, since the amount of revenue derived from it has been insignificant, and if corporations are successful in guessing high enough they could completely eliminate the revenue of the declared-value excess-profits tax.

As far as the capital-stock tax is concerned, it seems that to continue the declared-value basis for computing the capital-stock tax, if you repeal the declared-value excess-profits tax, would result in a useless and meaningless base and, therefore, we suggest that the capital-stock tax be retained as a revenue producer, but the method of computing the tax be the method used in the old capital-stock tax previous to the enactment of the declared-value excess-profits tax.

At the present time, section 102 of the Internal Revenue Code imposes the unreasonable accumulations tax on corporations, which accumulate earnings and profits in excess of their normal requirements. The Treasury Department, as you know, has imposed an arbitrary rule called the 70-percent rule, the effect of which is to require a corporation, which does not distribute at least 70 percent of its earnings, to prove to the Treasury Department that its accumulation of earnings was reasonable. We submit that, in times such as these where it is desirable and almost imperative that corporations accumulate larger reserves than ordinarily, it would be a very equitable thing for this committee to either require the Treasury Department to reduce its 70-percent rule, or set up some alternative procedure than that provided in the present law. It is our hope that corporations would not be required to go to the tremendous expense of proving that this accumulation is reasonable simply because it, in mathematical figures, did not figure out to be 70 percent of their earnings.

We also want to subscribe to the recommendations of the Army and Navy in connection with the amortization deductions. They have made certain suggestions as to revision of procedure in the granting of necessity certificates, certificates of nonreimbursement, and certificates of Government protection.

In addition, we hope that that law may be clarified to allow the amortization of replacement facilities which corporations purchase in order to cooperate in the speed-up of production. Their present machinery is entirely adequate for normal production in peacetimes, but because of the pressure placed upon them by the Government, they have gone out and purchased new machinery in order to speed up their productive capacity, and it seems to us that these expenditures should be allowed to be amortized.

We want to add our voice to that of others, that we believe that nondefense expenditures can be reduced and should be reduced in order to aid in the revenue situation which confronts us.

The CHAIRMAN. Thank you. Are there any questions?

(No response.)

The CHAIRMAN. Thank you for your appearance, Mr. Adams.

(The statement submitted by Mr. Adams is as follows:)

THE MANUFACTURERS ASSOCIATION OF CONNECTICUT, INC.,
Hartford, Conn., August 18, 1941.

To the Honorable Committee on Finance of the United States Senate:

We submit herewith a brief in behalf of the Manufacturers Association of Connecticut, Inc., on the matter of the 1941 revenue bill.

The finance and taxation committee of the Manufacturers Association of Connecticut, Inc., has studied carefully both the present tax law and the amendments as proposed in H. R. 5417, and the recommendations that follow are made for your serious consideration. These recommendations have been submitted to the members of this association and the recommendations have their approval. The members of the Manufacturers Association of Connecticut, Inc., include substantially all of the bona fide manufacturers, both large and small, in Connecticut. They employ over one-third of a million employees, which employees constitute approximately 95 percent of the total manufacturing employment in Connecticut. Nearly all of the members are corporations which are subject to the Federal corporation taxes. The manufacturers whom the association represents have a vital interest and concern in the measure before your honorable committee.

The recommendations are divided into four (4) parts:

I. The excess-profits tax.
II. Capital-stock tax and declared value excess-profits tax.
III. Unreasonable-accumulation tax.
IV. Amortization of emergency facilities.

I. EXCESS-PROFITS TAX

1. The average earnings method of computing the excess-profits credit should be retained.
2. Rates should be based on the ratio of excess profits to normal profits instead of on the amount of excess profits.
3. The 10 percent tax on any increase in average earnings when the invested capital method of computing the excess-profits credit is used should be eliminated.
4. The deduction of normal tax and surtax in the computation of the excess-profits tax should be retained and deduction of excess-profits tax imposed should be allowed in the computation of the normal tax.
5. The "New capital" provision allowing an additional 25 percent in figuring invested capital should be included.
6. The adjustment provision for abnormalities should be extended to include computation of the credit under the invested capital method.

1. *The average earnings method of computing the excess-profits credit should be retained.*—We subscribe to the attitude of the House Ways and Means Committee in their feeling that the soundness of the policy of allowing a computation of the excess-profits credit on the basis of average earnings appears to have been adequately demonstrated. The alternative methods of computing the credit are a necessary adjunct to an equitable application of the tax. If this tax is to be truly a war excess-profits tax, and we think it should be, the average earnings method of computing the credit is absolutely essential to provide a base for determining what constitutes normal profit.

2. *Rates should be based on the ratio of excess profits to normal profits instead of on the amount of excess profits.*—The present excess-profits tax rates are based upon the amount of excess profits. The result is that the larger the amount of a corporation's profits the greater the portion of the profits that are taken in taxes, without any relation to the reasonableness of the profits in proportion to normal profits. This schedule of tax rates evidences an attempt at progressive taxation of corporations. The principal should be discouraged, and its fallacy should be known.

Progressive taxation of corporations is not sound. In the last analysis a corporation is simply the aggregate of its stockholders. Income to the corporation is in reality income to the stockholders. Reduction of the corporation's income by taxation is a reduction of the income of the stockholders. The imposition of graduated excess-profits tax rates; i. e., progressive rates, upon income of corporations according to the amount of their taxable income, without consideration of the amount of the average earnings or the invested capital, is rank injustice to the stockholders of large corporations in favor of the stockholders of corporations with small incomes. It should be considered

that as a general rule the larger the corporation the greater the number of stockholders and the smaller the average amount of capital invested, per stockholder. For example, in one large corporation, one-third of the total number of stockholders hold from one to five shares each. It is Mr. Average Stockholder who suffers when a schedule of rates such as that in the present excess-profits tax law is imposed upon the profit of a corporation, and Mr. Average Stockholder is the widows and orphans; he is the working man who has saved a few dollars and invested them in some large but sound, nationally known corporation; he is not a would-be war millionaire. He is the forgotten man.

Accompanying this brief is a table showing the computation of corporation excess-profits taxes based on H. R. 5417 as passed by the House of Representatives. It shows that a corporation which earns a net income before Federal taxes of $15,000 and entitled to an excess-profits credit of $8,000 was taxed at $700; that is, the excess-profits tax was 4.7 percent of net income before Federal taxes. It shows also that a corporation with $15,000,000 net income before Federal taxes would be taxed $4,190,000 for excess profits, assuming an excess-profits credit in similar proportion to the small corporation, with the result that the ratio of its excess-profits tax to its net income is 27.9 percent. This tremendous span in percent of net income taken by the excess-profits tax is attributable only to the fact that the corporation with earnings of $15,000,000 had a large amount of earnings, even though the ratio of normal earnings to actual earnings was the same as that in the case of the corporation earning $15,000. The impact of this tax is on the small investor. Thirty percent of the return on his investment is taken by the excess-profits tax before it gets to him.

The need for treatment of this problem was recognized by the Senate in an amendment which it adopted to the Excess-Profits Tax Act of 1940, but which was eliminated in the conference by the two Houses. The amendment was introduced by your present chairman, Senator Walter F. George, who at the time of its introduction considered that it corrected the "manifest error" of basing the graduated excess-profits tax rate "merely upon dollar value, without any reference to the percentage of earnings to invested capital, or the prior earnings of any company." The text of the amendment appeared on page 18669 of the Congressional Record for September 10, 1940. For the convenience of your committee, we quote the rate schedule in the Senate amendment:

"Twenty-five percent of so much of the adjusted excess-profits net income as does not exceed the greater of $20,000, or 20 percent, of the excess-profits credit; 30 percent of so much of the adjusted excess-profits net income as exceeds the greater of $20,000, or 20 percent, of the excess-profits credit and does not exceed the greater of $50,000, or 40 percent, of such credit;

"Thirty-five percent of so much of the adjusted excess-profits net income as exceeds the greater of $50,000, or 40 percent, of the excess-profits credit and does not exceed the greater of $100,000 or 60 percent of such credit; 40 percent of so much of the adjusted excess-profits net income as exceeds the greater of $100,000, or 60 percent, of the excess-profits credit and does not exceed the greater of $250,000, or 80 percent, of such credit;

"Forty five percent of so much of the adjusted excess-profits net income as exceeds the greater of $250,000, or 80 percent, of the excess-profits credit and does not exceed the greater of $500,000, or 100 percent, of such credit; and 50 percent of so much of the adjusted excess-profits net income as exceeds the greater of $500,000, or 100 percent, of the excess-profits credit."

3. *The 10 percent tax on any increase in average earnings when the invested capital method of computing the excess-profits credit is used should be eliminated.*—The effect of this tax is to penalize corporations which have been struggling under a high capitalization simply because they now earn a small amount of profit in addition to earnings of the previous years base period. The imposition of this 10 percent additional tax becomes ridiculous in the case of a corporation which has suffered losses over the base period years. The method of computing the 10 percent additional tax is extremely complicated. The provision, of course, is a nonsequitur, because it contradicts the very basis of the invested capital method of computing the credit, namely that a corporation is entitled to a fair return on its investment before any profits should be called "excessive" and made subject to tax. The committee should not tolerate this confusion of tax principle.

4. *The deduction of the normal tax and surtax in the computation of the excess-profits tax should be retained and the deduction of the excess-profits tax*

imposed should be allowed in the computation of the normal tax.—There is more unfairness in not allowing the deduction of the normal tax in the computation of the excess-profits tax than vice versa. If the normal tax is not deducted, obviously the taxpayer is paying an excess-profits tax on the amount of the normal tax at a rate which is the highest bracket rate for the taxpayer under his excess-profits tax. The deduction as it was in the 1940 excess-profits tax is in accordance with sound procedure for determining what profits are excess profits, and it should be continued.

It is suggested that in addition to continuing the present deduction of the normal tax in computing the excess-profits tax, there also be allowed the deduction of the excess-profits tax in computing the normal tax, as provided in the House bill. A simple procedure could be worked out for the computation of the two deductions.

5. *The "new capital" provision allowing an additional 25 percent in figuring invested capital should be included.*—We favor the treatment of "new capital" provided for in the House bill. The allowance of a total of 125 percent new capital in computing invested capital will aid in the encouragement of private financing of changes in facilities and equipment.

II. CAPITAL-STOCK TAX AND DECLARED VALUE EXCESS-PROFITS TAX

1. The declared value excess-profits tax is an anomaly in the tax structure and should be repealed.

2. The present capital-stock tax should be repealed.

1. *The declared value excess-profits tax is an anomaly in the tax structure and should be repealed.*—This tax, based as it is on the fictitious declared value of capital stock, has been a guessing game with corporations. The winners have guessed a declared value high enough to absolve them from payment of the tax; the losers, however, having guessed conservatively, pay a tax of thousands of dollars. The gamble becomes all the more fierce now that corporations must pick a declared value which will cover them for the next 3 years, since the present law provides that no revision other than routine adjustments may be made until with the return for 1944 for the capital-stock tax. If all corporations guessed for this year a declared value high enough, there would be no revenue from the declared value excess-profits tax.

The declared value excess-profits tax produced $24,484,167 revenue in 1939 and only $15,388,825 in 1940, or a decrease of over $9,000,000. That revenue received from this tax represents either a penalty imposed upon corporations for their inability to foretell the amount of profit which they receive or a penalty upon a taxpayer who was not aware of how to play the guessing game. The tax is a disgrace to our Federal tax structure. It should be repealed.

2. *The present capital-stock tax should be repealed.*—The provision for an arbitrary declaration of the value of capital stock of a corporation for purposes of the capital-stock tax is manifestly inequitable. The taxpayer who makes an honest effort to declare a fair and accurate value of his capital stock does so only to be penalized tenfold or more by the declared value excess-profits tax. The revenue from capital-stock tax is substantial, and it is not suggested that the form of tax should be eliminated. We recognize that the Federal Government can properly demand from corporations a tax in the nature of a franchise tax based upon capital stock. We believe that the declared value basis for the capital-stock tax should be repealed along with the declared value excess-profits tax. We suggest that the method of computing the capital-stock tax which was used in the old capital-stock tax would be more equitable and could be used to produce more revenue than the declared value formula. The old capital-stock tax (previous to the enactment of the declared value excess-profits tax) used the highest of three alternative methods of computing the value of capital stock, as your committee will no doubt recall.

III. UNREASONABLE-ACCUMULATIONS TAX

The 70-percent-distribution rule of the Treasury Department in connection with unreasonable accumulations of earnings under the provisions of section 102 of the Internal Revenue Code should be voided by Congress.—Because it is to be desired that corporations in these times accumulate more reserve than normally, it will work an undue hardship on corporations to be subjected to the enforcement of the Treasury Department's "70-percent rule." We suggest that if the burden is going to be placed upon the corporation to prove the reasonableness

of its accumulation of earnings unless a certain percentage is distributed, the burden imposed should be clearly defined and the percentage of distribution should be set by Congress. Your committee should know that the Internal Revenue Bureau has as a matter of enforcement been applying the "70-percent rule" strictly and arbitrarily, so that each corporation which fails to distribute 70 percent or more of its earnings is required to submit proof of the reasonableness of the accumulation. This submission of proof, as you can well understand, involves considerable and careful analysis and other work, because failure to satisfactorily prove to the Bureau of Internal Revenue that the accumulation is not reasonable would mean the imposition of the most drastic penalty tax.

IV. AMORTIZATION OF EMERGENCY FACILITIES

The recommendations of the Secretary of War and the Secretary of the Navy with respect to the revision of the procedure for the certification in connection with amortization of emergency facilities should be adopted.—We subscribe to the recommendations with respect to the special amortization procedure made in a joint letter by the Secretary of War and the Secretary of the Navy addressed to the Honorable Sam Rayburn, Speaker of the House. We believe that the suggested revision of the procedure will greatly facilitate the granting of the proper certificates.

In addition we believe that the amortization provision in section 124 of the Internal Revenue Code should be clarified to definitely allow the amortization of replacement facilities necessitated by production speed-up on defense work. Many plants have in them machinery which is entirely adequate for their normal production requirements, and this machinery would continue to meet these requirements for some time. But because of the necessity for increased efficiency and speed in the production of defense products, these plants have replaced or plan to replace slower operating machinery with modern high-speed equipment. We believe that these plants should be allowed to amortize a large portion of the cost of this new equipment over the 5-year period as provided in section 124.

We submit these matters for your serious attention.

Respectfully,

PAUL W. ADAMS, *Counsel.*

Comparative excess-profits taxes (based on H. R. 5417, 1941 revenue bill)

Net income before Federal taxes....	$15,000	$150,000	$1,500,000	$15,000,000
Excess-profits credit (average earnings or percentage of invested capital).....	$8,000	$80,000	$800,000	$8,000,000
Computation excess-profits tax:				
Net income.....	15,000	150,000	1,500,000	15,000,000
Less:				
Excess-profits credit.....	$8,000	$80,000	$800,000	$8,000,000
Specific exemption.....	5,000	5,000	5,000	5,000
	13,000	85,000	805,000	8,005,000
Adjusted excess-profits net income.....	2,000	65,000	695,000	6,995,000
Excess-profits tax:				
First $20,000 (35 percent).....	700	7,000	7,000	7,000
Next $30,000 (40 percent).....		12,000	12,000	12,000

The CHAIRMAN. Mr. Tanzer.

Mr. TANZER. My name is Laurence Arnold Tanzer, chairman of the committee on taxation and public revenue, Merchants' Association of New York.

The CHAIRMAN. You may proceed.

STATEMENT OF LAURENCE ARNOLD TANZER, NEW YORK, N. Y., CHAIRMAN OF THE COMMITTEE ON TAXATION AND PUBLIC REVENUE OF THE MERCHANTS' ASSOCIATION OF NEW YORK

Mr. TANZER. I appear on behalf of the Merchants' Association of New York, the city's largest chamber of commerce organization, representing all phases of the business and professional life of that city and thus expressing the view not of any special interest but of a cross section of the city's life.

The association heartily approves the program of financing defense expenditures through taxation so far as practicable, with a view to averting inflation resulting from too much deficit financing and preserving the national credit and the private-enterprise system.

We are here to make constructive suggestions to assist in raising the taxes needed by avoiding mistakes which will defeat their purpose. The heavier the tax burden, the more important it becomes to avoid injustice and unnecessary uncertainty, complexity, and confusion. The criticisms which we have come here to present are directed not at the amount proposed to be raised by taxation, but at features of the bill which tend to prevent the collection of the necessary revenue by mistaken methods.

Increased surtax rates.—It is proposed to raise surtax rates to unprecedented levels—in many cases to several times what they are now. What justification can there be for adding to these rates an additional 10-percent "defense tax"? Originally imposed for a limited period as a "temporary defense tax," if it is required permanently, honesty and simplicity require that it be incorporated in the permanent rates, as in fact the bill proposes to do in the case of excise taxes and of the declared value excess-profits tax. If, for example, it is felt that a particular class of taxpayers should pay a tax of 22 percent, they should be openly and honestly taxed at that rate. To tell them that their tax is only 20 percent with a 10 percent "defense tax" added, is merely to deceive them and to add an unnecessary complication to an already complicated tax calculation.

This criticism applies not only to the income-tax provisions, but also to the estate and gift taxes, as well as to the special tax on personal holding companies.

Excess-profits tax.—In several respects the practice as proposed in the bill is not made to square with the principle of taxing "excess profits." This is due largely to the inherent difficulty of defining what is normal income, and hence of determining what are "excess profits." These difficulties are at best so great as to raise the question whether the interests of national defense might not be better served, and injustice and uncertainty and complexity avoided, by simply raising the rates of tax on normal income.

We call attention merely to some of the more flagrant injustices in the bill.

The greatest danger lies in levying so high a tax as will tend to defeat its own purpose by stripping the corporations taxed of the resources needed for continuing operations, for carrying out the defense program, and for paying future taxes.

The proposed increase in the rates of the excess-profits tax by adding 10 percentage points to each bracket is, we believe, too drastic and threatens to destroy the tax base on which it is levied.

In considering the effects of this tax, it should be borne in mind:

1. That the tax is imposed not only on ordinary profits, but also on capital gains, which are not taxed in England, and is to that extent a tax on capital;

2. That it is payable in cash and if too high deprives a business of its working capital, and hence of the means of going on in business and paying future taxes and wages;

3. That it reduces the sums available for distribution to stockholders, thus reducing the base for income taxes as well.

Insofar as the bill measures the amount of the tax by the return on capital, it departs from that principle, and unjustly discriminates against mere size by reducing the rate of invested-capital credit, ordinarily 8 percent, to 7 percent on amounts of invested capital in excess of $5,000,000. This manifestation of the superstition that the mere size of a business is evil is, we believe, unsound and unjust.

The bill contains a wise provision allowing a more liberal credit for new capital. It should, we submit, apply to new capital invested since June 10, 1940, the date from which the present law recognizes the right to amortize defense facilities, rather than December 31, 1940, the date proposed in the bill.

This provision properly gives some relief to new businesses which cannot avail themselves of the average earnings method, where they have substantial capital. It will not help a new business having a small capital, and which is built up, as the report of the Ways and Means Committee expresses it (p. 23), "not mainly from capital but from good management, skill, development of goodwill, favorable locations, trade advantages, and other important factors of personal efficiency." We urge that Congress enact a relief provision to cover such cases.

Capital stock tax and declared value excess-profits tax.—These taxes, based on a guess by the taxpayers, with heavy penalties for a wrong guess, have no justification in principle. Their complexities and uncertainties will be greatly multiplied by the increases in corporate taxes, and particularly in the excess-profits tax. These uncertainties are a serious threat to the increased production required by our defense effort, and even to the continued existence of a business which may be ruined by an erroneous guess.

We recommend that these taxes be repealed, and that if the revenue is found necessary, it be raised through increased rates of normal corporation income taxes.

If these taxes are retained, corporations should be given the right to declare the value of their capital stock annually, as it is impossible under present conditions to make valid estimates for the future.

In computing income for declared value excess-profits tax, the present law properly allows a deduction for income taxes. To disallow this deduction, as is proposed in the present bill, would be unfair and deceptive. If additional revenue is required from this source, it should be honestly sought by an increase in the rate of the tax.

Excise taxes and broadening of the base.—The bill continues a number of the existing excise taxes, increases the rates or reduces the basis of others and adds a number of new excise taxes. It adopts this hit-or-miss method of imposing a series of miscellaneous taxes, a method bound to result in discrimination and injustice, instead of squarely facing the problem of finding some general method of taxation which will spread the burdens of taxation more uniformly and justly, and which at the same time will enlarge the tax base and increase the number of taxpayers contributing to national defense. We urge that Congress give serious consideration to formulating some general tax affecting all commodities and business with some measure of equality, such as a manufacturers' excise tax or a general gross income tax deducted at source from all wages, dividends and other personal income payments. Such a tax, we believe, would be sounder in principle, less complicated and uncertain, and much more easily collectible than a large aggregate of excise and "nuisance" taxes.

Reduction of nondefense expenditures.—The people of this country are ready to pay any taxes required to insure its safety. But in calling upon them to shoulder unprecedented burdens for defense, Congress owes it to them to reduce to the lowest possible minimum the burdens of nondefense governmental expenditures. Congress itself should rise to the emergency and cut down nondefense expenses.

Conclusion.—We believe that the American people stand solidly behind the defense effort, and that they will gladly shoulder any burdens for the protection of America. It is in that spirit that we appear before you, not to object to proposed taxes, but to cooperate in making them effective through the elimination of provisions which, by introducing injustice or discrimination, or unnecessary complexity or uncertainty, tend to destroy the tax base itself and to defeat the very purpose of raising the revenue needed for defense.

I should like, if I may, to mention one matter which is not in my prepared statement. Our association protested to the Ways and Means Committee against the provision for joint returns of married couples. That was not included in our statement because we had been advised it had been omitted from the bill. We hear now that there is agitation for its restoration.

We hope the committee will not restore that provision, because we believe it will do a great injustice and work discrimination against married couples and go counter to the tendency all over the world in case where discrimination is made in making the discrimination rather against those who remain single than those who marry.

The CHAIRMAN. Are there any questions?

Senator DANAHER. I would like to ask one, please.

The CHAIRMAN. Senator Danaher.

Senator DANAHER. On page 3 of your prepared statement, sir, you are talking about allowing a more liberal credit for capital and you then suggest that it should apply to new capital invested since June 10, 1940, rather than December 31, 1940.

What is your understanding, please, as to the reason for the change?

Mr. TANZER. The reason for it is that the provision for amortization was inserted in the existing law in order to recognize new capital invested in defense activities and that was made to apply to investments made after the date the defense effort commenced, so that people

would not be able to claim the credit on capital which was not invested for that purpose.

People have been making these additional investments ever since June 10, 1940, and even before, for that purpose; and where the credit is given for new capital we think it should be recognized that it really goes back to the defense effort.

Senator DANAHER. I understand that. I am wondering if you have any understanding as to why December 31, 1940, has been proposed in this bill?

Mr. TANZER. Oh, no; it seemed to us illogical; therefore we thought the same date should be adopted which was in the existing law.

The CHAIRMAN. Thank you very much.

Mr. Wright.

STATEMENT OF ANTON P. WRIGHT, SAVANNAH, GA., PRESIDENT, SOUTH WESTERN RAILROAD CO.

Mr. WRIGHT. Mr. Chairman and gentlemen, I regret to say that the prepared statement from which I will read was sent by express to the clerk of this committee on Saturday, and for some unforeseen reason has not been delivered. The statement which I am about to offer is cumulative and supplemental to a statement made by Mr. Walter A. Edwards, of Providence, R. I., for this committee on the 12th instant.

The CHAIRMAN. Yes; we have the report of that, Mr. Wright. You also appeared before the Ways and Means Committee?

Mr. WRIGHT. I appeared before the Ways and Means Committee and this statement is practically in the language that I submitted at that hearing.

The CHAIRMAN. Yes, sir; well, you can proceed. I am sorry the brief did not get here for every member of the committee, but we have it covered here very well in the record.

Mr. WRIGHT. The decision of the Supreme Court of the United States in the case of *Helvering* v. *Bruun*, rendered March 25, 1940, and reported in 309 U. S. 461, has excited grave apprehension in the minds of those taxpayers who may come within its purview.

No doubt the members of this committee are fully conversant with this decision. However, it may not be inappropriate to briefly recapitulate the holding of the Court in that case, which is as follows:

> Where a tenant by virtue of the provisions of his lease is permitted to erect and does erect at his own expense new buildings upon the property of the landlord and where the lease is subsequently canceled before the expiration of the term, for default in payment of rent and taxes, and where the landlord has regained possession of the land and the buildings, then and in such an event the net fair market value of the buildings erected on the premises by the tenant is taxable gain to the landlord, realized in the year in which the forfeiture of the lease occurs.

This ruling reverses the trend of previous decisions of the courts on this subject, is far-reaching in effect and harsh in its results. The Congress in adopting the Excess Profits Tax Act of 1940 seemed to have in mind the harsh results which would follow from an application of this ruling and section 721 (e) of said act excepted from the taxation, imposed by it, income derived from the termination of a

lease. This section, of course, does not affect the income tax on net income.

The hardship imposed by this decision may be more fully exemplified by its application to a concrete example.

Senator BROWN. Let me interrupt, please. You say that tax is assessed entirely in the year in which cancelation occurred?

Mr. WRIGHT. Yes.

Senator BROWN. You want to spread it over a number of years, is that the idea?

Mr. WRIGHT. No; not that exactly. What we wish to do is when the property is disposed of that then any gain or loss should be taxed.

The South Western Railroad Co. is a corporation chartered December 27, 1845, by act of the General Assembly of Georgia. On the 10th day of February 1848, the company was formally organized and from that day to this, or for 93 years, it has enjoyed a continuous corporate existence, which was not even interruppted by the War between the States. The road has a main-line trackage of 333 miles in round figures, and extends from the city of Macon, Ga., which is practically the geographical center of the State, to various points in southwest Georgia. In 1869, the South Western being then a fully equipped, going railroad executed a perpetual lease of its property and franchises to the Central Railroad & Banking Co. of Georgia at a minimum rental equivalent to 7 percent upon its capital stock. The railroad was operated under this lease until March 4, 1892, at which time, the lessee, the Central Railroad & Banking Co., was placed in the hands of a receiver. The Central Railroad & Banking Co. was reorganized in 1895 under the name of the Central of Georgia Railway Co. and the reorganized company at that time adopted the lease of the South Western Railroad Co. to the Central Railroad & Banking Co. with certain modifications, one being that the term of the modified lease should run for 101 years. In 1932, the successor corporation, Central of Georgia Railway Co., was placed in the hands of a receiver and subsequently, the receiver adopted the lease of the South Western to the Central of Georgia Railway Co. with certain modifications. Subsequent thereto, in June 1940, the Central of Georgia Railway Co. filed a proceeding for reorganization under section 77 of the Bankruptcy Act and the trustees appointed under said act, in turn adopted the renewal lease of 1895 to the Central of Georgia Railway Co. with certain modifications.

Under the terms of the original and renewed leases, the lessee undertook to keep the South Western Railroad in good order and repair. Of course, many vital changes have taken place in the technique of railroad operation since 1869, and, naturally, in order to maintain the South Western as a modern, efficient railroad, the lessees have been forced to expend large sums upon this line. In the natural course of events since the original lease of 1869, all of the equipment of the South Western Railroad Co. has been consumed in use and the equipment now serving the line is that which is furnished by the Central of Georgia Railway Co.

The additions and betterments made to the property of the South Western Railroad by the Central of Georgia Railway Co. from July 1, 1914, through October 1940, amount to a total of $3,220,171.45. (No figures are available for the period prior to July 1, 1914.)

The financial structure of the South Western Railroad is simple, consisting of 51,911 shares of common stock of the par value of $100 per share of a total capitalization of $5,191,100. This remarkable state of affairs appears. It has no bonds, debentures, preferred stock or debts of any kind. Owing to these favorable factors and a fixed return guaranteed by the terms of the lease, the stock of the South Western Railroad Co., for many years, has been a favored investment. It has some 1,100 stockholders and among these will be found many trust estates, eleemosynary institutions, and small investors. It is obvious, however, that if the betterments placed on the property at a cost of $3,200,000, in round figures, is taxable gain to the railroad, should its lease be abrogated, the solvency of this enterprise will be substantially impaired. Under the accounting practices prescribed by the Interstate Commerce Commission, no depreciation is taken by the Central of Georgia Railway or by its leased lines, except upon equipment; additions and betterments are charged to capital account and where retirements are made, the value of the same, if any, is credited to the same account.

The lease to the Central of Georgia Railway Co. of 1895 provides for a rent equivalent to 5 percent upon the capital stock of the South Western, which amounts to $259,555 per annum.

If the lease should be abrogated and even if the South Western Railroad Co. were fortunate enough to secure a new lessee at a rent equivalent to 5 percent upon its capital stock the untoward results above pointed out could not be avoided.

In the present unhappy state of the railroads, it is futile to attempt to prognosticate what will be their ultimate fate. Even under the improved conditions brought about by large defense projects, it is conceded that there will have to be drastic changes made in the capital structure of the Central of Georgia Railway Co. in reorganization. It is not disputed by any one familiar with the affairs of the Central of Georgia Railway Co. system that the South Western Railroad Co. is an important and indispensable part of that system.

While the South Western Railroad is only capitalized at $15,666 per mile, and while its depreciated value, as ascertained by the Interstate Commerce Commission is in excess of $12,000,000; and while a rental of $259,555 per annum seems to be exceedingly reasonable, its peculiar situation renders it difficult to engage the attention of competing lines. In a word, the South Western is worth more to the Central of Georgia Railway Co. than it is to any other railroad in this territory.

Undoubtedly when the Central of Georgia Railway Co. is reorganized, if it is deemed important to preserve the integrity of the system, it will be incumbent upon the reorganizers to assume the present lease of the South Western with such modifications as may be agreed upon between the reorganized company and that company. Such negotiations would unquestionably be hampered by the fact that if the South Western were unwilling to submit to a modification of the present lease embodying less favorable terms, it would be difficult to maintain such a position in view of the fact that the abrogation of the present lease would expose it to the large tax liability imposed by virtue of the decision in Helvering versus Bruun.

In view of these facts, we venture the opinion that this decision

produces a situaton which ought to be releved against by appropriate legislation.

If the observations submitted seem to warrant the favorable consideration of this committee, and if it is proper to make such a suggestion the remedy would seem to lie in an amendment to paragraph (b) of section 22 of the Internal Revenue Code by adding at the end thereof a paragraph reading as follows:

(10) Income received by a lessor upon the expiration or termination of a lease by reason of additions, betterments, and improvements to the leased property made by the lessee.

The CHAIRMAN. Are there any questions?

(No response.)

The CHAIRMAN. Thank you very much, Mr. Wright.

Mr. Mitchell B. Carroll.

STATEMENT OF MITCHELL B. CARROLL, NEW YORK, N. Y., NATIONAL FOREIGN TRADE COUNCIL, INC., NEW YORK, N. Y.

Mr. CARROLL. Mr. Chairman and members of the committee, my name is Mitchell B. Carroll, 67 Broad Street, New York. I am counsel for the tax committee of the National Foreign Trade Council, Inc.

In behalf of the American companies that are still endeavoring to carry on trade abroad, particularly in Latin America, I wish to bring to your attention a situation which has developed in foreign countries beyond the reach of your committee, yet which frustrates the operation of a section of the Internal Revenue Code adopted in 1918 by your committee and has since been maintained in our revenue legislation.

As you know, foreign countries, in their effort to maintain their monetary resources, have adopted exchange restrictions. As the result income derived in one year by an American enterprise operating in, say, Brazil or Chile or Colombia may be blocked by local exchange restrictions so it cannot be brought home to the American enterprise, and that income may not be released until the second year or the third year. When this happens, by reason of a decision rendered by the Board of Tax Appeals, the American enterprise may be deprived of its credit for foreign taxes. A provision was adopted in 1918 to put our American enterprises, competing in foreign markets after the World War, on an equal footing with the enterprises of other countries which were receiving exemptions and subventions and other benefits.

Consequently, I come before you with a very simple amendment which is, in effect, to permit the carrying forward of foreign tax on income which has been blocked as a credit against the United States taxes until the income, which is imposed is released and brought into gross income.

In other words, there is a simple amendment to rectify a situation which has been brought about through the disturbed economic conditions in the world today.

I have here a memorandum that I would like to submit to your committee which goes into the technical details, which are well known to your staff and, if you will permit me, sir, I might go into the details at some later date with Mr. Stam, or some other representative of the committee or the Treasury.

The CHAIRMAN. Yes; you may file your statement, if you wish, for the record.

Mr. CARROLL. Thank you, sir.

The CHAIRMAN. All right. Thank you very much.

(The statement referred to is as follows:)

AMENDMENT TO SECTION 131 OF THE INTERNAL REVENUE CODE PROPOSED FOR INCLUSION IN THE REVENUE BILL OF 1941 IN BEHALF OF THE NATIONAL FOREIGN TRADE COUNCIL, INC., 26 BEAVER STREET, NEW YORK, BY MITCHELL B. CARROLL, ESQUIRE

INTRODUCTORY STATEMENT

Mr. Chairman and members of the Committee on Finance of the United States Senate, the members of the National Foreign Trade Council are gratified that the House has adopted in the revenue bill of 1941 section 108 which provides for the reduction, in pursuance of treaties, of the rates of tax to be withheld from certain recurring items of income derived by nonresident alien individuals resident in, and corporations organized under the laws of, Western Hemisphere countries. This provision should indeed tend to accomplish the purpose set forth in the official report of the House Committee on Ways and Means (p. 9, par. 6), namely, that "the extension of this favorable treatment is a part of the program toward improving relations with our sister nations in the Western Hemisphere."

Therefore, the council heartily endorses this amendment and hopes that the Senate will concur in its adoption.

PROPOSED AMENDMENT TO ALLOW DEFERRING OF THE CREDIT FOR FOREIGN TAXES ON BLOCKED INCOME UNTIL RELEASE OF INCOME

You are doubtless aware that, just as you are considering the raising of taxes according to the criterion of the utmost capacity to pay, the legislatures of other countries are likewise engaged in augmenting their rates to about the highest point the traffic will bear. If an American enterprise carrying on business in any one of these countries realizes income there, which is subject to burdensome rates both in the foreign country and again in the United States, the resulting burden would be so great that American enterprises might have to withdraw and leave the field to competitors.

Many of you may recall that our commercial enterprises were faced with a similar situation along toward the end of the last war and, in the Revenue Act of 1918, the Congress wisely decided that if our enterprises were to continue to compete abroad with foreign companies which were receiving tax exemptions and other kinds of aid from their respective governments it would be necessary at least to allow a credit against the United States income tax for income taxes paid in foreign countries. The credit has justifiably been limited so that in no case the offset may reduce the United States tax on domestic income, and where the foreign rate is lower than the American rate, our Government collects the difference in rates on the foreign income. However, in recent years, and particularly at the present time, enterprises are being denied the benefit of this credit because of circumstances arising from the disruption of economic life abroad and the trends of foreign tax legislation.

As you know, an increasing number of countries, including countries of the Western Hemisphere, are forced to adopt exchange restrictions in order to arrest the depletion of their national monetary resources, with the result that, in many cases, profits which have been earned abroad by American enterprises are blocked and cannot be availed of. The question has arisen whether such income, which cannot actually be enjoyed by the American enterprise, should be treated as income for tax purposes here, and the Board of Tax Appeals has ruled that such blocked income need not be treated as income until it is unblocked or becomes convertible into dollars. (*International Mortgage and Investment Corporation* v. *Commissioner*, 36 B. T. A. 187). However, if this unblocking takes place in a later year, the limitations in section 131 (b) prevent taking the credit for the tax paid abroad on such income.

Hence, we respectfully urge you to remove this inadvertent inequity by adopting our proposed amendment which, in substance, would treat the tax as following the income and would allow it to be taken as a credit in the taxable year when the income in question is brought into gross income.

TECHNICAL DISCUSSION OF AMENDMENT

The decision in the case of *International Mortgage and Investment Corporation* v. *Commissioner* (36 B. T. A. 187) to which the Commissioner has given his acquiescence, 1937-2 CB 15, permits the carrying forward for tax purposes of completely blocked income until it is released; and, if this interpretation of the law is generally applied, it may result in the loss of the credit for foreign taxes in a growing number of cases. This problem may become more serious for American export corporations in view of the probable increase in exchange restrictions on foreign currencies because of the war situation. The credit for foreign taxes on blocked income may be assured, however, by a simple amendment which merely states a principle inherent in section 131 of the Internal Revenue Code.

In the above-mentioned case the petitioner realized gain by purchasing at less than their face value mortgages which were paid off at their full value. The Board of Tax Appeals observed that, measured in marks, the petitioner had income from its business in Germany, but that income for our Federal income-tax purposes is measured only in terms of dollars. The marks received after a certain date were blocked and they could not therefore be removed from Germany either physically or by way of a credit during the remainder of the taxable year, nor could the dollar equivalent of the marks be obtained. The petitioner did not have unrestricted use and enjoyment of the marks, and could not use them to retire its bonds as planned. It could not have any of these marks released until a number of years later. The marks were seriously restricted and in no sense the equivalent of free marks. The Board therefore held it was improper to compute a gain to the petitioner from the repayment of the mortgages by translating the gain in marks received into dollars at the rate of exchange applicable to free marks.

However, the Board held that taxable gain had been realized in marks which were received previous to the time of the imposition of the exchange restrictions and because those earlier funds had been freely negotiable, convertible, and transferable. They could have been removed from Germany when received but had been allowed to remain there until they were blocked.

There may be a great many situations in which an American taxpayer will receive foreign currency income in the forms of dividends, interest, royalties, trading profits, or otherwise, which is blocked, and only in a later year susceptible of conversion or of realization through use.

Although the International Mortgage and Investment Corporation decision involved only a very limited class of income, its basic reasoning may well apply in determining what shall be included in gross income in many other blocked currency situations. It would be very difficult to draft legislation to cover the facts of all these situations, and perhaps it may be best to leave to determination in audit whether, under the facts of each case, blocked foreign income should be regarded as realized in terms of dollars and included in gross income, or should be regarded as not realized until a later year. In the former case, the amount of foreign taxes thereon would be converted into dollars at the same rate and taken as a credit under section 131. However, if foreign income were not included in gross income until a year or more after it arises abroad, then any foreign income taxes paid or accrued with respect to such income should be carried forward for the purposes of the credit for foreign taxes in section 131 until the foreign income is included in gross income.

Only such a procedure would be consistent with the underlying principle of the foreign tax credit. The law presupposes that foreign income will be subjected to the United States tax for the year in which it is realized and, under section 131 (a), only taxes paid or accrued during the taxable year to any foreign country or to any possession of the United States may be taken as a credit. Furthermore, under section 131 (b) (1), the credit for the taxes of any particular foreign country may not exceed the same proportion of the United States tax against which it is taken, which the income from such country bears to the entire net income, in the case of a taxpayer other than a corporation, or to the normal tax net income, in the case of a corporation, for the same taxable year (sec. 131 (b)).

Strictly speaking, therefore, under the language of subsection (a), the foreign tax paid on blocked income can be credited only in the taxable year in which it is

paid or accrued. If the taxpayer regularly takes credit on the accrual basis, and if the blocked income involved is not brought into gross income in the given year, no credit would be allowed in that year because the numerator of the limiting fraction would be zero. Situations might also arise where taxpayers could not take credit for the foreign tax on a paid basis for similar reasons. Furthermore, when, in a subsequent year, the funds are freed for conversion into dollars or utilization, they would be subjected to the United States tax, but ordinarily no credit could be taken against the United States tax for the foreign tax which was paid or accrued during an earlier taxable year. Hence, in such cases the income would be doubly taxed and the purpose of the credit for foreign taxes would be frustrated.

The original intent of section 131 could be realized if the section were amended so as to incorporate specifically the principle that the foreign tax would not be deemed to have been paid or accrued until the taxable year when the income is included in gross income. This might be accomplished by inserting at the end of subsection (d), entitled "Year in Which Credit Taken," the following language printed in italic:

SUGGESTED LANGUAGE OF AMENDMENT

SEC. 131. TAXES OF FOREIGN COUNTRIES AND POSSESSIONS OF UNITED STATES.

(a) *Allowance of credit.*—If the taxpayer signifies in his return his desire to have the benefits of this section, the tax imposed by this chapter, except the tax imposed under section 102, shall be credited with:

(1) *Citizen and domestic corporation.*—In the case of a citizen of the United States and of a domestic corporation, the amount of any income, war profits, and excess-profits taxes, paid or accrued during the taxable year to any foreign country or to any possession of the United States; and * * *

* * * * * * *

(d) *Year in which credit taken.*—The credits provided for in this section may, at the option of the taxpayer and irrespective of the method of accounting employed in keeping his books, be taken in the year in which the taxes of the foreign country or the possession of the United States accrued, subject, however, to the conditions prescribed in subsection (c) of this section. If the taxpayer elects to take such credits in the year in which the taxes of the foreign country or the possession of the United States accrued, the credits for all subsequent years shall be taken upon the same basis, and no portion of any such taxes shall be allowed as a deduction in the same or any succeeding year. *In any case, for the purposes of subsection (a) of this section, taxes paid or accrued to any foreign country or any possession of the United States shall be deemed to have been paid or accrued during the taxable year when the income upon or with respect to which they are imposed is included in gross income for purposes of the tax imposed by this chapter.*

If the above location of the new language seems inappropriate, the amendment might be added to section 131 as a new subsection, as follows:

( ) *Definition of taxes paid or accrued.—For the purposes of subsection (a) of this section, taxes paid or accrued to any foreign country or any possession of the United States shall be deemed to have been paid or accrued during the taxable year when the income upon or with respect to which they are imposed is included in gross income for purposes of the tax imposed by this chapter.*

DEDUCTION OF FOREIGN TAX

The carrying forward of the foreign tax for the purpose of taking it as a deduction under section 23 (c) (2), if the taxpayer prefers, might also be covered, as follows:

SEC. 23. DEDUCTIONS FROM GROSS INCOME.—In computing net income there shall be allowed as deductions:

(c) *Taxes generally.*—Taxes paid or accrued within the taxable year, except—

(2) Income, war-profits, and excess-profits taxes imposed by the authority of any foreign country or possession of the United States; but this deduction shall be allowed in the case of a taxpayer who does not signify in his return his desire to have to any extent the benefits of section 131 (relating to credit for taxes of foreign countries and possessions of the United States), *and in such case, taxes paid or accrued to any foreign country or possession of the United*

States shall be deemed to have been paid or accrued within the taxable year when the income upon or with respect to which they are imposed is included in gross income.

The CHAIRMAN. Mr. Alfred L. Smith.

STATEMENT OF ALFRED L. SMITH, ELKHART, IND., CHAIRMAN, COMMITTEE ON TAXATION, NATIONAL ASSOCIATION OF BAND INSTRUMENT MANUFACTURERS

Mr. SMITH. Mr. Chairman and gentlemen of the committee, my name is Alfred L. Smith. I am executive vice president of C. G. Conn, Ltd., Elkhart, Ind., manufacturers of band and orchestra instruments, and I am speaking on behalf of the National Association of Band Instrument Manufacturers. This association is composed of the manufacturers of band and orchestra instruments.

This is a separate and distinct industry within the general music industry, manufacturing the instruments of the symphony orchestra; that is, the wind, percussion, and string instruments. Our great market is the public-school system and the children in the system who take instrumental instruction and our secondary and much smaller market is the professional musician who uses these instruments as the tools of his trade.

We are very small industry. I suppose I have the distinction, if it is a distinction, of representing the smallest group of any industry that has appeared before this committee. If you eliminate the small shops employing less than 25 people each, we have only about 15 manufacturers, and we employ only about 2,000 men, but on this tiny industry there depends entirely the development of the musical art in this country.

Also I might say that in no group of employees of this size, or any size, could you find, perhaps, a greater proportion of men who are very highly skilled, who have devoted their entire lifetime to one job. Throughout the entire industry, the employees are old. Probably the average is way over 50 years. These men are not of the type, they have not had the experience, and they are not of the age that they can be transferred to defense work, and they are dependent, and their families are, for their livelihood on this industry. For that reason, I ask your careful consideration of some of the problems of this industry which are affected by this tax.

Senator BROWN. Mr. Smith, you are now taxed at 5½ percent, are you not?

Mr. SMITH. We are not taxed at all now. We are proposed to be taxed 10 percent on the manufacturers' price in the bill.

Senator BROWN. The House report, section 3404, emphasizes the tax on sales, manufacturing certain radio components at the rate of 5½ percent of the sales price. Section 545 amended this to impose a tax of 10 percent on radio receiving sets and certain other instruments, including musical instruments.

Mr. SMITH. Yes; that added the musical instruments, but the musical instruments were not taxed at all.

Senator BROWN. Now it is proposed that you be taxed 10 percent?

Mr. SMITH. That is right.

Senator DAVIS. Mr. Smith, what portion of the instruments are purchased for the young people of this country, especially those in the schools?

Mr. SMITH. Well, as between the children in the schools and the professional musicians who constitute the great market, I should say it is, roughly, in value—about 80 percent goes to the school children and 20 percent to the professional musician. That is not taking into account purchases by village bands, of which there are a few, and the lodge bands, and individual instruments of people for enjoyment; but I presume that between the school children and professionals, they account for 95 percent of the production, and that 95 percent, I should say, is divided about 80 percent between the children in the schools and 20 percent to the professionals.

When it comes to the number of instruments, the percentage to the schools is much larger, because, obviously, the professionals have to use the highest grade, the highest-priced instruments, whereas the children start with the third or lowest-grade instruments; and if they continue their instructions, as many of them do, they get the medium grade, and finally they purchase the highest grade. As a matter of fact, more of the very highest, finest instruments are purchased by the children in the schools than there are purchased by the professional musicians.

Senator DAVIS. If you pass this 10-percent tax on, how much will that increase the price to those youngsters that buy these instruments?

Mr. SMITH. It will increase the price by 10 percent to the consumer. That will mean in dollars to the beginner from about $5 to perhaps $15 or $20, and to the child who has progressed beyond the beginning stage and buys the better instrument, it will probably run from $10 to $25, depending on whether it is a trumpet, for instance, which is a relatively inexpensive instrument, or, we will say, an alto or bass clarinet, which is the expensive type of instrument.

Senator DAVIS. It is going to be difficult for them to buy the instrument. I recall when I was quite a youngster I got 50 cents a day, and I had to pay 50 cents a week on my clarinet. It was a difficult thing to get that half dollar. I presume there has not been much of a change since that time.

Mr. SMITH. Senator, you know parents may endure a lot of privation to give their children an enducation, whether it is a musical education or any other type of education. We know that they do go a long way in the poorer families. We also know these increased prices will curtail sales. They will have to, because our sales are primarily to the poorer people.

In other words, our market is primarily in the rural districts in those States from Wisconsin down through to Texas and in the poorer sections of the industrial States, like in your State of Pennsylvania, Senator, and the State of Ohio, and our poorest markets are in the better suburbs of the big cities. In other words, music is the poor man's art, and he is the one that wants his children to take instrumental music. It is true that you will find the biggest, finest symphony orchestras and bands in the smaller towns and rural schools and in the workingmen's sections of the cities. The consolidated school has been

a great thing in this respect, because it has brought music to the districts where, with the little individual schools, they never had this sort of thing.

Senator DAVIS. I know a great number of men and women, too, as far as that is concerned, that are playing in these symphonies that had a difficult time to get their instruments when they were young people, when they were merely beginners.

Mr. SMITH. That is right. I think it is fair to say that the average person who buys these instruments does it for a serious educational purpose and does it with considerable struggle to get the money, because they are not inexpensive instruments, even the lowest grades of them.

Senator BROWN. Mr. Smith, under the chapter which this section amends, there is an exemption which is the same as the exemption found on page 71 of the House bill which we are considering, which refers to any instruments which are bought by a subdivision of any State.

Mr. SMITH. Yes.

Senator BROWN. That is why, it would seem to me, as to the effect of this particular tax, it would be very easy for the board of education of a school district to buy these instruments and thereby avoid the tax. Is not that very commonly done?

Mr. SMITH. It is with certain types of instruments. There are certain instruments that no parent wants to buy his child. He does not want to buy a bass horn, or a bass drum, or perhaps a bass clarinet. Those are big instruments and the school boards buy those instruments; but all of the smaller instruments and all of the beginners' instruments, which constitute the great bulk of the instruments—I suppose 90 percent are bought by the individuals. In a great many communities, for instance, in the South, in the Southeast, where the movement is developing very rapidly now, the schools are very much restricted for funds, and the parents get together in clubs and raise this money for the big instruments. Of course, all the individuals who buy them individually are subject to the tax, and I do not see any way that they can avoid it.

Now there have been many suggestions before your committee and particularly, I think, before the Ways and Means Committee, which would indicate that the purpose of these excise taxes at higher rates is primarily curtailment of so-called luxury or less essential industries, yet, at the same time, the claim is made that these industries, including our industry, can be taxed at these terrifically high rates, or must be taxed at these terrifically high rates because the Government needs the money. We know the Government needs the money, we know we are all going to be taxed heavily; it cannot be avoided, but we submit that those two purposes are inconsistent. You cannot have both. If you are going high enough to curtail, then the Government does not get the revenue; if the Government gets the revenue then there is no need for curtailment.

Now, if the purpose of this tax, as has been said in some quarters, is curtailment of industry which we think is erroneouly considered less essential in these times, then I submit that you are too late, that other factors, unavoidable factors, are already working and are already curtailing this industry far beyond anything this tax will do; and the

income, the revenue to be derived by the Government by this tax will be only a fraction of the estimate of the Treasury Department. There is every indication that before the end of this year there will be practically no band and orchestra instrument industry in existence, except possibly 10 percent which will go to the Government for the Army and Navy Bands, on which, of course, there is no tax to be collected.

Senator RADCLIFFE. Mr. Smith, do you understand that this tax is on the church organs?

Mr. SMITH. Yes. I am not speaking of church organs, but the tax is applicable to church organs, yes.

Senator RADCLIFFE. What percentage, do you happen to know, goes to the value and number of organs owned by religious organizations?

Mr. SMITH. I do not know. I can only guess from a casual connection with that end of the business, but I would say that, with the decline of the theater organ, practically all of the organs now are sold to churches, but I might be wrong.

Senator VANDENBERG. Well, I think you have proven that bands are essential today. I do not know how you can work up a war without a band.

Mr. SMITH. You are not accusing us of working up a war, are you, Senator?

Senator VANDENBERG. No.

Mr. SMITH. In 1939, according to the Bureau of the Census, this little industry produced about $6,667,000 worth of musical instruments which, at this rate, would yield, even in a good year like that, only $660,000, but our opinion is, according to present indications, next year and for years to come until we are out of this emergency, we will not produce more than $1,500,000, which would mean that this tax would produce, during that period, probably not more than $150,000 a year.

Now, the reason for that is that the biggest groups of instruments in this industry, the cup-mouth pieces, for instance, which are the so-called brass instruments, unfortunately require the four metals which are most critical in the defense program, nickel, aluminum, zinc, and copper. Brass itself is 80 percent copper and 20 percent zinc. The Office of Production Management has stated that in this country there is not more than 75 percent of the nickel and 75 percent of the copper absolutely essential to the defense program alone, and that industries like ours are not going to get any after we have exhausted our present materials, and I think it is easy to see why that is so.

So that the cup-mouth instruments, after we have exhausted our supplies of material, which will be only a few months now, will be nonexistent.

The wood-wind, which are the next group, we estimate will be down to 25 percent. The percussion instruments will not be greatly affected, but they are a comparatively small group. The string instruments are affected probably not at all, because they use no defense material. But because of the curtailment, we will be down to something like $1,500,000, and perhaps produce a revenue of $150,000.

We believe that in view of the essential need of our industry and of our product, or rather, not our industry but the essentiality of our product to the continuance of the art of music, that for a paltry

$150,000, we ought not to be taxed when we find ourselves in this terrible situation.

Senator JOHNSON. Is the price advancing very rapidly in musical instruments?

Mr. SMITH. It is not yet. Our own company—and I think this would apply throughout the industry—had only one price increase. We increased our labor cost as the result of the reduction from 44 hours to 40 hours, and we made that up to our men for some months; we absorbed the increased material costs, but last March we increased our prices somewhere around 10 percent. The raw material costs have continued to increase. We have got to increase again. With the curtailment, due to this defense program, which we cannot avoid, our overhead costs, of course, are going to soar, with the result that we must increase our prices, and I am afraid they will go up very greatly, and, of course, we are afraid that they will get to that point where these people will not be able to buy the instruments to give their children a musical education, and the children, during this time, will not be able to begin their musical education or continue it if they have to have new instruments. Our prices, while they have not gone up very much yet, they are going up. We cannot avoid it.

The CHAIRMAN. Mr. Smith, you have exhausted your time limit. Is there anything you wish to put in the record?

Mr. SMITH. Yes; I have a brief which I should like to put in the record. I would like 1 minute more. I want to make a specific request for an exemption of band and orchestra instruments. I want to state that this industry is willing to do its part. It is going to pay heavy taxes. We believe that the way to raise taxes from industry through the sale of their product is a general manufacturers' tax on all manufactured products, except possibly food, clothing, or some few things like that, and that irrespective of how high this rate will have to be, we should have a rate that will produce this revenue equitably from all manufacturers.

Senator DAVIS. How many persons are employed in the instrument-making industry?

Mr. SMITH. About 2,000, if you except the small local shops of which we have no knowledge. You have a man, for instance, who makes violins who may have two or three employees, or a man who may make bassoons. He has two or three employees. I am excluding them. We have about 2,000 in the band and orchestra industry.

The CHAIRMAN. All right.

Mr. SMITH. I only want 1 more minute. There is another matter we did not know about. I want to call your attention to the section having to do with reporting on installment sales.

There is a provision, if we understand it correctly, that, on all sales made between July 1 and the date of the passage of this act, the seller must pay the tax on the unpaid installments collected after the passage of the act and we submit that that is an impossible situation.

For instance, our company has 11 retail stores. They are not separate corporations. They are operated as divisions of a parent corporation. We are the manufacturer and the seller. Even though we sell at retail, we had no knowledge of this provision in the act, if

we understand it correctly and if it is not changed, we will have to pay 10-percent tax on all of our collections on those sales since July 1, and there is nothing like that profit in the business.

We think your committee should consider that gross inequity.

The CHAIRMAN. Yes, sir. That has been brought to the attention of the committee by several witnesses. I think that will certainly be looked into.

Mr. SMITH. Thank you.

The CHAIRMAN. Thank you very much.

(The brief by Mr. Smith is as follows:)

BRIEF BY ALFRED L. SMITH IN OPPOSITION TO APPLICATION TO BAND AND ORCHESTRA INSTRUMENTS OF THE PROPOSED 10 PERCENT TAX ON MUSICAL INSTRUMENTS

AUGUST 20, 1941.

The FINANCE COMMITTEE,
United States Senate, Washington, D. C.

GENTLEMEN: The National Association of Band Instrument Manufacturers respectfully urges the Finance Committee to adopt, in place of the new manufacturers' sales taxes in this bill, a general manufacturers' sales tax excepting only food, some types of clothing, and fuel, at a rate which will produce the revenue anticipated from these excise taxes, as well as such additional revenue as may now have become necessary.

With respect to section 3404, tax on radio receiving sets, phonographs, phonograph records and musical instruments, subparagraph D, musical instruments, as it applies to band and orchestra instruments, we request your consideration of the insignificant amount of revenue which the tax would yield and the deplorable effects which this tax would have on the industry and the art of music which it serves.

The band and orchestra instrument industry is a separate and distinct industry within the general music industry. Its products are the instruments used in the symphony orchestra—that is, the wind, string and percussion instruments. Its largest market is the public-school system and the children in it taking instrumental music instruction, and its secondary market comprises the professional musicians who use these instruments as the tools of their trade.

The industry is a small one, whose continued existence, however, is essential to the development of the art of music in this country, particularly through instrumental instruction in the schools. Omitting the small shops employing fewer than 25 persons each, there are not more than 15 manufacturers and their factory employees number about 2,000. In no similar number of workman in any industry, however, could there be found more highly specialized and skilled craftsmen who have devoted their entire lifetime to the manufacture of a single product and know no other trade. Most of them are too old to be adaptable to strange occupations in defense work or other industries. They and their families are entirely dependent upon the continuance of this industry. Therefore we urge you to consider this proposed tax on musical instruments, insofar as the band and orchestra instruments are concerned, with sympathetic understanding of the conditions which now threaten the very existence of this industry and the continuance of work for the employees engaged in it.

There have been suggestions made before your committee, and previously before the Ways and Means Committee, based upon the theory of using the taxing power of the Government to curtail drastically alleged non-essential or less essential industries. At the same time these taxes are advocated because the Government requires the revenue which it is hoped they will produce. Both results cannot be obtained. It is impossible to tax so as to curtail production and at the same time maintain the tax yield. Furthermore, in the case of band and orchestra instruments, there is no need of a tax for purposes of curtailment; other unavoidable factors are already doing this far more effectively—so effectively, in fact, that the revenue yield from this tax will be but a small part of the amount which the Treasury Department experts have estimated.

There is every evidence that there will be no band and orchestra industry in this country by the end of this year, except for minor production for Army and Navy requirements, which will not use 10 percent of the facilities of the indus-

try. Under these circumstances, how can this proposed tax be productive of any substantial revenue? Present indications are that at best the revenue yield from this tax in 1942 will be about $150,000.

Estimated tax yield, 1942

	Production in 1939	Estimated production in 1942	Annual tax yield at 10 percent
Cup mouthpiece instruments	$2,787,120	None	None
Woodwind instruments (clarinets and other wind, i. e., oboes, flutes, etc.)	1,445,962	[1] $216,894	$21,689
Percussion instruments	1,468,858	[2] 1,101,643	110,164
Saxophones	842,976	None	None
Violins and other bow instruments	226,074	226,074	22,607
Total	6,770,990	1,544,611	154,460

[1] 15 percent of 1939.
[2] 75 percent of 1939.

Cup-mouthpiece instruments.—Cup-mouthpiece instruments, which constitute over 40 percent of the total production, are made almost entirely of brass. Brass is constituted approximately of 20 percent zinc and 80 percent copper. For several months zinc has been available to vital defense industries only. According to the Office of Production Management, there is more than 25 percent shortage of copper necessary for defense requirements alone. On August 1, our industry was notified by its sources of brass supply that no more brass would be available for the manufacture of band instruments, and it is impossible to obtain any official indication that brass will be available to the industry during the year 1942. Consequently it is expected that the production of cup-mouthpiece instruments will cease completely when the present brass supplies of the industry are exhausted. No manufacturer has sufficient supplies of brass to continue operation beyond December, and most of the production of the industry will have ceased before that time.

Saxophones.—The above remarks concerning cup-mouthpiece instruments apply likewise to saxophones.

Wood winds.—Wood-wind instruments, consisting primarily of clarinets, oboes, bassons, and flutes, comprise about 21 percent of the industry. Probably more than half of these instruments are made of brass or nickel silver, and production on them will have ceased entirely by the end of the year for the same reasons as apply to cup-mouthpiece instruments. Most of the other wood winds are made of grenadilla wood, imported from East Africa, importation of which is no longer possible. Manufacturers' stock of grenadilla wood are limited. Rubber and plastic bodies may be substituted for metal and wood, but rubber is no longer available and plastics are difficult to obtain. The key mechanisms of these instruments require nickel silver, none of which has been available for several months because of vital defense needs which it is expected will continue indefinitely. The manufacturers' supplies of nickel silver are almost entirely exhausted. Therefore it is expected that production of wood winds will be small after December 1, probably not more than 15 percent of normal in 1942.

Percussion instruments.—Percussion instruments account for about 22 percent of the total. Aluminum is essential in the manufacture of some percussion instruments, and where substitutes have not been found, these instruments have already been eliminated from the manufacturers' lines. The recent shortage of steel will curtail further the production of other models of instruments. Relatively, however, percussion instruments will not be so badly curtailed in production and in 1942 might possibly be as high as 75 percent of normal.

Bow instruments.—Violins and other bow instruments will probably not be greatly affected, although some of the imported woods used, as well as miscellaneous hardware, are becoming difficult to obtain.

There is a possibility that this industry, like other nondefense industries using vital metals, will be rationed in 1942. However, if the shortage of vital materials as published by the Office of Production Management continues, it is difficult to see how industries such as this can be rationed without interference with the vital preparations for defense. The British band and orchestra instrument

industry has been rationed at 25 percent. Under any such rationing, the amount of revenue resulting from the proposed tax would still be insignificant.

The manufacturers of band and orchestra instruments will naturally make every effort to make up for the disappearance of band-instrument production by defense work. Their continued existence in business depends on their success in obtaining defense contracts. It is not difficult to obtain defense work to the capacity of screw machine, punch press, and other machine departments, but these departments employ relatively few workmen. It is proving very difficult to obtain sufficient defense contracts of a type to keep polishing, plating, and similar departments busy even partially, and practically impossible to get defense contracts which will maintain employment for the specialized band-instrument workers, such as horn assemblers of all kinds, burnishers, and engravers. Many of these employees are very highly skilled, have worked for many years in their specialized trades, and are no longer young and adaptable enough to make the change to machine operators or assembly of defense products bearing no relationship to musical instruments. Even if the industry is fortunate enough to be rationed at 25 percent in 1942, there will not be work for most of these skilled operatives. Unemployment among skilled workers in the band and orchestra instrument industry will be most severe. It is, therefore, necessary that everything possible be done to prevent the curtailment of regular production below the point at which the industry can provide work for skilled workers who cannot be transfered to defense operations.

Insofar as this is a problem of raw materials, we realize that it is not a matter over which your committe has any control. However, a 10-percent tax imposed at this time on an industry struggling for its very existence will be unduly oppressive and disastrous. Prices, in the opinion of industry, are already approaching a prohibitive point, yet further increases are already necessary as a result of increases in costs of raw materials. With production of band and orchestra instruments at such low levels as must be expected under the most favorable rationing, overhead costs will soar to unheard-of heights, with consequent further increases in prices to the consumer. If, on top of these unavoidable price increases, there is piled another 10-percent increase due to this tax, it may well be that such little peacetime band- and orchestra-instrument business as is left will entirely disappear, because of the inability of children to pursue their musical education further, in the face of excessive prices for their musical instruments.

In view of the critical situation facing the band- and orchestra-instrument industry, and especially in view of the fact that this proposed tax will produce insignificant revenues during the predictable future, we urge you to except band and orchestra instruments from the proposed tax, as a measure of fairness and justice to a struggling industry and to the employees and their families dependent upon it.

Respectfully submitted.

NATIONAL ASSOCIATION OF BAND INSTRUMENT MANUFACTURERS.
By ALFRED L. SMITH, *Chairman, Committee on Taxation.*

STATEMENT OF JOHN G. LERCH, NEW YORK, N. Y., REPRESENTING THE TOY MANUFACTURERS ASSOCIATION

Mr. LERCH. Mr. Chairman and members of the committee.

The CHAIRMAN. You represent the Toy Manufacturers Association?

Mr. LERCH. I represent the Toy Manufacturers Association, and I am appearing here with respect to several items in this proposed bill which we believe were overlooked so far as the toy industry is concerned. There has been a consistent policy throughout the internal-revenue legislation not to tax toys or playthings or juvenile articles. In all of the revenue bills it has been so considered by the Treasury Department, except one instance, throughout the history of that legislation, and we do not think that it was the intent of the framers of this bill to tax toys or playthings or juvenile articles.

For instance, in the sporting-goods section of this bill, great care has been taken to exempt all those toys or juvenile articles. In con-

sidering tennis rackets, golf clubs, badminton rackets, and such, the taxable articles are all limited to that size used by an adult; there is exempted the small toy or juvenile article. We believe that was the intent of the House and has been the intent right through this legislation. We would suggest, therefore, at the end of part V of this act that you add a section, much in this language:

No taxes shall be levied under part V of this Act on children's toys, children's playthings, juvenile articles, or parts thereof.

I think that would carry out what has been considered to be the intent of Congress and what is the intent of Congress in this bill.

Senator VANDENBERG. When does a person cease to be a juvenile under your definition?

Mr. LERCH. There are a number of court decisions on that, and about 18, I would say; between 16 and 18. There are decisions on what a juvenile court has jurisdiction over; some say 16, some 18. In other words, they reach maturity at one of those ages.

Senator VANDENBERG. Well, we are probably safe in saying they have reached maturity when they are old enough to be drafted.

Mr. LERCH. Now, as I said, if that section were added to this bill, it would take care of a number of these instances I would like to call attention to specifically, but there is one item, and that is tires, in the present bill, which the Treasury Department has held to be taxable when applied to children's articles. We think that was not intended by Congress, and it should not be carried into this bill. For instance, it covers items like this [indicating] that go on toys, toy baby carriages, and other playthings. That tax, 2¼ cents per pound, as now applied, amounts to 50 percent of the value of the article and it is all levied on children's articles, children's playthings, and juvenile articles. If it is increased as proposed in this bill to 5 cents per pound, it will be over 100 percent on many articles of the value of the tire itself. That is by reason of the fact that the tires which we believe Congress intended to tax, automobile tires—there is a 10-percent tax there—but this article is made up of shoddy, reconstructed rubber, hence the tax of 2¼ cents makes a large portion of its value.

Therefore, we suggest as to the tire section of the law, the addition of the words—if you eliminate the tax entirely—we suggest:

"No taxes shall be levied under this section on articles or parts of articles designed for use on children's playthings, juvenile articles, or parts thereof"; or, if the tax is left to apply to tires used on these articles, we ask that it be held at least at what it is now, since we think it is exorbitant when increased to 5 cents per pound.

Now, as to section 545 of this bill, musical instruments, we have spent years litigating the definition of "musical instruments." That designation appears in the Tariff Act and applies as well to toys.

Now, the customs courts, for instance, have held this toy piano [demonstrating] to be a musical instrument. Here are two more items that have been held to be musical instruments; they would come under the tax as that section of the law is now drawn, so that we ask that the musical instrument section be changed so as to provide all musical instruments except children's toys, which we think would carry out the intent of Congress.

In this bill, you have added a new section for sporting goods and, as I have already said, great care has been taken to exempt the juvenile or children's articles in that paragraph. However, there is a provision for baseballs. The provision for baseballs doesn't take into account the little 10-cent article which the boy buys that bears the tax just the same as the professional base ball. We do not think that was meant by Congress.

There is another provision for footballs. Here [indicating] is a regulation football that we think was intended to be taxed. Here [indicating] is the toy article constructed out of some cloth fabric and inflated, a very cheap, flimsy article, and one which not even a high school game could be played with. We do not think that was intended to be covered by this tax.

Here is another one, fabricated of pigskin as the regular article is. Softballs are also covered by this sporting goods paragraph. Here is another article that we make for children's use that sells for 15 cents. It is stuffed with various waste material and no adult game could be played with it; it would go to pieces in a very few minutes.

You also have a provision for skis and sleds; 95 percent of all sleds are made for children's use; only 5 percent are of a character used by adults. Therefore, the tax that would be levied, if it is not applied to toys or playthings, would be infinitesimal, with the cost of collection, in our opinion, greater than the revenue itself, so we would suggest that you delete the word "sleds" from this bill.

As to skis, skis for children are under 5 feet in length, and we feel that some exception should be made in the provision for skis, either by value or in length, as you have done in the cases of tennis rackets and golf clubs, to limit it to those that are used by adults.

Now, you have a provision in section 552 for rubber articles. Apparently that provision was put there to catch all rubber articles and, while I do not know the intent of it, I feel it must have been to conserve the use of rubber. Well, now, toy rubber articles consume a total of 2,500 tons of rubber per year, and much of that is not pure gum rubber but shoddy, reconstructed rubber. It is an infinitesimal quantity and considering that they are little articles like toy balloons, toy soldiers, bath babies, rattles, and many other articles which have never been taxed, and which are sold mostly in 5- and 10-cent stores—and if, as I say, the conservation of rubber is the purpose of this provision—it fails of its effort there and unduly burdens a very cheap article of amusement.

Now, I said in the beginning, we earnestly ask that a provision be put on the end of part V which will carry out not only the past intent of Congress, but which we feel is the intent of this bill, not to tax playthings, toys and juvenile articles.

If I might, I would like to leave a memorandum with the committee, and if I may have permission, there are one or two other articles I didn't touch on in this memorandum which I would like to deal with in a supplemental memorandum on the subject.

The CHAIRMAN. That is perfectly all right. Thank you.

(The memorandum submitted by Mr. Lerch is as follows:)

RE H. R. 5417, REVENUE ACT OF 1941

CHAIRMAN, SENATE FINANCE COMMITTEE,
United States Senate, Washington, D. C.

SIR: This brief is filed on behalf of the Toy Manufacturers of the United States of America, Inc., representing the views of these manufacturers as to the above bill but with particular reference to some of the provisions thereof.

In all of the revenue statutes enacted by the Congress, it has shown a very definite cleavage to the principle that playthings of children and articles of juvenile amusement should not be taxed. These statutes have all been so construed by the administrative authorities. Since the policy of Congress has been so definitely fixed and construed over a term of years, we think it unnecessary to comment upon the merits of this policy.

In H. R. 5417, now before your committee, this policy has time and again been manifested. For instance, in section 552, which adds a new section to the law covering sporting goods and other articles, great care has been taken to exempt from the tax those articles which are designed for children's or juvenile use. This was done by limiting the tax to articles which by their size were designed for child use only. However, the language used in other sections of the law without exemptions is so broad that it may include children's playthings or juvenile articles which are known by particular designation.

In view of the long established policy of the Congress in enacting revenue bills, we feel that the proposed bill should contain a provision at the end of part V just after section 559, effective date of part V, in a new section 560 containing language to the following effect: "No taxes shall be levied under part V of this act on children's toys, children's playthings, juvenile articles or parts thereof."

Such a provision would take care of all of the suggestions we are about to make. However, if this cannot be done, we ask that attention be given to the following sections since the language in each instance is sufficiently broad to include a tax on articles which is not intended by the bill.

SECTION 535

Under the language of section 3400 (1) of the existing Internal Revenue Act, the Treasury Department has ruled for the first time in connection with any article of children's or juvenile amusement that the word "tires" included tires that were placed on doll carriages, velocipedes, juvenile vehicles, and other articles of children's amusement. Since this tax is based upon weight it places an undue hardship on the manufacturers of toys and juvenile articles. Rubber tires or articles of this nature are made principally from recovered rubber or shoddy, whereas the tires of utility which Congress undoubtedly intended to tax, are made from pure gum rubber. The existing tax rate of 2¼ cents per pound amounts in some instances to 50 percent of the value of the article, whereas this tax when imposed on automobile tires amounts to but 10 percent of the value. If the rate proposed in the pending bill is adopted, the tax on tires for children's articles described above would, in some instances, equal 100 percent or more of the value of the article. Whatever may be the reasons in the mind of Congress for the levy on utility tires, we do not feel that it is the intent of Congress to penalize the articles of amusement for children by levying a tax which is many times greater than the tax on the article of utility. We respectfully ask that a provision be added at the end of section 535 as subsection (d) as follows: "No tax shall be levied under this section on articles, or parts of articles, designed for use on children's playthings, juvenile articles, or vehicles."

If, for any reason, your committee finds it impossible to add this provision, then we ask that language be inserted in the proposed bill which will hold the tax on articles of the above nature at the present rate instead of 5 cents per pound, which we believe would be exorbitant.

SECTION 545

This section, amending section 3404, includes a tax on musical instruments (subsection (d)). This language standing alone, because of the difficulty of determining from the definitions what constitutes a musical instrument, should be made to apply only to those instruments which are used by adults for produc-

ing music. Years of litigation in the customs courts have produced almost absurd results in attempting to define identical language in the Tariff Act. Articles, such as we produced at the time of the hearing, were held to be musical instruments because they were capable of playing a scale, and to this extent capable of producing "music." We, therefore, ask that the new provision "section 3404 (d) Musical instruments" be amended to read "(d) Musical instruments except children's toys."

SECTION 552

Subchapter A of chapter 29 of the Internal Revenue Code, new section 3406

(a) (1) *Sporting goods.*—This section is the best example of our position before this committee. In drafting this section it is apparent that there was no intention on the part of the framers to tax articles designed for the use of children or juveniles, since care has been taken to exempt from the tax those articles which by designation might come within the provisions by limiting the taxable articles by size, thus levying the tax only on articles used by adults, for example, badminton rackets, badminton racket frames, baseball bats, billiard and pool tables, golf bags, golf clubs, hockey sticks, indoor baseball bats, softball bats, squash rackets, squash racket frames, tennis rackets, and tennis racket frames. All of these designations are broad enough to cover articles designed for the amusement of children and juveniles and are to be found on every toy counter and place of business dealing in juvenile articles. No dealer would carry the articles which are exempted by this section in his sporting goods department. However, the framers of this bill have overlooked similar designations in the same section (a) (1).

Baseballs.—Although the tax on baseball bats is limited to articles actually used in the sports, recognizing that there are articles of the same designation not so used, no exemption is provided for balls. Children's baseballs are stuffed, with the core made from compressed scrap felt, excelsion, or cottonseeds, which is a very different articles from the regulation baseball with its core of rubber and expensive winding and horsehide cover. This is true both as to cost and the use of the article. Because of the cost of the materials used in the child's baseball, the rate of tax in the bill is vastly in excess of the real article of sport, which we think Congress intended to cover, and thus penalizes the boy who has but a few cents to spend for his article of amusement.

Footballs. A clear line of demarcation as to the construction, workmanship and price marks the difference between a juvenile football and the article of sport. The real ball is made of pigskin and is commonly called in the world of sports a pigskin. The juvenile article is a cheaply constructed football with which it would be impossible to play one quarter of a high school, college, or professional football game. (See exhibits left at the hearing.) The same argument applies here that we made with regard to baseballs.

Skis and sleds. Sleds are manufactured chiefly for the use of juveniles or for the amusement of children, in fact about 95 percent of sleds are used by children. We do not believe that it is the intention of Congress in levying a tax on a luxury, sporting goods, at a time when the parent is making every effort to pay his share of the cost of defense, to render it harder for him to provide articles of amusement for his family. Small skis up to 5 feet in length are also manufactured almost entirely for children's use. Since sleds of a character for adults are negligible in quantity, we feel the cost of collection of the tax would be greater than the tax and hence the word "sleds" should be eliminated. As to skis, some line of demarcation should be drawn either as to cost or length to exempt children's or juvenile articles.

Softballs.—Softballs come under the same category and are made in the same manner, cover the same range of materials, workmanship, and cost as baseballs. This article for children's use because of its construction would no more withstand the abuse of an adult game than would a baseball or football of the sporting-goods type. We do not believe that the framers of this provision had in mind a tax on softballs of the type for children's use any more than for badminton, tennis, or other real sporting goods from which they have segregated the articles of real sports and those of children's amusement.

As to all of the above articles specifically referred to, we respectfully ask that the provisions be so changed as to limit their scope to real sporting goods and exempt children's articles.

SECTION 552

New section 3406 (7), Internal Revenue Code—Rubber articles

This section was evidently written to cover articles of rubber of a character that would conserve the use of rubber. Rubber toys have found a definite place in every household where there are children. The total consumption of rubber through this avenue, as determined by a recent survey, was less than 2,500 long tons. A great majority of this is sold through the 5-, 10-, and 25-cent stores. They would not come within the provisions of any other section of this law and their inclusion here, we think, would only increase the cost and deprive many children of cheap amusement at a time when it it difficult to substitute articles of different materials at anything approaching the same cost. For instance, let us cite toy balloons, toy soldiers, bath babies, rattles, and many other articles which have never been taxed. We, therefore, request that the proposed draft be amended so as to insert after the words "surgical use," the word "toys,".

In the light of the foregoing, we respectfully submit that wherever the framers of this bill were aware that the language of the proposed sections covered articles of children's or juvenile amusement, they exempted them from tax. That policy should be carried throughout and a new section added at the end of part V to cover all such articles or each of the sections we have referred to herein amended so as to exempt the articles described.

Respectfully submitted.

TOY MANUFACTURERS OF THE UNITED STATES OF AMERICA, INC.,
By LAMB & LERCH, *Attorneys.*

AUGUST 1941.

CHAIRMAN, SENATE FINANCE COMMITTEE,
United States Senate, Washington, D. C.

Re: H. R. 5417, Revenue Act of 1941.

SIR: During the hearing on the above-entitled bill on Wednesday, August 20, 1941, permission was granted us by the committee to embody in writing our suggestions relative to the amendment of section 552 (9). In our brief filed on that day we suggested amendments of section 535, section 545, and section 552, and we respectfully request that the suggestions which follow be considered as supplementing the suggestions contained in said brief.

SECTION 552

Subchapter A of chapter 29 of the Internal Revenue Code.

New section 3406

(a) (9) *Optical equipment.*—Enumerated in this section are particular instruments which it is proposed shall be assessed with a tax equal to 10 percent. The instruments thus enumerated belong to a highly technical and expensive class. Among these items appear microscopes and telescopes, both of which are used in this specialized optical field. However, there are also microscopes and telescopes which are designed for the amusement of and which are actually used only by children. These are cheap reproductions of the genuine articles and generally constitute parts of children's chemistry or mineralogy sets. We believe it to be self-evident that it is not the intention of Congress to include children's articles within the provisions of section 552 (9). However, that will be the actual result unless an amendment is introduced which will exempt microscopes and telescopes which are for children's use only.

Respectfully submitted.

TOY MANUFACTURERS OF THE UNITED STATES OF AMERICA, INC.,
By LAMB & LERCH, *Attorneys.*

AUGUST 1941.

The CHAIRMAN. Mr. Spalding.

STATEMENT OF H. BOARDMAN SPALDING, NEW YORK, N. Y., REPRESENTING A. G. SPALDING & BROS.

Mr. SPALDING. Mr. Chairman and members of the committee, I have a prepared memorandum here which I would like to have extended on the committee's report and I will hand it up. I am not going to read it; I am going to speak extemporaneously.

I am an attorney. My firm is counsel for A. G. Spalding & Bros., one of the largest manufacturers of athletic goods. I am a director of that company and I am a fairly large stockholder in that company. Therefore, what I have to say is, I believe, in the interest of my client; on the other hand, I am appearing here as an individual, not as a spokesman for the industry, and with complete freedom to express my personal views, rather than be bound by the expediencies incident to speaking for the industry.

I am, of course, addressing my remarks primarily to the proposed tax on sporting goods, but what I shall have to say has some bearing on many of the other new manufacturers' excise taxes that are proposed in the tax bill. There are several spokesmen for the industry who will follow me and who, I believe, will urge the inexpediency of a tax on athletic goods and other articles of sporting goods.

That, in my opinion, is primarily a matter of legislative policy. You gentlemen have before you today one of the most serious crises this country has ever been in. You have before you the problem and duty of raising revenues larger than ever raised in the past, and you have the great difficulty of determining the sources from which those revenues are to be raised. It must be perfectly obvious to you, as you have studied the problem, that whatever form your taxes may take, you have got to reach that large amount of national income which is received by individuals and families having incomes of $5,000 a year and less.

Mr. Houston, of the National Association of Manufacturers, who appeared before you yesterday, I believe, presented charts showing that 75 percent of the national income was going to people in that class. There is where the increased revenues have got to come from.

Now, the question is the forms these taxes are going to take. There have been a number of proposals before you which I do not need to touch on, such as a general sales tax, and a gross income tax, as it has been called, and other proposals.

The House has seen fit not to adopt as far-reaching measures as that, and to have sought, in part, perhaps to reach these sources of income through these miscellaneous excise taxes.

Now, of course, they are manufacturers' sales tax, we call them excise tax, because that has been the nomenclature used for decades, but they are, nevertheless, manufacturers' sales taxes.

I have never been quite able to understand why those industries that are proposed to be, and have been in the past, subject to a manufacturers' sales tax, always recommend a general manufacturers' sales tax. The only possible excuse is that they assume it will be at

also much smaller rate than the rate when they have a special tax on their industry, that they will have a less burdensome tax with which to deal.

Of course, obviously the lower rate of the tax, the less difficulty in handling it, but all the problems, at least in theory, that exist in the case of these special manufacturers' taxes also exist in the case of a general manufacturers' tax, with the sole exception that you might not have to determine whether a particular item was within the tax. Of course, if it was a general tax, it would include everything.

Another thing that may have puzzled members of this committee is to have an industry appear before you and argue, on the one hand, that this tax is an intolerable burden to the industry and, on the other hand, that it is an unfair burden to the consumers of the industry's product. In the case of sporting goods, they are going to talk to you about the health of the Nation and the necessity for physical education. The gentleman who just preceded me told you that consumers' toys should not be subjected to this tax and, at the same time, talked about the burden that it is on the toy industry.

Now, obviously, if the tax is paid entirely by the consumer, it is not a burden on the industry; conversely, if the tax is paid by the industry, it is not a burden on the consumer. That argument cancels itself out.

It is my purpose to explain how that confusion comes about and what the difficulties are. It is, of course, always conceded that excise taxes are intended to be passed on to the ultimate consumer. No one ever imagines that you can impose upon a manufacturing industry a tax of 10 percent of its sales when its net profits rarely exceeds 10 percent, and often is very much less than 10 percent, and have that industry survive. It is supposed to be passed on. The difficulty is you cannot be sure it will be passed on. That is why the industries that come in here fearful that they won't be able to pass it on, are all urging they should not be taxed, and they try to give you the various reasons which they think will have the most appeal, sometimes a political appeal.

Now, the question of whether a tax can be passed on or not, is dependent upon a wide number of economic factors which impinge upon the particular industry at any given time; factors which change from time to time. Also it is easier, usually, to pass on a tax to the ultimate consumer who is supposed to bear it, if that tax is imposed at the nearest point to that consumer. The retailer cannot always, but he can as a general rule, more effectively pass on a tax which he is called upon to pay upon his sales to the consumer, than can the manufacturer, removed two or three points back, see that that tax is passed on through the wholesaler, and on down to the final consumer.

The experience of the athletic-goods industry with this tax which was imposed under the 1932 Revenue Act, and which continued until repealed as of July 1, 1938, was that, of course, in the first instance, the manufacturers sought to add the tax to their prices. Now, let us assume they increased their price by 10 percent. Immediately, the forces within the distributing field of the indutsry, added to that increased price their customary percentage of mark-ups. If it was 33⅓ percent, one-third was added on to the total cost. The retailer, in turn, had his customary percentage of mark-up which he added on, so that, if that process had worked through without other economic pressures

impinging upon it, the consumer would have wound up paying an increase in the price of double the amount of tax which the manufacturer had originally paid and which the Government had collected; obviously, an undesirable economic result, both from the standpoint of the public required to pay the tax, and from the standpoint of the Government entitled to receive the tax.

Senator VANDENBERG. You say it is impossible to avoid that?

Mr. SPALDING. If you place a manufacturers' tax on the manufacturers' selling price, in most cases and in the athletic goods' industry, for instance, that tax will pyramid through the customary mark-ups of the wholesaler and retailer to the final consumer. Now, if you will bear with me for one moment; let me come back to that because it is a complicated economic problem which I am talking on this morning, a very technical subject.

We have a number of different types of excise taxes in our revenue laws today, leaving out those not pertinent to this discussion.

You have the type of excise tax such as the old tobacco and liquor tax and the gasoline tax and, incidentally, on tires which you have imposed on units, or quantities, irrespective of the selling price. You have these proposed taxes on manufacturers, which are a percentage of the manufacturers' selling price, and then you have proposed taxes on the retailer. I say "you"—I mean the House—have proposed taxes on the retail sale in the case of jewelry, toilet articles, and furs.

Now, the pyramiding of the tax in those classes where the tax is paid back by the manufacturer or producer is not the same in the various industries. Curiously enough, one of the very heavy taxes, percentage-wise to the final consumer price, is the tax on cigarettes, a tax of 6 cents on a package retailing at 15 cents. I don't think that tax is pyramided to the consumer. Of course, more accurate testimony on that you can get from the people in the tobacco industry, but the general evidence indicates that the custom in that trade has been for the wholesaler and retailer to take so many cents, not percentage mark-ups, and do that irrespective of whether the price is 15, 12 cents, or lower. In the case of liquor, the contrary takes place.

I was talking with the treasurer of one of the large wholesalers of liquor just 2 or 3 weeks ago and I asked him the specific question. There the custom is for the wholesaler and retailer to add a percentage mark-up on his cost and, if you observed—I only did it rather casually—retail liquor prices last summer when there was added 75 cents a proof-gallon tax on liquor, which amounted to something like $2.25 per case, you found that the retail price per case went up $4 or $4.50, showing the effect of that taking place.

The industry that probably handles these taxes the best of all is the automobile industry, probably due to the fact that the automobile manufacturer exerts a more powerful economic control over the whole industry than do manufacturers in other industries. Everyone who has bought an automobile has seen added to his bill for the automobile the precise amount of the tax the manufacturer has paid. For some reason or other, the dealer hasn't had any objection to disclosing either the amount of that tax or what the cost of that

automobile was to him, but you come into these other industries, this athletic-goods industry, and you cannot get the distributing branch of that industry to disclose to their customers their costs by simply passing the tax on at its precise figure.

Senator VANDENBERG. Why can't you require the disclosure of that tax?

Mr. SPALDING. By legislation?

Senator VANDENBERG. Yes.

Mr. SPALDING. To the consumer?

Senator VANDENBERG. Yes.

Mr. SPALDING. I presume you could, but there is no such provision in the law.

Senator VANDENBERG. No; but we are talking about a possible manufacturers' sales price.

Mr. SPALDING. Yes.

Senator VANDENBERG. Are you familiar with the discussion of the staff of the Joint Congressional Committee on Internal Revenue of this subject of pyramiding and their belief that it can be entirely or substantially corrected?

Mr. SPALDING. I am not.

Senator VANDENBERG. I don't think it is insurmountable.

Mr. SPALDING. You propose to put such a provision in the law, that is a provision that the final retailer would have to disclose the amount of tax paid by the manufacturer on that article at the time of his sale to the consumer; that is what you have in mind?

Senator VANDENBERG. Yes.

Mr. SPALDING. I know that you would certainly introduce a very great disturbance in the distributing end of the industry. The wholesaler doesn't want to disclose to the retailer what his cost is.

Senator VANDENBERG. All he has to disclose is the cost of the tax?

Mr. SPALDING. But when it is a percentage, it discloses the cost.

Senator VANDENBERG. No; it discloses the price where the transaction occurred.

Mr. SPALDING. No, Senator; that is not it. A manufacturer sells an article to a wholesaler at 50 cents. If there is a tax included in that, the tax is one-eleventh of that price, something about 4½ cents.

The wholesaler, in turn, sells that article to the retailer at 65 cents. He doesn't disclose to the retailer that his cost was 50 cents. If, however, he said 65 cents, of which 4½ cents was tax, the retailer, in a moment's time would say, "Oh, yes; but you paid 50 cents for that article."

In turn, when the retailer sells that article to the consumer for $1 and the consumer knows there is a 10-percent tax, but is disclosed that the tax is 4½ cents, he could very readily say. "The manufacturer sold this to you for 50 cents; why should I pay a dollar for it?"

The whole distributing trade would be up in arms. They don't want that disclosure made at the time of their sale. However, if, of course, you put it in the law they will have to comply, but they won't like it. I don't want to take the time to develop some of the other technical arguments which I have set forth in this memorandum, because I think I may assume that the members of the committee will read it. The memorandum is set forth more logically than I am able to talk extemporaneously.

There is one point that I would like to mention, however. You will recall that in the 1932 law, you had a section—I think it is 3447 of the code—which provides that if a contract for sale was made prior to May 1, 1932, for delivery or for the sale to be completed subsequent to the time when the tax went into effect, and the contract didn't permit the vendor to add the amount of the tax to the selling price, the vendee was made liable for the tax, the tax to be collected from him by the vendor, or if he refused it, that the matter be reported to the collector of internal revenue.

There has been no similar provision in the House bill. Of course, it seems to be obviously only fair to protect those manufacturers who are subjected to a new excise tax to provide a similar provision, having effect from July 1 when the bill would become law.

Thank you, Mr. Chairman. I have nothing further.

The CHAIRMAN. Thank you, sir.

(The memorandum referred to by Mr. Spalding is as follows:)

MEMORANDUM OF H. BOARDMAN SPALDING

MANUFACTURERS' EXCISE TAXES

This memorandum relates to the new excise taxes imposed by section 552, H. R. 5417. Although this memorandum in its general aspects is applicable to all of the subdivisions of that section, it is concerned in particular with the manufacturers' excise tax on sporting goods which, if enacted, will be subsection (a) (1) of section 3406 of the Internal Revenue Code.

In making the statement before the Senate Finance Committee, and submitting this memorandum, I am representing my individual opinions. I am not acting as a spokesman for the industry. I am, however, an attorney, a member of the firm of Kelsey, Waldrop, Spalding & Parker, of 55 Liberty Street, New York, and my firm is general counsel for A. G. Spalding & Bros., Inc., one of the principal manufacturers in the sporting-goods industry. I am also a director and stockholder of that company. While, therefore, they would be, if adopted, beneficial to the interests I represent, I believe they will likewise help the entire sporting-goods industry add to the Government revenues, and be in the public interest.

Excise taxes are of several different types. Disregarding those which are not germane to the present discussion we have, with respect to existing taxes and the new taxes proposed by H. R. 5417, the following types:

A. Excise taxes of the type of those imposed on liquor, tobacco products, tires, and gasoline. On these the tax is a specific amount per unit, or per physical weight or volume. Taxes of this type, although usually payable by the manufacturer or producer, are the same in amount irrespective of the manufacturer or producer's selling prices.

B. Another type of manufacturer's excise tax is that which becomes effective on the sale of the product by the manufacturer or producer and is measured by a percentage of the manufacturer's selling price. Taxes of this character are the manufacturer's excise taxes on automobiles and the new taxes imposed on sporting goods and other classes of articles under the proposed new section 3406 (a) of the Internal Revenue Code.

C. A third type of excise tax is that imposed on retailers measured by the retailer's selling price, such as the taxes imposed under section 553 of H. R. 5417 upon jewelry, furs, and toilet preparations.

For convenience, I shall hereinafter refer to these separate and distinct types of excise taxes by the letters A, B, and C, as above defined. It is necessary to distinguish between these three types of excise taxes because of differences in their respective economic effects.

I believe it is generally assumed that the economic incidence of all three excise taxes will be borne and ultimately paid by the users and consumers of the products subjected to them, the manufacturer or retailer being, in the economic sense, only a collector for the Government. If the ultimate incidence

of these taxes is not wholly passed on to the ultimate consumer, and all or some part of the tax is absorbed by either the manufacturer or other elements of the industry, the tax becomes unfair, discriminates against, and may be ruinous to the businesses affected thereby. It is quite obvious that with margins of net profit which rarely exceed 10 percent, and in many instances are very much less than that rate, a tax equal to 10 percent of the selling price, unless passed on in its entirety, may be equal to or very much greater than the net profit of the enterprise. This being so, it is clearly the duty of Congress to impose excise taxes in such a manner and form that they may be passed on to the ultimate consumer with the highest practical degree of certainty.

It is frequently difficult to determine with statistical accuracy the extent to which a tax has been passed on. Therefore, in all statements made on this subject, there is some element of judgment which necessarily enters. There are, moreover, two elements which affect this question and which are often confused in discussions regarding it. The first element is measurable with a fair degree of accuracy; that is, the effect of the tax upon the percentage margin of gross profit of the entity legally liable for payment of the tax; that is, if it is an excise tax of type B and prior to the tax the manufacturers' margin of gross profit has been 25 percent, and after a tax of 10 percent has been levied on the manufacturer's sale, the gross margin on the articles, the sales of which are taxed, is reduced to 15 percent, it is reasonably safe to assume that no part of the tax has been passed on. This element is reasonably easy to measure with a fair degree of certainty.

There is another element, however, which frequently comes into discussions of this subject, and that is the effect of the tax upon sales volume. A net profit is the result of a gross profit which exceeds the expenses of the enterprise. The percentage of gross profit is only one factor. Volume is the other factor and frequently the more important factor. Perhaps an illustration will be helpful to make this point clear. Assume an enterprise which has a gross-profit percentage of 30 percent and has expenses of $200,000. If it does a volume of business of $1,000,000, it will have a resulting net profit of $100,000 at 10 percent. Assuming that it has a capacity of 50 percent greater volume and can secure that volume by reducing its selling prices to a point where its gross profit is only 25 percent and has an increase of $50,000 in its expenses due to the larger volume, it then shows the following result:

Sales	$1,500,000
Gross profit 25 percent	375,000
Expenses	250,000
Net profit	125,000

or a greater net profit than it had with the higher percentage of gross profit.

On the other hand, if, by an increase in costs, an advance in prices is considered necessary, which has the effect of reducing its sales volume 30 percent to $700,000, even though the margin of gross profit remains the same, at 30 percent, the gross profit will be only $210,000, resulting in a net profit of $10,000 above its expenses.

Any excise tax which is reflected in a higher consumer price will have some effect upon sales volume. The extent of that effect depends upon the elasticity of the demand for the particular product, and upon other factors affecting the business economy at any particular time. This second element enormously complicates the problem of determining the extent to which the enterprise made subject to the payment of the excise taxes has succeeded or failed in passing them on to the consumer. The foregoing, however, is the reason why industries whose products it is proposed to subject to excise taxes or increases in the excise taxes are extremely apprehensive of the effect that it may have upon their prosperity or even their ability to survive.

Insofar as the imposition of an excise tax results in an increase of price to the consumer, the effect of the increase in price on the sales volume of the product will probably be substantially the same at whatever point the tax is imposed. This effect is an inevitable consequence of excise taxation and where, for social or other reasons, it is desired to reduce consumption of any particular commodity, imposition of an excise tax is a medium by which this result may be obtained. Such damage as it may cause to the industries affected is an inescapable consequence of the policy decision by Congress to impose taxes of this character.

The passing on, however, or the failure to pass on of the direct effect of the tax upon the percentage margin of gross profit is relatively more important and of more immediate concern to the industries affected. They may, in any event, have to adjust themselves to a decrease in profit or to a loss caused by a decrease in sales volume, but they should not be forced involuntarily to accept a smaller percentage margin of gross profit. The type of excise tax adopted is, therefore, very important when this factor is considered. A tax such as type C, imposed upon and at the time of a final retail sale, bears the most direct relationship to the party upon which the ultimate incidence of the tax should rest. It enables the retailer to acquire the merchandise without any increase in the cost thereof that results when the tax is imposed upon the manufacturer's sale. The retailer has only to add to his usual percentage mark-up on cost the exact amount of the tax and in the entire chain, the retailer, wholesaler, and manufacturer will, as far as the tax is concerned, have each maintained their accustomed margins of gross profit. The only price change which the tax will cause will be the final ultimate price to the consumer. In such a case, also, the price increase to the consumer will almost invariably be exactly the amount of the tax paid to the Government.

When, however, an excise tax of type B is imposed, the result is one of two things: Either the manufacturer fails to pass on the tax in its entirety, or, if he does, the wholesaler and retailer, in most cases, will add to the total cost (including tax) the customary percentage mark-ups so that the resulting price to the consumer will be increased about twice the amount of the tax paid to the Government. This result is undesirable, first, from the revenue standpoint; second, it will have a greater effect to reduce volume of sales than will a tax imposed upon the retail sale; third, while it may appear to enrich the wholesaler and retailer, the resulting curtailment of volume will probably more than absorb any increase they obtain by adding their percentage mark-ups on a higher cost. Experience under the 1932 manufacturer's excise tax on sporting goods shows that, in the first instance, this increase in prices took place. This advance in prices, coming at the bottom of a severe business depression brought about a very great curtailment in consumption in the 2 years following the imposition of the tax as contrasted to the 2 years preceding the imposition of the tax. The result was to intensify greatly the competitive forces with the result that instead of being paid by the consumer, the burden of the tax was forced back upon the manufacturing division of the industry. The distributors for the most part maintained their percentage margins of gross profit. The burden upon manufacturers was so great that the company for which I am counsel never succeeded in earning a net profit during all the years the tax was in effect, and shows a net profit for the first time in the year 1939, after the tax was repealed. Another interesting fact in the case of this company was that on the average the percentage of gross profit which it earned during the period the tax was in effect was less than the percentage of gross profit which it earned during the years of 1926 to 1930, inclusive, by approximately the amount of this particular tax.

Another difficulty with a tax which is imposed upon the manufacturer's selling price (type B) is that under the statutory definition of the price upon which the tax is levied, the tax must be paid upon the wholesae price, whether that wholesale price is a price to wholesalers or a price to retailers. It is a very well recognized fact that there will be a difference of 20 percent to 30 percent in a manufacturer's price to wholesalers in contract) the same manufacturer's price to retailers. Therefore, the manufacturer who performs entirely his own wholesale distribution will have a taxable price base 20 percent to 30 percent higher than his competitor whose distribution is through wholesalers. This introduces a serious competitive discrimination between manufacturers in the same trade and industry. This competitive discrimination is so serious that when the 1932 act was enacted, manufacturers sought to escape the discrimination by the organization of separate subsidiary sales corporations and will undoubtedly make use of this same means to avoid the discrimination if these new manufacturer's excise taxes are imposed. It is most unfortunate, however, to force the use of subsidiary sales corporations to escape what is otherwise an unbearable competitive discrimination. In the first place, it immediately introduces the difficult administrative problem for the Commissioner of Internal Revenue, because, instead of being able to audit the tax simply on the basis of the actual selling price by the manufacturing

corporation to its customers, it is obliged to check the intercompany prices to determine whether they are the prices defined by section 3441 (b) of the Internal Revenue Code. This leads to endless questions and disputes between the taxpayer and the Bureau of Internal Revenue, and there is reason to doubt that the individual cases can or will be decided on a basis uniform to all taxpayers.

A further serious objection to use of subsidiary sales corporations is that under the income-tax law, separate income-tax returns have to be made for the parent and the subsidiary sales corporation. Since these sales corporations are not separate business enterprises, but are, in effect, merely sales departments of a single enterprise, there is no objective basis by which the Commissioner of Internal Revenue can determine that the income between the companies has been properly apportioned, and yet that is what he is required to do pursuant to section 45 of the Internal Revenue Code. To force manufacturers, by the imposition of these manufacturer's excise taxes, to organize separate sales companies in order to avoid an unfair competitive discrimination and, at the same time to refuse to permit consolidated income-tax returns of such companies, is capable of and will inevitably produce unjust results wherein income taxes will be assessed upon what in a business sense are wholly nonexistent and purely fictitious profits.

A further difficulty arising from the imposition of the manufacturer's excise tax of type B, which is of considerable importance in the sporting goods industry, is the exemption from tax of sales to States and political subdivisions. This means sales of athletic goods to State universities and all schools supported by public funds, all parks and playgrounds, all purchases by the Government for the use of the Army or Navy. If sales to these various governmental bodies were all made direct from the manufacturer, little difficulty would arise. The fact is that only a small percentage of such sales are made direct, and most of them are made by dealers and distributors who may be either once or twice or more removed from the manufacturer who pays the tax. The paper work involved, under such circumstances, is itself a serious burden. But the more serious question to the industry is the allowance to be made to the school or college for the tax exemption. As a matter of business policy, because of unwillingness to disclose their cost prices, dealers under the 1932 law, in general, allowed such institutions one-eleventh of the purchase price. Inasmuch as one-eleventh of the purchase price was, in most cases, about twice the tax that had actually been paid to the Government, there was an endless source of friction, leading to creation of ill will between manufacturers and their dealers and distributors respecting which was to absorb the other 50 percent. In some of the items which are subjected to these taxes, such as football and baseball equipment, a large proportion of the products sold ultimately go to such tax-exempt institutions.

It is believed that the foregoing are the considerations which led the Ways and Means Committee to impose excise taxes upon the retailer's sales (type C) in the case of jewelry, furs, and toilet preparations. In the case of the tax on toilet preparations, which was previously subject to a manufacturer's excise tax, it is proposed to repeal the manufacturer's excise tax and impose the tax on the retail sale in its place. As the majority of the Ways and Means Committee stated in this report, the "tax is placed on the retail sale rather than on the manufacturer's or importer's sale because of administrative and equitable considerations." The report does not go into the detail of these administrative and equitable considerations, but it is believed that considerations of the character above set forth led them to make this change in the character of the tax on toilet articles and to impose the tax on the retail sale in the case of jewelry and furs. If that is sound for those industries, it is equally sound for sporting goods.

Excise taxes have in the case of liquor and tobacco products long been an important source of Federal revenue. At times such as the present, when there is needed a great increase in revenue, it is to be expected that one source of that increase will be found by subjecting to excise taxes a large number of items in the luxury and semiluxury class. Those advocating such taxes, lacking experience regarding their economic effect, lose sight of the importance of the form of such levies and of the point at which the taxes are assessed. The purpose of my statement before the Senate Finance Committee and of this extension of my remarks has been to demonstrate the harmful economic

effects and the administrative difficulties resulting from the imposition of such a tax upon the sale by the manufacturer and measured by the manufacturer's selling price. These economic effects and administrative difficulties may be overcome when the tax is imposed upon and at the time of the retail sale. It is true that to tax the retail sale increases the number of companies and individuals required to render reports. This, however, is only a matter of administrative routine. Certainly, if the Bureau of Internal Revenue can administer a retail sales tax in the case of jewelry, furs, and toilet preparations, they will find no difficulty in administering a similar tax in the case of sporting goods. The need today is to collect the largest amount of revenue possible without undue hardship or economic injury. A retail tax on sporting goods at a rate of 6 percent will, in my opinion, produce as large, and possibly even larger, revenue than will a 10-percent tax on the manufacturer's selling price.

CONTRACTS MADE PRIOR TO JULY 1, 1941

I also strongly recommend that there be added to the Revenue Act a section similar to section 3447 of the Internal Revenue Code. This section of the Internal Revenue Code, which was part of the 1932 Revenue Act, provided that, in the case of contracts made prior to May 1, 1932, for sale after the tax takes effect, and where such contract did not permit adding the tax to the amount to be paid, the vendee should, in lieu of the vendor, pay so much of the tax as is not permitted to be added to the contract price. If manufacturers have, with respect to the new manufacturers' excise taxes, made contracts of the character above described, they are entitled to be protected by the addition of a similar provision in the pending revenue law.

Respectfully submitted.

H. BOARDMAN SPALDING.

AUGUST 20, 1941.

The CHAIRMAN. Maj. John L. Griffith.

STATEMENT OF MAJ. JOHN L. GRIFFITH, CHICAGO, ILL., REPRESENTING THE ATHLETIC INSTITUTE

Major GRIFFITH. Mr. Chairman, I have copies of my remarks that I would like to file with the committee, if I may, and with your permission, I would just like to address myself to two or three provisions of the bill.

My name is John L. Griffith; my address, Chicago, Ill., care of the Hotel Sherman. I am commisisoner of athletics of the Big Ten Conference, secretary-treasurer of the National Collegiate Athletic Association, and president of the Athletic Institute.

I am appearing for the Athletic Institute. It is an organization whose purpose is that of trying to extend wholesome recreation and athletics throughout the country. Our directors all serve without pay. Some of them are:

Fielding Yost, football coach and long prominent in athletics;

Mr. Frank McCormick, director of athletics, University of Minnesota;

Mr. Charles Robbins, of Mr. Spalding's firm;

Mr. L. B. Icely, who is to follow me, and so on.

May I say first, that personally, I feel that we should pay taxes; we should pay as we go and everybody who is capable of making a living ought to pay his fair share of the cost of government. What I want to bring to the attention for the consideration of this committee is my view that we should not tax the implements used by our children in the pursuit of their academic or physical education.

The Senate Finance Committee in other years has frowned on the advisability of taxing athletic goods used chiefly by children. I need not remind the Ways and Means Committee that we have had a number of tax bills; one in 1918 taxing athletic goods, which was repealed in 1921; another one was introduced in 1932-33 and repealed in 1938. I recall that the Senate Finance Committee in 1933 eliminated the tax on athletic goods and then the joint committee put it back in.

You are familiar, too, no doubt, remember no doubt, that the Subcommittee on the Ways and Means Committee that was appointed and functioned from November 1937 to January 1938 reported that a tax on athletic goods was a tax on the children of the country, and it is to that point, Mr. Chairman, I would like to chiefly address my remarks.

Specifically, we are interested in seeing and hoping at least that a tax will not be imposed on such articles as baseballs, soft balls, basketball equipment, footballs, tennis balls, and rackets, because those articles are used almost exclusively by boys and men under 21. We are apt to think of baseball in terms of the professional leagues, but only about 5 percent of the manufactured goods are used by professional players.

I think I need not develop the point that these are the games of youth, and if we don't wish to tax our children's activities, we should not tax those. We do not tax their books; why, then, should we tax the implements they use in their physical education?

Following the last war 38 States passed compulsory physical-education laws. It is generally recognized that our physical activities are a part of the pedagogic program, so I am suggesting that we relieve the children of this burden, whatever it may be. We are going to leave them a debt of a hundred billion dollars or something like that, I am told; we are going to draft them to fight our wars; we might show them the consideration of not taxing what they need in developing the strong, live, healthy bodies necessary to enable them to do this.

Senator LA FOLLETTE. Is it not a fact that the physical-education departments of the universities, colleges, and high schools have grown tremendously in recent years?

Mr. GRIFFITH. Yes; there is no question about that. You may recall that, after the last war, when Germany could not carry on her military training because of the Versailles Treaty, they organized sport clubs and continued that even after Hitler came along when they had these labor camps. England, following the last war, also appointed a committee to consider this thing and have carried on along that line in terms of community recreational activities ever since. I read the other day that in Vichy, France, they are soon to set up labor camps. We tried the other idea after the last war with, as I have stated, 38 States passing compulsory laws on the subject.

Our educational institutions got into the business and built adequate plans. They said we could not take care of such a program because we did not have trained personnel to do the work—men and women. The institutions got busy on that. In our Big Ten Conference that I represent I figured that we had trained 10,000 men and women to go into institutions to carry on this program which the Government found out was very necessary. So you are correct in saying that these educational institutions have done a great deal and that physical education has grown tremendously.

Senator LA FOLLETTE. And as far as the young man and the young woman who elects that as a major course and hopes for a degree; it is just as logical to tax the test tubes and other instruments and equipment used in chemical engineering schools as it is to tax the tools by which they must come into their education, is it not?

Mr. GRIFFITH. Very well, indeed. That is true, and the point I am trying to make is this: For some reason or another, we don't believe in taxing schoolbooks; academic education is not so burdened but it is proposed to tax physical education which latter may be more important when you are fighting for your existence. If we are going into a world war—and Senator Pepper says we will be at war for the next generation, or maybe——

Senator VANDENBERG. Don't take Senator Pepper too seriously.

Mr. GRIFFITH. I believe anything any Senator says must be correct; but seriously, isn't that true that we must place a greater emphasis on that sort of thing when we are threatened, than perhaps in peacetime, and that is what I would like to try to develop for my next point; namely, these activities are part, or form the basis of military training.

We are either going to develop our children in labor camps as in other countries, and God forbid that that will happen here, or develop them as we are trying and have been trying to do, in public schools and colleges; and if we are going to recognize the importance of this work, certainly we are not going to place any more burden on them than necessary.

You may say that the parents will buy these, yes; and the parents might also buy their schoolbooks but we feel it is a burden if such a tax is applied.

Senator BROWN. Isn't there some danger of discrimination in this tax?

I take it universities, such as the University of Michigan, University of Illinois, and most of the institutions you represent would not pay this tax, but that the University of Notre Dame, Yale College——

Mr. GRIFFITH. Stanford.

Senator BROWN. Yes; and institutions, not State institutions would pay the tax. It seems to me that is a rather unfair distinction to make in a tax bill.

Mr. GRIFFITH. I was going to say that. In our conference, we have 8 tax-supported and 2 endowed institutions. The 8 tax-supported institutions would be exempt under the bill.

Senator TAFT. Why are they exempt?

Senator BROWN. There is an exemption in the bill as to political subdivisions of a State government.

Senator TAFT. Why should they be exempt; this is a manufacturers' tax?

Senator BROWN. The exemption is there and I take it if Spaulding & Co. sold equipment to the University of Michigan, that institution would not pay the manufacturers' sales tax nor would A. G. Spaulding be required to pay it.

Mr. GRIFFITH. I think it is discriminatory and I think it is, as you suggest, this exemption is part of the bill.

One other point and I am through. We should encourage in times such as these activities that will help to develop a strong citizenry, and that applies not only to the physical side, but to our moral and intellectual viewpoints.

Athletics, especially football, develop a fighting spirit, a sense of loyalty, and the benefit to the country generally of such physical education is most evident from the significant statistics in connection with the matter of training our officers. In our group of 10 institutions 47 percent of our athletic men in the service were commissioned officers; only 33 percent of the general student body were.

Seven-tenths percent of all the men in service were commissioned. So, we believe there isn't any question this training has something to do—we may not be able to put our finger on it—in the making of the type of men needed where the Nation goes to war.

I would close with an illustration contained in a story recently told me: When God, in His infinite wisdom, created the universe, He endowed each living thing in it with certain attributes and means of existence. To the oyster He gave a shell and economic security; the oyster's shell is his house. He doesn't need to worry about a housing problem; and, as for food, all the oyster needs do is open his shell and the food flows in. And then the American eagle, and gave him no guaranty of home or food, but the whole wide world and the opportunity to fight his own battle.

Gentlemen, the oyster is still our national emblem, and the point I am trying to make is in our athletics we are trying to develop the eagle rather than the oyster. I believe we should do something to develop these activities.

Senator DANAHER. I would like to ask the gentleman a question, if I may.

The CHAIRMAN. Yes.

Senator DANAHER. Is there any reason why a person could not play soft ball with a bat 25¾ inches long instead of 26 inches?

Mr. GRIFFITH. I don't think there would be any reason why not.

Senator DANAHER. And the same thing would apply to tennis rackets, wouldn't it? And badminton rackets; if they shortened them a quarter of an inch all the way down the line, they could use them and they wouldn't be taxable, anyway. Isn't that correct?

Mr. GRIFFITH. Yes; that is an idea; that is something I might bring to the attention of some of these people.

Senator DANAHER. Well, I think the point has already been conjured up; hockey sticks, squash rackets, all wooden frame rackets are given a definite measurement and exempted if below that definite measurement.

Mr. GRIFFITH. That is correct.

The CHAIRMAN. They were given a definite measure for the one purpose of taking out what children use because it is impossible to define what is a child's toy or adult's toy or sporting article of any kind.

Mr. GRIFFITH. We have 30,000,000 children in our educational institutions and they are, for the most part, being given some kind of physical education. They go back into the grades; they would be listed as children. Perhaps high-school students also would be listed as children, but they use the standard equipment quite generally.

Senator DANAHER. Who makes these wooden frames, one or two manufacturers?

Mr. GRIFFITH. I wouldn't say that. It is my understanding that there are five or six manufacturers.

Senator DANAHER. I notice there is no tax on darts.

Mr. GRIFFITH. Yes. Well, I am speaking primarily of these four activities where large numbers play. This year one-fourth of a million will play football and, at the end of that season, they will be in splendid physical condition, probably in as good condition as these German parachutists who landed in Crete. I am told that they are in such fine physical condition that they are able to descend from a parachute, run a mile or two with a machine gun in their hands and start firing. Well, I will put our boys up against them from the standpoint of physical condition at the end of the football season.

Then there are probably two or three million more who, at the end of the basketball season, will be in splendid shape. There can be no question about it. If we aren't interested in that phase of the national-defense program, we can do a job with the boys before they go to camp by proper sports, and these details, such as darts and so forth, would not enter into our problem. As we see it, this is true, first, from the standpoint of athletics—the advantages to be gained generally by our boys and young men—and, secondly, its value in terms of national defense.

The CHAIRMAN. Thank you very much.

(The prepared statement by Mr. Griffith is as follows:)

MEMORANDUM SUBMITTED BY MAJ. JOHN L. GRIFFITH, PRESIDENT, ATHLETIC INSTITUTE; COMMISSIONER OF ATHLETICS, INTERCOLLEGIATE CONFERENCE; SECRETARY TREASURER, NATIONAL COLLEGIATE ATHLETIC ASSOCIATION

PROPOSED EXCISE TAX ON ATHLETIC EQUIPMENT

This memorandum is respectfully submitted in an attempt to set forth particular views having to do with the proposed excise tax on what is termed in section 3406, Internal Revenue Code, paragraph (1) of the Revenue Act of 1941, as "sporting goods."

Specific articles are listed therein, as well as "including in each case parts or accessories of such articles sold on or in connection therewith, or with the sale thereof." An analysis of those articles enumerated will show two types of merchandise to be taxed—sporting goods and athletic goods. The distinction between the two can be summarized as follows:

(*a*) *Sporting goods.*—Articles used largely for personal recreation and very little physical exercise and very seldom in games of physical contact. Such articles are fishing tackle, billiard and pool tables, balls and cues, bowling balls and pins, clay pigeons, deck tennis, and croquet balls and mallets.

(*b*) *Athletic goods.*—Articles used in games or contests combining physical exercise and contact, as well as a certain degree of individual skill. Such as baseball, football, basketball, golf, tennis, boxing, wrestling, track and field games, etc.

Those articles listed in (*a*) as sporting goods can be considered more or less as luxury items and we are not speaking for them.

The industry engaged in the manufacture of those articles in (*b*) above—athletic goods—realizes the necessity of additional taxes on luxury items, but it respectfully contends that athletic equipment is not a luxury. With the exception of golf equipment, which is used only to a limited extent by schools and colleges, all of the athletic equipment referred to is sold largely to schools and colleges and other eleemosynary institutions carrying on organized athletics.

I. Athletic equipment is essential to the defense program

Following World War No. 1, a number of major generals stated in substance that they had come to believe that athletic training was an integral element in the training of the youth for war.

Marshal Foch, following the last war, witnessed a football game played between two teams of officers and soldiers of the American Expeditionary Forces at St. Nazaire. Marshal Foch had never seen a football game but, according to the story, he witnessed with amazement the way the two teams tackled and blocked each other. When the game ended, it was reported that Foch, with his eyes aglow with delight and amazement, said, "Any country that has a game such as football for its national pastime need never worry about preparing its young men for the rigors of war."

It was also very evident during the last war that enlisted men who had participatd in some form of competitive athletics in school or on the sandlots had a much higher degree of coordination of mind and body than the nonathletes and, due to this early athletic training, they were able to faster learn the Army routine of drill and the art of warfare.

The British officers who were assigned to certain American regiments for infantry training during the last war were amazed at the accuracy with which the American infantrymen handled hand grenades. They attributed this to the fact that baseball was the outstanding game of the American youth and, while the throwing of a hand grenade required a slightly different technique than a baseball, the general characteristics were the same and this early training in the throwing of a baseball was very beneficial to the armed forces.

You may recall that immediately following the last war, when Germany was not allowed under the Versailles Treaty to engage its youth in military training, German authorities instead promoted a national sports program. Military authorities have stated that undoubtedly at least a part of the success of the German Army in its conquests of Europe is due to the fact that the highly trained German soldiers are in every sense physically fit.

If we are to survive as a nation we must be physically fit. Moki, the great Finnish athlete who visited this country last winter, was asked how Finland had been able to put up such a splendid resistance against the Red Army of Russia, and he instantly replied "because Finland is an athletic nation."

It is common knowledge that the War and Navy Departments have provided funds out of which to purchase athletic equipment, particularly baseball and football, for use in the various camps throughout the country, since it is realized that the games to which this equipment is devoted are beneficial to the development of the members of the armed forces.

II. Athletic equipment is necessary in the physical and character development of the youth of America

Leading educators have come to believe that athletics as conducted in the educational institutions of this country are and should be considered a definite part of education. Dr. Clarence E. Dykstra, president of the University of Wisconsin, former Selective Service Administrator and former Chairman of the National Labor Mediation Board, has defined education in the following terms:

"It is the process which makes a mature adult out of a child. It is life itself. Everything contributes to the process—observation, experience, association with others, thinking processes, formal and informal schooling, games and recreation, and the inspiration which comes from nature, from art and music, and from every impact with the whole universe. The more sensitive one is to all of these influences the riper and richer is his education."

In the past 22 years the schools and colleges have done more in the way of providing physical training for the youth of the land than is commonly realized. Speaking for the Big Ten Conference, its members since the last war have spent more than $19,000,000 for athletic grounds and buildings. That equipment has not been primarily for intercollegiate athletics but for thousands of boys and girls now attending those institutions and the hundreds of thousands who will follow. The cost of these plants, by the way, was contributed primarily by those people who voluntarily purchased tickets for football and other contests and from generous donations by alumni and others.

The larger universities provide the athletic equipment for the boys who compete in intercollegiate sports. They do not buy the equipment for the lads who participate in intramural athletic activities. In one of our midwestern universities a year ago there were approximately 50 boys on the freshman and varsity basketball squads. These lads received equipment purchased by the university athletic department. In that same institution there were 120 intramural basketball teams. The 1,200 to 1,500 boys who were members of these intramural teams and squads purchased their own equipment.

Carrying the thought further there are, roughly speaking, 1,100 educational institutions above high-school rank. In more than 1,000 of these institutions athletics for the year are conducted at a loss, which means in very many cases the boys have to buy their own athletic equipment.

Tremendous sums have been expended by the States and the political subdivisions thereof in providing playgrounds, baseball fields, tennis courts, gymnasiums, golf courses, and other facilities to encourage the participation in athletic games. Some 38 States have compulsory physical-education laws made applicable to their public schools. Likewise large sums have been provided by denominational schools and colleges—not supported by public funds—to encourage the student body to engage in athletic contests.

In many schools it is compulsory that all male students participate in some form of intramural athletics or military training. The National Collegiate Athletic Association—composed of the leading colleges and universities of the United States—last summer recommended that its members do everything possible by way of contributing to the military-preparedness program that our Government is now promoting. In response to that appeal several of the leading universities have made physical education compulsory for all students for the 4 undergraduate years. Further, a surprisingly large number of the institutions of higher learning are conducting teacher-training courses. The purpose of these is to train men and women to carry on health education, physical education, and recreation activities in the public schools and colleges.

It is believed that physical development through athletics is as important in the development of youth as mental training.

III. Athletic equipment is essential to the physical and mental welfare of the civilian population

Athletic equipment used in developing the youth of this county and assisting in training for the defense program consists mostly of those articles used in group games.

Other articles, such as golf and tennis, are used by individuals, and it is essential that these individuals be able to purchase the necessary equipment to permit them to take advantage of every opportunity for exercise. Particularly is this true in defense industries, where the men are working overtime and require relaxation over the weekends.

Golf and tennis are not rich man's sports. For instance in Chicago there are 100,000 individuals registered in tennis, but less than 5,000 of these are members of tennis clubs. Most of these young boys and girls play their tennis in the public parks or on the school and university tennis courts.

As regards golf, there are approximately 2,000,000 players, but only about 25 percent of whom belong to golf and country clubs. The member of the private club is already taxed on his dues. The majority of the golf players are found on the daily fee and municipal courses; they carry their own bags and most of their play is on Saturday and Sunday. To impose a tax on this type of equipment is to restrict the playing of a game that is essential to the health of a great number of people.

Conclusion

In conclusion, the American Legion, the National Collegiate Athletic Association, and the Athletic Institute, together with the thousands of young men and women who are conducting physical-training activities in the schools, are doing what they can by way of improving the health, virility, and stamina of the young men of this Nation by and through athletic activities of various sorts. Young men have fought the wars of history and young men will fight our future wars. It is our sincere hope that the Congress in its wisdom will decide not to make more difficult the task of those who are endeavoring to prepare our young men for what lies ahead, be it peace or war.

I trust you will believe me when I say that no selfish interest on the part of any individual connected in any way with the amateur athletic work of the Nation prompts the request that the Congress give careful consideration to the request that such athletic goods as basketball, baseball, football, tennis, golf, and soft ball be exempted from the excise tax which is now being considered by this committee.

May we recapitulate by enumerating the reasons why we have taken the time of this committee of Congress:

First: We feel that the principal part of the tax on the goods enumerated would fall not upon those best able to pay it but rather on those least able to pay.

Second: The tax on such athletic goods as have been enumerated is in no sense of the word a luxury tax.

Third: It cannot very well be contended that athletic equipment should be classified as a luxury, but is as essential in the physical development as textbooks and other literature is in mental training. In the present emergency the value of athletic training to youth cannot be doubted. It must be acknowledged as a proven necessity for physical and mental fitness.

Fourth: Athletics should be encouraged to the fullest extent possible. It should not be burdened by taxation of the necessary equipment. The youth of America need athletic training today more than ever to help provide physical and mental fitness for the great task ahead.

Fifth: To impose a tax on athletic equipment is to tax athletics and the youth of America at a time when the pursuit of athletics will most benefit America. In their effort to qualify, they should not be taxed.

The CHAIRMAN. Mr. L. B. Icely. Give your name to the stenographer, please.

STATEMENT OF L. B. ICELY, CHICAGO, ILL., REPRESENTING THE WILSON SPORTING GOODS CO.

Mr. ICELY. Mr. Chairman and gentlemen of the committee; my name is L. B. Icely; I am president of the Wilson Sporting Goods Co. I appear for the Wilson Sporting Goods Co. and other athletic goods manufacturers.

The CHAIRMAN. Are you a manufacturer, also, Mr. Icely?

Mr. ICELY. Yes. I am planning to leave a brief with the committee and it covers most of the points that we have in mind to submit for this committee's consideration. I will not take your time to go into that brief; I would like to have it passed around and read by the committee members.

I have only a few points upon which to touch. Much of my argument has already been used by Major Griffith, particularly what I had to say with respect to youth.

There is no use of further emphasizing on that but the fact is that athletic goods are used by the young man and young lady of this country. We think in terms of athletic goods more as physical education in the same sense that you think of academic education, and we think therefore that those articles, implements—balls, rackets, and so forth—used in those sports should not be taxed. There is another angle to this tax we want to dwell on a moment. As I read the bill, the House has submitted, it covers the heading called "Sporting Goods."

Now sporting goods is not the proper term, in our opinion, for the items we manufacture such as baseballs, soft balls, footballs——

Senator CONNALLY. What do you call yourselves the Wilson Sporting Goods Co. for then?

Mr. ICELY. It is true that is our name, but we got it when we handled a good many articles that we did not manufacture, including fishing tackles and such items. We are now strictly an athletic goods organization, and the firms for whom I am talking are strictly athletic goods houses. In the athletic goods, we find in this bracket, sporting goods, are those of two types: One that requires very little

physical exercise and not used in physical combat games. Among those are fishing tackles, billiard and pool tables, balls and cues; bowling balls and pins, clay pigeons; deck tennis and croquet balls and mallets; they are not athletic games.

Senator CONNALLY. You think a fellow on the creek fishing ought to be exempt from taxes while some boy is in the Army for $21 a month?

Mr. ICELY. I am saying as to him, we are not appearing for him. I say that is a sport; that is not a physical combat sport. There is no game in that and that is not the implement we are representing. I am talking more for athletics, athletic goods, football, basket ball, golf——

Senator CONNALLY. You think the fellow out playing golf, he ought not pay any tax?

Mr. ICELY. I would like to come back to golf.

Senator CONNALLY. All right. I won't ask you any more questions.

Mr. ICELY. I said a moment ago, we are talking on games of combat, baseball, football, tennis, soft ball, and that type of activity, wrestling and boxing, and we don't think they are the same as the other types of sports I have mentioned where there is no physical combat and no keen participation; it is the softer type of recreation.

We think along this line that our youth, who are the ones we are depending on in the next few years, should not be taxed on the implements used in these games any more than they should be taxed for their school books, or anything else used in an academic education.

The other point I had in mind to touch on briefly is the question of our industry and where we stand with respect to our own markets. We know that this defense program is going to take 1½ to 2 million of our young men out of our commercial or civilian market and, therefore, a great deal of athletic goods used, from a civilian standpoint, a much larger amount than in the past. We know, in addition to that that all of our costs of raw material are going up, and if we add this 10 percent, in addition to that, it is very evident that our prices are going to be at a point where sales are stopped; people can't afford to buy.

Senator LA FOLLETTE. Did you have that experience in the last war? Did the sales of goods go down?

Mr. ICELY. There were a number of factors affecting our industry then which are not present now. In 1918 our business fell off, civilian lines, over 50 percent because 2½ millions of our boys were not and could not be users of our products and later the Army commenced to buy things for athletic purposes and then, of course, there was no tax and no revenue for the Government. Now, developing that point just a moment brought out by the Senator over here.

When you speak of discrimination, all the goods to be bought by the armed forces will not carry any tax, so no tax will be collected from them. The civilian market is going down. All these schools, high schools and colleges, will qualify to buy without payment of tax. Beyond that, since we are having a shrinking or smaller market with our civilian business, if we put a tax on, it will be still smaller. We feel it is very unfair to tax athletic goods, thereby raising the price with the attendant results.

We are not speaking for anything except the 4 or 5 items mentioned in our brief. Let us take a look at the amount that might be gotten

from such a tax. The total amount that can be gotten, minus exemptions, is about $2,300,000.

Senator LA FOLLETTE. The Treasury estimates $2,800,000.

Mr. ICELY. That includes a great many articles I am not speaking of, such as billiard equipment and fishing tackles, and a great list of sporting goods not athletic goods in the sense I am describing them.

We figure there will be 2½ million, $2,300,000. On this basis, first, golf clubs and bags which will probably collect $1,000,000. Tennis figures $400,000; football, baseball, and basketball, five or six hundred thousand. After you put your exemptions against them—and that has been compiled very carefully and is in my brief that is what may be gotten. The common opinion of most all people is that athletic goods are sporting goods.

What I would like to have you do is to see the difference between athletic goods and sporting goods as such and the type of people who will be taxed and who they are under this proposed bill, and with that in mind I will develop the golf situation briefly.

There are today in the United States two and one-half million golfers. There are 2,000 golf clubs with an average of 200 members, all paying taxes on their dues. The other 2,000,000 golf players play on public links, paying a fee, because they don't even have a caddy. They are the young people working in factories and offices. In our own company two-thirds of our people do just that. These are the people who get up at 4:30 in the morning and go out and play golf before going to work. You are not taxing the rich men when you tax golf. Three-fourths of them are working people with incomes of $40 to $50 a week. That is the type of people playing golf.

Then go to tennis. In the United States there are probably less than 25,000 members of tennis clubs, whereas in reality there are 700,000 to a million who play tennis, and where do they play? On the public courts, including those here in Washington. They are the working type of people. If you tax them you are simply making it more difficult for them to keep physically fit. If I had anything to do with the responsibility of preserving the moral standards of the people, I would sooner have them out playing tennis than to have them congregating around, talking about the overthrow of our Government, or something else of that kind. In fact, it is my opinion that you folks should not tax athletic goods as such. You have all this story about juvenile articles, items within the borderline, and it is very difficult to justify some of the distinctions which would have to be made. If there were any merit at all in the point I am making, I would say it would be even wise, rather than to tax our young people, to attempt to devise some way under which a bounty or bonus might be given to get people to play, rather than to have their tax raised.

The CHAIRMAN. Your time has expired.

Mr. ICELY. And I thank you gentlemen.

(Mr. Icely's memorandum referred to is as follows:)

MEMORANDUM SUBMITTED BY L. B. ICELY, PRESIDENT, WILSON SPORTING GOODS CO., CHICAGO, ILL.

THE PROPOSED EXCISE TAX ON SPORTING GOODS

This memorandum is respectfully submitted in connection with the proposed excise tax on articles specified in section 3406 Internal Revenue Code, paragraph (1) of the Revenue Act of 1941, as "Sporting goods."

When the Treasury officials proposed excise taxes on a number of commodities, their recommendations were (hearings No. 1, pp. 50, 51)—

1. To avoid excises which would increase business costs and result in price increases.

2. To avoid experimentation and stay within the scope of previous experience by taxing carefully selected commodities or luxury articles which will produce revenue commensurate with the expense of administration.

3. To tax commodities not essential to the defense program.

A review of those articles specifically listed in paragraph (1) will show two distinct types of merchandise which is considered in this industry as "sporting goods" and as "athletic goods."

This distinction can be summarized as follows:

(*a*) *Sporting goods.*—Articles used largely for personal recreation and very little physical exercise and very seldom in games of physical contact, such articles are fishing tackle; billiard and pool tables, balls, and cues; bowling balls and pins; clay pigeons; deck tennis, and croquet balls and mallets.

(*b*) *Athletic goods.*—Articles used in games or contests combining physical exercise and contact, as well as a certain degree of individual skill, such as baseball, football, basketball, golf, tennis, boxing, wrestling, track and field games, etc.

Those articles in (*b*) Athletic goods, can be divided into two classes of equipment, one for group use and the other for individual use.

The company I represent is engaged in the manufacture of athletic goods—those articles defined in (*b*) above. With the exception of golf equipment, all of the athletic equipment referred to in the proposed bill is sold largely to schools and colleges and other institutions carrying on an organized athletic program.

We realize the necessity of additional taxes to pay the cost of national defense and do not wish to imply that we welcome a tax on every industry except our own, but the articles of athletic equipment as specified in the proposed bill are essential to national defense and are not luxury items and, therefore, should not be taxed. We do not manufacture "sporting goods" and, therefore, are not speaking for that industry.

I. "Parts and accessories" should not apply to "sporting goods"

One part of subdivision (a) of section 3406 of the code in the proposed bill reads:

"(Including in each case parts of accessories of such articles sold on or in connection therewith, or with the sale thereof.)"

Under the 1932 law, which was repealed in 1938, there was considerable confusion as to what articles were taxable and what were not taxable. The above paragraph will immediately raise the question as to what is a "part" and an "accessory" for athletic equipment. For example, a boy purchases a football. After the ball has been used a while, the bladder becomes punctured. He needs a new bladder and to remove the old bladder he cuts the leather lace. We do not believe it is the intent of Congress to say there should be a tax on the new lace and the new bladder.

Administration difficulties were numerous under the 1932 law because of the question as to taxability of certain items. This was recognized by the Treasury Department and also the Committee on Ways and Means as this committee is commenting upon those excise taxes proposed for elimination in the 1938 revision stated:

"Fourth. It is proposed to eliminate the tax on sporting goods, which consist chiefly of athletic equipment. This tax presents much administrative difficulty because the taxability of an article depends upon the purpose of its manufacture and use. It is extremely difficult to apply even the exemption provided for children's toys and games * * *. The 10 percent rate of tax bears severely upon the youth of the country, especially in the use of baseball and football equipment."

It is, therefore, suggested that this part of section 3406 of the Code—

"including in each case parts or accessories or such articles sold on or in connection therewith, or with the sale thereof"

should not apply to paragraph (1) of the proposed law, as this would cause considerable administrative difficulties.

II. Sales and exempt to state and political subdivisions

Section 2406 of H. R. 5417, page 79 of printed copy, applies to tax-free sales as follows:

"Under regulations prescribed by the Commissioner with the approval of the Secretary, no tax under this chapter shall be imposed with respect to the sale of any article—

"(a) For the exclusive use of the United States, any State, Territory of the United States, or any political subdivision of the foregoing, or the District of Columbia;

"(b) For export, or the shipment to a possession of the United States, and in due course to exported or shipped."

The athletic equipment mentioned in this bill can be grouped into three divisions:

(1) Those articles purchased by individuals for their personal use.

(2) Those articles purchased by boards of education, city park boards, etc., for playground and school use.

(3) Those articles purchased by schools and teams for group use of teams, etc.

All of those articles in group (2) will be purchased on exemption certificates, and no tax will be realized thereon. Also 80 percent of the articles in group (3) will be purchased by schools who can qualify under the exemption. This leaves only such articles as skates, golf, tennis, etc., that cannot be purchased on an exemption certificate.

Tax-exempt sales like taxable sales require the keeping and filing monthly of special reports, statements and returns of sales, classification and special certificates and other transactions to comply with the Internal Revenue Regulations. Exemption certificates on tax-exempt sales have to be prepared and filed; also applications for credits and refunds. Thus, on account of the large volume of tax-exempt sales the additional cost of clerical work required would in many cases more than equal the amount of revenue on taxable sales and impose an additional burden upon both the taxpayer and Government disproportionate to the revenue received.

III. The tax discriminates between public and denominational schools

The denominational schools and societies are discriminated against in the purchase of athletic equipment because they cannot purchase on an exemption certificate such as a State university and public high school.

It is needless to say that were there no denominational schools in existence, the present public-school facilities could not adequately care for the students of this country. Accordingly the operation of denominational schools results in a tremendous saving in general taxes which would be necessary to provide free learning for the entire student body.

In view of the importance these denominational schools have in the education of the youth of this country, there should be no discrimination in the price these schools pay for their athletic equipment when such equipment is used in the development of the health of the students of America.

IV. The proposed tax does not avoid experimentation, previous experience led to its elimination

At the hearing the Treasury officials proposed to tax certain luxury articles "consumed in sufficient quantities to bring in revenue commensurate with the expense of administration" and proposed "to avoid experimentation and stay as nearly as possible within the scope of previous experience * * *." (Hearing No. 1, pp. 50, 51.)

The imposition of a new tax on sporting goods would not accomplish those purposes. On the contrary it would be experimenting with a tax which both the Treasury and the committee discarded because the tax did not produce revenue commensurate with the administrative cost.

The 1938 subcommittee on Revision of Revenue Laws which made an exhaustive study of several so-called nuisance taxes recommended (Recommendation No. 60) that the tax on sporting goods be eliminated (p. 81). The Committee Report (p. 63) stated:

"The taxes * * * on sporting goods have caused administrative difficulties out of proportion to the revenue received, and in many cases fall upon articles in general use."

V. The small amount of revenue to be obtained

The previous experience under the 1932 law, which tax on sporting goods was repealed in 1938, was that there was a very small amount of revenue obtained which was not commensurate with the expense of administration.

After making allowance for the athletic equipment which will be purchased tax-free on exemption certificates, it is estimated that the net revenue received from athletic goods will be $2,300,000, made up as follows:

Golf equipment	$1,300,000
Tennis equipment	400,000
Baseball equipment	400,000
Basketball equipment	40,000
Football equipment	100,000
Boxing, wrestling, and other miscellaneous equipment	60,000
Total	2,300,000

From the above schedule it is apparent the revenue from a tax on such equipment as football, baseball, and basketball will be very small and will not justify the expense of handling the exemption certificates on which the majority of this equipment will be purchased.

Golf and tennis are purchased mostly by individuals and very few sales will be made on exemption certificate.

This is not enough revenue to cover the expense of the defense program and is a small amount to the Treasury but a large amount to tax on the youth of this country.

Conclusion

It is, therefore, submitted that the careful thought and study given this excise tax by the 1938 subcommittee and the Treasury should be given great weight and that the reasons for discarding the tax in 1938 should now serve as a well established precedent for the elimination of an excise tax on sporting goods in the proposed bill. And, in this connection, the observations of the committee in 1938 are of even greater significance in the present emergency:

"The 10 percent rate of tax bears severely upon the youth of the country, especially in the use of baseball and football equipment."

It is also contended that the renewal of the tax this year will result in a recurrence of the past administrative difficulties and that these and the other reasons which led to its elimination in 1938 are still applicable this year.

The expense of administering this proopsed tax will be burdensome to both the Government and the taxpayer, and in view of the small amount of revenue to be derived, it is urged that the athletic goods specified in paragraph (1), section 3406, of H. R. 5417, be entirely eliminated from the proposed bill.

The CHAIRMAN. Mr. Boland?

STATEMENT OF FRANK A. K. BOLAND, NEW YORK, N. Y., GENERAL COUNSEL, AMERICAN HOTEL ASSOCIATION OF THE UNITED STATES AND CANADA

Mr. BOLAND. Mr. Chairman and gentlemen of the committee, my name is Frank A. K. Boland. My office is 500 Fifth Avenue, New York City, and I am general counsel of the American Hotel Association of the United States and Canada.

On this occasion I appear before you in reference to the proposed section 452 of the law, applicable to the cabaret tax.

Now, under the proposal, this bill changes the base of the tax. Heretofore it has been based on 20 percent or one-fifth of the bill charged where food has been served in connection with entertainment as that is defined under the rules and regulations of the Department pursuant to the law.

The CHAIRMAN. You say 20 percent or one-fifth of the bill?

Mr. BOLAND. Twenty percent or one-fifth; yes; but it must be, under any circumstances, 50 cents; that is to say, if any of us went to a cabaret the tax would be—that tax would be applicable to us if the bill was $2.50. Now, this proposal eliminates altogether that feature and provides for a straight tax of 5 percent of the total charge. In other words, the tax was indirect in its application in the first instance, and amounted to only 4 percent approximately, of the bill. Now it is 5 percent, to which we have no objection. We do object, however, to any change of the law which proposes to fasten the obligation and the liability of that tax, to transfer it from the shoulders of the patron, as it has been in the past, to the pocket of the hotel proprietor.

Therefore, we are here now before you in protest and ask you to relieve us indirectly. As to those who might have some doubt as to the contention I am pressing, namely, that this proposal requres us to pay this tax directly, I can only refer you to the report of the Committee on Ways and Means.

The CHAIRMAN. Weren't you required to pay it directly under the other law?

Mr. BOLAND. No.

The CHAIRMAN. The proprietor paid it?

Mr. BOLAND. No; he didn't pay it; he collected it and returned it.

The CHAIRMAN. Won't you do the same under this?

Mr. BOLAND. No, Mr. Chairman.

The CHAIRMAN. Why not?

Mr. BOLAND. Because, for two reasons: (1) As a matter of fact, we are of the opinion that where a tax is specifically imposed on one person, it cannot be imposed for collection on another person unless he is willing; that is the point; that is the crux of the situation.

The CHAIRMAN. I think you must be wrong about that.

Mr. BOLAND. I hope I am.

The CHAIRMAN. It is contemplated that you pass along this tax.

Mr. BOLAND. That is right; it is just that—it was so contemplated. I will get to that in a moment, but let us read four lines of the Committee on ways and Means.

Senator BROWN. What page is that, Mr. Boland?

Mr. BOLAND. The one I have, mine is page 26, Mr. Senator. In your report it is 31.

Here is what the committee says, 3 lines:

> Under existing law the tax is upon the patrons, but the owner of the establishment is charged with its collection and payment into the Treasury.

And here is the blow that kills father—just this short sentence:

> The bill places the tax directly on the owner—

Now, if this is so, this becomes a gross receipts tax and when you in the first instance, attempt to impose a tax of 5 percent on the basis of gross receipts, and that is all it is, it is unfair.

Now, can we pass this tax along? It can only be done by absorbing it in the charge.

Senator TAFT. Here is what it says:

> The tax imposed under paragraph 1 shall be returned and paid by the person receiving such payment.

Isn't that clear that it is to be paid by the patron?

Mr. BOLAND. Payments of what? Payments for charges of admission, food, refreshments; that is under subdivision 1.

Senator TAFT. It doesn't imply the payment be made by you?

Mr. BOLAND. No, sir. And, all I am asking here today is a simple provision which will clarify this whole issue. I have prepared, and we have sent to you gentlemen, this provision:

"The tax imposed under paragraph 1 shall be returned and paid by the person receiving such payments," and this is our proposal:

"Collected by the proprietor of the establishment from the person paying for admission, refreshment, service, and merchandise."

Now, this is a consumers' tax, and in all consumers' taxes it is customary that the ultimate consumer pay the tax. We want to follow the custom. That is the way it is as to the direct admission charge with respect to theaters, motion-picture theaters, and so forth.

What we want in appropriate language is some provision which will make it mandatory that the payment of the tax in the first instance be charged to the patron. There shouldn't be any objection to that.

The hotels should not be picked out especially for tax treatment under a scheme inconsistent with the plan heretofore in existence. We are satisfied with the 5 percent; we are satisfied to go along without any objection except we want the status quo to be maintained with respect to these charges as it has in the past. A simple provision—I drafted that provision—any other provision would settle the case. We don't want the competition, gentlemen, which our hotels are subjected to and will be subjected to, under this provision; it should be eliminated by this suggested change.

Senator DANAHER. Let me ask you a question: Suppose a concession for hat-checking privileges is rented by the hotel or cabaret for $25,000 a year, or up?

Mr. BOLAND. Or up? Those are good figures.

Senator DANAHER. Yes; or up. Who pays the 5 percent tax there, under your theory?

Mr. BOLAND. Is that another provision; is that a new provision? Would you repeat that?

Senator DANAHER. Do you have a copy of the bill before you?

Mr. BOLAND. I have a reprint of it in the report of the Ways and Means.

Senator DANAHER. Don't you think the operator of the establishment that is charging for admission, refreshments, services, and merchandise, should have to pay the 5 percent, the tax levied on this entire service?

Mr. BOLAND. No; I am right here objecting to it.

Senator DANAHER. I am limiting it to services.

Mr. BOLAND. Well, I hadn't thought of that.

Senator DANAHER. That is in the bill.

Mr. BOLAND. I feel that these excise taxes should be passed along. I don't think we should adopt any innovations with respect to the identity of the person who has heretofore paid the tax. This general trouble has come about for the reason and as indicated in the report of the committee.

Senator TAFT. It seems to me perfectly clear, without a legal provision, that the 5 percent is on the patron's bill.

Mr. BOLAND. How?

Senator TAFT. By adding it to the bill.

Mr. BOLAND. You can't add it as a tax; that is my opinion, as it were. Suppose you go into my hotel—assuming I have one—and the bill is $5, let's say, and I give you a bill for $5 and then I add the tax. Suppose you would resist and say, "I won't pay you."

Senator TAFT. I can't resist. It is $5.25.

Mr. BOLAND. Wait a minute; I can't agree that you would have to pay it. As a lawyer——

Senator TAFT. Yes, as a lawyer; you can charge that additional tax and you can write it on the bill separately or put it in any way you like.

Mr. BOLAND. That is a comforting statement of yours. I would like to be assured that the court would stand behind us.

Senator TAFT. There is no way of preventing it.

Mr. BOLAND. That is all I want—that provision be inserted that in the first instance, the tax be collected from the guest.

Senator TAFT. It was never intended otherwise.

The CHAIRMAN. It was not intended that you should pay it.

Mr. BOLAND. I don't think it was; I am sorry as a lawyer I cannot agree with Senator Taft.

The CHAIRMAN. They are simply carrying the tax from the other over to this, and here is the general tax on the whole service you render, taking charge of his hat, furnishing music, furnishing food, and they simply say you shall pay a tax of 5 percent on that. It was not intended that it could not be passed along.

You want that made clear?

Mr. BOLAND. Yes.

Senator TAFT. I think there is a doubt about Senator Danaher's question about the hat-check feature because I don't know how you are going to pass that along.

Mr. BOLAND. Senator, we are going to pay the tax. We, the hotel proprietors, are going to pay the tax; there shouldn't be any question about it.

The CHAIRMAN. The hat-check is a subcontract?

Mr. BOLAND. I don't care whether it is; it is an integral part of the operation and the tax applies. Do you like my proposed amendment or shall I get busy and whip something else into shape?

Senator TAFT. That raises a question and the reason that amendment may not fit it comes up. How are you going to pass on the charge on the hat-check, by charging 11 cents?

Mr. BOLAND. Now listen, Senator; there is a charge made in some institutions for checking property. The rule is that there is not, and I supose there is in that business figured something. It is better to work under the old provision because they depend on the generosity of the patron.

Senator TAFT. But your amendment says that the tax shall be returned and paid by the person receiving such payment, which means you would have to charge 11 cents if your regular charge was 10 cents, and I don't think you can, or want to do it. It seems to me that, for that reason, your amendment may not be exactly appropriate.

Mr. BOLAND. Senator, that is a matter of regulation with the Department; we get along with them all right. I am worried about the statutory law, that is all.

The CHAIRMAN. I think we will take care of that.

Mr. BOLAND. Shall we address you further?

The CHAIRMAN. Not on that subject.

Senator BROWN. I think this gentleman is the first witness who has appeared here who said he was in favor of paying taxes.

Mr. BOLAND. Thank you, gentlemen.

(The proposed amendment referred to by Mr. Boland is as follows:)

PROPOSED AMENDMENT TO SECTION 542, REVENUE BILL OF 1941, CABARET TAX
H. R. 5417—1941

In accordance with our memorandum herewith submitted we recommend:

That section 1700 (c) of the Internal Revenue Code, subdivision (2) as presently proposed in subdivision (a) of section 542 of the revenue bill, be amended as follows:

"(2) By whom paid.—The tax imposed under paragraph (1) shall be [returned and paid by the person receiving such payments."] *collected by the proprietor of the establishment from the person paying for admission, refreshment, service, and merchandise."*

That section 1716 (a) of the Internal Revenue Code as presently proposed in subdivision (c) of section 542 of the revenue bill, be amended as follows:

"(a) Requirement.—Every person required under subsection (a) of section 1715 to collect the taxes, or required under section 1700 (c) *or* (d) [or (e)] to pay the taxes, imposed by this chapter shall make returns under oath, in duplicate, in such manner and containing such information as the Commissioner, with the approval of the Secretary, may, by regulation, prescribe."

NOTE.—Matter presently contained in revenue bill, to be omitted, in brackets; new matter recommended printed in italic.

AMERICAN HOTEL ASSOCIATION OF THE UNITED STATES AND CANADA,
FRANK A. K. BOLAND, *Counsel.*

(A letter by Mr. Boland is as follows:)

AMERICAN HOTEL ASSOCIATION,
OF THE UNITED STATES AND CANADA,
New York, N. Y., August 22, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

In re suggested amendment to section 1700 (c) of the Internal Revenue Code, subdivision 2 as presently proposed in subdivision (a) of section 542 of revenue bill (H. R. 5417).

DEAR SENATOR: You will recall that I appeared before your committee last Wednesday, on behalf of the American Hotel Association of the United States and Canada, with respect to an appropriate amendment to the proposed admissions tax on cabarets and roof gardens, so that hotels might be permitted to continue to pass this tax on to the patron as now provided in the present law. At the hearing you, as well as the other members of your committee, intimated that in the drafting of the bill there was no intention to preclude the hotel proprietor from passing such tax on to the patron. I previously learned that this understanding was supported by representatives of the Treasury Department and the Internal Revenue Department. You will recall that I expressed the opinion that under the present wording of the bill this tax could not be passed along and that it would practically amount to a gross-receipts tax. In this latter contention I am supported by the advice of many eminent lawyers who have clients to whom this issue is a matter of concern. You intimated that your committee would give the matter consideration with respect to some form of amendment to accomplish our desired objective.

After having given the matter further consideration since the hearing, I suggest the following amendment consisting of an insertion (printed in italic) in subdivision 2 of section 542 of the revenue bill, so that such section would read as follows:

"By whom paid.—The tax imposed under paragraph 1 shall be *collected from the patron and* returned and paid by the person receiving such payments."

You will note that under our suggested amendment, the proprietor still has the obligation to pay the tax but the amendment permits of collection of the tax from the patron.

As I stated to your committee, the hotel men of the United States have no fault to find with the change of the base of this tax, for we do know from actual experience that the enforcement of the present law has been the source of serious administrative difficulties on the part of the Internal Revenue Department. Nor do we object to the increase of the tax from approximately 4 percent to a straight 5 percent of the total bill. All that we ask is the permission to pass the tax along to the patron under some form of statutory mandate and hoping thereby to prevent any form of unfair competition on the part of hotels and restaurants, for as a practical matter we can well understand that while some proprietors may assume to pay the tax directly because of the advantage of their financial overhead structure, others not so fortunately situated may seek to impose it upon the patron directly or, as an alternative, through stress of circumstances, may attempt to absorb it by increasing the cost of the food and other entertainment where they can do so, to the disadvantage of competitors.

In closing I wish to thank you and the members of your committee for the very courteous treatment which I received from you at the hearing.

Respectfully yours,

FRANK A. K. BOLAND, *Counsel.*

The CHAIRMAN. There is another matter we might bring up at this time, because Mr. Murphy this morning presented a very forceful statement suggesting the imposition of a tax on what I believe was the commercial mutual companies, the large insurance companies, and I would like to make this statement about it.

There may be much merit in Mr. Murphy's suggestion, but, obviously, if we are going to consider the proposition of a new tax of that kind we would be compelled to give the other people, the mutual insurance company people, an opportunity to be heard, and my information is—and I think it is correct—that the Treasury is giving thought to this very problem now and is not yet ready to make a recommendation.

And, in order to prevent the appearance before the committee of people on the other side of the question, if it is agreeable with the committee, I would like to be able to announce that the comittee will not go into the question at this time and not until the Treasury is ready to submit its recommendations.

Senator CLARK. That would not be before the passage of the bill?

The CHAIRMAN. No; and it would be only fair to the people on the other side of the question, and they have a right to do so, to appear and be heard, which would probably prolong this hearing after this week.

Senator CLARK. I think that question ought to be dealt with; I don't know whether it ought to be dealt with in connection with this bill or later; I do not think it should be treated hastily, but I do think it is a very important matter. I may say that a method is in my mind for consideration on this bill or the other, reaching such underwriters as Lloyd's of London, who do business in every State in the Union and who pay no taxes in any State or Federal taxes, with the exception of the State of Kentucky, and they do business in competition with insurance companies all over the United States. I have such an amend-

ment, but I am not disposed to press that if it is felt that the whole matter should await the report from the Treasury and considered in the future.

Senator LA FOLLETTE. It is a very complicated question; not one that can be gone into hastily and unless the committee is ready to take up the matter at this time, I think we ought to make some statement about it, otherwise the mutual-insurance people would naturally want to be heard, and they are entitled to be heard.

The CHAIRMAN. Yes; that is the reason I brought it up now. I don't think, Senator Clark, that your suggestion would be precluded by this particular suggestion. It is only with respect to these mutual-insurance companies.

Mr. Sullivan, does the Treasury wish us to go into that at this time?

Mr. SULLIVAN. Our studies are practically completed, and we will be ready to submit our report and take up the matter at the pleasure of the committee. I think, as you suggested, if the question is to be opened up, the Treasury would want a complete hearing on both sides, and whereas in arriving at our conclusions we think we have given adequate hearings to both arguments, we feel easier about it after a full public hearing, because it is quite likely that we may have missed something, although we tried not to. We will be ready whenever the committee wishes to hear from us, either now or in the technical amendment bill.

The CHAIRMAN. It could be considered in connection with that legislation.

Mr. SULLIVAN. We should think so.

The CHAIRMAN. What is the pleasure of the committee?

Senator LA FOLLETTE. This falls in the same category with a great many others which the House committee has considered. We might find, after giving our consideration to it that there had been developed in the House something which would render our action of little value.

Senator CLARK. It seems to me, in view of the very large loss of revenue entailed in the untoward delay of this bill, it should be disposed of as early as practicable.

Senator BROWN. We could make this tax effective March, 1942.

The CHAIRMAN. It occurred to me it would be well to let it go over for consideration in the bill dealing with the administrative and technical matters.

Senator CLARK. I move the Chair be authorized to make the announcement originally suggested.

The CHAIRMAN. Any objection to that?

(No response.)

The CHAIRMAN. Without objection then, we will not open up this question at this time but will reserve it for consideration when the subsequent bill dealing with technical and administrative details is before the committee, probably this winter.

We will now recess until 2 o'clock.

(Whereupon, at 12.30 p. m., a recess until 2 p. m. was taken.)

AFTERNOON SESSION

(Pursuant to adjournment, the committee reconvened at 2 p. m.)

The CHAIRMAN. Mr. Marsh.

STATEMENT OF BENJAMIN C. MARSH, WASHINGTON, D. C., EXECUTIVE SECRETARY, THE PEOPLE'S LOBBY

Mr. MARSH. Mr. Chairman, and members of the committee; for the record, my name is Benjamin C. Marsh. I am executive secretary of the People's Lobby, with headquarters here in Washington.

The CHAIRMAN. You can sit down, if you would rather sit.

Mr. MARSH. I would rather stand, if you will let me, Senator. You see, my father was a preacher and he found he could deliver his exordium better standing in the pulpit than sitting down and I think I inherited that trait.

I have been following the hearings of this committee and I have reached the conclusion that the American people are almost solid behind having the other fellow pay the costs of defense. I have never seen such unanimity on this, and I have been appearing before the Senate Finance Committee for 24 years; I have never seen such unanimity in the proposal to "let George do it." I am unable, naturally, to state whether that indicates the American people's desire not to get involved in this war, or what it does indicate. I am going to represent, and do today, a group which is not connected with this great mass who want to let the "other fellow do it."

I want to suggest to this committee that you can, and in our judgment, should raise $20,000,000,000 by taxes. Most of the members of our organization, the People's Lobby, will pay considerably more taxes under this proposal, and they are ready to.

This morning one of the witnesses suggested to you that you were going to hand on to the next generation a debt of $100,000,000,000.

Well, I think I am older than any member of this committee, with possibly one or two exceptions, and I respectfully suggest to this committee that the next generation will refuse to honor any such bill as that, and it will be repudiated with rather difficult results.

This tax bill is a test bill this year. Hitler is watching it; hundreds of thousands of young men in concentration—I will take it back—in training camps are watching it; and the people throughout the world know perfectly well what every member of this committee knows, that it is not the enunciation of 8 Points either synthetically in midocean or individually by the President of the United States, which will determine what our policies are to be following this war. Those policies will be largely determined by the economic system and economic conditions and the fiscal policy of the United States during the war.

That was the case in the World War, you remember, Mr. Chairman, I am sure.

The CHAIRMAN. Yes, sir.

Mr. MARSH. The 14 Points turned into 41 disappoints and the thing went to smash.

I am going to be specific in suggesting how this money can be raised, and, frankly, you are going to be terribly criticized if you adopt our program and you are going to be in a devil of a situation if you do not, but I am going to try to reinforce the aspirations of the Members of the Congress to put through a just tax bill by sending to about a thousand papers in the next few days some facts I will give you. I know perfectly well the Boston Herald, the New York

Times, the Chicago Tribune, and the San Francisco Chronicle will not publish them, but thousands of little papers will. Also, I am going on a 6 weeks' speaking trip shortly, from here to the coast, to speak on how this war should be paid for.

I am going to ask permission to file a supporting brief instead of reading it, because I know your time is very valuable.

A citizen is merciful to the Senate Finance Committee by doing that instead of trying to keep them up all night.

We shall have a national income of about $90,000,000,000 this year and probably $95,000,000,000 next year, and assuming State and local tax collections next year will not exceed $8,000,000,000 the Federal Government can, next year, collect $20,000,000 in taxes.

The Treasury Department has recently issued a statement that the total tax collections up until July 1, this year for the preceding year were in round figures—and I will use only round figures for the record—$7,370,000,000.

We suggest the following additional taxes and yield:

Increase in new corporation income taxes	$2,148,000,000
Increase in personal income taxes	3,582,000,000
Increase in the excess-profits tax	798,006,000

The August bulletin of the Federal Reserve Board states that during the first half of this year the net income of major corporations was 25 percent larger than for the same period in 1940—of course, it was only for the first half of the year—and that dividend payments were 15 percent higher during that period than the first half year of 1940.

We suggest an increase in the capital stock tax of $33,400,000 in the estate tax of about $145,000,000 in the gift tax of some $48,000,000 and in liquor taxes of about $380,000,000.

I am not as much of an expert as one of the witnesses this morning as to what taxes on liquor do, because I have not tested the subject sufficiently, but I do not object to a reasonable increase.

We ask you, in all sincerity, to forget all about these other fool taxes which the House committee wrote in. When I saw that tax bill from the House, allegedly of Representatives, I was reminded of the tariff bill which the Democrats put through when Grover Cleveland was President, which he described as an "act of perfidy." I can only so describe the House committee bill, because it puts upon the majority of the people who cannot afford to pay much, if anything more, something like a billion dollars extra taxes.

I studied economics. I wasted 4 years during my attendance in the graduate schools of Chicago and Pennsylvania Universities. I was earning my way, but you do not have to waste that time and money to know there are only three taxes that cannot be shifted, except in a totalitarian government, and we haven't that yet. You cannot shift the income tax, either the personal or corporate income tax. If you could nobody would object to it. That is pretty good proof. When a fellow objects to a tax, it is a sign that he cannot shift it.

Second, you cannot shift the estate tax, or, for that matter, the inheritance tax, onto someone else.

Third, you cannot shift a tax on land values. Every other tax, nearly, you can shift, but those you cannot.

Let me give some figures as to new taxes. We suggest an excise tax on land values, with an exemption so that no little home

owner and no little farmer, small fellow, I mean, that is working his farm, will pay 1 cent additional tax through this excise tax on the value of land. We know you can raise about $494,000,000 or $495,000,000 by such a tax. Whom will it fall upon?

Well, it will fall upon the Roosevelt, the Morgenthau, and Astor tribes and the rest of big-land owners primarily. It should fall upon me. I have been very much more successful, Mr. Chairman, in the 20 years past in skinning the people than in saving them. About 3 years ago I bought a piece of land over in Virginia. I thoroughly believe, as Ambassador Josephus Daniels remarked in 1935, in Mexico City, "You will never have freedom as long as you have speculation in land." He made that statement at a Thanksgiving Day service and also, "You will never have freedom as long as you have private ownership of natural resources."

I sold this land after holding it a little over 2 years and I sold it at a profit, minus a few expenses, of about 200 percent. I did not earn it. In fact, what I made by acts of Congress and the State legislature, pardon me, was about a year's net salary. I could not have done that if we had imposed a fair tax on land values.

It is strange, but the increase in net rents and royalties from 1932 to 1940 was more than the total reduction in the total interest payments.

Now I come to the source of the largest revenue you can get, and that is taxing the surplus and undivided profits of corporations. You can get next year $5,000,000,000. And it will not be a precedent. I told you I will not take time to give you the detailed figures which I have in this statement, but I would like to read on that point these figures, and all of my figures, Mr. Chairman and members of the committee, are from our Government reports; none of them are imported from Moscow, not one.

At the end of 1937, surplus and undivided profits of 416,902 corporations were $58,524,000,000. Their cash on hand was $24,346,300,000. I will use round figures. The details are in the statement. Their holdings of Government obligations largely tax-exempt were nearly $24,000,000,000.

In other words, at the end of 1937 their liquid assets were about $48,500,000,000.

I am suggesting what this Congress has got to do to save America from Hitler or perhaps we might say, save the administration from an economic collapse—it comes to the same thing. What they have got to do is make the corporations do what they did in each of 3 years in the past decade. In the 3 years from 1931 to 1933, inclusive, incorporated business reported an aggregate loss of $5,900,000,000, but paid dividends amounting to $9,200,000,000, so that they paid out of something besides profits, because they had not any profit; they had a deficit, mind you, of $5,900,000,000—they paid out each of the 3 years an average of over $5,000,000,000 a year.

To whom? To their stockholders, and 20,000 people got roughly one-third of that.

I should say there is not an industry in America which has the slightest fear of Hitler, judging by the way they have come to you and said, "For God's sake, give the other fellow the privilege of paying for defense and give us the privilege of making the profits."

because that summarizes practically all the testimony you have had. When I see your scheme for excise taxes, which the House put up to you, I reach the conclusion that the House Committee on Ways and Means have decided the only way to reemploy those put out of non-defense industry is collecting excise taxes, and they are planning to make jobs for 2,000,000 more such people collecting excise taxes. That may be Americanism, but I doubt it. It is not intelligent.

The corporations can pay $5,000,000,000 a year for the next 3 years, for each of the next 3 years. They did it for 3 years from 1931 to 1933. Did they go broke? No. I have shown you the figures, and these figures, by the way, that I am giving you are from the statistics of income of the Internal Revenue Bureau for 1937.

After going broke that way, 4 years later they had surplus and undivided profits of $58,500,000,000. They are probably larger today. I could not get any later figures; your experts can.

Incidentally, not to go into details, out of that 416,000 corporations, 394 had about two-fifths of all the surplus and undivided profits.

Which leads me up to my next suggestion, Mr. Chairman and members of the committee, and that is this: I do not know whether corporation executives are liars congenitally or as an acquired trait, or whether they are just scared, but I got from the O. P. M. the other day this list of contracts awarded, supply contracts only, totaling $25,000,000 and over, because anything under $25,000,000 now is not worth mentioning. Six corporations received 31.1 percent of all the contracts given through May 1941 from June 1940. Then they give a list of fifty-odd additional corporations. These 56 corporations, some of them having in their contract that they would not subcontract, these 56 corporations—let me read it:

Fifty-six corporations having defense-supply contracts with the War and Navy Departments have contracted for almost three-fourths of the total dollar volume of such contracts, according to a compilation made by the Bureau of Research and Statistics, Office of Production Management.

I am going to make this request of this committee in order that we may have a record of it—I know you can get it, I have talked to some people in the Treasury—I will give you this list and ask you to let it go into the record, and ask that your committee request the Treasury Department to ascertain what the net profits of these corporaions, over and above any increase in taxes you contemplate, are for the current half year, the first half of this year, as compared with 1940, and on the basis of that information, that you determine which one of these corporations is to pay the major part.

I think it is fair to say that corporations that get most of the Government contracts should pay the major part of the profits tax. It is nonsensical for me to talk percentages to you because you have experts that are very capable to determine those—Mr. Stam, Mr. Parker, Mr. Sullivan, and others, who can get you all of these facts.

You have been seeing the story in the papers about the lack of morale in the Army, and that lack of morale, gentlemen, I expect in the Army was due to the lack of morale in the country.

Well, it would be natural.

Let me repeat, if I may, as some more members have come in——

The CHAIRMAN (interposing). Your time is over.

Mr. MARSH. I will not repeat then. I will let them read the record. I will get right down to two or three more points.

May I read into your record a statement I got the second of this month from the Department of Agriculture showing farm-land values, exclusive of buildings—5 States have about two-fifths of all the farm-land value in the 48 States. I would like to enter into the record just this last column, if I may.

The CHAIRMAN. Yes, sir.

Mr. MARSH. Now, the other day you had the astounding suggestion from a good friend of mine, who I hope will learn economics later, Mr. Alvord, about the 3-percent withdrawal tax. Of course, he appeared for his employers, the United States Chamber of Commerce, whose patriotism has never been put to the test by being applied. He suggested a universal 3-percent withdrawal tax. Well, that will probably save the rich fellows over $100,000,000. I figured it out, and I will tell you why.

This year the net income of people getting over $5,000 will be approximately $9,000,000,000. They are to pay a 3-percent tax under the Chamber of Commerce suggestion. What does that mean?

Three percent of $9,000,000,000 is $270,000,000. By a little payment, about $270,000,000 will be withdrawn from a tax rate in the upper brackets of 80 percent. It is a very slick scheme. I do not think there is much danger of its going through, but I want to warn you it will be pushed. Taking the 1939 figure for the $5,000 people, their total income was $7,800,000,000. Their property income was $4,700,000,000. So you see that scheme for withdrawal at the source really means that the property interests would be exempted from very heavy surtaxes, and that would naturally increase the deficit or put it over on somebody else.

Also, you have had several buckets of tears shed in your presence over the terrible taxes on the rich. Let me give you the Government figures for the poor people who had an income of a million apiece in 1939; 43 of them.

The CHAIRMAN. You will have to put your figures in the record, Mr. Marsh. Your time is up. You have taken twice as long as you were allotted.

Mr. MARSH. May I put them in later, then?

The CHAIRMAN. Yes, sir.

(The figures submitted by Mr. Marsh are as follows:)

FIFTIETH OF FAMILIES GET NINTH OF INCOME

The report on incomes and taxes for 1939 shows about one-fiftieth of American families got about one-ninth of the national income and paid very little income taxes.

National income was $68,600,000,000. Income from ownership or control of property was $21,832,000,000. The 674,265 persons or married couples making returns of over $5,000, received a total net income of $7,814,000,000, and their income from ownership or control of property was $4,192,000,000.

About one-fiftieth of the families of America received in 1939 over one-ninth of the total national income and almost one-fifth of the income from ownership or control of property. Almost 54 percent of their net income was from property.

ONE-THIRD PERCENT OF FAMILIES GET ONE-SIXTIETH OF INCOME

The 12,034 net returns of incomes over $50,000 reported total income of $1,211,000,000, including income from property of $840,000,000.

About one-third of 1 percent of the families of America received over one-sixtieth of the national income, including almost one twenty-fifth of all property income.

The $5,000-plus people paid in Federal income taxes and surtaxes $820,541,000 and had left an average of $10,373.

Even the 467,337 people making humble returns of $5,000 to $10,000, whose total net income was $3,139, had left, after paying $81,500,000 of taxes, an average of $6 541, and incidentally paid on the average in Federal income and surtaxes only $177, or 2.6 percent.

INCOMES OVER A MILLION DOLLARS

The 43 returns of net incomes of over $1,000,000 deserve careful consideration.

Their total reported net income was $74,100,000, and they allowed themselves an average of $39 700 as salaries, commissions, etc.

This left them $73,393,000 income from ownership or control of property, which must be worth about $2,000,000,000.

Their average income from property was $1,706,810.

They paid in Federal income and surtaxes only $47,969,000, which is not the 85 percent of net income to which it is often asserted they are subject, but was only 64.7 percent—less than two-thirds, and had left on the average after paying all direct taxes, $607,464.

Returns of incomes under $5,000 were estimated at $6,813,439, or 91 percent of all returns, with total estimated net income of $14,475,500,000.

This averages $2,124 per return, not per family. The total Federal income tax paid by these 6,813 439 families was $89,972,000, which was 9.88 percent—nearly one-tenth of all Federal income tax collected—compared with the 5 27 percent of all tax collections paid by the 43 persons with net incomes over $1,000,000.

Mr. MARSH. I will just make two requests in closing. First, that during this war no member of Congress represent any corporation, or make an argument for the reduction of taxes of any corporation until we scuttle Hitler, and then we will have to tackle our own jobs.

The second suggestion is this: I know the temptations to which Members of Congress are subjected. I think you should adopt a resolution which has been before you for years, for a public record of all stock holdings of all Government officials, because, mind you, not all of them are above the temptation to be patriotic, spelled their way, and what land they own, so that you can down the growing feeling in America that things are not going right. People have a reason to feel that.

After 8 years of the New Deal, property got a larger proportion of the national income than under the wicked Old Deal, and humanity cannot survive that much longer by being told to hate Hitler. You have got to change that system.

Thank you for your patience. Might I give you a paraphrase from the Scriptures?

Since ye know these things, happy are ye if ye do that, and unhappy are the people if ye do not.

(The supplemental statement of Mr. Marsh is as follows:)

FEDERAL GOVERNMENT CAN RAISE TWENTY BILLIONS

The estimated actual cash outlay for armaments next year, in 1942, will probably be about $18,000,000,000, while nonarmament expenditures can be held to about $7,000,000,000—a maximum total of $25,000,000,000.

The estimated national income this year, 1941, is $89,000,000,000 to $91,000,000,000, and for next year about $95,000,000,000.

Twenty billion dollars is only a little over one-fifth of the national income.

State and local taxes in 1942 will not much exceed $8,000,000,000.

Combined Federal, State, and local taxes in 1942, assuming Federal taxes at $20,000,000,000, will amount to only 35 to 40 percent—under two-fifths of the national income.

Two basic principles ignored by the House, must be observed scrupulously in the revenue bill to finance a major part of defense and armaments costs:

1. There must be substantial parity of real income of draftees, officers, professional people, stockholders, entrepreneurs, farmers, and wage earners.

2. Taxes must not curtail production, nor add to costs.

This is just another way of putting the principle of ability to pay, approved in the Democratic Party platform in 1932, and rigorously ignored.

The tax bill should not attempt to limit consumption so as to conserve raw materials needed for defense and armaments.

If certain products, such as automobiles, refrigerators, and gadgets, use material needed for vital purposes, they should not be manufactured. It is folly to attempt to limit consumption of goods which should not be produced by excise taxes.

As our experience has also shown, it is folly to let manufacturers of defense material bloat costs, and then take back most of excess profits in taxes.

This pyramids costs.

For the current year 1941:

Total income of persons, not families, receiving net incomes of over $5,000 will be about $9,000,000,000, and there are about 700,000 of them.

Total income of persons receiving net incomes of $3,000 to $5,000 will be about $6,000,000,000, and there are amout 1,250,000 of them.

This represents about 1,850,000 families.

Total income of persons with net incomes of $2,000 to $3,000 is this year about $4,600,000,000, and there are about 1,700,000 of them.

These 3,650,000 persons representing probably about 3,475,000 families—or approximately one-ninth of all families will get this year around one-fourth of the total national income, including the major part of income from ownership or control of property.

In addition the total income this year of persons receiving net incomes of $1,000 to $2,000 is from $3,750,000,000 to $4,250,000,000. People in this income class paid Federal income tax in 1938 of only $15,202,000.

The Treasury Department reports that from July 1, 1940, to June 30, 1941, total individual income-tax collections were only $1,417,655,000, which was an increase over the preceding year of $435,637,000, or about 44 percent.

If America is to get adequate defense or armaments, within 2 years, the Government will have to take over all basic industries, as well as all defense industries, since they are all involved in the defense program.

It will not be practical to bank on largely increased receipts from corporation profits under Government control, since elimination of profits and getting down costs of the armaments program is quite as effective a method of preventing inflation, as taxing incomes, cradles, clothing, shoes, food, and drinks.

The armaments program is costing at least one-third more than it should, but this cannot be changed in the eighth month, to affect this year vitally.

It can be done for next year, now.

The following table gives receipts in main classes and in millions for fiscal year 1940 to 1941, possible yield in 1942 calendar year, and increases, and new taxes proposed.

[In millions of dollars]

	1940 to 1941	1942	Increase
Corporation income taxes	1,852	4,000	2,148
Individual income taxes	1,418	5,000	3,582
Excess profits, etc., taxes	201.4	1,000	798.6
Capital stock tax	166.6	200	33.4
Estate tax	355.1	500	144.9
Gift tax	51.8	100	48.2
Liquor taxes	820	1,200	380
Tobacco taxes	698	698	.....
Documentary and stamps taxes	39	39	.....
Manufacturers excise taxes	617.3	617.3	.....
Other miscellaneous taxes	225.1	225.1	.....
Employment	925.8	925.8	.....
Total	7,370.1	14,505.2	7,135.1

New taxes:	
Excise tax on privilege of holding land based on value, with small exemption	$494.8
Tax on surplus and undivided profits of corporations with assets over $100,000,000	3,000
Tax on surplus and undivided profits of corporations with assets under $100,000,000	2,000
Total	20,000

This table shows how to get an increase of $7,135,000,000 from existing taxes, without any increase in consumption taxes, and how to obtain $5,495,000,000 additional revenue from new taxes—on land values and on corporation surpluses, and undivided profits.

The exemption for an individual will have to be reduced to about $750, and for a couple to $1,500—with allowance for dependents.

Monthly payments will help in collections.

The Department of Agriculture reports that April 1, 1940, the value of farm lands, exclusive of buildings, was $23,230,200,000, of which 5 out of the 48 States—Illinois, Iowa, Kansas, Texas, and California—reported $8,017,000,000, or 39 percent—nearly two-fifths—of the total for all farm lands.

A large part of farm lands in these States is in rather valuable holdings.

Government's farm programs have benefited chiefly land owners since higher prices for farm products, as the Department admits, result in higher selling prices of farm lands.

The assessed value, that is the untaxed selling price of land in American cities is about 40,000 million dollars, and much of it is owned, in every major city by 5 to 10 percent of the people.

Suburban land tends to be more widely owned.

Just as the Government's farm policies increase the selling price of farm lands, so its housing and relief programs increase the selling price of nonfarm lands.

The public-housing program reserves to economic royalists the privilege of plucking those whose income makes plucking profitable, and reserves to Government the privilege of bailing out landowners of sites needed for housing for people too poor to be attractive victims.

Both the Roosevelt and the Morgenthau families are successful and congenital land speculators, which has rendered them incapable of urging that the Government can get half a billion dollars a year by taxing their racket.

Congress may escape such blindness.

Such an excise tax on land values will effectively prevent speculation in farm lands, which the Vice President in 1934 declared "was worse than the plague, and almost as bad as war."

It will materially reduce the price the Government pays for land, for housing, cantonments, airfields, and other purposes connected with the armaments program.

At the end of 1937 (the last date for which figures are available) the surplus and undivided profits of the 394 corporations having assets of over $100,000,000 amounted to $22,713,200,000.

Their financial position was quite strong. They had cash assets of $10,418,800,000 and held Government obligation amounting to $13,715,400,000.

Many of these mammoth corporations are well represented in Government defense agencies (or were till recently), and have gotten rather juicy war contracts. They include most of the large motor companies, which were able to stall off priorities and pile up profits on their almost record output of motors in the past year.

They include the Aluminum Trust, steel combine, oil octopus, and Food Trust—with bloated capitalization and ballooning profits.

The $3,000,000,000 suggested tax on the surplus and undivided profits of these corporations to "save the system of private enterprise"—of which they have been such beneficiaries, would mean taking considerably less than one-eighth of their liquid assets at the end of 1937—and probably a smaller proportion of their present liquid assets—cash on hand and Government obligations.

Their capital assets at the end of 1937 were $50,035,700,000.

At the end of 1937 the surplus and undivided profits of the 416,508 corporations with assets of less than $100,000,000 were $35,810,800,000.

Their cash on hand amounted to $13,027,500,000; their holdings of Government obligations to $10,272,000,000—together their liquid assets were $24,195,000,000—only $44,000,000 less than those of the 394 mammoth corporations.

A tax of $2,000,000,000 means taking only about one-twelfth of the liquid assets of these corporations at the end of 1937, and probably about the same proportion of their present liquid assets.

Payments out of surplus and undivided profits would not be a precedent.

In the 3 years 1931, 1932, and 1934 incorporated business reported an aggregate loss of $5,885,000,000 but paid dividends amounting to $9,200,000,000.

This means incorporated business paid, out of something it had, and presumably out of surplus and undivided profits, $15,085,000,000 or an average of slightly more than $5,000,000,000 each of the 3 years.

In spite of this, total surplus and undivided profits of incorporated business were at the end of 1937 almost $58,524,000,000.

Such a tax on surplus and undivided profits would make Government acquisition of basic industries much more practical, for it would cut the selling price of stocks quite materially and would doubtless enable bondholders to see the wisdom of accepting some composition as to principal and interest rates.

In 1937 incorporated business paid in interest $2,025,900,000.

About 20,000 stockholders collect about one-third of all dividends paid.

The Government's policy of increasing the national debt by 10 to 15 billion dollars a year, even for 2 or 3 years, will produce such inflation as will cause most small stockholders much larger loss of purchasing power than the reduction in their claim upon the production of the Nation involved in the proposed tax upon surplus and undivided profits.

Government cannot ethically or safely attempt to pass onto the next generation any appreciable part of the cost of armaments and defense necessitated largely by the stupid, or worse, policies of this administration.

(Mr. Marsh also submitted the following report:)

OFFICE OF PRODUCTION MANAGEMENT

Fifty-six corporations having defense supply contracts with the War and Navy Departments have contracted for almost three-fourths of the total dollar volume of such contracts, according to a compilation made by the Bureau of Research and Statistics, Office of Production Management. The balance of one-fourth of the total volume of defense supply contracts was divided among several thousand contractors.

Under supply contracts the Government is provided with ships, airplanes, tanks, guns, other equipment, food, and fuel, in contrast with construction contracts under which cantonments, bases, depots, arsenals, and factories are built.

Bethlehem Steel Corporation, at the end of May, held the largest volume of supply contracts—a total of $927,000,000. The next largest volume of supply contracts was held by the New York Shipbuilding Corporation, the total being $507,000,000. General Motors Corporation ranged third with $490,000,000, and Curtiss-Wright Corporation fourth with $444,000,000. Fifth in order was Newport News Shipbuilding & Dry Dock Co., with War and Navy supply contracts totaling $389,000,000, and sixth E. I. du Pont with $318,000,000.

The combined defense supply orders of these six companies total $3,075,000,000, or 31.3 percent of $9,839,000,000, representing the total volume of all defense supply contracts at the end of May. Tabulations of these are given in the following three tables:

Distribution of War and Navy supply contracts of $10,000 and over by volume of contracts held, June 1940 through May 1941

Dollar volume of contracts held by company (in millions of dollars)	Number of companies	Dollar volume of contracts	Dollar volume of contracts held by company (in millions of dollars)	Number of companies	Dollar volume of contracts
600 to 1,000	1	$927,000,000	50 to 100	12	$832,000,000
500 to 600	1	507,000,000	25 to 50	22	751,000,000
400 to 500	2	934,000,000	Up to 25 [1]	(2)	2,569,000,000
300 to 400	2	708,000,000			
200 to 300	5	1,131,000,000	Total	(2)	9,839,000,000
100 to 200	11	1,480,000,000			

[1] From $10,000 to $25,000,000.
[2] Not available.

Cumulated distribution of War and Navy Department supply contracts of $10,000 and over by volume of contracts held, June 1940 through May 1941

Dollar volume of supply contracts held by company	Number of companies cumulated	Dollar volume of contracts cumulated (in millions of dollars)	Percentage of dollar volume cumulated
Over $600,000,000	1	927	9.4
Over $500,000,000	2	1,434	14.6
Over $400,000,000	4	2,368	24.1
Over $300,000,000	6	3,076	31.3
Over $200,000,000	11	4,207	42.8
Over $100,000,000	22	5,687	57.8
Over $50,000,000	34	6,519	66.3
Over $25,000,000	56	7,270	73.9
Over $10,000	(1)	9,839	100.0

The CHAIRMAN. Mr. Forstall.

STATEMENT OF JAMES J. FORSTALL, REPRESENTING MICKELBERRY'S FOOD PRODUCTS CO., CHICAGO, ILL.

Mr. FORSTALL. Mr. Chairman, my name is James J. Forstall, of Chicago. I am representing Mickelberry's Food Products Co., a Chicago company. I am one of its directors.

Our interest here is to see that there is in the law a definition of excess-profits taxes which will be fair to rapidly growing corporations such as ours. Now, I realize that excess-profits tax laws are not simple. I have had a little experience myself in that regard. I was one of the lawyers on the Internal Revenue Staff in 1918 and 1919. There were only 12 of us in the Solicitor's office at that time, when the Revenue Act of 1918 was adopted, and since then I have spent a good deal of time on these taxes, so I know it is not easy to find something simple. That is why I and some of my friends have been delighted in finding the formula which has been suggested by Mr. Stiles for use in the determination of excess profits, which seems to be fair, just, and at the same time very simple.

I want to give, first of all, just a few facts about our company to let you know what our problem is and then see if you do not think that that formula would be very fair for companies in our situation.

We process and sell pork products. We sell them by refrigerated trucks from store door to store door—only to retailers. We have no Government orders at all. Our business is mostly in Chicago and Detroit and the suburbs. The company was incorporated in 1926. We had a very stable and good income from 1936 to 1930, earning close to $120,000 each year, after Federal taxes. Then we went into an unfortunate side venture; we bought out a cookie company with 10 plants all over the United States, and we began losing money right and left on it, and then finally, in 1935, our company was practically insolvent and almost passed out, but by strenuous efforts the company was saved. In 1936 we lost only $3,400; in 1937 we made $27,000; in 1938 we made $68,000; in 1939 we made $90,000; and in 1940 we made $118,000—all before Federal taxes.

Now, under the terms of the First Revenue Act of 1940, we would have been subjected to a very heavy excess-profits tax on those 1940 earnings, even though those earnings were less than what we were earning normally until we got into this outside business which cost us so much, and even though in the last 10 years the dividends on the common stock have amounted, in all, to only 45 cents a share, which is only three-fourths of the amount paid each year as dividends in 1930 and before.

There is also the fact that we have never done any defense business. We just sell to retailers. Then there is this additional fact to make it all the stronger: While our income in 1940 was just about up to the 1926–30 level, our profit margin was very much lower. We simply had the larger income because we had increased the number of outlets and increased the territory. We were employing more people, paying more wages.

It hardly seems fair, under those circumstances, that we should pay a substantial excess-profits tax. Of course we are paying for 1940 a 24-percent income tax and will pay a 30-percent one for this year, but I think you will agree that a substantial, drastic excess-profits tax on top of it would not be fair if "excess" means anything.

Now, there are several different ways that our situation could be helped. I am glad to say that fortunately this committee, in its wisdom, proposed an amendment to the Frst Revenue Act of 1940. This amendment was enacted as part of the Second Revenue Act of 1940, and it very greatly helped our situation, but we did have some

excess-profits taxes to pay even then. The trouble with the amendment is that it does not carry the relief forward. This year's earnings will be greater than last year's earnings, and we hope that the 1942 earnings are going to be greater still, but the additional growth is not taken care of at all.

Of course, we will pay heavier excess-profits taxes anyway. There is a 10-percent increase in all the rates, and no income-tax deduction is granted.

We feel that a formula which takes care of a company such as ours, which really has no excess earnings at all, so that it does not have to pay, on top of heavy income taxes, heavy "excess-profits taxes," taxes that we submit are not excess-profits taxes at all, is fair and just. That is why we are so strong for the formula of Mr. Stiles.

Mr. Alvord and Mr. Stiles have both discussed it at length. I will not go into details, but I will say just a few words about it.

A formula which adds to your excess-profits credit base pro rata with your increases in pay roll certainly seems just as fair as the rule, where the excess-profits credit is based on invested capital, that if you double your invested capital, you double your base.

Certainly this administration does not want to discriminate against the workingman as compared with the capitalist. Under your invested-capital base, if you put up twice as much money and buy that much additional stock, you double your base. If the company is expanding, giving more employment and more wages, it certainly seems fair that they should get a larger base on which to determine their excess-profits tax. If they put in additional capital, that may well go into labor-saving machinery, so there may not be anywhere near a pro rata increase in pay roll or any help to the general prosperity of the country, and yet they will double their base. Unless you adopt such a formula as this, if we double our pay roll, we do not double our base even though we are giving those additional wages.

I submit that our case is a splendid example of a company that seems to need the benefit of that formula to escape unjust taxation.

There are a couple of my friends in Chicago representing other companies that would like to join us in supporting the Stiles formula. I am not through yet, but with your permission, when my testimony is concluded, I want to put a paragraph or two in the record in their behalf. Will that be all right?

The CHAIRMAN. Yes.

Mr. FORSTALL. There is one other ground on which I would like to support this Stiles formula. The chairman of this committee was quoted in the papers some time ago—I would not want to say I remember it accurately—as saying of the Revenue Act of 1942—and we all know there will be one—that it was important that in it there should be a comprehensive simplification of our tax laws. Certainly, if he was quoted correctly, it strikes a sympathetic chord in my breast, because all the way back in 1918 to 1920, when I was working on these laws, it always seemed to me that the most terrible thing about them was the waste of intellectual power and time of the leading corporate executives caused by their having to devote so much time and thought to fussing with the corporation-tax laws. For the board of directors

of a company, or for the executive committee, to spend their time on the details of the tax laws—what sort of tax return they would make, what their depreciation policy should be, what their depletion policy should be—always has seemed to me just a terrific economic waste. If that were true in the twenties, when things were going well, when we were not in any crisis, what about now when we are in a great crisis, when, as Senator Byrd says, the defense program seems to be lagging terribly? Would not it be well if we could simplify the tax laws? I know it is not easy, but the British have always kept their century old income-tax laws relatively simple, so why cannot we greatly simplify ours? If we really could simplify the tax laws we could release a large amount of invaluable intellect and time for increasing the defense production. Therefore, in conclusion, I want to urge that this Stiles formula be adopted this year as a first little start in a step toward simplification of the tax laws. While its adoption as an alternative this year will add one more provision, this simple provision, to the act, experience the next year or two may well show that a lot of other relief provisions may be dropped out, because this simple provision will take care of them.

Mr. Arthur C. Nielsen, president of A. C. Nielson Co., of Chicago, who was unable to appear before the Senate Finance Committee but who did testify on May 15 and May 28 before the Committee on Ways and Means, has requested that I include in my remarks the following statement for him:

The nature of our business is such that we are brought in close contact with many growing companies and are convinced that they have and will continue to play a very important part in the future progress of the economic welfare of our country. It is my opinion, therefore, that the retention of the average earnings method as amended by Congress in March of this year is absolutely necessary for the continuation of such companies.

I believe, however, that their future growth should be encouraged by the provision of an additional yardstick for the purpose of determining normal profits. The suggestion which has already been submitted to your committee and is known as the Stiles formula for determining normal profits of a growing company appears to me to be a very equitable method. Its simplicity makes it easily understood and its adoption as an additional alternative or relief measure is highly desirable.

The CHAIRMAN. Thank you very much. You may put into the record what you wish to.

Mr. FORSTALL. I submit for incorporation in the record the following letter from the chairman of the tax committee of the Illinois division of the National Small Business Men's Association.

(The letter submitted by Mr. Forstall is as follows:)

ILLINOIS DIVISION, NATIONAL SMALL BUSINESS MEN'S ASSOCIATION, INC.,
Chicago, Ill., August 19, 1941.

Mr. JAMES J. FORSTALL,
Chicago, Ill.

DEAR SIR: Please incorporate in your testimony before the Committee on Finance, United States Senate, the following:

The tax committee of the Illinois division of the National Small Business Men's Association is convinced that growing companies have and will continue to play a very important part in the future progress of the economic welfare of our country. It is their opinion, therefore, that the retention of the average-earnings method as amended by Congress in March of this year is absolutely necessary for the survival of such companies.

They also recommend an amendment incorporating the principles of the Stiles formula as an alternative method of computing the excess-profits credit as it gives growing enterprises an opportunity and incentive to keep on growing.

It is simple to apply and relieves the small businessman using this method of the costly burdens of the computation of the excess-profits credit which the preparation of returns under the existing law involves.

Yours very truly,

NATIONAL SMALL BUSINESS MEN'S ASSOCIATION,
THOMAS F. SEAY, *Tax Committee Chairman.*

The CHAIRMAN. Mr. Sommers.

STATEMENT OF HOBART H. SOMMERS, CHICAGO, ILL., REPRESENTING NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES AND MUSIC EDUCATORS NATIONAL CONFERENCE

Mr. SOMMERS. For the record, Mr. Chairman, my name is Hobart H. Sommers, of Chicago. I am principal of the Austin High School of that city, and I am representing here today the National Education Association of the United States as well as its department, the Music Educators National Conference.

We are interested merely in the proposed 10-percent tax on musical instruments that was presented to your attention this morning. The N. E. A., as you know, has a membership of 211,000 in the United States, and the Music Educators National Conference is composed of mostly public-school music teachers in the United States and has a membership of 45,000, and we, of both organizations, sincerely believe that this tax will affect detrimentally the development of the bands and orchestras in our schools.

Our instrumental music organizations are great contributors to good citizenship, high morale, and the unified community spirit in our schools. We have developed this as a public-school enterprise. It is not a private enterprise. It is run by the teachers.

I notice a good many of the people who testified before your committee testified from the viewpoint of the manufacturers. I might say I am representing the teachers and consumers that are interested in not seeing this tax passed.

We object primarily to the classification of musical instruments as luxuries, as we teachers in the schools know them to be as important to our educational plans as any of our textbooks.

I think that was a point made by Major Griffith this morning, as far as athletic equipment is concerned, and we are in favor of that also.

There are 30,000,000 young people in the schools of the United States, and almost every one of them has contact with public-school music daily.

The American boy and girl have found group expression through musical instruments in a movement that has no parallel anywhere or anytime in history.

Of the 7,000,000 youngsters in our high schools and junior colleges, between 30 and 40 percent would be vitally affected by this tax as new users of instruments.

This great development of public-school music is something that has grown up since World War I, when the school bands and orchestras gave great service in the Liberty-bond drives and showed the public what organized school music could do along that line.

I hope they will not be called upon again in such a great measure, but that is within the realm of reason.

During the depression the music program was often attacked as a passing fad; but the fact that it has grown during hard times shows its importance to the school program. In this year almost 100,000 boys and girls, picked people from their local organizations, took part in the national band and orchestra and solo contests, in the great regional festivals held at many places over the Nation. Educators are agreed that this is a worth-while activity from many viewpoints. This is not only the music teacher now, mind you, but we all agree that this activity is worth while. This new tax of 10 percent we believe will affect the professional musician little, if at all. We feel he has his instrument already, and that the people that will be affected by the tax are the youngsters that are coming up and buying new materials.

The high-priced articles, such as old violins or other expensive instruments, are not newly manufactured articles, but have gained in value on account of mellowness due to age.

Musical-instrument dealers, and I believe Mr. Smith testified this morning that the great bulk of the instrument business deals with amateurs who are customers of new and low-priced articles, about 80 percent. We wish to corroborate that fact from the school viewpoint.

My point is that this tax will put a great psychological burden on an educational movement that has taken 25 years to build.

If Congress labels these community activities of school bands and orchestras, and other materials, as luxuries to be highly taxed along with jewelry and other articles that you have here that are not pertinent to defense, we have been placed in a very embarrassing position. We believe that these things are just as important, the musical activities, the bands and orchestras, to our boys and girls as their learning geography and perhaps more so.

Senator TAFT. How far would there be any exemption as to high-school bands?

Mr. SOMMERS. I do not know as there would be any exemption. I noticed in the testimony of one person this morning where he mentioned the fact that boards of education could buy instruments and therefore, being representatives of the State, would get some exemptions; but I would like to point out that very few boards of education supply instruments to the school. That is done through what is called the school fund. For instance—I am from the city of Chicago—our board of education has not supplied any money for school instruments for years; they have been bought through the school. We raise that money through our concerts one way or another to buy the school instruments, and the children often buy their own after they become interested in the school musical program. It is a school fund and is not a fund created by the board of education, and we could not claim exemption for any instruments

that we might buy next year for the Austin High School, my own school. Does that answer your question, Senator Taft?

Senator TAFT. Yes.

Mr. SOMMERS. The music program in our schools should be left to develop unhindered. The American youth, we believe as educators, has enough of passive listening in the movies and the radio. He needs to do something himself that will help him undestand his community and teach him his place in a democratic society. This is a community activity program. He is doing something in his band or orchestra, he has an opportunity to serve his community in many ways through this musical group, and we feel it is very good for him in these days, or any days, as far as that is concerned.

This is the point that Senator Taft talked about: The money for instruments used in our school bands and orchestras seldom comes from board of education tax money but rather from the individual players or from money raised locally by the school itself.

The music organization of our schools will be keenly needed next year in the effort of American education to keep the citizens of the United States alive to the needs of the defense program.

I am quite worried about the statement made by Mr. Smith this morning, that with the lack of priority on some metals he will not be able to make as many instruments as he had made in the past. That alone is going to hinder us, but with this tax of 10 percent put on by Congress we feel it will hurt us no end.

You remember the tax bills passed after World War I that exempted musical instruments, and we feel little actual money will be lost to the Federal Government if this tax is not enacted, but many thousands of homes and people will be affected. Local tax budgets for education will be strained on account of rising Federal expenditures, and this 10-percent tax under luxury classification, together with the new installment-buying regulations, will do inestimable harm to the public-school music program in our schools.

The CHAIRMAN. Any questions?

Mr. SOMMERS. I will be glad to answer them.

The CHAIRMAN. Thank you very much for your appearance.

Mr. Scudder.

STATEMENT OF C. W. SCUDDER, CORDELE, GA., PRESIDENT, GEORGIA MUSIC EDUCATION ASSOCIATION

Mr. SCUDDER. My name is C. W. Scudder, of Cordele, Ga. I am president of the Georgia Music Education Association and representing the Music Educators National Conference.

The CHAIRMAN. You wish to speak on the same text?

Mr. SCUDDER. On the same subject.

The statements that I have for you represent the views of more than 45,000 music educators represented by the Music Educators National Conference, a department of the National Education Association.

In unparalleled expression, it has been said:

> Music, drama, painting, and pageantry—all the arts—are the means by which a nation may express emotionally its common ideals. The spirit of our Nation should speak through its art, and, as it speaks, its spirit will nourish its art; and, ultimately its art will exalt its spirit.

Education is the foundation of any State. Anything that we do today that weakens our educational program will tend to weaken our great country at a time when it needs to be strong in every respect. Modern educators believe that education has to provide not only knowledge, skill, and insight necessary to solve social and economic problems but also a means of developing aesthetic sensitivity. Opportunity must be provided for giving vent to emotions which will bring about emotional stability and mental health of our young people.

Music teaching in this generation is done as group work in the public schools in contrast to the habits of 25 years ago of having private teachers for violin, cornet, and piano, and so forth. Music is a regular school subject taught in school hours, in schoolrooms equipped as band, orchestra, and practice rooms, with teachers paid like teachers of algebra and geometry and with students receiving credit toward graduation, in band, orchestra, clarinet, or violin.

The public-school music teachers of the United States feel that this bill will definitely harm the growth of a great movement which has as its philosophy that music is essential in the lives of our young people and in the community. The music educators are offering one of the most vital voluntary contributions to the building of the country's morale.

The brightly uniformed high-school band found almost in every small town in America is not a luxury but an expression of the American way of living in harmony and unity. Bands and orchestras contribute greatly to every community enterprise. The great high-school band of Joliet, Ill., as well as many other school bands throughout the country, serenade at traintime every group of selectees on their way to camp. Every U. S. O. drive and defense bond drive in the coming year will call for the services of some school instrumental organizations.

It is not the purpose of this program of music activity to prepare thousands of professional musicians and artists. This is a citizenship program, giving a cultural background by actually living and working in the field of music during the school terms. Although every child in our schools does not play an instrument, yet every child in the school is benefited by the organization developed. If we tax these cultural activities in our schools by taxing the materials they work with, we will destroy the very way of living that we are attempting to defend by all of our defense measures.

The arts and our intellectual activities need to be kept alive. They are struggling today against a tremendous pressure of world events. It is always difficult for culture to live in turmoil.

This tax will bring in little money to the Federal Treasury in comparison to the effect it will have on the educational program. And the educational program cannot be valued in dollars and cents.

Many communities have few professional musicians and professional musical organizations and rely entirely for their music upon amateur groups that are constantly changing.

Finally, this plea is made by the music teachers and directors of bands and orchestras in the public schools of America who are interested in the music trade only as much as any teacher is interested in obtaining the necessary textbooks and laboratory material for his classes.

Our purpose is not to suggest what shall be taxed and what shall not be taxed but to make the plea that our educational program not be weakened by classifying and taxing one of the recognized essential departments as a luxury.

It is hoped that this tax, which we feel will tend to weaken our educational system through weakening our music program, will not be wished upon education.

The CHAIRMAN. Are there any questions, gentlemen?

(No response.)

The CHAIRMAN. Thank you very much, Mr. Scudder.

Mr. O'CONNOR. I think Mr. Ungaro is substituting for Mr. O'Connor.

STATEMENT OF GERARD M. UNGARO, SECRETARY, THE MAGNAVOX CO., INC., FORT WAYNE, IND.

Mr. UNGARO. My name is Gerard M. Ungaro, and I am the secretary of the Magnavox Co., Inc., which is situated in Fort Wayne, Ind.

Our company manufactures radio parts, consisting largely of loudspeakers and condensers, which component parts are incorporated in household radio receiving sets and automobile sets. We also manufacture radio-phonograph combinations, which are sold under the name "Magnavox." We are also engaged in the development and production of highly specialized electric firing mechanisms for the United States Army and Navy and the British Air Commission. We presently employ about 1,500 people.

I am addressing myself to the excess-profits provisions of the Internal Revenue Act, and my appearance here is not alone on behalf of the Magnavox Co., but on behalf of the large number of businesses and industries throughout the country which find themselves confronted with a mutual problem, resulting from the passage of the excess-profits-tax law. This problem is intensified by the increased rates now being considered. I refer to the very large number of companies which, prior to the passage of the Excess Profits Tax Act, were reorganized under section 77B of the Bankruptcy Act or in the equity courts of the various States, and in connection with such reorganizations reaffirmed their debts and obligated themselves to make payments to their creditors either at stated periods or pursuant to a well-defined plan.

These corporations in charting their future course were forced to be realistic because of what had previously occurred, and I think it is safe to say that in each instance the plan of reorganization which was finally approved, either by a district court of the United States or a State court, was the result of considerable planning, much thought, and numerous conferences between all classes of creditors, both secured and unsecured, and between the creditors and the respective companies. Frequently new corporations were organized with a very limited capital, and consequently such corporations receive a small exemption under the invested-capital credit and may not be in a position to avail themselves of the income credit because of their recent incorporation. These obligations which were assumed and the agreements for payment which were entered into as a part

of the plan of reorganization undoubtedly represented the maximum which appeared probable according to the tax laws as were then in existence, and in each instance the payments and method of making the same were related to what appeared to be the anticipated net profits of such corporations.

Creditors, committees, lawyers, and courts were all anxious that liquidation of indebtedness be accomplished as quickly as possible, and debtors were forced to accept the best deal which they were able to make. In other words, it was and is very common for a company which is being organized to say to its creditors, in effect: "We should earn X dollars each year; a certain portion will go toward the payment of taxes and the balance (or a specified part thereof) will be available for the liquidation of our indebtedness or the forced retirement of the prior or preferred stock which we give to our creditors." Such agreement, as I say, was on the basis of a normal income tax, no excess-profits-tax law being on the statute books.

Now, the excess-profits-tax law has cut very deeply into the amounts which it was thought would be available for such payments to creditors, and performance under reorganization plans is becoming increasingly more difficult. As an example, the Magnavox Co. from August 1, 1940, to July 31, 1941, will show a net profit of approximately $470,000. The taxes of this company, based on the rates you are now considering, would amount to about 59 percent of the total.

Senator BROWN. That is both the normal and excess profits?

Mr. UNGARO. The normal and excess profits, Mr. Senator.

Deducting from the remainder the payments which we were forced to make to our creditors under the reorganization program during the same period and the additional amount which we would be obliged to pay, would leave less than $45,000 to be added to our working capital out of a total of $470,000 in net profit. In the meantime, we are obliged by prevailing conditions to carry an inventory which considerably exceeds our total net worth and borrow in the neighborhood of $500,000 for such purpose; which sums are available to us only by a pledged collateral. This figure becomes significant when it is realized that it represents two-thirds of our net worth.

I do not intend to be personal, but I think it dramatizes the situation that this corporation, and many corporations are confronted with, and gives you a picture of the thing I am talking about.

Accordingly, I respectfully suggest that in connection with the Revenue Act of 1941 consideration be given to extending to such taxpayers some relief in computing the excess-profits tax, so they will be enabled to fulfill the agreements which were undertaken at the time of reorganization.

The necessity for aiding reorganized companies arises from the fact that most of them suffer from insufficient capital, and if the businesses of this country are to be enabled to put forth the maximum of effort on behalf of our defense program and be in a position to withstand the unpredictable period following the present emergency, there should be no stifling of activity resulting from insufficient working capital. The need for new capital is recognized in the report of the Committee on Ways and Means of the House of Representatives

rendered in connection with this legislation. I quote from page 26 of said report.

> In order to encourage the investment of new capital in corporate enterprises your committee is impressed with the desirability of offering a special inducement in the form of a more liberal credit where new capital is present. To achieve this result, new capital is counted at 125 percent.

While I recognize that the House report dealt with new capital in its ordinary sense, yet I believe the ultimate result would be the same whether new capital was paid in or whether such new capital resulted from profits which remained in the business.

It might be argued that relief as I suggest would merely permit the taxpayer to pay out in dividends a greater sum than would otherwise be available for shareholders and that this might tend to defeat the purpose of the proposed amendment.

I answer by stating that in connection with most reorganizations the payment of dividends to the equity owners of the business already has been severely restricted and subordinated to the payment or liquidation of the obligations owing to the old creditors. In addition, in many, if not in most, instances the management of the reorganized corporation has either been retained by the creditors as a part of the plan of reorganization or has been subjected to supervision either by the court which approved the plan or by one or more directors or managers appointed by the court. Consequently, I think it is safe to say that in almost every instance the amount represented by such additional credit as this committee may see fit to recommend would result in an improved working-capital position.

With a view toward saving the time of this committee—and I know how busy it is in connection with these hearings—I anticipate another question which might logically arise. It has been said in connection with some reorganizations that the debtor scaled its obligation down to a point where no further assistance is necessary. While this may be true in some instances, it is not true in every case, and, if the personal reference may be pardoned, it is not true of the Magnavox Co. Our company was one of the large number of companies which sought relief under section 77B of the Bankruptcy Act only for the purpose of extending the time within which our obligations might be paid. We did not ask nor did we encourage the suggestion made by many of our creditors that our obligations be scaled down to an amount less than that which was owing at the time of the reorganization, and we undertook to pay the same in full. As a means of achieving the relief suggested, I should like to urge that reorganized companies be permitted to make an adjustment of their normal-tax net income which would permit such companies to deduct from the normal-tax net income the payments made to creditors on obligations assumed as a part of a reorganization program. The present tax law offers a precedent. It provides for the stipulated tax on the adjusted excess-profits net income, permits the deduction of certain exemptions and credits in section 710, and then in sections 711 and 712 permits certain adjustments of the normal-tax net income for the purpose of arriving at what is defined in the law as the "adjusted excess-profits net income."

I suggest another deduction also, I should say in passing, if the chairman please, that the old undistributed-profits tax law made a provision for relief such as I talked about, one which offered or permitted

a dividends-paid credit on amounts which were used to pay certain indebtedness.

The adjustments are enumerated in the act and I urge that this committee might include an additional adjustment as the following amendment to H. R. 5417:

On page 23 at line 11 (Senate print) the word "subparagraph" should be changed to "subparagraphs."

On page 23, between the lines 18 and 19 add the following:

SEC. 711 (a) (1) (H). *Payments required to be made by reorganized corporations.*—There shall be excluded in the case of any taxpayer all amounts used to pay or retire evidences of ownership or indebtedness where such amounts are paid pursuant to a plan for corporate reorganization confirmed under section 77-B of the Bankruptcy Act as amended or approved by some other court of competent jurisdiction. As used in this subparagraph, "evidence of ownership or indebtedness" shall mean only preferred or prior stock of the corporation and bonds, notes, debentures or certificates of indebtedness which have stipulated maturities or provide for payment, redemption, or retirement at stated periods or under definite conditions, and provided further that the plan of reorganization under which the said evidence of ownership or indebtedness was issued or given was confirmed by a district court of the United States or by some other court of competent jurisdiction prior to October 8, 1940.

The Internal Revenue Code treats the computation of excess-profits credit under two subsections—one relating to "income credit" and the other to what is termed "invested capital credit."

Accordingly, the same amendment proposed for section 711 (a) (1) should be made to section 711 (a) (2). And this amendment to H. R. 5417 would be made as follows:

On page 23, at line 21, the word "subparagraph" should be changed to "subparagraphs." On page 24, between the lines 4 and 5 add as section 711 (a) (2) (J) the same language quoted above as section 711 (a) (1) (H).

The proposed amendment is self-explanatory. It permits the allocation of profits to the payment or retirement of debts and obligations incurred during the depression days and it was a faith in the future which caused many taxpayers to avail themselves of the opportunity of survival offered by section 77B of the Bankruptcy Act as amended.

I select October 8, 1940, because that was the date of the passage of the present Excess Profits Tax Act, and corporations whose plans of reorganization were approved subsequent to that date presumably took into account this law (if not the amounts presently being discussed) in arriving at the amount which they obligated themselves to pay. Companies which were reorganized prior to such date had no similar opportunity.

To summarize, I respectfully submit that the inclusion in the present pending legislation of a provision such as I have proposed will tend to cure an unfortunate situation resulting from the passage of the Excess Profits Tax Act. I am not complaining about the law, believing, as most businessmen do, that the present requirements of the Government must be financed from day to day to the maximum of our ability. Equitable relief, however, is necessary because many corporations when reorganized under section 77B of the Bankruptcy Act or under the equity powers of State courts, undertook, in good faith, obligations to their creditors when there was no Excess Profits Tax Act. Now, many of them are unable to carry out such obligations unless some additional adjustment is permitted them in arriving

at the adjusted excess-profits net income and unless this Congress assists such corporations their continued existence is imperiled.

Senator TAFT. Why should a corporation in debt under such a plan be treated any differently from one which just was in debt and did not go through 77B? What is the logical distinction?

Mr. UNGARO. The reason, Mr. Senator, is that 77B, if you please, was passed in the first instance to extend relief to corporations which otherwise would either be obliged to fold up or go into complete bankruptcy.

Senator TAFT. Supposing we had a corporation that was struggling along all these years, was still owing a large amount of money, why is not that a company in exactly the same position as one under 77B? It may well have made a settlement without having gone through 77B with many creditors, providing for annual payment, such as you suggest here.

Mr. UNGARO. I would have no objection, Senator, to extending the relief that I talk of to a larger number of corporations if they can be brought into a certain category. I feel you have to stop somewhere, and the reason for taking the corporations which have gone through 77B is because all these corporations assume their obligations and enter into a plan of reorganization, pursuant either to absolute dictation or by approval of a court of competent jurisdiction.

Now, borrowing that program, these corporations entered into agreements under which they intended to carry on on the basis of the tax law as it then existed.

Senator CONNALLY. Right there, does not everybody else do that, whether they are in 77B or not?

Mr. UNGARO. Yes.

Senator CONNALLY. You cannot make a contract now and say, "Well, I thought the taxes would stay like they were." You know very well that taxes change from time to time. Those 77B corporations are in no different attitude than anybody else. They made commitments and contracts as everybody else. You are in better shape because you have got your capitalization scaled down, you got rid of a lot of debts. Why should you be treated better than anybody else?

Mr. UNGARO. Not all corporations had their debts scaled down.

Senator CONNALLY. You were supposed to have gotten some relief or you would not have gone into a 77B.

Mr. UNGARO. The relief, if you please, Senator, was, as I pointed out, in many instances merely the extension of the time of payment.

Senator CONNALLY. That is pretty good. If the extension was long enough, you would never have to pay. I did not mean to divert you from Senator Taft's question. You go ahead and answer him.

Senator TAFT. He answered me. The suggestion was if you make any distinction, it seems to me it should be a reduction in the payment of debt, or leave the company with impaired capital, or something of that kind. It is a difficult thing to work out. I do not see the distinction.

Mr. UNGARO. The distinction, Senator, is largely one of degree. A corporation which went through 77B has entered into a stipulated program which, probably, proportionately to the total number of corporations, does not exist in as large a measure as the number of other corporations which have not availed themselves of it.

Senator TAFT. I know several corporations that we reorganized without 77B.

Mr. UNGARO. That is right, and I would not have the slightest objection to elaborating the provisions such as I suggest to include corporations, basing it on some ratio, either of obligations to capital or obligations which had matured prior to a certain date, or anything else, and that was what we had in the old undistributed-profits law. There they made a distinction, permitted a dividends-paid credit, as it was then called, in favor of corporations which they could charge against dividends, or the profits, rather, the indebtedness which occurred prior to, as I remember the date, December 31, 1937.

The CHAIRMAN. Did you have a reorganization?

Mr. UNGARO. Yes; we did.

The CHAIRMAN. Was it a tax-free reorganization?

Mr. UNGARO. It was a reorganization under 77B, and those reorganizations, Mr. Chairman, do not involve a tax problem at all. It was not a voluntary reorganization; it was a reorganization under 77B.

Answering your question specifically, there was no tax involved in the reorganization.

The CHAIRMAN. I understand that, but did you have the basis of the old corporation? Are you on invested capital or on prior earnings?

Mr. UNGARO. Invested capital.

The CHAIRMAN. You are on the invested-capital base?

Mr. UNGARO. Yes. That was reduced.

The CHAIRMAN. That was reduced?

Mr. UNGARO. Yes; Mr. Chairman.

The CHAIRMAN. You did not have the base of the old corporation?

Mr. UNGARO. No, Mr. Chairman; that matter is up right now for discussion with the tax authorities, but we do not have the same capital base now that we had before.

The CHAIRMAN. At least they have not allowed it?

Mr. UNGARO. That is quite right.

The CHAIRMAN. All right.

Senator BROWN. You are not making any complaint about the normal corporation income tax?

Mr. UNGARO. Not at all.

Senator BROWN. You are complaining exclusively about the excess-profits tax?

Mr. UNGARO. Yes.

Senator BROWN. Therefore, the basis of your complaint is that you have no proper basis for calculating the base period, 1936 to 1939?

Mr. UNGARO. Our complaint arises from that; yes.

Senator BROWN. Your experience was very unfortunate during those years because of the depression, and you had to adopt the invested-capital method as your base, and that has to be reconstructed because of the difficulties that you went through?

Mr. UNGARO. Quite right.

Senator BROWN. I think you made something of a case.

Mr. UNGARO. Specifically, to translate it into another aspect, if I may, at the time we entered into an agreement, when we obligated ourselves to pay our past indebtedness to the tune of 100 percent, we were looking at a tax of 16 percent on corporation profits, and we obligated ourselves to pay 50 percent of the remaining 84 percent, thinking we could carry your 42 percent of net profit to added work-

ing capital, which was insufficient. We now find ourselves today looking at a tax that is not less than 60 percent.

Senator BROWN. And, of course, you made the commitments to pay 50 percent of your profit at a time when you did not have in contemplation any excess-profits-tax law.

Mr. UNGARO. As to the amount, that is correct, sir, and made it with the blessing of a court of competent jurisdiction, if you please.

The CHAIRMAN. If you were given your old base of invested capital, of course, you would get considerable relief?

Mr. UNGARO. We do not ask for that, Mr. Chairman. We are not objecting to the excess-profits-tax law at all, we are not objecting to the increase in corporate rates. We stand herein the position that I think most business of the country does, that is, we are in favor of paying for this defense program as we go along from day to day. The thing I am asking that this committee give earnest consideration to is relief which will permit us, when we get around to calculating excess profits, and calculating the base for excess profits, that we be permitted to deduct from our normal taxed net profit the amount which we have paid to our creditors, under a prearranged program, and I have no objection, Mr. Chairman, to extending that relief to the type of corporation the Senator from Ohio speaks of. Unfortunately I have no way of knowing what a difference that would make in dollar amount. I am discussing the equities of the situation, rather than the amount which might be lost or the amount which might be gained from some substitute.

Senator CONNALLY. You mean deduct from your income the amount paid on debts; is that right?

Mr. UNGARO. Right.

Senator CONNALLY. A very distinguished man in my State has been writing me about a similar plan that he has advocated, former Gov. W. C. Hobbie, the former Governor of Texas, and it was in the Houston Daily Post. Probably there would be some objection to allowing you to deduct it all, because you are paying on a debt, you are just improving your position, in a way, and yet you are just discharging an obligation. If you did not owe the debt, you would have that much more profit.

Mr. UNGARO. That is right.

Senator CONNALLY. There must be some merit in your proposition, but I doubt if there is enough merit in it to allow you to deduct all of the payments.

Mr. UNGARO. Senator, we are here—not in any wise to minimize the force of what I have said here—frankly, I like every other person that has appeared here, is in the nature of someone pleading for some relief. I should like to ask you and urge you to give us 100 percent relief, but if you do not want to do that, then it is for you gentlemen, in your wisdom, to find the spot at which such relief should be granted.

Senator CONNALLY. Here is the thing about it; you might owe a lot of debts, some of which were not pressing. If you go to figure up your excess profits, you might say "Well, I made more money than I thought I would. We might pay off all the debts, so we will not have any tax loss," and you might hunt up some debts.

Mr. UNGARO. I can tie that up, button it up so it will not happen. That will not be a problem. The people in the Treasury Department are smart enough to close that loophole.

Senator CONNALLY. We had a man here the other day that was advocating not exactly that proposition, but something similar. He told us privately he was in the newspaper business, that he made so much money on some of the papers that he could hunt up old broken-down papers so he could take them down from his income tax, and then later on rehabilitate them and get them in shape.

I can see the objection to allowing a total deduction for debts. I think it is a good idea to urge you fellows who owe debts to pay them. I have several creditors that I would be glad to pay, I have that urge, that to allow the whole amount that you pay on the debt, when, as a matter of fact, you are benefiting yourself, you are getting rid of an obligation, that is a pretty big order.

Mr. UNGARO. I admit that, but does not it resolve itself down to this—I mean the portion at which you find the balance here between equities among the taxpayers and obligations that you gentlemen have upon you of raising some money.

Senator CONNALLY. Would you make it a long-term debt or a bonded debt? Every big company, the more prosperous they are, the more money they borrow. Would you deduct everything they pay on a debt?

Mr. UNGARO. No; Senator, I would not.

Senator CONNALLY. How would you limit it?

Mr. UNGARO. To begin with I would put a time within which the obligation should have been incurred, and the precedent for that is in the undistributed profits tax, the old law.

Senator CONNALLY. Yes.

Mr. UNGARO. I select here October 8, 1940, which was the date of the passage of the Excess Profits Tax Act. That date is largely arbitrary in my mind. It could be any other date prior to that, but if there is any merit in my contention that the relief should be granted because the taxpayer honestly assumed his obligations and said he, or it, wanted to pay it, then the relief ought to be given to an obligation which was taken at a time when the excess-profits tax was not in contemplation. I do not mean no one thought about it, but it was not being discussed, and it was not on the statute books. That is the reason I select that date.

The CHAIRMAN. Have you got anything else you wish to put in the record?

Mr. UNGARO. Nothing; Mr. Chairman.

There was a question over here that I think the Senator wanted to ask, Mr. Chairman. I would be glad to answer it.

Senator CLARK. Senator Connally stated exactly the proposition I wanted to mention. The testimony we heard the other day on behalf of certain newspapers, the witnesses appearing on behalf of one certain newspaper, it is a fact that the same affiliations, the same corporation, corporate and family affiliation has been making so much money out of certain other newspapers and a certain magazine they had been going around looking for a place to buy up dead horses and assume a very small equity by assuming a very large indebtedness, and at the same time had the affrontery to come here

and ask this committee to permit them to deduct all their indebtedness on the excess-profits tax which, at the worst, resulted in making 3 percent profit for them, the difference between 4 or 5 percent which they would have to pay on this indebtedness and 8 percent that they would have the right to deduct. I simply intended to call attention to the same situation that Senator Connally has already mentioned.

Senator JOHNSON. You are permitted now to deduct your debt service charges?

Mr. UNGARO. Beg pardon?

Senator JOHNSON. You are permitted now to deduct your debt service charges, your interest on debts?

Mr. UNGARO. Yes, we are. The expense of doing business.

Senator JOHNSON. What you want to do is deduct the principal.

Mr. UNGARO. Get some relief for the principal which we pay under that kind of obligation which we assume; yes, sir.

The CHAIRMAN. As I see it, your whole case is a question of whether you have a proper base for your excess-profits credit, or whether you have an exceptional case that is entitled to some special relief.

Mr. UNGARO. Quite right, Mr. Chairman.

Senator BROWN. Have you pursued your remedy under this hardship statute, section 722? Do you feel you have done everything you can under that?

Mr. UNGARO. Our accountants tell us everything has been done; yes, sir.

Senator BROWN. You cannot get relief?

Mr. UNGARO. That is right, sir.

Senator BROWN. I think generally that section 722 has got to be revised.

Mr. UNGARO. That is what I have been told. I am not an accountant so I am not in a position to speak from personal knowledge on that, but that is what our accountants tell us.

Senator DANAHER. One question before you leave, please.

In this prearranged plan of paying your outstanding indebtedness after your reorganization, did you agree to pay a given amount over a given number of years?

Mr. UNGARO. We agreed two ways, Senator. We agreed to pay half of our indebtedness on a fixed rate of amortization without regard to profit; we agreed to retire the stock which we gave for the remaining half of our indebtedness by applying toward a forced retirement of that stock 50 percent of the net profit.

Senator DANAHER. At your present rate how many years do you expect it would take to liquidate that investment?

Mr. UNGARO. If we were able to continue and make some money in the next couple of years without relief under this tax law, it would take us about 3 years more. That is purely an estimate you understand.

Senator DANAHER. Without relief under the tax law?

Mr. UNGARO. That is right.

Senator DANAHER. Thank you.

The CHAIRMAN. Very well. Thank you, sir.

The CHAIRMAN. Mr. Melville Clark.

STATEMENT OF MELVILLE CLARK, SYRACUSE, N. Y., PRESIDENT AND REPRESENTING THE NATIONAL ASSOCIATION OF MUSIC MERCHANTS

Mr. CLARK. I represent the National Association of Music Merchants of America, composed of about 700 members and about 9,000 music dealers. I manage a music store at Syracuse, N. Y., and manufacture Irish harps and play the harp professionally.

Senator CONNALLY. You are speaking of the music, not the instruments?

Mr. CLARK. The instrument, the musical instrument.

Senator CONNALLY. How about the printed music?

Mr. CLARK. We sell that also, but it is not taxed.

We ask your sympathetic consideration of our opposition to the proposed tax of 10 percent on musical instruments.

With the Supreme Court, you represent the most important group of men in the Nation, and I am grateful that music men can have the thoughtful consideration of so intelligent a body.

Outside of certain very limited number of purchasers of high-priced instruments, most musical instruments are sold at moderate prices within the reach and purchasing power of the masses. The logical prices are very well established for these instruments, and if prices were advanced to absorb the 10-percent tax, it would place them beyond their purchasing power.

Senator CONNALLY. You figure in your business there is just a little 10 percent, and if you go beyond that 10 percent the business would close up?

Mr. CLARK. I would make it pretty difficult.

Senator CONNALLY. Why not drop it down 10 and get all the business; make a lot of money?

Mr. CLARK. There is a logical limit beyond which people will not buy.

Senator CONNALLY. Then drop it 10 percent and sell it at prices the public will accept.

Mr. CLARK. As I was going to say, the price to the public—there is always a logical price.

Senator CONNALLY. You fix the price at all the traffic will bear?

Mr. CLARK. That is right.

Neither the manufacturer nor the dealer makes enough profit to absorb the proposed 10-percent tax.

The rich are not the ones to play musical instruments. They listen to the radio. The rich and the children of the rich do not want to struggle with the study of music—don't need to train themselves.

A low estimate is that 80 percent—or a high estimate of 85 percent—of all those who play musical instruments would be classed as limited-privilege people. Witness that the children of the underprivileged follow the organ grinder and the circus band in the street, and dance to their tunes, and the adults who listen to the Salvation Army bands.

Would not taxing the things that produce music called "musical instruments" be like "taxing a smile in the time of sorrow?"

Senator CONNALLY. If they all produced music, yes, but a lot of them don't produce music.

Mr. CLARK. I agree with you, Senator, you are right.

As the last war was coming, I was asked to play at the White House for President Wilson. Following the evening concert, after all had gone, the President asked me to come out on the portico and play his accompaniment on the Irish harp as he sang the old-time tunes, his favorite tune being "Drink to Me Only With Thine Eyes." He sang until after midnight. After he had finished, I could see that he was much refreshed and happier, for the experience of doing this singing; and gentlemen, it is probably not very well known that President Wilson had a very lovely lyric voice and enjoyed singing very much.

Music is the safety valve of human nature.

A brief story of music is that in about 6,000 years the art of music had never been taxed until 1917, when only pianos, records, and rolls were taxed 5 percent.

When lawmakers in Ireland years ago were trying to decide about taxes and other problems, music went untaxed, but in the Brehon laws the harpers were even given free taxes on their lands.

You all know, of course, what Shakespeare has said about music:

He that hath no music in his soul, nor is moved by the conquest of sweet sound, is fit for stratagem, treason, and spoils.

Why, taxing music at this time would be like "taxing the rain in time of drought." So great is the strain of the draft on the people you no doubt have read the recent article in Life, What the Soldier Complains About. If this tax goes through, it seems to me like running your car with the brakes on.

What is the power of music? No one can tell,
But all can feel the magic spell of its appeal—
Rich and poor and old and young
From every land, from every tongue
Can be united, swayed, controlled,
Refreshed, by the power of music.

—Author unknown.

I say with that great Scotch patriot and parliamentarian, Andrew Fletcher, of the seventeenth century—

Give me the makings of the songs of a nation and I care not who makes its laws.

Everything in nature stirs to the sound of music—the song of the bird, the hum of the bees, the rustle of leaves, the murmur of the brook, the roar of the waves, the crashing of thunder. Each proclaims its part and has individuality in the harmony of the universe.

I thank you.

The CHAIRMAN. Thank you, sir.

Mr. Edwin Hughes, will you give your name to the reporter?

STATEMENT OF EDWIN HUGHES, NEW YORK, N. Y., PRESIDENT, NATIONAL MUSIC COUNCIL

Mr. HUGHES. My name is Edwin Hughes; I am president of the National Music Council; my address is 338 West Eighty-ninth Street, New York City.

A good deal has been said about music here and at the hearing yesterday. In fact, I think you can see how keenly we musicians feel; how interested we are in this thing. The fact is, we are represented by—I believe there are nine of us, who have come from all parts of the country. I believe there are almost as many of us as there are of the excess-profits-tax people.

As president of the National Music Council, I represent 34 national music associations, with a combined individual membership of over 600,000.

All the musical professions and industries in the United States are represented on the National Music Council.

The following organizations comprise the council:

American Academy of Teachers of Singing.
American Composers Alliance.
American Guild of Music Artists.
American Guild of Organists.
American Musicological Society.
American Society of Composers, Authors, and Publishers.
Associated Glee Clubs of America.
Columbia Broadcasting System.
Intercollegiate Musical Council.
League of Composers.
Mu Phi Epsilon.
Music Library Association.
Music Publishers Protective Association.
Music Teachers National Association.
National Association for American Composers and Conductors.
National Association of Band Instrument Manufacturers.
National Association of Music Merchants.
National Association of Musical Merchandise Manufacturers.
National Association of Musical Merchandise Wholesalers.
National Association of Performing Artists.
National Association of Piano Tuners.
National Association of Schools of Music.
National Association of Sheet Music Dealers.
National Broadcasting Company.
National Federation of Music Clubs.
National Guild of Community Music Schools.
National Guild of Piano Teachers.
National Music Camp.
National Music Printers and Allied Trades Association.
National Piano Manufacturers Association of America.
Phi Beta.
Sigma Alpha Iota.
Song Writers Protective Association.
Standard Music Publishers Association.

On May 8, at its annual meeting, the National Music Council passed a resolution opposing the proposed 10-percent tax on musical instruments. A copy of the resolution is appended herewith, and it is requested that this be printed in the official report of this hearing, along with the present statement. Our organizations, representing all phases of musical activity in America, are united in opposing this proposed tax.

I may say that the organizations composing the National Music Council are largely professional organizations. We have some industrial organizations among our members, but two-thirds of them are professional and lay organizations. I want to insist about the importance of music in the national crisis and that it not be looked on as a luxury. Music, I believe, is one of the essentials of our national life, not only in normal times but in such times as these.

A tax on musical instruments would strike a blow at culture, education, and religion. It is futile to believe that manufacturers of musical instruments could and would absorb such a tax. It would be passed on to churches, schools, colleges, and to all the purchasers of musical instruments, including those used in the strengthening and preservation of military and civilian morale in the present national emergency.

Senator BROWN. I am informed that the same exemptions which we have discussed here with reference to athletic goods apply to musical instruments and that schools and colleges supported by the State would be exempt from the payment of this tax, which is a little contrary to what you have just stated.

Mr. HUGHES. I think that matter was discussed by the gentleman from Chicago, Mr. Sommers, if I am not mistaken, who said that most of these instruments are purchased by contributions and otherwise and were, therefore, not exempt. Mr. Alfred Smith said yesterday that almost all instruments used in school bands and orchestras are purchased by the children, mostly poor children, or their parents.

The National Music Council has been working in cooperation with The Adjutant General's office since last October and has given it what they consider valuable assistance in the use of music for the national defense.

Music is an essential in the national defense. Military men recognize music as one of the four necessities in the maintenance of the soldier in the field, the other three being food, clothing, and shelter.

The Army maintains a Morale Branch, with a special music department, in charge of the use of music as a morale builder in the camps.

May I say that not only the Army and Navy but also another department of the Government has taken to employing music as part of its activities. I was very much astonished to receive this post card from the Treasury on Monday morning last before I left New York, and I found that the Treasury is now using music for national defense.

Senator TAFT. Mayor LaGuardia has been conducting, as part of the activities, hasn't he?

Mr. HUGHES. Yes. And on this card which I received is [reading]:

A new song by a famous composer—Any Bonds Today?

This sparkling new melody, composed by Irving Berlin and copyrighted by Henry Morgenthau, Jr., Secretary of the Treasury, is now available for general use in connection with the sale of defense savings bonds and stamps.

Any reasonable number of song sheets will be gladly sent without charge, on request. Simply tear off and mail back the attached card.

I am sure we will all be glad to do that. Remember, you have to have an accompaniment to sing, and to have the accompaniment you have to have instruments, and if you tax instruments the number of them will be less as time goes on.

Music is the handmaiden of religion. It is not too much to say that if there is a decline in the use of music in religious services there will be a decline in religion itself.

Music forms one of the most important branches of education in our public-school system, colleges, and universities. To tax musical instruments would be to tax one of the most essential tools of public education.

Music, far from being a luxury, is one of the prime essentials of our national life and should therefore be exempt from luxury or other taxes.

Without music and musical instruments some of the most important industries could not possibly function, such as the motion-picture industry, the theater, the radio, and the phonograph industry.

As a tax on religion and education this proposed levy would set a dangerous precedent in national legislation.

Speaking for the 34 nationally active organizations which compose the National Music Council, I ask that the proposed 10-percent tax on musical instruments be stricken from the tax bill.

(Mr. Hughes submitted the following for the record:)

RESOLUTION PASSED AT THE ANNUAL MEETING OF THE NATIONAL MUSIC COUNCIL

NEW YORK CITY, *May 8, 1941.*

Whereas the Treasury Department has recommended to Congress the inclusion of a 10-percent tax on musical instruments in proposed new tax legislation; and

Whereas the performance and hearing of music is a most important factor in the preserving of morale in the national defense, both in the military forces and among the civilian population; and

Whereas any added financial burden in the purchasing of musical instruments would react unfavorably on the use of music in the national defense; and

Whereas musical instruments now form one of the most important tools of education in the public-school system and in higher institutions of learning, and as such should not be subject to taxation any more than should books, maps, charts, laboratory and home economics equipment, and other essentials, all of which, in addition to musical instruments, are indispensable tools of education: Be it hereby

Resolved, That the National Music Council is definitely opposed to the levying of a tax on musical instruments, except coin-operated instruments, and urges that all musical instruments, except coin-operated instruments, be not included in the list of taxable items presented to Congress.

The CHAIRMAN. Thank you.

Mrs. Guy P. Gannett. You may proceed. You may sit down, if you wish.

STATEMENT OF MRS. GUY P. GANNETT, PORTLAND, MAINE, PRESIDENT, NATIONAL FEDERATION OF MUSIC CLUBS

Mrs. GANNETT. I am Mrs. Guy P. Gannett, of Portland, Maine, president of the National Federation of Music Clubs.

Mr. Chairman and members of the committee, it is my privilege to come before you today representing the largest musical organization in America, cultural and nonprofit, with a membership of one-half million men and women—the National Federation of Music Clubs—organized in every State of our Union, including 5,000 music clubs with many special members.

Our program is very broad, and whereas for 43 years we have worked to support the American artist and the American composer—in fact, to promote American music along all lines—in times in which we now find ourselves, faced with warring nations on every side, we believe, while not neglecting these, the more important issue is for a strong national defense.

We are convinced that our Army and Navy should be strengthened, that our air force should be brought up to supersede that of any country in the world. We are taking our places with all defense committees wherever we can find a place to serve. We have offered every facility within our organization to U. S. O., to the Army, and to the Navy. But with this building up of our material defenses we are convinced that we should strengthen our cultural defense, in order that life in our Nation may be stabilized and rightly balanced.

Music is a spiritualizing force which touches our inner life, lifts us above the tragedies so forcibly impressed on us all each day through press and radio. It keeps our thinking and living more normal. It is because I believe this so sincerely, not unmindful of the great revenue needed to build up this defense, that I come before you today to ask you to reconsider including a 10-percent tax on musical instruments.

Music is not a luxury but a greater need than ever before in our lives, because it helps keep up the morale in all our people. This tax would not greatly increase the revenue, so much needed; it would cripple our public-school musical programs and definitely hamper the plans we are trying to carry out with relation to bands in the Army and Navy camps, so very necessary now, which we are trying to stimulate and promote.

This is no time for relaxing our efforts to bring music to the whole people; rather, we should increase them. It is my belief that if music could be introduced into industrial plants, it might lessen strikes and increase production.

This was demonstrated in England very recently, where music was used in a munitions plant and the output thereby increased 15 percent.

The larger proportion of buyers of musical instruments come from the lower income groups, and large numbers of small instruments are used by settlement music schools and public-school bands and orchestras.

Thousands of people make untold sacrifices that their children may realize the educational and cultural advantages from music. They do not consider in any way that this is a luxury, but a real necessity.

In view of the facts that have been brought before you today, with the realization of the small revenue derived from such a tax, I cannot believe the fair-minded men representing our country will allow this to pass.

I wish I could make a stronger appeal. I feel so keenly, but I can only ask of you to please give this your very fair and kind consideration. If you do so, I am convinced that from my viewpoint, all will be well.

I thank you very much for giving me this opportunity to be heard.

The CHAIRMAN. Thank you very much.

Mr. Emerson Richards.

STATEMENT OF EMERSON RICHARDS, ATLANTIC CITY, N. J., REPRESENTING THE PIPE ORGAN INDUSTRY

Mr. RICHARDS. Mr. Chairman and gentlemen of the committee, I am a lawyer by profession, but an expert on certain acoustical phenomena as an avocation, and specifically upon the tonal design of pipe organs.

I have been requested by the various pipe-organ builders to appear before this committee, representing the pipe-organ industry.

This section that taxes musical instruments will, of course, involve pipe organs as well.

Now, I think this was hardly intended. This section started out originally as a tax upon radios and now there have been added other things to it, including musical instruments.

I think it has been overlooked that practically all pipe organs—I would say 98 percent of pipe organs built today—go either into churches or educational institutions. That is divided about 80 percent to the churches and 18 percent to the schools, and the other 2 percent miscellaneous.

There was one time in 1925 when a large business was carried on and when a large number of pipe organs went to the moving-picture theaters, but that was killed by sound pictures, and today the industry has shrunk from about a $10,000,000 industry to last year, $1,800,000, so it is chicken feed in this matter, even if you got the tax.

My first point is that so far as future collections are concerned, the tax would have to be paid by the churches of the United States, and I am afraid that is a point that has been overlooked, and I doubt very much if Congress intended to set such a precedent.

As to the balance, we have this situation: The Senator has spoken about the exemption of public schools. The difficulty with that is that in many cases the public schools have raised the money for organs from contributions and by passing the hat and what not, and have made a direct purchase, and then even where you get a case where the instrument itself is to be used by the institution, your trouble is still not over. For instance, I am sorry Senator Connally has gone, because there is a deal pending down in his State, in Texas, for a $35,000 organ, which, under the contract, is to be built into a music building, and although the organ is being selected by the university, it is covered by the contract for the building, with the result that the contract is now laying on the desk unsigned, because the contractor doesn't know whether he is going to have to pay the tax on it.

There is another thing the matter with this bill, which is very serious.

Pipe organs are built just as you build a house. I design an organ, a particular organ, to be put into a particular place, depending on size and on the amount of money you raised. The organ, therefore, is first designed, then it goes out to competitive bidding, and the business is highly competitive, although small.

There are a dozen firms all trying to get business to keep their plants going, and the result is that the price gets shoved down to the very last penny. Finally the contract is awarded and then a period must elapse of 6 months or a year before the pipe organ is built in.

Now we have this section here, which has reference to installments, so that if a down payment was made in 1940, it will cause the tax to be assessed when the organ is delivered, even if that is next year.

I know of a case in Columbus, Ohio, where a contract was let in 1939, down payment made, and the church is not yet completed. The organ is boxed up in the factory, awaiting directions for installation, probably this fall. Now then, the major part of the purchase price of that would be subject to this tax, although the contract was made 2 years ago, and a lot of the 1940 business which now is in the course of erection, most of it for fall and winter season, would be subject to this tax, and if this is done in the cases of several manufacturers I have talked to, it simply wipes out their profit for the year. The most profitably operated company in the industry made less than it would lose if it had to pay this retroactive tax.

Senator BROWN. I suppose there would be some dispute as to who should pay it?

Mr. RICHARDS. I don't think there would be. You couldn't put it on the purchaser. The manufacturer would have to pay, and if he does, the results are obvious.

Senator BROWN. There would be a $3,500 tax on that transaction.

Mr. RICHARDS. Yes; and in that case, 2 years ago they were terribly anxious for business to keep their factories going, and the price was very low.

There just comes to my mind another illustration of what happened about the payment of this tax. The Government built a wonderful chapel at West Point and there was installed there a very fine organ. Now that organ has been built piecemeal by contributions made by friends, relatives, or members of clases of officers who have died in the defense of their country. Now, every dollar of that would be taxed.

The CHAIRMAN. Title has already passed to that?

Mr. RICHARDS. The organ is still in the process of completion. It has been going on for 20 years. Every time an officer dies and they want to do something up there for him they buy another stop for the organ.

The CHAIRMAN. You mean a new part?

Mr. RICHARDS. Yes. Now, a great many organs aren't new organs. A lot of old organs that are still very good are rehabilitated—reconditioned. There is no way of computing what the tax is on that. Changes and additions are made to organs. It is a little difficult to find out just where that stands. Your Honor—I am so used to addressing the court, you will have to pardon me—but Mr. Chairman, I have no doubt about the situation that is confronting the industry.

It is a fact that the industry is small and the greater part of the costs are in labor. It is all hand labor. Organ building is a craft, and anybody with a good set of carpenter tools can build an organ.

As a matter of fact, there is a convict in one of the penitentiaries who has built an organ, so I would say at least 85 percent is in wages, and in that particular case, due to the fact of the depression, and what not, no young men have entered the business, and practically all the men who are working in these factories—and there may be altogether 500 in the whole country—are older men; I would say, over 50. If some of these factories have to shut down, or if this tax frightens people off from buying organs, these men have no other place to go; they don't know very much except this sort of work, so that this industry would suffer a great deal and it seems to me rather unjust that the retroactive feature of this bill should be retained.

The CHAIRMAN. That is a very harsh provision on any installment transaction.

Mr. RICHARDS. Yes; and it seems to me that could be easily changed.

Now, if you decide to continue the tax on musical instruments, an exception could be made which could be inserted right after musical instruments, "except those purchased by churches and religious institutions"—whatever wording you wished to use—"or educational institutions." Remember also, there are the sectarian institutions, private schools, parochial institutions, which would not come in under the exemption in this bill.

I doubt very much if Congress ever intended to levy a tax on the churches of the United States, and this is a direct tax, if there ever was one. I don't know whether the churches are doing all they might for the people of the country, but I have an idea that a little old-fashioned religion would be beneficial.

The CHAIRMAN. I call your attention to a matter, namely, that in order to enjoy the exemption it is not necessary that the article be purchased by the Federal Government or State or municipality, if it is for the exclusive use of the agency of the Government, State, or municipality, the exemption prevails.

Mr. RICHARDS. That is one of those things.

The CHAIRMAN. It is not clear, and in the case of West Point, the organ there, it isn't clear, but I am inclined to believe that there would be a tax for resale.

Mr. RICHARDS. The difficulty about this is you cannot litigate it. By the time you pay the tax and bring the suit it has cost more than the tax amounts to.

The CHAIRMAN. You are undoubtedly right about that.

Mr. RICHARDS. Yes. That is the great trouble about many of those taxes, that you are licked before you start, because it costs so much to litigate.

Senator BROWN. I was going to say that about 10 or 12 years ago when we enacted the revenue tax in Michigan, there was included a tax upon charitable corporations, and it was considered, at least by the people, to be a most outrageous, atrocious thing. I want to express myself as being opposed to any tax that will affect religion.

Mr. RICHARDS. I may say I served five terms in the Senate of the State of New Jersey, and Acting Governor, and any time a proposal got anywhere near that type they came down on our

necks so fast it wasn't funny, and if this gets started, your correspondennce will probably increase. I think it was purely a slip; I don't think anybody intended it, and I think there should be some relief, both as to the tax and the retroactive feature, and some clarification as to what constitutes a sale, because lots of times we take an old organ—I know a case in Chicago where they spent $5,000 on an old organ and never put a pipe in; all they did was revamp it. Now, whether that comes within the provisions of the bill may be uncertain but you can bet that, if asked, the Revenue Bureau would try to collect it.

That is, in general, most of everything I wanted to tell you about this matter. It is, of course, a question of policy. I might suggest also that if you decide that you must tax musical instruments, what is the matter with taxing sheet music as well? You are taxing phonograph records. Now, the Society of Composers has an income of over $5,000,000 a year from copyrights alone on sheet music, and the sheet-music business is far bigger than the musical-instrument business. I might call your attention to the fact also that most of the so-called professional musicians are also members of a labor union; I am, myself, a member of the American Federation of Labor Musicians Union, and I don't think they have gotten wise to the fact that their tools are being taxed. If it is logical to tax the tools we use in our trade, why not all the trades? In other words, I think a good deal of the pain in these things comes about because they only hit certain things.

Where they do not meet everybody alike we have this trouble of this fellow trying to push it onto the other.

In this case it doesn't mean a cent to me one way or the other, except that I don't want to see this rather small but very beautiful industry harmed because it is a craft and art, and the building of organs and inspiration of organ music in church is something which I think we all treasure, and don't want to see dissipated.

I believe this tax would not only probably put some of these people out of business, because most of them have been running in the red during all of this depression; it would otherwise fail of its purpose.

The largest company in the business which had quite a large surplus lined up lost $250,000 last year. It is about to a point where it has to quit or cease losing money so that I hope the committee will be able to work out a proposition in which they can eliminate the tax, so far as the churches and educational institutions are concerned, if it can go no further.

I think that, as far as all instruments are concerned, what has been said here is largely true. I know that, if you gentlemen had been able to come to Atlantic City to the public auditorium when there were those contests between bands from all over the country, kids were brought from all over—I saw 8,000 youngsters in one massed band—those kids or their parents bought those instruments and if they are to be taxed for having them, there probably will be fewer of them.

The CHAIRMAN. Can you give us any idea of the manufacturers' selling prices of the instruments used in bands?

Mr. RICHARDS. No; I know everything about the prices of organs, from an engineering standpoint; I don't know anything about other

musical instruments. There is undoubtedly quite a large spread between the manufacturers' and the retailers' prices; how much that would be pyramided I don't know. I suggest that in that case, if it is going to be taxed, it be done as in the automobile industry so there cannot be any pyramiding.

It is the same with a piano. The situation which exists with respect to a piano is a development of the last 10 years. Before that there weren't many musical instruments in schools; now every institution has a band, even if it is only a few pieces and the instruments are paid for by contributions and collections.

May I submit a memorandum to the members of the committee? I prefer to mail it to them.

The CHAIRMAN. You may do so or give it to the clerk.

Mr. RICHARDS. I could give him a copy.

(Mr. Richard's statement is as follows:)

MEMORANDA REGARDING TAX ON PIPE ORGANS, BY EMERSON RICHARDS, ORGAN ARCHITECT

The revenue bill now pending before the committee as approved by the House of Representatives provides for a 10 percent tax on musical instruments. The framers of this bill had in mind the former bill which taxed radios and probably intended to extend this tax to the manufacture of such musical instruments as pianos, orchestral instruments like trumpets, saxophones, and other band instruments which are manufactured and sold over the counter for cash or on installments. Such instruments are manufactured in quantity and the tax, if applied, could be passed on to the consumer as is evidently intended to be the policy of the bill. This could not apply to pipe organs, which are installed these days in only churches or schools, because such organs are built to order for these institutions, and to those now under construction the tax would be retroactive.

The present bill would work a hardship because, so far as future organs are concerned, it would be a direct tax upon the religious and educational institutions of the United States. Insofar as it relates to organs now under construction, the tax would fall upon the builders and would more than wipe out any prospective profit that they might have anticipated. Moreover, the act is uncertain with relation to alterations, repairs, and additions to present organs.

The organ industry is a small one. Its gross business in 1940 was approximately $1,800,000 distributed among about a dozen builders who are in active competition with each other. This gross business includes repair work, tuning, alterations, rebuildings, and additions to existing organs. There has always been intense rivalry among builders and in attempts to get business, prices are habitually cut to a point where the profit is very small, never reaching anything like 10 percent. So that a 10 percent tax on organs now under construction, or upon which payments are still being made, would completely wipe out any anticipated profit of the builder and would result in actual losses upon the contract.

It should be understood that organs are designed and built for the particular church or other auditorium in which they are to be used. Consequently, no two organs are alike and their actual construction is largely a labor and material matter, similar to the building of a house or even the church in which the organ is placed.

The general procedure is for the church authorities to contract with an organ builder, after competition, for the building of the organ. The various parts of the organ are then made in the builder's shop or factory and later set up in the church by the builder's workmen. A down payment is made when the contract is signed and payments are usually made during the progress of the work, with the final payment after the organ is completely erected and accepted by the church authorities. Occasionally credit is extended by the builder for a longer period of time, and payment completed in installments after the actual installation of the organ. All such installment payments would be subject to the tax, even in the case of organs already installed.

It consequently follows that all contracts made before July 1, 1941, where delivery has not been made by that date or upon which installments are still due, would be subject to the tax under section 549, pages 64 and 65, of the House

bill. The usual time between the making of a contract and the completion of the organ in the church average between 6 months and a year, depending on the size of the instrument. It follows that this tax is therefore retroactive and would require the builders to pay the tax on organs that may have been contracted for more than a year ago, but not yet completely delivered and paid for. Since, as before stated, profits do not range as high as 10 percent, this would mean that the builder's profit upon these instruments would be wiped out and an actual loss sustained.

The organ industry has never been a lucrative one. Its best years were around 1925 when organs were demanded by moving-picture theaters. With the advent of sound pictures this demand ceased and a large percentage of organ builders were forced out of business. During the period of depression most of the builders operated at a loss, since there was not enough demand to cover the overhead of their business. Because of this lessened demand very few, if any, young men have been attracted to the organ-building craft and the workmen are now mostly elderly men who would not be adaptable for absorption in other manufacturing processes.

Organs are more than 85 percent hand labor, requiring special skill and ability from the workmen. The materials employed are principally wood with some metal, such as zinc, lead, and tin, used in the metal pipes. Neither men nor the material could be suitably absorbed into defense work. The shops and factories of the organ builders are not adapted for such work, and as the 10 percent tax will in all probability result in a still lessened demand for organs, it is inevitable that most of the builders will be compelled to cease operations, thereby throwing their workmen out of their jobs.

It should also be realized that so far as the sale of future organs is concerned, the 10 percent tax would have to be paid directly by the churches and schools of the United States. About 98 percent of all organs built today are installed in the religious and educational institutions of the United States. About 80 percent go to the churches and the remaining 18 percent to the schools and colleges, the remaining 2 percent to residences and other occasional uses. Only tax-supported schools controlled by a political subdivision of the State would be exempt under the bill, and there are many instances where even this exemption would not apply to these institutions because the organ is not bought directly out of tax moneys, and in any event there would be a discrimination between the schools and colleges not supported by direct taxation and those in the exempt class. It has not heretofore been the policy of the Federal Government to tax religious and educational institutions directly, and it is doubtful if this result was understood when the present language was incorporated in the bill.

Another complication results from the fact that very few organs built today are completely new instruments. Quite a few are simply rebuilds of older instruments, while others employ either in part or in whole the pipes from older instruments. It would be very difficult to determine the extent of the tax in such instances. In other cases the work consists in alterations or additions to present instruments, and again the language is not clear as to the method of determining the tax.

Conclusion.—It is respectfully submitted that the total revenue collected would be very small. Against this a considerable body of workmen would lose their present employment without prospect of reengagement elsewhere. A precedent in the taxing of religious and educational institutions of the United States would be made which would inevitably lead to much future controversy. The language of the present bill would be retroactive and tax the builders for work already done but not yet paid for.

It is, therefore, suggested that after the words "musical instruments", there be inserted the words "except pipe organs purchased by religious or educational institutions" and that in the administrative section a proviso be inserted providing that this act shall not apply to pipe organs purchased by religious or educational institutions now contracted for but not yet completed and installed or upon which installments of the contract price remain unpaid.

Respectfully submitted.

EMERSON RICHARDS, *Organ Architect.*

The CHAIRMAN. I am advised that Mr. C. M. Christensen, auditor of the Triumph Mining Co., whose name appears on the calendar, has

filed a brief in lieu of making an oral statement. Mr. Christensen's brief will be incorporated in the record at this point.

(The statement of Mr. Christensen is as follows:)

STATEMENT OF C. M. CHRISTENSEN, AUDITOR, TRIUMPH MINING CO., TRIUMPH, IDAHO

SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: This presentation is a protest against a tax situation created by the Excess Profits Tax Act of 1940 and its amendments. This protest is made by the Triumph Mining Co. of Triumph, Idaho, a producer of zinc and lead, and is directed against the limitations set forth in supplement A, section 740, and against the retroactive provisions of supplement B, section 752 of such Revenue Act. The inequity and injustice to this corporation and to any and all other corporations in a similar position as a result of the limitation and inclusion in the above mentioned sections has been fully discussed with the Treasury Department and Bureau of Internal Revenue and it is our understanding that these two agencies are in complete sympathy with the request for relief as hereinafter set forth and are agreeable to the purposes of the amendments herein requested.

Section 741 grants to corporations known as "acquiring corporations" the election to use either section 713 (the income method) or section 714 (the invested capital method) in computing their excess profits tax credit. But section 740 which defines "acquiring corporations" eliminates all corporations which came into existence as a result of having acquired only a portion or portions of the assets of predecessor transferor corporations. The Triumph Mining Co. is such a corporation and is thus deprived of its rightful privilege of using its own base period income in computing its excess profits tax credit.

For several years prior to 1940 the "A" corporation (owning and operating other mines in other mining districts) owned certain mining claims in the Wood River mining district of Idaho and had a long-term lease on all of the mining claims owned by two other corporations in that same district. These various mining lands, which were all adjacent and continuous to each other, had been operated by the "A" corporation for many years as one single mining operation with a separate and exclusive set of books and records just as completely kept as if it had in fact been an independent corporation.

In order to avoid disagreement over extralateral rights, to effect a permanency of operations and to simplify their respective interests in this one natural mining operation, the three corporations decided to and did in February 1940, organize the Triumph Mining Co. and on March 15, 1940, transferred their respective assets above set forth to such corporation for all of its voting capital stock in the following proportions:

	Percent
Corporation A	38.00
Corporation B	50.84
Corporation C	11.16
Total	100.00

Corporation A, B, and C continued to exist and function as separate corporations after this transfer of only a portion of their respective assets.

Thus the Triumph Mining Co., having acquired only a portion of the assets of other corporations, fails to meet the definition of an acquiring corporation and is deprived of the benefit of its base period income in computing its excess profits tax credit, an income record which it rightfully earned and to which it should be entitled by virtue of its merely continuing the identical enterprise. It so happens that the various mining claims involved in this reorganization were acquired by the respective transferor corporations many years ago by location and assessment work and have no cost basis and the depreciable assets have been largely written off through depreciation. As a result the entire assets of the Triumph Mining Company, although highly valuable at the time of reorganization, represent an insignificant amount of invested capital on which

to compute an excess profits credit. But a second and perhaps even greater injustice results from the effects of Section 752 as it strikes this particular corporation. This section is discussed later in this presentation.

So long as the still remaining transferor corporations involved in such reorganizations are willing to forego that portion of their own respective base period incomes which pertains to the assets transferred, it appears indefensible not to allow the resulting transferee corporation the benefit of such rightfully earned income. This amounts only to a division of a predecessor corporation's income to its own component parts.

In permitting what is defined as "acquiring corporations" the benefit of base-period net income in computing their excess-profits credit, it was clearly the intention of the Treasury Department and Congress to grant this privilege to all domestic corporations which could clearly establish such a record during their base period and it is assumed that the same privilege was withheld from reorganizations under section 112–B–5 on the theory that if only a portion of the assets of a corporation or corporations was transferred, the income produced by such assets during the base period could not be definitely or equitably established. It appears to be pure oversight that the income attributable to the assets transferred was not allowed to follow the assets so transferred and the transferee corporation allowed the same choice as other corporations in electing its excess profits credit to be determined upon the base-period income allocable to the assets transferred or the invested capital represented by those same transferred assets, whichever is the greater. Such a provision would have more completely given effect to the equity contemplated in the act.

Correction of this inequity could be accomplished by a simple amendment to section 740 (a) broadening the definition of "acquiring corporation" expressed in the following language or in language which gives effect to the thought herein expressed:

"Section 740 (a) is amended by adding at the end thereof the following new subsection:

"(5) At the option of the transferee corporation and with the written consent of the transferor corporations, a corporation which has acquired property from one or more corporations in a transaction with respect to which gain or loss was not recognized under section 112 (b) (5) of chapter 1 or a corresponding provision of a prior revenue law, provided that accounting records have been maintained which shall have clearly defined the net income attributable to such transferred assets; and provided further, that only the net income allocable to such transferred assets be considered in arriving at such acquiring corporation's base-period net income. Base-period net income so allocated to such acquiring corporation shall be deducted from the base-period net income of the transferor corporations. The matter of whether or not net income is allocable to such transferred assets shall be on the basis of fact to be determined by the Commissioner of Internal Revenue."

SEC. 752. "*Highest bracket amount.*"—No objection is raised to the general theory of establishing a "highest bracket amount" available to corporations which undergo reorganizations and thus avail themselves of a device for defeating the rates of excess-profits tax to which they would otherwise be subject without the provisions of section 752. Our objection is that this section includes corporations which were not intended to be included under the basic theory of this section. Section 752 was, by its very nature, intended purely as a safeguard to prevent corporations from breaking up into smaller units and thus distribute their income in such a way as to evade the rates of tax contemplated and set forth in the act.

It was clearly the intention of Congress to allow all domestic corporations, existing at the time this act was introduced in Congress, a highest bracket amount of $500,000 and added supplement B only as a measure for retaining such a basis of excess-profits taxation thereafter. The Triumph Mining Co. was organized in February 1940, which was some months prior to the time this tax measure was even introduced in Congress, and yet it is limited in its highest bracket amount to about one-fourth the intended $500,000 and each corresponding bracket proportionately reduced.

It must be admitted that section 750 (e), section 752, and all other sections of Supplement B dealing with "highest bracket amount" pertains to a condition brought about by the passage of the act itself and were not intended to penalize or limit the actions of corporations prior to such new law. It could not, or at least, should not have been intended to penalize actions entered into innocently prior to the time the contents of the act became public information.

Correction of this discrimination and injustice can be accomplished by the following amendment:

"Section 752 is amended to read as follows:

"'SEC. 752. Computation of highest bracket amount in connection with certain exchanges effective on all exchanges occurring after (date of introduction of the bill.)'"

Also article 30.750-4 of regulations 109 should be rewritten to give effect to such new date.

Like the amendment to section 740-(a) herein suggested, this amendment would not open the door to any unworthy corporation since it would yet specifically bar transactions entered into for the purpose of evading the tax imposed by the law or transactions entered into in full knowledge of the existence of such limitations or contemplated limitations.

Respectfully presented.

TRIUMPH MINING CO.,
By C. M. CHRISTENSEN, *Auditor.*

The CHAIRMAN. Mr. Birch?

Mr. Birch, you are representing whom?

Mr. BIRCH. The Criterion Advertising Co., Inc., of New York City.

The CHAIRMAN. What subject do you wish to talk to the committee about?

Mr. BIRCH. On the matter of billboards.

The CHAIRMAN. Billboards, outside billboards?

Mr. BIRCH. Yes.

STATEMENT OF FRANK H. BIRCH, NEW YORK, N. Y., REPRESENTING THE CRITERION ADVERTISING CO., INC.

Mr. BIRCH. I don't want to take up your time and the time of the committee in covering the general matter which has been well covered. I do feel, however, I have a business, I and some associates have a business which, while it is included under this act, is totally different from billboards; billboards are the large structures along the boulevards.

We have a small poster display about the size of that door [indicating] which we attach to retail stores generally, advertising products sold in the stores. We also contact the dealer and see that the products are sold in the store. There are thousands of the other small displays maintained by manufacturers and advertisers and also by retail dealers themselves, with whom we are really in competition.

Now, I am not going to take up your time or that of the members of the committee in telling you that we think that, because of the discriminatory nature of advertising in the class that this should be thrown out, and also for other reasons which have been covered, not only those but from the fact that here is a small business which is doing something which comes under the act but which is totally different. A business which has not had a profit for 9 years, which this year, may have a small profit, and if taxed at a dollar per display, would not permit us to continue business. The contracts are made over a long period of time, not a short period like the big billboards. The contracts do not provide for any such taxes so it could not be passed along. Now, our display has 24½ square feet.

The act contains a clause providing for a dollar excise tax for 100 square feet which would be at the rate of 4 cents a square foot on

our 24½ square feet, and 1 cent a square foot on the larger. Now, as I say, we are totally opposed to retaining this in the tax law at all for the reasons that have been given to you by the speakers but, in addition to that, I would like to offer an amendment which I have here and which I will give to the secretary.

The CHAIRMAN. Yes; give it to the secretary.

Mr. BIRCH. On the basis simply that the act should be amended, it is proposed by us that the excise up to 25 square feet be 25 cents; from 25 to 50 feet, 50 cents; and from 50 to 100 feet, a dollar, leaving that exactly on the same basis as 1 cent a square foot.

The CHAIRMAN. Well, thank you very much. Your prepared statement will be included in the record.

(Statement submitted by Mr. Birch is as follows:)

Hon. Walter F. George, chairman, and members of the Finance Committee of the United States Senate:

Mr. name is Frank H. Birch, president of the Criterion Advertising Co., Inc., of New York City, a company engaged in erecting and maintaining the smaller type of advertising signs, know as three-sheet displays each containing 24½ square feet of advertising space.

These displays are placed on the side walls of retail stores and generally advertise some article on sale in the store. A yearly rental is paid to the store merchant in each instance. There are thousands of other small signs on retail stores and filling stations, placed and maintained by the manufacturers or advertisers themselves, in addition to thousands of small signs placed and maintained by the little retail dealers themselves, which signs we understand will not be taxed under this act. These signs and not the big billboards, are our main competition and to tax our signs and not the others would be discriminatory and unfair in this field.

Our company makes contracts with advertisers to erect and maintain these three-sheet displays for a period ranging from 1 to 3 years for a rental of $36 per year each. Most of our present business is contracted ahead for from 1 to 3 years.

We realize the necessity to raise funds so vitally needed to finance our defense activity and do not want to dodge our share of the burden. We stand ready to pay any tax on our profits which Congress may see fit to levy, but feel that the proposed tax imposed by section 3269, part XI, of H. R. 5417, is economically unsound, discriminatory, and unwise. We urge its complete elimination and that the necessary funds be raised by some general tax which applies equally to all business and which does not discriminate against one industry.

Outside of paying ourselves reasonable salaries our company has not made an operating profit for a number of years, but this year it appears now that we will make a small profit on our operations. However, should we have to pay a dollar tax per display, which could not be absorbed by ourselves or passed on to the advertiser whose contract does not require him to pay it, we could not continue the business as a profitable operation, meaning the loss of our investment in signs and the throwing out of work our several hundred employees, many of whom have spent the best part of their lives in this business—in some cases up to 25 years.

The proposed exise tax on outdoor signs is levied without regard to profits and in our case would be a tax on losses as the small estimated profits we anticipate this year would not be sufficient to cover the $1 tax per display.

I respectfully call to your attention that the proposed excise tax if applicable to three-sheet displays of 24½ square feet each, the rate would be over 4 cents a square foot while on a billboard of 100 square feet the proposed rate would be 1 cent a square foot. This is wholly unjust and unfair. If the Congress concludes that outdoor signs must pay an excise tax, certainly then all in the industry should be treated alike and the tax be made uniform at a rate of 1 cent a square foot for the advertising space contained in each sign.

Furthermore, all signs not being utilized and producing any revenue should be exempt from taxation and this should be true even if the advertising space thereon was donated by us in furtherance of the defense program or for some other governmental or public purpose. A tax on outdoor advertising would be

unfair while exempting that of newspapers, magazines, window displays, and direct mail. There would be no justice in singling out one medium for taxation thereby leading to an unfair competitive advantage in favor of other advertising mediums not taxed.

In conclusion, I believe for the reasons above given that the Senate Finance Committee should amend the revenue bill of 1941 by striking from it section 3269 which contains the excise tax on outdoor advertising or an amendment should be adopted whereunder signs having an advertising space area of not more than 25 square feet should be taxed not over 25 cents each, or at the rate of 1 cent a square foot.

Amend act as follows: For each billboard having an advertising space area of:	*Per annum*
(1) Not more than 25 square feet	$0.25
(2) More than 25 and not more than 50 square feet	.50
(3) More than 50 and not more than 100 square feet	1.00
(4) More than 100 and not more than 200 square feet	2.00
(5) More than 200 and not more than 300 square feet	3.00
(6) More than 300 and not more than 400 square feet	4.00
(7) More than 400 and not more than 600 square feet	8.00
(8) More than 600 square feet	11.00

The CHAIRMAN. If there are any other witnesses here scheduled to testify tomorrow who desire to testify this afternoon, we will be glad to hear them. If not, the committee will recess until tomorrow at 10 o'clock.

(Whereupon, at 3:55 p. m., the hearing recessed until 10 a. m., Thursday, August 21, 1941.)

REVENUE ACT OF 1941

AUGUST 21, 1941

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Mr. Bachmann.

STATEMENT OF HON. CARL G. BACHMANN, CHARLESTON, W. VA., WEST VIRGINIA LIQUOR CONTROL COMMISSION

The CHAIRMAN. Mr. Bachmann, before you commence, let me inquire. I see there are five or six witnesses here having to do with the tax on liquor. Are you gentlemen all speaking to the same general purpose?

Mr. BACHMANN. I do not know what the other gentlemen are speaking about, Senator.

The CHAIRMAN. You had no conferences at all?

Mr. BACHMANN. Yes. I am appearing for the West Virginia Commission.

The CHAIRMAN. All right. Well, go ahead with your statement. You may proceed. There is very little point, however, in having half a dozen witnesses to the same general question, and, therefore, I will ask you to stay strictly within the rule of 10 minutes because there are a number of people here who want to be heard. We would be glad to hear the whole case, but a multiplicity of witnesses always means delay in getting through with the subject.

Mr. BACHMANN. Mr. Chairman, my name is Carl G. Bachmann. I am a member of the West Virginia Liquor Control Commission, appointed by Governor Neely as a minority member of that commission. I am also a former Member of Congress.

I appear on behalf of the State of West Virginia and the National Alcoholic Beverage Control Associaton, which is an association composed of the States of Maine, New Hampshire, Virginia, West Virginia, Alabama, Ohio, Michigan, Iowa, Wyoming, Utah, Idaho, Montana, and Oregon. There are 17 States that handle distilled spirits through a monopoly system. The 4 States that are in that group that do not belong to the association are Washington, Vermont, Pennsylvania, and North Carolina.

We are interested in presenting to your committee two questions with which we are vitally concerned back in the States. The first is that an increase in tax tends to increase bootlegging and illicit distilling, and the second is a decrease in Federal revenue if the tax becomes so high.

Now, I have some interesting information taken from our records, and I would like to call your attention to just what has happened since the other tax increase has gone into effect, insofar as our State is concerned. I am speaking now of the number of stills seized in West Virginia by the Federal authorities and by the State authorities. For the period, the fiscal year ending June 30, 1940—that was before the last increase in tax went on—as compared to the period ending June 30 this year, this remarkable result appears from our records: Before the tax increase of 75 cents went on the 1st of July 1940, the Federal and State agencies captured in West Virginia 246 stills. After the tax went on we captured for the same period 658 stills, or an increase in stills captured after the tax went on of 167.5 percent.

Gallons of whisky seized before the tax went on, 1,691; after the tax went on, 2,784 gallons, or an increase of 64.6 percent.

Senator VANDENBERG. There ought to be a tax on stills.

Mr. BACHMANN. I do not know how much more they are making down there, Senator, but I know we captured this many stills.

Senator TAFT. Or there ought to be a tax on copper coils.

Mr. BACHMANN. I do not know how we can get the coils in the mountains. They hide them.

We captured, in that period before the tax went on, 27,106 gallons of mash, and after the tax went on 86,569 gallons of mash, or an increase in the amount of mash captured of 219.4 percent.

I would like to ask unanimous consent of the committee to introduce this analysis as part of my remarks.

The CHAIRMAN. You may do so.

Mr. BACHMANN. And also a short statement showing what the West Virginia enforcement agency did, and also the Federal agency in the State of West Virginia.

The CHAIRMAN. Yes, sir; you may put that in the record.

Mr. BACHMANN. You know they make moonshine in West Virginia for about 25 cents a gallon. There are 3 gallons of liquor in a case, so they make a case of liquor for 75 cents. We start out now, under the present law, with a tax of $9 on a case, or $3 a gallon, and if the other dollar goes on, you have got $12 on a case of liquor in taxes.

The more tax you put on the more you enlarge the opportunity of people to get into the illicit distilling business, because the greater the margin of profit for the illicit distiller, the more we encourage the big distilleries, just as we did in prohibition days, to get back into the business.

Here is some startling information from our records. For the fiscal year ending June 30, 1940, the value of the whisky seized in West Virginia was $5,073, and after the tax went on the value of whisky seized was $8,352, an increase of 64.6 percent.

Senator LA FOLLETTE. How did you arrive at the value of seized whisky?

Mr. BACHMANN. Well, they value it by the gallon.

Senator LA FOLLETTE. I know, but how did you arrive at the value of that whisky? Do they compare it with anything?

Mr. BACHMANN. They compare it with legal liquor.

Senator LA FOLLETTE. They compare it with legal liquor?

Mr. BACHMANN. Yes. Now, the value of mash seized during that period before the tax was put on was $16,263, and after the tax went on the value of the mash seized was $25,600, or an increase of mash and liquor seized from $21,336 to $33,952, or 59.1 percent.

I would like the consent of the committee, if I may, to introduce that little table.

The CHAIRMAN. Yes, sir; you may do that.

Senator LA FOLLETTE. What was the total consumption of legal liquor in this period?

Mr. BACHMANN. I am just coming to that, Senator La Follette.

For the fiscal year 1940 we consumed in West Virginia 2,009,483 gallons of distilled spirits. For the period ending June 30, 1941, we consumed 1,809,003 gallons. In other words, we have decreased our consumption in West Virginia about 10 percent, and we lead the monopoly States.

Senator TAFT. What was the second figure?

Mr. BACHMANN. The first figure was 2,009,483, and the second figure was 1,809,003, or a decrease of about 10 percent, in gallons, 200,480.

Here is the point: The Federal tax loss at $3 per 100-proof gallon in West Virginia alone was $511,224. That is figured from the average of liquor at 85 proof.

I would like the permission of the committee, Mr. Chairman, to introduce this little table, if I may.

The CHAIRMAN. Yes, sir.

Senator VANDENBERG. Do you relate the decrease entirely to the tax?

Mr. BACHMANN. Senator, there is no way of telling, but I think the major part of our decrease is due to the increased illicit distilling. In our mountain sections, we have 13 men on our enforcement unit continually.

Senator TAFT. That is not due to a decrease in drinking in West Virginia?

Mr. BACHMANN. No; I think it is on the increase.

The CHAIRMAN. You have had no decrease in population?

Mr. BACHMANN. No, sir.

Senator VANDENBERG. You ought to have, after that large amount of sale of moonshine.

Mr. BACHMANN. That is not true of West Virginia alone. If I may just take a minute to give you some startling information from the State of Virginia, I asked Colonel Bullington of the Virginia Alcoholic Beverage Control Board, who I think is one of the most outstanding men on the liquor control commissions in the country, the best advised man that I know of in that business, to give me the facts pertaining to the State of Virginia, and I was amazed when I saw what was happening down in the State of Virginia. For that period, before the 75-cent increase went on, the Federal and State agencies in the State of Virginia captured 1,325 stills, and after that tax went on, for the same period, they captured 1,771, or an

increase of 446 stills. Now, here are some startling figures. The value of stills, equipment, mash, and so forth, captured in the State of Virginia for the period before the tax went on was $426,686, and after the tax went on the value of stills, equipment, mash, and so forth, was $754,715, or a total increase in value of equipment, illicit distilling equipment captured by the Federal and State agencies in the State of Virginia of $328,028.

That shows this, that before these tax increases came on bootlegging in Virginia and West Virginia was on the decrease. We were not having any trouble with these illicit distillers. These figures in Virginia are significant of this. They show that the big moonshiner is getting back into the business again, because when they capture equipment amounting to that figure, in the hundreds of thousands of dollars, you have got the big distiller going back into the business, the illicit distiller.

Now, the Virginia State stores sold—coming back to Senator La Follette's question, the question that you asked Senator La Follette about West Virginia—for the period ending June 30, 1941, the Virginia State stores sold 2,850,786 gallons of distilled spirits. In the previous year the Virginia State stores sold 3,136,646 gallons, or a decrease after the last tax increase went on of 285,860 gallons. If you figure that at $3 per proof gallon, the tax that the Government was receiving on that amount of decrease, the Federal Government alone lost from the State of Virginia alone in revenue $728,943.

Now, I think in West Virginia and Virginia we could have anticipated, because of the defense program, an increase in business, an increase in the sale of liquor, of distilled spirits, but this worked just the opposite down there. Had that increase gone along in liquor of about 10 percent, which we have a right to assume from other businesses that have improved in those two States, figuring the 10-percent increase in business, the Federal Government would have lost by reason of that $3 tax $1,528,788 in the State of Virginia alone.

I would like to ask unanimous consent, Mr. Chairman, to introduce Colonel Bullington's letter. There is some valuable information on that question.

The CHAIRMAN. Yes, sir.

(The letter referred to is as follows:)

COMMONWEALTH OF VIRGINIA,
DEPARTMENT OF ALCOHOLIC BEVERAGE CONTROL,
ALCOHOLIC BEVERAGE CONTROL BOARD,
Richmond, Va., August 19, 1941.

Hon. CARL C. BACHMAN,
Washington, D. C.

DEAR MR. BACHMAN: Referring to our telephone conversation this morning, and your reference to my letter to you of May 14, wherein I gave you certain information relative to still seizures and other data:

As I understand it, you would like for this information to be brought up to date, or to the end of our fiscal year, which was June 30, and you will probably use this in the hearing on the proposed increase of Federal taxes on liquor, which takes place tomorrow before the Senate Finance Committee in Washington.

Here in Virginia we realize it is necessary for the Government to increase the tax burden in order to raise the revenue necessary for the defense program. But it is our honest opinion that any increase in the tax on alcoholic beverage will not bring about any increase in revenue but will actually result in a decrease in the revenue the Federal Government is now receiving from that source.

Assuming that the Senate committee does not agree with this view and does put on an additional tax, the addition of as much as $1 a gallon will actually result in a great loss of revenue. Any amount over $1 per gallon would be ruinous insofar as the revenue from this source is concerned.

As you know, on July 1, 1941, the Federal Government placed an additional tax of 75 cents per gallon on all distilled spirits, and the Virginia Legislature, at its session in February 1940, added a 10-percent tax on distilled spirits to the retail price, to be effective July 1 of that year. For your information, I am listing below certain comparative figures for the 12-month period ending June 30, 1940, and for the 12-month period ending June 30, 1941:

	Number of stills seized	Value of stills equipment, mash	Number of raids
Fiscal year ended June 30, 1940	1,325	$426,686.60	9,879
Fiscal year ended June 30, 1941	1,771	754,715.05	14,339
Increase	446	328,028.45	4,460

These figures represent the joint operations of the Virginia A. B. C. Board and the Federal Alcohol Tax Unit. I understand that the Alcohol Tax Unit did some additional work, which is not included in these figures, and which will probably increase the totals by about 10 percent. I have omitted from this tabulation the number of investigations, since these activities are not a fair measure of increased enforcement.

For your further information, in the 12-month period ended June 30, 1941, Virginia State stores sold 2,850,786 gallons of spirits. In the previous fiscal year the Virginia stores sold 3,136,646 gallons of spirits. This is a decrease of 285,860 gallons. Assuming these spirits to be only 85 proof, the loss in gallonage at $3 per proof-gallon would be a loss in Federal taxes alone of $728,943. Assuming that without increased Federal and State taxes Virginia stores would have had an increase of approximately 10 percent in quantities sold—due chiefly to improved economic conditions and defense expenditures—the Virginia A. B. C. Board could reasonably have expected to sell 3,450,322 gallons of spirits, or an increase of 599,525 gallons. Assuming these spirits also to be an 85 proof at $3 a proof-gallon, the loss in Federal taxes may be estimated at $1,528,788.

From the above, you can get a pretty good picture of what the last increase in Federal taxes is doing to us in Virginia.

Aside from the question of revenue, as you know, a great many other law violations accompany bootlegging and moonshining, and I feel that we should not entirely lose sight of the social problem involved in this matter. Prior to July 1, 1940, we had eliminated most of the larger illicit operators of stills and were gradually going after the smaller ones. You can see from the above figures that after July 1940, when the additional tax was levied, not only was there an increase of 446 stills but the value of the equipment was about doubled, showing that the larger operators who had gone out of business were getting back into it, and we fear that these conditions will be still worse with the increased tax.

I feel that the monopoly association is very fortunate that you are in Washington to represent that particular group before the committee and wish to thank you for your willingness to accept such service.

With kind personal regards,

Very truly yours,

VIRGINIA ALCOHOLIC BEVERAGE CONTROL BOARD,
By R. McC. BULLINGTON.

Mr. BACHMANN. I have just one other matter and I am finished.

The CHAIRMAN. All right.

Mr. BACHMANN. I notice in the bill as it is now introduced there is no exemption for gallonage to the stores. When you put on the 25-percent increased tax there was an exemption in the bill of 250 gallons for each store. When you put on the 75 cents tax there was an exemption in the law of 100 gallons for each store. Now that is very important to all of us down there in our respective States, because the 13

members of this control association, in those 13 States combined, we have 2,841 stores and agencies, and if we would have the benefit of the same exemption in these stores that we had in the last law it would mean an exemption of 284,100 gallons of distilled spirits.

The reason for that is this: When this tax goes on we have to get out a new price list, and in some States to get out a price list, changing prices of liquor, it costs about $5,000, and in other States less. I think in Senator Taft's State it is about, if I am not mistaken, $1,500 to $2,000 to change the price list. I am not so certain about that amount, however, but it is near that figure. So if we had the benefit of the same exemption that we had in the previous acts, when you put on the tax increase, you would help the States to take care of the additional cost that this increase in tax will cause us.

Thank you, gentlemen.

Senator TAFT. Mr. Bachmann, have you any figures from Ohio?

Mr. BACHMANN. Senator, I do not.

Senator TAFT. Is bootlegging greater in the Mountain States than it is in the Plains States, do you think?

Mr. BACHMANN. I can give you the Federal figures on that for Ohio, if you would like to have it.

In Ohio, as shown by these figures that were obtained from the Treasury Department, still and mash seizures in Ohio for the year 1941 were 264, and for the fiscal year ending 1940 it was 322. You had a decrease in Ohio.

Senator TAFT. A decrease?

Mr. BACHMANN. Yes.

If I may be permitted, in the chairman's State of Georgia, for the fiscal year ending 1940, they captured 1,501 stills, and in the year ending 1941 they captured 1,939, or an increase of 29 percent in the illicit stills captured in the State of Georgia.

Senator BARKLEY. They have probably got better law enforcement in Georgia.

Mr. BACHMANN. Senator, I do not know. As I said, we have 13 enforcement officers down in West Virginia now, and we will have to put some more on, because as the tax goes on we encourage the illicit distillers to go back into the business and therefore we will have to increase our enforcement agencies.

Senator TAFT. Is there a State tax in West Virginia?

Mr. BACHMANN. No; there is no State tax in West Virginia.

Virginia levies a 10-percent tax, but the State of West Virginia levies no tax.

Senator TAFT. What does that come to in gallons?

Mr. BACHMANN. That comes to about 10 cents on a proof gallon in tax.

Senator TAFT. That is after the Federal Government puts on a tax?

Mr. BACHMANN. That is right. We put nothing on in West Virginia by way of a tax.

Senator TAFT. Mr. Chairman, I think it would be interesting if the Treasury or our committee would give use the actual results of this last increase as compared to what their estimates were at that time, whether the actual results have been less than the estimated increase.

The CHAIRMAN. We will take that up, Senator, in executive session. Can you answer it now, what Senator Taft would like to have?

Senator TAFT. I do not mean right now.

Mr. BACHMANN. Senator, I do not know anything about the liquor business. I cannot answer these general questions. All I know is what I learned down there as a member of our commission, in the State of West Virginia.

The CHAIRMAN. Perhaps the Treasury might answer now, if you have it.

Mr. RAY. No, we do not, Senator; but I will look into that immediately.

The CHAIRMAN. All right. Thank you, Mr. Bachmann.

(The tables submitted by Mr. Buchmann are as follows:)

Comparative analysis of activities, combined Federal and State enforcement divisions, for fiscal years ended June 30, 1940, and June 30, 1941

	Fiscal year ended June 30, 1940	Fiscal year ended June 30, 1941	Total increase	Percent of increase
Cases and investigations:

[1] Members of National Alcoholic Beverage Control Association.

The CHAIRMAN. Mr. Fontenot.

STATEMENT OF RUFUS W. FONTENOT, BATON ROUGE, LA., COLLECTOR, DEPARTMENT OF REVENUE OF THE STATE OF LOUISIANA

Mr. FONTENOT. My name is Rufus W. Fontenot, Baton Rouge, La., collector, Department of Revenue.

The CHAIRMAN. You may proceed, Mr. Fontenot, with your statement.

Mr. FONTENOT. Thank you, sir.

As the chief revenue collecting officer of the State of Louisiana, I have asked permission to appear before your committee to tell you briefly of my State's attitude toward any further change in the Federal taxes on liquor.

I do not feel that I come before you as an amateur in such matters, since in the last 25 years I have had considerable experience in the regulation and taxation of the liquor business. I have served twice as United States collector of internal revenue and once as Federal prohibition administrator for my State, in addition to my present service as Louisiana State collector of revenue. I feel that my many years in these fields of activity give me a knowledge and experience which make my comments worthy of consideration.

In connection with the imposition of excise and license taxes, it has been the experience of many States that on certain luxury commodities, a saturation point may be reached beyond which an increase in the tax levied will almost certainly produce a loss of revenue. It is elementary to say that this is due to the unfailing effect of the law of diminishing returns. The economic ability of the liquor industry to merchandise its products under the burden of a tax load that makes consumption economically undesirable to the purchasing public is now being tested to a far greater degree than ever before.

More and more States are relying on the revenues derived from liquor taxes for a large portion of their operating revenues. As a result, the liquor business is compelled to carry the constantly increasing tax burden. It is obvious that at some point in the schedule of tax rates, gallonage consumption will begin to drop to such an extent that the revenue realized will be less than that formerly obtained through a smaller tax rate.

While it is not the desire of any State to be guilty of anything which might be considered failure to cooperate with the national-defense program of the Federal Government, we feel that the revenue problems of the States must be given every possible consideration. As our national emergency grows graver by the hour so do the responsibilities and duties of the States grow heavier and more expensive. The Federal Government alone cannot assume and carry the full load of the national-defense program in all of its component parts. The States must increase their police services, their fire prevention and control services, their health services, their hospitals, their employment facilities, and all of the other numerous activities which are considered essentially local activities of the States but which are unquestionably a vital part of the operation of this Nation in the present emergency.

We who represent State governments are well aware of the difficult financial problems which now face the National Government. We desire to do everything we can to cooperate in solving those problems. But we feel that extreme caution must be exercised in order to avoid imposing a levy which will have the effect not only of reducing the Federal income from the source against which it is levied, but will also have a devastating effect on one of the few remaining reservoirs from which the States may derive the income necessary for their essential governmental functions. We feel that this is assuredly true in the case of liquor taxes. In my State alone a small increase in tax has already resulted in a decrease in gallonage. While the decrease is as yet negligible, it is to me a clear indication of the dangerous quicksand which lies in the direction of additional liquor taxes. I feel confident that any further increase in liquor levies will bring about a decrease in consumption which will be sufficient to reduce the revenue collected.

An interesting fact to remember in connection with this experience in Louisiana, is that my State, according to authoritative reports, until recently consumed more liquor per capita than any other State in the Union. In spite of this fact, a small change in the tax rate has already produced a decrease in consumption.

I should like to call your attention to another potential effect on an increase in the liquor tax. Taxation can bring prohibition or partial prohibition just as surely as the passage of a statute. The people of this country have clearly indicated that the majority of them are opposed to prohibition. Thereby, by increasing taxes you may bring about partial prohibition even though this result is contrary to the wishes of the people.

I might add here that one-third of the parishes in the State of Louisiana have gone dry in the last year.

It seems obvious to me that an increase in the tax rates on liquor must of necessity bring about an increase in retail prices. Naturally, an increase in cost means that the average purchaser will, in all probability, reduce the quality of the merchandise he buys. He will do this not because he wants to, but because the amount which he can spend on liquor will require it. This is particularly true when we stop to consider that many Federal taxes are being levied now with the purpose of reducing the amount the average citizen may spend for luxuries. If we carry the taxation feature to an extreme, we will certainly cause such a lowering in the quality of the average merchandise as to encourage the return of the illicit liquor traffic. Such ventures are not profitable enough now to justify their existence on a large scale. But, if the tax rate and the retail prices are increased sufficiently, then the illegal liquor business will be profitable enough to justify its risks.

This result carries with it, in addition to its partial prohibition aspect, another very dangerous feature. If the illegal traffic returns, both the Federal and State Governments will be faced with an enforcement problem of increasing seriousness and, consequently, an increasingly heavy expense in connection with enforcement. It can very easily be true that the cost of enforcement alone will exceed the revenue collected as a result of an increased tax. This, I am sure, neither the Federal nor the State Governments desire.

In conclusion, let me urge as strongly as I may that you give consideration to these facts: An increase in the liquor tax which is too

large will, in my opinion, inevitably lead to a reduced revenue from this source; a form of partial prohibition which is foreign to the wishes of the majority of our people; and a fiscal problem for the State governments which may be insurmountable without considerable Federal assistance, which would, of course, nullify completely and irrevocably any increase in revenues the Federal Government might gain.

Let me remind you that I speak to you as a revenue official of one of our States and not as a representative of any liquor interest or interests. These opinions are my own and are given you with the sole idea of presenting the case for the States in general, and my State in particular.

Thank you, sir.

The CHAIRMAN. Are there any questions?

Senator VANDENBERG. Do you supervise the gas-tax collection also?

Mr. FONTENOT. Yes, sir.

Senator VANDENBERG. How does the total gas tax compare with the total liquor tax?

Mr. FONTENOT. The gas tax total and liquor tax are about the same.

Senator VANDENBERG. If there is a general Nation-wide curtailment in gasoline consumption does not that involve a very serious hazard to State revenues everywhere?

Mr. FONTENOT. Yes; I am sure it does, in my State particularly, because from the severance tax, which is the tax on every commodity severed from its natural habitat, like gravel, oil, sulfur, all of the things produced in Louisiana, the amount we collect from the severance tax and gasoline tax amounts to over one-third of our revenue in the State of Louisiana. We get about $24,000,000 out of the severance tax and out of the gasoline tax.

Senator VANDENBERG. And a reduction of one-third, an arbitrary reduction of one-third in gasoline consumption, would automatically reduce your revenue by one-third?

Mr. FONTENOT. That is right; yes.

Senator VANDENBERG. That is all.

The CHAIRMAN. Thank you very much.

Mr. Childs.

STATEMENT OF RANDOLPH W. CHILDS, PHILADELPHIA, PA., REPRESENTING PENNSYLVANIA ALCOHOL BEVERAGE STUDY, INC.

The CHAIRMAN. All right, Mr. Childs, you may proceed.

Mr. CHILDS. Mr. Chairman and gentlemen, I am the executive director and counsel of a nonprofit organization known as the Pennsylvania Alcoholic Beverage Study, Inc., which was formed in the spring of 1940.

Its purpose is to study conditions in the alcoholic beverage field in Pennsylvania, to cooperate with Federal, State, and municipal authorities in the enforcement of laws and regulations relating to alcoholic beverages and to recommend improvements in existing laws and practices in order to maintain in the State of Pennsylvania a sound and effective system of alcoholic beverage control.

The president of this organization is Laurence H. Eldredge, of Philadelphia, who is professor of law in the law school of the University of Pennsylvania, a legal writer and associated with various civic movements including the Better Business Bureau of Philadelphia of which he is president.

Among our directors are the Right Reverend Alexander Mann, of the Protestant Episcopal Church, bishop of Pittsburgh; W. W. Montgomery, Jr., of Philadelphia, a lawyer and a former law partner of Mr. Justice Owen J. Roberts; Leon J. Obermayer, of Philadelphia, lawyer and member of the Board of Education of the city of Philadelphia; Thomas W. Phillips, of Butler, president of the T. W. Phillips Gas & Oil Co. and a former Member of Congress; Raymond Pitcairn, of Philadelphia, president of the Pitcairn Co., a publicist and the builder of the Bryn Athyn Cathedral; and W. Chattin Wetherill, of Philadelphia, a director of student welfare of the University of Pennsylvania and vice president of Franklin Institute.

From time to time this organization has published its findings and recommendations on various subjects, such as central licensing; support of the Pennsylvania Quota Act of 1939, limiting the number of retail licenses to 1 to each 1,000 of population; disposition by the courts of appeals from orders of the liquor control board; limitations on transfers of retail liquor licenses; suppression of bootlegging, and the need for cooperation of local police authorities in law enforcement.

We wish now, for the first time, to record our apprehension of the dangers which we think are inherent in the plan of taxing liquor to the point where social evils, crime, and racketeering will return to create an important national problem which up to now we thought was solved by the repeal of the eighteenth amendment.

In fixing the tax on distilled spirits it is important to consider the taxes already placed on this commodity. These taxes, which ultimately are borne by consumers, include the Federal liquor tax of $3 per gallon (an increase of 50 percent over the post-repeal tax of $2 per gallon), a State tax averaging about $1 a gallon, and miscellaneous license taxes. In Pennsylvania the monopoly system obtains and while no State tax is imposed upon liquor purchased by the monopoly, the liquor-control board imposes a mark-up (now 55 percent) on the cost price of liquor, and subjects the sale price to a 10 percent emergency tax. Small wonder that it has been said that a person drinking legal liquor drinks more taxes than liquor.

There is a grave danger that increased Federal excise taxes on liquor will result in liquor prices which are prohibitive. When such a price level is reached, consumers of liquor will turn to the bootlegger.

I do not wish to be understood as condoning the conduct of any citizen in purchasing illegal liquor. However, we are confronted not with a theory but with a condition. Illegal liquor can be produced and sold at about one-fourth the present price of legal liquor. If prices of legal liquor become prohibitive, a large group of citizens will resort to bootleggers with attending loss of revenue to Federal and State Governments and the revival of the widespread racketeering and corruption of public officials which darkened the prohibition era.

The probability of an enormous illegal liquor trade following prohibitive liquor prices is enhanced by the fact that there is already a nucleus of illicit liquor traffic which will expand as opportunity for profit increases.

It is estimated that about 1,095,000 gallons of 60-percent proof illegal spirits are brought into Philadelphia each year. It is also estimated that about 400 to 500 gallons of "moonshine" are produced daily in the Philadelphia area alone. This amount of "moonshine" can be produced every 24 hours by about 35 house-pot stills. At 500 gallons per day this "moonshine" would amount to about 182,500 gallons per year. "Alky" and "moonshine" would thus aggregate 1,2 7,500 gallons, which would be about 10 percent of all legal liquor sold in Pennsylvania (about 12,500 000 gallons). The above estimate covers only the Philadelphia district. If anyone claims that our figures for this district are too high, the apparent amount of illegal liquor sold in the remainder of the State, especially in the counties of Allegheny, Schuylkill, Luzerne, and Lackawanna, will show the conservatism of my estimate that from 5 to 10 percent of all liquor sold in the State of Pennsylvania is illegal.

The existence of a substantial percentage of bootleg liquor in Pennsylvania does not reflect upon the agents of the Federal Alcohol Tax Unit or upon the agents of the Pennsylvania Liquor Control Board. Necessarily the Federal agents are primarily concerned with large-scale distilling and transportation. The Federal agents in conjunction with the State agents have substantially driven the large illegal distiller out of business in Pennsylvania. The State agents are limited in number. Thus some 40 agents are available in the first enforcement district comprising five populous counties. There is one such agent for about each 70,000 of population. The difficulties of apprehending and convicting small violators are tremendous. In many districts throughout the State the local police are inactive in apprehending and prosecuting offenders engaged in the manufacture, transportation, sale, and possession of illegal liquor.

The average citizen in Pennsylvania would prefer to purchase liquor from the State stores. Many citizens have a natural aversion to dealing with bootleggers and the seal of the State stores insures the purity and genuineness of liquor purchased at the State stores. On the other hand, if legal prices mount to a point which the average liquor consumer cannot afford to pay, many citizens will be induced to patronize bootleggers. In the last analysis, observance of any law depends upon the feeling of the average citizen that the law is just and not upon the fear of legal sanctions. It is so with the liquor law. The drinking of liquor can no more be stopped by excessive taxes than it could be wiped out by national prohibition. Indeed, if Federal liquor taxes are excessively increased, such taxes can in effect restore national prohibition. It is important that increases of taxes do not drive liquor prices to a peak which creates resentment on the part of the consuming public. The need is for a tax which the consuming public will accept as fair in view of the defense needs of the United States.

The new revenue act, which is now being formulated by your committee, will impose such additional heavy burdens upon the average citizen that he will be obliged to completely readjust his method of

living. Many citizens will feel that after making enormous sacrifices in their standard of living in order to pay high taxes to the Government, they cannot be blamed for patronizing bootleggers who sell liquor for less than one-third the cost of taxed liquor.

I have no hesitation in expressing the opinion that fair liquor prices, which in turn depend upon fair liquor taxes, constitute the supremely important factor both in good enforcement and sound revenue policy.

It has already been noted that the illicit operator in Pennsylvania is a small operator. While his operating profit is high he must "fix" the outlets for the sale of his products. However, as his margin of net operating profit increases, as would be the case if alcoholic-beverage taxes are substantially increased, the illegal operator can afford to pay greater protection. The prospect of tremendous profit will attract the large-scale operator and gangster, who of recent years have practically withdrawn from the scene. An example of extensive illegal enterprises is today found in the so-called "numbers racket" which flourishes in certain populous communities. The profits from such rackets are sufficiently large to attract the well-financed criminal into the field. Such large-scale criminals will enter the illegal alcoholic-beverage field if and when liquor prices become prohibitive as a result of excessive taxes. It is unnecessary to enlarge upon the evils which accompany the conduct of the illicit liquor traffic when conducted on a vast scale.

The members of your committee will realize that taxes on liquor, unlike taxes on other commodities, can be evaded by the substitution of illegal products. This is shown by the experience of 13 years of national prohibition. Alcoholic-beverage taxes are peculiarly subject to an inexorable law of diminishing returns which is that as the margin of profit to the illicit operator increases, sales of the legal purveyor will decrease with a consequent loss of revenue to the taxing authorities.

Senator VANDENBERG. I call your attention to the sentence on page 4 of your statement, which says:

> The need is for a tax which the consuming public will accept as fair in view of the defense needs of the United States.

What tax on liquor do you think the consuming public would accept as fair in view of the defense needs of the United States?

Mr. CHILDS. Senator, of course, we all realize the tremendous need of our Government for revenue in order to carry on the vital project of national defense. I would say this, that if possible the present tax on alcoholic beverages, on spirits, which has been increased from $2.25 to $3, should not be increased, because we have reached what I consider the danger zone. So if you ask me my opinion, I would say it should not be increased. but I haven't the responsibility of a Senator of the United States. I do not know but what, when you gentlemen weigh the various factors that are here involved, you may find it necessary to make some increase. All I am trying to do is to point out, as the result of actual observation and experience, that if you raise the tax at all, you are getting into the danger zone. I hope if you raise it at all you will raise it as little as you, with your vast responsibility, find it possible.

Senator VANDENBERG. I think your observations are very important. I am not quarreling with your conclusions, but I was struck with your suggestion that there might be some tax on liquor which the consuming public would accept as fair, as you said in view of the defense needs of the United States. I wondered how far you would go and still be fair as far as the public opinion is concerned.

Mr. CHILDS. I would say this, Senator: My own feeling about it is that the tax we have now of $3 a gallon must be considered fair. I see a good side to the proper, the moderate, use of alcoholic beverages. I know it will go on. It is better to have a regulated liquor traffic than an unregulated liquor traffic. I feel at the present time the people ought to be willing to sacrifice, to pay the present tax, if they can do anything to save our country in this hour of peril.

Senator BARKLEY. Let me ask you this: An increase of the tax from $3 to $4 a gallon represents an increase of 25 cents a quart, does it not?

Mr. CHILDS. Yes.

Senator BARKLEY. And 12½ cents per pint.

Mr. CHILDS. Yes.

Senator BARKLEY. Do you know whether, and if so to what extent, those who are engaged in the distribution of the liquor to the public, that is the retailer, whether they add anything to that tax in the price that they get for their commodities? When the individual purchases it, for instance, if this dollar tax were added it would add, theoretically and actually if only the tax is added, 12½ cents a pint. You cannot split a penny, you either get 12 cents or 13 cents or maybe 15 cents. To what extent, if you know, does any retailer selling liquor by retail add more than the tax which is represented, we will say, by an increase of a dollar a gallon?

Mr. CHILDS. I think, Senator, he does add more in most cases, because of the fact that he has been trained, as every businessman is trained, to add a mark-up on his cost. I think the answer is "Yes," Senator.

Senator BARKLEY. You do not know how much?

Mr. CHILDS. No. Take in the State of Pennsylvania, for example, in the case of our monopoly there, the Pennsylvania State Liquor Store, the board adds about 55 percent to the cost of the liquor, which cost would include taxes. Now, I might say frankly, we propose in the next 2 weeks to make a strong plea to the State liquor board to lower the mark-up, so that in effect it will not be imposing a mark-up on emergency taxes imposed by the Federal Government. I would say as a matter of accounting practice, leaving aside people who want to profiteer, I do not think the State of Pennsylvania wants to profiteer or make too much money, even though they start out with the form of imposing their mark-up on the cost, which includes taxes.

Senator BARKLEY. That is all.

Mr. CHILDS. Thank you, very much.

The CHAIRMAN. Thank you, sir.

Mr. O'Rear.

STATEMENT OF JAMES B. O'REAR, REPRESENTING BUFFALO SPRINGS DISTILLING CO., STAMPING GROUND, KY.

Mr. O'REAR. My name is Jim O'Rear. I am president of the Buffalo Springs Distilling Co., a small, independent Kentucky distillery. I have been requested by the Kentucky Distillers Association and by the Distilled Spirits Institute, producers and owners of more than four-fifths of the distilled spirits of the United States, to outline to you the attitude of the industry as represented by these associations toward the proposed increase in the excise tax on distilled spirits.

The distilled-spirits industry is not only ready but is desirous of doing everything it possibly can for national defense. The industry, which after all is only a tax collection agency so far as excise taxes are concerned, can collect for the Government only such taxes as consumers are willing to pay.

In fixing the rate of excise tax on distilled spirits, certain facts and factors must be kept in mind which are peculiar to this industry.

In most other industries the imposition of excise taxes involves the sole problem of determining the maximum revenue producing point. It is just a question of whether the rate of tax results in a price which the consumer will pay for the product or whether because of the tax the consumer will elect to do without the product.

In the distilled-spirits industry, however, there is an entirely different and much more difficult problem. In considering the rate of excise tax on distilled spirits, there must be kept in mind the fact that so long as the laws of nature exists and so long as there are sugars and starches in existence the demand for distilled spirits will be supplied.

This was made abundantly clear to the American people during the ill-fated prohibition era. The problem in considering a rate for excise taxes on distilled spirits, therefore, is not whether the consumer will buy the product or do without it but is whether the consumer will buy the tax-paid product or the illicit product.

An excessively high rate of tax on distilled spirits is just as sure to re-create the illicit industry as the reenactment of statutory prohibition.

If the excise tax rate on distilled spirits is raised to the point where sufficient subsidy is given to the now disorganized racketeering mobs which flourished during the prohibition era, those disorganized mobs will most certainly be brought back to life and the country will be again faced with the scandals and mob law enforcement problems with which it was faced during the era of the eighteenth amendment .

I need not elaborate on the law-enforcement problems or on the attendant evil effects on the young people of the country which resulted from prohibition and it is our sincere hope that this condition will not be revived in the form of prohibition by taxes on distilled spirits.

We do not believe that it is our function or our right to tell the committee at what point the excise taxes bring about the prohibition evils.

We do feel, however, that it is our duty to advise the committee of facts from which it may draw a sound conclusion in this regard. I have with me Mr. Howard Jones, of the Distilled Spirits Institute, who will present to the committee various facts, figures, and charts which show the effect of the various increases in the distilled-spirits excise taxes which have occurred since repeal of the eighteenth amendment.

Mr. Jones' figures deal with both State and Federal taxes. I am sure these will be enlightening to the committee. I only want to call attention to two things—(1) that not only is the Federal Government dependent on the excise tax on distilled spirits for a substantial portion of its revenue but that the State governments are also dependent on the excise tax on distilled spirits for a substantial portion of their revenue.

Prior to prohibition this situation did not exist. During all of the years prior to prohibition the Federal Government was the only governmental entity that levied an excise tax on distilled spirits.

It must be kept in mind that whenever the Federal tax depresses the volume of business, even though the total Federal tax collections increase, the State revenue is proportionately decreased.

Thus, any Federal tax which depresses consumption is incentive to the States to maintain their gross income by increasing the State tax rate; and unless we are very careful we are liable to create a vicious circle of taxation which, taken as a whole, will create prohibition by taxation even though the Federal rate standing by itself may not be sufficient to result in a real subsidy to the bootlegger; (2) after the last increase in tax, there was virtually no increase in total consumption of distilled spirits despite the fact that national income rose materially.

Mr. Jones will give you the figures but it is my recollection that with national income increasing 10 percent the consumption of distilled spirits increased only 1.6 percent. This leveling off of consumption would indicate that possibly the saturation point has been reached in the excise tax on distilled spirits.

The $1 increase now proposed may be a dangerous dollar. That is something for this committee to determine. I trust that you will analyze the figures which Mr. Jones will give you carefully and that they will be helpful to you.

In conclusion I want to call the attention of the committee to the fact that America is now faced with a hidden danger in its defense program. Any real subsidy to the racketeering mobs through a tax on distilled spirits would, I am afraid, create a real danger to national defense.

In this connection, if in your wisdom you should find it proper to impose the $1 tax or any portion thereof, it is respectfully suggested that the matter be called to the attention of the Appropriations Committee so that they may give some additional appropriation to the law enforcement authorities, particularly to the Alcohol Tax Unit which is charged with the duty of policing illicit production and distribution of distilled spirits.

In this connection, your attention is directed to a circular, copy of which is filed for the record, issued by the Alcohol Tax Unit and covered by Treasury Department news release of August 12, 1941.

seeking cooperation of sugar refiners, brokers, and wholesalers, in keeping sugar out of bootleggers' hands.

Mr. Chairman, I would like to have your permission to introduce this circular as part of the evidence.

The CHAIRMAN. Yes; you may.

Mr. O'REAR. It was issued by the district supervisor, Alcohol Tax Unit, New York City.

The CHAIRMAN. You may do so; yes, sir.

Any questions, gentlemen?

Senator BARKLEY. May I ask Mr. O'Rear the question I asked Mr. Childs a while ago, if he can answer? To what extent, if at all, any retailer is calculated to add more than the tax to the bottle of whisky which he sells to the ordinary consumer who buys it over the counter.

Mr. O'REAR. Senator Barkley, in the commerce of the liquor industry it is the fairly universal custom that the average mark-up, through the channel which liquor is distributed—and that is very carefully regulated by the Treasury Department—the distiller sells to the wholesaler and in most instances the wholesaler takes the average mark-up of about 15 percent, and the wholesaler sells to the retailer and the retailer takes an average mark-up of about 33⅓ percent, or, roughly, a 50-percent mark-up upon your taxes. In the State stores of monopoly States—some 17 of them—I think the average mark-up is approximately 50 percent.

Senator BARKLEY. In other words, we will take liquor that has been in bond 4 years and is bottled—the tax is paid at the time the liquor is removed from the bonded warehouse and bottled; let us suppose it bears a $4 tax, that tax is added to the other costs of the production, and the wholesaler pays the distillery sales price plus the $4 tax; is that correct?

Mr. O'REAR. That is correct.

Senator BARKLEY. Now, the wholesaler then adds his profit based upon a percentage of what he has paid, and that percentage is added to the tax.

Mr. O'REAR. That is correct.

Senator BARKLEY. No; that is to the original cost of the liquor. So there is a pyramiding process there by which everybody who handles it—whether his mark-up is 10 percent or 50 percent, or 20 or 25 percent—everybody who handles it bases his mark-up on the cost to him, and that cost includes the tax, and the greater the tax the greater the mark-up. That is true, is it not?

Mr. O'REAR. That is right.

Senator BARKLEY. So the average mark-up by the time the ordinary consumer gets it, based upon the price that the wholesaler paid for it, is about 50 percent?

Mr. O'REAR. The retailer's mark-up is 33⅓ percent. The total mark-up on the tax is about 50 percent.

Senator BARKLEY. That is what I mean—from the time it leaves the distiller until it gets to Dick, Tom, and Harry.

Mr. O'REAR. Yes, sir.

Senator VANDENBERG. Would it be possible to control that mark-up pyramiding of the tax by requiring that the tax be carried as a separate item on the bill from start to finish?

Mr. O'REAR. That presents a great many difficulties, Senator. I would not be prepared to state that. In the American system of commerce, where any excise tax is imposed, it is customary in all lines that the mark-up shall be on the entire cost of the product, including the tax, whether it is an excise tax or hidden tax.

Senator VANDENBERG. I do not see any theory by which State sales taxes are protected against mark-up by being carried as a specified item, why that same theory could not be applied to this tax from start to finish on liquor.

Mr. O'REAR. In the handling of our distilled spirits, in the channels of commerce, we are very strictly regulated, including the line of questions that you are proposing. The State stores do not have that regulation applied to them, and they are able to make their own laws and regulations to suit themselves for their own business, which is different from that which we use, and they impose a sales tax which is different from an excise tax.

Senator TAFT. On the cheap whisky what, roughly speaking, proportion of the price is taxed when it goes to the wholesaler?

Mr. O'REAR. Based upon today's tax rate, the withdrawal tax is $9 per case or $3 per gallon on cheap whisky that would sell at $15 per case to the wholesaler.

Senator TAFT. That is $6 for whisky and $9 for the tax?

Mr. O'REAR. $6 does not represent the whisky. It represents hidden taxes, costs, and various and sundry other things, but $9 of that price is the tax.

Senator TAFT. For $15 a case, $9 is Federal tax, or 60 percent, roughly?

Mr. O'REAR. Yes.

Senator TAFT. And if this is made $12, of course, that would be two-thirds, or 66 percent?

Mr. O'REAR. Yes.

Senator GUFFEY. How old is that cheap whisky that we are talking about? Is it blended by the time the consumer gets it?

Mr. O'REAR. Senator, at that price some of it may be 4 years old and some of it may be blended.

Senator GUFFEY. All right.

The CHAIRMAN. Thank you, Mr. O'Rear.

(The circular referred to by Mr. O'Rear is as follows:)

SUGAR—THE LIFEBLOOD OF ILLICIT DISTILLING

Since all alcohol is produced through the processes of fermentation and distillation from sugar, sugar is the one absolute essential which an illicit distiller is dependent upon for his existence when operating in any thickly populated areas. Deprived of it, his theft of taxes so sorely needed to support the national-defense program would cease.

Sugar is used by bootleggers in the preparation of mash in the general proportion of one 100-pound bag to each 50 gallons of mash. On distillation, such mash may be expected to produce about 6½ gallons of 95-percent alcohol, or 190° proof. Since the Federal tax is $6 on each gallon of pure 200° proof alcohol, each bag of sugar so used represents a loss to the Federal Government of $37.05. Any State taxes evaded represent so much additional public loss.

The average sugar dealer at the present time (July 1, 1941) enjoys a profit of approximately 10 cents on the sale of a bag of sugar. Consider the figures:

1 bag of sugar:		
Dealer's profit	$0.10	
Tax loss to United States		$37.05
		37.05
		.10
Our net loss		36.95

Any comment here on such a balance sheet would be a gross insult to native American business intelligence. Then help us to keep sugar out of bootleggers' hands; cooperate by refusing to sell sugar in quantity to suspicious or unknown persons; obtain automobile license numbers and notify district supervisor, Alcohol Tax Unit, Federal Building, 90 Church Street, New York N. Y. Telephone, Rector 2-9100.

The CHAIRMAN. Mr. Jones.

STATEMENT OF HOWARD T. JONES, WASHINGTON, D. C., GENERAL COUNSEL, DISTILLED SPIRITS INSTITUTE, INC.

Mr. JONES. My name is Howard T. Jones, of Washington, D. C. I am general counsel of the Distilled Spirits Institute, a trade association of distillers of the United States.

The distilled-spirits industry, like every other American industry, is ready and willing to do everything it possibly can for national defense. The industry—which is, after all, only a tax-collecting agency so far as excise taxes are concerned—can collect for Government only such taxes as consumers are willing to pay.

As has been stated by Mr. O'Rear, we are not here to complain about the present burden of the industry nor are we going to protest any increase which this committee determines is appropriate after considering all factors involved. However, we would be derelict in our duty as a tax-collecting agency if we did not place before the committee pertinent information which we possess bearing on our tax problem.

We fully appreciate that one of the moving influences in bringing about repeal of the prohibition amendment was the expectation of revenue from taxation of alcoholic beverages, and it is our desire that Government, State and Federal, receive their measure of benefit from their local sale.

We respectfully submit for the consideration of the committee the known fact that the product of the distilled-spirits industry is peculiarly subject to the competition of the illicitly produced non-tax-paid product—a condition not a factor in any other substantial tax-producing industry.

With the total tax rate on distilled spirits as high as it already is, the point of diminishing returns appears to be dangerously close. It is, of course, impossible to predict accurately what would happen if the tax were increased again, but there is abundant evidence that the present tax rate is extremely close to the danger point.

We believe that the information presented here indicates a consumer turn from tax-paid to bootleg liquor, and we are of the view, therefore, that the proposed increase may likely be a "dangerous dollar" to the Federal and State Governments, as well as to the legal taxpaying trade.

In this connection, your attention is directed to a circular, copy of which is filed for the record, issued by the Alcohol Tax Unit and covered by Treasury Department news release of August 12, 1941, seeking cooperation of sugar refiners, brokers, and wholesalers, in keeping sugar out of bootleggers' hands.

Background.—The prohibition amendment was repealed in 1933 for two principal reasons: (1) To put an end to rampant bootlegging, racketeering, and gangsterism, and (2) to provide Government—both State and Federal—with a much-needed new source of revenue.

After a great deal of careful study by the House Ways and Means Committee and the Senate Finance Committee of just how high the tax could go without giving bootleggers sufficient incentive to stay in business, it was calculated that a tax rate of $2 per gallon on distilled spirits would insure the maximum possible revenue with a minimum of bootlegging. Congress accordingly increased the rate of $1.10 per gallon in effect at the time of repeal to $2 per gallon. In addition, the open States levied State taxes initially averaging about 66 cents per gallon. As calculated, this rate of taxation discouraged large-scale bootlegging. There was not enough tax margin to finance highly organized bootlegging rings such as had flourished under prohibition. The vast network of criminal syndicates of prohibition days largely disappeared.

However, taxes on distilled spirits did not long remain at the rates then best calculated to discourage bootlegging and insure adequate revenues. The total of Federal and State taxes was steadily increased year by year, thus progressively enhancing the profit possibilities of illicit operations. Finally, in 1940, the Federal tax was increased 75 cents on top of an existing Federal tax of $2.25 and average State taxes of $1, making the total State and Federal tax $4 per gallon; and bootlegging became a more tempting venture. Since the 75 cents Federal tax increase of 1940, bootlegging has increased significantly. If the tax is now increased another $1—making the total State and Federal tax more than $5 per gallon—the tax margin may be sufficient to bring back the big-time bootlegger and his vicious entourage of crime and corruption.

Another tax increase well might endanger the two major purposes of repeal—one of the most significant actions ever taken by the American people—by reviving the highly organized bootlegging operations of prohibition days, and by jeopardizing anticipated public revenues from distiller spirits.

Inequities.—Distilled spirits are already bearing a very heavy share of the national tax burden, including a special 75-cent defense tax levied last year, an increase of 33⅓ percent, whereas most other taxes were increased only 10 percent. The increase of $1 now proposed would increase the present tax by another 33⅓ percent. The total Federal tax on distilled spirits would then be more than 3½ times the rate effective on the date of repeal, and 100 percent greater than the first post-repeal rate. It would be 78 percent more than the tax in force on June 30, 1940, a little more than a year ago.

No other commodity is bearing as heavy a load of taxation, nor have the taxes on any other commodities been increased so much in the last several years. In addition to the Federal tax, 28 States and the District of Columbia levy excise taxes on distilled spirits and 17

States sell distilled spirits and take their revenues in the form of profits, gallonage taxes, and sales taxes. Moreover, the Federal Government, the States, cities, towns, and counties are levying a bewildering assortment of license taxes. Total governmental revenues on distilled spirits now represent some 60 percent of the retail selling price. The national average tax on cigarettes—Federal, State, and local included—runs about 50 percent. Taxes on gasoline run about 40 percent of retail selling price. Taxes on beer run about 25 percent of retail selling price.

The tax burden on distilled spirits has been growing steadily more inequitable. While other major Federal commodity taxes, those producing more than $100,000,000 annually, have decreased relative to the total of Federal excise taxes or increased only slightly, distilled spirits taxes have increased sharply from 13.8 percent of total Federal excise taxes in the fiscal year 1935 to 20.2 percent of the total in 1941. The Federal tax on distilled spirits has been increased 273 percent since repeal—from $1.10 to $3 per gallon. The tax on cigarettes was $3 per thousand at the time of repeal and has been increased only once in the meantime to $3.25, an increase of only 8 percent. The tax on gasoline has been increased only once from 1 cent per gallon to 1½ cents, a 50 percent increase. The tax on beer was reduced shortly after repeal from $6 to $5 per barrel and then increased last year back to $6, for no net change.

Bootlegging.—It is a well-known fact that the product of the distilled-spirits industry is peculiarly subject to the competition of the illicity produced, nontaxpaid product—a condition not a factor in any other substantial tax-producing industry.

When taxes are increased on other products, the consumer must pay more or do without. When taxes are increased on distilled spirits, bootleggers and racketeers take advantage of both the Government and the consumer by substituting illicit concoctions for the taxpaying product.

Last year's defense tax increase sharply reversed the long-term downward trend of bootlegging. Prior to the tax increase, bootlegging had been reduced until in the fiscal year 1940 it stood at the lowest levels since repeal. In the first full year of the defense-tax increase, fiscal year 1941, bootlegging turned sharply upward. The Federal Alcohol Tax Unit seized nearly 1,200 more stills and nearly 400,000 gallons more mash, increases of 11 percent and 6 percent respectively, over the year before the tax increase. State-enforcement agencies report similar or greater increases.

It is estimated that the illicit stills seized by Federal agents alone last year turned out nearly 21,000,000 proof gallons of bootleg liquor, defrauding the Federal Government of $63,000,000 in taxes and the States of a minimum of $21,000,00 additional.

The 75-cent tax increase of 1940 raised the total tax margin to the point where bootlegging is again a highly lucrative business proposition. With another tax increase, the tax margin would probably be high enough to permit big-time, highly organized bootlegging operations on the prohibition scale, with all their ramifications of crime and corruption.

The bootlegger would then have what would be in effect a Government subsidy of $5 per gallon, the total of Federal and State taxes, which amounts to $15 a case, or $1.25 per quart bottle.

Revenues.—The average consumer has only so much money to spend for distilled spirits, a quota pretty rigidly fixed by other pressing demands for his income. Increases in the tax-paid gallonage of distilled spirits can be expected only when public purchasing power expands. In the past, the total tax-paid gallonage of distilled spirits has shown a strikingly close relationship to total purchasing power, hovering around 1.90 gallons per $1,000 of national income year in and year out. When national income increased, tax-paid gallonage increased proportionately, and when national income decreased, so did tax-paid gallonage.

However, when the Federal tax was increased 75 cents per gallon last year, the average consumer got less legal distilled spirits with a given amount of money. Public purchasing power increased more than 10 percent in fiscal year 1941—and unit sales in most other lines increased accordingly or to a greater percentage—but Federal tax-paid gallonage of distilled spirits increased only 1.6 percent. This slight increase was more than accounted for by increases in wholesale and retail inventories. Sales to consumers are estimated to have fallen off by some 3 percent for that period.

Sales actually were more than 3 percent lower than they might have been. The 75-cent tax increase reduced the volume of purchases from the previously normal 1.90 gallons to 1.79 gallons per $1,000 of national income. If there had been no 75-cent tax increase last year and the rate of 1.90 gallons per $1,000 had been maintained, tax-paid gallonage would have risen to 153,500,000 gallons against which the realized figure of 144,500,000 gallons represents a 9,000,000-gallon decrease, or 6 percent.

If there is no further tax increase, tax-paid consumption can be expected to increase during the next year in line with the expected increase in public purchasing power, with a consequent sizable increase in tax collections. If there is a tax increase, the Government may not realize much more of a relative increase in revenues than it would if there were no tax increase, and much of the increased revenues might be dissipated in increased enforcement expenditures.

Experience.—What might be expected nationally if the Federal tax is increased again is suggested by the experience of Louisiana and Virginia, the only two States which increased their taxes in 1940 on top of the Federal tax increase of 1940.

The total tax in these two States is now approximately what it would be nationally if the Federal tax were increased another $1.

In the first full year under such a rate in Virginia, legal sales fell off 9 percent, and bootlegging as measured by mash seizures increased 65 percent.

In the first 10 months under such a rate in Louisiana, legal sales dropped 23 percent, and bootlegging went up 211 percent.

Similarly, in the State of Kentucky, which increased its State tax a few months before the Federal tax increase of 1940, sales in the fiscal year of 1941 were off 6 percent, and bootlegging increased 26 percent.

States.—When the Federal Government increases its tax rate and thereby depresses national tax-paid gallonage, most States lose State tax revenues on distilled spirits.

In the fiscal year following the Federal tax increase of 75 cents every State in the Union realized an increase in consumer purchasing

power. In 19 of these States, tax-paid consumption actually declined over the preceding fiscal year. In 39 States sales of legal distilled spirits—upon which the States collect taxes or realize profits—lagged behind the increase in consumer purchasing power. In 20 States, tax-paid consumption failed to increase in line with consumer purchasing power. In all 39 States, State revenues were less than they should have been as a result of the 75-cent Federal tax increase.

Such losses are extremely serious to the States and their citizens because of the essential social services for which distilled spirits revenues are frequently earmarked—old-age pensions, mothers' aid, aid to the blind and crippled children, teachers' funds, and so forth.

If there is another Federal tax increase now, more severe and more widespread losses may be expected, with resulting unbalanced budgets in many States. The States would then be faced with a choice between giving up essential social service and finding new tax sources.

Miscellaneous.—In the light of the foregoing, there are a number of other important factors that should be taken into account in considering another tax increase on distilled spirits.

The farmers who supply the grain would find the legal market for distilling grains reduced. The legitimate distilling industry's grain purchases are highly important to farmers, representing as they do a very significant factor in establishing prices on the cash grain market.

Thousands of small retailers and wholesalers throughout the country would be faced with the necessity of securing additional capital to finance their businesses.

Distillers and rectifiers would have to secure many millions of dollars of additional capital to finance the tax increase on the huge volume of "floating stocks" necessary to keep their business going.

In addition, the floor-tax requirement alone would entail an estimated $38,000,000 of financing, principally by the hard-pressed small businessmen in the wholesaling and retailing end of the trade.

Summary.—Since the repeal of the prohibition amendment in 1933 taxes on distilled spirits—Federal, State, and local—have been increased steadily year by year. By every criterion, distilled spirits are already bearing far more than their fair share of taxes compared to other commodities. In simple equity, should distilled spirits be called upon to bear yet another sharp increase so soon after the 33⅓ percent defense-tax increase of last year?

Should not the invitation to bootlegging—the peculiar and difficult problem of distilled spirits taxation which sets it apart from all other tax commodities—implicit in a too-high tax rate be sufficient to deter the imposition of such a rate? There is obviously a point beyond which distilled spirits taxes cannot be increased without retarding legal consumption and stimulating bootlegging.

There is strong evidence that that point was reached last year when the Federal tax on distilled spirits was boosted sharply for defense purposes. Since that tax increase, consumers have been forced to the consumption of bootleg whisky in considerable volume as evidenced not only by the pronounced rise in bootlegging, but also by the otherwise inexplicable failure of tax-paid gallonage to keep up with rising public purchasing power.

With a 75-cent tax increase retarding sales, despite the greatest increase in national income in recent years, would not another tax increase on top of the 75-cent tax increase reasonably be expected to

retard tax-paid gallonage still more? Without a tax increase, it is reasonable to expect an increase in tax-paid consumption during the next year in line with the expected increase in public purchasing power.

A tax increase of $1 would make the profit margin of bootlegging sufficiently high to again finance big-time operations on the prohibition scale. Is it not conceivable that big-time bootleggers would be invited to enjoy the enormously high profits of illicit operations?

Even if consumers do have considerably more money to spend next year, can they be expected to buy heavily taxed legal spirits in preference to readily available bootleg liquor? Can consumers—particularly in the low-income groups which because of their number are responsible for the bulk of tax-paid consumption—be blamed for shifting to the bootleg product if the legal product is taxed out of their reach?

Regardless of what may happen to Federal revenues, if there is a tax increase, the States—which depend on distilled spirits revenues for many essential social services to their citizens—would likely suffer severe revenue losses. A great many States suffered losses in distilled spirits revenues following the 75-cent Federal tax increase of 1940. If the tax is now increased another $1, the States would suffer still greater losses.

The need for increased revenues must be carefully weighed against the serious consequences that may flow from too high a tax rate on distilled spirits.

Having in mind all the factors involved—some of which have been touched upon here—we feel that we are justified in asking that serious consideration be given to the advisability of a tax increase at this time.

There is a very real risk of serious consequences—not only to the industry but to governmental revenues and public welfare.

Senator VANDENBERG. I would like to ask the witness one question. When you figure the total Federal and State taxes at $5 per gallon, I assume that includes the proposed $1 increase, so your present figure would be $4; is that correct?

Mr. JONES. You mean our present tax, Senator?

Senator VANDENBERG. Your statement is that both the Federal and State taxes now would average $5 per gallon.

Mr. JONES. That is correct.

Senator VANDENBERG. So it is now $4 per gallon, without this $1 added.

Mr. JONES. Yes.

Senator VANDENBERG. I understand the Canadian rate is $7 per imperial gallon, and the rate in Great Britain is $16.50 per imperial gallon. How much bigger is an imperial gallon than our gallon?

Mr. JONES. Roughly, I would say, one-fifth bigger. It is quite a little larger.

Senator VANDENBERG. Then the Canadian and British rates are very substantially higher than ours, are they not?

Mr. JONES. Yes.

Senator VANDENBERG. Have they been confronted with dire consequences, do you find?

Mr. JONES. No, sir; I should say they have not. We have a little different situation in this country. We have gone through 13 years

breeding a situation that has not existed either in Canada or in England.

Senator VANDENBERG. I think that is so, I would have to agree with you there.

Senator CONNALLY. You mean we have developed a taste for bootleg and it is hard to get them off of it?

Mr. JONES. I do not know whether that is the entire reason, Senator. I think we have developed a disrespect for law in this country. We have a lawless situation in this country that we have not entirely eliminated. We had in prohibition days, and we think this would bring about a recrudescence of that.

Senator VANDENBERG. There is a great difference between $4 in this country and $7 in Canada and $16.50 in Great Britain.

Mr. JONES. Yes. I think the taxes in Great Britain are very definitely punitive taxes at the moment.

The CHAIRMAN. They prohibited the distilling of grain during the last war, and they are now imposing a tax as a revenue measure.

Mr. JONES. Yes.

The CHAIRMAN. Beyond any doubt they were totally prohibited during the last war, but now they are imposing a tax.

I want to call your attention to the fact that Senator Taft asked about the Treasury reports, and they show a net gain after the imposition of the last raise of 75 cents to the Treasury of $393,000,000 from July 1, 1940, to June 30, 1941, against $289,000,000 from July 1, 1939, to June 30, 1940, and that, according to the Treasury statistics the consumption on the whole is still going up.

Mr. JONES. Consumption is going up, Senator, and in the last fiscal year went up about 1 percent. Our graph up here will show you that the national income went up roughly 8 or 9 percent in that period. I think the estimate which the Treasury has made on this particular tax to the committee indicates a decrease in consumption, I mean just taking the figures. I did not get it from the Treasury but their figures indicate the decrease in consumption in the next year.

The CHAIRMAN. They show a constant upward increase in revenue since the last raise.

Mr. JONES. That is right.

The CHAIRMAN. On practically all liquors except on imported distilled liquors, because the imports fell off.

Mr. JONES. Yes.

The CHAIRMAN. The imports on certain types of imported liquors fell off.

Mr. JONES. We went up nearly 2 percent, something over 1 percent.

Senator BARKLEY. Is there a manufacturer of illicit liquor in Canada, where they consume largely rye and scotch, such as there is in the United States?

Mr. JONES. I do not think it is any different, Senator. I think the Canadians are now experiencing difficulty with bootlegging. It is growing up there. It had not existed before, but it is growing up there. We hear stories of alcohol being shipped from this country into Canada now in opposition to their laws, as we used to get their whisky in the prohibition days.

The CHAIRMAN. All right, Mr. Jones, thank you very much.

The CHAIRMAN. Will you give your full name?
Mr. JAFFE. Theodore Jaffe.
The CHAIRMAN. For whom are you appearing?
Mr. JAFFE. National Retail Liquor Package Stores, Inc.
The CHAIRMAN. All right, proceed.

STATEMENT OF THEODORE JAFFE, PROVIDENCE, R. I., REPRESENTING THE NATIONAL RETAIL LIQUOR PACKAGE STORES, INC.

Mr. JAFFE. I will make the statement as short as I can and ask leave to file a written statement later in the day.

The CHAIRMAN. Yes; you may do that.

Mr. JAFFE. I represent the small retailers that operate the privately owned stores where liquor is sold that is consumed off the premises in the 28 open States as distinguished from the so-called monopoly States in the country. My point is different from that which was argued this morning by other speakers. I am not here asking any reduction in the tax increase, although my personal opinion and that of my associates is that this proposed increase is apt to work against the purpose for which it is designed in that we will be confronted with the condition of diminishing returns. The point I am to make is more limited in scope, and that is that the bill as presently drawn does not provide for any exemption on the floor stocks of the retailers. Twice before the Congress has passed increased tax legislation and did provide for exemptions on floor stocks. That becomes very important as far as we, the small retailers, are concerned.

Senator LA FOLLETTE. You were given up to 10 months to take care of that.

Mr. JAFFE. No; we were given up to 10 months to pay the tax on our inventories, but not given any time to dispose of any of that upon which you have to pay a tax increase. In other words, the industry is so constituted that it would take a minimum from 15 to 30 days to adjust the price structure of the industry. We would have to pay that tax increase on every gallon of inventory which we have in the store as of the effective date of the act. The price changes could not possibly be arranged until this 15 or 30 days later, in which case all that inventory which we are selling during that interval we would have to pay a tax on and could not get it back.

Now, we are perfectly willing to pay our share of the tax increases.

Senator CONNALLY. Why would it take that long to get your prices adjusted?

Mr. JAFFE. Because we deal almost exclusively in the nationally advertised brands.

Senator CONNALLY. But you would know when the price will be effective. Why couldn't you change rates then?

Mr. JAFFE. Those prices are arranged for the various States by the principals that control those brands.

Senator CONNALLY. Your floor stock is not controlled; you could put any price you wished on that?

Mr. JAFFE. That may be true in this respect: They wouldn't get around to changing their prices for, say, 30 days, and while I could say, "I will raise my prices," if my competitor didn't, I would lose the business.

Senator CONNALLY. How about your competitors? You don't complain, you say, about the fact and he is going to have to pay it. You will ruin your competitors.

Mr. JAFFE. Well, speaking for the people I represent, there isn't anyone that operates in one of these establishments that I know of

that carries less of an inventory than the inventory provided for in the last legislation of 1940, but I would say this, what I am asking is not that the floor stocks be exempt from taxation; that was the provision in 1937 and we came here and asked to have the tax imposed on the floor stocks because if it wasn't that would put the small retailer at a tremendous disadvantage. The large dealer could go out and purchase large stocks where the little fellow couldn't; the big fellow would be protected and could make capital out of that, so that, therefore, it is protection for the little fellow to have this floor tax and makes it impossible for the big fellow to take advantage of him under the provision existing in the 1940 act, and that is the very thing we are asking to have repeated. This is the first time that was not repeated and it is certainly justifiable because there is no way the smaller fellows can get it back if they have to pay that amount of money themselves. It would certainly make it very difficult for them. That is why we are asking for 10 months here. These retailers are only small operators and any time they have to dig down for this kind of money it is very difficult for them.

The CHAIRMAN. What was the exemption in the previous bill?

Mr. JAFFE. One hundred gallons.

The CHAIRMAN. What was the exemption for the producers?

Mr. JAFFE. This provision is just for the retailers; there was no exemption for the producers or wholesalers and there was no exemption for the retailers above this amount.

The CHAIRMAN. I understand you simply want an exemption of 100 gallons.

Mr. JAFFE. Yes.

Senator CONNALLY. How many retailers are there in the United States?

Mr. JAFFE. I haven't the Treasury figures, but there are quite a number of thousands, because this would cover and include the small restaurants.

Senator CONNALLY. Well, 100 gallons—that would be $300 tax?

Mr. JAFFE. No; it would be just the increase, $1 a gallon.

Senator CONNALLY. Well, $100; so the Government would be losing $100 on every retailer in the United States?

Mr. JAFFE. Well, it isn't $100 the retailer is getting; he is passing that and much more on to the consuming public without getting it back. And take your argument: The Government says to the small retailer: "You might not be able to get this back, but if you dispose of it we still ask you for a—and it amounts to a contribution—of $100."

Senator CONNALLY. Well, you said you passed it on to the retailer.

Mr. JAFFE. No, I said we would have to pass on part of our inventories to the consumers without including it.

Senator CONNALLY. Why would you; nobody is going to take the whisky away from you unless you want to sell it?

Mr. JAFFE. Competitive conditions in the industry would force that and experience in the past has definitely proven that to be a fact.

The CHAIRMAN. Thank you very much for your appearance.

(The following letter was ordered printed in the record:)

NATIONAL ASSOCIATION OF ALCOHOLIC BEVERAGE IMPORTERS, INC.,

Washington, D. C., August 21, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR MR. CHAIRMAN: The National Association of Alcoholic Beverage Importers, Inc., appeared at the public hearings held by the Committee on Ways and Means on the revenue revision of 1941 and presented oral testimony, which appears on pages 1459 to 1461, inclusive, of that hearing. The association, in order to conserve the time of the committee, respectfully requests that this communication be made part of the record of the hearing now being held by your committee.

The importers of alcoholic beverages made it clear to the Committee on Ways and Means that they were anxious to aid the Federal Government in the obtaining of revenue necessary during the present emergency. I am instructed by the officers of this association to inform your committee that there has been no change in the position we have taken heretofore.

We most respectfully renew the suggestion I made in behalf of the association to the Committee on Ways and Means. We recommend that in the pending bill the committee consider the adoption of two excise taxes on alcoholic beverages. It is our view that the excise taxes which were in effect prior to the adoption of the defense tax bill of July 1, 1940, should be restored as the permanent excise tax rates for wines, spirits, and beers. We feel that there should be designated as special defense tax rates any additional excise taxes which may be carried in the pending measure. We further recommend that the additional taxes should take the form of a percentage sales tax payable at the time of purchase by consumers or buyers of alcoholic beverages. A tax of this nature could be collected easily and is equitable. Furthermore, it has the distinct advantage of being a direct tax paid by the consumer which would eliminate financial carrying charges which are true when excise taxes are increased and must be paid at the time when the alcoholic beverage is withdrawn from bonded warehouse.

Excise taxes are included in the price charged wholesale distributors by the firms who pay the Government the tax. Wholesale distributors base their prices to retailers on the prices paid to the primary producer or importer. Finally, retailers base their consumer prices on the price they pay wholesalers. It is commonly believed in the alcoholic beverage trade that for each $1 tax imposed by the Government, consumers pay $2 at the retail point of purchase.

The proposed bill now carries a number of consumer taxes on luxury items. We feel that alcoholic beverages could easily be treated in the same class. The details of our argument on this proposal were stated clearly in the testimony given before the Committee on Ways and Means.

The members of this association have been the victims of the present war. We are unable to trade with Continental Europe excepting for Portugal and Spain. As a result the main portion of our business has been the importing of Scotch whiskies and other spirits and wines from the British Isles. We have been able to establish for the British Government important dollar credits which include not only the price paid producers and shippers in the British Isles but also the cost of freight and other charges. It is our estimate that in the calendar year of 1940 such dollar credits made available to the British Government amounted to $45,291,000.

In addition to this huge sum which has been of great value to the British Government for the purchase of items not covered by the Lease-Lend Act, we paid the Federal Government in the form of tariffs and internal revenue taxes for the same period the amount of $62,883,000. There should not be forgotten, however, that the States collected a considerable revenue in addition to the amounts collected by the Federal Government.

Federal taxes on alcoholic beverages may be likened to a two-edged sword. High taxes may result in an increase of revenue for the Federal Government, but accompanied by a drop in the revenue obtained by the individual States. Obviously, the sound way of solving the problem is the collection of a single tax b the Federal Government and the returning of a portion of that tax to the various States. Another method might be the obtaining of a compact from the individual States with respect to the amount of the gallonage tax to be imposed by such States.

The foregoing possibilities are theoretical. Congress is faced with a definite concrete problem. How far can it go in increasing Federal taxes without reducing the present revenue obtained by individual States and without causing an increase in illicit operations?

If increases in Federal taxes result in a decline in consumption and a resulting decline in the revenue of the individual States, there may be expected an increase in the tax rates imposed by the States. This has already happened in certain States.

The Treasury Department is not unmindful of the dangers of high taxes, especially when two taxes are collected by two different Government authorities. Although Deputy Commissioner Stewart Berkshire, of the Alcohol Tax Unit, has done a magnificent job in controlling operators of illicit stills, it is particularly significant that recently the Alcohol Tax Unit issued a circular pointing out that from a bag of sugar of 100 pounds, which gives a legitimate sugar dealer a profit of approximately 10 cents, there may result a tax loss to our Government of $36.95 because a bootlegger can produce approximately 6½ gallons of 190 proof alcohol from 100 pounds of sugar. This calculation is made on the basis of the existing $3 per proof gallon tax on spirits. At the proposed $4 rate the estimated tax loss to the Government would be $51.30 for every 100 pounds of sugar used by illicit operators. There was not included in the figures cited above the tax losses to the individual States which, on the average, collect $1 for every wine gallon of spirits sold in their territories.

The foregoing is mentioned so that the committee will realize that the proposed taxes carried in the present bill, taken in conjunction with the existing State taxes, offer a fertile field to illicit operators. It, therefore, appears reasonable to assume that, if the taxes carried in the present bill are going to be adopted, Congress should strengthen the hands of Commissioner Berkshire of the Alcohol Tax Unit.

I have been instructed to request the committee to consider adoption of such language as is necessary to wipe out an existing inequality in the application of internal revenue taxes on imported distilled spirits. The present Internal Revenue Act and the Tariff Act of 1930 require the payment of the internal Revenue tax on a wine-gallon basis where the imported spirit is below proof. As a result, imported spirits pay a higher internal revenue tax than is true for American distilled spirits. We have no quarrel with the imposition of the Federal Internal Revenue taxes on imported articles. We believe that to be entirely appropriate, but we do feel that the language in the present Internal Revenue law should be changed to provide that imported distilled spirits should pay the Internal Revenue tax on a proof-gallon basis. This would place imported alcoholic beverages on the same basis as domestic spirits, which would still enjoy the protective benefits of the existing tariff rates.

Very truly yours,

HARRY L. LOURIE, *Executive Vice President.*

The CHAIRMAN. Mr. Burnett.

STATEMENT OF GEORGE H. BURNETT, BOSTON, MASS., REPRESENTING THE FLAVORING EXTRACT MANUFACTURERS ASSOCIATION OF THE UNITED STATES ET AL.

Mr. BURNETT. My name is George H. Burnett; address, 437 D Street, Boston, Mass. I am treasurer and general manager of Joseph Burnett Co., a firm engaged in the manufacturing of flavoring extracts for 94 years. I also represent the Flavoring Extract Manufacturers Association of the United States, which all the large and many of the small manufacturers belong to; also the National Association of Soda Water Flavorers, an association of fruit and sirup flavorers.

I have been asked since I came to this meeting to represent them; I also represent the Interstate Manufacturers Co.

These four associations cover the entire flavoring field, and probably use 90 percent of the amount of distilled spirits used in the manufacture of flavoring extracts in the United States.

Gentlemen, I am going to refer to some notes I have here.

Senator CONNALLY. Are you a manufacturer of alcohol?

Mr. BURNETT. No, sir. I am appearing before you to ask the establishment of a differential in the tax on alcohol used for nonbeverage purposes; that is, for use in strictly manufacturing purposes. I mean by that in flavoring extracts and medicinal preparations. Those articles today bear the same tax, pay the same tax, that the liquor people pay. My reason for asking this is as follows: There is no sound reason for the imposition of a tax on alcohol used in the preparation of flavoring extracts and medicines any more than in the preparation of perfumes, tooth pastes, hair tonics, or such things, except from the point of view of administrative costs. The use of substitutes, which contain no alcohol and from which the Government derives no benefit, is rapidly drying up this source of revenue.

Every country in the world recognizes the difference between beverage and nonbeverage alcohol. In most countries there is no tax levied on alcohol consumed in nonbeverage products. In Canada, which was referred to a little while ago, there is a tax of $1.50 a proof gallon used for nonbeverage purposes, with a tax of $7 per gallon on alcohol u for liquor. The difference is, of course, in the imperial gallon, which brings the base down to $1.27½ a proof gallon.

There is no satisfactory substitute for alcohol and the use of synthetic chemicals used in nonalcoholic imitation extracts will also affect to a certain extent, as far as the fruit extracts are concerned, the growers of fruit, particularly in the Pacific Northwest, where the dried-berry industry is a large one. Those cannot be used in the preparation of any extracts except pure extracts. The most important thing is that the revenue to the Government is drying up. You have heard and will hear what the effect of this increased taxation will be in the liquor industry. We can show you how the tax has already affected our industry since it has been increased, and that I will take up a little later. I have asked the clerk to distribute among you gentlemen a number of exhibits and I am going to refer to those, if it is satisfactory to you.

The first is a copy of an amendment to section 2800, Internal Revenue Code, the title being title V, section 533, "Domestic nonbeverage ethyl alcohol,' and intending to establish a new classification. It provides for the imposition on all ethyl alcohol produced in the United States and used exclusively in the manufacture of food products, flavors, flavoring extracts, medicinal preparations, and other nonbeverage products a tax at the rate of $2.25 on each proof gallon or wine gallon to be paid by the distiller when withdrawn from bond. Manufacturers using nonbeverage ethyl alcohol must file application for permits, execute bonds, and keep such books and records as the Commissioner, under proper rules and regulations, prescribes to insure that such nonbeverage ethyl alcohol purchased by them shall not be used for beverage purposes, which records, of course, shall be open and available to the Internal Revenue Bureau. It provides for nonbeverage alcohol diverted to beverage purposes being taxed, makes unlawful the procuring of nonbeverage alcohol for diversion to beverage purposes and prescribes penalties for violation of the act; it is further provided that there shall be no refunds on floor stocks of tax-paid ethyl alcohol held and intended for nonbeverage uses if this provision is accepted.

Senator VANDENBERG. What differential do you propose?

Mr. BURNETT. We are not asking for complete exemption. We realize that the Government wants to collect as much as possible and we are proposing $2.25 a proof gallon be used, which is the rate at which the greatest amount of revenue has been collected by the Government.

Senator BAILEY. What can you do to prevent nonbeverage alcohol from being substituted for beverage alcohol?

Mr. BURNETT. It is a question of administration.

Senator BAILEY. Can you make a suggestion here as to how we can do that? I am in sympathy with your view that beverage alcohol should bear a greater, larger tax than alcohol used in nonbeverage products. The question is one of administration.

Mr. BURNETT. The best answer to that is what happened during the prohibition era. At that time there was a differential.

Senator BAILEY. During prohibition the problem of diversion was a considerable one. Much nonbeverage alcohol was used for beverage purposes.

Mr. BURNETT. The use of the words "nonbeverage alcohol" may be deceptive. It is exactly the same alcohol whether used for beverage or nonbeverage purposes. Denatured alcohol is alcohol with something added to it.

Senator BAILEY. That is what I was thinking of. How was that administered?

Mr. BURNETT. By the same system I suggest. The manufacturer would apply to the Treasury Department; he would be looked up as to whether or not his firm was reliable and if his application was granted he was required to post a very large penalty bond and was finally issued a permit. He kept records and was under the supervision of the Treasury Department during the entire period.

Senator CONNALLY. As a matter of fact, the diversion of nonbeverage alcohol to beverage purposes is what we have to guard against.

Mr. BURNETT. I agree with you.

Senator CONNALLY. During prohibition there were abuses, widespread abuses. In Baltimore, for instance, there was a patent medicine concern found to be buying a great amount of nonbeverage alcohol and it was discovered that the firm was simply bootlegging; it was not using the alcohol for patent medicines, but diverting it to beverage purposes. That is the danger.

Mr. BURNETT. Yes; that is the danger.

Senator CONNALLY. But your answer is that the Treasury investigates the firm and will not license it unless it is reputable?

Mr. BURNETT. Yes; and furthermore, we must not forget that it is possible now to buy legal liquor.

Senator CONNALLY. But 75 cents a gallon is a pretty good inducement; if alcohol can be bought for $2.25 instead of $3, a pretty good inducement is supplied.

Mr. BURNETT. Well, as I understand it, at the present time the market for bootleg alcohol is around $3.50 a wine gallon.

Senator CONNALLY. I am not talking about that; I am saying if you can get this alcohol for $2.25 instead of $3 there is a substantial inducement there to do so.

Mr. BURNETT. That is true, and I think it is a problem of administration which the Treasury Department can work out.

Senator BAILEY. Would you be willing to impose an extremely heavy penalty for those who abuse the privilege?

Mr. BURNETT. Oh, yes.

Senator BAILEY. You would go along with us to the limit on that?

Mr. BURNETT. Absolutely. We will be agreeable to any restrictions that will insure against diversion from nonbeverage to beverage purposes of any alcohol.

Senator BAILEY. I think you need something more than the imposition of a forfeiture of the bond; it would have to be very severe. You might have to provide for the dissolution of the business itself.

The CHAIRMAN. If this tax is increased to $4 a gallon now, and you get a tax of $2.25, there would be considerable opportunity for licensees to do pretty much what they did under the Prohibition Act; there is an opportunity for quite a margin of profit there.

Mr. BURNETT. Yes; that is true; but there is an opportunity for the purchase of legal liquor now which did not exist then. Furthermore, I believe the way in which bootlegging is established today—not that I am an expert on the subject—but I understand that a great deal more of it is done by distilling corn or sugar, whatever they use, and it is much simpler to do that and safer because the penalties are not nearly as severe when they are apprehended in that way as they would be on a man who was posing as a legitimate manufacturer.

The CHAIRMAN. That has been the real problem; the difficulty of administration.

Mr. BURNETT. Yes; I think that is correct. However, we feel that the Treasury Department has been a little bit overanxious on that subject. May I refer to this a little later?

Senator CONNALLY. May I ask a question? Do you use any kind of spirits in your business except alcohol; do you use any whisky?

Mr. BURNETT. No; no whisky or brandy; only ethyl alcohol.

Senator CONNALLY. Pure alcohol?

Mr. BURNETT. Well, I will take that back; we use a small amount of rum to make a sirup.

Senator CONNALLY. That would probably be a fairly good argument for you; you couldn't sell this alchol; you would have to process it, which would add something to the cost; there wouldn't be quite so much temptation.

Mr. BURNETT. It would be very difficult to do that; you couldn't do that.

Senator CONNALLY. Oh, yes; you could.

The CHAIRMAN. Well, proceed.

Mr. BURNETT. If you will refer to this exhibit again, you will see a photostatic copy of invoices, which show what the tax amounts to, but I won't touch on that. The next page shows how the tax has gone up, so that we are paying today 19½ times the value of the commodity; a tax absolutely unknown in any country of the world. I think opium, the tax on opium is only 2½ times its value, and cigarettes three or four times their value. Now, from the point of view of revenue, I think the figures on the next page will be interesting to you. You have heard before from the previous speakers what will happen if the tax goes up. We can show you what has happened since it was raised. There has been a net decrease in revenue under the $3 rate of $321,828. The interesting part of that is that during

the last 3 months of the period the loss was $150,000 or $50,000 a month, as compared with $171,000 for the first 9 months, or $19,000 per month.

We are quite certain from the studies of the industry that if the tax is further increased this revenue will be further decreased, because we know of any number of manufacturers who have recently and others who are now preparing to abandon the use of fewer extracts and use the substitutes. In the bakery, confectionery, and candy trade there are comparatively few left who use pure flavors containing alcohol.

Now, I want to call your attention to one other thing, the question of administration, which I know will interest you very much. The figures given here are from the Treasury Department to the House Ways and Means Committee at a time when a somewhat different bill was before them. The bill we are presenting today would change that number of permits very materially. You notice here we say that this ethyl alcohol can only be used for manufacturing purposes, so that does away entirely with classification J. Classification T—that is, permits to dentists, veterinarians, and so forth—to use alcohol, and to dentists to administer liquor, is omitted, which reduces the administration problem. In addition classification Q should be left out; there are at the present time allowed to purchase tax-free alcohol. A permits to manufacturers, bonded warehouses, and free warehouses are not an additional amount, as they are already supervised by the Alcohol Tax Unit. This would reduce the cost of administration somewhere to around, well, depending on which you take, $300,000 to $500,000, and with a fee of $5 or $10 on each permit, would reduce it so at the very highest the cost of administration would not be over $250,000; that is, the net cost.

I will be very glad to answer any questions.

In closing, I want to assure the committee that it is our intention to cooperate with the Government in every way and intend to accept and abide by the regulations.

Senator BAILEY. You have here the comparison of the tax with the amount of cost, which indicates that the tax under this bill will be approximately 25 times the commodity cost.

Mr. BURNETT. That is right.

Senator BAILEY. How would that be with respect to ordinary brands of whisky; how would that compare?

Mr. BURNETT. I can't tell you about whisky; I am not an expert on that; I know my own business, but I do not know anything about the whisky business.

Senator BAILEY. What I have in mind is this: You can put the tax on whisky so high that you will turn all the distillers and bootleggers loose, break down your whole conception of the repeal of the eighteenth amendment.

Mr. BURNETT. Well, I am sorry I can't answer that question.

Before I leave, there is just one point I would like to mention. I want to show you these two bottles of flavoring extracts, both sold for the same price. That [demonstrating] is imitation; this is pure. This pays a tax to the Government of 1¼ cents; you get 1¼ cents out of that; this you don't get anything from. The use of this is increasing by leaps and bounds and the reason is largely this 1¼ cents.

Senator VANDENBERG. I would like to complete the record in regard to those comparative figures on the tax in Great Britain, Canada, and

the United States. The figures I used were on imperial gallons, which are a fifth larger than our gallons.

Mr. BURNETT. Excuse me, sir; 25 percent larger.

Senator VANDENBERG. Well, that is all right; it depends on which way you figure it. The adjusted price, compared to ours, would be $13.20 in Great Britain, compared to our present rate of $3; and $5.60 in Canada compared to our rate of $3; that is the adjusted fair relationship.

Senator BAILEY. I raised that question to point out that the proposed tax is approximately twice the commodity cost on whisky.

The CHAIRMAN. Approximately twice the cost?

Senator BAILEY. Yes. A man buys a bottle of whisky, two-thirds of what he pays goes for tax, one-third for the whisky.

The CHAIRMAN. Thank you very much.

(Mr. Burnett submitted the following material:)

AMENDMENT TO H. R. 5417

Amend title V, section 533, by inserting on page 41, after line 9, the following new subsection:

"(e) DOMESTIC NONBEVERAGE ETHYL ALCOHOL.—Section 2800 of the Internal Revenue Code is amended by inserting at the end thereof the following new subsection:

"'(*j*) DOMESTIC NONBEVERAGE ETHYL ALCOHOL.—

"'(1) There shall be levied and collected on all ethyl alcohol produced in the United States and used exclusively in the manufacture of food products, flavors, flavoring extracts, medicinal preparations, and other nonbeverage products, an internal-revenue tax at the rate of $2.25 on each proof gallon or wine gallon when below proof and a proportionate tax at a like rate on all fractional parts of such proof or wine gallon, to be paid by the distiller when withdrawn from bond.

"'(2) Manufacturers using nonbeverage ethyl alcohol as herein provided for shall file application for permit, execute such bond, and keep such books and records as the Commissioner, with the approval of the Secretary, may by rules and regulations prescribe to insure that such nonbeverage ethyl alcohol purchased by them shall not be used for beverage purposes. Such books and records shall be preserved for a period of four years and during such period shall be open at all times during business hours for inspection by any internal-revenue officer or agent.

"'(3) Nonbeverage ethyl alcohol withdrawn and tax paid under the provisions this subsection subsequently diverted to beverage purposes or used in the manufacture or production of any article intended for use as a beverage, shall be taxed as provided by Section 2800 (a) (1) of the Internal Revenue Code, such tax to be paid by the person responsible for such diversion or prohibited use. It is hereby declared unlawful for any person procuring nonbeverage ethyl alcohol as herein provided for to divert or cause the same to be diverted to beverage purposes, and on conviction thereof such person shall be fined for each offense not more than $5,000 or be imprisoned for a period of not more than five years, or both.

"'(4) No refund shall be made on floor stocks of tax-paid ethyl alcohol held and intended for nonbeverage uses on the effective date of this Act.'"

U. S. INDUSTRIAL CHEMICALS, INC.

BALTIMORE, MD.

Sold to McCormick & Co., Inc., Light and Barre Streets, Baltimore, Md., April 24, 1941. Shipped via truck; customer's permit No. MD-ST-11. Shipped to same, 414-432 Light Street, Baltimore, Md. Our order No. 8607; shipped from Curtis Bay; contract No. 25-2591; transfer No. 55029. Terms: Cash in advance on tax; net 10th approximately on alcohol. Date shipped, April 24, 1941. Salesman, Whitescarver.

748491-562

Tax paid, alcohol, 190 proof, 72 fifty-four-gallon drums (3888 gallons, at $0.305, gallon)	$1,185.84
Internal-revenue tax (added) (7,387.20 proof gallons, at $3, proof gallon)	22,161.60
Total	23,347.44

Part of carload order. Proof gallons, 7,387.20. Stamp Nos. 254614-685. Invoice, customer's copy 25, No. 24247.

Comparison of commodity cost and internal revenue tax

Fiscal year 1940:	
1 carload tax-paid alcohol, 190 proof, 72 54-gallon drums, 3,888 gallons at $0.305	$1,185.84
Internal revenue tax (added), 7,387.20 proof gallons, at $2.25 per proof-gallon	16,621.20
Total	17,807.04

In 1940 the tax was approximately 14 times the commodity cost.

Fiscal year 1941:	
1 carload tax-paid alcohol, 190 proof, 72 54-gallon drums, 3,888 gallons at $0.305	$1,185.84
Internal revenue tax (added), 7,387.20 proof-gallons, at $3 per proof-gallon	22,161.60
Total	23,347.44

In 1941 the tax was approximately 19½ times the commodity cost.

Fiscal year 1942:	
1 carload, tax-paid alcohol, 190 proof, 72 54-gallon drums, 3,888 gallons, at $0.305	$1,185.84
Internal revenue tax (added), 7,387.20 proof-gallons, at $4 per proof-gallon	29,548.80
Total	30,734.64

In 1942 the tax will be approximately 25 times the commodity cost.

Nonbeverage ethyl alcohol consumption and taxes paid (comparative statement, fiscal years 1940-41)

[Ethyl alcohol taxpaid during 1940 compared with 1941, and proof gallons of alcohol dumped for rectification (beverage) in like period. Difference is nonbeverage use. Figures from ATU releases]

	Fiscal year 1940	Fiscal year 1941
	Proof gallons	*Proof gallons*
Total tax paid	24,344,306	27,866,524
Total dumped (beverage)	17,475,958	22,822,539
Net nonbeverage	6,868,348	5,013,985
Internal revenue tax per proof gallon	$2.25	$3.00
Total revenue	$15,453,783	$15,131,955

Net decrease in consumption under $3 rate (proof gallons)	1,824,363
Percent decrease in consumption under $3 rate	26.55
Net decrease in revenue under $3 rate	$321,828

Nonbeverage ethyl alcohol consumption and taxes paid (comparative statement, fiscal years 1940–42)

[Based on the experience gained during the fiscal year 1941, ethyl alcohol tax paid during 1940 is compared with the estimate for the fiscal year 1942, being confined however, only to nonbeverage uses]

	Fiscal year 1940	Fiscal year 1942
Net taxpaid nonbeverage alcohol (proof gallons)	6,868,318	3,707,329
Internal-revenue tax per proof gallon at	$2.25	$4.00
Total revenue	$15,453,783	$14,829,316

Net decrease in consumption under $4 rate (proof gallons)	3,161,010
Percent decrease in consumption under $4 rate	52.9
Net decrease in revenue under $4 rate	$624,467

ADMINISTRATION

Treasury Department opposition to establishment of a tax differential is premised on the magnitude and high cost of administration.

PERMITTEES

Magnitude of the task is proportionate to the number of possible applicants for permits to use nonbeverage alcohol. Based on experience during prohibition, the Department has made an estimate of potential permittees, analyzed below. In an adjoining column is an estimate of potential permittees based on common sense in the light of existing conditions. The false base on which the Department's estimate rests is immediately evident.

Classes of permits	Number	
	Treasury estimate	Practical estimate
A. Permits to manufacturers, bonded warehouses, and free warehouses	427	427
B. Permits, wholesale druggists	266	266
H. Permits to use intoxicating liquors in the manufacture of preparations unfit for beverage use and for experimental purposes	20,113	10,056
I. Permits to use and sell	24,222	12,111
J. Permits to physicians	86,810	.....
Q. Permits to hospitals	2,877	.....
T. Permits to dentists, veterinarians, etc., to use alcohol, and to dentists to administer liquor	49,828	.....
Total	184,649	22,860
Add 5 percent on account increase in population	9,232	1,143
Total, potential permittees	193,881	24,003

With intoxicating liquors legally available in 45 States, it is evident the practical estimate of potential permittees represents a greater degree of accuracy than the estimate of the Treasury Department.

Further the Department neglects to inform Congress of the fact that today it supervises the activities of more than 400,000 alcohol beverage taxpayers.

HIGH COST

Based on an estimated 194,000 permittees, the Treasury Department calculates cost of administration to be $2,370,138. Assuming the accuracy of this calculation, it is equivalent to approximately $12.20 per permittee.

Applying this unit cost to a liberal estimate of 25,000 permittees, administrative costs will be approximately $305,000, compared with an estimate of $2,370,138.

Subtract also from this estimated cost of administration the amount which will be derived from annual licenses, which if fixed at $5 per annum would produce a revenue of $125,000, or more than 40 percent of the cost of administration.

Thus, it is contended the high cost of administration as calculated by the Treasury is but camouflage, conceived and determined on a false premise.

BRIEFS

A tax differential on ethyl alcohol consumed in nonbeverage industrial products is effective in every nation in the world except the United States.

Today, under extreme war pressure, Canada taxes nonbeverage ethyl alcohol at $1.50 per gallon. Beverage alcohol is taxed at $7 per gallon.

During prohibition, the United States taxed nonbeverage ethyl alcohol at $1.10 per gallon. Beverage alcohol was taxed at $6.40 per gallon.

Administration of the law in Canada is satisfactorily accomplished under a permit and bond system. A similar system was employed in the United States from 1917 to 1933.

Ethyl alcohol consumed in food products, flavors, and medicines is a necessary use. Ethyl alcohol consumed in beverages is a luxury use.

In 1791 Congress first taxed all domestic distilled spirits. On June 5, 1794, Congress first distinguished between luxury and necessary use of distilled spirits. In that act it was provided the tax should not apply to physicians, apothecaries, surgeons, or chemists, as to any wines or spirituous liquors which they may use in the preparation or making up of medicines for sick, lame, or diseased persons only.

Congress distinguished between luxury use and necessary use of ethyl alcohol during practically all the years between 1794 and 1933.

With the repeal of prohibition all distilled spirits (beverage and nonbeverage ethyl alcohol) were taxed at $2 per gallon. This liquor-taxing act followed the principle of the law of 1791.

Later distilled spirits were taxed at $2.25 per proof gallon, then $3, and now there is proposed a tax of $4 per proof gallon.

The distinction between beverage and nonbeverage use of ethyl alcohol has been lost. Use of ethyl alcohol in the production of necessities should be fostered by reestablishment of a tax differential.

Producers of food products, medicines, flavors, and flavoring extracts, and druggists' compounding prescriptions ask no tax exemption. Each and every one of them pays every other tax, license or fee levied by Federal, State, county, and municipal government. In addition they are willing to pay an equitable tax on pure alcohol used by them.

These producers ask only that there be reestablished a classification of ethyl alcohol used for nonbeverage purposes and that a just tax of not more than $2.25 per proof gallon be placed thereon. Increased consumption and increased revenues will result.

The CHAIRMAN. Mr. Embry. Are you appearing for your own industry, American Bakeries Co.?

Mr. EMBRY. Yes; my company.

The CHAIRMAN. You may proceed.

STATEMENT OF B. S. EMBRY, ATLANTA, GA., REPRESENTING AMERICAN BAKERIES CO.

Mr. EMBRY. My name is B. S. Embry. I am secretary-treasurer of the American Bakeries Co., which has its principal office in Atlanta, Ga.

I have prepared a brief statement, Mr. Chairman, which sets forth our case and which I would like to read to you and the other members of the committee.

The CHAIRMAN. You may proceed.

Mr. EMBRY. First, I will state that the purpose of my appearance is not to enter an objection to the imposition of the excess-profits tax. The purpose of my appearance is to call to your attention what appears to be an inadvertent omission in the present law, which imposes a peculiar hardship on our company and compels us to bear a burden out of proportion to that which is borne by other companies with similar earnings. I refer particularly to the failure of sections 742

and 713 (f) of the Excess Profits Act of 1940, as amended March 1941, to provide the same treatment of acquiring corporations as of other corporations.

Until December 31, 1938, our operations were conducted by two companies, a parent corporation and one subsidiary corporation. The parent corporation was organized in 1927 and acquired all of the common stock of the subsidiary corporation. It conducted no business other than the receiving of dividends from the subsidiary corporation and the payment of dividends to its stockholders. The subsidiary corporation, since its organization in 1920, was continuously engaged in the manufacture and distribution of bakery products. At December 31, 1938, the subsidiary corporation was merged into the parent corporation, which action was in conformity with the general desire of the administration to simplify corporate structures and eliminate holding companies. As a consequence of the merger and liquidation of the subsidiary corporation, the former parent corporation became the operating and surviving company.

In 1940 we had a taxable net income of appoximately $1,460,000 and a taxable net income in 1939 of approximately $1,130,000. In 1936, 1937, and 1938 the annual net loss exclusive of dividends received from the subsidiary corporation each year amounted to approximately $24,000. These losses are explained by the fact that the real income for those 3 years was from the operations of the subsidiary corporation.

Obviously, we are at a substantial disadvantage if in determining the base-period credit under the average-earnings method, our earnings are limited to those of the present company as a separate entity as distinguished from the combined earnings of the two companies over the base period. As the result, our base-period credit for 1940 was but $805,488, whereas it would have been $1,073,586.

In other words, our company paid excess-profits tax for the year 1940 amounting to $134,664, whereas other corporations with exactly the same amount of earnings during 1940 and the base-period years would have paid $23,744.

Senator BAILEY. Did you make your consolidation prior to the passage of the act?

Mr. EMBRY. We effected our consolidation December 31, 1938.

Senator BAILEY. Prior to the act?

Mr. EMBRY. Yes; that was prior to the passage of the act.

It is our belief that all taxpayers having comparable earnings should be similarly treated under the provisions of the statute.

If the subsidiary company had been merged and liquidated prior to January 1, 1936 (the beginning of the base period), our company would have paid excess-profits tax in 1940 of $23,744, which is $110,890 less than what was paid as heretofore stated.

The mere fact that the subsidiary was not merged and liquidated until December 31, 1938, resulted in this excessive amount of excess-profits tax for the year 1940 alone.

If the underlying theory of the excess-profits tax is to reach profits in excess of the average earnings over the base period, it would seem that we should be entitled to the benefits of section 713 (f) as well as the use of the combined earnings of the present company and its former subsidiary, since the operations then conducted by both companies are now conducted solely by the present company.

In a subject as complex as the excess-profits tax, we can appreciate the difficulty of initially drafting, with 100-percent thoroughness, provisions which fully consummate the congressional intent. In the amendments passed in 1941 it was intended, we believe, to give a certain measure of relief to those companies whose earnings increased in the last half of the 4 years of the base period. That relief was given in section 713 (f). As the statute is worded, it fails to give relief uniformly to a parent corporation which has acquired its subsidiary during the base period.

Counsel for the company have prepared a memorandum which points out, in somewhat greater detail, the omissions in the statute which deny us the benefits which we believe Congress intended us to have, and which makes a suggestion as to the changes we think should be made in the statute. We ask permission to file a copy of this memorandum for your consideration.

The CHAIRMAN. Thank you very much, Mr. Embry.

Mr. EMBRY. Any questions?

The CHAIRMAN. It may be that in the subsequent bill the committee will be called on to consider during the coming winter that your situation can be pretty carefully canvassed.

You can file your memorandum for this record so we will have it.

Mr. EMBRY. Thank you.

(Mr. Embry submitted the following memorandum:)

MEMORANDUM AS TO APPLICATION OF GROWTH COMPANIES RELIEF PROVISION TO PARENT CORPORATION AND CONTROLLED SUBSIDIARY

EXCESS-PROFITS TAX

The excess-profits-tax provisions of the Internal Revenue Code fail to make adequate provision for acquiring corporations. As the statute now reads, it is certain that an acquiring corporation electing to be taxed under section 742 would lose the benefit of the growth provisions in section 713 (f). Denial of the benefit of such relief to acquiring corporations which have absorbed their subsidiaries during the base period is inconsistent with other provisions of the statute and with the general intention behind the 1941 amendments which inserted the growth provisions into the statute.

This memorandum is limited to a discussion of the problem as it affects a parent corporation which has absorbed, during the base period, a subsidiary which had been controlled by the parent corporation throughout the base period up to the time of absorption or acquisition. The fact that a company in such a situation is unequally treated under the 1941 excess-profits-tax amendments is readily illustrated by the use of comparative examples.

Situation I.—By way of illustration assume that corporation A has been in existence over the period from December 31, 1935, to date, and that during this period, until liquidation on December 31, 1938, it owned all of the voting stock of corporation B, which likewise has been in existence over such period; assume that the base-period net income of corporation A and corporation B (both up to December 31, 1938, when it was liquidated and merged with corporation A) was as follows:

Year	Corporation A	Corporation B	Combined
(1)	(2)	(3)	(4)
1936	$-32,409.18	$638,087.40	$605,678.22
1937	-21,966.58	768,538.39	746,571.81
1938	-17,687.22	881,013.01	863,325.79
1939	1,130,072.17		1,130,072.17
Total	1,058,000.19	2,287,638.80	3,345,647.99

(*a*) If the incomes of the companies A and B are combined under section 742, (see column 4) the combined income for the 4 years would be $3,345,647.99 and the average base period net income would be $836,421. The excess-profits credit, assuming no capital additions or deductions, would be $794,591.40.

(*b*) If corporation A computes its excess-profits credit under section 713 rather than section 742 (see column 2) its average base period income is $847,882.66 and its excess-profits credit is $805,488.53. This result is indicated in the following tabulation:

Corporation A

Calendar year 1936	—$32,409.18
Calendar year 1937	—21,966.58
Total first half	—54,375.76
Calendar year 1938	—17,687.22
Calendar year 1939	1,130,072.17
Total, last half	1,112,384.95
Difference	1,166,760.71
One-half of difference	583,380.36
Total, last half	1,112,384.95
Total	1,695,765.31
Average of above total (½)	847,882.66
Average base period net income	847,882.66
95 percent of average base period net income	805,488.53

Situation II.—If corporation B had continued in existence instead of being dissolved as of December 31, 1938, corporations A and B would have been entitled to file a consolidated return (I. R. C. sec. 730 added by sec. 201, Second Revenue Act of 1940 as amended by section 7, Excess-profits amendments of 1941; regulation 110, section 33.30 and 33.31 (a) (22)). On such consolidated basis the average base period net income after applying limitation would have been $1,130,072.17 and the excess profits credit would have been $1,073,568.56, as indicated in the following tabulation:

Corporation A and corporation B

Calendar year 1936	$605,678.22
Calendar year 1937	746,571.81
Total, first half	1,352,250.03
Calendar year 1938	863,325.79
Calendar year 1939	1,130,072.17
Total, last half	1,993,397.96
Difference	641,147.93
One-half of difference	320,573.97
Total, last half	1,993,397.96
Total	2,313,971.93
Average of above total (one-half)	1,156,985.97
Base period net income computed under section 713 would have been	$1,130,072.17
95 percent of average base period net income	1,073,568.56

Situation III. (*a*) If, on the other hand, instead of continuing in existence through 1939 and 1940 (situation II), or instead of liquidating on December 31, 1938 (situation I), which are the two suppositions made above, corporation B had liquidated into corporation A on December 31, 1937, corporation A's average base period net income computed under section 713 would have been 1,130,072.17 (after applying the limitation) and its excess-profits credit $1,073,568.56, as indicated in the following tabulation:

Corporation A

Calendar year 1936	—$32,409.18
Calendar year 1937	—21,966.58
Total, first half	—54,375.76
Calendar year 1938	863,325.79
Calendar year 1939	1,130,072.17
Total, last half	1,993,397.96
Difference	1,939,022.20
One-half of difference	969,511.10
Total, last half	1,993,397.96
Total	2,962,909.06
Average of above total (½)	1,481,454.53
Limitation under sec. 713 (f)	1,130,072.17
95 percent of average base period net income	1,073,568.56

(*b*) Assuming liquidation of corporation B into corporation A on December 31, 1937, if corporation A elected to compute its tax under section 742 rather than section 713, its excess-profits credit would be only $794,591.40, or the same as in situation I (a).

Summary of excess-profit credit allowable

Subsidiary liquidated Dec. 31, 1937 (1)		Subsidiary liquidated Dec. 31, 1938 (2)		Subsidiary not liquidated (3)
If taxpayer elects to compute credit under sec. 742	If taxpayer elects to compute credit under sec. 713	If taxpayer elects to compute credit under sec. 742	If taxpayer elects to compute credit under sec. 713	
$794,591.40	$1,073,568.56	$794,591.40	$805,488.53	$1,073,568.56

It seems reasonably clear that the mere fact of dissolution of the subsidiary on December 31, 1938, should not result in an excess-profits tax credit different from the credit allowed where the two companies remain in existence during the full base period and the taxable year or where the controlled subsidiary was liquidated December 31, 1937.

In the case which we have used as illustrating this problem (situation I—dissolution of corporation B on December 31, 1938), corporation A is strangely enough better off by electing to be taxed under section 713 on its own base-period earnings including 3 years of losses than by electing to be taxed under section 742 and using the combined earnings of itself and its subsidiary. The reason for this result is that by electing to be taxed under section 713 the company is assured of the relief provided in the growth provisions (sec. 713 (f)), whereas if it elects to be taxed under section 742 it must determine its average base period net income without reference to the growth provisions. In other words, while the combined income of A and B for the years 1936 to 1939, both inclusive, is $3,345,647.99; that is, approximately $2,288,000 more than the income of corporation A alone, the average base period net income of Corporation A determined on the combined income under section 742 is only $836,412 while the average base period net income of corporation A determined under section 713, and solely by reference to its own income, is $847,882.66.

If corporation B had liquidated 1 year earlier; that is, on December 31, 1937, corporation A would have increased its average base period net income from $847,882.66 to $1,130,072.17 if it had elected under section 713 to use only its own income; under section 742 it would have an average base period net income of $836,421, the same as though corporation B had liquidated December 31, 1938, rather than December 31, 1937.

If corporation B had not liquidated at all but continued as a subsidiary throughout the base period and the taxable year, the consolidated average base period net income of the enterprise would be $1,130,072.17.

The foregoing illustrations demonstrate the unevenness of the relief presently provided in section 742. It is inequitable not to recognize the singleness of identity and permit recognition of the growth factor in the unit where a parent and controlled subsidiary working together have through their efforts consistently increased the total earnings of the unit, as is done in the provision for consolidated returns. Clearly in a case of the character described in situation I it could not have been intended that the relief provided in section 742 should be less than the relief provided in section 713, nor could it have been intended that an acquiring corporation which has absorbed its subsidiary and thereby simplified its corporate structure should be given a lesser credit than is allowed to a parent and controlled subsidiary which continue in existence during the taxable year (see situation II); nor that a difference of 1 year in the time of absorption of a controlled subsidiary should result in an allowance for excess-profits credit which varies over 20 percent. (See situation III.)

The excess-profits tax was intended to reach only excess earnings or war profits. In the enactment of the original excess-profits tax provisions in the Second Revenue Act of 1940 and in the excess-profits-tax amendments of 1941, Congress has demonstrated its intention to adhere as closely as possible to this theory and to insert provisions in the statute to take care of cases which fall outside the simple types and in order to avoid unevenness in its application to varying situations which were basically alike.

In the case used by way of illustration in situation I, corporation A stands alone for the year 1940, having absorbed its subsidiary during the base period. The combined earnings of itself and subsidiary over the 4 base-period years average $836,412 a year. It should be entitled to use the average income of itself and subsidiary for the base-period years and the statute grants that privilege in section 742. However, in addition, it is strikingly a "growth enterprise," the earnings of the two companies having increased approximately 20 percent in each of the 4 years (see the figures above); its base-period net income for 1939 was $1,130,072.17. It would be unreasonable to impose an excess-profits tax on this corporation except on the theory that it was only the excess over $1,130,072.17, which represented excess profits, inasmuch as its profits before 1940 had reached that level and were still accelerating. This is undoubtedly a situation which Congress intended to provide for in subsection (f) of section 713, added by section 4 of the excess-profits tax amendments of 1941. The present language of the statute is, however, inadequate for that purpose.

The result suggested may be accomplished by adding to section 742 the following:

Add at the end of the first paragraph of section 742, after the phrase "section 713," eliminating the colon and substituting a comma, the following:

"subject to the exception that if the acquiring corporation has been in control of a qualified component corporation or corporations during its entire base period and at all times until the acquiring corporation became an acquiring corporation with respect thereto, and if the aggregate excess profits net income, as computed under subsection (h) for the last half of its base period and reduced by the aggregate of the deficit of such corporations in excess profits net income for such half, is greater than such aggregate so reduced for the first half, then the average base period net income shall be the amount determined under subsection (h) if greater than the amount otherwise determined hereunder."

Add as a new subsection at the end of section 742 the following:

"(h) *Average base period net income—increased earnings in last half of the base period.*—The average base period net income determined under this subsection shall be determined as follows:

"(1) by computing, for each of the taxable years of the taxpayer in its base period the excess profits net income for such year as determined in subsections (a) to (g) hereof or the deficit in excess profits net income so determined, but excluding the excess profits net income or deficit of all component corporations which are not qualified component corporations of which the taxpayer was in control during its entire base period and at all times until the acquiring corporation became an acquiring corporation with respect thereto;

"(2) by computing, for each half of the base period the aggregate of the excess profits net income, as computed in paragraph (1), for each of the taxable years in such half, reduced, if for one or more of such years there was a deficit in such excess-profits net income, by the sum of such deficits;

"(3) if the amount ascertained under paragraph (2) for the second half is greater than the amount ascertained for the first half, by dividing the difference by two;

"(4) by adding the amount ascertained under paragraph (3) to the amount ascertained under paragraph (2) for the second half of the base period;

"(5) by dividing the amount found under paragraph (4) by two;

"(6) The amount ascertained under paragraph (5) shall be the average base period net income determined under this subsection, except that the base period net income determined under this subsection shall in no case be greater than the highest excess-profits net income, as determined in subsections (a) to (g) hereof, but excluding the excess-profits net income or deficit of all component corporations which are not qualified component corporations of which the taxpayer was in control during its entire base period and at all times until the acquiring corporation became an acquiring corporation with respect thereto, for any taxable year in the base period;

"(7) As used in this subsection the term 'control' means the ownership of stock possessing at least 80 per centum of the total combined voting power of all classes of stock entitled to vote."

The CHAIRMAN. There is a witness here who wants to get away and I understand his statement is very brief, Mr. Thomas Whitaker.

Mr. Whitaker, we are calling you out of order, because your statement is not long, as I understand it.

Mr. WHITAKER. I certainly appreciate it; I want to get away as I have to leave town.

STATEMENT OF THOMAS WHITAKER, TAMPA, FLA., REPRESENTING FLORIDA CABARETS AND RESTAURANTS

Mr. WHITAKER. My name is Thomas Whitaker, of Whitaker Bros., Tampa, Fla., and I am representing the Columbia Restaurant located in Tampa, Fla. I will say here, however, by way of interpolation, that while we only directly represent this one restaurant, there are undoubtedly thousands of restaurants in the United States in the same position we are in.

The Columbia Restaurant operates a strictly high-class Spanish restaurant, specializing in Spanish foods served in the atmosphere of the Latin countries. No performances nor entertainment of any kind is given with the exception that an orchestra is maintained by the restaurant and the patrons are permitted to dance if they so desire; however, no dance program is arranged by the restaurant. No admission or cover charge is made by the restaurant, and the music, along with the privilege to dance, is an incident to the restaurant business. In other words, the maintenance of the orchestra by this restaurant is for the purpose of carrying out the scheme of serving Spanish foods in a Latin country atmosphere, rather than for entertainment purposes. All we are asking is that this restaurant be protected by clarification of the section in question, so that the basis for a distinction between the interpretation as now made in the Treasury Department between restaurants such as the Columbia Restaurant and the ordinary restaurant will be removed.

Senator BAILEY. What is your contention?

Mr. WHITAKER. Our contention is that we are operating a restaurant business, purely and simply.

Senator BAILEY. But you have music and dancing.

Mr. WHITAKER. We have music and we permit dancing. We do not arrange dances; we don't put on cabaret shows or acts of entertainment or anything of that nature.

Senator BAILEY. Music is provided; dancing is optional, and if you call it Spanish atmosphere you will get free of the tax?

Mr. WHITAKER. No, sir; it just so happens, as I said awhile ago, there are thousands of restaurants throughout the United States who are in our position who are not following out the Spanish atmosphere. In other words, the music and dancing is purely an incident to the food with us, not a case of where the food is incidental to the entertainment and dancing.

Senator BAILEY. I don't know how you get the distinction as to that; whether the music is incidental or whether the food is incidental.

Mr. WHITAKER. One illustration: The restaurant business is one that operates on a very small margin of profit.. The profit shown by the Columbia Restaurant during the last year was less than 3 percent net of its gross revenue. Our average we had figured up before I left there. Our average bill as compared with our gross business, and it ranged between $1.65 and $1.75; that is the average bill of all people who come in here and trade with us; but under this proposal this will be a gross-receipts tax of 5 percent tacked on us, whereas we are competing with restaurants, not cabarets; in other words, we are in a position where we cannot, our economical position will not permit us to absorb that.

The CHAIRMAN. Have you an amendment?

Mr. WHITAKER. I have this suggestion only: We believe this can be done by the use of a few simple words clearly setting forth that this section covers an entertainment tax and is not intended to cover restaurants which only furnish music and permit dancing as an incident to the operation of the restaurant business. If, however—now we come to another point which we want clearly understood—if, however, it should be the desire to place a tax on restaurants, we feel it should cover all restaurants and should so state in the tax bill so that no question of interpretation can arise. In other words, we find ourselves in the anomalous situation that we are not operating a roof garden or a cabaret and yet we are being taxed for and on the theory that such is our operation.

Senator BAILEY. What is a cabaret?

Mr. WHITAKER. A cabaret is a place which sells entertainment.

Senator BAILEY. And food?

Mr. WHITAKER. And food. Food, however, is incidental to the entertainment; they have cover charges, admission prices of one kind or another, which we do not have. We have none of that at all. They put on performances; they have vaudeville acts and different types of entertainment that they give; we have none at all. Yet it has been ruled that the tax does not apply where they have what is known as canned music and the people get up and dance to that; we are in competition with those places in Tampa. Such places are not required to pay the tax because they do not furnish the music; that has been the interpretation placed on it. In other words, the restaurant itself is not furnishing the music to which they dance because the customer drops his nickel in the slot and dances. Yet music and dancing is available in these places in competition with us.

Senator BAILEY. I know of one hotel in Washington where they have this chain music, where the music comes in at meal times over the radio. Is that taxable?

Mr. WHITAKER. My understanding is that it is not under the provision we are complaining of.

Senator BAILEY. Cabarets are a new word in our vocabulary; I am not sure how it has been defined.

Mr. WHITAKER. My understanding is as I have indicated.

Senator BAILEY. In cabarets the entertainment is the main thing; in restaurants the food is supposed to be.

Mr. WHITAKER. That is it, and we have no objection, as I say, if it is the desire to place a tax on restaurants, we are perfectly willing to pay it, but we do feel that when we find ourselves in the restaurant business and taxed on the theory we are in the cabaret business, with a restaurant across the street from us serving food exactly as we are not being required to pay the tax, it is something which puts us at considerable disadvantage.

Senator BAILEY. If you had a tax on restaurants, you do have a tax on all dining rooms?

Mr. WHITAKER. Yes; and we are not complaining of that.

Senator BAILEY. Do you have a tax on food?

Mr. WHITAKER. No, sir.

The CHAIRMAN. The trouble seems to be the Treasury has construed a restaurant such as you operate as a cabaret, "or other similar place furnishing a public performance for profit," which for quite some years has been taxable. Perhaps, a distinction might be drawn if you only furnished the music, but when you furnish music coupled with an opportunity to dance, then the Treasury's interpretation doesn't seem to me to be so unreasonable in your case.
