Mr. WHITAKER. The only complaint we have there is that the ruling and interpretation made by the Treasury Department only applies where the restaurant itself furnishes orchestra music. If it is carried on as I suggested a while ago by the use and employment of an organ where a coin is dropped in, they still permit it to go untaxed.

Senator BAILEY. You would be satisfied if we extended the tax to those places?

Mr. WHITAKER. Yes; that would eliminate the discrimination and that is our complaint.

The CHAIRMAN. We have your point: You would like to have the statute clarified so you wouldn't get under it, or if you did, that you would not be discriminated against?

Mr. WHITAKER. That is it exactly.

(The following prepared statement was submitted by Mr. Whitaker:)

AUGUST 20, 1941.

My name is Thomas Whitaker, of the law firm of Whitaker Bros., of Tampa, Fla., representing the Columbia Restaurant, located in Tampa, Fla. This brief is submitted on provisions of section 542 of H. R. 5417, being the revenue act now pending before the Finance Committee of the Senate.

The particular section above referred to, and which will be discussed herein, is entitled "Cabaret, roof garden, etc., tax," and is found on page 46 of the printed copy of said bill.

Our contention is that the tax imposed by said section above referred to does not apply to a restaurant such as is operated by the Columbia Restaurant. However, owing to the regulations and the interpretation placed upon the wording of said section, the Internal Revenue Division of the Treasury Department has ruled that the tax does apply. The Florida Senators agreed with us that it was not intended for section 542 to apply to restaurants operated in the manner which the

Columbia is operated. Senator Pepper called the legislative drafting committee and was informed that under their interpretation the section would not apply.

The Columbia Restaurant, with an investment of approximately $150,000 or more, operates a strictly high-class Spanish restaurant, specializing in Spanish foods served in the atmosphere of the Latin countries. No performances nor entertainment of any kind is given with the exception that an orchestra is maintained by the restaurant and the patrons are permitted to dance if they so desire; however, no dance program is arranged by the restaurant. No admission or cover charge is made by the restaurant, and the music, along with the privilege to dance, is an incident to the restaurant business. In other words, the maintenance of the orchestra by this restaurant is for the purpose of carrying out the scheme of serving Spanish foods in a Latin country atmosphere rather than for entertainment purposes.

All we are asking is that this section be clarified so that the basis for the difference between the interpretation as now made by the Internal Revenue Bureau of the Treasury Department and the opinion of legal authorities as well as the legislative drafting committee as to what this section covers will be removed. We believe that this can be done by the use of a few simple words clearly setting forth that this section is an entertainment tax and is not intended to cover restaurants which only furnish music and permit dancing as an incident to the operation of the restaurant business.

If, however, it should be the desire to place a tax on restaurants, we feel that it should cover all restaurants and should so state in the tax bill, so that no discrimination could result therefrom.

If a tax is levied, it should be mandatory that the tax be separately listed and shown on the bill rendered to the consumer.

The CHAIRMAN. Before taking a recess, I wish to have incorporated in the printed record a letter addressed to me by Senator Wiley, of Wisconsin.

(The letter referred to is as follows:)

UNITED STATES SENATE,
COMMITTEE ON THE JUDICIARY,
August 9, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR: Since August 4, 1941, when H. R. 5417 passed the House of Representatives, I have had occasion to make daily telephone calls to the Senate Finance Committee expressing my views with reference to certain portions of H. R. 5417.

Like all Members of Congress, I have received a great many letters concerned with certain specific portions of the pending measure. I have already discussed most of the views contained in these letters in conversation with the committee.

Because representatives of these various views will appear before your committee, and because the committee clerk advises me that the testimony in these hearings will be so voluminous that it will be impossible to encumber the written record of the hearings with such an extensive correspondence, I will not request that this material be incorporated in the hearings.

Supplementing my telephone conversations, however, I am presenting my correspondence files on H. R. 5417.

It is my understanding that the points raised in these letters will be given every consideration by the committee in their deliberations on this measure.

I want to express my appreciation for the courtesy and consideration which the members of your staff have extended to me. I have made numerous calls on their time, and they have always evidenced a genuine willingness to cooperate in the consideration of views presented by my constituents.

With kindest regards.

Sincerely yours,

ALEXANDER WILEY.

The CHAIRMAN. I have before me statements by Representative Curtis and Mr. A. W. Kohler and a memorandum by Mr. Ike Lanier, which will be incorporated in the record at this point.

(The statements and memorandum are as follows:)

STATEMENT OF HON. CARL T. CURTIS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEBRASKA, BEFORE THE COMMITTEE ON FINANCE IN REFERENCE TO A PROPOSED TAX ON BILLBOARDS

Mr. Chairman, I wish to impose upon the committee's time briefly to protest the tax upon outdoor advertising, or what is commonly referred to as billboards. No opportunity came to make this protest before the Ways and Means Committee of the House of Representatives. I believe it is fair to state that no notice was given that such a tax was being considered; consequently, no one had an opportunity to appear in protest thereof.

In support of my position, I wish to make the following points:

(1) A tax on billboards is a tax on advertising, without covering the whole field of advertising. I am not here to suggest that other mediums of advertising be taxed, but surely there is no justice in picking out one type of advertising and imposing a tax thereon. Advertising is essential to our system of free enterprise and open competition.

(2) The tax on billboards as it passed the House of Representatives would in many instances be confiscatory. I am referring particularly to billboards in rural areas and small towns where the revenue is very limited.

(3) Many billboards have been contracted for 2, 3, or 5 years in advance. The price has been agreed upon without any knowledge of any special Federal tax that might be placed against the billboard owner. In these cases it would either mean the breaking of the contract and the destruction of the billboard or an unjust and unfair tax imposed upon the owner of the billboard.

(4) The big concerns, or the wealthy advertiser, might be able to pay this tax and continue his billboards, especially if his advertising was carried on in order to cut down his income tax. That is not true of the smaller towns, or the small businessman. It merely takes his outdoor advertising away from him and destroys the property rights of the owner of the billboards.

(5) It must be borne in mind that the billboards of our Nation have given freely to safety campaigns, the Red Cross, community chests, national defense, and many, many other worth-while things. It is unjust to single out this particular type of advertising for a Federal tax.

Respectfully submitted.

CARL T. CURTIS, M. C.,
Fourth District of Nebraska.

NATIONAL ASSOCIATION OF MOTOR BUS OPERATORS,
Washington, D. C., August 21, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

DEAR SENATOR GEORGE: As secretary-manager of the National Association of Motor Bus Operators, I am transmitting to you herewith a statement in opposition to the proposed increase in the Federal gasoline tax.

Our association does not oppose this tax for the reason that we are opposed to increased taxation in this period of emergency, but because of the fact that it is discriminatory in character.

The members of the motorbus industry are engaged in a highly competitive business, and for them to be singled out among the passenger carriers for special taxation resulting in increased operating costs will seriously handicap them in furnishing the public with a high-class and necessary service.

I shall appreciate it if you will file the enclosed copy of our statement with the Finance Committee and bring it to the attention of the members of the committee.

Respectfully yours,

A. W. KOEHLER, *Secretary-Manager.*

Encl.

STATEMENT OF NATIONAL ASSOCIATION OF MOTOR BUS OPERATORS ON PROPOSED ADDITIONAL INCREASE IN FEDERAL GASOLINE TAX

In a statement submitted to the House Ways and Means Committee in opposition to any further increase in the Federal gasoline-tax rate, the National Association of Motor Bus Operators stated its belief that those engaged in commercial highway transportation cheerfully should pay their full share of the cost of national defense. The National Association of Motor Bus Operators now reaffirms that belief but hopes to give it greater emphasis by pointing out that it would be unfair to compel commercial highway transportation to bear a disproportionate share of national-defense costs.

The National Association of Motor Bus Operators always has tried to avoid being known as a chronic complainer. It has been the policy of our organization never to express opposition to public policy unless we sincerely were convinced that the policy was unsound or inequitable. For example, motorbus operators accepted without complaint the increase in the Federal gasoline tax and other automotive levies enacted by the Revenue Act of 1940, even though those increases were most substantial, because as patriotic citizens they recognized the critical need for more revenue and were ready and willing to bear their rightful share, and more, of the burden.

Ever since the proposal to increase further the Federal gasoline-tax rate from 1½ to 2½ cents a gallon first was suggested; however, bus operators—individually and as a group—have felt that enactment of this proposal would be both unsound and inequitable. The viewpoint of these men is the viewpoint of their national association. In their behalf, therefore, the National Association of Motor Bus Operators has felt that rightfully it should make known this viewpoint, and the considerations on which it is based, to the legislative authorities weighing the expediency of this proposal.

The National Association of Motor Bus Operators believes that a further increase in the Federal gasoline tax would be unsound because—

1. The gasoline tax is a good tax measure only when used as a "benefit impost." The volume of gasoline consumed by an individual determines the amount of tax he must pay. To be a sound measure of tax responsibility the consumption of gasoline should either reflect the taxpayer's ability to pay or his benefits received. Obviously gasoline consumption does not indicate ability to pay, because the small farmer may consume many times more gasoline in earning his living than does the fabulously paid moving-picture actor. On the other hand, gasoline consumption does measure with reasonable accuracy one form of special benefit received by the taxpayer, namely, road benefits. A gasoline taxpayer's consumption of gasoline, roughly, is proportionate with his use of the roads. As a road tax, therefore, the gasoline tax is a sound tax measure, but it does not possess the characteristics that determine a good tax measure to raise revenue for general governmental purposes.

2. The taxation of gasoline is primarily a State tax field. The gasoline tax was originated by the States, and each of the States already had come to rely heavily on this impost long before the Federal Government first levied a tax on gasoline. Moreover, it has been shown that the gasoline tax most properly should be used as a benefit tax and is most favorably suited to financing highway construction and maintenance. Since the provision of highways still is primarily a State function, the continued and successful use of the gasoline tax by the States should not be jeopardized by an excessive duplicating Federal gasoline-tax rate.

3. Gasoline consumption is not "luxury consumption" and therefore should not be taxed as such. To classify gasoline with liquor, tobacco, cosmetics, and other luxuries for the purpose of justifying comparable tax rates is erroneous and misleading. Actually, as was pointed out to the House Ways and Means Committee time and time again, the major portion of the gasoline consumed by motor vehicles in this country is consumed on "necessity trips." A tax on gasoline, therefore, is a tax on "necessity transportation," not on the Suday ride.

4. Excessive taxation of gasoline impedes the full development of highway transportation. Since the fullest possible development of transport facilities is essential to the national-defense effort and the conduct of civilian life, it is imperative to consider the fact that excessive taxation of gasoline would impede this development. The motorbus, for example, is depended on today to carry workers to factories engaged in defense work. There are today some 48,000 communities throughout the United States that are dependent entirely upon the motorbus for their public passenger transportation. Since the cost of fuel is one

of the most important factors in motorbus operation, excessive gasoline taxes increase operating costs very substantially and discourages the fullest possible development of this new flexible and low-cost form of transportation.

The National Association of Motor Bus Operators believes that a further increase in the Federal gasoline tax would be inequitable because—

1. The revenue bill of 1941 already provides for the payment of a fair share of the new defense-tax burden by the automotive groups, including bus operators. Last year the increases in the Federal automotive excise-tax rates which were enacted were considerably more severe than those enacted for excise rates on other commodities. This year it is proposed to increase again all these Federal automotive tax rates, except the Federal gasoline tax. Combined with the increases enacted last year, these new proposed automotive-tax increases still are considerably higher than those for any other tax subject. In place of an increase in the Federal gasoline tax, an annual "use" tax of $5 for each vehicle on all motor vehicles is proposed. These new automotive tax rates will exact from the automotive group in excess of $285,000,000 each year in addition to the more than $500,000,000 in Federal excise taxes already paid by this group. Of these amounts, motorbus operators even now pay more than their proportionate share per vehicle because of their extensive use of automotive equipment and fuel. To superimpose on these proposed Federal excise-tax increases and the new "use" tax a further increase in the Federal gasoline tax would compel the automotive group to bear a disproportionate share of defense costs.

2. Motor-bus operators already bear an unusually heavy tax burden. Authoritative studies disclose that the average motor bus now pays about $1,200 annually in operating taxes and licenses. This figure does not include income and profits taxes, property taxes, and other general imposts. The larger motor-bus companies, operating in interstate service, pay in operating taxes and licenses an average of $3,392 for each bus. The extent to which such taxation is a burden on bus operation may readily be appreciated when it is understood that these taxes now comprise about 15 percent of the total variable operating costs of the motor-bus operator. Inasmuch as the cost of gasoline is one of the most important factors in bus-operating costs, the excessive taxation of gasoline becomes particularly burdensome on motor-bus operators.

3. An increased Federal gasoline tax would add to the excessive tax which gasoline now bears. Concerted opposition has been voiced against proposals that a Federal general sales tax be imposed, on the grounds that it severely would penalize persons of modest means. Usually it has been suggested that such a general sales tax should be imposed at the rate of 1 or 2 percent of the sales price. Yet, even at present rates, the Federal gasoline tax rate represents a special sales tax of about 12 percent. If the Federal gasoline tax were increased an additional 1 cent a gallon, it then would represent a sales tax of 20 percent. Including State and local gasoline taxes, consumers of gasoline now pay a special sales tax of 47 percent.

4. Bus transportation, which more than pays its way, would be compelled to assume a much greater tax burden than its competitors who receive governmental subsidies. The Federal Eastman report on Public Aids To Transportation revealed that highway transportation, including bus transport, was the only form of transportation, other than pipe lines, which pays its way and more. This report found that large busses paid special taxes that exceeded their share of highway costs by as much as $249 per vehicle per year. General tax payments by busses, of course, were in addition to these special taxes. The fare charged by bus-transportation companies are fixed by franchises or regulation. Obviously, the new 5-percent tax proposed for passenger fares will affect all competing forms of transportation in the same manner. But if another increase in the Federal gasoline tax is imposed, only those forms of transportation using gasoline as fuel, principally highway transportation, would be compelled to bear the extra cost. With the fares they can charge rigidly inflexible, bus operators then would be at a competitive disadvantage. It would be inequitable to impose a burdensome tax on one form of transportation and thus place it in an unfavorable position in its field of competition.

MURPHY, LANIER & QUINN,
Washington, D. C., August 20, 1941.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee of the Senate,
Washington, D. C.

DEAR SIR: We ask the privilege of filing, for the consideration of the Senate Finance Committee, the attached memorandum in regard to joint Federal income-tax returns for husbands and wives and that the same be incorporated in the record of the proceedings before your committee.

We represent a great many individuals who would be affected by this proposed provision. It appears to us that the proposal now before the Senate Finance Committee to tax jointly income received from property but to exempt earned income is just as unconstitutional as the proposal contained in the House bill to tax jointly all income received by husband and wife.

Very truly yours,

IKE LANIER.

Encl.

MEMORANDUM RE JOINT TAXATION OF INCOMES OF HUSBAND AND WIFE

It is our purpose in this memorandum to develop the historical background and development of women's rights as they now exist, to point out their present status, and to indicate those considerations which we believe controlling with reference to the question of the proposed joint taxation for income-tax purposes.

HISTORICAL DEVELOPMENT

At common law, the wife's personalty in possession vested exclusively in her husband, without any act on his part, and, on his death, passed to his personal representatives. This was true as to personalty owned by her at the time of the marriage, personalty acquired during coverture, personalty in her actual possession, and personalty in the actual possession of some third party holding adversely. This property became as much the husband's as if it had been acquired by him originally. He could dispose of it as he saw fit; it could be seized by his creditors and subjected to the payment of his debts; and on his death it went to his personal representatives, even though the wife was the survivor. The husband's right to his wife's personalty in possession was the result of the marriage and depended upon nothing else. The right lasted as long as the marriage relation lasted.

At common law, the husband was entitled to his wife's choses in action if he reduced them to possession during coverture but not otherwise. To reduce them to possession he had only to exert some act of ownership over them, with the intention of converting them to his own use.

At common law the husband had the enjoyment of his wife's chattels real (leases and terms of years) during his life, with the power to dispose of or encumber them, and they were liable for his debts. If undisposed of upon his death, they belonged to the wife. If the wife predeceased him, they passed to him as administrator.

Where, at the time of marriage or during coverture, a woman was seized of an estate of inheritance in land, the husband was entitled to its usufruct. His estate lasted at least during coverture; and in case there was issue of the marriage born alive and capable of inheriting her estate, his estate continued as tenant by the curtesy initiate during the wife's life, and as tenant by the curtesy consummate after her death, for the remainder of his life. The husband's estate extended only to the use of the land. He was entitled to the rents, issues, and profits, and upon his death the emplements growing upon the land went to his representatives (*Breeding* v. *Davis*, 77 Va. 639, 46 Am. Rep. 740).

A married woman at common law had no power or capacity to contract other than her right in equity to contract with reference to her equitable separate estate so as to bind it (but not herself personally). Her attempted contracts were not merely voidable but were absolutely void.

The only way that a wife could hold property as a feme sole, free from the control of her husband, was to have a conveyance settled to her sole and separate use. To create such an equitable separate estate in the wife there had to be an intention on the part of the settlor that the wife should take and that the husband should not.

The above rules are of some historical interest, but of historical significance only. The law relating to the capacity of a married woman to own and control property and to contract has been almost completely remade since the beginning of the development of American law. This remaking has been accomplished by both legislation and judicial decision. The development of the present law of this subject has been a most interesting process, but the process has so definitely reached its conclusion in so large a majority of American jurisdictions that it is now universally accepted. This is a long step from the common law, where, as Blackstone puts it: "*By marriage the husband and wife are one person in law;* that is, the very being or legal existence of the woman is suspended during the marriage, or at least is incorporated and consolidated into that of the husband." (Italics supplied.) (See further Pollock and Maitland, History of English Law (2d ed.), ch. 7, sec. 2.)

Statutes have been enacted in practically every State providing that all property, real or personal, owned by a married woman at the time of her marriage, or acquired by her thereafter, should be and remain her separate property, free from the control of her husband.

In most States the statutes, either expressly or by construction of the courts, give married women the power to convey or dispose of their property, real or personal, but in a number of States the statutes require that the husband join in a wife's conveyance of her land in order to make it valid. In some States a husband has an inchoate interest in his wife's land, such as curtesy, statutory dower, or homestead, which is not divested by her conveyance of her lands, unless he releases such interest by joining in the conveyance or otherwise.

These changes were brought about by the statutes, known as the married women's acts, which have been everywhere adopted, though in varying terms and with varying effects, with the purpose of eliminating or modifying the harsh doctrines of the common law with reference to the legal status of married women. This legislation began in many of the States around the year 1850. As early as 1839 such a statute was enacted in Mississippi (Laws of 1839, ch. 46), Maryland (ch. 161 of Laws of 1841), Michigan (No. 66 of Laws of 1844).

In some States there are even constitutional provisions intended to secure the property rights of married women (Constitution of Arkansas, 1874, art. 9, secs. 7 and 8; Constitution of South Carolina 1895, art. 17, sec. 9; Constitution of West Virginia, art 6, sec. 49).

Under the statutes as they now exist, it has been held that a married woman has a separate estate in property acquired by gift (*Salisbury* v. *Spofford*, 22 Idaho 393; *Chorn* v. *Chorn's Adm'r.*, 98 Ky. 627; *Hess* v. *Brown*, 111 Pa. 124). A husband who executed a note to his wife for money received by her as heir of her mother, thereby made the note the wife's separate property, and deprived himself of any right to or interest in either the money or the note, though it did not in terms recite that it was for the wife's separate use (*Bennett* v. *Bennett's Adm'r.*, 134 Ky. 444). A wife acquires land as her separate estate if the consideration used in paying for the property was hers (*Johnson* v. *Johnson* (Taxes), 207 S. W. 202). Where property was paid for by the husband's checks, it is nevertheless the wife's property if the actual purchase money was funds of the wife previously given to him (*Conron* v. *Cauchois*, 242 Fed. 909). The property is hers, if purchased with her money, even though title is taken in the name of the husband (*Adone* v. *Spencer*, 62 N. J. Eq. 782, 50 L. R. A. 817; *Gooch* v. *Weldon Bank & Trust Co.*, 176 N. C. 213). In most States her earnings in activities not connected with her household duties are hers (*Nuding* v. *Urich*, 169 Pa. 289, 32 A. 409). In practically all States such damages as she may recover for torts committed against her are her separate property (*Blacchinska* v. *Howard Mission & Home for Little Wanderers*, 130 N. Y. 497, 15 L. R. A. 215; *Harmon* v. *Old Colony R. Co.*, 165 Mass. 100, 30 L. R. A. 658).

DISCUSSION

In any discussion relating to the separateness of the taxing entities—husband and wife—we must, of necessity, make careful differentiation of statutory and constitutional aspects. What the statute now provides, and the respective interpretations and troubles that have arisen thereunder, is one thing; what the statute may or can provide under the Constitution, is another thing. In the present case, the constitutional aspect is the more important. Many cases having a bearing on the construction of the statute do not reach the underlying constitutional principles involved; and our discussion must avoid these, yet cover those

cases which indicate, through an interpretation of the statute, the true condition of the basic constitutional mandate.

As we have pointed out, the early rule was that husband and wife were one, and that that one was the husband. Whatever may be said about the inequality and undesirability of such a rule of law, it definitely contemplated marital economic unity. The law has now developed, in the United States, to the point where the wife and husband are separate persons.

Under the modern taxing concept of a wife's status, she is liable for the tax on the income from her property, and remains, for tax purposes as otherwise, separate from her husband. This is true in community property States (*Poe* v. *Seaborn*, 282 U. S. 101), as well as in other States (*Margaret A. Holmes*, 27 B. T. A. 660). The income-tax statute taxes the "net income of every individual." The phrase has been construed so that "of" means ownership (*Poe* v. *Seaborn*, *supra*). In other words, the ownership of capital, which is one of the principal sources of income, determines the identity of the taxpayer who shall bear the burden of taxation with respect to such income (*Helvering* v. *City Bank Farmers Trust Co.*, 296 U. S. 85; *Helvering* v. *Helmholz*, 296 U. S. 93; *White* v. *Poor*, 296 U. S. 98). This has been most clearly illustrated in the cases relating to the assignment of income. Unless the corpus which produced the income was also assigned, the assignor was not relieved of income-tax liability. (*Lowery* v. *Helvering*, 70 Fed. (2d) 713, and the cases cited immediately above). It has been held further that the law may not make a different rule for husband and wife from the rule which obtains with respect to other parties equally separate in the eyes of the law (*Tracy et ux.* v. *Commissioner*, 70 Fed. (2d) 93). The very premise of all these decisions, and many others which might be cited, is the legal separateness of husband and wife. There would be no need to resort to ownership as a test of tax incidence if the husband and wife were a taxable unit; it would be a simple matter to distinguish the husband and wife cases from the general rule where ownership is the test. The historical fact is that the ownership test rule originated in the husband-and-wife cases; and that because husband and wife had developed legal separateness, it was necessary to establish the ownership test.

We might further point out that the courts have deemed it incumbent upon them to define ownership in a substantial, as distinguished from a narrow and technical, sense. Dominion and control and actual command over the property, and not mere refinements of title, control (*United States* v. *Robbins*, 269 U. S. 315; *Harold G. Parker*, 39 B. T. A. 423; *Richardson* v. *Smith*, 102 Fed. (2d) 697).

So many cases have been decided relating to the separateness of husband and wife, with reference to deductions for payments made, one to the other, that the matter is almost axiomatic. Where the payments are reasonable, and the transactions bona fide, no question arises.

The procedural rules and requirements relating to income tax carry further the idea of legal separateness. Husband and wife are separate persons for the purposes of board appeals (*Ethel Weisser*, 32 B. T. A. 755). See also rules 5 and 6 of the United States Board of Tax Appeals, 1941 revision. It has been held that a notice of deficiency sent to the husband is not notice to the wife (*Reynolds* v. *Glenn*, 1935 C. C. H., par. 9415). Further, the Commissioner may not credit a husband's account, without special consent, with a refund due to a wife (*Krug* v. *U. S.*, 18 F. Supp. 242).

It is true, as pointed out by some, that England taxes the combined incomes of husband and wife (44 Harvard 988; 32 Columbia 374; 13 Tax Magazine 198), but it must be remembered that every time a new law is enacted by the English Parliament a change is made, to that extent, in its Constitution. Hence, their income-tax law represents a derogation from the rights attained by women under the married women's acts. This follows the theory of Holmes in the *Hoeper case*. Such a change cannot be made by legislative enactment in this country—first, the State constitutions would have to be changed and the Federal Government granted that power, perhaps through a constitutional amendment, for Congress now has no such jurisdiction over the marital status.

It would seem clear that the status of husband and wife must be determined in the light of their status as established as a fact by State law. (Cf. Divorce cases, differences in State laws controlling, etc.) This seems to be indicated even on principle, and seems recognized by the *Robbins case*, wherein the Supreme Court stated its understanding of its "duty" to follow the rule adopted, or settled opinion of the California courts as to the community property status of husband and wife. The Supreme Court has unequivocally re-

fused to disregard a State rule of property to work uniformity of incidence and operation of the income tax in the various States with relation to married people, holding that the constitutional requirement of uniformity is not intrinsic, but geographic (*Poe* v. *Seaborn*, 282 U. S. 285). We do not believe that the theories set forth in *Lyeth* v. *Hoey* (305 U. S. 188); *Helvering* v. *Hallock* (309 U. S. 106); and *Helvering* v. *Reynolds* (1941 P. H., par. 62046); in any way affect the validity of this statement. This may well be summed up in the words of Justice Frankfurter to the effect that "The feudal laws of property must not interfere with modern fiscal practice." We are not here dealing with the feudal laws, but rather those current constitutional rights of women which have arisen with the growth of American jurisprudence.

CONSTITUTIONAL CONSIDERATIONS

We have dealt above with the development of the modern position of man and wife, and the treatment of that status under the modern taxing statutes. The real question is whether Congress may validly, for Federal tax purposes, discard this modern philosophy of marriage. The one leading case on this subject is that of *Hoeper* v. *Tax Commission of Wisconsin* (284 U. S. 206). (Noted in 32 Columbia 374; 45 Harvard 740; 9 N. Y. Univ. L. Q. R. 490, 492; 30 Michigan L. R. 810; 44 Harvard 988.) In this case, the State of Wisconsin, one of the pioneer States in income-tax legislation, realizing the opportunity afforded by separate returns for minimization of tax liability, enacted a statute which attempted to tax a husband upon the combined total of his and his wife's income as shown by separate returns. The amount of the tax on the combined incomes assessed to the husband exceeded the sum of the taxes which would have been due if their taxable incomes had been assessed separately.

Objection was made to this assessment, on the ground that it was a violation of the due-process and equal-protection clauses of the fourteenth amendment to the Constitution. The Supreme Court majority opinion, written by Mr. Justice Roberts, upholds this contention of the husband. After coming to the conclusion that under Wisconsin law the wife's income is in the fullest degree her separate property, and in no sense that of her husband, the opinion views the question presented as one of the power of the State, by an income-tax law, to measure the husband's tax, "not by his own income, but, in part, by that of another."

Mr. Justice Roberts, early in his opinion, cites certain language from *Knowlton* v. *Moore* (178 U. S. 41), which he believed apposite:

"It may be doubted by some, aside from express constitutional restrictions, whether the taxation by Congress of the property of one person, accompanied with an arbitrary provision that the rate of tax shall be fixed with reference to the sum of the property of another, thus bringing about the profound inequality which we have noticed, would not transcend the limitations arising from those fundamental conceptions of free government which underlie all constitutional systems."

Then follows this interesting language:

"We have no doubt that, because of the fundamental conceptions which underlie our system, any attempt by a State to measure the tax on one person's property or income by reference to the property or income of another is contrary to due process of law as guaranteed by the fourteenth amendment. *That which is not in fact the taxpayer's income cannot be made such by calling it income.*

* * * * * * *

"It is incorrect to say that the provision of the Wisconsin income tax statute retains or reestablishes what was formerly an incident of the marriage relation. Wisconsin has not made the property of the wife that of her husband nor has it made the income from her property the income of her husband. *Nor has it established joint ownership.*

* * * * * * *

"What Wisconsin has done is to tax as a joint income that which under its law is owned separately, and thus to secure a higher tax than would be the sum of the taxes on the separate incomes." [Italics supplied.]

Mr. Justice Holmes wrote the dissenting opinion (Brandeis and Stone concurring) on the theory that Wisconsin was seeking to take away some of the rights which had been previously conferred upon married people. We might

here point out that the current court would have a difficult time hanging its hat upon this peg as the United States Congress has no right to regulate marriage in any such manner.

From the above language of the Court, it is plain that that which was unconstitutional in the Wisconsin statute was the fact that one person was taxed upon the income of another. The provision in the proposed current Federal act which provides for allocation of liability for the tax is an obvious attempt to sidestep this very issue, and to protect the proposed act from the pitfall looming in the shape of the fifth amendment. It is our belief that this is not sufficient. Assume a case in which husband and wife were, separately, liable for a tax of some $2,000 each on separate returns. When the returns were combined, because of capital gains and losses, the additional tax amounted to only $1,000. How will this be allocated? Recollections of the difficulties experienced in returns of affiliated corporations under the revenue acts prior to 1928 immediately arise. Can it be said that merely because the man has a wife, he must pay the additional $500? Certainly this is the very thing which the Court in the *Hoeper case* found wrong—the husband is being taxed upon the income of the wife. So long as there is an increase in the tax, then there will be one or the other spouse paying a tax upon income which is not his. This is so clearly an unconstitutional provision as to leave no room for argument.

Before attempting to set forth those arguments which are here deemed controlling, certain further considerations should be noted with reference to the Constitution. Constitutional questions were few in the beginning of our modern income-tax era. The validity of the tax, in a generic sense, was settled by the Supreme Court in 1916 (*Brushaber* v. *Union Pacific R. R. Co.*, 240 U. S. 1, 36 S. Ct. 236). The preponderance of cases since that time has ruled in favor of the provisions attacked; but the courts have steadfastly refused to violate clear-cut and long-established principles which permit no escape from a conclusion of invalidity. It is true that the Supreme Court is reluctant to declare or enlarge by construction limitations upon the sovereign power of taxation (*Bromley* v. *McCaughn*, 280 U. S. 124); but the sixteenth amendment is to be taken as written and is not to be extended beyond the meaning clearly indicated by the language used (*Edwards* v. *Cuba R. R. Co.*, 268 U. S. 628). The existence of constitutional power is not to be determined by the extent of the exercise of the authority conferred upon Congress (*Smith* v. *Kansas City Title & Trust Co.*, 255 U. S. 180).

One point must be made plain, for it bears directly upon the question at issue. The motives and purposes of Congress are not open to inquiry in considering questions of constitutional power (*McCray* v. *United States*, 195 U. S. 27). It has been clearly stated that questions of policy are no concern of the board or courts (*State Board of Tax Commissioners* v. *Jackson*, 283 U. S. 527; *United States* v. *Adams*, 11 F. Supp. 216). However, questions of fairness will be taken into consideration in determining what is a constitutional right. As Justice Learned Hand states:

"* * * Were the fifth amendment a remorseless pattern which all legislation must fit, the argument might even so be troublesome; might indeed be conclusive. But constitutional limitations are not indifferent to the occasions of the statutes they effect. They represent a mood rather than a command, that sense of moderation, of fair play, of mutual forbearance, without which states become the prey of faction. They are not the rules of a game; their meaning is lost when they are treated as though they were." (*Daniel Reeves, Inc.*, v. *Anderson*, 43 Fed. (2d) 679.)

Further, taxes are practical matters, and statutes imposing them must be tested by practical results (*Nichols* v. *Coolidge*, 274 U. S. 531). Considerations of policy sometimes carry substantial weight. So, perhaps, do economic considerations, as distinguished from absolute and conceptualistic reasoning (44 Harvard 651).

We have suggested that this proposed tax is violative of the fifth amendment. This amendment provides that no person shall be "deprived of life, liberty, or property without due process of law". This clause is not a limitation on the taxing power. (Cp. *Cohan* v. *Commissioner*, 39 Fed. (2d) 540). If it were so interpreted, the Constitution and the amendments as an aggregate organic document would be self-destructive and would conflict with itself by taking away with one hand power conferred with the other hand. (See Arthur A. Ballantine, 29 Yale L. J. 625, 632.) A statute is not unconstitutional under the due process clause unless it is so arbitrary and capricious that it is not the exercise of taxation, but a confiscation of property (*Heiner* v. *Donnan*, 285 U. S. 312;

Nichols v. *Coolidge, supra*). In other words, it must be so wanting in a reasonable basis for classification as to produce a gross and patent inequality. (See 33 Colorado L. R. 791; *Brushaber* v. *Union Pacific R. R. Co., supra.*) It has been stated that the question is: Is the means adopted appropriate to the end? (*Helvering* v. *City Bank Farmers Trust Co.* 296 U. S. 85). These theories naturally lead to the conclusion that the question is one of degree. Certain classifications have been approved: (1) Domestic and foreign corporations (*Barclay* v. *Edwards*, 267 U. S. 442); (2) inequalities as to intestate successors and legatees (*N. Y. Trust Co.* v. *Eisner*, 256 U. S. 345); (3) interest on exempt securities (*Denman* v. *Slayton*, 282 U. S. 514); (4) corporations and individuals (*Flint* v. *Stone-Tracy Co.*, 220 U. S. 107); (5) individual proprietorships and partnerships (*Wm. Guy*, 13 B. T. A. 51, 53); (6) things foreign and domestic (*Billings* v. *United States*, 232 U. S. 261).

The matter is well summed up in *Burnet* v. *Wells* (289 U. S. 670):

"A margin must be allowed for the play of legislative judgment. To overcome this statute the taxpayer must show that in attributing to him the ownership of the income of the trusts, or something fairly to be dealt with as equivalent to ownership, the lawmakers have done a wholly arbitrary thing, have found equivalence where there was none nor anything approaching it, and laid a burden unrelated to privilege or benefit."

Based upon the foregoing conceptions, it seems plain that an attack upon the proposed bill might be successful if it were possible to show that the bill constituted an unreasonable classification which resulted in an arbitrary and capricious confiscation of property without due process. We believe that such a showing is entirely possible in this case. This brings us to our second conclusion of unconstitutionality, namely, that Congress is here arbitrarily taxing married people at higher rates than other individuals.

The only appropriate method of taxation under the sixteenth amendment is to tax as citizens—not in groups—and most certainly those citizens must be taxed equally unless a real basis for separate classification exists. (Cf., the language immediately above from *Burnet* v. *Wells.*) While we have pointed out above that the mode and manner of apportionment suggested will involve one spouse paying tax upon the income of another, let us assume for the moment that such an apportionment is constitutional and that a perfect apportionment of liability is possible. The ideal in this respect, would be that of a husband and wife with absolutely identical incomes and expenses—no discrepancies whatsoever—whose tax liability, of course, would be identical. Now, if these two people are forced to pay upon their joint income, one or the other, or both (based upon the apportionment rule), would have to pay a higher tax than other individuals (citizens) not marrried. Thus, the proposed bill in reality constitutes but an increase in the rate of taxation upon married people and, as such, is clearly violative of the provisions of the fifth amendment.

SUMMARY

It is our position, predicated upon the foregoing considerations, that the proposed taxation of husband and wife, living together, on a joint return, is both unconstitutional and ill-advised. Our beliefs might be tabulated as follows:

I. The proposed bill violates constitutional guaranties:

A. In that it attempts to force one person to pay a tax upon the income of another.

B. In that it is an attempt on the part of Congress to deny to married women those rights which are guaranteed to her by State statutes and constitutions.

C. In that it attempts to arbitrarily and capriciously increase the rate upon married people without reasonable basis for such a classification.

II. The proposed bill is ill-advised:

A. In that most charitable contributions come from those in the higher brackets, and the first cut will be in contributions, thus levying a larger burden upon public charities.

B. In that its obvious purpose is to strike at the few community-property States, and thus constitutes a backhanded method of avoiding the rule in *Poe* v. *Seaborn*, a method not commensurate with American standards.

C. In that the general impression that this provision will apply only to wealthy individuals and community-property States is incorrect. The greatest hardships caused by this provision will be borne by countless thousands of

husbands and wives both of whom are compelled to work in order to maintain their families. In those instances the added burden of this tax will create a most unhealthy economic condition.

D. In that its secondary purpose is to increase revenue, and the discontent and hardships which will result inevitably will leave the game hardly worth the candle.

MURPHY, LANIER & QUINN,
Cincinnati, Ohio.

The CHAIRMAN. We will recess until 2 o'clock this afternoon.

(Thereupon, at 12 noon, a recess was taken until 2 p. m. this day.)

AFTERNOON SESSION

(Pursuant to adjournment, the hearing was reconvened at 2 p. m.)

The CHAIRMAN. The next witness is Mr. Kelly.

STATEMENT OF GEORGE TERBORGH, SECRETARY, MACHINERY AND ALLIED PRODUCTS INSTITUTE

Mr. TERBORGH. I am sorry to say, Mr. Chairman, that Mr. Kelly was unable to attend the hearing today. He has authorized me to appear in his place, however.

The CHAIRMAN. Will you give your name to the reporter?

Mr. TERBORGH. I am George Terborgh, secretary of the Machinery and Allied Products Institute. If it is agreeable to the committee, I shall present his statement.

The CHAIRMAN. Yes, sir; you may proceed. Do you want to read it into the record?

Mr. TERBORGH. I shall read it, sir.

The CHAIRMAN. All right, sir.

STATEMENT OF WILLIAM J. KELLY, PRESIDENT, ARTHUR J. O'LEARY & SON CO., CHICAGO, SPEAKING AS PRESIDENT OF THE MACHINERY AND ALLIED PRODUCTS INSTITUTE

Mr. KELLY. Mr. Chairman and gentlemen of the committee, let me first of all express my appreciation for the opportunity to present the views of the Machinery and Allied Products Institute on certain aspects of the pending tax bill.

I say "certain aspects" advisedly, since I do not propose on this occasion to suggest how much the Government should tax for defense purposes or how the burden should be divided between direct and indirect taxes or between individuals and corporations.

This does not imply that the organization I represent is uninterested in such questions, or that it has no views on them. The contrary is the case. It means only that we prefer to forego their discussion at this time and to concentrate on certain aspects of the pending tax bill that are of peculiar interest and concern to the capital-goods manufacturers who compose our membership.

I propose therefore to deal only with certain inequities in the application of the corporation taxes proposed in the bill and to suggest measures by which they may be ameliorated.

Before proceeding to the discussion of these inequities, I wish to make it perfectly clear that the industries I represent do not protest

against the payment of equitable and reasonable taxes, however onerous. We realize that the defense effort calls for heavy sacrifices from all, and we are ready and willing to carry our full share.

We ask merely that the burden be distributed without discrimination. For various reasons, which I propose to discuss briefly, we believe that a large and important sector of industry is subject to an unintentional discrimination, both under the present corporation tax law and under the pending bill.

Effect of instability of earnings on relative tax burdens.—Let me begin my discussion with the basic proposition, which I believe no one will dispute, that the real test of the profitability of a business enterprise is its earning power over the life of the investment, normally a long period of years.

In computing its earnings we must, of course, subtract the losses incurred in poor years from the profits of good years, just as we subtract the losses of poor months from the profits of good ones in computing the net income of a single year.

It should be obvious that a corporation whose earnings are irregular, with loss years interspersed among the profitable ones, must make more profit during its good years than a corporation whose earnings are continuous if it is to offset its losses and return the same cumulated net income over a long period. In other words, the corporation with intermittent profits must earn during the good years alone as much as the company with continuous profits earns during the entire period plus enough additional to cancel the losses of poor years.

What is the bearing of this fact on the equity of income taxes as applied to the two corporations? If the basis of assessment is the net income for the entire period, then taxes are identical and there is no discrimination. If, however, the tax is assessed for each separate year in the period, the company with the intermittent earnings must pay a larger amount than the other.

It must pay not only on the net income as computed for the period as a whole but on the income canceled by losses within the period.

It is precisely this taxation of income canceled over the long run by losses that gives rise to the discrimination of which I am speaking.

By way of illustration, let us consider three hypothetical corporations with the following annual earnings and subject to a flat income-tax rate of 30 percent:

	Net income		
	Company A	Company B	Company C
Year:			
1931	$130,000	−$100,000	−$300,000
1932	80,000	−300,000	−500,000
1933	00,000	−200,000	−400,000
1934	110,000	−100,000	−200,000
1935	120,000	100,000	100,000
1936	130,000	250,000	300,000
1937	180,000	500,000	800,000
1938	160,000	350,000	300,000
Total for period	1,000,000	500,000	100,000
Taxable income	1,000,000	1,200,000	1,500,000
Tax in percent of net income	30	72	450

For the 8-year period covered by this illustration, the three companies have net incomes of $1,000,000, $500,000, and $100,000.

On the basis of annual assessments, however, the incomes subject to taxes during the same interval aggregate $1,000,000, $1,200,000, and $1,500,000, respectively.[1]

Consider what this means in terms of the relation between tax payments and net income for the period as a whole.

Assuming a tax rate of 30 percent. A pays exactly this percentage, B pays 72 percent, and C pays 450 percent.

Discrimination against capital-goods companies.—This discrimination might be unimportant in practice if all corporations subject to income taxation were substantially similar with respect to the regularity and stability of their earnings.

It is common knowledge, however, that this is not the case. There are large groups of corporations in what are popularly known as the "feast-or-famine" industries that respond with more-than-average sensitivity to the cyclical movements of economic activity and whose typical earnings record is an irregular alternation of profits and losses. As compared with corporations in fields of relative cyclical stability, those companies are subject to a systematic tax discrimination.

The most significant classification of industries with respect to the amplitude of their cyclical movements distinguishes those producing durable goods from those producing nondurable goods and services.

It is quite unnecessary to dwell at length on the basic difference in the economic behavior of these two groups of industries.

The durable-goods industries as a whole are subject to cyclical swings in activity several times as wide as those of the nondurable group.

While extreme cyclical instability is characteristic of the production of nearly all types of durable goods, and while, therefore, it is the durable-goods industries as a class that are the chief victims of the discrimination in taxation of which I am speaking, I wish to direct your attention primarily to a single subdivision of this class, namely, the industries producing capital goods, the facilities for production, distribution, transportaton, communication, and commerce—that is to say, business plant and equipment.

This happens to be the field in which the Machinery and Allied Products Institute is directly interested.

The extreme cyclical variability of profits in the capital-goods industries as compared with those in industries producing consumption goods such as food, clothing, drugs, and so forth, is too well known to require demonstration. It is confirmed by every compilation of corporate earnings which permits a comparison of the two categories.

By way of illustration, let me cite the results of an investigation by this institute covering 219 capital-goods companies and 181 consumption-goods companies for the period 1929–38.[2] Only in the worst year of the depression (1932) did the combined net profit of the consumption-goods companies fall below 55 percent of 1929. Only in that year did fewer than 70 percent of these concerns make a profit.

---

[1] Assuming no provision for the carry-over of losses.

[2] Capital Goods Industries and Federal Income Taxation, pamphlet, 1940, Machinery and Allied Products Institute, Chicago.

For the capital-goods companies, on the other hand, 3 consecutive years showed a combined net deficit, while in the worst year fewer than 15 percent of the reports showed profits.

Classifying the concerns in each group as to the number of deficit years incurred during the 10-year period 1929–38, of the consumption-goods companies 48 percent had no net losses during the decade, the corresponding figure for capital-goods companies being 8 percent. Only 11 percent of consumption-goods companies had losses for 5 or more years, against 39 percent for capital goods. The average number of loss years for the two categories as a whole was 1.4 and 3.8 years, respectively. Those are truly striking contrasts.

Let us proceed a step further to classify these corporations according to the greatest number of consecutive years of net loss experienced during the decade. Here again the contrast between the two classes of corporations may be described as striking. More than two-thirds of the consumption-goods companies (68 percent) had no consecutive years of loss.

This can be said of only 19 percent of the capital-goods enterprises. The proportion with 3 or more consecutive-loss years was 18 and 65 percent, respectively, with 5 or more years 3 and 31 percent.

Nothing could show more clearly the fundamental disparity in the stability and continuity of earnings in these two areas of production.

It is obvious that this marked contrast in the gravity and duration of the deficits experienced by the two groups of corporations must have been reflected in extreme differences in their relative tax burdens. As I have already indicated, taxes must be paid (in the absence of provision for the carry-over of losses) on all the net income of all the profitable years in any period, that is to say, both on income that is offset by deficits within the period and on income that is not offset.

Since the proportion of income that is so offset is greater for capital-goods companies than for consumption-goods companies, the former necessarily pay in taxes over a period of years a larger proportion of their income in excess of deficits.

If we compute taxes paid as a percentage of the excess of income over deficits, we obtain what may be called the "effective" tax rate applicable to capital-goods and consumption-goods companies.

The statistical investigation just referred to demonstrates that for the 8 years 1931–38, consumption goods companies as a whole paid 16 percent of their net profit for the period in Federal income taxes, while capital goods companies paid 29 percent.

This proportion of net profit paid in Federal income taxes is 185 percent (not far less than double) the proportion paid by the consumption goods companies. Forty-one percent of the capital goods companies had a net deficit, yet paid taxes on one or more years of income; of consumption-goods companies only 15 percent fell into this category. Moreover, 11 percent of all Federal income taxes paid by the capital-goods companies were paid by the deficit concerns, while the corresponding figure for consumption-goods companies is only one-half of 1 percent.

While 77 percent of the consumption-goods companies had less than a fifth of their net profit absorbed in taxes, only 47 percent of the capital-goods companies were so fortunate.

On the other hand, 21 percent of the latter paid out more than two-fifths of their profit, against 5 percent of the former. There were even a few capital-goods companies that in the 8-year period 1931–38, paid in taxes more than their entire profit.

Recommendations for reducing the discrimination.—While we are under no illusion that our recommendations, if adopted, will eliminate the discrimination I have been discussing, we wish to advance four proposals which we believe will substantially reduce it, and thereby bring the tax burden of the capital-goods industries more nearly to parity with those of the consumption-goods industries. These recommendations are as follows:

1. Carry-over of corporate net losses for income-tax purposes should be permitted for a minimum of 6 years.
2. Carry-over of unused excess-profits-tax credits should likewise extend over a period of 6 years.
3. Corporate normal income-tax rates should be raised, or a surtax on normal income levied, in preference to increasing the present excess-profits-tax rates.
4. The base years for computing the excess-profits-tax credit under the income alternative should be changed from 1936–39 to 1935–39, with the privilege of selecting 3 of these 5 years in computing the average income credit.

Let me comment very briefly on each of these recommendations.

1. *Carry-over of corporate net losses for income-tax purposes should be permitted for a minimum of 6 years.*—If the inequity previously discussed is to be ameliorated so far as income taxes are concerned, provision for the offsetting of losses against the income of later years is a prime requisite.

In our judgment, there is no alternative that so well meets the tests of practicability and of impartial application to all corporate taxpayers.

It is quite obvious from the foregoing comparisons, however, that a loss carry-over period sufficient for corporations in the consumption-goods industries may be wholly inadequate for concerns producing capital goods.

It is the requirements of the latter that must govern the carry-over provisions of the revenue laws if a substantial equalization of tax burdens is to be achieved.

I am not going to propose that the allowable carry-over period should be unlimited, or that it should secure a complete offsetting of losses in every case. What I wish to suggest is a practical compromise that will make possible a complete offset for the great majority of capital-goods companies and other companies with similar income characteristics.

For this purpose the present provision for a 2-year carry-over, continued in the pending bill, is clearly inadequate.[3] If this provision had been in effect during the decade 1929–38,[4] it would have permitted only 19 percent of the capital-goods companies in our sample to make

[3] A 2-year carry-over was provided for in the Revenue Acts of 1921, 1924, 1926, and 1928. The Act of 1932 reduced this to 1 year, and the Act of 1933 abolished the carry-over entirely. The 2-year provision was revived in the Act of 1939, and is now in effect.

[4] It was effective during the early years of the period, but was of little practical consequence.

a complete offset of losses. The percentages covered by longer carry-over periods would have been as follows:

Carry-over period in years:	*Percent of companies offsetting losses*	Carry-over period in years:	*Percent of companies offsetting losses*
3	30.6	7	80.3
4	42.5	8	94.0
5	56.6	9	99.5
6	66.2		

If the experience of these corporations during the decade 1929–38 is a valid criterion of the length of the carry-over period required—and we believe it is—the conclusion follows that nothing less than 6 years will suffice to meet the test of a complete offset of losses for the large majority of capital-goods companies.

It may be noted in this connection that in Great Britain the Royal Commission on Income Tax (1920), after a careful study of the whole question, recommended a 6-year carry-over, a recommendation that was adopted in 1926. The provision has since remained in effect, and has even been liberalized by later legislation.

2. *Carry-over of unused excess-profits tax credits should extend over a period of 6 years.*—It should be evident to anyone who has followed the foregoing discussion of the need for an extended carry-over of losses for income-tax purposes that there is an even greater need for a long carry-over of unused excess-profits tax credits.

Since capital-goods companies must earn more in good years than consumption-goods companies if they are to come out even with them in the long run, they are forced to pay excess-profits taxes in such good years much heavier than those levied on the consumption-goods enterprises. Especially is this true when the excess-profits tax rates are graduated upward with the size of the taxable income, as under the present and proposed law.

Unless these heavier taxes can be compensated for by offsetting the unused excess-profits tax credits of poor years against the excess-profits income of later years, capital-goods companies must pay in excess-profits taxes a larger share of their long-run-average profits than consumption-goods concerns having equal long-run earnings. They are subject, in other words, to a tax discrimination.

Since the present excess-profits tax is of recent origin, it is impossible to present an historical analysis of the extent of this discrimination such as we have made in the case of the income tax. By the same token, it is impossible to say how long a carry-over period would be required to offset the unused excess-profits tax credits that would have accumulated during the depression had such a tax been in effect.

We have no doubt, however, that this carry-over would need to be even longer than that necessary to offset income-tax losses against the net incomes of the post-depression years.

Certainly the 2-year carry-over provided in the present law and continued in the pending bill is wholly insufficient, and we therefore recommend six years as a minimum.

Even this relief is inadequate. May I call your attention to the fact that the British excess-profits-tax law allows not only an unlimited carry-over of unused excess-profits-tax credits against the excess-profits income of later years but also the offsetting of such unused credits against the income of earlier years. This combined

offset, both backward and forward, assures that, in the language of the Chancelor of the Exchequer—

> The aggregate amount of excess-profits tax payable throughout the whole operation of the tax will be the tax corresponding with the net excess profits *over the whole period*, after allowing for any falling off of profits in any year.[5]

This thoroughgoing offset of unused credits makes our proposal for carrying them forward 6 years seem very modest indeed.

3. *Corporate normal income tax rates should be raised, or a surtax on normal income levied, in preference to increasing the present excess-profits-tax rates.*—I recur again to the basic proposition that companies with intermittent profits must earn more during the fraction of the time when they are making profits than companies with steady earnings must make in their good years if the two classes are to pay out equally in the long run. It follows that a rate of profit that may properly be considered "excess" for concerns with stable earnings may be only "normal" for a company with intermittent earnings.

The present excess-profits tax does not discriminate between the two, but applies a uniform rate of 8 percent on invested capital as the dividing line between normal and excess profits.

It is certainly correct in principle to draw this line for companies in industries of the feast-or-famine type at a substantially higher level than for concerns in relatively stable industries. This is not only because a higher rate of profit in good years may properly be regarded as normal in their case, it is also because enterprises of this type have generally suffered a far greater depletion of invested capital from operating losses during the depression than have companies in less fluctuating lines.

We are not prepared to say, however, that in practice it is administratively feasible to apply a variety of standards as to normal and excess profits, however correct in principle such a differentiation may be. Since there is grave doubt that this is practicable, we are impelled to the view that if additional revenue is to be raised from taxes on corporations it is more equitable to do this by an increase in normal or surtax rates than by further increases in a levy that falls with such discriminatory effect on capital goods companies as does the present excess-profits tax.

We reach this conclusion despite the fact that the average-earnings credit is available to capital-goods manufacturers as an alternative to the credit based on a standard rate of earnings on invested capital. The base period for computing average earnings, 1936–39, was, we believe, much further from normal for capital-goods companies than for consumption-goods concerns.

The recovery under way in the heavy industries during the early part of this period was only partial at its best level and was followed, late in 1937, by one of the most rapid and drastic declines on record, and by a depression which lasted for most of the remainder of the period.

As a result, the period as a whole was overweighted on the low side. A tabulation of the profits of 301 capital-goods companies and 368 consumption-goods companies from data assembled by the

[5] Italics ours. Quoted from the Bankers' Magazine (London), May 1940, p. 706.

National City Bank shows an average annual return on net worth for 1936–39 of 7.5 percent and 9.1 percent, respectively.

The earnings of the capital-goods companies thus ran substantially below those of the consumption-goods enterprises for the base period. The true picture is even more unfavorable to the capital-goods companies than this comparison suggests, because write-offs and write-downs of their invested capital during the depression were generally more severe than in the case of the consumption-goods concerns.

Since we have already seen that the capital goods companies must be allowed a higher rate of return free of excess-profits tax if their tax burden over a period of years is not to exceed that of the consumption goods concerns, it is evident that in general they cannot escape discrimination by electing to use the average earnings credit computed on a period in which their return averaged lower than that of the consumption goods companies.

It is evident that the pending bill runs counter to our recommendations that further increases in the tax burdens of corporation be concentrated in the income tax and surtax rather than in the excess-profits tax. The bill proposes not only an increase in the rates applicable to excess profits but by making these rates apply to income before income taxes, through the reversal of the present order of deductions, it increases the burden of the excess-profits tax out of all proportion to the increase in the rates themselves.

In addition it lowers the invested capital credit (on capital in excess of $5,000,000) and imposes a new tax of 10 percent on the amount by which the excess-profits net income computed with the use of the income credit exceeds that computed with the use of the invested-capital credit. Believing as we do that the discrimination against capital goods companies even under the present statute is repugnant to equity and fairness, we respectfully urge that it be not further extended by the enactment of the bill under consideration.

4. *The base years for computing the excess-profits tax credit under the income alternative should be changed from 1936–39 to 1935–39, with the privilege of selecting 3 of these 5 years in computing the average income credit.*—I have previously pointed out that the 4-year period 1935–39 was on the whole an unfavorable one for the capital goods companies as compared with concerns in the consumption goods field. The average income of these years does not constitute for these companies a proper criterion of normal earnings, above which income can be considered "excess." By way of a partial correction—and I wish to emphasize that it is only partial—we propose that the taxpayer be permitted to choose the best three of the 5 years 1935–39. We believe that this modification of the present law will help to reduce the inequities of which I have spoken and will afford a fairer test of where excess profits begin.

Mr. Chairman and gentlemen of the committee, let me close by repeating that we ask no favors for the capital goods industries or for any other group of taxpayers. We feel privileged in assuming our fair share of the burden of national defense and ask only for a measure of relief from discriminations which we believe are simply an unintentional result of the practice of assessing in time units of 1-year income that can be properly determined for tax purposes

only over a longer period. We appreciate the privilege of presenting our case, and shall be glad to respond to any request you may make for material bearing on the subjects of these remarks.

The CHAIRMAN. Are there any questions?

(No response.)

The CHAIRMAN. Mr. Howard B. Minier.

STATEMENT OF HOWARD B. MINIER, OF FORT WAYNE, IND., INTERNATIONAL HARVESTER EMPLOYEES' BENEFIT ASSOCIATION

Mr. MINIER. My name is Howard B. Minier. I live in Fort Wayne, Ind., and work for the International Harvester Co.'s Fort Wayne works as a machine operator.

I am the elected trustee from Fort Wayne works of the Employees' Benefit Association of International Harvester Co. and affiliated companies. We call the Employees' Benefit Association the E. B. A.

I am also active in the affairs of our local of the United Automobile Workers.

I am here as trustee of the E. B. A., and I am grateful to you gentlemen for the opportunity you are giving me to tell you something about our problem.

The E. B. A. is an old organization. It was established in 1908 as a voluntary, unincorporated, nonprofit association. It was set up to provide a fund to pay sickness, accident, and death benefits to employees who belong to it, at all the United States and Canadian operations of the company. Nobody has to join the E. B. A., but practically everybody does. Any employee who passes the physical examination can join. Right now the E. B. A. has more than 60,000 members.

From the time it was set up in 1908 to the end of 1940 the E. B. A. had paid out to members $9,362,000 in death benefits and $9,326,000 in disability benefits.

Senator TAFT. How is it taxed? By this bill or by the Internal Revenue?

Mr. MINIER. By the Internal Revenue Code.

Senator TAFT. There is nothing in the present bill regarding it?

Mr. MINIER. No, sir.

The CHAIRMAN. There is no change in the House bill that affects you?

Mr. MINIER. No.

Senator TAFT. What are you taxed now?

Mr. MINIER. The corporate income tax is involved.

The CHAIRMAN. If over 85 percent of your income was derived from dues or assessments, you would not be subject to the tax.

Mr. MINIER. Yes; that is correct.

The interpretation of the Internal Revenue Bureau is that if the company contributes more than 15 percent to the E. B. A., they are subject to the tax.

The CHAIRMAN. I expect you cover the point in your statement?

Mr. MINIER. Yes. The exemption has been an important thing to us, and we would hate to see anything happen to it.

The E. B. A. set-up is this. The association is composed of the employees who belong to the E. B. A. and the Harvester Co. and its

affiliated companies in this country and Canada. It is controlled by a board of trustees. Half the trustees are appointed by the company and the other half are elected by the employees who are members. That is how I came to be a trustee.

The E. B. A. gets its money in three ways—what the employees pay in, what the company pays in, and what we are able to earn in the way of interest or dividends on money we invest. Almost all our money comes from the employees and the company and comparatively little from investments.

An employee who belonged to the E. B. A. used to contribute 1½ percent of wages to the E. B. A. and the company put in a flat sum of $50,000 a year. The idea was that the company's payment would cover administrative costs. As a matter of fact, it usually did a little better than cover them. We ran along on that basis until 1936.

In 1935 the trustees engaged a competent actuary who made a thorough study of just where the E. B. A. stood at that time, with reference to its finances. We found out that we were just about insolvent from an actuarial standpoint. There were two big reasons for that—first, the average age of the employee members had increased steadily from about 30 years old to nearly 38 years old; and, second, there was greater stability of employment, with fewer people leaving the company.

I don't imagine I need to explain to you men in detail why that happened. You all know that during and after the depression—and right down to the present time—men don't move around from job to job like they used to do. The way things have been, if a man had a reasonably good job, he stayed with it.

The result was that our reserves, which had been good enough for a group of members averaging 30 years old, with a large turn-over, were not big enough for a group almost 8 years older, with a slower turn-over.

The only way to meet that situation was to increase the contributions of the members, both the employees and the companies.

On May 22, 1936, we raised the contribution for employee members from 1½ to 2¼ percent of their annual wages or salaries up to a maximum of $2,080 annual inome, and the company, instead of furnishing a flat $50,000 a year, began to contribute an amount equal to 20 percent of what the employees paid in.

When that was done the company's payments went up to an average of about $393,000 for the years 1936 to 1940, inclusive.

That increase, plus the higher payments made by the employees, put us back to a sound actuarial condition. Our reserves have increased every year since 1936. We still have less than an actuary would say we needed for complete soundness, but we are a lot better than we were, and getting better all the time.

Just as we are getting into a better position we ran into this tax question that is troubling us now. We have always thought the E. B. A. was exempt from taxation, the same as a lodge or a fraternal organization. But the Bureau of Internal Revenue has handed down a ruling that we are not exempt, beginning with 1935, and has proposed to put in a claim for tax payments of over $500,000 for the years 1935, 1936, and 1937. If similar tax assessments should be made for the years 1938,

1939, 1940, and 1941, more than $1,500,000 of additional taxes would also have to be paid, making a total of $2,000,000.

As I understand it, the law (sec. 101 (16) of the code) says that at least 85 percent of the E. B. A. funds have to be received as contributions from members. The Bureau claims that the company is not a member of the E. B. A., although E. B. A. regulations say the company is a member. The Bureau says that the money the company has put into the E. B. A. since 1935 is not a contribution from a member. If the contribution of the company is not figured as a contribution by a member, we don't qualify under that part of the law.

I can't believe Congress intended to prevent a company from putting money into an organization like our E. B. A. The whole purpose of the law, I would think, was to make it possible for us to have such organizations by exempting our funds from taxation. But if what the company contributes is to be taxed, organizations like ours will not be able to get along.

I never heard of a benefit association like ours that did not receive considerable support from the company concerned. They can't run any other way.

The only reason I can see for that 85-percent provision of the law would be to keep the E. B. A. or similar organizations from branching out into a side line of business and earning a big profit that would be tax free. We certainly have not done that.

If the Bureau of Internal Revenue is allowed to collect the tax they want to collect from us, it will take just about every cent the company has been paying to the E. B. A. to meet taxes.

Then we would have to make up the loss by putting on heavier assessments on the employee members, and we can't get away with that. It would cost our members too much. We would have a lot of members drop out of the E. B. A., and that would make it tougher on the ones who stayed in, because they would have to pay just that much more.

At the worst, the E. B. A. would quite likely have to fold up entirely. And at best we wouldn't be doing what the E. B. A. set out to do and was organized for—that is, to furnish low-cost insurance protection to employees.

There's another thing, too. The Government wouldn't get very much money by taxing the E. B. A. and other organizations like it out of existence. The Bureau of Internal Revenue might take away from us the $2,000,000 in taxes, but it would probably be the last money they would ever get from us. Taking that amount from the E. B. A. would practically force us into liquidation.

We think our organization has been doing a good job, doing it for more than 30 years. I know what the E. B. A. has meant to me and the men I work with every day. We would certainly hate to lose it or have anything happen to kill it. That insurance protection is important to us. And I don't believe Congress ever intended to make it impossible for the company to contribute money for the protection of employees.

Naturally, our association has consulted legal counsel regarding this tax calamity now overhanging us and other similar associations. Our counsel advises us that they believe it was the very purpose and intent of Congress (when it passed the law in 1928 exempting employee benefit associations) to exempt associations like ours. They believe this because, with few exceptions, all employee-benefit asso-

ciations then in existence were receiving substantial support from employers. These must have been the associations Congress had in mind to encourage by tax exemption.

It does not seem reasonable to suppose that Congress wished to discourage employers from helping these associations. It is more reasonable to believe that the act was intended to deny exemption when the income from investments exceeded 15 percent of the annual income, and the contributions were less than 85 percent of the total.

This view is strengthened when we consider that there is no real difference between contributions to the association paid by deductions from employees' wages and contributions paid by the company by agreement with and for the benefit of its employee members. These latter contributions could have been credited to the employees as additional wages and turned over to the association on their behalf, but this would only have involved additional bookkeeping.

This is a brief, nonlegal statement of the question as I understand it. If your committee desires a detailed legal brief, our association's counsel will be glad to file one.

As matters now stand, unless Congress gives relief, our association and every other similar association will be faced with insolvency and employers will be practically forbidden, under threat of heavy taxation, to help associations which are not operated for profit.

No legislation taking effect as of the present time would meet the situation, as heavy taxes for past years are already in course of being imposed. The only thing that would help us would be an early amendment to section 101 (16) of the Internal Revenue Code declaring what we believe to have been the intent of Congress in 1928 when that section was passed, namely, that employers' contributions on behalf of employees should be classed with employees' contributions in determining the right to tax exemption.

We suggest that section 101 (16) be amended so as to provide that, in determining the right to tax exemption under this section 101 (16) of the Internal Revenue Code, irrevocable contributions by an employer to an employees benefit association made for the purpose of reducing the expense and contributions of employees shall be treated as contributions made on behalf of and for said employee members, this amendment to be interpretative and declaratory of the language and intent of said section as originally enacted in 1928.

I wish to thank you for your courtesy in allowing me to appear here and tell our story.

The CHAIRMAN. Are there any questions, gentlemen?

Senator DANAHER. I have one, if you please.

Has a member, upon leaving the employ of the company, the right to withdraw from the association?

Mr. MINIER. Yes, sir.

Senator DANAHER. And does he recover at that time the back payments charged against him, or the contributions he made by way of dues and assessments?

Mr. MINIER. At the present time he does not. He is allowed to get death benefits by keeping up his payments. Past payments for disability benefits only cover the cost of the protection. Depending on what takes place in the passage of this exemption, we have a very broad plan, which is to go into effect the first of the year, depending on the outcome of this, where he will be able to do that. Under this plan we would draft new rules and regulations.

Senator DANAHER. Would you therefore say that the company has the right to do the same thing, if it be a member?

Mr. MINIER. Well, I would not say so; no. We state that they are giving these contributions and they are irrecoverable. They are doing that in an attempt to furnish low-cost insurance to the members.

The CHAIRMAN. You very well stated your case. Your whole position is this, that the company contributing more than 15 percent is really contributing to the membership of the trust, of your benefit association.

Mr. MINIER. Yes.

The CHAIRMAN. And that it ought not to be taxed, nor make your association taxable, bring it into the taxable class, simply because the company may contribute 20 percent?

Mr. MINIER. That is right.

The CHAIRMAN. You have a right to get 15 percent of your income from sources other than contributions from your own members or employees, so the company, if it wished to, could give you 15 percent of your income, or 10 percent, and you would still not be taxable, but the moment it gets above 15 percent, the Treasury has ruled that that is an income from sources other than the dues of the members.

Mr. MINIER. That is right.

The CHAIRMAN. And it makes your trust taxable. I think you have very well stated your case.

Senator TAFT. What meets your requirements is just to put in "or their employers" so it will read "contributions by members or their employers of 85 percent." It must be from members or their employers.

Mr. MINIER. Yes; that would cover it if the amendment is made retroactive or declaratory.

The CHAIRMAN. Well, thank you, sir. Unless there are some further questions.

Mr. MINIER. Thank you for allowing me to present our problem.

The CHAIRMAN. Mr. Cooper.

STATEMENT OF WALTER A. M. COOPER, WHITE PLAINS, N. Y., CHAIRMAN OF THE COMMITTEE ON FEDERAL TAXATION OF THE AMERICAN INSTITUTE OF ACCOUNTANTS

Mr. COOPER. Mr. Chairman and gentlemen of the committee: My name is Walter A. H. Cooper, of White Plains, N. Y., and New York City. I appear as chairman of the committee on Federal taxation of the American Institute of Accountants. In accordance with out established policy, the profession I represent takes no position on the matter of rate or type of taxation believing that we all must face, and are prepared to carry, a substantial tax burden and that our legislators and fiscal experts can well determine the necessary rates. However, we do wish to make certain recommendations concerning the bill H. R. 5417, now before you. These I summarize as follows:

I. We urge that all personal exemptions be eliminated and that the normal income tax be withheld at the source on all payments to individuals, partnerships, and trusts of salaries, wages, dividends, interest, and other fixed or determinable income.

II. With respect to the capital stock tax (which we have previously stated, and still believe, should be eliminated), if that must be retained, we urge that corporations be given the right to revise upward, adjusted declared values during the second and third years—as in 1939 and 1940.

III. The section dealing with the annual adjustment of declared value should provide for adding the net income, after deduction of income and excess profits taxes, rather than the amount before such tax deductions—as now proposed.

IV. In connection with the new 10-percent tax applicable to corporations using the invested capital credit method, provision should be made for a redetermination of base period income in abnormal situations described in section 722—which because of its limitations, will otherwise not be applicable.

V. The provisions of section 204 (e) should be eliminated so as to provide that the unused excess profits credit for any taxable year beginning prior to December 31, 1940 should be computed under the provisions of the Internal Revenue Code before amendment by the pending bill.

VI. The definition of "Corporation surtax net income" should be modified so that, in computing it, the limitation on the credit for dividends will be net otherwise subject to the surtax.

VII. The provisions for recognition of new capital (proposed section 718 (6)) should be modified in four respects.

I. *Elimination of personal exemptions.*—To repeat this recommendation—all personal exemptions should be eliminated in determining the income subject to normal income tax and the amount of such tax should be withheld at the source on the payment of all fixed and determinable income which would include among other things, and primarily, wages and salaries, interest, and dividends. We urge that for the five fundamental reasons, as follows:

1. The original reason for including in the income tax statute a personal or dependent exemption has disappeared.

2. Our defense is being developed to protect the right of everyone to live and to earn any income whatsoever and there is no reason why every person in the United States should not contribute a share of that burden, proportionate to the amount of income, if any.

3. The imposition of tax on all incomes without exemption would tend to prevent inflation of prices and probably would be more helpful in accomplishing the desired result in that respect than anything heretofore suggested.

4. The collection at the source will not involve administrative complications but, to the contrary, will make the problem of collection simpler than it is today with a limited exemption, and the objection to the reduction of exemptions because it would not produce enough additional revenue to justify the administrative cost of collection will disappear.

5. Such elimination of exemption would produce a very substantial amount of revenue.

1. *The original reason for granting any exemption has completely disappeared.*—The idea of allowing any so-called personal exemptions was first included in the 1913 Revenue Act. At that time we sought through the medium of an income-tax law to increase the revenues of the Federal Government by a comparatively few millions of dollars.

We sought, in other words, to add a little "gravy" to the Federal revenue at the expense of or as a charge against those of our citizens who had "gravy" of their own which they could share with Uncle Sam. Hence the law allowed substantial personal exemptions, ranging as high as $4,000 for a married couple, which on a comparable price basis would be equal to much larger exemptions at the present time.

Today, however, we are not seeking a little extra Federal revenue. The income-tax law is expected to and will produce the major portion of Federal revenues. Merely the additional revenues of three or four billion dollars we are now considering is many times the total revenue of the Federal Government when the first income-tax law was enacted and personal exemptions were first considered necessary.

2. *Every citizen should contribute a direct Federal tax.*—We are operating today on the basis that the very existence not only of those who have some income to any extent but even of those who have no income is dependent upon our developing our defences to insure the continuance of our way of life. We will defend not only those who have $800 or $2,000 of income but those who have less. Some of our citizens are satisfied with their smaller incomes and do not choose to work to produce more, and we shall be defending them in their right to continue to live on that basis.

It has been urged that exemptions be not eliminated or materially reduced because persons with incomes less than the exemptions do not have enough income to enjoy a reasonable living. It is noted, however, that the House committee report, while making such a statement, intimates that a substantial part of the tax on automobiles will be borne by persons paying no income tax because they have less income than the allowable exemptions, so a substantial part of our population receives insufficient income to enjoy a reasonable living, yet has enough income to operate automobiles.

Even assuming that low incomes are a matter of fortune or ability and not choice, those with low incomes will suffer more through price inflation rather than tax levies, which will retard price inflation.

Every citizen ought to pay a direct tax for many reasons which need not be repeated. The major part of the cost must be borne by even the lowest income group in one form or another—indirect taxes or higher prices. They will become more interested and better citizens if they pay it directly.

3. *Prevention of price inflation.*—Several divisions of our Government are concerned about price inflation. They should be, and so should all of us. We cannot deny or avoid the fundamental facts that the price level is the quotient resulting from dividing the available money by the goods that can be bought with it. When we increase the available money supply by operating printing presses, creating credit money or other so-called credit inflation, prices rise, but the same thing happens when we reduce the quantity of goods available to the supply of money.

Millions of our workers are today devoting their productive efforts to the creation of war and defense materials. Some of them are workers who were not employed before but many of them were formerly engaged in producing consumer goods. Hence, the quantity of consumer goods available today is materially less than before the defense program got under way, and it will continue to decline, not only as

more workers are absorbed by defense activities but also because commodity shortages and priority rules will reduce the production of consumer goods.

All the price fixing in the world will not stop that inflation. If it should be stopped in certain wholesale lines it will spread to the retail prices, and if it is stopped there with respect to major items it will spread to the minor and uncontrolled items. The money is there to be spent and unless absorbed in taxes or possibly a compulsory savings scheme, which would involve an even greater direct levy on all wages than an income tax, it will be absorbed in price increases somewhere along the line. The Federal Government may receive a substantial part of it eventually through the medium of excess-profits taxes but it will get far less than if a tax were directly levied on income at the source so that it is not available for spending, thus reducing the aggregate sum of money available to buy the same quantity of consumer goods.

The Secretary of the Treasury intimated that surtaxes should be increased for that reason but such a change will not affect the great majority of our citizens or the major portion of available money. The elimination of exemptions will.

Thus, whether the wage earner pays it in the form of taxes or higher prices it will go, but if it goes in the form of direct taxes it all goes to the Government. When it goes in the form of higher prices only a part of it eventually reaches the Federal coffers.

We believe, therefore, that a reduction in the amount of money available for the purchase of consumers' goods, by a direct tax without exemptions, will tend to retard price increases and accomplish more than price fixing, which may prevent immediate profiteering but will not stop the inexorable law of economics.

4. *The collection at the source is an essential and important part of our recommendation.*—A reduction of exemption is open to the very definite and important objection that the amount of tax to be collected will be too little in relation to the expense of collecing it, especially when it will result in creating many new taxpayers not in the habit of filing tax returns, paying small amounts of taxes. However, if any exemptions are allowed, withholding at the source cannot adequately and satisfactorily accomplish the desired result because those with less income from any one source than the allowable exemption escape any withholding even though they have income from several sources, the aggregate of which renders them liable to tax.

Such difficulties disappear when withholding is required on all payments of fixed and determinable income.

Senator DANAHER. Would you apply the same principle to rents?

Mr. COOPER. You cannot apply it to rents, because that is not net income, or ordinary income, because from that rent must be deducted taxes and all costs. That is why I use the term "fixed and determinable income," because the amount paid is the income itself.

Equally important is the fact that the tax is withheld as the income is paid, so that the recipient never has the income to play with or to spend. Its loss or the failure to receive it is not felt any more than if it were received and spent in the form of higher prices. Furthermore, there is no trouble when the ides of March roll around

requiring payment of a tax on a prior year's income which was received and spent and is not then available for the payment of taxes. Our Treasury has recently made available so-called tax-prepayment securities. How much simpler it would be to withhold the tax in the first place.

5. *The amount of tax that would be raised by the elimination of all exemptions would be substantial.*—I do not have available the necessary statistical data to estimate that sum but no doubt the Treasury experts can provide it. Should it be more than the revenue needs of the Government require, then excise taxes or other indirect taxes largely payable by the low-income citizens of our country should be eliminated or reduced.

II. *Redeclaration of capital stock value for capital stock tax purposes.*—Two years ago it was realized that the speculative possibilities of the capital-stock tax and its related excess-profits tax, coupled with the uncertainties then existing with respect to future income which necessarily controls the value to be declared for capital-stock tax purposes, were such that fairness and equity required permitting an increase in adjusted, declared values. Accordingly the law was amended to permit taxpayers to revise adjusted declared values upward, if they saw fit so to do.

Future income potentialities are today even more uncertain than they were 2 years ago. Price inflation is one factor not then present. Defense-production activities and the availability, or otherwise, of materials for consumer goods production are other important new factors. Corporations now faced with the problem of declaring a value for capital-stock tax, which must take into account the potential net income, before taxes, for the next 3 years, are faced with an almost impossible situation. To reduce speculation to a minimum, corporations should be permitted to declare a value, in the returns to be filed before the end of September, knowing that they can increase such declared value as subsequently adjusted, if future developments indicate such a redeclaration should be made. The law was changed 2 years ago to permit that and all the reasons that prompted such a change 2 years ago are present today, as well as several new and more important factors which were not present 2 years ago.

We urge, therefore, that the law be amended now, before values have to be declared for the tax year 1941, so that taxpayer corporations will have the right to declare a new value, higher than the adjusted declared value, in returns to be filed in 1942 and 1943.

We also urge, though it may not seem important at the moment, that the statute be amended to permit the Commissioner of Internal Revenue to grant extensions beyond 60 days from the ordinary due date for the filing of capital stock tax returns. Normally 60 days should be adequate. Because of the present uncertainties, the Commissioner of Internal Revenue has already granted the maximum extension of time permitted by the statute, yet the law under which the return must be filed is still pending before you. Should it be passed before the end of this month no further extension should be necessary. If, as now seems likely, the law will not have our President's signature until well into the month of September and perhaps not until October, taxpayers will be forced to declare a value under a law not yet enacted or enacted so recently as to leave insufficient

time for all the necessary officers or other employees to give the matter adequate consideration. Hence, we urge that the statute provide that if it be not finally enacted before the 1st of September the Commissioner of Internal Revenue should be authorized to grant extensions up to 60 days beyond September 29, 1941.

III. *Adjustment of declared values.*—The bill pending before you provides that the declared capital-stock value shall be adjusted by adding thereto the net income computed before the deduction of income and excess-profits taxes. It follows the form we have had ever since the imposition of the capital-stock tax on the present basis. It has been unsound from the beginning, but when we were dealing with an income tax of 15 percent it was not serious.

Today, however, income and excess-profits taxes will take up to 72 percent of net income. Yet, despite the fact that only 28 percent of it may remain to be added to a corporation's surplus, 100 percent of the income must be added to the value originally declared for capital stock. Nothing could be more unsound. The statute should provide for an addition to declared value, subject to reduction for dividends or other distributions, of net income after deducting therefrom all income and excess-profits taxes. Fundamentally that is all that can possibly be added to the taxpayer's capital. There will be no mathematical or accounting difficulty in applying such a provision.

IV. *Adjustment of base-period income for the new 10-percent tax.*—The pending bill proposes to add to our taxing scheme a new tax which will affect corporations using the invested-capital method of determining excess-profit tax credit. One of the bases for its computation is the average income during the base period.

Early this year it was recognized that certain abnormal events may have occurred during the base period or abnormal conditions have existed during all or part thereof so as to result in net income that did not measure fairly the earning capacity of the taxpayer corporation. Accordingly, a new section was inserted in supplement E, No. 722, which provided for a redetermination of the income for all or a part of the base period during which the abnormal events occurred or abnormal conditions prevailed. To avoid adjustments and claims involving comparatively limited amounts, which, of course, had no effect unless the credit as revised exceeded the invested capital credit, certain limitations were placed on the application of section 722. However, those limitations should not apply in determining the new 10-percent tax. If a taxpayer is to be charged an added tax because it uses the invested capital-credit method, when it did not earn during the base period a comparable income, it should be permitted, without limitation, to readjust or redetermine the base period income to exclude the effect of abnormal events or conditions.

We urge, therefore, that the provisions of section 722 be made applicable, without tax limitation, to the determination of the base-period income in the computation of the new 10-percent tax provided for in section 201 of the pending bill.

V. *Elimination of section 204 (e) of the pending bill.*—The several amendments proposed will materially increase the income subject to the excess-profits tax. While we of the accounting profession believe that at least one of the changes is fundamentally unsound (I refer here

to the nondeduction of the income tax in figuring the amount which may be subject to excess-profits taxes), we are not urging any change because in the final analysis it will affect all corporate taxpayers alike. We do believe, however, that the requirement to recompute the unused excess-profits-tax credit for the year 1940 on the basis of the amendments applicable to 1941 is a most inequitable proposal. It resolves itself into the situation that taxpayers who earned excess profits in 1940 were enabled to avail themselves of the more favorable credit computed under the 1940 provisions while other taxpayers who were not able to earn excess profits in 1940 cannot avail themselves of a credit computed under the 1940 statute but must use the less favorable 1941 basis. Thus, in result, the amendments are made applicable to some taxpayers for 1940 and to others for 1941 only. Such a discrimination is in our opinion entirely unwarranted, particularly when it involves a tax that will take as high as 60 percent of the income subject to tax. We urge, therefore, that the new provisions relating to the determination of excess-profits net income and the credit thereagainst be made applicable, in computing the unused credit carry-over, only for years beginning after December 31, 1940.

VI. *Corporation surtax net income.*—In defining "corporate surtax net income," for the new 6 percent tax, new section 16 permits a deduction for the same dividend credit as is allowed for the normal tax of 24 percent. That dividend credit—generally 85 percent of the dividends—is limited to and cannot exceed 85 percent of net income minus the credit for certain Government interest.

For surtax purposes the Government interest credit is not to be allowed. Hence the limitation on the dividend credit for the purpose of that tax should be 85 percent of net income—including the Government interest which is to be subject to the surtax.

VII. *Provisions for recognition of new capital.*—In computing invested capital greater weight is to be given new capital. That is a sound policy. We believe, however, that some changes ought to be made in section 205 of the pending bill, to wit:

1. It should not be limited to new capital paid in after the start of a tax year beginning after December 31, 1940. It should cover new capital acquired after January 1, 1940 or the equivalent tax year. There is no sound reason to grant a special benefit to those who waited for the "encouragement" to acquire new capital and deny it to those who patriotically went ahead, last year and increased capital. If it is desired to tie this provision to the defense program—as is the amortization deduction, it could be limited to new capital acquired after June 10, 1940, the amortization date.

2. As now drafted this additional allowance applies only to corporations using the invested capital as the capital addition under section 713 (g) is limited to the amount of capital paid in computed (as to property) under section 718 (a) 2. Companies using the income credit method are entitled to just as much encouragement to obtain new capital and expand as are those who use the invested capital method.

Proposed new section 718 (a) (6) should therefore be made applicable to the income credit method in determining net capital additions. Otherwise it will be discriminatorily favorable to only some taxpayers and may, therefore, fail to accomplish its purpose.

3. The reduction of new capital, for increases in inadmissible assets, is good but there should be excluded from the amount of inadmissible assets any new investment which is not recognized as new capital to the recipient. Under the proposed rule (sec. 718 (6) (D)) if a corporation acquires bona fide new capital and invests it in turn, in another corporation, the increase in its inadmissible assets offsets the new capital and no additional credit results. However, if such second investment involves a certain type of reorganization, or the second corporation is a controlled company, it gets no new capital credit either (sec. 718 (6) (A) (B) and (C)). New capital has been acquired, in fact, and it should be recognized in the manner suggested.

4. The limitation of proposed new section 718 (6) (E) (ii) should not disregard (as is now proposed) taxable dividends after December 31, 1940 (or appropriate taxable year). If a corporation distributes its earnings for, say, 1941, and in 1942 acquires new capital, its new capital allowance is reduced by the earnings previously distributed. Similarly, if it acquires new capital at any time in 1941, any earnings distribution in 1941 or any later year will reduce its new capital allowance. The reason for this is not apparent, it certainly does not seem justifiable, and is likely to lead to nondistribution of earnings with a consequent reduction in personal surtaxes.

Conclusion.—May I say in conclusion that the accounting profession appreciates very sincerely the privilege of presenting its views, welcomes the opportunity to be of service, and is prepared to do anything else it can to help you. We understand procedural and technical problems will be considered later and we intend to suggest numerous technical recommendations at a later date.

The CHAIRMAN. Your suggestion is not for withholding the tax of, say, 3, or 4, or 5 percent, or whatever tax you fix, withhold it at its source and simply superimpose it on the present tax structure, you propose to simply do away with all exemptions so everybody begins to pay right from the first dollar?

Mr. COOPER. On the first dollar, and then provide that that tax be withheld by the person paying the income at the source, so as to avoid two things: The collection difficulties and get the income in faster than you do now. As it stands now, the tax on the income for the calendar year 1941, that is, income earned by the individuals, will not start to come in until March 1942, and with the withholding it would come in during 1941.

The CHAIRMAN. I understand.

Mr. COOPER. It would simplify collection. It would not be necessary to get every wage earner or individual to file a tax return, because, so far as income tax is concerned, it would be withheld at the source. You would not have to worry about that. As it is now, the Treasury has got to chase up people who have incomes and see whether they have filed returns or have not filed returns.

The CHAIRMAN. Thank you, Mr. Cooper.

Mr. Zick.

STATEMENT OF LEONARD O. ZICK, VICE PRESIDENT, MASTIC ASPHALT CORPORATION, AND SENIOR PARTNER OF THE ACCOUNTING FIRM OF ZICK, PRICE & CO., SOUTH BEND, IND.

Mr. ZICK. Mr. Chairman and members of the Finance Committee, I have come before you today to discuss with you the inconsistencies of the proposals of the Treasury and the great injustice that would be inflicted upon the thousands of small businesses in our country, if the Treasury proposal to abolish the elective privilege of determining a corporation's excess-profits credit on the basis of normal 1936 to 1939 average earnings were enacted into law.

The Treasury has said in presenting its proposals that--

1. All sections of the people should bear their fair share of the (tax) burden and that the additional tax burden necessitated by the emergency should be distributed equitably among the several segments of our population.
2. We (the Treasury) have proceeded on the assumption that we want the kind of Federal revenue system which can be readily adjusted to the Nation's requirements after the job is done and the emergency is past.

In these two foregoing statements I am sure most everyone is in agreement and we appreciate the difficulty before you gentlemen in determining the sound distribution of any new tax load.

However, when the Treasury proposes to abolish the elective privilege of choosing to report on the normal average earnings of the base period of 1936 to 1939 or invested capital method and instead recommend to restrict the determination of an excess-profits credit to be made on the basis of a corporation's invested capital only, then we are of the opinion that the Treasury is quite inconsistent and such action would lead only to the grave danger of the destruction of thousands of small businesses, through inability to accumulate a surplus to act as a shock absorber when the need arises.

My associate, Stanley R. Price (who is also professor of accounting and teaches income tax at the University of Notre Dame) and myself operate a small accounting firm in South Bend, Ind., which with eight employees perform a general accounting and tax service for many small businesses in our community. When I speak of small businesses, I mean those employing 250 workers or less engaged in manufacturing, wholesaling, retailing, and the like.

It is such businesses as these, gentlemen, that comprise 99 percent of all businesses and handle 65 percent of the Nation's commerce. They have been for the most part deprived of a fair share of Government defense business and are now beginning to feel the stranglehold of the priorities system, which will most seriously affect them.

Many of these businesses are operated as incorporated partnerships where the stock is closely held and others where the stock of the corporation is held rather widely but, of course, not listed on any national exchange—but all of them have a comparatively small invested capital.

Their accounting has been conservative over the years and it can be safely said they have no watered stock. What net surplus earnings many had accumulated during the twenties evaporated during the depression and this, too, has had an effect upon their invested capital in arriving at their excess-profits credit under the 1940 Revenue Act.

Now, to take away from them the elective privilege of arriving at their excess-profits credit on the basis of their average normal base period 1936 to 1939 earnings and force them to compute their credit on the basis of their invested capital would be well-nigh ruinous and would add to the confusion which will attend the readjustment of a war-exhausted and bankrupt world to some kind of a peace basis.

I wish I could show you, gentlemen, many specific examples of the inequity and unfairness of the Treasury's proposed elimination of the elective privilege in the determination of the excess-profits credit but time will only permit of one such example, namely, in the case of the Mastic Asphalt Corporation:

This manufacturing corporation began business in 1932, is associated with the building industry, has no direct Government contracts, and is only indirectly affected by the defense program, and that adversely, if at all. It has approximately 1,000 shareholders, its stock is unlisted, employs 123 people.

In its first few years of operation the company lost money, but began to recoup its losses in 1936, with net incomes during base period as follows:

1936	$11,800
1937	47,400
1938	202,200
1939	370,400

In 1940 its net income was approximately $340,000—a reduction of $30,000 from 1939 largely due to increased taxes, and if its normal tax net income for 1941 is equal to that of 1940, its net income, after taxes (as provided in the bill passed by the House recently) would be $290,000 or $50,000 less than in 1940 and $80,000 less than in 1939, in which year there were no indirect benefits of the defense program.

Now, what would happen to this company under the Treasury's proposal eliminating the elective privilege and providing for the computation of the excess-profits credit on the basis of invested capital alone?

This company's average invested capital January 1, 1940, was but $434,200, and its excess-profits credit (based on 8 percent of $434,200) was but $34,736, so that if this company's normal tax net income for 1941 were equal to that of 1940, its net income after taxes (under the Treasury's proposal) would be only $203,000 compared with $370,400 in 1939 and $290,000 under the House bill.

The unfairness and inequity of the Treasury's proposal can be cited in this instance in another way. This particular company's capital stock structure consists of 300,000 shares of $1 par value common stock, and it is this figure that is used in arriving at its invested capital, yet in 1940 most of the company's present shareholders paid $6.50 per share, this price having been arrived at on the basis of earnings and growth possibilities; 300,000 shares at $6.50 per share is $1,950,000, yet its invested capital for tax purposes would be only $434,200 under the Treasury's proposal. Is this fair to this company's new shareholders?

There is no question that, if excess profits are computed on the basis of invested capital alone, it would penalize many small corporations and favor their large competitors. A corporation or-

ganized in a period of low values, such as Mastic, would be discriminated against in favor of a corporation organized in a period of high values. Compare, for an example, any corporation organized in 1929 and one like Mastic Asphalt Corporation in 1932.

The identical assets may have been turned into each corporation. Yet such assets may be reflected in invested capital of one corporation at many times the value it would have in computing the invested capital of the other. It is well known that in some cases the mere accident of incorporation in 1 year, instead of 1 year later, meant savings in taxes of millions of dollars.

Then, too, one corporation's dividend policy may have been more liberal than that of another corporation, yet that corporation whose policy on dividends has been less liberal would be benefited, while the company which has cooperated with the Treasury and avoided an unreasonable accumulation of surplus under the Treasury's proposal would be penalized.

We believe the allowance of the alternative methods of computing of whom are competitors and the unfairness of the Treasury's proposal is clearly evident among them. There is much inequity that already exists in the Federal income-tax laws, let alone the proposed addition.

We believe the allowance of the alternative methods of computing the excess-profits credit (that is, either the invested-capital or the average-earnings method) have been justified by experience and are thoroughly sound and equitable.

The CHAIRMAN. Are there any questions, gentlemen?

(No response.)

The CHAIRMAN. Thank you, sir, for your appearance.

Mr. Ulmer.

STATEMENT OF FRED ULMER, TREASURER, MONSANTO CHEMICAL CO., ST. LOUIS, MO.

Mr. ULMER. Mr. Chairman and gentlemen of the committee, my name is Fred A. Ulmer, and I am treasurer of the Monsanto Chemical Co., at St. Louis, Mo.

When the defense of our country is the stake, heavy taxation must be expected. All should willingly contribute of their earnings and substance as well as render service for the preservation of the American way of living.

But certain principles of fairness and equity should, nevertheless, be observed in the levying of the tax burden. Regarding the tax bill now before Congress, I wish to point out a few instances which I think violate the principles of fairness, and furthermore, fail to meet the purposes of such provisions as expressed in the committee report.

1. According to the press, one cardinal principle of the present excess-profits-tax law has met with more administration criticism than any other, and that is the principle of measuring exempt income by means of 4-year average income.

I think the Ways and Means Committee of the House decided rightly that only with such alternative provision can this very severe and onerous excess-profits tax be made reasonably fair and equitable. The proponents of the exclusive use of the invested-capital method failed

to recognize that the invested capital of the corporate taxpayer, as defined by the taxing statute, often bears little resemblance to the true composite amount invested in the company's equity capital by its present stockholders. Present stockholders, in many cases, have paid several times the book value of the stock as shown by the corporation's books of account.

The result of this is, of course, that whereas the corporation may earn as high as 20 percent or 30 percent on its statutory invested capital, it is earning 5 to 10 percent and in many cases even less, on the basis of the stockholders' actual investment.

Even though the average income basis is retained in the law, the definition of invested capital governing those corporations which find it necessary to use the invested capital basis should be made as realistic as possible, and from this standpoint I wish to point out the inequity in section 718 of the excess-profits-tax law, defining invested capital. Here the express purpose is the measurement of invested capital, obviously of the taxpayer corporation, not a previous owner of all or part of the property.

The concept of tax deferment under section 112 of the Tax Code is not involved here, because that deferment is concerned only with the sale or other realization of the particular property acquired in a tax-free reorganization. Here in section 718 we are concerned with an excess-profits tax on regular operation income and profits, and for measuring the excess over normal, the invested capital must be expressed at its cost to the present corporate taxpayer.

Therefore, in the case of tax-free acquisitions under section 112, the invested capital value in acquiring company's hands should be the market value at the date acquired by the transferee company, not some previous owner's valuation, wholly unrelated to the present circumstances. This does not violate the concept of deferred taxation under section 112 for when such properties acquired under tax-free reorganization are sold or exchanged, profit or loss will still be measured by the tax basis in the hands of the transferor, and this proposed change in section 718 has nothing to do with such taxation of profits when realized.

In the measurement of invested capital for the very important purpose of exempting a portion of current income from excess-profits tax, the true financial and accounting concept of invested capital should be used, not a narrow and restricted definition.

A present excess-profits taxpayer corporation should not be penalized because of a low cost of property long ago, in the hands of a predecessor when the present owner's cost is much higher.

In many cases of older corporations, the failure of invested capital basis to fairly measure excess profits is because of this acquisition of property many years ago in a period of lower cost levels. And likewise, in many cases this fault would be corrected or alleviated if invested capital were measured by the cost of the capital stock to the present holders.

As long as the statute does not provide for a realistic measurement of invested capital, it is of the utmost importance in the interest of justice, that the alternative average income method be provided.

I urge that section 718 (a) (2) be amended so that valuation required is the actual cost basis instead of "an amount equal to its basis (unadjusted) for determining loss upon sale or exchange."

2. A manifest inequity of H. R. 5417 appears in its section 205. This section amends section 718 (a) of the Internal Revenue Code so as to increase by 25 percent the amount includible in equity-invested capital on account of new capital. The purpose stated in the committee report is to encourage investment of new capital. My criticism is that this same allowance should be made to corporations whose excess-profits credit is measured by base-period income as well as to corporations using the invested-capital method.

Within any industry there will be corporations using the invested-capital method and others using the average-income method, and it appears that discrimination is worked by section 205 to the detriment of corporations finding it to their advantage to use the average-income basis. Whether a corporation measures its excess-profits credit by base-period income or by the invested-capital method does not in all cases depend upon a corporation's actual invested capital; that is, what it paid for its assets. The statutory definition of invested capital is not in accord with the financial and accounting concept of invested capital, as I have pointed out earlier. This restricted definition of invested capital suffices to force many corporate taxpayers to the average-income basis. Therefore, it must follow that it seriously injures many taxpayers who have no recourse but to use invested-capital method, in that it seriously understates their true invested capital, which should be the basis for measurement of the credit.

Therefore, since in many cases it is merely fortuitous as to the time and method of acquiring its capital property whether the invested-capital or average-income basis must be used for determination of excess-profits tax, it seems only fair to extend to either type of taxpayer this incentive of 25 percent premium for investment of new capital.

3. I wish to submit for your consideration that United States industry should be relieved under the present uncertain and emergency conditions of the speculative requirements of the 3-year declaration of value under capital-stock tax section 600 of the Internal Revenue Code. It is understood that the purpose of this declaration of value for capital-stock tax is not only as a basis for the levying of the capital-stock tax, but also to act as a measurement of declared-value excess-profits tax in any case where 10 percent of the declared value is insufficient to cover the annual taxable income of the declarer.

This requirement has always been a severe imposition on companies in industry where it is difficult to forecast earnings.

But, in such abnormal and unpredictable times as the present, it would seem that this basing of a substantial rate of tax on pure guesswork cannot be justified. I believe this committee will agree that industry today cannot forecast earnings in 1942 or 1943 with any accuracy because they are so inescapably related to the national economic situation regarding war and defense.

I respectfully urge that the law be changed, at least during the period of the emergency, so that the declaration of value may be made annually.

4. After considerable experience with administration of the amortization section 124 of the Internal Revenue Code, I am thoroughly convinced that section 124 should be amended by the deletion of subsection (i). Subsection (i) relates to protection of the United States

in cases where a taxpayer has entered into direct Government contracts and seeks the privilege of deducting 5-year amortization of newly acquired plant facilities for the production of articles deemed necessary under the defense program. Although it is perfectly proper to enforce the protection of the United States against unreasonable and excess prices under contract, I submit that the place to do this is not in a taxing statute. I believe I can cite an actual instance proving that in certain cases subsection (i) makes the amortization provision practically inoperative.

The amortization section was included in the Second Revenue Act of 1940 by Congress in response to the reasonable request of industry that it be allowed to reimburse itself through tax credits for the amounts outlaid for additional plant facilities found necessary to implement the defense program.

It was deemed reasonable by Congress that such plants with questionable postemergency utility should be written off against the income they earned, and not left as a burden against long future income with which such facilities might have no relation and which postemergency income might be far insufficient to cover.

This being the case, it should be possible for the corporate taxpayer to receive assurance of amortization through the medium of certificates of necessity before embarking upon the extensive acquisition of new assets, and the law does so provide in cases where sale of products from such emergency plants is not made direct to the United States Government in any of its branches; but where there are direct Government contracts, the taxpayer must further secure a certificate of nonreimbursement, as well as a certificate of necessity, before he has any assurance of obtaining the amortization write-off.

As a condition precedent for filing an application for a certificate of nonreimbursement, a Government contract for sale of product must be entered into.

It is obvious that after entering into such Government contract the taxpayer must proceed with the acquisition of the facilities in order to fulfill the contract. Therefore, he is committed to the expenditure for new facilities whether the administrators of the amortization act see fit to issue the certificate of nonreimbursement or not. It is quite evident that if this amortization is to act as definite assurance that amortization will be granted to those who expand their facilities for defense purposes, the necessary certificates should be granted prior to any commitment on the part of the taxpayer to acquire the facilities.

Basically this provision for Government protection under subsection (i) should not be activated by means of actual or threatened loss of the amortization privilege. Therefore, I urge that subsection (i) be deleted.

Gentlemen, I thank you.

The CHAIRMAN. Thank you very much, Mr. Ulmer, for your appearance.

The next witness is Dr. George S. Benson, of Searcy, Ark. Senator Caraway.

Senator CARAWAY. Mr. Chairman, I would like to say I have known Dr. Benson quite well. He is a noted educator in our State, and he has some very decided views on the tax question. He appears for no

group of people. He is here just on his own. I would like to introduce Dr. Benson.

The CHAIRMAN. Come around, Doctor.

STATEMENT OF DR. GEORGE S. BENSON, PRESIDENT, HARDING COLLEGE, SEARCY, ARK.

Dr. BENSON. Thank you, Senator Caraway.

Mr. Chairman and members of the Finance Committee, I am appearing before you just as an average American citizen, not representing any particular group but interested in the welfare of the Nation as a whole. I think my prepared statement will possibly provoke some questions that will be answered as I proceed with the statement, so if I may complete the prepared statement before you ask questions, I think it will save you some time.

I wish to discuss the importance of paying for the present defense program as far as possible as we go, and I wish to discuss two methods which I think would assist in doing so.

Why should we pay as we go? Because if we don't we are headed straight for inflation, dictatorship, and revolution. This statement might seem startling or exaggerated to businessmen, but to makers and students of history like yourselves, it is practically self-evident.

You well know that in one century in Europe there were six revolutions—England, France, the Netherlands, Spain, Portugal, and Naples—all having a financial origin. The last World War was followed by revolutions in Germany, Italy, Austria, and Russia, all of which were preceded by inflation.

In view of the revolutionary spirit prominent in our world of today, and in view of known socialistic and communistic activities in our own country, I am certain you gentlemen realize the absolute necessity of having our own financial system in the safest position possible.

This means that we must have the smallest possible debt at the close of the present war in order to avoid extreme inflation and heavy taxes at a time when people can't pay them and when many would repudiate heavy taxes, thus starting severe disorder.

Personally, I like Mr. Morgenthau's expression "all out" taxation. In my opinion it is not only advisable, but imperative that we pay for the greatest possible part of this war as we go. It is advisable because national income and patriotism are at a high peak during the war; and accordingly high taxes can be collected easier than at any other time. It is imperative because we must avoid inflation, dictatorship, and possible revolution at the close of the war. We want to preserve, if possible, the unequaled freedom and prosperity of the American people.

My two suggestions for paying as we go are—

1. Increased tax revenue, and
2. Reduction of nondefense expenditures.

Increasing tax revenue.—Many suggestions are being offered for increased revenue from taxation. Regarding most of these, I am not in the position to offer suggestions. It does, however, seem vitally important to me that we broaden the base by lowering the exemption on income tax.

I do not know the attitude that wealthy people have regarding their part in paying for the defense of America, because 365 days in the year I associate with those having small incomes. I do know their viewpoint and if the loyal patriotism of our Askansas people is representative of those throughout the Nation, then I know that the vast majoriy of our citizens whose incomes are less than $1,800, want to have a vital part in the necessary defense of that Nation which has brought to them the finest living conditions ever enjoyed by the masses anywhere. They know that it is only in America that people of moderate incomes can enjoy convenient homes, own an automobile, a telephone, and a radio. They are anxious to do their part in preserving a prosperity which is illustrated by the fact that while we have about 6 percent of the world's population, we have 32 percent of the world's railway mileage, 44 percent of the world's radios, 76 percent of the world's automobiles, and 50 percent of the world's wealth. Allow me to illustrate our prosperity in another way.

My two daughters were born in China. They attended Chinese schools, and knew their China, with all of its poverty. They saw children whose hunger was never satisfied, beggars in filth and rags, glaring poverty everywhere. Upon leaving China for America in 1936, they came by way of India and Egypt where they observed similar poverty. But upon arriving in New York City and observing those great skyscrapers, those clean, wide streets, those beautiful new automobiles, the well-fed and well-dressed people, Lois exclaimed: "Daddy, I just hope Heaven will be this nice."

The people whose incomes are less than $1,800 know that they are already paying a liberal share of the tax bill through indirect taxation, but they would realize more satisfaction from paying it by direct taxation. Direct contribution improves morale. You gentlemen know that we give of ourselves to those causes which we support financially. We get out only what we put in.

These people are also becoming more and more aware that this indirect taxation increases their living costs more than direct taxes would. They believe that any sudden large increase in taxes or in wages which is forced upon a large industry results in increasing the price to the consumer more than the amount of the increased taxes or increased wages. In other words, they are beginning to realize that a tax at the source of production always costs the consumer more than a direct tax would cost him, such as a retail sales tax or a personal income tax which would yield an equal amount to the Government.

Anyone who thinks that the average resident of Arkansas earning $1,800 a year or less prefers a hidden corporation tax or a hidden manufacturers excise tax to a direct tax is reflecting upon the intelligence of those people.

So I want to urge the lowering of the exemption on personal income tax for three reasons:

1. It will provide increased revenue to help pay for the war as we go, which is imperative.

2. Because people of low incomes have a patriotic loyalty which inspires them to want a direct part in paying for the necessary defense of their country.

3. Because a direct tax is the least burdensome to those in the smaller brackets.

Reducing nondefense expenditures.—I understand that nondefense expenditures are expected to cost about $7,000,000,000 for 1941 and 1942. This is almost twice the average national expenditures from 1922 to 1932. Approximately $1,000,000,000 of this increase is in relief measures no longer imperative. Part of this increase is to be found in downright waste which should be stopped.

I do not believe that extravagance ever resulted in efficiency, or increased the ability of those who became accustomed to it, and this belief is based upon years of observation and experience.

I am president of Harding College, a small college in Arkansas, a State where the per capita income is only $225 a year and the average family income only $969 a year. This college has no endowment, no income from taxation, no regular large gifts, and, as our students do not come from wealthy homes, we cannot charge high tuition and fees. Accordingly we can only balance our budget by economizing. Our experience proves this to be an asset. It has made our students more self-reliant, more dependable, more efficient—more in demand. Throughout the past 10 depression years, we have constantly had more calls for graduates than we could supply, even during the period when there were millions of unemployed youth including thousands of college graduates.

Waste and extravagance on the part of our Government is particularly painful to us. All of our professors are making sacrifices in order that the ideals of our institution may be maintained. We are able to hold Ph. D. professors at $100 a month when they are annually offered two or three times that amount elsewhere. Our highest salary is $1,800 a year, and we are holding executives who have actually been offered five times that amount. These professors also set an example of thrift and economy by living within their incomes.

This loyalty on the part of the faculty and students who economize so faithfully for the ideals of Harding College convinces me that the public officials of the United States and the general public will economize to the *n*th degree for the salvation of American democracy once they recognize the present need and witness such examples being set before them by our Congress. Accordingly I want to urge that the Federal Government take the lead in setting an example of thrift and economy to replace the present spendthrift psychology of the Nation by making a $2,000,000,000 immediate reduction in nondefense expenditures.

After recommending the broadening of the income-tax base Secretary Morgenthau told you that "we ought not to accept such sacrifices, even though willing sacrifices, from millions of people with low income * * * unless we" do five things. These five things are enumerated on pages 3 and 4 of the hearings before this committee. In my opinion, they do not include the most important item of all, namely, eliminating about $2,000,000,000 of nondefense expenditures.

Gentlemen, it is my opinion that this committee would be ashamed to ask these 2,500,000 additional people to make these sacrifices unless you can say to them that the waste and extravagance which they have witnessed on every hand is being stopped through your efforts, which they believe to be within your power.

Another imperative reason for paring nondefense expenses to the bone: Mr. Jesse Jones, I believe, anticipates a Federal debt of $90,000,000,000. We also already have other governmental debt, not Federal, of $20,000,000,000.

Now, honestly, gentlemen, how do you think that we are going to pay this $110,000,000,000 or more? What do you think will happen after the war ends? Well, there will be a drop in war production of at least $20,000,000,000 per year, also several million men will be laid off employment and several million soldiers probably will then be mustered out and with few jobs available. Is it then that we will begin to reduce the billion dollars per year that we are spending on W. P. A.?

No; I expect this appropriation to be greatly increased after the war. Will our tax receipts then exceed our desires to spend to such an extent that the surplus can be used to pay off our $110,000,000,000 indebtedness? On the contrary, is it not likely that there will be a strong temptation to wipe out the indebtedness through devaluing the dollar?

Will not some leaders explain that by revaluing the present dollar at 20 cents our $22,000,000,000 of gold will increase in value $88,000,000,000 and then recommend that this $88,000,000,000 be used to reduce the indebtedness?

Do you realize, gentlemen, that the interest on a $100,000,000,000 debt 5 years from now will probably be $3,000,000,000 per year and that during the 10 years ending in 1932 the total United States Government expenses averaged less than $4,000,000,000?

In other words, our interest alone would be three-fourths of the cost of the total Government back in 1932 and the 10 years preceding.

No doubt great pressure will be applied to wipe out this $3,000,000,000 interest charge, and the indebtedness, through dollar devaluation.

If from now until the end of the war, Congress and the administration have a spendthrift, wasteful psychology, I shall expect some such suggestions to be enacted; but if every unnecessary expense is eliminated, if Congress and the administration are just as much interested in eliminating waste as they are in raising revenue, this need not happen.

What are the facts, and where are we heading?

The great defense industries are expected to become a $24,000,000,000 per year business by next May. The Army and Navy are also absorbing many men. Accordingly many parts of the country are already facing a shortage of manpower. For the duration of this war there is no probability that we shall again have a problem of unemployment. We naturally will always have some unemployables who must be cared for, but the problem of unemployment which we faced a few years ago has vanished. Is there any question in your minds but that the relief bureaus, which were organized to help those who could not find employment, should now be discontinued? I refer particularly to C. C. C. and N. Y. A. On May 15 I suggested this to the Committee on Ways and Means of the House. At that time N. Y. A. had a budget of $99,000,000. A few days later its appropriation was increased to $160,000,000 and it now claims to be a defense organization. The elimination of N. Y. A. would be a severe financial blow to our college, but we believe that everybody should make some sacrifice and we are willing to make ours.

I also suggested the eliminaton of C. C. C., the budget for which is $265,000,000. With the expected shortage in labor, there surely is

no need for a relief organization to provide jobs for young men of draft age. Imagine my surprise later to find an expensive moving picture, produced by professionals at Government expense and shown in leading theaters throughout the country, seeking to prove that C. C. C. is a defense organization.

The C. C. C. was created to help young men who could not find employment and who were too poor to go to school—a worthy purpose, the need for which no longer exists. It has, however, proved a very expensive method of relief. Each boy in the C. C. C. has cost the Government $1,025 a year.

At Harding College we can board and educate four boys for that amount of money; if they work for the college just during the summer vacation. We can also board and educate three boys for that amount without their doing any work. If you will deduct the $30 a month which the C. C. C. pays to the boy or to his parents, you still have a cost of $665 a year for his keep and training. We can keep three boys for that amount at Harding College if they will work for us only through the summer vacation, or two boys on that amount without any work. Yet we have no endowment, no income from taxation, and no regular large gifts.

Relief agencies do not have a "thrift" psychology. They were created to listen to the calls of the needy and say "yes." They were a part of the "prosperity through spending" program. We need no part of that program today in civilian departments. Economy and thrift should be the watchwords, but how can this be done if Congress appropriates the money for these agencies to employ the most luxurious forms of publicity for the purpose of making us believe that they have changed from relief agencies to defense agencies?

Expenses which may be reduced or eliminated during the emergency.—The largest savings I believe could be made in the following:

	Present	*Proposed reduction*
Work Projects Administration, public works, and soil-erosion budgeted at	$2,088,000,000	$1,088,000,000
Civilian Conservation Corps budgeted at	265,000,000	265,000,000
National Youth Administration appropriation	160,000,000	160,000,000
Nonmilitary highways budgeted at	161,000,000	161,000,000
Total		1,674,000,000

1942 APPROXIMATE BUDGET ESTIMATES

Rivers, harbors, and flood control [1]	$121,000,000
National park improvements	10,000,000
Agricultural forests and trails	10,000,000
Rural rehabilitation	66,000,000
Food-stamp plan	100,000,000
Export bounties	100,000,000
Department publicity and franking [2]	39,000,000
National Resources Planning Board and Office of Government Reports	3,000,000
Total	449,000,000

[1] For several generations it has been assumed that this item contains political pork, which surely can be reduced during this emergency.

[2] Congress used for franking in 1928, $845,000; in 1940, $737,000; departments used for publicity and franking in 1940, $39,000,000. I understand that professionals are employed to prepare radio scripts and movie films and that the most luxurious types of publicity are included. If Harding College used such luxuries we could not educate two boys for the cost of keeping one boy in the Civilian Conservation Corps.

One-half to be reduced equals		$224,500,000
(I believe that approximately one-fourth of the next group could be saved during this emergency.)		
Agricultural Department expense	$114,000,000	
Department of Commerce	31,000,000	
Department of Justice	55,000,000	
Department of the Interior	70,000,000	
War Department nonmilitary activities	45,000,000	
Miscellaneous independent offices	66,000,000	
Refugee relief	18,000,000	
Total	399,000,000	
One-fourth is		100,000,000
Total		1,998,500,000

(The above figures are limited to nondefense activities and do not include aids to agriculture and civil aeronautics.)

I know that organizations in all sections of the country are seeking increased expenditures in Washington, but if the Federal Government would immediately and sincerely undertake to set an example of thrift and economy, I believe the entire Nation could be led to follow that example. At the present time Congress is besieged with appeals for appropriations which 10 years ago we would never have thought of carrying to the Federal Government. This is because the impression has been made all over the Nation that the head is off the barrel at Washington—that money is being poured out and that somebody is going to get it. Accordingly, every Congressman is urged to secure an appropriation for his district and thought to be a failure if he does not succeed in getting it. If an atmosphere of thrift were dominant at Washington, those appeals would cease to be made.

Where I have spoken in my State groups have voluntarily officially notified our congressional representatives of their desire for economy and have urged them to do their utmost to secure the type of nondefense reductions I have requested here today.

Gentlemen, we are today at the crossroads. Shall we continue on the pathway of waste and extravagance which leads to inflation—dictatorship and revolution? That depends largely upon the action taken by you—our Senators. If you immediately broaden the base—pay every possible dollar on the war as we go—and seriously economize in all nondefense expenditures; we can then weather this crisis and successfully preserve our freedom and our democracy.

Senator VANDENBERG. Dr. Benson, as far as I am concerned, I would like to congratulate you on a very splendid statement. I would like to express the wish that you run for Congress in the area in which you live and get yourself elected.

Senator CARAWAY. The folks at Searcy would like to hear that.

The CHAIRMAN. Are there any questions by any members of the committee?

(No response.)

The CHAIRMAN. Doctor, we thank you for your appearance here. Undoubtedly your statement ought to be made to the Appropriations Committee rather than this committee because we, unfortunately, have no control over expenditures, except as we may have some little influence as individual Members of the Senate. Of course, you realize—and I think all of us must realize—that without strong executive

leadership you are not going to have the economy that ought to take place in this Government.

Dr. BENSON. That is right, and I appreciate your kindness. I feel very much disturbed about the heavy spending program, with the expenses that the war certainly will entail, and I am very much concerned about an actual demonstration of economy that will inspire our people to follow. I believe our people will stand any amount of taxation, provided they believe the leadership is willing to bear the burden with them. So I am very much interested in a demonstration of economy, which I believe our Congress should actually make. I observe the tendency for each group to wait for everybody else to make the start in these reductions. Mr. Morgenthau says a billion dollars could be reduced, but he suggested no places for it to be reduced. Other groups talk about it being done, but nobody seriously takes hold to actually secure reductions or to put the machinery in movement that will secure them.

The CHAIRMAN. Thank you very much.

Mr. Hart.

Mr. HART. Gentlemen, may I ask the privilege of relinquishing my time to Mr. George Glassgold, who is slated to appear following me?

The CHAIRMAN. Yes; that is satisfactory.

Mr. HART. May I also ask permission to submit a brief?

The CHAIRMAN. Yes; hand it to the clerk of the committee.

(Mr. Hart's brief is as follows:)

MEMORANDUM SUBMITTED BY JOSEPH J. HART, NEW YORK, N. Y., FOR EMPIRE DISTRIBUTORS & JOBBERS BOARD OF TRADE, INC.

SUBJECT.—Tax on coin-operated amusement and gaming devices.

GENTLEMEN: I refer to section 3267 of the House bill 5417. The coin-machine industry recognizes the needs of the Government for funds to carry out the defense program and is desirous of contributing its full share. Therefore, may I state at the outset that in asking for certain changes in rates, distinctions between various branches of the coin-machine industry, and more equitable methods of computation and collection, I am doing so in the sincere conviction that these changes, distinctions, and methods of collection will offer a practical solution to the tax problem relating to the coin-machine industry.

I hope to point out, what careful investigation will prove, that these revisions provide the only method of obtaining a maximum of tax revenue from this industry.

It is only fair to start with the understanding that the operator who places coin-operated equipment of all kinds into various locations, does so by paying a commission to the location owner. A commission which is based on a percentage of the gross income from the equipment and that the operator will necessarily be called upon to assume the entire burden of any taxation which is levied.

Having started with that premise, it becomes quite evident that the entire picture of equitable taxation must be based upon the earning capacity of the various types of equipment.

This brings us, gentlemen, to the definite line of demarcation between various types of equipment, which has always been recognized in the trade but which, evidently, was not taken into consideration in the drafting of the House bill.

In the section of the bill referred to above, there have been thrown together, without regard to earning capacity or the original cost, or depreciation or general ability to pay, such widely diversified types of equipment as, on the one hand, slot machines and coin-operated gaming devices of all kinds and, on the other hand, legitimate amusement games, such as pinball games, antiaircraft guns, baseball practice games and a host of strictly legitimate games of skill.

Let us analyze, somewhat, the comparative original cost, rate of depreciation, cost of operation, and earning capacity between the gaming devices and the games of skill.

A pinball or other skill-game location whose weekly total revenue reaches $15, would be considered in the trade to be an exceptionally lucrative one. Whereas a slot-machine location which was productive of no more than $15 per week total revenue would be considered unusually poor.

The initial cost of a new slot machine is approximately $100. The initial cost of a new pinball game is likewise approximately $100. But that is where the similarity ends.

The average life of a slot machine in productive use is at least 5 years—there being on location today, any number of such machines which are 10 to 15 years old and older. Amortization and depreciation are figured roundly at the rate of a few pennies per week.

On the other hand, the life of a pinball machine rarely exceeds 4 months of top productive use, after which it must be placed in outlying areas where the income is greatly reduced. After several months additional use, its value is practically nil. The cost of a pinball machine must be entirely amortized within a period of from 9 to 12 months—the greatest portion of the depreciation and amortization taking place during the first 4-month period.

The average operator of pinball machines operating 25 to 30 new machines in the most desirable metropolitan areas will average, on his entire operation, a maximum of $7.50 to $8 per week per machine gross income before deducting any costs, such as operating expense, commission to location owner, taxes, association dues, etc.

Thousands of pinball machines are operated not in desirable metropolitan areas but in nonindustrial and rural areas where the yearly income from these machines rarely exceeds $50 to $75, and where it is therefore economically impossible to operate anything but second-hand and third-hand equipment which costs $10 to $15 per machine. (Such States as Alabama, Mississippi, Arkansas, etc., use a preponderance of this type of equipment.)

It is our firm conviction that on the basis of $25 tax per annum for each pinball or other amusement skill game, thousands of these machines will have to be removed from circulation—machines whose income could justify a smaller tax. It is our further considered opinion that only by taking into consideration these various elements of ability to pay will the pinball industry and other allied amusement and skill-game industries be privileged to provide their full share of the revenue required by our Government to carry on its program of defense.

Our request, therefore, is that slot machines and other gaming devices, because of their much greater earning capacity and negligible depreciation, be placed in a separate category in the bill.

We further respectfully request that pinball games and other amusement skill games be taxed at $10 per annum, so that instead of thousands of machines being removed from circulation because of inability to pay the tax these machines will remain on location and the Government will be the recipient of a maximum of taxation cheerfully paid.

In order to eliminate a further possibility of loss of revenue, we feel compelled to call to the attention of your committee the existence of several conditions peculiar to our industry which, if not taken into consideration in the bill, will surely result in loss of tax revenue.

Many amusement games are placed in locations commonly known as resort locations, where they are in use approximately 3 months out of the calendar year. These machines rarely earn enough during this short period to warrant the payment of a full year's tax and under the proposed method of taxation it would be found necessary to avoid this type of location entirely.

Furthermore, pinball games and other amusement devices, such as antiaircraft guns, etc., are frequently placed in locations which, after several weeks or a month, prove to be absolute failures as means of providing income. Under the proposed method of taxation, a full year's tax would be required on such locations. This condition is certain to reduce materially the number of taxable machines in circulation.

In view of the above, we therefore make the following request: That the tax on pinball games and other coin-operated skill games such as antiaircraft guns, baseball batting practices, etc., be collectible on a semiannual basis. We assure your committee that this method of taxation and collection will result in the very maximum of tax revenue from the coin-machine industry.

May we now call to your attention the problem of amusement arcades under the proposed bill. In amusement arcades the revenue is obtained predominantly from the operation of coin-operated amusement devices. There are a

number of such arcades which contain as many as 200 to 300 individual coin-operated machines. It is immediately apparent that even at a reduced rate of taxation, such places would be taxable at anywhere from $3,000 to $10,000 per year. This we assure you would be so prohibitive as to drive most of them out of business, thereby producing no tax revenue whatever from this source. We therefore suggest, with regard to amusement arcades, that the tax be placed at $10 per annum per machine up to 30 machines and that a maximum tax per annum of $300 be placed on amusement arcades where 30 or more machines are operated.

It is only fair, in making suggestions of this kind for your consideration, that we submit definitions for the purpose of classification of various types of coin-operated equipment. Therefore, in order that a clear distinction be made between slot machines and other gaming devices, on the one hand, and pinball games and other coin-operated amusement skill games, on the other hand, we offer the following definitions:

1. A coin-operated machine whose operation is controlled wholly by chance and which as the result of such operation, automatically pays out cash or tokens redeemable for cash or merchandise, and which operates without the element of skill, shall be termed a gaming device. Such a device shall be one which, if operated by a blind man, would obtain the same result as if played by a man having full and complete use of his eyes.

2. A pinball game or similar amusement device shall be one which is operated with an element of skill, where the player's skill helps determine the result, and which device does not automatically pay out money, cash, or tokens redeemable for cash or merchandise.

SUMMARY OF RECOMMENDATIONS

1. That slot machines and other gaming devices be placed in a different section of the bill from that of pinball games and other amusement devices of skill such as antiaircraft guns, etc., and that they be taxed accordingly.

2. That pinball machines and other amusement games of skill be taxed $10 per annum.

3. That the tax on pinball games and other amusement skill games be payable semiannually.

4. That a maximum tax of $300 per annum be placed on amusement arcades at the rate of $10 per annum per machine up to the number of 30 machines, with no additional tax over 30 machines. An amusement arcade being an establishment whose income is obtained predominantly from the operation of coin-operated machines.

5. That a distinction for the purposes of taxation, between slot machines and gaming devices, on the one hand, and pinball games and other amusement skill games, on the other hand, be clearly defined.

Respectfully submitted.

EMPIRE DISTRIBUTORS & JOBBERS BOARD OF TRADE, INC.,
JOSEPH J. HART.

The CHAIRMAN. Now, Mr. Glassgold, will you state for whom you are appearing?

Mr. GLASSGOLD. Yes; my name is George Glassgold and I appear for the Coin Machine Industries Joint Council.

The CHAIRMAN. Coin Machine Industries Joint Council?

Mr. GLASSGOLD. Yes.

STATEMENT OF GEORGE M. GLASSGOLD, NEW YORK, N. Y., REPRESENTING COIN MACHINE INDUSTRIES JOINT COUNCIL

Mr. GLASSGOLD. Gentlemen, I refer to section 3267 of the House bill 5417. At the outset, I wish to state that the coin-machine industry is not here to protest against the taxing of its industry and is fully cognizant of the need by the Government for funds to further the defense program. My purpose in appearing before you

is to obtain an equitable distinction between the various branches of the coin-machine industry.

The present section, as now worded, has thrown together legitimate amusement devices with slot machines and coin-operated gaming devices. In the first place, with respect to the taxable status, the gaming devices are operated by every variation of coins, ranging from 1 penny to a silver dollar. The income from the gaming devices is far in excess of the income from any amusement device; and since this tax should be an equitable tax, it places the amusement devices at a complete disadvantage. So much so, that it is very possible that the amusement device, commonly known as the pin-ball game, will be removed from many locations as a result of the tax, and cause many location owners to invite the installation of a gaming device—which in the majority of States and locales would constitute the housing of an illegal device. In other words, there will be created a situation similar to liquor bootlegging.

The pinball game or similar amusement device, is known in the trade as a novelty game, and its trade name indicates the status and life of such equipment. As a novelty game, the life of the machine is short, figured in months, and therefore is constantly changed by those people who operate the games. The resultant cost of maintenance is therefore very high. This is not true of the gaming device. It is well known that the life of gaming devices is measured, not in terms of weeks or months, but in terms of years. There is gaming equipment in operation which is as old as 10 to 15 years. It becomes apparent that a differential exists in the cost of operation between amusement devices and gaming devices.

Since it is a matter of obtaining revenue for the Government to maintain and put into effect its program of defense, we believe it is necessary that it be made certain that the maximum revenue be obtained from a given industry. It is imperative that no provision be made so that as a result, any group or large portion of the taxed industry is eliminated from the field. A tax differential should be created between the gaming and the amusement devices. Unless this is done, a large section or portion of the amusement devices will be compelled to drop out of the field and the gaming devices will become their substitute with much resultant damage.

We believe that the so-called slot machine or gambling device, since they use coins up to the size of $1, and are not continually changed in design, can readily pay an occupancy-use tax of $25 per annum or more. However, the pinball game or similar machine, since it is equipment which is constantly changing in design and becomes obsolete rapidly, and the usual coin for operation is the nickel, cannot compete against the gaming or slot machine. It cannot pay the annual tax as high as $25. The tax should be fixed at $10 per annum. This reduced tax will make it possible to keep as many of these games that are presently operated, in operation; and obtain the maximum of income to the Government. This is a national problem and tax—a cross section of the entire country must be taken in fixing this tax. Though it is true that in some of the larger metropolitan districts there are some pin-ball games in operation that have a large income-producing capacity, these locations are in a very small minority. The bulk of the machines in operation are scattered in

the outlying districts of metropolitan areas and in the rural districts, where the gross income is very small.

At its best, an operator services an average of 30 machines; and after paying the commissions to location owners, paying the cost of replacing machines, servicing the equipment, he is able to make a small weekly salary for himself.

We request that the bill provide for the taxing of amusement devices under a separate paragraph from that of the slot machine and gaming device. It has been a source of embarrassment and distress and hardship in having amusement equipment classified with the so-called gaming devices. A definite hardship when the question of taxation is brought up for consideration. Consequently, the amusement device suffers as it is suffering in this particular case.

Another matter that we request to bring to your attention is the method of taxation. Many of these games are placed in locations which are known as resort locations, and they are in use approximately 3 months out of the calendar year. In many instances it would be impossible to place the pinball game or amusement device in a location where the tax is the same as on a machine which is used for the entire 12 months. Furthermore, a machine may be placed in a location and after a month or 2 months found to have produced little or no income, and consequently that machine will be permanently removed and not replaced with another. It does not seem equitable that a tax for the full year should be paid when there was a usage of possibly 1 or 2 months. Not to prorate over the period on this tax would tend to lessen the number of games being placed on locations and decrease materially the income from the industry. This should not be done at this time in view of the defense needs of the Government.

A solution to the prorating of the tax and other problems would be to place the tax on a semiannual basis. In this way, most of the elements which now appear inequitable would automatically be eliminated.

Another existing condition that we should like to bring before the committee is the effect of the proposed tax on so-called amusement arcades, where the space is used predominantly for the operation of coin-operated amusement devices.

The CHAIRMAN. That is covered by this same section?

Mr. GLASSGOLD. Yes; it is. In such locations there may be as many as two and three hundred individually coin-operated amusement machines. It is apparent that if the $25 tax remains, an arcade may be subject to a tax of as much as $10,000 per annum. Such a tax would be absoluately beyond their capacity to pay, and the very purpose of this section would be defeated. May we suggest that a maximum tax per annum be placed upon amusement arcades, and that we believe the sum of $300 per annum would be a fair and equitable tax?

With regard to the definition of the amusement machine as distinguished from the gaming machinie, may we suggest that a coin-operated machine, whose operation is controlled wholly by chance, and which, as the result of such operation, automatically pays out cash, or tokens redeemable for cash or merchandise, and which operates with no element of skill, shall be termed a gaming device. A homespun definition would be that such a game, if operated by a blind man, would obtain the same results as if played by a man having full and complete use of his eyes. A pinball game or similar amusement device is such a game or

device as is operated with the element of skill, where the player's skill determines the result, and which game does not automatically pay out money—cash or tokens redeemable for cash.

That is my statement.

The CHAIRMAN. Any questions, gentlemen?

(No response.)

The CHAIRMAN. Thank you very much.

Mr. Scott?

STATEMENT OF ROBERT J. SCOTT, PHILADELPHIA, PA., REPRESENTING NATIONAL WHOLESALE HARDWARE ASSOCIATION

Mr. SCOTT. With your permission, may I read my remarks?

The CHAIRMAN. For whom are you appearing?

Mr. SCOTT. National Wholesale Hardware Association and the Edward K. Tryon Co.

I have been buying and selling fishing tackle for 35 years. I am associated with the Edward K. Tryon Co. of Philadelphia, who probably distribute a larger volume of fishing tackle, in a wholesale jobbing way, than any other firm in these United States. I also represent the National Wholesale Hardware Association, consisting of 300 members located in 34 States. This group represents the outstanding and most important wholesale jobbing distributors in hardware and sporting goods, a great many of whom sell fishing tackle. As a matter of fact, some of the larger outlets of fishing tackle are hardware organizations. I also represent several large houses that are exclusively fishing-tackle distributors.

We are asking you gentlemen to give most serious consideration to the proposed tax on certain items of fishing tackle in H. R. 5417, page 72, lines 2 and 3.

We do not believe anyone will seriously object to the proposed tax on rods and reels although—and we quote from your records as follows:

In the Report of the Subcommittee of the Committee on Ways and Means of the House of Representatives, Proposed Revision of Revenue Laws, 1938, there is a statement on page 23, as follows:

> The tax on sporting goods has caused administrative difficulties out of proportion to the revenue received.

If this has been true of sporting goods as a whole, the difficulties will be multiplied many times in the collection of a tax on artificial lures, baits, and flies.

We, however, do not now offer any objections to the proposed new tax on rods and reels although we feel you will be very much disappointed in the dollar-and-cents return. We do, as a group, however, object to the proposed tax on artificial baits, lures, and flies.

There are many reasons, among which is the fact that it will be almost impossible to collect from a great many so-called manufacturers of these items.

I hold in my hand my confidential list of fishing tackle factories containing 1,106 names, some of which are large, important factories with complete organizations but, by far, the great majority are small individuals located here, there and everywhere, with little or no

overhead and there are, no doubt, other names that I have not recorded. (A careful count indicates that 20 of these names will cover all of the manufacturers of rods and reels in this country.) There seems to be a great desire on the part of many sportsmen to be in the manufacturing of fishing tackle, especially baits and lures. In my State of Pennsylvania—and this is true of other good fishing States—in almost every town in the fishing area, you will find one or more fly tyers or bait makers who have no business organization of any kind, who do most or all of the work themselves, sometimes assisted by their families and, these "so-called" manufacturers would have a decided advantage in selling, over the large and better-organized factories.

You all know that it would be almost an impossible task for the Government to keep track of and collect taxes on artificial baits, lures, and flies from these small local factories. As a matter of fact, many of these so-called manufacturers have other employment and do this work for either a hobby or extra remuneration. Many retailers produce baits and flies in their spare time, not only for stock purposes but to supply special orders, and you would have a tremendous job, an almost impossible one, in keeping track of the tax.

During the season in Pennsylvania and other good fishing States, dealers have girls in their windows tying flies as an advertisement, and often customers walk in and have their flies tied while they wait and take them with them.

We have no hesitancy in saying that, in our judgment, there are probably more flies and baits made by these so-called local manufacturers than there are in the larger factories.

In days gone by we enjoyed a very large business in Pennsylvania on flies which is now almost negligible on account of the competition from these local factories. The amount of detail work necessary in a regular jobbing distributor's organization to keep a true record of the taxes on baits and flies would be enormous and the amount of return to the Government would be very small.

Then, another important point is that only the amount of the tax paid can be collected, and this would divulge the cost of the merchandise to the dealer and the consumer. The only way this could be overcome would be for the tax to be included in the cost of the merchandise at the source and not added separately.

I am submitting for your consideration a copy of the membership list of the National Wholesale Hardware Association, and also a copy of the catalog of the Edward K. Tryon Co., which will indicate to you the great variety of baits and flies that we sell, and you will note that their monetary value is comparatively insignificant.

We hope you will find it possible to eliminate the tax on artificial lures, baits, and flies.

The CHAIRMAN. Any questions?

Mr. SCOTT. I will leave this catalog here for the committee.

Senator DANAHER. Mr. Chairman, is that catalog going into the record?

The CHAIRMAN. No; he has just left that for the committee.

Mr. SCOTT. I have left it for the committee.

The CHAIRMAN. Mr. Haggerty.

STATEMENT OF JOHN B. HAGGERTY, CHAIRMAN, BOARD OF GOVERNORS, INTERNATIONAL ALLIED PRINTING TRADES ASSOCIATION, AND PRESIDENT, INTERNATIONAL BROTHERHOOD OF BOOKBINDERS

Mr. HAGGERTY. Mr. Chairman and members of the committee, this presentation, in behalf of the International Allied Printing Trades Association, comprising the 5 international unions in the printing industry, representing almost 200,000 skilled workers, favors the doubling of the taxes voted by the House of Representatives on net time sales to radio broadcasters.

It is our understanding that this revenue bill is to be based on the ability of the taxpayer to pay. The presentation of the opposition carefully avoids this question of the ability to pay.

The International Allied Printing Trades Association advocated the levying of this tax on the net time sales of radio broadcasters with two purposes in mind. First, the ability of the broadcasters, based upon their own reports to the Federal Communications Commission, to pay, and, secondly, to protect the job opportunities of printing-trades workers.

In the 10 minutes allowed me it is not possible for me to develop all of the reasons which we have incorporated in the brief which I have filed with your committee. I will, therefore, confine myself to the highlights, hopeful that we will demonstrate to your satisfaction that not only should taxes be levied, but also that the rates as voted by the House be substantially doubled.

The opposition to the levying of this tax presented no figures to disprove the contention we made of the ability to pay. They raise the cry that this is a tax on advertising. No one has advocated a tax on advertising.

The first question, as we understand it, before the committee in levying these taxes is the ability to pay. You will find citations in our brief which do not permit of anyone questioning the ability of the networks and the operators of the larger radio broadcast stations to pay. It is worthy of note that the two major networks, with a combined total investment of $4,614,000, had net profits of $59,509,549 for the 10-year period 1931–40, inclusive. Also, it might be of interest to the committee to know that the net profits for the years 1931–35, inclusive, were $19,017,613, while the net profits for the 5-year period following, 1936–40, inclusive, were $40,491,736, an increase in net profits of some 213 percent.

These net profits are after stated deductions for depreciation of some $10,182,021—1931–40, inclusive—and the payment of all taxes, including Federal income and all other operating costs.

In addition to these unusually high net profits, mainly in what were known as depression years, the networks principally and the larger radio broadcast stations allowed to be deducted by advertising agencies, in the form of rebates and discounts, an additional $20,000,000 yearly. These figures do not show in the financial reports of the networks or the radio broadcast stations, as the deduction is allowed before the presentation of the bills.

In order that there may be no question about this I will quote as an authority the attorney for the National Association of Broadcasters.

In the formal brief he presented, referring to gross sales, page 2, he said, I quote—

> The amount so received or accrued cannot logically include discounts or rebates actually allowed, of course.

Whether he was fearful that your committee might seek to tax such rebates or discounts or possibly having in mind that the Treasury of Federal Trade Commisison might see the wisdom of questioning such practices I do not know. However, you will note he sought to justify the continuance of these debates and discounts, free of taxation.

It is understood that your committee will recommend the levying of substantial taxes—increases of 200 percent and 300 percent—on incomes of wage earners and small businessmen, the very people least able to pay. The reason given is the need of additional revenue.

Further, we understand your committee has under consideration the lowering of the income-tax base, again calling upon those least able to pay to make up for the losses to the Treasury through the exemptions which are sought by those who operate radio broadcasting stations with their yearly net profits in excess of 100 percent.

We are opposed to the lowering of the income-tax base until such time as those of proven ability to pay are properly taxed.

The taxes which the International Allied Printing Trades Association have advocated will collect more net revenues than the total amount the Treasury will receive from taxes received through the lowering of the income-tax base, and, much of that which they would receive through substantial increases in the taxes of those least able to pay.

We understand that through the lowering of the income-tax base it is expected that the Treasury Department will collect some $19,000,000 and the cost of collecting will be some $15,000,000.

The taxes which we suggest be levied will raise at least $25,000,000. Of this amount some $20,000,000 could accrue through the elimination of these rebates and discounts, which do not show in the receipts of the radio broadcasting companies and the networks, and the payment of this money into the Treasury as taxes.

The networks, with their increased net profits of 213 percent for the period 1936–40, inclusive, alone can pay an additional $5,000,000 yearly. They would still have, according to the report of the Federal Communications Commission for 1939 and for 1940, some $4,000,000 yearly as net profits, after all taxes on their investment of $4,614,000. In addition, there are a number of other stations the net profits of which range from 63 percent to 133 percent.

The net profits of the entire industry as shown by the reports of the Federal Communications Commission, 1939, the last detailed report available, was some $24,000,000 on a declared value of properties worth $28,000,000.

Radio broadcasters would have you believe that the proposed tax on radio broadcasting stations is a tax on advertising. That they do not believe such themselves is best evidenced in the formal brief of the National Association of Broadcasters. You will find on page 18 they say "radio broadcasting is the principal source of entertainment in America." On the same page they emphasize their insistence that radio broadcasting is an amusement and entertainment enterprise

as you will note they say that radio broadcasting "enjoys the favor of half again as many people as its closest competitor, the motion picture, which is the chief attraction for 19.3 percent of the American people."

Surely, no one will contend that the motion pictures, radio broadcasting's closest competitor, is advertising. During the Finance Committee hearing, in response to a query as to placing a tax on advertising, Senator Bennett Clark said:

You cannot conceivably tax newspaper advertising under the Supreme Court decision in the *Louisiana case.*

Reference was made before the committee on Monday to the fact that the executive council of the American Federation of Labor had voted to oppose this tax. The A. F. of L. was not consulted by the Printing Trades Unions as to whether or not such tax should be levied. It is our belief that the people most vitally concerned are the Members of the Congress—House of Representatives and Senate—on whom lie the responsibility for deciding on the contents of the revenue bill.

(A brief submitted by Mr. Haggerty is as follows:)

PRESENTATION OF PRINTING TRADES UNIONS, BY JOHN B. HAGGERTY, CHAIRMAN, BOARD OF GOVERNOR, INTERNATIONAL ALLIED PRINTING TRADES ASSOCIATION, AND PRESIDENT, INTERNATIONAL BROTHERHOOD OF BOOKBINDERS

Mr. Chairman and members of the committee, the International Allied Printing Trades Association, for whom I speak, is composed of the International Brotherhood of Bookbinders, the International Printing Pressmen and Assistants' Union, the International Photo-Engravers Union, the International Electrotypers and Stereotypers Union, and the International Typographical Union, with a combined membership of almost 200,000 highly skilled workers.

We ask your committee to recommend a substantial increase—100 percent—in the taxes, voted by the House of Representatives, on net time sales of radio broadcasting networks and stations. We believe the rates voted by the House of Representatives are but one-half of those which should be levied, in view of the profits realized on the Government license or franchise, and the ability of the networks and larger radio stations to pay the tax.

$60,000,000 profits on $4,614,694

We favor the imposition of these taxes for several reasons:

1. The annual revenue collectible from this source, estimated at $12,500,000 based on rates voted in the House of Representatives, is needed, as are the taxes sought from numerous other sources, to meet the heavy burdens of national defense. When every available source of revenue must be tapped to meet the requirements of unprecedented public expenditures no fertile source should be neglected, so long as the tax proposed is not discriminatory, and, at the same time would not impose an excessive burden. In these times no tax can properly be opposed merely because it is burdensome. The only question is one of discrimination and of undue burdensomeness. With workers called upon to pay increased taxes of 200 percent to 300 percent and with many workers who never before paid any taxes called upon to deprive themselves of the necessities of life in order to contribute to national defense, surely those who secure yearly net profits in excess of 100 percent, after the payment of present Federal income taxes, should not complain of the so-called burden of taxation. We are opposed to the lowering of the income tax base until such time as those with proven ability to pay are properly taxed.

2. We favor the imposition of a tax on radio broadcasting income, substantially higher—100 percent—than the rates voted by the House of Representatives, because such taxes would not be either excessively burdensome nor discriminatory. We believe your committee should recommend exempting from this tax those radio stations owned and operated by labor, farm, religious, and educational bodies when such stations are not leased to others. We believe

such stations serve a community interest and are not commercial in the usual sense of the word.

The net broadcasting revenues of the radio networks and larger radio stations are and have for a number of years been exceedingly high as measured by the cost of facilities, both when compared with net profits of any industry of similar proportions and when looked at in terms of percentage of profits.

Reports of the Federal Communications Commission show that the net profits of the two major networks, namely, National Broadcasting Co. and the Columbia Broadcasting System, amounted to $59,509,349 for the years 1931–40 inclusive. These figures are taken from the Federal Communications Commission Monopoly Investigating Committees' report, volumes 1 and and 2, and, reports of the Federal Communications Commission for the years 1939 and 1940. These net profits of $59,509,349 for the 10-year period yielded an average annual net profit for these two companies alone of $5,950,934. The total combined investment in these two companies, on which these unusual earnings were made, was $4,614,694. The average annual net profits, after deduction of all operating costs, payment of Federal income and all other taxes, and including depreciation of $10,182,021, were therefore some 129 percent.

They have the profits to pay

It should be added that the net profits for the years of 1936–40, inclusive, were much greater than those for the years of 1931–35, inclusive. National Broadcasting Co. and Columbia combined net profits increased from a total of $19,017,613 in the first half of the 10-year period to $40,491,736 during the second half of the 10-year period, an increase for the years 1936–40 of 213 percent over the profits for the 5-year period 1931–35, inclusive.

Surely, these official figures, as reported by the network companies to the Federal Communications Commission, give every evidence of ability to pay a much higher and more substantial tax than those which were voted by the House of Representatives.

Further evidence of the ability to pay additional taxes is also available from the same official source. In 1939 there were 33 stations of 50,000 watts power operating full time on clear channels. The total broadcast revenues (1939) of these stations were $27,055,000 and their net broadcast revenues were $9,375,000, or an average of $284,000 per station. The declared net worth or current value of the physical property of these stations in the same year was $7,015,000, or an average of $212,000 per station. Thus, their net broadcast income—their net profits before payment of Federal income taxes—was 133.6 percent of their value.

Compare such net profits with an allowance of 8 percent, or even 10 percent, which we believe is considered a high return on investments, and then consider the unusual ability of these radio network and broadcasting stations to contribute substantially to the common burden of national defense.

In 1939 regional unlimited time stations numbered 174. Their total broadcast revenue was $32,814,000. Their net broadcast revenues were $6,393,000, compared with a current value of $10,222,000. Their net broadcast revenue was therefore 63 percent of the current value. This is less than one-half of that enjoyed by the 33 full-time 50,000-watt stations operating on clear channels, but it is many times the liberal rate of 8 percent or 10 percent.

The most profitable radio stations are, of course, located in the larger urban centers of the Nation. Seventy-three stations with time sales of over $25,000 were located in centers of over 2,000,000 people. Without reciting all the supporting figures which are available in the reports of the Federal Communications Commission, calculations show that the net returns of these stations were 76.8 percent of the current value of the stations. Twenty-six stations located in populous centers ranging from one to two million people enjoyed net profits, calculated on the same basis, of over 100 percent, while the net return of the 40 stations with time sales of over $25,000 located in cities with 500,000 to 1,000,000 people was 97.1 percent.

Why exempt profitable broadcasters?

Reports of the Federal Communications Commission reveal that of total net broadcasting revenues of the entire industry, in 1939, not less than 93 percent was received by the 154 stations which had a gross income of more than $150,000.

Many additional statistics could be cited to substantiate the lucrative character of the radio-broadcasting business, but enough has been submitted to demonstrate

conclusively the ability of the radio-broadcasting industry to pay substantially higher taxes than those voted by the House of Representatives without either networks or stations incurring an undue or excessive tax burden.

Much criticism has been leveled at what is alleged to be the possible discrimination of imposing such taxes on radio broadcasters. Before considering the criticism of those who are interested in opposing the levying of these taxes let us consider how fortunate these networks and radio broadcast stations would be in being freed of the payment of these taxes for the year 1941, as provided for all other taxpayers. You might note that these taxes would not become effective before December 31, 1941, instead of sometime during 1941, as do all other new excise taxes.

If we examine the long list of excise taxes already imposed, and bear in mind that a number of these are to be substantially increased under this revenue bill, the question arises, not whether it would be a discrimination to tax radio broadcasters but whether it would not be discriminatory to levy a tax on all of these other industries and services and to single out radio broadcasters for exemption. If all forms of luxury and amusements and a number of necessities are called upon to contribute substantially, yes, even heavily, to meet the costs of national defense, radio broadcasters should not escape paying their share of the common burden.

Radio broadcasting is aimed principally at amusement or what is thought to be amusement and entertainment. That the Federal Government classifies radio programs as entertainment is shown by the form which every broadcaster must file when he applies for a renewal of his license. The space in which he is asked to specify the activities he proposes to engage in is headed "entertainment." No reference is made to advertising in the application filed with the Federal Communications Commission. In the exhaustive report of the Federal Communications Commission, made public May 4, 1941, radio broadcasters are constantly referred to as disseminators of entertainment.

"Broadcasting is entertainment"

In the amusement field radio programs are similarly treated. The organ of the amusement trades, Variety, includes the radio broadcasters as members of the amusement group. In the issue of May 27, 1941, Variety carries a list of the most popular daytime and evening radio programs. Among the 50 listed, only 5 are identified under the names of the sponsors or advertisers. The remainder of the 50 so listed—45—are identified under the names of the popular entertainers. The trade publication Broadcasting likewise identifies radio programs principally by the names of the entertainers. A recent issue of Broadcasting lists the 10 most popular radio programs for the year 1940. In this listing we note the absolute absence of the name of any sponsor or advertiser. Almost all of the leading radio programs are identified only by the names of the entertainers. Much the same is true of the radio schedules appearing in the daily newspapers.

That the National Association of Broadcasters itself regards radio broadcasting as predominantly in the entertainment class is evidenced from their brief filed with the Senate Finance Committee. They claim (p. 18) that "Radio broadcasting is the principal source of entertainment in America today," and that radio broadcasting "enjoys the favor of half again as many people as its closest competitor, the motion picture."

Radio broadcasters secure entry into American homes through their dissemination of entertainment. All other purveyors of amusement are taxed on gross income. Radio broadcasters should not be exempt. Otherwise, one disseminator of entertainment on a national scale would escape the payment of taxes comparable to those collected by others.

3. A third reason why we favor higher taxes than those proposed on radio broadcasting revenue lies in the fact that an outright gift of monopolistic license is made to the radio broadcasting companies by the Federal Government. This free franchise is capitalized by the license holders, as records of the Federal Communications Commission show, and sold for profits sometimes in excess of a million dollars. The licensee pays nothing for this lucrative permit. It is certainly neither unreasonable nor unfair or repressive of freedom to ask the holders of these profitable privileges to take their place alongside other purveyors of amusement and entertainment, and even those of necessities in defraying the costs of arming the country. The opponents of this tax have enjoyed these valuable privileges so long, through the generosity of the Congress,

that they apparently find it disagreeable to be called upon to pay their fair share of the costs of government and of national defense.

Who are the opponents of this proposed tax?

First, of course, are the radio networks and radio broadcast stations which will be called upon to pay the taxes levied. Their desire to escape this taxation may be natural, but the cry of discrimination and excessiveness of the levy are unfounded, as we have shown. All the facts are against these allegations.

On July 21, 1941, the Federal Communications Commission reported the net income, before payment of Federal income taxes, of those 238 radio broadcast stations which would come within the purview of the taxes voted by the House of Representatives. This compilation does not include the network operations. The total net profits of these stations, before Federal income taxes, was $23,533,440. If we allow $5,000,000 for Federal income taxes the balance of net income for these 238 stations would be $18,500,000. Accepting the estimate of the trade publication, Broadcasting, that $4,000,000 of these taxes of $12,500,000 would accrue from the networks, we have $8,500,000 to be paid by these 238 stations which had a net, after payment of Federal income taxes, of $18,500,000, thus a net profit of some $10,000,000.

According to another report of the Federal Communications Commission the current value of the 255 more important stations, which would include these 238, was $20,473,000 in 1939. After payment of the proposed taxes already voted, these 238 stations would therefore have left a net profit in excess of 50 percent on their current value.

As for the two major networks, National and Columbia, calculations based upon reports of the Federal Communications Commission show that after the payment of the proposed low taxes the net profits remaining would be some $3,500,000 on a combined total investment of $4,614,000, or a return of nearly 75 percent.

Considering the vast and unusual profits of this industry their contributions toward eliminating unemployment has been relatively slight. The 84 stations in centers of population of more than 2,000,000, for example, had in 1939 only 3,473 full-time employees, including 314 executives. The total pay roll, exclusive of executives, was also small. The average was $50 per week, including the wages paid to staff musicians and highly skilled electrical operators. Yet these stations showed a net profit of 76.8 percent on the current value of the stations.

Another group that opposes the proposed tax consists of the advertising agencies. These too have a reason for complaint that is not hard to understand. The commission paid by newspapers and magazines for securing advertising is 15 percent. Network broadcasters and many of the larger radio stations can and do pay rebates and discounts as well as agency commissions ranging from 36 percent upward.

Frank K. White, treasurer of the Columbia Broadcasting System, in a recent letter to the Editor and Publisher, a weekly trade magazine, in defense of the bookkeeping practices of radio networks, protested that the maximum commission allowed by his company could only represent 36 percent. These higher rates are arrived at by a combination of rebates, discounts, and commissions. The National Broadcasting Co.—red network—rates published in the 1941 yearbook of Broadcasting, reads as follows:

COMMISSIONS AND DISCOUNTS

[Weekly discounts for 13 or more consecutive weeks network broadcasting]

All network contracts for the same advertiser (advertising agency) may be combined for determining discount rate

Contracted value of network time at gross rates:	*Rate of discount on weekly gross billing, percent*
Less than $2,000 per week	None
$2,000 or more but less than $4,000 per week	2½
$4,000 or more but less than $8,000 per week	5
$8,000 or more but less than $12,000 per week	7½
$12,000 or more but less than $18,000 per week	10
$18,000 or more	12½

"Twenty-five percent annual discount: A discount of 25 percent in lieu of weekly quantity discounts and annual rebates will be allowed currently to advertisers (advertising agencies) whose contracted gross billing equals or exceeds $1,500,000 within a 12-month fiscal-year period.

"Net billings (gross billings less all discounts and rebates) shall be subject to an advertising agency commission of 15 percent."

The blue network of the National, in addition to the above, provides for special blue discounts.

The Columbia has a schedule of weekly and annual discounts, plus an advertising agency commission of 15 percent. There is not much material difference in the systems employed to make it attractive for the advertising agency to divert as much advertising as possible from printed publications to radio broadcasting.

Having in mind that the advertising agencies receive some "36 percent" from radio broadcasting companies, as admitted by the treasurer of the Columbia (which does not advertise special discounts or rebates) as compared with only 15 percent from printed publications for placement of advertising, it might be well for the committee to look over the National Broadcasting Co. billings of those advertising agencies whose billings exceeded $1,500,000 in 1940.

Agency A	$9,564,419	Agency G	$1,956,810
Agency B	4,392,855	Agency H	1,920,143
Agency C	2,972,116	Agency I	1,749,591
Agency D	2,454,059	Agency J	1,604,674
Agency E	2,134,921	Agency K	1,560,537
Agency F	1,950,503		

Much the same could be cited with relation to the advertising agencies and Columbia.

The combined total billings by advertising agencies (1940) amounted to $91,684,000. Of this amount all but $496,641 was placed through advertising agencies. In other words, direct billings was about one-half of 1 percent.

It is estimated that the rebates and discounts, other than advertising agency commissions, divert some $20,000,000 of yearly income which would otherwise be received by the radio networks and broadcasting companies. The proposed tax allows a deduction of not more than 15 percent for commissions free from taxation. The elimination of the rebates and discounts would save the networks and radio stations an estimated total greater than the estimated $12,500,000 which they would pay under the low rates voted by the House of Representatives.

Seek continuance of rebates

The National Association of Broadcasters makes it clear in their brief (p. 2) that "gross amount received or accrued from the sale of time," by the broadcast companies, "cannot logically include discounts or rebates actually allowed." This means that rebates and discounts which are always in addition to the agency commissions, do not show in the gross receipts and so are not deductible. The broadcasting companies will, therefore, look twice before allowing the very generous rebates and discounts which the advertising agencies have become accustomed to.

Little wonder the advertising agencies are concerned about a tax on radio broadcasters!

Radio broadcasters would have you believe that the proposed tax on radio broadcasting stations is a tax on advertising. That they do not believe such themselves is best evidenced in the formal brief of the National Association of Broadcasters. You will find (p. 18) they say: "Radio broadcasting is the principle source of entertainment in America." On the same page they emphasize their insistence that radio broadcasting is an amusement and entertainment enterprise as they contend that radio broadcasting "enjoys the favor of half again as many people as its closest competitor, the motion picture." Surely, no one will contend that "the motion picture," radio broadcastings "closest competitor" in entertainment or amusement, is advertising.

During the Finance Committee hearings, in response to a query as to placing a tax on advertising, Senator Bennett Clark said: "You cannot conceivably tax newspaper advertising under the Supreme Court decision in the *Louisiana* case."

The employees of the broadcasting companies may also be numbered among the opponents of the proposed tax on radio-broadcast companies. In addition to other figures which we have cited it would be well for the committee to have in mind that the 40 stations in centers of population of 500,000 to 1,000,000, in 1939, employed only 1,805 full-time workers. The average wages paid were $42.37. Clerks received an average of $20.59; stenographers, $23.10; accountants, $31.43; writers, $41.60; staff musicians, $43.29; and highly skilled

electrical operators, $42.54. The 87 stations in centers having between 250,000 and 500,000 population employed only 2,561 full-time workers. The average wages received was $34.04. Clerks averaged $20.40; stenographers, $22.93; accountants, $32.06; writers, $28.13; staff musicians, $32.67, and electrical operators, $40.09. The average net broadcast revenue of 80 of these 87 stations was 86 percent of the current value of the stations, after paying commissions and allowing rebates and discounts to billing agencies.

The employees who oppose the levying of the proposed slight taxes obviously have no stake either in the larger profits of the radio-broadcasting companies or the swollen rebates allowed to the advertising agencies.

4. We favor a substantial increase in the proposed taxes on radio broadcasters because of the diversion of advertising from printed publications to radio broadcasting with its resultant loss of thousands of job opportunities to printing trades workers.

Jobs lost—yearly wages decreased

The small number of workers engaged by radio-broadcasting stations, as compared with printing establishments, the broader regional coverage enjoyed by the more powerful radio stations which cover areas wherein are located hundreds of newspapers, magazines, and printing plants, which provide employment for thousands of printing-trades workers; the public gift of a free franchise and finally the great profits of the radio-broadcasting companies together with comparatively small operating expenses have combined to give radio broadcasters an unfair competitive advantage which has resulted in the loss of thousands of job opportunities to printing-trades workers. In addition, we believe, the granting of rebates and discounts, plus agency commissions, has led these advertising agencies to prefer radio business to that of newspaper and magazine contracts from which they receive much lower remuneration.

That the effects of this competition has been serious cannot be doubted. Farm newspapers and magazines have been the greatest sufferers. According to Printer's Ink of March 1, 1940, the advertising revenues of farm papers totaled $35,000,000 in 1929, while in 1939 these receipts had dropepd to $17,000,000, a loss of 50 percent. In 1929 radio advertising amounted to 4.3 percent of total national advertising. In 1939 this percentage had risen to 31.8 percent. Government statistics show a decline of 1,656 in the number of publishing plants compared with 1929. Average annual wages of printing-trades workers during the same period declined $284 or 15 percent. The decline in advertising revenue forced many newspapers and magazines to increase their prices to the consumers as much as 50 percent.

In view of the foregoing it would be difficult to find among the hundreds, yes, thousands of industries, trades, or services in the United States, subject to excise or other taxes, one which might with greater justice and fairness and with less oppressiveness and injury be taxed than the radio-broadcasting stations and networks.

(Subsequently the following telegram was received from Mr. Woodruff Randolph, secretary-treasurer, the International Typographical Union.)

[Telegram]

VANCOUVER, BRITISH COLUMBIA, *August 22, 1941.*

SENATE FINANCE COMMITTEE,
Senate Office Building, Washington, D. C.:

The International Typographical Union, in convention assembled, respectfully calls to the attention of the committee that the printing-trades unions are unanimous in their support of the International Allied Printing Trades Association's request for adequate amusement tax to be levied on net time sales of radio broadcasting networks and stations as presented to your committee by John B. Haggerty, chairman of the board of governors of the association. The International Typographical Union further states that the American Federation of Labor does not represent the association in this matter, and that a resolution adopted by the executive council of the American Federation of Labor opposing such a tax does not represent the desires of the five international printing-trades unions involved. The names of such other American Federation of Labor unions as may be desirous of such an action by the executive council of the American

Federation of Labor have not been made known to our organization. Four of the five printing-trades unions forming the International Allied Printing Trades Association are members of the American Federation of Labor but do not depend upon that organization for guidance on this particular question. These four printing-trades unions even though affiliated with the American Federation of Labor are unqualifiedly in support of the presentation of President Haggerty, as is also the International Typographical Union.

WOODRUFF RANDOLPH, *Secretary-Treasurer.*

The CHAIRMAN. Mr. Casey.

STATEMENT OF WILLIAM J. CASEY, NEW YORK, N. Y., REPRESENTING THE FEDERAL TAX FORUM

Mr. CASEY. Gentlemen, I am William J. Casey, an attorney associated with the Research Institute of America, and I am here on behalf of the Federal Tax Forum of New York City. It is a forum of tax men in the tax departments of corporations and attorneys and accountants who practice tax law in New York. This organization of over 100 tax men meets together 2 nights a month for the purpose of studying and discussing taxes and pooling experiences with both taxpayers and tax collectors.

In appearing for the forum, I am presenting not my own ideas and recommendations but those of the organization as a whole. I agree with most of these recommendations; with some of them I disagree. They were arrived at after submitting to the group over 30 different and distinct suggestions for amending the tax law in the interest of greater equity and expediency in raising revenue. These suggestions were boiled down; some of them discarded; some were amended. I am submitting to you the recommendations which the group, as an organization, has approved and thinks deserving of serious study and action by you gentlemen who are charged with drafting revenue legislation.

At the outset, let me say that the Federal Tax Forum as a body recognizes the urgent need for more revenue. We are not speaking in behalf of any taxpayer, class of taxpayers, or even in behalf of all taxpayers as a group. We appear as plain citizens for the purpose of contributing our experience to the task of raising the greatest amount of revenue with the least amount of hardship and inequity. We submit that our own experiences in dealing with both taxpayers and with tax collectors gives us a particularly advantageous perspective from which to consider this problem of raising a maximum of revenue with a minimum of hardship, irritation, and injustice with which you are so seriously concerned. Before proceeding to our specific recommendations, let me urge one general principle. It is this: It is just as important in drafting tax legislation that you consider taxpayer morale, as it is in drafting military legislation to consider the morale of the men in Army camps. Without good taxpayer morale, the new and higher tax rates, which are necessary this year and for some years to come, will not produce their maximum in revenue. Most of our recommendations are directed at clearing up inequities and hardships which generate resentment among taxpayers. In some cases, these steps which we are asking you to take—for example, restoring the tax on investment income to a net income instead of a gross income basis—may cost something in revenue. We submit, however, this cost will be offset—perhaps even more than

offset—by the reduced difficulty and expense in collection, and the general increase in revenue which will result from the more cheerful cooperation by taxpayers in reporting income, keeping records, cooperating on audits, and in general cooperation with the Bureau of Internal Revenue.

Removal of these sources of irritation will pay dividends in revenue. If they do not, it is within your power to make whatever rate increases are necessary to make up the loss in revenue which results from following these recommendations.

Investment expenses.—It is strongly urged that section 23 (a) of the Internal Revenue Code be amended to specify clearly and unmistakably that any expenses incurred in connection with the production of any income which would be taxable shall be deductible. The Supreme Court, in *Higgins* v. *Commissioner* (61 S. Ct. 475), has upheld the Commissioner in disallowing clerical salaries, office rent, and similar expenses incident to supervising extensive investments.

The CHAIRMAN. It will not be the purpose of the committee, according to its tentative decision at least—I think we will have to follow it—to go into what you might call the administrative or technical, or miscellaneous provisions of the tax bill at this time. The Treasury is making a study and will be ready to submit a bill that will cover such matters as the correction of the rule in the *Higgins case* sometime this winter.

Mr. CASEY. I would like to lay these recommendations on the record anyway. Some of the things I have to speak on concern technical and administrative changes; others concern provisions of this bill.

The CHAIRMAN. You can file the brief in the record; it will be more helpful for us a little later.

Mr. CASEY. This *Higgins decision*, perhaps primarily aimed at inactive investors, has been applied against persons actively engaged in carrying on an investment business. This discriminates gravely against the taxpayer who invests his money in securities and bonds and who has to spend money in investment research, keeping records, making reports, etc. Frequently he would be much better off putting his money in an annuity or some other form of investment where he received only a net return. Under the current Treasury practice, he must pay tax on his gross return without the benefit of any deduction for incidental business expenses. Thus, taxpayers who happen to receive the income on which they are taxed from investments are taxed on their gross returns. Other taxpayers are taxed on their net return. This glaring, and now very common discrimination can be readily eliminated by providing for deduction of all expenses incurred in earning taxable income.

It is particularly important that inequities and injustices be eliminated now. As tax rates increase, taxpayer resentment is apt to increase correspondingly. By eliminating technical discriminations of this kind, that resentment can be at least kept at a minimum.

In 1938 a subcommittee of the House Ways and Means Committee made a recommendation on this point which received Treasury approval. This recommendation was to this effect:

> It is recommended that a deduction be permitted under section 23 of the Revenue Act of 1936 for expenses not attributable to the taxpayer's trade or business, but immediately and directly incurred in the collection or production of amounts included in gross income, limited to 50 percent of the amount collected or produced.

This recommendation was not written into the law at that time because the Bureau was as a general thing allowing deductions of expenses incurred in producing income. The need now is acute. It might be noted that a provision in the New York income-tax law similar to the recommendation of the House Ways and Means subcommittee is operating satisfactorily.

It is recommended that the relief be made retroactive to all cases now open. For many years it was the regular practice of the Bureau of Internal Revenue field men and auditors to allow deductions of bookkeeping and stenographic expenses, office and safe-deposit-vault rent, auditing and legal fees, the cost of investment advisory services, etc. Disallowance of these expenses on a really large scale began with the Supreme Court's decision on February 3, of this year in the *Higgins* v. *Commissioner case*. Now it is not fair to levy assessments for the disallowance of their investment expenses on taxpayers whose returns for prior years have been kept open by waiver or otherwise. To avoid discrimination in favor of those taxpayers whose returns happened to be closed when the *Higgins case* came down, the amendment authorizing deduction of any expense incurred in producing taxable income should be retroactive. This change will put the Treasury back on the basis on which it operated for many years.

Basis for graduation of excess-profits-tax rates.—It is strongly recommended that the excess-profits-tax rates be graduated on a percentage basis instead of a dollar basis. The present scale of rates and the proposed rates operate arbitrarily with respect to many corporations. The present graduation of the rates of tax according to brackets measured by dollar amounts is entirely out of accord with the principles and the logic of excess-profits taxation. As the law stands, some corporations can increase their earnings four or five times and earn over 100 percent on their capital without hitting the top rates. On the other hand, other corporations might hit the top rates though earning only 10 percent on capital or earning slightly in excess of their average earnings during the base-period year. This is illustrated in the following examples:

Corporation A has an invested capital of $10,000,000 and average base-period earnings of $800,000 so that under either credit method it has an $800,000 credit. In 1942 its earnings amount to $1,350,000—an increase of slightly more than 50 percent over the base-period earnings. Corporation A will pay excess-profits taxes at rates running from 35 to 60 percent on its adjusted excess-profits net income. Corporation B has an invested capital of $100,000 and average base-period earnings of $8,000 so that its credit under either method is $8,000. Corporation B earns $42,000 in 1942—a 200-percent increase over base-period earnings, but pays excess-profits tax at no more than the 35-percent rate. Because of the fact that the excess-profits-tax rates are at present tied to brackets graduating according to fixed money amounts, a corporation which increases its earnings by only 50 percent may be required to pay at the very highest rate while a corporation increasing its earnings threefold can pay at the very lowest excess-profits-tax rate.

The philosophy behind the option to take a credit based on prior earnings record or capital is that a corporation is entitled to a reasonable return on capital and to earnings equal to its earnings for a

representative predefense period before it should be required to pay excess-profits tax. Since the rates are to be graduated it is logical that they should be graduated according to the proportion by which current earnings are in excess of predefense earnings or the allowable rate of return on capital.

Consider that a stockholder in a corporation with a high level of earnings in dollars may now have his return depleted by excess-profits tax at top rate even though his return on his investment is much lower than that of stock in a close corporation which earns more on its capital, more in relation to its predefense earnings and yet keeps within the low-rate bracket.

We therefore urge that the excess-profits tax be placed on an equitable basis by graduating the rate schedule according to a percentage of the excess-profits credit. The rates can be adjusted to produce the amount of revenue sought from the excess-profits tax. All we ask is that the arbitrary dollar basis of a graduating rate be replaced by a fair and reasonable percentage basis. The Treasury in the testimony of Mr. Sullivan recognized that the proper basis for graduating excess-profits-tax rates is the ratio between excess profits and the credit and not the dollar amount of excess profits.

Amortization allowance.—The forum recommends that the revenue act be amended to require the Treasury Department or the National Defense Advisory Commission to issue certificates of nonreimbursement permitting 5-year amortization in all cases where the contract contains no specific treatment of or reference to reimbursement for the amortization of capital costs. There is a serious log jam in the issuance of certificates of nonreimbursement. The Defense Commission is requiring taxpayers who expanded their facilities to carry out defense work to establish that they will not recover any part of the cost of the expansion in the price they charge for the defense items they contracted to produce. This is causing a great deal of anxiety among taxpayers. It is understood that the Defense Commission has gone so far as to break down the corporation's profit on the contract, consider that it is entitled to earn only what it considers a reasonable profit, and so consider the balance as reimbursement of the costs of expansion. Where the Defense Commission is able to find what it considers to be reimbursement, it withholds certificates of nonreimbursement and doubt is thrown on the taxpayer's right to the 5-year amortization privilege which Congress granted last year. It does not seem to have been the intent of Congress to authorize anybody to determine what is a legitimate profit on a Government contract and to treat the amount in excess of what that party considers a reasonable profit as reimbursement for the cost of expansion. This dispute and litigation can be cleared up now by making it mandatory to issue a nonreimbursement certificate unless the Government contract specifically provides for reimbursement of expansion costs. Of course, where the latter is the case, clearly 5-year amortization is not allowable.

It was not the intent of Congress in enacting section 124 of the Second Revenue Act of 1940 that a taxpayer's right to amortize the cost of expansion certified as necessary should be contingent upon the taxpayer's being able to break down the cost elements and the profit anticipated in taking a Government contract to show that he did

not figure on a return of his expansion cost in the contract price. It was the apparent intent of Congress and the almost universal opinion among taxpayers that nonreimbursement certificates would be issued unless reimburstment for expansion costs was specifically agreed upon as such and appeared on the face of the contract. There was no suggestion that ordinary supply contracts might involve a hidden reimbursement that would require protection of the Government's interest.

Taxpayers have relied on the assurance given by the entire history of section 124 that 5-year amortization would be available if expansion was certified as necessary and reimbursement was not specifically contracted for. Those contemplating additional expansion can't be sure as to their tax position. This situation can only be cleared up by amending section 124 to require issuance of nonreimbursement certificates in all cases when necessity certificates have been issued unless the contract on its face provides for specific reimbursement of expansion costs, as in the case of emergency-plant-facilities contracts.

Extension of the "growth corporation" formula.—In March 1941, the excess-profits-tax law was amended to permit a computation of base-period earnings which gave special weight to the last 2 years of the 1936 to 1939 base period. The purpose was to relieve a young corporation which had grown rapidly during the base period. It was felt here that in the case of these rapidly growing corporations the last 2 years of the base period were more representative of their average predefense earnings than were the first 2 years. The law as it stands today does not seem to permit the use of income of predecessors. It does not seem fair or reasonable that a business which carried on through the entire base period should, merely because of that fact, receive better treatment than a business which underwent reorganization, changed corporate form, or was perhaps transformed from an individual proprietorship or partnership form to the corporate form during the base period. Frequently, a corporation which had new capital pumped into it or which changed managership during the base period will have undergone some change in corporate form. This is precisely the type of corporation which the growth corporation formula intended to assist. It is recommended that the law be amended or clarified to afford the benefits of the growth corporation formula to all corporations, including the one which used the data or earnings record of a predecessor corporation or individual proprietorship or partnership in computing its average earnings credit.

Extension of section 3801.—The forum recommends extending the provisions of section 3801 of the Internal Revenue Code to lift the bar of the statute of limitations where the Treasury Department disallows a loss on the ground that it should have been taken in an earlier year. This revision would permit the taxpayer to take his loss in the earlier year even though ordinarily that year would be closed by the statute of limitations. The House Ways and Means Committee, in its report on the 1938 Revenue Act, stated:

> The sole purpose of the statute of limitations is to prevent the litigation of stale claims. Its use to obtain a twofold advantage, whether by double deduction or by double taxation, is not in keeping with its fundamental purpose.

Pursuant to this philosophy, section 820 of the Revenue Act of 1938, now section 3801 of the Internal Revenue Code, was enacted. This

section effectively closed up the possibility of a taxpayer taking a double deduction. It protects the Government from claims by taxpayers that income sought to be taxed in a current year should have been taxed in a year outlawed by the statute of limitations. It protects taxpayers against efforts by the Government to impose tax on an item of income which was reported and taxed in a year barred by the statute of limitations. However, there is one glaring and obvious omission. The Commissioner is still entirely free to disallow a deduction on the theory that it should have been taken in a year outlawed by the statute of limitations. Suppose in 1939 the taxpayer claimed a worthless stock deduction. The Commissioner erroneously disallows it on the ground that the stock is not yet worthless. In 1941, after a refund for 1937 is barred, the taxpayer again claims his worthless-stock deduction and again the Commissioner disallows it. This time the disallowance is on the ground that the stock had become worthless in 1937. Although the taxpayer has suffered a valid loss, the Commissioner, by changing his position, has prevented him from using that loss to reduce tax liability. The Government is protected from double allowance of all losses, but the taxpayer is not protected from double disallowance of a loss which he actually suffered, whether in one year or in another. This inequity can be remedied by adding to subsection (b) of section 3801 a further circumstance for adjustment.

Income from partially completed contracts.—It is recommended that taxpayers performing work on Government contracts or subcontracts be given the option of taking into taxable income of the current year the income arising from goods completed within the year but not delivered until after the close of such year.

This proposal would afford relief in situations where a contractor has completed a large amount of goods on Government contract, income from which cannot be taken into taxable income because of the failure of the Government to inspect and/or accept the goods for various reasons. It would also afford relief where completion of the entire contract is delayed because of inability to obtain parts or certain essential materials. The taxpayer's object in exercising such an option, of course, would be to avoid being taxed on such profits in the following year, when tax rates might be higher and/or other deductible expenses lower. Such a relief provision would operate generally to advance the date of collection of taxes.

Accounting principles.—The experience of a good many of the tax men in the Federal Tax Forum indicates that many troublesome situations met in their practice had an obvious solution from an accounting viewpoint, although not covered by any specific provision of the tax statutes. The forum therefore recommends that the bill contain a provision substantially as follows:

> Generally recognized principles of accounting are to be followed in determining what is gross and net income and the year of its realization, and what constitutes paid-in capital and earned surplus except to the extent, if any, that such determination be clearly contrary to specific provisions of the code.

Note that this provision would not operate to permit dispute and litigation over what is the recognized accounting principle or the best recognized accounting principle. If the taxpayer follows any recognized accounting principle or practice, the Bureau would be required to compute income and capital on that basis in the absence of any conflicting statutory provision.

Extension of limitation period.—The forum recommends that the law or regulations be amended so that the statutory waiver form used by the Commissioner to keep open the statute of limitations on assessment automatically operate also to keep open the right to file refund claim for the same year. Frequently, the Bureau has insisted upon obtaining a waiver to keep open a number of tax years. Although the taxpayer cooperates by giving such a waiver, this waiver does not operate to keep open the period within which he can file refund claims for the same year or years. Frequently, further audits and examinations, discussions, and negotiation on a return for an outlawed year will reveal that the taxpayer failed to take a deduction to which he was entitled or that he reported an item of income which he did not have to report. If the statute of limitations has run on the filing of a claim for refund, he is helpless. On the other hand, the waiver, if it is signed by the taxpayer, permits the Commissioner to knock out exemptions erroneously claimed, or add an income item which the taxpayer failed to report, even though the statute of limitations has run. In the interest of tax justice, this should work both ways. This is another point at which placing the Commissioner of Internal Revenue and taxpayers on an even and equal footing would result in more cheerful or, at least, less resentful payment of taxes, keeping of records, filing of returns and other cooperation with the tax-collecting authorities. Here it is quite clear that is difficult for a taxpayer and a Bureau representative to sit down and work in a fair, cooperative, and truthful manner to determine the taxpayer's exact tax liability when the atmosphere is clouded by the knowledge that if the Bureau representative finds some way to add to the taxpayer's liability he is free to do so, but if the taxpayer finds some point on which he paid more tax than he should have, he gets no refund.

The forum recommends a basic provision in the statute that any agreement extending the period within which the Commissioner may make an assessment will automatically grant the taxpayer a similar extension of time within which he may file a claim for refund. It has been held (*Tucker* v. *Alexander*, 275 U. S. 228) that the Commissioner does not have the power to extend the period for filing refund claims. Therefore, there is a clear necessity for legislative relief to produce equal operation of the statute of limitations.

Bad debts.—The forum recommends that section 23 (k), permitting deducation of bad debts, be amended so that no charge-off is deemed necessary. A similar amendment eliminating the need for ascertainment within the taxable year should be enacted. Both of these recommendations could perhaps be best accomplished by creating a statutory presumption in favor of the year in which a bad debt is taken off or deducted on the tax return. The thought behind these recommendations is that a bad debt should be deductible when it actually becomes worthless. The technical requirement that the taxpayer go through the mechanical process of ascertaining that the debt is worthless within the year in which it becomes worthless, and charging it off within that year, appears to be superfluous to the main objective of permitting a taxpayer to use bad debts to offset taxable income. The requirement for charge-off and ascertainment is a pure matter of form. It has no effect upon the substance of when a debt

actually is worthless, and thus when it can be deducted. Large mercantile and manufacturing organizations can avoid these technical requirements by using the reserve method of deducting bad debts.

A statutory change, such as the one proposed, would help the small taxpayer who does not use extensive accounting set-ups or, in many cases, even keep books. Here the requirement that he must ascertain that a debt is worthless within the year in which he wants to deduct it and charge it off in that year is particularly harsh. Too often the Bureau of Internal Revenue had disallowed the bad debt deduction purely on the ground that it was not charged off or not ascertained to be worthless within the taxable year, even though the taxpayer is able to prove that the debt actually became worthless in the year for which the deduction is claimed. Taxpayers are in the best position to know when they have exhausted efforts to collect a debt and when the debt becomes uncollectible. The Commissioner should be required to overcome a presumption that the taxpayer has claimed the debt in the proper year. It might be noted that the courts and the Board of Tax Appeals are trending to correct inequities worked by failure to observe these technical requirements. Thus it has been held that a taxpayer who keeps no books makes an effective charge-off when he takes a bad debt on his return. However, this judicial assistance has not extended to the point of overlooking the technical requirement that the taxpayer ascertain the debt to be worthless within the taxable year. Judicial assisance on a question of this kind is slow and uncertain. It does not operate with complete uniformity. The taxpayer should not be required to carry his case to the Board of Tax Appeals in the attempt to avoid inequities of this type. Too frequently the amount involved does not justify appeal. The clear, certain, and reasonable remedy for inequities caused by this vestigal technicality in the tax law lies in the statutory amendment.

Impose excise taxes as near point of manufacture as possible.—The forum recommends that Federal excise taxes or sales taxes, if they are enacted, be imposed on manufacturers instead of on retailers. The forum opposed a general Federal sales tax. The grounds for opposing a general sales tax and for recommending that existing and new excise taxes be imposed at the point of manufacture bear some resemblance. The basis for both is the administrative convenience of collecting the tax more readily from manufacturers than from a much greater number of retailers. A general Federal sales tax would require a new army of auditors, examiners, and all the other incidentals involved in collecting a sales tax. If excise taxes are collected from manufacturers, the Government will be required to deal with a much smaller number of firms, and the job can be handled by a much smaller number of persons on the Federal pay roll. By adjusting the rates to manufacturers' selling price rather than the retail selling price, the required amount of revenue and substantially the same economic and business effects can be produced.

Merger of gift and estate taxes.—The forum recommends that the gift and estate taxes be combined to provide only one exemption and, in effect, one tax on gifts in trust and the general estate payable at different times. Lifetime gifts would first absorb the single exemption. Then the value of lifetime gifts in trust over and above the exemption

would be taxed at gift-tax rates, which would be as they are at present, about three-fourths of the estate tax.

Thus, the discount for paying the tax on a lifetime gift would be retained. But when the donor dies, estate taxes would begin operating against the property held at the time of his death at the level of the value of all gifts in trust over and above the exemption. Thus, if there were a $40,000 exemption, and a donor gave to trusts during his life property valued at $240,000, he would pay gift tax on $200,000 at about three-fourths the estate-tax rate. If at his death he held property worth $500,000, this property would not be taxed at the estate-tax rates from zero to $500,000, but would be taxed at the estate-tax rates in effect between $200,000 and $700,000.

No retroactive excise taxes.—Final recommendation calls for elimination of the retroactive provision of section 2405 which would impose the new and increased excise-tax rates on conditional or installment sales made since July 1, 1941. While sympathizing with the desire to begin the collection of new excise-tax revenue at the earliest possible date, we do not feel that it is fair to discriminate against sales made on an installment basis. As the bill stands today, there will be no excise tax on cash- or charge-account sales made before the effective date of this 1941 Revenue Act. This discriminates against the small income taxpayer who does most of his buying on articles subject to excise taxes on an installment basis. This favors the taxpayer who can afford to pay cash or who enjoys the luxury of a charge account.

We particularly protest against the retroactive application of this provision, which penalizes the buyer or seller of jewelry, furs, musical instruments, and other articles affected by these new excise tax rates. There was no warning that penalty of this kind was contemplated at the time the sale was made. Many business lines face the requirement to pay excise tax and adjust their selling prices accordingly for the first time this year. Certainly for the period between July 1 and the date the House Ways and Means Committee bill was made public, most businesses sold without collecting excise tax or adjusting their selling price to cover a new or increased excise tax rate. If the bill goes through as it stands today, they will be faced with the necessity of absorbing as much as 10-percent excise tax or jeopardizing customer relations by attempting to collect from buyers a tax which was not contemplated by either party at the time the sale was made.

We, therefore, recommend that the new and increased excise tax rates be made applicable only to sales made after this tax bill becomes law.

In conclusion, I want to say that some of the recommendations we have made here may cause a little loss in revenue to the Government. We thought and talked about this, however, and concluded that there was a good possibility that the decreased cost of collection and better taxpayer cooperation, resulting from taking out some of these more irritating taxing provisions, might more than compensate for the loss in revenue, particularly in connection with such items as bad debts. In any event, we feel that if that doesn't prove to be the experience, you gentlemen can raise the rates to recover the required revenue with the full assurance that you will then be doing it on a more equitable tax structure.

The CHAIRMAN. Mr. Guiney. For whom are you appearing?

Mr. GUINEY. The National Tavern Association.
The CHAIRMAN. New York City?
Mr. GUINEY. Yes; 8 East Forty-first Street, New York City.
The CHAIRMAN. All right; you may proceed.

STATEMENT OF TIMOTHY P. GUINEY, NEW YORK, N. Y., REPRESENTING NATIONAL TAVERN ASSOCIATION

Mr. GUINEY. Gentlemen, as the president of the National Tavern Association, I am presenting the views of my fellow tavern men on the tax measure now before this committee, insofar as it concerns a proposed tax on alcoholic beverages, which my members, the owners of the Nation's bars and grills, taverns and restaurants, sell. Officially we are designated as on-premise licensees and there are more than 250,000 of us throughout the country. We sell liquor "by the drink" for on-premise consumption in our establishments, and in this manner account for better than 70 percent of the alcoholic beverage sales volume in this country. Which means that out of the 50,000,000 cases of so-called hard liquor sold nationally, more than 35,000,000 cases are sold by these on-premise licensees, by the drink.

The facts and figures you will hear today from other factors in this industry will convince you that there is a grave danger lurking in any added tax at this time. An increased tax opens the way to illicit liquor sales, refilling of bottles, the use of lower-proof whiskies and the general increase of unlicensed sales of alcoholic beverages, all of which must result in a greatly curtailed consumption of tax-paid liquor. I could talk about the law of diminishing returns, or stress again that the point of tax-satiety has been reached on this commodity. But I believe that, if you will permit me, a practical tavernman, to show you exactly what happens to the tax dollar in this industry, and what the result, practically, of an added tax would be in actual revenue to the Government, you may agree with me, that the proposed $1 per gallon tax, will not only result in a falling off of consumption, but will cause a definite loss in tax revenue from this industry of over $27,000,000 in the coming year.

First, for the purposes of computation, permit me to discuss this tax on the basis of a case of whisky—12 quart bottles at 100 proof, 3 gallons to the case. Now, let me take you step by step with this tax from the distiller to the consumer. The placing of a $1 per gallon tax on distilled spirits, would mean that the Government should get for each case sold $3. The distiller then adds to his price this $3 plus a mark-up for handling, overhead, and interest of about 50 cents, making the additional price to his distributor $3.50. The distributor in turn adds to this price his mark-up of about 13 percent, bringing the price to the tavernman to about $4 per case. The tavernman should now add to his cost his usual mark-up and pass it on to the consumer, the public—but he cannot do so. For he now breaks up the case into individual drinks—and thanks to the last two tax increases his price per drink is as high as he can make it, and still obtain customers to buy it. The next price increase would have to add 5 cents to the price, and he cannot get that price from his customer, or can only get it at the cost of a great loss in trade. As proof positive that he cannot get an additional nickel is the fact that in

States where a State tax in 1940 has boosted this price, the sales have decreased as in the State of Virginia, where a State tax resulted in an exceptionally noticeable decline in tax-paid revenue, and a relatively high increase in captured stills, and other illicit outlets. In the State of Louisiana, too, a State tax increasing the cost per drink, resulted in a definite and marked decline in State tax revenues, directly attributable to this tax.

This leaves but one alternative to the tavernman. He must absorb the tax himself or find other means of passing it on to his customer—other means than a price increase, if he is to maintain his sales volume, and correspondingly the tax-revenue possible through such sale.

Where you cannot get more for a commodity, and the cost to the seller is increased, there is but one thing to do—stretch that commodity, so that you give less for the same price, and thus maintain your same percentage of profit. In the case of meats for example, the price of the dinner might not be increased because the cost of steak has been increased, but the size of the steak served is noticeably reduced, although the price of the dinner is the same. By the same token, the tavernman must stretch the whisky in the bottle he buys, so that he can continue to derive the same volume of profit at the same price. In other words where he formerly sold 20 drinks out of each quart of liquor, he now must get 30 drinks to overcome the added taxes and costs with which he is burdened. If the $1 per gallon ($3 per case) tax is made a fact, it will be inevitable and the duty of this association to advise its members to cut their drinks, by serving them in 1-ounce glasses instead of in the 1½-ounce glasses in which they are now sold. Only in this way can the tax be passed on to the public as it was originally intended to be. Only in this way can the tavernman avoid again absorbing a tax, which he cannot afford to pay.

What does such cutting down of the size of the glass mean to the Government in revenue. As pointed out, of the 50,000,000 cases sold annually, over 35,000,000 were sold, by the drink, through the taverns. On these 35,000,000 cases of liquor, the taxernman paid a tax amounting to some $315,000,000. Should he reduce the drink sold to 1 ounce from 1½ ounces he would need exactly one-third less liquor to serve the same number of drinks as he sold the previous year. In other words he would only have to purchase some 24,000,000 cases, instead of 35,000,000 cases of tax-paid liquor to do the same volume of business. The number of drinks he sells would be the same, but the volume of liquor sold in each drink would be reduced exactly one-third. So that even if there was a tax increase of $3 per case as is proposed—it would only be paid on 24,000,000 cases. Figured at the new tax total, including the new tax proposed, the tax would be $12 per case, which would only bring in $288,000,000 of tax revenue. In other words, at the present $9-per-case tax the revenue would continue to reach at least $315,000,000 annually. At the proposed $12 rate, the total revenue would only be $288,000,000, or a loss of revenue of $27,000,000 without taking into consideration the very evident loss through the sale of illicit liquor, bootlegging, and other subterfuges made possible by the inviting margin between legal and illegal liquor, not to mention the loss of revenue to the States who now average $3-per-case-tax revenue

from the present taxes in force. This association is not anxious to suggest any changes to the tavernman which in these times would adversely affect the national tax revenue. No one knows better than America's No. 1 taxpayer how vital such funds are to national defense. We therefore have a suggestion to make which has been endorsed and approved by our members throughout the country. Despite the burden of the present taxes, we feel that if we must we can stand a tax rise of not more than $0.25 per gallon—$0.75 per case. By the time this tax reaches the tavernman it will be $1 per case—getting out of each case 240 drinks (using the 1½-ounce glass as at present); it would mean that each drink would cost us a little less than one-half cent additional to serve—we are willing to absorb this cost ourselves, just as we have absorbed most of the past tax rises, in the interest of national defense and the great need for funds, despite the present heavy tax load we are now called upon to pay. As a practical matter, you can see that where the tax increase involves a cost to the tavernman of only one-half cent per drink, it would not pay him to change over to the other size of glassware, at the risk of offending the customer, the public. Only dire economic necessity would make such a move mandatory. We feel that this is the only way to keep up this industry's present tax-paying capacity—and while this tax would not add the $100,000,000 the $1 new tax proposal contemplated—it will definitely assure the Government of the same tax as last year, plus an added $30,000,000 from the $0.75 per case suggested here, plus the normal increase added national earning power should bring. Against which you have the almost certain loss of $27,000,000 which must result if the $3-per-case tax proposal now recommended should pass. A net difference in national tax revenue of $57,000,000 less than you can have under the plan we have submitted here.

This association sincerely hopes that this committee will take into consideration the figures and facts stated here, and act upon the suggestion of this association. And, lest the cry of "unpatriotic" be raised by anyone against this industry, let me point out that over 75 percent of the licensed tavern owners in this country are ex-service men like myself who proved their patriotism in the last war. In fact, we feel that we would be definitely unpatriotic were we to fail to point out and protest a proposed tax which cannot possibly raise the revenue intended, because it is economically impractical. Two hundred and fifty thousand tavernmen are anxious to cooperate—with a just tax they can do so.

The CHAIRMAN. Thank you very much, sir.

Mr. GUINEY. Mr. Chairman, I am submitting to the committee a brief requesting an exemption on floor stock on hand to the extent of 100 gallons as previously granted in past tax measures, and would appreciate permission to file a final brief on the matter with the committee in the next few days.

The CHAIRMAN. You may do it up to Monday.

Mr. GUINEY. Thank you, Mr. Chairman; I do appreciate the privilege granted me here today, in expressing the views of the tavernmen of this country.

The CHAIRMAN. It will be included.

(The memorandum referred to follows:)

NATIONAL TAVERN ASSOCIATION FINAL BRIEF

REQUEST FOR EXEMPTION FOR FLOOR STOCKS ON HAND IN PROPOSED 1941 REVENUE BILL FOR ALCOHOLIC BEVERAGES IN TAVERNS

COMMITTEE ON FINANCE, UNITED STATES SENATE.

GENTLEMEN: The brief attached hereto clearly shows that the tavern men whom this association represents, under the present economic conditions in the industry, have little hope of passing on to the public any part of the tax now proposed on alcoholic beverages. The tavern men of this country suggested to the Congress, on behalf of this industry that the tax be limited to 25 cents per gallon of distilled spirits, and have offered to absorb this tax so that the tax revenue resulting would not be diminished and could in fact be increased. But that is not the purpose of this brief.

We are requesting that the committee incorporate in the proposed tax bill an exemption such as was included in the last tax bill passed on July 1, 1940, for stocks on hand in retail outlets to the extent of 100 gallons.

As in 1940, we base this figure of 100 gallons on the normal stocks on hand in the average business establishment throughout the country. We do not believe that any stock in excess of this figure should be tax exempt if a new tax is to be levied. But we do believe that the tavern man, the small businessman of this industry, is entitled to every consideration unsofar as it is economically possible for the taxing agencies to extend such consideration. Stocks in excess of this figure should be taxed. All we want is a 30-day supply exempt from tax—35 cases, 100 gallons of alcoholic beverages is sufficient for normal business. The average tavernman would, if given a floor-tax exemption on this quantity of merchandise, be given an opportunity to adjust himself to the next tax and would feel that the Government is cooperating with him, rather than burdening him with taxes without any consideration for his normal business activities, and would reciprocate by lending his every effort to continue to be America's No. 1 tax collector and taxpayer. Sufficient precedent exists for the inclusion of such floor-stock exemption clause, not only in the tax bill of July 1, 1940, was exemption granted, but in the present tax bill of 1938 a 250-gallon exemption was granted. Such excessive exemption is not needed or expected by the taverns. But we do feel that an exemption of 100 gallons, especially inasmuch as the tavern-we do feel that an exemption of 100 gallons, especially inasmuch as the tavernman must absorb this tax himself, would be of the utmost economic, moral, and financial aid to the small tavernowner who has never protected any levy that was for the general welfare of the country. A small businessman who needs the little lift, the saving of this seemingly small amount of money which nevertheless means much to him. This exemption would have a tonic effect on the man upon whom the burden of collecting America's heaviest industrial tax ulptimately falls. We respectfully request your inclusion of the exemption clause in any tax which may be levied, either at the level suggested by this association of $0.25 per gallon or at the tax rate finally determined by the Congress.

The CHAIRMAN. Mr. John P. Crane.

STATEMENT OF JOHN P. CRANE, PHILADELPHIA, PA., REPRESENTING THE PHILADELPHIA RETAIL LIQUOR DEALERS ASSOCIATION

Mr. CRANE. Mr. Chairman and members of the committee, I do represent 14,000 retail liquor licensees in Pennsylvania, employing some 50,000 people. I appreciate this privilege of appearing before your committee today and wish only to point out that we think this is a dangerous tax. It is a tax that would deprive the working man whom we cater to mostly of the drink he has been used to getting, or increase the price of that drink to just double the amount he has paid for it in the past. I therefore appeal to you not to remove that drink from the market so that this workingman will be deprived of the pleasure given to people in the higher wage brackets. I

sincerely hope you will give this consideration. This provision will increase the number of bootlegging outlets in this country; they are in every township, city, and borough. We are infested with bootleggers and the authorities, Federal and State, agree that it is a condition they cannot meet. They do not have a number of men sufficient to stamp this thing out. I believe to make the price of any drink prohibitive to the one who enjoys it will only add to the enforcement problem which we are confronted with today. We are interested in the enforcement and control of the liquor laws and try to cooperate always with the agencies charged with that enforcement; therefore, I hope an exemption will be allowed, as it has been in the past.

I want to thank you very much for the privilege of permitting me to address you on this subject.

The CHAIRMAN. I believe that exhausts the witnesses for today, so we will recess until 10 o'clock tomorrow morning.

(The following letters and statements were ordered incorporated in the record:)

STATEMENT SUBMITTED BY THE NATIONAL ASSOCIATION OF CREDIT MEN, NEW YORK CITY

The National Association of Credit Men, an organization representing the credit interests of approximately 20,000 American manufacturers, wholesalers, and financial institutions, respectfully submits the following statement on taxation. In submitting our statement we are doing so with two points in mind:

1. A full recognition of the fact that in the present emergency now confronting our Nation all must make sacrifices. Our organization approves the efforts being made to meet as much as possible of the expense of the defense program out of current income. As a vital essential to full defense effort, we strongly urge that every nondefense item possible be eliminated from Government operation.

2. The maintenance of the business activity necessary to the securing of maximum revenue by the Government is greatly dependent upon the credit operations of business. On the other hand, credit is greatly affected by the fiscal policy of the Government.

Our statement is made in the hope that such an expression of views may be of assistance to Congress in coping with its gigantic task of financing during such an emergency period.

With these thoughts in mind we submit the following suggestions for consideration:

I. We believe in the principle of a widened income-tax base, both from a fiscal viewpoint and because of the creation of citizenship interest in all governmental problems. We favor placing the greater emphasis upon the extension of direct taxes rather than indirect taxes.

II. We recognize the necessity of increased taxes for all groups and classes. In such increase of taxes, however, there is always the danger that the added burden may fall disproportionately upon those in one particular income group. That group is usually the so-called middle class. Most of those within this group are professional men, men of moderate salary and small businessmen. Aside from the fact that it is obviously unfair to discriminate against one group in any way which might tend to conflict with the ability-to-pay principle of taxation, it is likely that much of the market for the sale of defense bonds will be found among those in this middle income group. A disproportionate increase in taxes for this group would, therefore, serve as a hindrance rather than a help to the Government in its financial aims.

III. Consideration might well be given to establishing a principle for taxation for individuals similar to that now in existence for corporations. In corporation taxes the principle of making the greater increases on profits beyond the normal corporate profit has been accepted. In formulating a tax program for individuals this same general principle might well be used so that the heavier increases will fall upon abnormal earnings rather than upon normal earnings.

IV. In the coming years the tax factor will become of increasing importance in the cash position both of individuals and of companies. This fact will have a marked bearing both upon any analysis of credit and upon business in general. We heartily commend the plan for the issuance of tax anticipation warrants. In addition to this, we believe that provisions should be adopted, permitting the payment of taxes on a monthly installment basis. Such provisions will, if adopted, facilitate tax collections and serve as a benefit both to individual taxpayers and to business organizations.

AUGUST 6, 1941.

NATIONAL ASSOCIATION OF CREDIT MEN,
New York, N. Y., August 25, 1491.

RECOMMENDATIONS OF A GROUP OF TEXTILE CREDIT EXECUTIVES WITH RESPECT TO INVENTORY MATTERS IN THE PROPOSED NEW TAXATION LAW

It is the suggestion of this group that the new revenue bill embody a provision permitting businesses when computing their income for 1941 and subsequent years to deduct a reserve for future inventory depreciation. As will hereafter be shown, this provision will not benefit concerns enjoying actual excess profits but will only tend to the preservation of business houses that in reality will never enjoy such excess income.

Assume that for the year 1941 a concern has had an extraordinary volume of sales the proceeds of which it has used in part, as it is desirable, in acquiring merchandise to be sold. But because of the present extraordinary conditions this merchandise has been purchased at greatly advanced prices at which it cannot be profitably sold when the inevitable recession comes. The result will be, if the law does not make a suitable provision to meet this situation, that such businesses must destroy their cash position by paying out cash for taxes on net income they will never realize. And of course these businesses will collapse to the detriment not only of the investors therein but more particularly to that of the employees who will be thrown out of employment.

To accomplish what is herein advocated, the suggestion is made that taxpayers be permitted to deduct annually in determining their taxable income for 1941, and subsequent years, an amount found by subtracting from the value of their inventories, determined on the basis of 1941 and subsequent year prices, the value of their inventories for 1941 and subsequent years, determined on the basis of September 1939 market prices. Such an amount should be set up as a reserve on their books and maintained until the need therefor arrives. Such a need will arise when prices equal or fall below September 1939 prices. At that time inventories will be taken at the prices prevailing, and the total of the amounts previously deducted and carried in the reserve will be credited to cost of sales as a reduction of the opening inventory, and taxable income for the year determined on the basis of this adjustment.

In the case of those who have truly enjoyed excess profits this will not happen. These persons will not have reinvested in inventories; their unusual profits will be represented in cash or its equivalent, and they will accordingly receive no benefits from this provision. They have truly realized their excess profits and will be taxed thereon. On the other hand, the average business which has invested its profits into goods, which business should not be destroyed in order to reach those persons who should be taxed on their extraordinary gains, will alone be benefited by the present proposal.

The present income-tax law (sec. 22 (d) of the Internal Revenue Code) recognizes to some extent the necessity for maintaining inventory stability in determining taxable income by permitting the use of the so-called last-in and first-out method of valuation. But this method is inadequate under present conditions because when it is adopted it is only permissible to go back to prices at the beginning of the year of change instead of to the sound prices prevailing in September 1939. This, of course, does not permit adequate provision for further inventory depreciation.

In addition, section 22 (d) is faulty because the special method therein provided requires the actual valuing of inventories at the special prices allowed rather than permitting the deduction of reserves to cover the situation. Such valuing

of inventories at other than market conditions is in various businesses unsuitable for merchandising purposes and cannot be adopted. Moreover, when the last-in-first-out basis is employed, the prices at the beginning of the year of adoption to the extent of quantities then on hand is perpetuated regardless of future market conditions. Should the last-in-first-out method be adopted for 1941, for example, thereafter the prices at the beginning of the year—and they are not the representative prices of ordinary times—must be maintained to the extent of the quantity of merchandise for which the method is employed at the beginning of the year, regardless of the fact that market may subsequently fall far below such prices. Many business houses do not dare to adopt the last-in and first-out method because of these conditions. Also certain types of businesses—for example, the retail business using the retail selling system—cannot employ it, as it does not fit in with their methods of operation.

The textile group submits that if the method herein advocated is adopted, a most constructive step will be taken to stabilize business and benefit credit conditions. Should a provision allowing what is herein suggested be incorporated in the new bill, to a great extent the cloud of uncertainty that now overhangs business will be removed. Then, when merchandise is sold on the basis of balance sheets showing a large inventory as an asset, the businessman will know that the possible depreciation of that asset is covered by proper reserve reflected in that balance sheet in arriving at the net worth shown thereby, which net worth is the basis of credit extended. And so far as the business is concerned which has that inventory as an asset, the investors therein and its employees are protected because its cash is not being improperly depleted; and it is in a position to meet the depression that will come, and carry on.

HENRY H. HEIMAN,
Executive Manager.

STATEMENT OF A. LOWENHAUPT, ST. LOUIS, MO.

Presently, the law contains two alternative bases for the determination of normal corporate income which is exempt from the excess-profits tax. That is, the tax is applied to the excess income over the normal income.

The two bases are (1) a percentage of invested capital deemed a fair return, or (2) the corporate income during the base period. A corporation may choose which of the two bases it will use. A proposal has been made that the use of the base period income as a measure of normal corporate income shall be eliminated, and I desire to point out to you that this will result in many cases in a capricious and unjust tax for the following reason. The other basis, so-called invested capital a percentage of which is exempt is in the case of many corporations not true or real invested capital at all. It is merely a name for a formulary result and not anything real or true.

Under the invested capital method, property transferred to a corporation for its stock is entered into the calculation at what is called the unadjusted basis. These words refer to the basis for determining gain or loss defined in section 113 of the Revenue Act. In most cases where a corporation received property from a predecessor corporation in what is classified as a reorganization under section 112, the basis for the allowance of invested capital is not the cost of the property to the existing corporation but the cost of its predecessor or the prior owner.

When the property was acquired in this manner by the existing corporation it was done with notice that it—the existing corporation—in the event it sold the property, must account for gain or loss calculated on its predecessor's cost, but that was the limit of the liability which it accepted at that time. Now, under the present statute, it is subjected to a new liability, that is, it is not allowed to earn a fair return of income on what it paid for the property.

For instance, if A and B form a corporation, and A invests $100,000 and receives half the stock, and B transfers a patent to the corporation for half the stock, B being the inventor and having paid substantially nothing for the patent, the present statute says that the patent cost the corporation nothing, and its invested capital is determined without any allowance of any value for the patent. Plainly, the patent was valued when received at $100,000.

The same thing is true as to reorganizations which occurred after January 1, 1936, in which gain or loss was not recognized to the transferors, but it is not true as to identically the same kind of reorganizations occurring prior to January 1, 1936, unless 50 percent control remains in the transferors.

The use of the statutory formula, unadjusted basis, is purely capricious. In many cases it results in excessive invested capital, sometimes grossly excessive, and in other cases it results in a grossly insufficient allowance. In hardly any case does the unadjusted basis reflect actual invested capital; that is, the amount embarked by the adventurers in the business.

An illustration of the excessive invested capital allowance is the case of a bondholders' foreclosure. For instance, under the generally accepted rule, suppose in years past stockholders invested $1,000,000 in the stock of a corporation which acquired land and built a building thereon, and the corporation borrowed $500,000, secured by a mortgage on the land and building. Assume further that the corporation paid off $150,000 of the bonds secured by the mortgage before 1932, at which time it defaulted and the bondholders foreclosed, bought in the property at foreclosure sale, using their bonds to pay the purchase price, and then organized another company to which they transferred the property and which issued its stock to the former bondholders. The Commissioner of Internal Revenue has contended both ways as to the result of this transaction. The Board of Tax Appeals and the courts of appeals, with one or two exceptions, have ruled that this was a reorganization and that the unadjusted basis for the property owned by the corporation formed by the bondholders was the cost to the mortgagor corporation, that is, in the case illustrated, approximately $1,500,000, or about $1,150,000 more than the bondholders who now own the property of the corporation formed by them embarked on the business. The capricious results from the formulary definition of invested capital in the present statute necessitate, if justice and equality are the ideal of the statute, that the base-period income as the alternative measure of normal income exempt from tax be retained in the statute.

CALIFORNIA STATE CHAMBER OF COMMERCE,
San Francisco, Calif., August 18, 1941.

Senator WALTER F. GEORGE,
Chairman, Finance Committee of the Senate,
Washington, D. C.

MY DEAR SENATOR GEORGE: Attached hereto is a statement briefly outlining my views and recommendations with respect to the proposed Federal Revenue Act of 1941, which is now under consideration by the Senate Finance Committee.

I believe this represents a fair cross section of business opinion in the State of California, and I hope it will receive your considered attention.

Yours very respectfully,

SIDNEY M. EHRMAN,
Chairman, State-wide Tax Committee.

STATEMENT BY SIDNEY M. EHRMAN, CHAIRMAN, STATE-WIDE TAX COMMITTEE, CALIFORNIA STATE CHAMBER OF COMMERCE

Although the responsibility for determining the Nation's fiscal policies rests with Congress, the question of Federal revenues and expenditures is of such broad public interest as to invite expressions from taxpayers and citizens generally. Accordingly I am taking this means of directing the attention of your committee to certain observations and conclusions on the proposed Federal Revenue Act of 1941, which I believe are representative of business opinion in the State of California.

RETRENCHMENT IN NONDEFENSE SPENDING

While the Federal Budget for the fiscal year 1941–42 has already been approved and the appropriations provided therefor are now operative, we feel that this body should insist upon drastic economy in current spending by the nonmilitary departments and agencies of the Federal Government. Moreover, future appropriations for these agencies should likewise be restricted to the utmost. By diverting revenues from civil to military purposes, the same objective can be achieved as that sought through new taxes.

The Federal Government has called upon all citizens to bear an unprecedented tax burden as their patriotic duty toward the national defense effort, and I am of the opinion that Congress and the administration should set the equally patriotic example of drastically reducing the expenditures of all agencies not absolutely essential to defense and of eliminating functions now made obsolete with the passing of the depression emergency.

An examination of the nonmilitary expenditures of the Federal Government over recent years indicates an increase of more than twofold. Yet the internal emergency brought about by the great economic depression, which called for an expansion of civil expenditures, is past. Now the Nation is faced with an external emergency that calls for a tremendous expansion of defense expenditures. While the citizenry is being required to bear billions in additional taxation, the nonmilitary functions of Government should likewise tighten their belts in the interests of national solvency.

NEW FEDERAL TAXES

Few, if any, citizens question the need for additional taxation to finance national defense. There are doubtless differences of opinion as to amounts and methods, but I believe that it is commonly agreed that these new imposts should be made on the basis of equality and with due regard for the possible effect, both present and future, on the Nation's economic structure. It would appear wise, therefore, to make the new tax program as equitable as is humanly possible.

Perhaps the first factor of equality is to give proper consideration to keeping the tax base as broad as possible. While the tax burden should be graduated according to ability to pay, every citizen should be expected to make his pro rata sacrifice in the interests of financing the cost of preserving the Nation's safety. Therefore I commend to your committee the desirability of maintaining a broad tax base in the interest of unifying the defense effort.

At this point I wish to stress the importance of applying the excess-profits tax to true excess profits and not to income that is not out of line with normal earnings. In fairness, the normal income tax should apply to normal earnings and the excess-profits tax should apply to earnings in excess of normal.

In administering the excess-profits tax it is desirable to lend enough flexibility to avoid hardships on businesses that find their operations governed by exceptions to the rule. I commend, therefore, the retention in the law of the alternate methods of computing excess profits—that is, the invested-capital method and the average-earnings method. While the latter is being attacked by those who would substitute a rigid rule for a flexible one, it surely is not the desire or intention of Congress to penalize certain businesses in an attempt to squeeze the last drop of blood out of the tax base.

Your attention is directed to the desirability of computing excess profits in terms of percentages of such excess over normal, rather than in dollar amounts. The dollar-amount method does not result in uniform application of the theory of excess-profits taxation. It would be more equitable to apply a scale of rates graduated according to the degree that profits exceed normal earnings, rather than to graduate the rates according to the dollar amounts of such excess earnings.

It is further suggested that there be a greater degree of uniformity in allowing deductions for operating expenses in computing net taxable income of taxpayers. If the objective is to tax net income whether it be normal or in excess of normal, all necessary business expenses incurred in making such profits should be deductible. Under the present law the tendency is to restrict more and more the deductions that are allowable as business expenses, with the result that hardships are placed on certain businesses and the income tax deviates from its true purpose.

While the capital-stock tax is not considered in this bill, I desire to state that it would be in the interests of fairness to allow corporations to make annual declaration of value. At the present time, these declarations can be made only once in 3 years and this does not take into proper account the rapidly changing conditions under which businesses are now compelled to operate.

As the bill now stands, the provision to require husbands and wives to file joint income-tax returns is absent. I strongly recommend that your committee reject any proposal to reinsert this provision into the bill. It is not a question of revenue alone, but it strikes at the individual status of married women to the exclusion of other individuals and is an infringement upon private-property rights now governed by the States.

MACK MANUFACTURING CORPORATION,
Long Island City, N. Y., August 14, 1941.

HON. WALTER F. GEORGE,
Chairman, Finance Committee, United States Senate,
Washington, D. C.

DEAR SENATOR: We urge an amendment to section 1202 of the Internal Revenue Code by adding a new paragraph at the end thereof to permit any year not otherwise a declaration year for capital stock tax purposes, to be a declaration year if with respect to such additional declaration year the value declared by the taxpayer is in excess of the adjusted declared value computed under paragraph (1) of subsection (b).

We suggest for your consideration the following proposed amendment to be added as a new paragraph at the end of section 1202 of the Internal Revenue Code:

"*Additional declaration years.*—In the case of any domestic corporation, any year not otherwise a declaration year, shall constitute an additional declaration year if with respect to such year (1) the taxpayer so elects (which election cannot be changed) in its return filed before the expiration of the statutory filing period or any authorized extension thereof, and (2) the value declared by the taxpayer is in excess of the adjusted declared value computed under paragraph (1) of subsection (b)."

Taxpayers are under the necessity this year to redeclare a new capital stock value which will be based upon estimates of net income for the years 1941, 1942, and 1943. It is practically impossible to make an intelligent guess as to what the net income of a corporation will be even for the year 1941, while an estimate for 1942 and 1943 can be nothing more than a vague conjecture. It seems that (1) the reasons which were sufficiently impelling to justify enactment of the amendment, which became effective in the Revenue Act of 1939, and permitted an upward redeclaration of value for each year 1939 and 1940, are even more persuasive under the current emergency conditions of priorities, price control, defense requirements, etc. and (2) corporate taxpayers should not be penalized by the fact that it is humanly impossible, under present conditions, to intelligently forecast their financial situation for the future.

In addition, since we now have an excess-profits tax, there appears to be no purpose served by the declared value excess-profits tax except to make it mandatory upon the taxpayer to declare a high enough capital stock value to enable it to void the declared value excess-profits tax.

Respectfully submitted.

MACK MANUFACTURING CORPORATION,
J. E. SAVACOOL,
Vice President and Comptroller.

MACK MANUFACTURING CORPORATION,
Long Island City, N. Y., August 14, 1941.

HON. WALTER F. GEORGE,
Chairman, Finance Committee, United States Senate, Washington, D. C.

DEAR SENATOR: We urge your committee to substitute for section 549 of H. R. 5417 the policy adopted in section 210 of the Revenue Act of 1940, with regard to the application of the increased taxes imposed by this bill with respect to leases, installment and conditional sales, in which delivery occurs prior to the effective date of the increased taxes.

Section 210 of the Revenue Act of 1940 specifically provided that the increased rates should only apply to payments made under leases, installment, and conditional sales, in which the delivery occurred after the effective date on which the increased rates became effective. Section 549 of the pending bill proposes to change this policy and make the increased rates applicable to such leases and sales, when delivery is made subsequent to July 1, 1941, and prior to the effective date of the act.

While our leases, installment and conditional-sales contracts provide for the addition of any Federal tax that may be later imposed, because of the

nature of our business if section 549 is enacted in its present form it will be necessary for our company to absorb most, if not all, of the additional taxes imposed under section 549 with respect to sales made during the period from July 1, 1941, to the date of effectiveness of the act. In the case of such leases and sales it is impossible for us to include the additional taxes to be imposed in the selling price agreed to because the rate is not definitely known and because of the penalty provision of section 3325 of the Internal Revenue Code. Section 549 discriminates against a company such as ours which sells directly to its customers and handles its own paper as compared with the competitor which sells its paper to a finance company.

In fairness to all concerned, we urge that the policy adopted in section 210 of the Revenue Act of 1940 shall be substituted for the policy set forth in section 549 of the pending bill, and the increased rates made applicable only to leases, installment, and conditional sales in which the delivery occurs after the date of the effectiveness of the act.

Respectfully submitted.

MACK MANUFACTURING CORPORATION,
J. E. SAVACOOL,
Vice President and Comptroller.

STATEMENT SUBMITTED BY JESSE T. PALMER, ARLINGTON, VA.

PART V. NEW EXCISE TAXES

Add sections 5551/4 and 5551/2 to H. R. 5417, Seventy-seventh Congress, First session.

SEC. 5551/4. *Parimutuel Wagering on Horse and Dog Races.*—A tax of 2½ percent of the total of all moneys wagered each day of a horse or dog racing meeting is imposed upon every person, association, corporation, or trust licensed by any State racing commission, board, or authority to conduct a horse or dog racing meeting. Each day's tax shall be paid to the Secretary of the Treasury within 24 hours after the close of the racing day upon which the same is assessed. Every purchaser of a parimutuel ticket shall make written application for said ticket, giving his or her name and address on a form approved by the Secretary of the Treasury. Said application for the purchase of a parimutuel ticket and the parimutuel ticket sold by any person, association, corporation or trust licensed under any State racing act shall be stamped with the same serial number and the purchase price of the ticket. Every parimutuel ticket shall be endorsed in ink or indelible pencil by the person purchasing same giving his or her address, before same shall be cashed by any person, association, corporation, or trust licensed under any State racing act. Every application for a parimutuel ticket and every parimutuel ticket cashed by any person, association, corporation, or trust licensed under any State racing act shall be kept and preserved, subject to examination by the Secretary of the Treasury and the respective State racing commission, board, or authority. The use of a fraudulent or fictitious name on any parimutuel ticket shall constitute a misdemeanor.

SEC. 5551/2. *Bookmaking on Horse and Dog Races.*—A tax of $500 for each day's operation is imposed upon every person, association, corporation, or trust engaged in the business of bookmaking in respect to any horse and dog race and/or accepting wagers on the outcome of any horse and/or dog races. Each day's tax shall be paid to the Secretary of the Treasury within 24 hours after the close of the racing day upon which the same is assessed. Every bookmaker shall keep a permanent record of the name and address of every person wagering money on horse and dog races as well as the amount of money wagered and such record shall be subject to examination by the Secretary of the Treasury and the respective State racing commission, Board, or authority.

JESSE T. PALMER.

PROPOSED FEDERAL MUTUELS TAX

BASIC CONSIDERATION

A. *Revenue.*—1. A tax of 2½ percent will, based on 1940 wagerings ($408,500,000) at horse races, yield a revenue of $10,000,000 for national defense. Reports indicate that wagerings at horse races may exceed $500,000,000 this year.

2. This is a luxury amusement tax—only the winning bettor pays it—it is not a burden to the taxpayer.

3. There is no indication that a small Federal mutuels tax will appreciably reduce betting at race tracks. Betting in 1941 appears to be far ahead of betting in 1940, in spite of increased take-out by the States.

4. There is no indication that such a tax will appreciably increase betting at bookies located off the tracks. Bookies, with all of their attractions, do not take the place of the race track.

5. There is no reason to believe that the administration of this tax will be any more difficult than the administration of any other Federal tax, and the yield per administrative dollar is likely to be much higher. Our excise taxes, especially these on tobacco and liquor, are difficult and expensive to administer. A Federal agent must be maintained in every distillery. The minutest details, to the weighing and testing of the ingredients, are carefully watched.

6. There is no question of State rights, as horse racing is most interstate in character. Furthermore, no attempt is made to restrict the taxing of mutuels by States. Race horses race in many States in a single racing season, and are continually crossing State lines. Not only are race horses continually moving in interstate commerce, but in international trade as well, as race horses are imported for racing from Europe, South America, and Austrial, and are shipped abroad for racing. This summer already, Whirlaway has raced in Florida, Kentucky, Maryland, New York, Illinois, and New England.

(*B*) *Regulations.*—7. The scheme of requiring an application when purchasing a parimutuel ticket is simple and not objectionably time consuming, and cannot be objectionable to honest people. Bettors simply pick a blank application card from any number of receptacles near the mutuel ticket windows, sign their name and address and hand it to the ticket seller, who stamps it with a serial number at the time he sells the ticket. All of this will take only a fraction of a minute's time. Honest people will not hesitate to sign their correct name and address. People do not hesitate to buy stock certificates in their correct names, yet speculation in the stock market is the greatest gamble of all.

8. The purpose of this check on betting is to protect the betting public. As a result of association jockey rings, it is doubtful if more than 50 percent of the money wagered ever finds its way back to the bettors. If the race-going public ever wakes up to this wholesale exploitation, horse racing will permanently collapse to the utter detriment of a vast horse-breeding industry in the United States. This legislation should be passed to put one of our important industries on a sound, permanent basis. Here again it should be pointed out that even betting on horse races is interstate commerce. The bettors follow the races from State to State—go South in the winter—North, East, and West in the summer. The race tracks wire their own money away to the bookies, and the bookies wire their money to the tracks.

9. This tax will aid in the enforcement of our banking laws. For example, a bank clerk absconds with bank funds. He is caught and claims that he lost the missing funds at the horse races, thereby giving racing an unjust reputation. Under this tax proposal the truth can be quickly learned, and the search continued for the hidden funds.

10. This tax proposal will block evasions of our Federal income-tax laws. Thus it will be possible to check deductions as losses at race tracks.

11. Racing holds a high stake in national defense. Racing on the level provides a wholesome form of amusement needed by defense workers—i. e., the opportunity to get out in the fresh air and sunshine, and to relax from the heavy grind. Annual importations of thoroughbred race horses and breeding stock reaches into the hundreds of thousands of dollars. Millions of dollars are invested in breeding farms and racing establishments in this country. Similar investments in France suffered irreparable losses when that country was conquered by Hitler. The horse-racing industry in this country cannot afford to take a chance on similar confiscation.

JESSE T. PALMER.

AUGUST 21, 1941.

STATEMENT SUBMITTED BY JOHN R. KEEFE, CALDWELL, N. J.

PLAN TO LIQUIDATE ALL GOVERNMENTAL DEBT BY REDUCING ALL TAXES

It is estimated that aggregate debts of local governments (State, county, and municipal) is $90,000,000,000. The New York City debt alone is about $3,500,000,000.

This plan is based on two facts that have been proved many thousand times. (1) That the Federal Government can borrow at a much lower interest rate than any local government can. (2) That local governments get gyped right and left in selling their securities by "all or none" flimflams, collusive syndicate biddings, private sales, fixing serial bond maturities and the amounts thereof so that short-term notes pay long-term interest rates, omissions of call clauses which will unnecessarily cost local taxpayers throughout the Nation $36,000,000,000 more for interest than it should (New York State has 5-percent bond issues maturing as late as 1964), and other acts of omission and commission that indicate gross incompetency and neglect by local officials.

Plan.—The United States Government to sell its own long-term bonds (50 years), bearing 1½ percent interest rate, and loaning this money to local governments to refund maturing loans and for new improvements, charging local governments 2½ percent interest. This rate will be 1½ percent less than these same local units now pay. The Federal Government will not have to actually sell its own securities and loan the money to local governments for refunding purposes; an exchange of bonds will suffice. The collective governmental debt is not increased one dollar.

The Federal Government profit ($98,250,000,000) and local government savings ($90,000,000,000) will amount to $188,250,000,000 in 80 years; the due date of the last maturity included in these calculations. However, the profits and savings will continue just as long as local governments borrow for betterments, which means forever. Thus a new and permanent source of Federal income is assured.

The Federal Government underwrites its own and all local government debts without investing a dollar of new capital under this plan, which is self-liquidating in fact. Local governments will eventually arrive at a point when the only requirement in order to carry and discharge a Federal debt will be to pay 2½ percent interest on the loan. As it now is, they pay up to 5 percent without decreasing the debt.

In order to show concisely how the plan works the figures involved on a $1,000,000,000 loan unit follow.

On the sum of $1,000,000,000 the Federal Government will make a direct profit of 1 percent, amounting to $10,000,000 a year. This latter sum will also be loaned and, as it does not represent an investment, will earn 2½ percent interest, amounting to $250,000 a year on each such $10,000,000 annual direct-interest profit. This sum ($250,000) will be multiplied 1,275 times during the life of a 50-year bond. Local governments will pay 1½ percent less interest to the Federal Government than they now pay to private parties and will save $15,000,000 a year.

Federal Government profit	$10,000,000×	50=	$500,000,000
Federal Government profit	250,000×1,275=		318,750,000
			818,750,000
Local government savings	15,000,000×	50=	750,000,000
Total profit and savings			1,568,750,000

Based on $90,000,000,000 being loaned to local governments to refund existing debts and $1,000,000,000 to be loaned annually for the next 30 years for new improvements, the profits and savings on a $1,000,000,000 unit will be multiplied 120 times thus $1,568,750,000×120=$188,250,000,000.

There are numerous instances where local governments pay less than 2½ percent interest on a part of its debt. In no such case is the debt paid off at maturity as is done under this plan which also provides for promptly lessening (next paragraph below) Federal taxes throughout the Nation thus further reducing the tax burden all over the country.

In order to more quickly and better implement this plan and at the same time actually conscript wealth, the Federal Government should call all local government outstanding bonds and give in exchange therefor United States 50-year bonds bearing 1½ percent interest. Otherwise numerous large local government debts paying an average 4 percent interest rate cannot be refunded for many years thus delaying full benefits though the plan is not dependent on such action for success.

NOTE FOR SENATE FINANCE COMMITTEE

The foregoing is one feature lifted from a financial plan that also provides for reducing post-war unemployment by 6,000,000 and paying $50 monthly to dependents over 50. The entire plan is available to the Senate Finance Committee if so desired.

JOHN R. KEEFE.

LETTER AND MEMORANDUM SUBMITTED BY BRADLEY H. WALTZ, BALTIMORE, MD.

AUGUST 18, 1941.

SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: The attached memorandum, disclosing the need and desirability of deficit financing, the error of considering Federal taxation as a means of acquiring revenue instead of solely as a means of regulating production, and the fallaciousness of commodity price fixing, is submitted for your consideration in passing on pending tax legislation.

Very respectfully,

BRADLEY H. WALTZ.

THE MECHANICS OF MONEY

Since the worker's activity in a modern society is so highly specialized that he can neither produce any appreciable portion of what he utilizes nor utilize any appreciable portion of what he can directly produce, he produces only when he can exchange the product of his effort for the product of another's effort. Hence the opportunity to exchange is essential to production. But the wealth accumulated through generations is eloquent evidence that man will produce when he has this opportunity, so the opportunity to exchange is also provocative of production.

Since Nature, the source of all wealth, receives no money for the wealth she affords man, all money men pay each other is for service. Or all money paid to man is wages.

If each of a number of workers has a dollar which he exchanges at the end of the day for what some other worker has done in the day, the daily wage of each worker is $1. If the dollars change hands twice a day, the wage is doubled. Or, a change in the number of workers can be accommodated by an inversely proportionate change in the wage, or a proportionate change in either the frequency of the wage payment or the circulating quantity of money. And where regulation of the average wage and its payment frequency is tabooed by governmental philosophy, unless the requisite adjustment of these factors be automatically attained an increase in the circulating quantity of money will be required for the employment of an increased number of workers. And, conversely, an increase in the circulating quantity of money will be reflected in employment when the average wage and its payment frequency are constant, for it will constiue an increase in the opportunities for exchange.

So because of its influence for constancy on wage and its payment frequency, the regularity in payment and quantity in normal times, of the average man's monetary disbursements should be encouraged whilst efforts to stabilize commodity prices should be discouraged, for since Nature's and man's vagaries will vary the output of wealth per unit of time for different periods, such stabilization is mere variation of the average wage.

When one of the afore-mentioned workers pockets his dollar at the end of the day, rather than exchange it for some other worker's output, the latter is disemployed and so remains as long as the dollar is hoarded and not circulating, if the change in the circulating quantity of money be not compensated by change in

the average wage and/or its payment frequency. Thus the tendency in a society where men must build reserves against sudden needs and do prefer the accumulation of money to that of property is toward unemployment.

When private reserves are depleted by the Government in correcting unemployment private enterprise is discouraged, but will be stimulated and reserves enlarged when the correction is accomplished with new money, and it can then be repressed in favor of public enterprise and reserves reduced by attaching private expenditures. The manufacture of silk shirts, for instance, can be depressed by taxing their purchase, so that their creators may be released for the production of parachutes.

BRADLEY H. WALTZ.

(Thereupon, at 4 p. m., the committee recessed until 10 a. m., Friday, August 22, 1941.)

REVENUE ACT OF 1941

AUGUST 22, 1941

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Congressman Dewey, if you will be good enough, we will be very glad to hear you this morning.

STATEMENT OF HON. CHARLES S. DEWEY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Mr. DEWEY. Thank you very much, Mr. Chairman. I wish to thank you and the members of the committee for the privilege of appearing before you. I do so in behalf of the small business and the small industries of this country.

Back in, I think it was, 1931, President Roosevelt wrote a book called Looking Forward, and in that book he particularly recommended that there should be a decentralization of industry, and a retirement to the smaller localities of the country. In other words, that industry should go back to where the population was and not all amass in the great metropolitan districts. I rather think that his advice has been forgotten, particularly recently, for the simple reason that these little industries that have located there have, to my way of thinking, been extremely burdened by the taxes placed on them, and particularly in the form of the Federal estates tax.

I have been sitting for the past 3 weeks in the Banking and Currency Committee, listening to the testimony of Mr. Leon Henderson on the price-control bill.

Now, these little industries are just not going to exist; they are not going to continue to exist, and they are certainly not going to produce any revenue unless something is done to protect them.

Priorities naturally have to be made for national defense, but any industries, and there are many of them, that are not engaged in national defense are in danger of being forced out of business. They are having to lay off men constantly; they cannot get material with which to make their products, and it is, to me, the promise of a terrible situation.

I am taking the liberty of putting into the record the number of companies that have already been called down here to Washington

to be told that their production will be reduced by anywhere up to 50 percent. That list of companies runs about 36.

Senator LA FOLLETTE. Are you reading from the hearings in the House committee?

Mr. DEWEY. This is from the hearings in the House committee. I will not bother you to read all of the industries affected, but I will indicate them and will ask to have the list introduced in the hearings at this time, if you please.

The CHAIRMAN. Yes, sir.

Mr. DEWEY. They cover every line of industry.

Senator VANDENBERG. You mean 36 categories, not companies?

Mr. DEWEY. Thirty-six industries, categories. I am glad you corrected me, Senator. They cover many endeavors.

(The table referred to is as follows:)

TABLE 1.—*List of industries for which meetings have been held or are contemplated; proposed level of operation in comparison with last year*

[NOTE.—(1) Indicates "Full capacity." (2) Indicates "No definite curtailment program has been formulated"]

Meetings held:	*Percent*
Rayon	(1)
Domestic laundry equipment	73
Refrigerators	52.2
Vacuum cleaners	92
Farm-equipment manufacturers	120
Gasoline (east coast distribution)	90
Automobiles	50
Thermostat bimetals	60
Commercial refrigerators	(2)
Tapioca	(2)
Burlap	(2)
Air conditioning and refrigeration	(2)
Domestic heating equipment	(2)
Cooking stoves	(2)
Metal office furniture	(2)
Domestic electrical equipment	(2)
Chlorine (Freon refrigerants)	(2)
Cotton linters	(2)
Formaldehyde and derivatives	(2)
Oil burners	(2)
Petroleum products and refining	(2)
Chinaware and pottery	(2)
Battery-can manufacturing	(2)
Die casting	(2)
Domestic ranges	(2)
Electric-light bulbs	(2)
Electric-switch and circuit control	(2)
Eyeglass frames	(2)
Fruit-jar tops	(2)
Galvanized ware	(2)
Grain-bin manufacturing	(2)
Home canning	(2)
Hospital apparatus and equipment and surgical instruments and supplies	(2)
Hot-dip galvanizing	(2)
Jewelry manufacturing	(2)
Milk-bottle crates	(2)
Oil filters	(2)
Pen and pencil	(2)
Pressure cookers	(2)

Meetings held—Continued.	Percent
Radio receivers	(2)
Resistance welding electrode manufacturing	(2)
Slide fasteners	(2)
Thermostats for domestic appliances	(2)
Wire screen	(2)

Meetings contemplated:
Household metal furniture.
Hardware.
Domestic ice refrigerators.
Cooking utensils metalware.
Commercial counter appliances.
Vending machines.
Bones (glue, gelatin, buttons, fertilizers).
Tar acids—cresol and phenol.
Toluol.
Ammonia (all nitrogen products).
Methanol.
Ethyl alcohol.
Ethylactate.
Enameled-ware manufacturers.

Mr. DEWEY. Now, having to support that sort of thing, and the various other difficulties that will come, to have a heavy Federal estates tax placed upon the smaller industries, as is proposed under the House bill, will just close them up, those that are still alive at the time of the death of their owner. Those little industries are generally—and you are familiar with them all—all types.

I have taken a list from the census of 1937, the manufacturers census of 1937, which is the most recent. There are 163,000 of those little companies in the United States, which employ 250 men or less. They employed at that time 3,817,000 out of the total of 8,569,000 of factory workers, which is 44½ percent of all people employed in factories in this country. They not only did that, but out of the manufactured products of 1937, which were totaled at $60,712,000,000 for all manufactured products in the United States in the year 1937, these little companies manufactured $27,385,000,000 of that $60,000,000,000.

I wish to impress upon the committee that these small companies are the backbone of the Nation's business. They are the little newspapers, they are the little knitting mills, machine shops. Every one of us, as he travels through this country, has seen them in every one of these little towns. They not only are the backbone of the business, but, as I have shown, they employ 44 percent of all factory workers in this country, and they give a livelihood and a means of livelihood to the people in those small locations.

I am going to read to you one letter, if you please, that came in to me when I presented this matter before the Ways and Means Committee from a man in Pella, Iowa, who makes window casings. He states:

> I have been very much interested in reading newspaper comment on relief for estate tax applying to small businessmen, which you are sponsoring. We have one of those businesses here, which, as nearly as I can determine, will be completely wrecked in case of my death. We have a business employing about 250 people. It was built up from nothing in this small town of about 3,500 people, and you can well realize that this business means a lot to this little city—in fact, so much, that we have had no unemployment problem among Pella citizens during the last several years.
>
> I have built up this business by reinvesting all of the profits. No profits have ever been taken out of this business.

I thought that I had taken fairly good precautions for an emergency by taking out about $100,000 worth of life insurance but under the proposed schedules of the estate taxes, this insurance will be considerably less than half of the total amount of the estate taxes with which this business would be hit. My wife would not only have to dig up an additional $150,000 to pay estate taxes, but the business would be further jeopardized by my not being here to help direct the affairs.

I took out my life insurance originally to have emergency cash on hand for carrying on the business, but this emergency cash will not now be available, to say nothing about having to pay perhaps $250,000 in estate taxes.

I can see no way of financing a thing like that. The business is such that I doubt whether anyone would be interested in putting any money into it, due to all of the uncertainties and right now I can foresee nothing but the wrecking of this business due to the injustice of estate taxes.

Unfortunately I am now at such an age that buying additional life insurance is prohibitive--especially when it has to be paid for out of profits that will be subject to a 30-percent corporation tax and then perhaps a 25-percent or 30-percent individual income tax, plus a 5-percent State income tax.

I am just another one of those small businessmen that feels completely frustrated and helpless, and I surely hope that you can do something for us.

That is one of many letters of that nature that I have received, Mr. Chairman.

Now, without wishing to bother your committee longer in this discussion, I wish to present what I propose.

With these points in mind that I have mentioned, I respectfully propose that Congress include in the tax bill under consideration the following new provisions in regard to the Federal estates tax:

(1) The Secretary of the Treasury to be empowered to accept prepayments of estimated Federal estates tax in 10 equal installments.

(2) The Secretary of the Treasury to be empowered to issue in acknowledgment of any such payment, and the amount paid, a Federal estates tax anticipation receipt.

(3) These receipts shall bear no interest, but shall be redeemable at face value, by the Treasury Department, upon presentation by original holder.

(4) Upon death of original holder or if a corporation, upon the death of that person, the integrity of whose estate was being protected by prepayment of Federal estates tax, the Treasury Department shall accept said Federal estates tax anticipation receipts in payment and settlement of said tax, providing said receipts show a face payment equal to the tax involved, and further providing that any excess payment shall be considered as taxable cash in the estate involved.

(5) No installment of anticipated tax payment, whether by an individual or a corporation, may exceed the sum of $25,000 in any calendar year.

(6) No individual or corporation may make payment in anticipation of the Federal estates tax on a net estate greater than $500,000.

The purpose of all this being, Mr. Chairman, to determine the exact amount of the estate tax and to permit preparation in advance of death for its payment. A man with an estate of $500,000, under the proposed rate, we will say, takes out a life insurance policy sufficient to pay his Federal estates tax, which would be $131,000. But that does not pay his estates tax, because his estate then becomes $631,000 instead of the $500,000, naturally, less any amount that you might exempt on the insurance, which I think is $25,000. So he has to take out another life insurance policy on the amount of the insurance policy that he has taken out, which would amount, in this case, to $42,000. Well, that adds to his estate, and on that $42,000 he has to take out an additional $13,486, and on this $13,486 an additional $4,300, and so forth, and so forth. So his tax liability, instead of being $131,000, will be

$193,000, because the more insurance he takes out the bigger his estate becomes, and there is no end to it.

My theory is, that in these small estates a man should be permitted during his life, to figure out what may be the value of his business for Federal estate tax purposes and start prepayments. Those prepayments should not become a part of his estate, nor should they be taxable. As an offset the Treasury will have the use of those prepayments, which will be made in installments, without paying interest on the funds received, during the period that they are being paid. I think that this prepayment feature, during this period of heavy Federal expenditures, is of real value to the Treasury.

It is also of value to the Treasury to have an immediate payment of their cash claim without waiting 18 months for the settlement of an estate, and who can tell what the future may bring forward and what will be the value of estates? I think these points are something that should be considered, sir, at this time.

When we finish this emergency we hope at least to have our little businesses alive and going, so that the boys that are now going into the Army can come back to their little communities and find a job waiting for them.

I respectfully ask you to give consideration to this matter.

The CHAIRMAN. Thank you, Congressman.

Senator DANAHER. Mr. Chairman, before the Congressman goes, may it be indicated in the record from what issue of the testimony and from what page he read?

Mr. DEWEY. I am referring to part 10 of the hearings before the Banking and Currency Committee, upon the price-control bill, H. R. 5479, page 566, table 1.

Senator DANAHER. Thank you very much.

Senator VANDENBERG. You would reach the same general net result, Mr. Congressman, would you not, if you exempted from the estates tax any insurance taken out with the Government as a beneficiary?

Mr. DEWEY. It would be the same plan, sir.

Senator VANDENBERG. Would not that be even simpler?

Mr. DEWEY. It would be just as simple. That has been considered. I would like to make it a part of my plan. The only thing, however, is that there may be a time when a man may be able to pay over $10,000 a year for 10 years but he could not take out a life-insurance policy, owing to ill health or age, or questions of that kind, and he ought not to be put in the position where he would not have the same opportunity as those that had life insurance or who can obtain a life-insurance policy.

I agree with you on that theory and am in perfect harmony with the use of life insurance, but I would like to see this used with it, too, to give an equal benefit to all.

Senator DANAHER. That is a very excellent suggestion.

Mr. DEWEY. Thank you very much.

The CHAIRMAN. Thank you very much.

Mr. Long.

STATEMENT OF HENRY F. LONG, BOSTON, MASS., COMMISSIONER OF CORPORATIONS AND TAXATION, STATE OF MASSACHUSETTS; CHAIRMAN OF COMMITTEE, NATIONAL STATE TAX ADMINISTRATORS; CHAIRMAN OF THE COMMITTEE OF THE AMERICAN BAR ASSOCIATION ON THE COORDINATION OF FEDERAL, STATE, AND LOCAL TAXES; CHAIRMAN OF THE COMMITTEE, NATIONAL TAX ASSOCIATION, ON THE COORDINATION OF FEDERAL, STATE, AND LOCAL TAXES

Mr. LONG. My name is Henry F. Long, and I am the commissioner of corporations and taxation of Massachusetts, and have served in that capacity since 1920.

I am here representing a group of State tax administrators who have gathered here in Washington, undertaking to discover what effect the proposed Federal revenue bill may have on the taxes of the States.

The CHAIRMAN. Would you like to finish your general statement before questions, or would you object to questions?

Mr. LONG. I would be very glad to have questions at any time.

The CHAIRMAN. All right.

Mr. LONG. I would wish the committee, if it please, to consider that the States have different forms of tax structures, and have also different requirements, and also the taxes can be reported in different ways. Insofar as Massachusetts is concerned, our government is so interlocked that, speaking as a State tax administrator, I am consciously thinking of the total tax burden on the people of the State of Massachusetts, the local taxes, as well as the State taxes.

We wish to present to this committee two or three things which we think are quite vital: First, I would like to call to the attention of the committee the fact that the States must continue to exist; that there should not be any encroachment upon their revenue sources which they have enjoyed through the years, unless it becomes of paramount necessity under any proposal of revenue production by the Federal Government.

It seems to us that there can be consideration given to the States on these general principles.

We have, all of us, inheritance taxes, and we believe that there should be in the minds of the Congress, in passing a Federal revenue bill, constantly in mind that the States are entitled to a proportionate share of the accumulated wealth of decedents in that State.

The progress of the Federal Government's taxation in regard to estate taxes during a number of years has been very seriously tended to deplete the amount of revenue which the States have under their inheritance taxes. It, in substance, comes in the form of taxation which the Federal Government has resorted to as a tax on estates that is, by indirection, a very similar situation as has developed in respect to the income tax schedules.

Every estate that has an income tax, or something comparable to it, finds that its revenue source is very substantially reduced by the high rate which the Federal Government employed in their income-tax proposals.

That means that there is depleted, where the estates are allowed credit for taxes paid the Federal Government, the amount which the State can receive for their own particular activities.

In this proposal, which I will leave with you, I think there is very well outlined the thoughts that I have just briefly called to your attention, which perhaps might be summed up, first, by saying that we hope, in considering this Federal revenue bill, you will not overlook the fact that the States do have revenue sources such as I have called to your attention, gasoline taxes, taxes on tobacco products, taxes on liquor, taxes on incomes, taxes on property, taxes on various privileges, and a good many of them have sales taxes which have also been implemented by usage taxes, all of which they have come to rely upon, and every excursion that the Federal Government makes into those fields, is going to be very detrimental to the States in financing the kind of governmental activities which they are obligated to perform.

This group that has gathered here in Washington has made up a memorandum which will be submitted to you, of some of the suggestions that we have in mind, together with an appendix in the form of tables, that call to your attention the impact of this proposal upon the States' particular revenue.

The second thing that I want particularly to emphasize is this: In addition to being the commissioner of corporations and taxation in Massachusetts, I am also chairman of the committee of the American Bar Association on the coordination of the Federal, State, and local taxes, and equally I am chairman of a similar committee of coordination of Federal, State, and local taxes of the National Tax Association; and, thirdly, I am chairman of the committee of the National State Tax Administrators on the coordination of Federal, State, and local taxes.

Now, all of the tax administrators through the years, particularly beginning at the time of the depression, have been very greatly concerned at the enormous assessments which, by indirection, have been made in the various Federal revenue bills on the States, and the groups that I am chairman of their committees, of the American Bar and the National Tax Association, and the Association of State Tax Administrators, have concerned themselves with the thought of how we could work out some plan that we could present to the Congress to indicate how the Federal Government may be able to raise their revenue without any particular attempt to tax by indirection the States' revenue.

Those committees have not as yet been able to get sufficient data to present to you, although we are struggling with the problem.

This group has called to your attention House bill 5196, which is another bill pending before the Congress, which seeks to set up by Federal enactment a committee which will think in terms of the coordination of the Federal, State, and local tax sources.

We suggest that the committee, in approaching this, begin to think very seriously in terms of—in respect to any future revenue bills—of considering, through the Treasury Department—if it is on that source that the committee relies for its information—the proposals of all representatives of the States.

In the particular proposal, H. R. 5196, there is only one representative of the State.

While the Federal expenditures are very heavy, it is respectfully submitted that the States, through their political subdivisions particularly, are much closer to the economy of our people and much closer to their lives than is true of the contact which the Federal Government has, and that the States should be permitted a larger representation on this coordinating committee.

We would ask, in a general way, that there be no provisions in this particular proposal which is now before you, which looks to the future in the matter of revenue, that you keep as a primary thought in the development of this present Federal revenue measure, the immediate return of revenue, and not, as in the bill, for example, in respect to your estate tax, project something that may develop revenue in the future. It is respecfully submitted that the Congress is going to be in session at another period, and that this bill might necessarily be only a forerunner to what might be thought of as a well-worked-out plan, as ultimately we must reach, as our cost of government increases, so that the Federal Government can exist, and the States and the local subdivisions are able to exist.

Senator LA FOLLETTE. I am not too optimistic about that. I have been waiting 15 years for that sort of thing.

Mr. LONG. Your State of Wisconsin, Senator, has been very reluctant to come in with us on any plan to work out coordination of the States and the Federal Government. We think it can be done, and we believe there is opportunity of doing it.

Senator LA FOLLETTE. I do not want you to think I am not in favor of it. When you talk about getting a sound Federal structure, it has always been said when we had a Federal bill before us, that the next time we are going to do a thorough job, and take into consideration all these questions, but I have never seen them do it.

Mr. LONG. I think it is largely due to the fact that human nature does not change, and one of the strongest emotions in human nature is the acquisitive sense. People do not wish to give up anything. Ultimately we may reach some sort of scheme, and the first step will be to have at least the Congress feel that there is some place in this picture for the States and the political subdivisions, and at least let us have some provision inaugurated in Congress that will permit us to sit down around the table and talk it over.

Senator LA FOLLETTE. I am very enthusiastic about that being done.

Mr. LONG. If we have of the States, who are rather constantly in contact with this problem, might sit down at the beginning of the drafting of the Federal revenue bill——

Senator LA FOLLETTE (interposing). Instead of at the end?

Mr. LONG. Instead of at the end, I think we might at least be able to show where the States were rather badly injured, and possibly we might make some suggestions which might be of value, at least to the committee in reaching their conclusions.

I can see no other way we can attempt it. In the last analysis, we have got to raise revenue. We should do it in the best way possible, and we should have it under consideration at the beginning rather than at the tail end.

It is clear that this particular group I represent have not had any time, nor are we implemented to bring the sort of report to you that we would like.

Forty-eight States in the Union are not very easily brought together. We can do the best we can. We do believe if the Congress will think in terms of what the States can do, we would be very glad, indeed, of that opportunity.

Senator LA FOLLETTE. It is true, is it not, that the greater the tax revenue raised by the Federal Government, the more imperative becomes the necessity of some coordination or cooperation between the States and the Federal Government in this field of taxation, because as you increase the impact of the Federal taxes you intensify the problems with which the States are confronted?

Mr. LONG. Yes, Senator, I think that is very intelligently put. In Massachusetts, for example, since the Federal Government has used the estates tax in large rates, we have averaged a drop in our normal revenue of about $3,500,000 a year, by virtue of the fact that we are giving credit because of the Federal estates tax paid.

Now, if you should say, in answer to that, that the States might very well discontinue giving credits because of the Federal estate tax paid, then you counsel destruction of all accumulation of wealth and the movement of that wealth down to those that the decedent wants to be the beneficiaries of his accumulation. That, of course, will lead us into another picture, it will mean the hiding of the accumulated wealth of people, so that neither the Federal Government nor the State can obtain it.

It can be done by scattering the fortunes into small hands, which again destroys our economy, which we have, particularly in Massachusetts, benefited fr through the years, of the ability of accumulated wealth to create w h upon which we must depend for the continuation of our Government.,

We think that when the States are, as now, largely dependent upon what might be called the people in the lower brackets of the income group, and lower brackets of the estates, that the field, even though the States may not immediately avail themselves of it, should be left open to the States, and not the theory adopted that where the States have not seized these sources, or because the States have not taken them, the Federal Government will go in and take them.

I submit there are some things which the Federal Government can well do, which the States are almost prohibited from doing. The obvious ones, of course, are the taxes on interstate commerce, which is only to a certain extent employed by the Federal Government. The States are very definitely prohibited from obtaining very much revenue from interstate commerce. The devices of corporations engaged exclusively in interstate commerce, are manifold in the ways in which the taxes can be avoided.

That is true also in respect to sales taxes. We are prohibited in the States from employing the manufacturers' sales taxes, that is, in regard to anything which has a Nation-wide spread, and which again is in relation to interstate commerce, which, it seems to me, might very well be modified by the Federal Government to supplement the other sources.

In other words, what I am pleading for is for the Federal Government to be constantly watchful that they do not gather revenue in those fields which are, in the first instance, close to the States, that when they enter the fields in which the States are also in part occupied, that they will do it in such a way that there will be a return for the Federal Government of $100,000,000 at the expense of $85,000,000 which the States have to give up, which is a net gain to the Government or the people of the United States of only $15,000,000. That, of course, is a major problem for a committee, which again is probably like the State tax administration, it is not given the opportunity to consider the Federal revenue bill until it is pretty well cooked and it is pretty difficult to break up the batch of dough and start all over again. At least we can try, and we are now presenting to you the suggestions as to what we would like. We would like the opportunity of coming in as States and sitting down with you and seeing if we can work this out. Perhaps we can.

I think the very fact that the Congress looks with favor on considering the States and subdivisions in the picture of financing the Government of the United States, which, after all, is not exclusively Federal and not exclusively State, but a combination of State and Federal and local, I think that is a good sign that we can get together.

The views of this particular group that is here, of the State tax administrators, and we have had communications with perhaps 35 of the 48 States, that will be presented to you in the form of a memorandum and tables. That is in detail what we would like to have you consider, but I would like to make these specific recommendations, if I may, and it will not take but a moment.

There are six in number.

1. We would like to recommend that there should be no increase in Federal estates taxes at this time. If, however, they are considered an indispensable source of additional revenue, provision should be made for an augmented share to be made available to the States by adjustment of the credit for death duties paid to the States.

You will recall that the 1926 revenue act gave the States 80 percent credit. You will recall the subsequent estate taxes have been superimposed upon that 1926 enactment, but that there have been no credits given in respect to the subsequent acts, and that therefore, when a person dies, coming within the sweep of the Federal estates tax, he is first taxed under the 1926 revenue act and the States there have the opportunity of taking the 80 percent credit, and then what there is over and above that is taxed without giving any credit to the States whatever.

Senator BROWN. What do you think of the proposal to reduce the exemption from $45,000 to $25,000?

Mr. LONG. You mean on the insurance?

Senator BROWN. On both, as I understand.

Mr. LONG. I am in favor of the abolition of exemptions. I think exemptions are the real burden in any tax structure.

Senator BROWN. What exemption do you have in Massachusetts?

Mr. LONG. We have a complete exemption on insurance.

Senator BROWN. On the estate, what exemption do you have?

Mr. LONG. We have no estate tax except to take up the 80 percent credit allowed by the Federal Government. The Massachusetts courts

ruled a great many years ago that in an insurance policy, where the main beneficiary was found in the policy that there was a completed transaction, and therefore upon the death of the decedent, there was not anything which came by way of succession to the beneficiary. Our courts have ruled they cannot tax insurance. Unquestionably our legislature could overcome that by making a tax. We have a tax where the insurance is made payable to the estate. Where the insurance is made payable to the estate or the beneficiary dies, and because there is no other beneficiary, the money is paid to the estate and then we have no exemptions whatever, the entire amount of the policy is included in the estate of the decedent.

Senator BROWN. Do you approve of the Treasury's recommendation to make that exemption $25,000 instead of $45,000?

Mr. LONG. Yes. But it is my opinion the States should have these lower amounts for taxation to themselves.

Senator BROWN. That would be a very material method and means of broadening the base of taxation.

Mr. LONG. Well, it would be a means of what we think is a method now permitted, to avoid a tax.

In Massachusetts, for example, a person can avoid our inheritance tax merely by taking out insurance.

Now, if the Federal Government taxes that in a large estate, we can pick up some of it under our 80-percent credit.

If you give us 80 percent credit under the 1941 Revenue Act we would, all of us, be highly pleased.

Senator BROWN. I am pleased to note your second recommendation there, about the allowance of the creation of a tax-free reserve by which to meet the Federal death duties. We tried to cover that here, I think, about 3 or 4 years ago, in part.

Mr. LONG. I recall it.

Senator BROWN. By providing for an 8-year period payment in the case of capital levies—that is what it amounts to—and by lowering the interest rate from 6 to 4, as I recall it. But I think there is merit in what you suggest. Often it amounts to a capital levy, and it should be spread over a number of years, or a reserve should be set up to repay it.

Mr. LONG. It is equally true that there is an accumulation, it is a circle and you never catch up. I think the rule, if it is good in this instance, and I think it is, should be generally applied. Ultimately, if taxes are going to develop, as I think they are, we will of necessity and fairness permit the accumulation of pools of money which are completely free from any assessment, just for the purpose of paying taxes in cash.

2. The second recommendation was that provision should be made to allow the creation of tax-free reserves with which to meet Federal death duties.

Such a provision would help both Federal and State Governments by retarding the exhaustion of capital holdings, and preserving the taxable base for future revenues.

3. The third suggestion is that large increases in income taxes, especially those applicable to individuals, should not be made retroactively. Since the revenue bill is so long delayed, provision for payment of taxes for the ensuing year will be difficult for many individuals who will be liable to State Governments upon income and other taxes.

4. The fourth point is that because the impact of Federal taxes upon the State tax yield is so great, there should be provision for prior consultation by Treasury representatives with State authorities before Treasury recommendations as to types and amounts of new taxes are made.

5. The fifth point is that attention should be given to the increasing number of commodities upon which duplicating or conflicting excises are being imposed.

6. The sixth point is that in any Federal legislation providing for a Commission to consider and report upon the interrelationship of Federal and State taxation systems, that there should be provision for adequate representation of State taxation officials.

In closing, gentlemen, I would like again to repeat what I said at the beginning:

We are anxious to do what we can to protect our States. We are not unmindful of the fact that the Government must be the first in concern in regard to the Nation. We do, however, want to ask that the Federal Government, having the greater power, having the first bite and being allowed to take too large a bite, that it be a little modest, and nibble instead of bite at these sources which they are seeking.

Senator GERRY. Mr. Long, you have a peculiar situation, haven't you, in Massachusetts, according to your testimony, in regard to the insurance policies?

Mr. LONG. In regard to inheritance taxes, that is correct.

Senator GERRY. That does not apply to other States, does it? I never heard of it, that is why I ask.

Mr. LONG. I think that the doctrine is rather to be found in the other States, namely, that when an insurance policy is taken out for the main beneficiary that there is not anything that goes to the living at the time of death. Now, if the State has an estate tax, you have an entirely different problem, and it may be that by legislation that the State can arrange that insurance policies will go into the estate. I think most of the States in the Union, in probating, where there is a main beneficiary in an insurance policy, do not run them through the probate court; nor does the fiduciary in the estate have any control in the insurance policy which is going to the main beneficiary.

Senator GERRY. My State has both the estate and inheritance taxes.

Mr. LONG. As I remember, your State merely passed the estate tax, as many other States did; I think you passed it in 1927.

Senator GERRY. No; we were the initial State, I think, that passed the estate tax, way back. The Treasury copied ours.

Senator TAFT. You do not have the catch-all 80-percent tax?

Mr. LONG. Yes; we do, Senator.

Senator TAFT. Does not that catch the insurance?

Mr. LONG. It catches the insurance, if it is sufficiently large, as far as the Federal is concerned. If the estate is under $2,000,000, our inheritance tax in Massachusetts is more than the 80-percent credit under the 1926 Revenue Act; therefore, we would not get any insurance because our inheritance tax would take it all. If it is a $5,000,000 estate, then we would pick up some of the insurance, under the 80-percent credit, to the extent that the 1926 Revenue Act made any contribution to the State. That is relatively small. I have in mind a recent

estate in which we were interested of approximately $40,000,000. Under the 1926 Revenue Act the Federal Government had a tax only of about $8,000,000, a little less than that, $7,000,000, of which we received 80 percent, but the ultimate amount which the Federal Government received was $23,000,000 out of the $40,000,000 estate. If we had 80 percent of the $23,000,000, we would be very happy.

Senator TAFT. The Federal Government would not have gotten it.

Mr. LONG. No.

The CHAIRMAN. I want to call your attention to the fact that exemptions from the Federal estate taxes have been put in partly, at least, on the theory that we were leaving the small estates—that is, estates that fell under that exemption—to the State, in which the small estate was generally accumulated.

Mr. LONG. I think, Senator, that is entirely to be commended, and I think that is correct because ultimately the Federal Government has got to think in terms of the higher things—the bigger things—those corporations which are Nation-wide.

The CHAIRMAN. That accounts, in part at least, for the exemption that we have always put in an estate tax. Of course it has been gradually reduced. The Treasury has made the suggestion this year that it be further reduced on the basis of $40,000 straight exemption. So far as the Federal tax is concerned, it leaves the estate of $40,000 or under for the State to deal with as it sees fit.

Mr. LONG. That is a statement of principle which we are asking on that, and we appreciate what you have done with respect to the estate tax.

The CHAIRMAN. Thank you very much.

Senator VANDENBERG. May I ask you for the explanation of one figure on table 3 of your compilation? Do I understand that the second item directed to fuel means that the States are collecting $845,000,000 from fuel taxes, representing 25 percent of the total State revenues?

Mr. LONG. Yes; I think that is correct. Now, the difficulty there is that again we have related these figures to just the State revenue itself, and have not thought in terms of the political subdivisions' revenues.

Senator TAFT. Yes.

Mr. LONG. The gasoline tax so far as the State budget itself is concerned, bulks very large in every single State in the Union. In my State it represents, or has represented in the past, about $22,000,000 which, out of our income in the State—because the bulk of taxes we collected were distributed to the cities and towns—is more than 25 percent of the actual State revenue. That is all earmarked and goes back to the cities and towns.

Senator VANDENBERG. Speaking generally, the State government is supported to the extent of about 25 percent by gas taxes?

Mr. LONG. That is correct. If you will permit me to add this to it: All of that money is earmarked for highways, and to the extent that the highways are brought into the picture of the cost of State government, then that suggestion is correct.

There is no opportunity to use any of this money for the normal activities of our State government. For example, we could not, in Massachusetts, take any of that and pay the $11,000,000 it cost us to take care of our mentally ill.

Senator TAFT. We do that in Ohio.

Mr. LONG. A great deal to the dissatisfaction of a great many people.

Senator TAFT. I mean you cannot make a general statement that it is all used for highways, because it is not.

The CHAIRMAN. The contrary is true in my State. Part of it is used for the educational activities.

Mr. LONG. In a great many States they have used it by device. I think the Federal Government has frowned on those kind of distributions from the Federal sources, yet there has been what they call diversion of the gasoline money for other than road purposes.

Senator LA FOLLETTE. And that diversion has been growing.

Mr. LONG. In the States with which I am most familiar there has not been any diversion. In some of the States of necessity, because their sources of revenue were incomplete, they have been obligated, by devices of various forms, to use the gasoline money for education and various other things.

Senator VANDENBERG. I was wondering if you were giving any attention to what would seem to me to be a tremendously serious problem, hanging over State functions. If 25 percent of your revenues come from gas taxation, the sharp curtailment in the use of gas will be a proportionate curtailment of State revenues, will it not?

Mr. LONG. That is true, but, if the Senator pleases, that would, I think, ultimately result only in diminution of highway expenditures. If in any of your States really you have used it for other purposes, I think as between the closing of the schools in Ohio and delaying of the construction of a new boulevard in Cincinnati, that the construction of the boulevard will be delayed. I think the revenue we are going to lose by curtailment of fuel consumption will be expressed by lack of expenditures rather than by any other difficulty.

Senator TAFT. Let me ask you about table 1. You have there "Total State expenditures." Of course that does not include local expenditures?

Mr. LONG. That is correct.

Senator TAFT. "Federal grants-in-aid, $645,000,000." Does that include both State and local grants?

Mr. LONG. That includes only State grants.

Senator TAFT. That includes only State grants?

Mr. LONG. Yes. Some of those are distributed to the local political subdivisions.

For example, you have "Old-age assistance." The old-age assistance starts locally, feeds in through the Government with the distribution back through the States.

Senator TAFT. The State and local relief is supposed to cover all relief except the W. P. A.?

Mr. LONG. That is true. It would come into this. As far as the relief end of it is concerned, it is included here, but there are certain grants made to local communities which are scattered, which are not general in character, which are not included in these figures.

Senator DANAHER. One question, please. I think this is one of the most significant exhibits which has been filed here. I wish the witness could supplement it by an itemized reference to the sources from which he has drawn these figures, if it is feasibly possible.

I would like to ask permission, Mr. Chairman, that such supplementary reference be given and included at an appropriate point, of this witness' testimony, in the record.

Mr. LONG. I would be very happy to do that.

The CHAIRMAN. We will be glad to have you do so and furnish it for the record.

Mr. LONG. Thank you.

(The memorandum submitted by Mr. Long is as follows:)

MEMORANDUM SUBMITTED BY HENRY F. LONG, CHAIRMAN OF THE COMMITTEE ON COORDINATION OF FEDERAL, STATE, AND LOCAL TAXATION OF THE NATIONAL ASSOCIATION OF TAX ADMINISTRATORS AND COMMISSIONER OF CORPORATIONS AND TAXATION OF THE COMMONWEALTH OF MASSACHUSETTS

A group of State tax commissioners and other State fiscal officers who have met here in Washington to discuss, and have by correspondence and otherwise exchanged information, data, and opinions relative to their common problems in State taxation and finance. The result of their discussions has been a general concern about the effect of Federal revenue taxation upon State finances during the present emergency.

OBJECTIVES

The purpose of submitting this memorandum is not to intrude into the committee's deliberations upon the revenue bill (H. R. 5417) at this late date, nor to oppose or criticize your efforts to provide the revenues with which to finance the national defense. We want to emphasize the resulting problems in finance which will face the State governments in this crisis and request that these problems be given adequate consideration through consultation with State officials, be they tax commissioners or finance officers of State governments, in order that full cooperation may be rendered and the States' revenues protected insofar as possible in the adoption of Federal tax schedules in a way which will create the least financial disturbance to our existing forms.

LIMITATIONS OF PRESENTATION

It is the desire of the group for whom I speak to indicate the relationships of this Federal taxation, the effects of H. R. 5417, in general on all States and in particular upon certain States:

(*a*) Upon State taxation by resulting decreases, and (*b*) upon State expenditures by resulting increases, and (*c*) cite the effects of price inflation on purchasing power, and (*d*) suggest the implications of taxable capacities of the States and the classification of their tax systems as elements for consideration bearing upon any proper solution of this problem.

One incidental objective of this presentation is to call your attention to another bill, H. R. 5106, which proposes to create a commission to study taxation in this country. The proposal provides for one representative of State government on this commission. There are 48 States and 180,000 municipalities that levy taxes in this country in addition to the Federal Government. These taxing authorities are to be represented by one consultant. The States and municipalities collect 63.54 percent of all taxes collected in this country. We submit that one representative in a commission of 10 scarcely provides proper representation to State government, nor can any single individual possess the ability to solve the complexities and unravel the confusion of the taxes which are levied by the States, let alone the municipalities who exist as creatures of these States. It is not our purpose in calling these facts to your attention at this time to inject this subject into your present deliberations, but, as I have said, we are concerned with the probable decrease in State revenue and the probable increases in State expenditures which may be expected during this crisis.

RATIONING AND PRIORITIES

The effects of rationing and priorities have been weighed but the necessity for these controls in the defense economy transcends in importance that of State revenues, although we urge that in the adoption of rationing and priority schedules an eye might be kept upon State revenues which will be directly affected and often in serious degree by these necessary defense controls. Our objective may be summed up briefly by stating that it seems advisable to give consideration to State revenue through consultation with State representatives when measures affecting it, such as the revenue measure now before you and related economic legislation, is being given consideration.

STATE EXPENDITURE INCREASES

The costs of defense are believed by many to be entirely the subject to payment out of Federal revenues. Despite this fact it begins to appear definitely that the States have been, and will be, increasingly called upon to bear many of the costs incidental to defense. These costs begin to be felt in those activities entailing the maintenance of vocational education and training for firemen, police, etc., and those involving the preparations by councils of national defense which have been created in the States. With their national guards in Federal service, the upkeep of home guards will place additional defense costs upon the States. Those States represented in this group fully realize and are in sympathy with the importance of economical State budgeting, to make free the taxable capacity of the citizen to the Federal Government in this crisis, but they also believe the Federal Government should practice strict economy in its nondefense spending. This type of spending parallels and conforms closely to the normal regular expenditures of States in many ways. Legislation in recent years has more and more shown the tendency to intermingle the functions originally allocated to Federal and State Governments at the expense of the States' budgets by grants-in-aid, and the expansion of those functions whose performance had come to be considered a matter of national emergency some time before the present crisis arose. Attention is merely being directed to the fact that State expenditures will increase during this emergency. The extent of the increase is speculative, but nonetheless real and sizeable.

TAXABLE CAPACITY AND STATE SYSTEMS CLASSIFIED

The principal objective of this presentation, as we have said, is to survey with you the factors and to measure, as well, the possible effects of revenue legislation upon the State tax systems. In order to properly survey and estimate these effects in dollars and cents, consideration must be given to the taxable capacity of the various States which differs as the wealth and income of the population and the taxable resources located within each State differs one from the other. In addition to the factor of taxable capacity, it seems appropriate to classify the various State tax systems in a general way to show groups which will be affected more adversely by certain types of taxation than certain other types.

A perusal of the data on taxable capacities will disclose the receipts from the various States set opposite to the expenditures by the various States from Federal sources. It will call your attention to the degree of reliance placed upon certain forms of taxation by the several States and furnish you with some indication of the willingness of the States to tax themselves.

Factors which affect and are of significance in the taxable capacity are indicated by the flow of income payments, the types of productive activity, the nature of the tax systems adopted, and the willingness of the State legislatures to impose taxes to support a program adequate to the States' needs. There is no desire to accentuate State differences in these statements, but rather to indicate the part taxable capacity should play in plans for existence of State government in a dual taxing system, such as that relied upon in this country. Tax techniques are closely associated with taxable capacity in any criterion of willing and effective efforts by State to support enlightened programs. Without further analysis of taxable capacity at this time, permit me to summarize the type and nature of the various tax systems.

Thirty-seven States employ the income tax as a revenue-raising measure, 33 in its individual form, and 32 employ the corporate form. Of the 33 individual income-tax States, 20 allow the deduction of Federal taxes paid; 18 of the corporate income-tax States allow the deduction of Federal corporation taxes paid.

Sales and use taxes are employed in 22 States, 5 of which do not take advantage of the use tax features, but it seems significant, also, that only 4 of these 22 States do not employ the income-tax method—Illinois, Michigan, Ohio, and Washington. Of the 37 income-tax States 20 do not resort to the sales and use method. All States employ a tax on gasoline to provide revenues. Certain inequities have resulted from the full employment of this tax as a State revenue measure through the limitations of the Hayden-Cartwright Act which will be discussed in a moment. All States but one employ the inheritance, estate, and gift tax in some form as a revenue-producing measure; 6 of these have adopted methods similar to the Federal estate tax, while 7 employ a tax on inheritances only and the remaining 35 have both inheritance and estate tax forms, the latter primarily to take advantage of the crediting device allowed under the 1926 Federal estate tax law; 8 States have gift tax laws in effect to supplement the death taxes. Appended to this presentation is a table classifying the State systems as nearly as possible for your guidance and assistance and including the most relevant data from which to determine in a general way the taxable capacities of the various States.

ANTICIPATED REVENUE LOSSES

The over-all picture

H. R. 5417 proposes to levy new taxes, or increase those now levied to the amount of $3,300,000,000. Of this $3,300,000,000, $1,300,000,000, or 40.87 percent, will be derived from the income tax on corporations, chiefly excess profits taxes: $864,800,000, or 26.75 percent, from the income tax on individuals; $151,900,000, or 4.69 percent, from the tax on estates and gifts; $127,300,000, or 3.93 percent, from the tax on alcoholic liquors. Smaller amounts and percentages will be raised by levies on other taxable objects.

The proposed levies are to a large extent on the same persons and objects now taxed by the various States. The principal reliance of the States for their revenues is placed upon gasoline and motor-vehicle taxes, representing 37 percent of the total collections, or $1,233,000. Gasoline tax, a form of sales tax, varying in rates in the several States, represents 25 percent of the total collections of State taxes, and other taxes on motor vehicles for registration and operation, 12 percent. Gasoline tax, on the other hand, furnishes 5.75 percent of all Federal internal revenues, and motor-vehicle taxes, 2.66 percent. Pay-roll taxes have been omitted from these computations, although this form is employed in all 48 of the States. Next in importance as a form of taxation come sales and use taxes providing 14.73 percent of the States' revenues and only 4.1 percent of all Federal internal revenues. Income taxes in the individual and corporate forms provide approximately 10 percent of the States' revenues and 46 percent of Federal revenue, although this percentage is bound to increase proportionately under the new schedules. Taxes on alcoholic beverages provide 7.16 percent of States' revenues and 13.02 percent of Federal revenues, being fourth in importance in the States' schedules. Next in importance, primarily to the local governments, is property taxation, providing only 7.95 percent of State revenues, but 53.7 percent of all revenues collected in this country. Death taxes range next in importance in the State systems providing 3.5 percent of State revenues and 8 percent of Federal revenues. Rather than continue to cite figures of relative importance of taxes below the levels which we have referred to and which provide the principal sources of conflict or impact from the States' anticipated losses as a result of Federal legislation, an additional table has been attached to this presentation to furnish the elements for survey which seem important to the group for whom I speak.

Perhaps a discussion of each of the proposed taxes mentioned above will throw light upon this conflict between the State and Federal tax systems, even though it does not measure the competition for each source of taxable capacity.

CORPORATION INCOME TAXES

The Federal Government now levies excess-profit taxes, corporation-income taxes, and capital-stock taxes, and H. R. 5417 proposes to increase the corporation-income tax above to increase the yield by $1,300,000,000. This tax will conflict directly with the corporation-income tax of 33 States which levy taxes on corporate incomes, and indirectly with 34 States which levy on individual incomes. In 1940 the States raised 4.15 percent of their total taxable income exclusive of pay-roll taxes from this source. Even in 1940 the Federal Govern-

ment collected $3.27 from the tax on corporate incomes for every $1 the State collected. The States directly competing with the Federal Government in the taxation of corporations can be seen by examining table 3A.

INDIVIDUAL-INCOME TAXES

H. R. 5417 proposes to increase the yield by $864,800,000 the tax on individuals. This tax competes directly with individual-income taxes levied by 34 States, but most directly with the 20 States in which Federal income-tax payments are an allowable deduction. In 1940 the States collected 0.13 percent of their total income from taxes, exclusive of pay-roll taxes, from this source. In that year the Federal Government collected $4.66 from this source for every $1 the States separately reporting income taxes raised from this source. The States in which the Federal Government and the States compete for this taxable revenue may be seen by examining table 3B.

ESTATE AND GIFT TAXES

H. R. 5417 proposes to increase by $151,900,000 the tax on estate and gifts. All but one State in 1940 levied inheritance, estate, and/or gift taxes, collecting $118,000,000 from these taxes. This was 3.54 percent of their total tax receipts, exclusive of pay-roll taxes. During this same year the Federal Government collected $358,000,000 or $3.03 for every $1 the States collected. The trend in this direction is more fully evidenced by the fact that in 1926 total death taxes were divided 30 percent Federal and 70 percent State, while in 1939 the ratio is completely reversed. The States affected by this competition and the importance of that competition can be seen by examining tables 3C and 5.

TAX ON ALCOHOLIC LIQUORS

H. R. 5417 proposed to increase by $127,300,000 by further taxing alcoholic liquors. In 1940 all the States levied on this source, collecting 7.16 percent of all their taxes, exclusive of pay-roll taxes, from this source. This revenue amounted to $238,000,000, which was $1 for every $2.62 collected by the Federal Government. The relative importance of this tax to the various States can be seen by examining table 3D

SALES TAXES

H. R. 5417 proposes to levy taxes on certain manufactured articles. Twenty-three States now have general sales taxes. The total yield of this tax to the States amounted to $490,000,000. The proposed tax will not cover all the same taxable objects that are carried by the States, but there will be certain areas of conflict. The revenue derived from this source and its relative importance may be learned from table 3E.

OTHER MEANS IN WHICH THE FEDERAL AND STATE REVENUE SYSTEMS MAY CONFLICT

We are told on every hand that the defense expenditures of the Federal Government will bring at least a temporary prosperity which will of itself offset the decreases in State revenues, a generalization which will bear examination.

Prosperity means profits. If there are profits, the income-tax States allowing a deduction of Federal taxes paid will not benefit to the extent they otherwise would. The machinery for their capture are the (1) excess-profits tax, (2) corporation-income tax, (3) individual-income tax. There remains for the States the taxing of leavings of the anticipated prosperity. (Pay-roll taxes will not relieve the situation for they are earmarked.) This will leave only the States which levy general sales taxes to reap the benefits of general prosperity. The amounts collected from general sales taxes and their relative importance may be learned from table 3E.

If we have inflation, there will be a marked lag between the higher price level and increased State revenues from increased spending except in the case of the sales-tax States. There will be, however, no lag between increased State expenses and increased prices.

We also hear on every side that priorities will be invoked. It is now too early to discuss the impact of priorities on specific objects, except upon automo-

biles and gasoline; 25.41 percent of the tax revenues of the States came from a tax on motor fuel and 11.65 percent from the tax on auto licenses. If these proposals of priorities and rationing are effectuated, the States' revenues will be further reduced. The importance of levies on motorists in the States' fiscal system are shown in table 3F.

PURCHASING POWER

It seems necessary, however, for you to bear in mind any reduction in purchasing power resulting from the forces presently at work requires consideration in determining the effect on the fiscal problems of the States. Decline in the value of the dollar will be felt seriously in carrying on the programs of roads, highways, schools, welfare, and general government which have been identified since the beginnings of our form of government as functions of the State. Local responsibility and local obligation must be exercised for their support. It seems to be generally admitted by those in close touch with the situation that purchasing power will decline and, as it declines, to that extent will the difficulties of State finances increase.

The estimated tax yield or the yields for each State in 1939, be they unaffected in any other respect by Federal-tax legislation, would feel the impact of declining purchasing power in the reduced value of the tax dollar. The States furnish complete living costs to many of their unfortunates and governmental services of some types to all citizens. Your attention is invited to this factor of purchasing power as applied to State revenues and State expenditures to show the trend which may be expected and the embarrassment to either the revenue or the expenditure side of State budgets as this purchasing power declines during a period of price inflation.

CONCLUSION

The national income, no matter who be the recipients and in what proportion and in what manner it is divided between the several States, is the source from which the Federal Government has the authority to reach first; to cut the first slice of taxation, so to speak, before the remainder becomes available to the States. We would remind you of this primacy in the hope that no undue advantage is taken of it.

Attesting the interest which has manifested itself throughout the country in this subject, and which has prompted the group which I represent to call this situation to your attention, we have attached as appendix 6, quotations from letters endorsing the idea and measuring the seriousness of the situation in the opinion of the tax commissioners contacted throughout the country. Your attention is respectfully called to this exhibit for assurance that this presentation is prompted by concern for State revenues and should be implemented in the future by consultation before revenue legislation is adopted.

The States cannot afford to lost millions of dollars through the impacts of Federal legislation and continue to operate. We do urge upon you that State fiscal conditions involving taxation and expenditures can be foreseen more readily by those actively interested and immediately engaged in fiscal fields within the several States with a more intimate grasp than anyone else.

A group of State tax commissioners therefore, has sought this opportunity to be heard to offer assistance in measuring the effects of Federal legislation upon subsequent revenue policy.

TABLE 2B.—*Classification of State tax systems*

States employing:
- Income, sales, and inheritance forms:
  - With State property tax:
    - Alabama
    - Arkansas
    - California
    - Iowa
    - Kansas
    - Mississippi
    - Missouri
    - New Mexico
    - Oklahoma
    - South Dakota
    - West Virginia
  - Without State property tax:
    - Arizona
    - Colorado
    - North Dakota
    - North Carolina
- Death tax forms only:
  - With property tax only:
    - Florida
    - Maine
    - Nebraska
    - New Jersey
    - Rhode Island
    - Texas

States employing:
- Income and inheritance forms (no sales):
  - With State property tax:
    - Georgia
    - Indiana
    - Kentucky
    - Louisiana
    - Maryland
    - Minnesota
    - Montana
    - Tennessee
    - Vermont
    - Virginia
  - Without State property tax:
    - Connecticut
    - Delaware
    - Indiana
    - Massachusetts
    - New Hampshire
    - New York
    - Oregon
    - Pennsylvania
    - South Carolina
    - Wisconsin
- Property tax only:
  - Nevada

TABLE 6

Name and office	State and date of letter	Excerpt quoted from letter
George P. Alderson, State tax commissioner.	West Virginia, Aug. 15, 1941	"I fully endorse the proposed conference to determine the effect of the impact of pending Federal tax legislation."
Charles V. Galloway, chairman, State tax commission.	Oregon, Aug. 15, 1941	"The Oregon Tax Commission is deeply interested in the results of the survey you propose and whole heartedly favors a cooperative effort to reconcile conflicts between Federal defense taxation and the necessary revenue requirements of the States."
Elmer E. Barlow, commissioner of taxation.	Wisconsin, Aug. 14, 1941	"I feel this will be a very helpful conference and bring about some excellent results."
E. A. Dye, chairman, State board of equalization.	Montana, Aug. 15, 1941	"The competition between the States and Federal Government in their mad scramble for revenue is becoming a problem which must some day be solved. The taxing plans of the two governments should be harmonized. Both are invading the same field; a division of these fields by some equitable plan would enable the man who foots the bill to exercise his citizenship rights more directly and more forcefully."
J. D. Carmichael, chairman, tax commission.	Oklahoma, Aug. 12, 1941	"The pending legislation will materially reduce our income-tax collections."
John C. Curry, commissioner of revenue.	Alabama, Aug. 14, 1941	"We are, of course, concerned with the relationship of the Federal tax system with that of the States as a whole and we are willing to work in cooperation with the other tax commissioners in handling such matters."
Dixwell L. Pierce, secretary, State board of equalization.	California, Aug. 14, 1941	"It seems clear that as the Federal share of the tax dollar increases, the State will have greater difficulty in securing sufficient funds for its expenses. Every effort should be made by those responsible for the Federal legislation to minimize as much as possible its impact on State finances."

TABLE 6—Continued

Name and office	State and date of letter	Excerpt quoted from letter
Frank J. Brady, State tax commissioner.	Nebraska, July 31, 1941.....	"Certainly the Federal Government should not preempt every right of taxation."
Walter J. Kress, acting secretary of revenue.	Pennsylvania, Aug. 1, 1941....	"The contemplated cut in gasoline sales is going to seriously affect State revenues."
William S. Evatt, tax commissioner.	Ohio, July 29, 1941.....	"There appears to be no question but that the matter of the impact upon State revenue of a number of proposed Federal tax measures should be given consideration from a State viewpoint."
John G. Marston, secretary, State tax commission.	New Hampshire, July 25, 1941.	"We are ready to cooperate in any way possible that offers any protection to the States."
George E. Hill, State tax assessor.	Maine, July 28, 1941.....	"In order to maintain the integrity of the several States which comprise the Union, it is, of course, fundamental that the integrity of their powers of taxation be at all times preserved."
A. J. Maxwell, commissioner of revenue.	North Carolina, Aug. 13, 1941..	"Gasoline and general sales taxes will be affected by Government priorities that will reduce the sale of particular items of merchandise."
Will M. Lynn, chairman, board of equalization.	Wyoming, Aug. 2, 1941.....	"We certainly want to cooperate with you in every way possible on any legislation that will affect State revenues."
George H. Sheppard, comptroller of public accounts.	Texas, July 29, 1941..	"With reference to pending revenue legislation before Congress, I am of the opinion that conference held with State officials would probably be beneficial."
W. G. Query, chairman, tax commission.	South Carolina, July 29, 1941..	"Instead of the high rates contained in the pending legislation before Congress on the sources of State revenues, I would much prefer imposing higher excises on certain nonessential commodities."
John McCuish, chairman, State commission of revenue and taxation.	Kansas, July 25, 1941.....	"The State of Kansas is very much concerned about this legislation. It is apparent that our revenue would be affected adversely."
Henry O. Levin, chairman, State tax commission.	Maryland, July 25, 1941.....	"This matter has given us a great deal of concern."
Charles J. McLaughlin, tax commissioner.	Connecticut, July 24, 1941.....	"Relating to pending revenue legislation before the Congress which may severely affect State revenues, I heartily agree that something should be done about this matter."
A. H. Stone, chairman, State tax commission.	Mississippi, July 29, 1941.....	"I agree as to the wisdom of cooperative action to protect the States against the disastrous inroads of Federal revenue legislation."
George B. McKibbin, director of finance.	Illinois, July 29, 1941.....	"I concur with suggestion that State tax administrators take some action in calling to the attention of Congress any adverse effect which proposed Federal tax legislation might have on State revenues."
Gilbert K. Hewit, director, gross income tax and store license division.	Indiana, Aug. 6, 1941.....	"We would be very glad to cooperate in any way in order to clarify the situation as between the States and Federal activities."

The CHAIRMAN. Professor Lutz.

STATEMENT OF DR. HARLEY L. LUTZ, PROFESSOR OF PUBLIC FINANCE, PRINCETON UNIVERSITY, PRINCETON, N. J.

The CHAIRMAN. Dr. Lutz, do you desire to speak generally on this tax question, or particularly with reference to the suggestions heretofore made by you regarding the withholding of the tax?

Dr. LUTZ. Principally on that point, Senator.

The CHAIRMAN. Do you desire to make your main statement without interruption and yielding to questions thereafter?

Dr. LUTZ. I think that would be desirable, if the committee is willing.

The CHAIRMAN. Very well. You may proceed. We will not interrupt you until you finish.

Dr. LUTZ. Mr. Chairman, I should like to hand you a document entitled "Taxation v. Inflation," prepared jointly by Willard D. Arant and myself, to be inserted in the record at the conclusion of my remarks as a part of my testimony.

The CHAIRMAN. Yes. You may hand it to the reporter.

Dr. LUTZ. I have also handed you an outline of the remarks that I propose to make.

My purpose in this statement is to urge on the committee the adoption of a new and productive method of defense taxation as a substitute for the House bill. This method is a tax on all income payments to individuals, to be withheld or collected at source wherever possible. By income payments to individuals, I mean wages and salaries, interest and dividends, net rents and royalties, and entrepreneurial withdrawals. The tax is not intended to apply to the gross income of business as such.

I would label it a defense tax, and would suggest a time limit to its operation despite the unfortunate history of a similar limit in the First Revenue Act of 1940.

I. *Two major reasons may be given for this proposal.*—1. The vastly greater revenue productivity and ease of carrying the tax load under such a plan than under the pending tax program.

2. Some seriously objectionable features of the House bill (one highly objectionable feature has already been removed from the original bill by the House).

II. *A bit of background.*—1. In April, the Treasury proposed 3.5 billions of new revenues, to establish a ratio of one-third loans, two-third taxes in financing the defense program. In his statement to this committee in August, Mr. Morgenthau said of the House bill:

> The rapid developments of the last few months have made this bill inadequate even before it is passed.

2. Before this committee the Secretary of the Treasury also said:

> To solve that problem (i. e., the problem of adequate defense production) without impairing our economy or weakening the structure of democracy, our fiscal policy must be adapted to the needs of the times.

3. A third passage from Mr. Morgenthau's statement to this committee is the following:

> If, in an attempt to protect the incomes of our people, we hold down taxes and as a result, the cost of living rises, we shall have taxed them just as surely as if we had levied on them directly—and we shall still have the inflated costs of defense to pay later from taxes.

III. *Advantages of a tax on income payments to individuals.*—1. A tax on individual income payments meets the specifications so recently set out by Mr. Morgenthau more completely than any other proposal of which I am aware.

(*a*) *The present bill is inadequate for revenue purposes.*—A tax on individual gross income, at the rate which I proposed last January, namely, 10 percent, with no deductions or exemptions, will raise twice as much money as the present bill. According to testimony before this committee, the 1941 income will amount to eighty-eight to ninety billions of dollars. Allowing liberally for leakage, a 10-percent tax should produce seven billions. It will begin to produce at that rate at once. The House bill is not only inadequate as to the total yield but also as to prompt availability of such revenue as it may produce. The first full fiscal year under it would be 1942–43. Its inadequacy by that time I leave you to judge.

(*b*) *Fiscal policy must be adapted to the needs of the times.*—The House bill follows the conventional and obsolete pattern of the first World War taxes. By comparison, the plan which I offer is streamlined. It is unconventional, but if we try now to observe convention in finance, it would be like sending Pershing's army with its 1918 equipment against Hitler's mechanized divisions. We already have a widely accepted and generally approved instance of withholding today, namely, the social security tax on employees. In this case there is no question of exemption, dependents, or total earnings, except as to the income above $3,000, to which the tax does not apply.

(*c*) *In financing defense, the obvious choice is between taxation and inflation.*—The plan which I propose will be far more effective than the present bill as an inflationary curb because—

i. It will siphon off much more purchasing power;

ii. It will curtail proportionately the purchasing power of all consumers, instead of applying rigid curtailment to only a portion of the eighty-eight or ninety billions of national income;

iii. It will reach the great mass of purchasing power which cannot be reached under the present conventional methods of taxation;

iv. It will be a more effective inflation curb than price control;

v. It will preserve us from the regimentation inherent in price control.

So far as inflation is concerned, it is later than we think. Evidence accumulates to show that the pressure of purchasing power on the available supply of consumer goods is creating that ground swell of rising prices which is the forerunner of the disastrous tidal wave of inflation.

(*d*) The proposed tax provides the only way by which the income-tax base can be extended downward.

i. There is general agreement that the income base should be broadened;

ii. But there is no appreciation of the difficulties involved in doing this under the existing types of income tax, namely, by simply lowering the exemptions;

iii. The present tax is applicable, administratively, only to the well-to-do, since it involves accumulation of a tax reserve out of the income of 1 year for tax payment in the following year.

iv. Mr. Morgenthau's plan for a simplified return, as outlined to this committee, is ingenious, but it misses the main point, which is that the people with small incomes cannot and will not set up income-tax reserves for perfectly obvious reasons:

a. They have no bank account or safety deposit box and must hoard cash. The tax stamp or tax note plan has the same draw-back for the small taxpayer;

b. A cash hoard runs the double risk of loss by fire, theft, or carelessness, and of being raided for other purposes. As the "piggy" bank fills up the chances that it will be broken grow in geometric ratio. Even governmental bodies with large cash reserves have suffered from defalcation, and in other instances they have used cash reserves for purposes other than the earmarked one.

v. It does not follow that small incomes cannot or should not be taxed directly, providing this be done in a proper way. That way is by collection at source. When the tax is withheld the individual adjusts his plans to what is left. This is a very different matter from spending the income first and then becoming liable for a tax on it.

2. The tax on income paid out to individuals is superior to a general manufacturer's excise or a sales tax because—

(*a*) It will apply to a larger base and will produce far more revenue;

(*b*) It will avoid the price distortions caused by the pyramiding and shifting of excise or sales taxes;

(*c*) There is far less leakage through avoidance. Excise and sales taxes can always be avoided in some degree by not buying the articles that are heavily taxed.

3. This tax will keep debt increase to the minimum; and thus it will—

(*a*) Lessen the post-defense taxes for debt service;

(*b*) Lessen the risk of direct or indirect debt repudiation.

4. I would not urge this plan, however, except as a substitute for the present bill, or for the parts of it applicable to individuals. If the proposed tax rates are imposed, the burden of meeting the increase to be levied on 1941 income will fall in large measure on next year's income, or on capital funds, as pointed out below. That burden, plus the budgeting out of 1942 incomes for the heavier taxes that would be due on next year's income, will make it impossible for many to bear, in addition, a heavy tax collected at the source.

IV. *Some possible objections to the proposed tax.*—

1. It will unduly burden small incomes. My answer is:

(*a*) Defense production is now burdening them and will burden them still more as the diversion of goods from civilian use proceeds;

(*b*) Price inflation will burden them even more heavily than this tax;

(*c*) The proposed tax tends to limit the burden on the small-income group, while the method of collection makes the load easier to carry. Under inflation there can be no limit to the burden and no one can be shielded from it.

2. Difficult to collect from the self-employed.

(*a*) I grant this; but

(*b*) Many self-employed will provide their own informational check in ordinary income-tax returns.

Senator TAFT. Will not nearly every self-employed person have to file an income-tax return?

Dr. LUTZ. It depends on where you set the exemptions, Senator, but I think it is true that this obstacle has been exaggerated. I think you can get directly from the individual, or in other ways, a very substantial amount of informational control over the base to which I am referring here.

(*c*) Local revenue agents and county agricultural agents can be utilized as well to give aid and instruction to farmers and small entrepreneurs under this kind of tax as under the present income tax.

I was informed by my colleague in this document, Taxation Versus Inflation, Mr. Arant, who lives in Oregon, of an item in his own paper some months ago relative to the fact that the county agents were even then being instructed to aid farmers in the preparation of their income-tax returns under the anticipated income tax.

Now, if they can help them under that tax, certainly they can help them just as well in preparing returns under this tax.

3. It will lead to demand for pay increases.

(*a*) Such demands have already been made, and others will no doubt be made. I do not agree that any group would be so unpatriotic as to make a specific demand to shift a defense tax in this way.

(*b*) If the economic basis of defense and of fiscal policy were to be correctly and adequately put before the people, as a matter of good public relations, any attempt to avoid this tax by demanding pay increases would appear to be as unpatriotic as resistance to selective service.

V. *Some objections to the House bill.*—The time limit compels me to single out only certain features of the House bill for specific adverse comment. These are:

1. Retroactive application of the taxes on incomes and profits.

(*a*) Business concerns are likely to be less severely affected here than individuals, although there may be cases in which the earnings of the second half or of the last quarter will be insufficient to provide for the necessary enlargement of tax reserves.

(*b*) There may be a collateral effect upon individuals, arising from the possibility of sharp reduction of dividend payments through the remainder of this year as a result of the necessary increases of tax reserves. Individuals whose principal source of income is dividends may be acutely embarrassed to provide for their own heavier taxes under H. R. 5417, because of the sudden and unanticipated drying up of dividend income.

(*c*) In the case of most individuals, all income received during 1941 would be taxable at the new rates of the House bill. Retroactive taxation is the most indefensible of all tax policies. This would be clear if it were proposed to make excise taxes retroactive, thereby compelling all who had bought taxable articles since January 1, 1941, to pay more taxes.

Senator CLARK. They go back to July 1 in the case of furs and jewelry, I believe.

Senator CONNALLY. That is in reference to installments.

Dr. LUTZ. I have not caught that in the bill, but I think they will have a nice time collecting from all the people who bought furs since July 1.

Senator CONNALLY. That is only insofar as installment sales are concerned.

Dr. LUTZ. There you have a definite record. That is the kind of situation over which you might have some control. You could not exercise it over excise taxes generally, obviously.

For some curious reason, it is not perceived that the income which the great mass of the people received and spent during the first half of 1941 is gone as completely as are the beer and cigarettes consumed in that period. It is no more logical to ask them, at this late date, to pay additional tax on income that has disappeared than it would be to ask them to pay extra tax on the beer and cigarettes that have also disappeared.

(*d*) In order to bring out the appalling significance of the individual surtax increases I have prepared the following table:

Increases in surtax on 1941 individual incomes, as proposed in H. R. 5417, above surtax at the rates of the 1940 act, compared with the taxpayer's average monthly income

Surtax income	1940			1941			Increase 1941 over 1940		Taxpayer's average monthly income [1]
	Surtax	10 percent	Total	Surtax	10 percent	Total	Amount	Percent	
$2,000				$100	$10	$110	$110		$333
$4,000				260	26	286	286		500

[1] The average monthly income is computed on the assumption that the taxpayer had $2,000 in addition to his surtax income, being his personal credit as a married person or head of a family, without dependents.

This table shows the increases in surtax only, at the rates of the House bill, over the amounts that would be payable under the rates of the 1940 act. It takes no account of normal tax, which would be the same in any case. The last column of the table shows the taxpayer's average monthly income, assuming that in each case there is to be added to the surtax income the $2,000 now permitted married persons and heads of families, without dependents.

The person with surtax income of $2,000 is therefore deemed to have total annual income of $4,000. His surtax increase will require one-third of a month's income. The person with $6,000 has an increase of more than half a month's pay. At every point between an annual income of $14,000 and $52,000, the surtax increase will require more than 1 whole month's salary to meet it.

In the case of a person with $52,000, you know it will take a month and a half on the total income which he would receive from now until December 31, in order to pay simply the increase in his surtax, which he would have to pay at the present House rate.

When we consider the fact that we are now in mid-August, and that a considerable time must yet elapse before the bill is finally passed and the rates estabished, it becomes apparent that many persons will be wholly unable to make provision for this increase out of

the remainder of the current year's income. They dare not carry too much of the 1941 tax into 1942 as a charge against 1942 income, for they must begin to budget the whole of the new tax against that year's income. It is to be confidently anticipated, if rates such as these are made retroactive, that many persons will finance their taxes by loans on insurance policies, by loans from banks and personal finance companies, and by selling securities or other property.

This kind of taxation forces the individual into deficit financing, and an individual's deficit is always a reduction of his net worth. In other words, the tax is very likely to be, in fact a tax on capital rather than on income.

2. I have three objections to enter, very briefly, against the proposed changes in the so-called excess-profits tax. These are:

(*a*) The change in the tax deductions, whereby excess profits are determined prior to deduction of ordinary income tax.

(*b*) The graduation of excess-profits tax rates to the absolute amount of such profit, and particularly the proposed rate increase while this rule is used.

(*c*) The special 10-percent tax on profits which exceed base-period income although not in excess of credit allowable on invested capital.

All of these points have a common basis, namely, that the matters referred to have no relation to any reasonable or logical conception of excess profit.

(*a*) With respect to measuring excess profit by earnings before deduction of ordinary income tax, it is clear that there can be no question of earnings or profits of any sort until all of the fixed charges have been met. The ordinary corporation tax, having been in effect since 1913, and being intended to remain in effect long after the excess-profits tax will have been repealed, is certainly one of these fixed charges. Whether a corporation has earned normal, subnormal, or excess profits in relation to average base-period earnings, or invested capital is a matter of significance only as it indicates the relative return to shareholders. Whether that return is to be regarded as more or less than it should be is a question that can be answered only by reference to the earnings after taxes. The whole subject of an excess profit is hopelessly obscured and befuddled by any other approach.

(*b*) A similar criticism applies to the basis of graduating the excess-profits tax rates. Whether the amount of excess profit be determined by reference to average base period earnings or to invested capital, this absolute amount has significance, as an excess, only by reference to the appropriate base. Because of this wholly indefensible departure from the logic of an excess profits concept, any further increase of the rates of tax deserves to be rejected.

(*c*) The special 10-percent tax is described as follows in the Ways and Means Committee report:

> The existing law does not subject to the excess-profits tax earnings which are not in excess of the greater of the average earnings for the base period and the invested capital credit. Thus, many corporations which are making added profits directly or indirectly attributable to Government expenditures for the national defense are paying no additional taxes upon such profits. It is felt that such corporations, benefiting so substantially from the defense expenditures, should make a larger contribution from their increased income even though their income for the taxable year is still less than the invested capital credit.[1]

[1] Committee on Ways and Means, report to accompany H. R. 5417 (77th Cong., 1st sess., House of Representatives, Rept. No. 1040), p. 25.

There is also a scuttling of the excess-profits concept. The law provides that only the earnings above a certain rate on invested capital shall be deemed to be excess profits. By the above proposal, any increase of earnings is to be regarded as an excess profit even if the total earnings, after the increase, are still below the rate on invested capital which the law says shall not constitute an excess profit.

As we consider these and other devices in the House bill, its undesirability becomes more evident. In order to make up a total of 3.5 billions by conventional tax methods, it was necessary to scrape the bottom of the barrel by including nuisance taxes estimated to yield, in some cases, only a million dollars or so.

I submit to you that the time is at hand to make a bold departure in taxation for defense by substituting such a tax as I have proposed.

The time for it is ripe—

Fiscally, because of the urgent need of revenue; politically, because it provides universal support for the defense program; economically, because the dread spectre of inflation haunts us, and it can be exercised most effectively by drastic taxation now.

(The treatise referred to and submitted by Dr. Lutz, entitled "Taxation versus Inflation" is as follows:)

TAXATION VERSUS INFLATION, A STUDY IN THE ECONOMICS OF DEFENSE FINANCING

By WILLARD D. ARANT, Research Director, the National Economy League, and HARLEY L. LUTZ, Professor of Public Finance, Princeton University. Published in the Nation's interest by the National Economy League

FOREWORD

During the War between the States, Secretary Chase told a group of New York bankers: "Gentlemen, the war must go on until this rebellion is put down, if we have to put out paper until it takes $1,000 to buy a breakfast."

This statement indicates a fundamental fallacy in regard to war or defense financing. Wars are not won by money but by the labor of human beings diverted from peacetime pursuits. While the issue of greenbacks under Chase's administration did not raise the price of a breakfast to $1,000, inflation was allowed to proceed far enough to increase the cost of the war by 25 percent, and the economic results of inflationary financing were felt for a generation. Our experience during the World War was much the same.

The present defense effort has been financed thus far largely by borrowing, and a sharp price rise, which was forecast if this method were pursued, is already in evidence. Congress has under consideration a tax measure to raise $3,500,000,000 annually in new revenue, but the taxes included therein are both inadequate as to aggregate amount and poorly distributed in their effect on different segments of the national income. That a system of universal taxation at a substantial rate is urgently needed, is now recognized by the Chairman of the House Ways and Means Committee.

This study sets forth the reasons why prices cannot be controlled by democratic means as long as the budgetary position is unsound. Various possible taxes are reviewed, and a universal income tax collected at the source is recommended as a special defense measure. This tax was first proposed by Professor Harley L. Lutz in a pamphlet, Financing the Defense Program, published by the League in February 1941. It is now reconsidered in the light of criticisms that have been made, and in the light of the present financial outlook.

H. G. W. SUNDELOF, *Executive Director.*

AUGUST 1941.

TAXATION VERSUS INFLATION

The purpose of the defense effort is to obtain the greatest output of supplies for the soldier while maintaining as far as possible the necessary supplies for the civilian. Under emergency conditions, direct economic controls replace to a large extent the normal and somewhat cumbersome functions of money, credit, and prices.

The purpose of war finance is only to make the stream of dollars flow along the course which has already been marked out by the compulsions of defense. The stream will not change its course automatically. Financial engineers must construct diversion dams to direct the flow into the channels previously agreed upon by the defense engineers.

Defense needs will be met in any case, partly by normal marketing processes, direct negotiations, and cooperative action but, when necessary, by governmental law or decree. Those goods and services which are less important will be, and are being, curtailed when they conflict with defense. The prospect is for automobile production to give way to tank and aircraft production. Household fixtures may give way to naval equipment, and silk stockings to parachutes.

Consumers in normal times vote with their dollars as to what will be produced, and the more or less automatic price changes control the economic decisions of the Nation's factories. In a wartime economy, a consumer may "vote" for an aluminum utensil, but he will not have his wish fulfilled, since he has already voted, through governmental processes, to use the available aluminum for bombing planes.

What, then, does he buy with the money he would otherwise have spent for the restricted articles? In the absence of controls over his total spending he attempts to purchase more of such articles as are available to him. Other consumers pursue the same course, and at the present time nearly one dollar out of every ten which cross the retailer's counter is a dollar which has been added to the money stream of the country through credit expansion—the Government has borrowed money from the banking system and injected it into the marketplace through defense spending, without at the same time taking adequate steps to reduce the money supply at other points.

The output of goods to meet this new demand can be expanded somewhat, but thus far the expansion has proved disappointing to those who predicted no difficulty in "finding expression" for consumers' desires to spend. Defense needs cover a wider field than had been realized in some quarters. When no further expansion is possible, consumers' money demand is expressed, not in more sales, but in higher prices. A sharp price rise disrupts the processes of exchange which must be performed by money even in a defense economy, slows down the defense effort, and has serious repercussions on civilian morale.

Some ground has already been lost in the effort to stop inflation. ("Inflation" will be used here to indicate a serious price rise such as that which occurred in the United States during the World War period, when the cost of living more than doubled; not to indicate an explosive movement which completely destroys the value of the currency.) The cost of living has risen 4 percent since February 1941. Wholesale prices have increased 12 percent in the last 18 months, and the Bureau of Labor Statistics index is currently rising about 1 point a week. The Bureau of Labor Statistics index of sensitive commodity prices, which foreshadows further increases in wholesale and retail prices, now stands 48 percent above the pre-war level.

Forces converging on prices

Of the various sources of new money operating to intensify the demand for goods, relative to their supply, the Federal deficit is the most important. However, emphasis on fiscal theory in recent years has tended to focus attention unduly on the deficit, to the exclusion of other powerful factors which are now beginning to operate. The omission of many of these forces from the calculations of fiscal optimists is, at least in part, responsible for our late start in attempting to control inflation.

The extent to which Federal credit is employed outside the Budget, through governmental corporations and credit agencies, has been too little recognized by the public, and this fact makes their operations especially insidious as an inflationary influence. While the Treasury has taken some steps to finance the budgetary deficit outside the banks, no such concern has been evidenced over the marketing of the obligations of Government corporations, practically all of which are exchanged for new bank credit. The Reconstruction Finance Corporation has made large commitments for plant construction, purchase of strategic materials, farm security, farm tenant, and rural electrification loans. The Commodity Credit Corporation has been granted additional authority to lend over $1,000,000,000 on farm crops, and the extent of these loans is made directly dependent on the price level by the "parity" formula. Government loan rates will rise *pari passu* with the level of nonfarm prices. Further use of credit is stimulated by Federal policies in the housing field, which have been maintained in spite of the reversal of the economic conditions under which they were

established. Substantial issues of local housing bonds, under the United States Housing Authority program, are being purchased currently by financial institutions, and Congress has recently extended and expanded the Federal Housing Administration program. None of these activities is reflected in the official Federal deficit, yet all serve to expand the money demand for commodities.

National-defense contracts have an effect on business spending long before Government funds actually leave the Treasury. For example, the Defense Contract Service of the Office of Production Management recently reported that banks in 101 cities had made defense loans and commitments of $1,100,000,000.

Apart from credit expansion, which increases the quantity of funds in circulation, the employment of funds previously held idle is a strong factor in forcing up prices. Business balances are now being used to finance plant expansion in both defense and nondefense fields, and the balances of consumers—supplemented by installment credit—are circulating more rapidly.

Liquidation of foreign assets to pay for war materials ordered in this country is also a source of upward pressure on commodity prices, insofar as the funds are obtained from idle balances or new bank loans.

The effect of these various types of Government, business, and consumer spending is indicated in the Federal Reserve Board's report that bank debits in 274 reporting centers for the 3 months ending July 31, 1941, were 24 percent above the volume of the corresponding 1940 period. A part of the increase corresponds with increases in employment and production. The remainder was permitted, through the hesitancy of the Government to apply adequate controls, to be reflected in the price rises already noted.

The requirements of "all-out" defense

Although the Federal deficit was only one of the stimulative elements in the economy during the last year, the defense spending outlined for the coming months will place the Federal Budget in a dominant position. The manner in which Federal finances are managed will determine the functioning of production and trade, the distribution of income, and the success of the defense program itself.

During the fiscal year ended June 30, 1941, Federal expenditures exceeded revenues by $5,200,000,000. Of the total expenditures of $13,100,000,000, national defense accounted for $6,000,000,000 and nondefense expenditures for $7,100,000,000. Regular sources of income provided $7,300,000,000, and $600,000,000 was obtained from surplus funds of Government corporations—a nonrecurring item.

The first Revenue Act of 1940 contained special tax levies to be earmarked for defense, but the unfortunate fact has been that the proceeds of both the First and Second Revenue Acts of 1940 have not sufficed, thus far, to cover the ordinary Federal expenditures apart from the emergency defense program. Revenues in the fiscal year recently closed exceeded nondefense expenditures by the slight margin of $200,000,000, exclusive of capital funds returned to the Treasury. Assuming that the national-defense outlay of $1,500,000,000 in the fiscal year 1940 represents the preemergency cost of defense, the revenues of 1941 failed to cover the "ordinary" expenditures by $1,300,000,000. Even if capital funds returned are counted as revenues—which may perhaps be justified for the year in which they are realized—the 1941 deficit in the nonemergency budget stands at $700,000,000. It is therefore correct to say that only after a year of intensive defense preparation have we come at last to a consideration of how and where to get the money to meet the extraordinary costs.

The rate of defense spending will increase sharply during the fiscal year 1942. The Bureau of the Budget has revised its January estimate of $10,800,000,000 upward to $15,500,000,000, and the Office of Production Management has estimated that approximately $24,000,000,000 would be spent on the basis of an all-out effort. Even on the basis of the Budget Bureau's figure, total Federal expenditures would be $22,200,000,000. With revenues from existing taxes now estimated at $9,400,000,000, the deficit to be covered by new taxes and by borrowing is $12,800,000,000.

The rate of expenditures, and therefore the financial problem, may be increased still further by the demands of new appropriations and more speedy letting of contracts. Defense production will require an enormous diversion of machinery and labor from peacetime pursuits in any case, but the lack of a comprehensive plan of defense and of an integrated defense administration means there will be an intense competition among those in the Goverment who think that naval ships, or merchant ships, or aircraft, or other things are most essential. The result of

this may be an undue increase in prices and costs. Additional defense appropriations should be viewed in the light of industrial experience in meeting the requirements of earlier appropriations. As recently expressed by the New York Times:

"Congress has been in the habit of passing these defense appropriations not only without real debate but even without that sort of careful examination which makes clear to the country the purpose for which the money is being spent, and which makes sure that the funds are going for the right things and not for wrong things. * * * It may only cause needless concern about the Budget, while not speeding up but rather retarding our real defense effort, to keep piling up new appropriations without constantly reviewing old ones. The defense program can get in its own way unless it is subject to a constant over-all supervision and to its own internal system of intelligent priorities as worked out by a general War Planning Board."[1]

It is not generally appreciated, as yet, that the "all out" defense program, when it eventually hits its full stride, will require a substantial part of our total current production. The critical situation already in evidence with respect to certain materials will spread over a much wider area. Some products will be wholly withdrawn from the civilian market. The supply of others will be drastically reduced. The underlying theory of priority control is the curtailment of private use.

The standard of living must be correspondingly lowered. We face a situation which to some may appear paradoxical; a rising "national income" and a lowered standard of living. But the standard of living depends upon the quantity of goods available for consumption rather than upon the flow of purchasing power which goes to make up the aggregate of national income expresses in money terms. Leon Henderson, who until recently held an optimistic view of the Nation's ability to expand production without curtailing consumer purchasing power, on July 14 warned against "a spurious prosperity based on production of goods that we can't wear, or eat, or live in." Wages and profits received for the production of armaments cannot be spent by individuals for the product of their own labors. Only the Government can pay for armaments, through the commandeering of purchasing power equivalent to the value of the goods it must commandeer for defense.

The automobile program for 1942 has already been cut by 20 percent, or 1,000,000 units. At an average value of $800 per unit, this priority step releases $800,000,000 in consumer purchasing power. An equivalent amount of money should be transferred to the Government by taxation at the same time that automobile labor and plant resources are transferred to defense work. If this is not done, the flood of purchasing power pressing against the prices of living necessities will overwhelm those who have been unable to get their own incomes on higher grounds.

It is clear therefore, that sacrifices must be made by the present body of consumers, to the extent necessary for defense. The choice lies between bearing the burden through orderly taxation, or bearing it through the disorders of a price inflation. A decision to pay as we go through an evenly distributed system of tax levies is much to be preferred to the erratic penalties of a drastic price rise.

In an inflationary period a few persons are in a position to ride the crest of a speculative wave, others are barely able to keep their heads above water, and many are submerged under a rising tide of prices. Taxation reduces speculative activity by siphoning off the purchasing power which serves to raise prices. (Strictly speaking, the problem is to reduce the number of dollars in the market place, not to reduce "purchasing power." Purchasing power—the ability to buy things—will be reduced by inflation if it is not reduced by taxation.) There is little question but what a substantial part of the rise in the cost of living which has already occurred would have been prevented by an adequate tax program.

The dislocations of the post-armament period will be held to a minimum only if financial management during the armament period has been competent. Donald M. Nelson, Director of Purchases for the Office of Production Management, recently said:

"I see all the elements working up for a runaway price situation and my one hope is that we are going to be smart enough and energetic enough to head it off. I doubt very much whether even as great a country as ours can stand two great deflations in one lifetime without bringing about fundamental changes in its form of government and its economic system."

---

[1] New York Times, July 15, 1941. Cf. The National Economy League, Defense Planning: A National Need, Dec. 23, 1940.

Price fixing not sufficient

Price controls and taxation are not to be considered entirely as alternative weapons in the fight on inflation. Both are needed. Even though purchasing power were not increased by loan financing, some prices would be affected by extraordinary demands or short supplies, including rents in some areas, and control over these, by governmental authority if necessary, is desirable. But the control of strategic prices is a far simpler task than the control of all prices. The World War experience proved that purchasing power prevented from being used at one point soon found its way to other points in the system, forcing up prices there, just as a toy balloon which is depressed at one point will be further inflated at others. Commenting on the experience of the War Industries Board in his book, Taking the Profits Out of War, Mr. Bernard Baruch has said, "Individual price fixing can never stop inflation." Consequently, Mr. Baruch recommends a "price ceiling" plan to fix maximum levels for all prices, subject to revision with Government approval.

The price-control bill introduced in Congress on August 1 would provide legal authority for carrying out the price-ceiling plan. While first operations would be restricted to specific commodities, the possibility of extending control over commodities in general was admitted by Mr. Henderson in testimony August 6. The effectiveness of the measure is severely hampered by the absurdly high levels set for farm commodities (110 percent of "parity," or the price on July 29, 1941, whichever is higher). Another possible source of failure is the omission of legal authority to control wages. While prices in most cases are pulled up by the increased money demand of consumers, rather than being pushed up by wage increases, the attempt to control prices will be extremely difficult so long as both of these conditions prevail: (1) The money demand for commodities is not reduced, and (2) wages are left free to rise. If purchasing power is reduced by adequate taxation, it may not be necessary to apply wage controls generally.

The inevitable ramifications of the price-ceiling plan have not been adequately appreciated. When there is a shortage of real supplies and a surplus of nominal purchasing power at prevailing prices, the temptation is strong to engage in transactions at prices above the ceiling. In order to maintain the ceilings on every commodity and every service, the Government would require a police force of tremendous proportions, and would have to be prepared to enforce drastic penalties to prevent bootlegging in scarce commodities. To extend this process over the whole economy would be to adopt the totalitarian way of solving economic problems.

No form of compulsion that can be exercised in a democracy will be capable of preventing inflation as long as the Government continues to add to the public's supply of liquid funds through defense spending, and fails to withdraw an adequate amount in taxes.

Defense bonds a partial remedy

Insofar as borrowing is necessary, the sale of bonds to the public and to savings institutions is a much safer procedure than the sale of bonds to commercial banks. The defense-bond campaign, by taking dollars that would otherwise be spent, absorbs income, while bank financing creates dollar income. The most optimistic estimates of defense-bond sales, however, fall far short of the prospective deficit for the fiscal year 1942. The failure to economize in nonessential spending is one factor discouraging the sale of defense bonds. The amount that would have to be borrowed from the banking system, on the basis of the present outlook, is of a magnitude carrying immediate inflationary dangers.

Recognizing the limits to voluntary purchase of defense bonds, some students of the problem have urged the Government to inaugurate a system of forced savings. By this method, a portion of the people's income would be forcibly taken by the Government to pay for the goods which have been taken for armament. The immediate result, as far as inflation is concerned, would be the same as if the income had been taken by taxation. Both methods involve compulsion, and when compulsion has to be used, there is little reason to prefer borrowing over taxation.

Future burden of debt

Up to this point consideration has been given to the task of controlling inflation during the armament period. The financial program should also be viewed in terms of debt increase.

The defensive arming of a nation should proceed on a pay-as-we-go basis, President Roosevelt said on December 5, 1938. Armament, he added, was not a self-liquidating program. However, the current official attitude on defense financing and the long-range debt problem is expressed by a statement in the Budget message of January 3, 1941, that "the main fiscal problem is not the rise of the debt, but the rise of debt charges in relation to the development of our resources."

The real burden of the debt is not to be judged in such boom years as the defense spending may produce, but in the worst years that may lie ahead of us. We do not measure the debt-carrying capacity of a private business by the ratio of debt charges to earnings in its best years, but by that ratio in the leanest years of the business. We have excellent prospects of being burdened with a debt of $90,000,000,000, as Secretary of Commerce Jesse H. Jones has predicted, or of $100,000,000,000, or more. Interest on a debt of $100,000,000,000 would cost $2,500,000,000 to $3,000,000,000 annually, and it should be borne in mind that this cost will be added to an enormous post-defense budget, which will include not less than $5,000,000,000, and possibly as much as $6,000,000,000, as the annual cost of maintaining the new Army and Navy. The interest burden and the ultimate cost of repaying the debt will be with us whether present borrowing is done through banks or through the savings bonds campaign. We have paid $15,000,000,000 in interest on the World War debt, and more than half of that debt remains unpaid.

There are some who say that a public debt, internally held, involves no burden on the Nation. While this idea is not new—in 1826 Sir Robert Peel, the elder, said, "The public debt is due from ourselves to ourselves"—it has gained currency in recent years with attempts to rationalize deficit spending. It is technically true that an internal debt merely involves a transfer of payments from some citizens to other citizens, but to say that this transfer involves no burden is to assume that each taxpayer owns bonds in proportion to his tax liability. Since only a relatively few persons can afford to own bonds of any sort, this condition obviously is not met. The taxpaying and bondholding groups are by no means identical.

It is shortsighted in the extreme to believe that the burden of the present defense effort can be transferred to succeeding generations. The burden will be borne now, either by taxpayers or by victims of inflation. Interest and debt repayment in the future will constitute a second burden on those who will have to pay taxes to meet the service on bonds owned by others. In general, the people who will be in that position will be the children of the present victims of inflation. That is why it would be a fiscal kindness to levy sufficient taxes to pay the defense cost as we go along, even though that would require seemingly high taxes on low-income groups.

The fallacy in the belief that borrowing postpones the defense burden may be further explained as follows:

"A payment involves two parties. If the next generation is to pay this bill, to whom shall it make payment? The answer is clear: the less fortunate of the next generation will pay to the more fortunate of the same generation. Looking forward to a better society for coming generations—and this we claim is at least in part our present purpose in defense—is it good social policy to plan deliberately that because of our present defense efforts some of our children shall be in a position to command the services of others of our children?"[1]

We started our defense effort with a public debt of $43,000,000,000, now increased to $50,000,000,000. We have already used up the cream of our credit resources. It is not now a question of a first mortgage on our future resources, but of second and third mortgages. Accumulation of a huge debt would be a national disaster that could not be compensated by any number of military or naval victories. On this basis, no financing plan can be adequate or acceptable which does not aim at a cash-basis defense, or which, failing of that objective, yet comes close enough to it to keep debt increase at a minimum.

The case for taxation summarized

Heavier taxation during the course of the defense effort means, in the long run, economy in Federal expenditures. This assertion may be supported on four significant grounds:

[1] Rainard B. Robbins, Defense Bills Payable, in the Watch Dog, the National Economy League, March 1941.

(1) By drawing off purchasing power, taxation will check price increases and prevent the cost of armaments from soaring. During the World War inflationary fiscal methods added billions to the cost of war supplies.

(2) Avoidance of inflation now will make easier the task of returning to a peacetime economy. The deflation will be less severe; consequently, there will be less need for public works and other depression-relief expenditures.

(3) To the extent that debt increase is avoided, interest costs will be saved. Public revenues required to pay interest are not available for other social services.

(4) Direct taxes will make people conscious of the cost of government and insistent on avoidance of waste in the programs which their taxes support.

Without adequate taxation, price control in the present and debt control in the future will require comprehensive and universal controls involving great loss of freedom for individuals. Taxation will make these types of bureaucratic controls unnecessary. Taxation is the way to preserve democracy. The rise of a huge debt, with autocratic controls over individual choices and actions, leads to the authoritarian state and the loss of civil liberties.

THE PENDING TAX MEASURE

The tax bill now under consideration in Congress was based on Secretary of the Treasury Morgenthau's statement that he believed it would be good policy to finance two-thirds of the total Budget by taxation and one-third by borrowing.

The official Budget for 1942, presented in January, called for total expenditures of $17,500,000,000. When the Ways and Means Committee began hearings on the tax bill in April, expenditures were estimated at $19,000,000,000, and the ratio suggested by Mr. Morgenthau required new revenues of $3,500,000,000. On June 1 the Bureau of the Budget announced a revised Budget totaling $22,200,000,000, which would require a further increase of $2,000,000,000 in taxes according to the Morgenthau formula, but on the following day the Secretary said there would be no change in the tax program. "If the Budget Bureau is right, and my guess is that their guess is pretty good, we shall have to borrow more." On July 17, however, the Secretary said that in spite of the new Budget figures and subsequent requests for additional defense appropriations, he would stick to his original $19,000,000,000 estimate, adding that he hoped he was wrong and that more could be spent.

Out of this confusing array of predictions, it is manifestly impossible to judge whether the present $3,500,000,000 tax program will fulfill Mr. Morgenthau's hope of meeting two-thirds of the expenditures from taxes. The probabilities are that the revenues will fall short of this goal, perhaps by several billions. In any case, there is no necessary virtue in the 2-3 formula. At the present rate of spending, bearing in mind the extra-budgetary operations of governmental corporations, a failure to cover more than two-thirds of the Budget by taxes is an invitation to inflation.

Although the most vulnerable aspect of the present financial program is that it proposes to borrow too much, the Ways and Means Committee found that it had to bring in virtually all of the conventional types of taxes in order to raise even the $3,500,000,000 set as a goal at the beginning of its deliberations.[3]

In broad outline the measure would increase tax revenues approximately as follows:

Corporation income and excess-profits taxes	$1,322,000,000
Individual-income taxes	1,152,000,000
Estate and gift taxes	151,900,000
Miscellaneous and excise taxes	902,400,000
Total increases	3,529,200,000

As this outline reveals, the proposal is only the first World War tax system with the dust brushed off. Excessive reliance on conventional taxes prevented the consideration of methods that would be more effective. But if we limit taxation today to the methods used in the first World War, we shall be making as great a mistake as it would be to send General Pershing's 1918 army, equipped as it was then, into the field against Hitler's 1941 mechanized divisions.

[3] After the Ways and Means Committee had reported the bill, the House eliminated the provision requiring joint income-tax returns from husband and wife, thus reducing the revenue total to $3,200,000,000. However, since the final total remains in doubt at this writing, the original goal of $3,500,000,000 is used throughout this paper in references to the bill. This figure refers to a full year's operation; the actual yield in the fiscal year 1942 will be somewhat smaller.

As an anti-inflation measure the pending bill is both inadequate as to total amount and poorly distributed in its impact on different segments of the national income. With exemptions unchanged from present law, the individual-income tax will require payments from only about 15 percent of income recipients. Since corporation stocks are owned in greatest part by persons earning more than $2,000 a year (the income-tax exemption for a married couple with no dependents), the corporation-income and excess-profits taxes will fall largely on the same group. Estate and gift taxes similarly will affect only a very small percent of the population. The excise, or selective sales, taxes will affect the pocketbooks of nearly every family in some degree, but will draw from the income stream less than $1,000,000,000 a year.

In the aggregate, approximately one-sixth of income earners and not more than one-half of the national income will be taxed directly under the Ways and Means Committee program. An inordinately large proportion of the vast reservoir of purchasing power created by the defense boom will not be reached at all through direct taxes, and only to a relatively slight extent through indirect taxes.

Another serious fault of the pending bill as a check on inflation is the lapse of time between the receipt of income and the date when taxes must be paid. This has long been recognized as a shortcoming of the traditional income tax (both individual and corporation) as an instrument of fiscal control. For example, the Annual Report of the Secretary of the Treasury for 1939 says, "The lag between the time income is received by the taxpayers and the time of receipt of income taxes based upon such incomes is particularly important in its effect upon total tax receipts in any given year." The new provision for tax-anticipation warrants, to allow advance payment of taxes as income is earned, is a step in the right direction. However, it is likely that only relatively large taxpayers will invest in these warrants. Small-income taxpayers, granted the doubtful premise that they might have the inclination and foresight to pay taxes in advance, seldom have the facilities for safekeeping of securities of this type. Many taxpayers will undoubtedly continue to exercise the privilege of paying taxes quarterly in the year following the receipt of income. Thus, it will be possible for a taxpayer, using tax-anticipation warrants in part, to spread his payments over a 2-year period. Under these conditions there can be no assurance that income taxes will be effective in drawing off purchasing power at the time when such action is imperative from the point of view of preventing inflation.

Many of the excise taxes proposed by the House bill are of the "nuisance," "chicken-feed" variety, which cause a large degree of popular irritation in proportion to their revenue yields. Moreover, the administrative burden which these taxes will place upon the collections divisions of the Bureau of Internal Revenue will be excessive in many cases. A mere listing of the commodities and services to be taxed indicates the difficulties involved. In addition to increases in rates on commodities already taxed, the bill provides levies on the following: Passenger transportation, telephone bills, jewelry, clocks, watches, radio broadcasting, photographic apparatus, sporting goods, luggage, phonographs and records, musical instruments, bowling alleys, billiard establishments, slot machines, pinball machines, optical instruments, furs, soft drinks, and the use of automobiles, yachts, and private airplanes.

Cost of collection of several of these taxes will probably equal the revenue obtained. In 1938, Congress repealed excise taxes on furs, sporting goods, phonograph records, cameras, and certain toilet preparations after the Ways and Means Committee had found that some were difficult to administer and others produced little or no revenue in excess of collection costs. In spite of this record, the present Ways and Means Committee has included most of these products in its proposed bill.

Among the increases in existing rates is a jump to $4 a proof-gallon on distilled spirits, compared with $3 under the present law and $2.25 prior to the Revenue Act of 1940. Compared with the rate 2 years ago, the proposed tax would add $1.75 a gallon to the profit margin of bootleggers, whose operations were already astoundingly high. Competent authorities doubt whether an increase in liquor rates is advisable in view of the probable shift of trade from taxpaying, legitimate dealers to bootleggers. It is certain that enforcement of the new rates would involve a large increase in the staff and the expenditure of the Alcoholic Tax Unit.

One declared purpose of the excise taxes is to cut down consumption of goods, the production of which competes with defense. While it is true that a tax, added in large part to the price, will discourage consumption (and hence to

some extent defeat the revenue purpose), the argument that such a course aids the defense program is particularly weak. Production of goods which make demands on the heavy industries will be reduced by decree. Once that is accomplished, there is little to be gained by raising the prices of goods which remain to consumers. Available goods would go to those consumers with the longest purse, and less fortunate consumers would have to "do without" in effect defeating one of the primary purposes of the Federal price-control program. In any event, the manipulation of particular excise tax rates could never be effectual in synchronizing the reduction of consumer goods with the requirements of defense. Since many of the excise taxes have been levied on goods and services which do not compete with defense, the result will be a distortion of relative prices and a partial veto of consumers' desires, without any corresponding advantage for the defense program. Excise taxes will prove a poor weapon for directing production into desired channels, as long as consumers' total purchasing power is not reduced by adequate, universal taxation.

Taxes on specific products are a source of bickering in Congress, since Members representing different States in which certain taxed commodities are important form blocks to bargain and trade and sometimes to inflict damage on other areas.

THE NEED FOR UNIVERSAL TAXATION

It has already been indicated that the aim of a defense-tax program should be cash financing—pay as you go—or as near an approach to it as possible. Before examining methods of achieving this goal, it will be well to review the prospective income and outgo totals, and the deficiency which may be expected under the present program.

Assuming that the Budget Bureau's estimate of expenditures for the year ending June 30, 1942, is an acceptable medium estimate, we have a total of $15,500,000,000 for defense and $6,700,000,000 for nondefense expenditures, or a total budget of $22,200,000,000. From the standpoint of inflationary fiscal operations, the net outgo of borrowed funds under the auspices of governmental corporations and credit agencies should also be taken into account. Probably not less than $3,000,000,000 will be added to the stream of purchasing power through these operations.[4] The total of Federal outgo, all of which should be financed by noninflationary methods, may therefore be placed at approximately $25,000,000,000.

On the income side the present tax structure will yield $9,400,000,000, according to the revised Budget of June 1. The revenue bill now under consideration is estimated to yield $3,500,000,000, making a total of $12,900,000,000 in tax revenues. The budgetary deficit would be approximately $9,000,000,000, and borrowing outside the Budget would raise this figure to $12,000,000,000.

Not all of the necessary borrowing will have an inflationary effect. Defense bonds and stamps, purchased out of income, will merely transfer purchasing power to the Government. However, not more than $4,000,000,000 may be expected from this source on the basis of the present outlook. In addition, Government trust funds, such as social-security reserves and retirement funds, will absorb approximately $1,500,000,000. After taking account of these offsets, the portion of Federal expenditures and loans having an inflationary stimulus may be placed at $6,500,000,000. Thus, the goal of a new tax measure should be $10,000,000,000 instead of the $3,500,000,000 now under consideration.

Expansion of business and consumer spending will have a further stimulative effect, but the reduction of activity in nondefense industries through the priorities program may prove depressive in some areas. No estimate of the net change in private spending is possible, but it should be noted that a strong upturn in nongovernmental spending may require an even greater increase in taxation, if inflation is to be prevented.

The proper fiscal policy under these circumstances was well stated in the unanimous report of Federal Reserve officials on January 1:

"Whatever the point may be at which the Budget should be balanced, there cannot be any question that whenever the country approaches a condition of full utilization of its economic capacity, with appropriate consideration of both employment and production, the Budget should be balanced. This will be essential if monetary responsibility is to be discharged effectively."

[4] This is not a precise calculation but only a rough addition of prospective loans from Reconstruction Finance Corporation funds (defense plants, British loan, rural electrification, farm security, farm tenants, etc.); Commodity Credit Corporation, farm-crop loans; Export-Import Bank and stabilization fund, international loans, largely for expenditures in this country; and housing loans under Federal auspices.

That it is possible as well as desirable to finance the armament expenditures on a pay-as-you-go basis has been stated succinctly by Harold G. Moulton: "The answer to the question whether the defense program can be financed without a great increase in the public debt is 'yes.'"[5]

According to the above analysis, the gap in Federal finances which must be closed in order to prevent inflation is $10,000,000,000. (From the standpoint of preventing an increase in the public debt, the requirement is even greater.) It may be confidently expected that before taxes of this magnitude are imposed, the public will demand all possible economies in nondefense expenditures.

The program of the National Economy League calls for savings of $1,600,000,000, the details of which follow:[6]

[In millions of dollars]

	Federal Budget	National Economy League proposals	Savings
General Government	997	897	100
General public works program	503	240	263
Work relief	1,034	555	479
National Youth Administration and Civilian Conservation Corps, nondefense	363	162	201
Aids to agriculture (except Department of Agriculture)	1,062	500	562
Social security	462	430	32
Veterans' aids	565	550	15
Other nondefense	1,689	1,689	None
Total	6,675	5,023	1,652

After deducting this amount from the expenditure side, the need remains for approximately $8,500,000,000 in additional revenues. The length of time required for the Ways and Means Committee to formulate the present $3,500,000,000 measure is adequate proof that traditional taxes are inadequate for the task. What is needed is some form of universal taxation, convenient to the taxpayer, which will yield a large amount of revenue without an inordinate cost of collection.

The three possible means of reaching a large share of the national income are (1) "broadening the base" of the present income tax, (2) a Federal sales tax, and (3) a flat tax on all income payments, collected at the source.

Extending present income tax

The First Revenue Act of 1940 reduced personal income tax exemptions of married couples from $2,500 to $2,000 and of single persons from $1,000 to $800. While exemptions could be lowered still further, with a consequent increase in revenue from new as well as old taxpayers, the cost of collection increases rapidly in proportion to the yield. The recent recommendations of the President and the Treasury for exemptions of $1,500 for married couples and $750 for single persons could probably be handled without great difficulty by the Bureau of Internal Revenue, but the additional collections would be relatively small. This change, if adopted, cannot be viewed as meeting the need for widespread and substantial taxation.

The reduction of exemptions last year approximately doubled the number of persons filing returns and necessitated a considerable increase in the staff of the collection agency. Further "broadening of the base" of the present type of tax, to a degree commensurate with the revenue need, would enormously increase the burden of collection. Persons in low-income groups are seldom able to report accurately their income for the year, or to pay a lump sum tax, when returns are required on an annual basis. The conventional form of income tax is complicated at best, and it would be difficult to educate the smaller taxpayers to the task of filling out a return.

Exceedingly high rates in the higher brackets, in excess of those already in effect, are suggested by some as the best application of the theory, or slogan, of "ability to pay." Since persons receiving large incomes are few in number, the revenue possibilities of such taxation are distinctly limited. Disregarding

[5] Fundamental Economic Issues in National Defense, The Brookings Institution, Jan. 13, 1941, p. 16.

[6] Cf. W. D. Arant, Nondefense Economies, the National Economy League, May 27, 1941.

the fact that excessive taxation will soon convince people that a high income is not worth the effort and risk to attain it, complete confiscation of all incomes in excess of $10,000, would yield the Government only $2,300,000,000 additional revenue, and complete confiscation of all incomes in excess of $3,000 would increase revenues by only $6,500,000,000.[7]

The sales tax

A Federal sales tax has possibilities for a substantial increase in revenues, the yield would be stable, and the payments would be made at approximately the same time that income is received. Moreover, a sales tax would effectively reach those whom it would be most difficult to reach by any other form of taxation.

John L. Sullivan, Assistant Secretary of the Treasury, told the Ways and Means Committee that the sales tax had been considered and rejected in favor of the higher excise taxes. One objection to it, he said, was that it would fall "more heavily on the lowest income groups." While there is some force in this contention, it certainly would not fall more heavily on the lowest income groups than the burden of an inflated cost of living. If we were building a tax system anew, there would be much weight to the argument that a sales tax is inequitable, but when the existing tax system as a whole is progressive, and steeply so in the higher brackets, there is less reason to fear this consequence. Many of the objections to a sales tax apply equally to the excise taxes included in the pending bill.

The principal objection to a Federal sales tax is that the base would be much smaller than the total income received by individuals. The tax would apply only to that portion of incomes spent on retail sales (or manufacturers' sales, as the case may be) and would not reach the portions of income not so spent. In 1939 national income was $68,000,000,000 but retail sales totaled only $42,000,000,000. Of this amount, $10,000,000,000 represented food purchases, which presumably would be exempt from tax. The Treasury has estimated that a manufacturers' sales tax, along the lines proposed in Congress in 1932, at a rate of 2¼ percent, would yield approximately $50,000,000. Assuming that retail sails in 1942 reach a total of $50,000,000,000, and that no exemptions were allowed, the revenue goal of $8,500,000,000 would require a sales tax rate of approximately 17 percent at retail. If the pending tax bill be accepted, and the sales tax relied upon for the additional $5,000,000,000 required to control inflation, the necessary rate would still be a magnitude of 10 percent at retail. Since exemptions would probably be granted on such items as food, fuel, medicines, and articles already subject to excises, the necessary rate would be much higher.

Rates of this sort would cause price distortions and economic dislocation, which could be largely avoided by a universal tax upon income.

Universal income tax

A substantial tax on all income paid out to individuals, collected at the source at the time payment is made, meets most of the objections to a sales tax or to a net income tax collected annually. The concept of the tax is exceedingly simple. Possibly this is an obstacle to its adoption, when tax administrators and legislators have become used to the complexities of the conventional tax system.

Following the first proposal of this tax,[8] it has sometimes been misinterpreted as a tax solely on wages, and has been condemned, therefore, as discriminatory. Actually, the plan calls for tax deductions on all payments of income of whatever sort: wages, salaries, other personal earnings, interest, dividends, royalties, rents, and entrepreneurial withdrawals. Thus, it would apply to the entire amount of national income paid out to individuals—a much broader base than that to which a sales tax would apply.

Collections would be made currently as income is paid; weekly in the case of wages, quarterly in the case of dividends and interest, and so on. This method of collection would have distinct advantages both for the Treasury and for the taxpayer. Revenue would flow into the Treasury at a steady rate throughout

---

[7] W. L. Crum, The Maximum Possible Yield of Ability Taxation, in the Watch Dog, the National Economy League, March 1941, p. 7. The estimates are based on income-tax returns for 1937.

[8] Cf. H. L. Lutz, Financing the Defense Program, the National Economy League, February 1941.

the year; there would be no lag as in the case of the regular income tax. This is an important consideration in devising tax measures to control inflation.

From the standpoint of the taxpayer, the tax burden which the defense program makes necessary can be borne with much less discomfort when payments can be spread over the year. Very few persons in the low-income groups have the facilities for accumulating a tax reserve. None of them can pay an annual tax under the present system without great hardship. Under the collection-at-source plan, the tax would be paid in small installments, just like the rent and grocery bills. Anyone can endure a heavier tax, if collected at the source, than can be endured if payment must be made in a few large installments long after the income on which the levy has been made has been spent. The Treasury plan for the tax anticipation warrants is an admission of this fact. The English are now subject to a standard income-tax rate of 50 percent. They can endure such a rate only because of widespread collection at the source.

This method of collection has had a successful trial in this country through the social-security system, and in Canada under a special national-defense tax collected at the source. The Canadian administration takes much of the bookkeeping burden off the hands of business enterprises by calculating the tax from pay-roll records and rendering a bill. The business firm merely furnishes the pay-roll data and is relieved of the duty of computing the tax.

No exemptions were provided in the original exposition of this plan. It was believed that the administrative difficulties of allowing exemptions, when the tax is collected weekly, monthly, or quarterly would be prohibitive, and moreover, it is doubtful whether an adequate amount of revenue to finance the defense program can be obtained without imposing a uniform tax upon the whole national income.

In this connection, it should be noted that social-security taxes are levied on the total earnings of the individual. No personal exemptions or credits for dependents are allowed. It is true that the social-security system involves both contributions and benefits, but the individual's contribution is nevertheless a tax in every sense of the word, and benefits are established with reference to other factors than the amount contributed. In the realm of semipublic finance, the trade union check-off of dues is a perfect example of a tax collected at the source without reference to the status of the individual or his dependents.

It may be necessary to remove the income-tax exemptions entirely and to collect taxes from everyone. Representative Doughton, chairman of the House Ways and Means Committee, declared on July 28, "If it should prove impossible to obtain congressional approval for this step, some exemptions might be allowed, in the manner provided by the Canadian national-defense tax. However, the rate that would have to be levied on the remainder of the national income, in order to meet revenue requirements, would be correspondingly increased."

A rate of 10 percent was originally suggested as a reasonable approximation of the diversion of income necessary to parallel the diversion of goods to military uses. With expansion of the defense program in recent months, a higher rate would be necessary to put the program completely on a cash basis. However, according to the analysis given above (allowing for income-absorbing borrowing) a rate of 10 percent would come close to reaching the antiinflation goal of $8,500,000,000 in additional taxes. This assumes economies in nondefense expenditures. The new tax would reduce the yields of existing taxes by approximately 10 percent (somewhat more in the higher brackets of the income tax). Assuming that the national income paid to individuals reaches a total of $90,000,000,000, the proposed tax may be expected to yield approximately $8,000,000,000.

State tax revenues would also be reduced to some extent, but such an effect would follow from the imposition of any new tax. As a matter of policy, there can be little objection to this result, when the Federal Government is burdened with defense, and when the defense boom would otherwise tend to increase State revenues.

Two principal objections must be considered:

First, it is held that the burden would be too great on the low-income groups. This objection is stated, for example, in the following excerpt from an editorial on the original publication of this proposal:

"Take the wage earner with wife and children, earning $2,000 a year and now exempt from income taxes. His present budget has no room for a $200 tax bill."

Although superficially reasonable, this statement shows a complete lack of appreciation of the functioning of a wartime economy. Whether a person's

budget, judged by peacetime standards, has room for the burden of defense or not, that burden is here and will be met. If the individual referred to does not pay his share of the cost in the form of a $200 tax bill (which should be spread over 52 pay days), he will pay it in small amounts when his wife goes shopping to find that prices have risen. If he is among those who cannot increase his income, he may pay much more than $200 a year. During the World War period, the cost of living more than doubled. In 1920 it took $2.07 to purchase what $1 would have purchased in 1914. A serious price inflation would be a far greater burden than the proposed tax, and when prices rise rapidly, low-income groups are most severely pinched. The tax would not increase the burden, it would merely distribute it more equitably. Since all existing taxes would be retained, the tax system as a whole would remain progressive.

The second objection is that collection will be difficult in the case of farmers, the professional groups, and other self-employed persons. In 1940 individuals in these groups received about 20 percent of the national income. Since many of them are required to file returns under the existing income-tax law, which provide an informational check on gross personal incomes, the percentage involving an administrative problem is actually much smaller. It is true that collection at the source cannot be used in these cases, and that a system of individual returns will be necessary.

So far as farmers are concerned, the agricultural program over the past 8 years has brought about a great improvement in the keeping of farm accounts, and county agricultural officials have recently undertaken to advise farmers with respect to their income-tax returns under the lower exemptions of last year. This aid could easily be extended, perhaps, with the cooperation of the newly established county defense committees for agriculture. Certainly the Federal Government could deduct the tax at the source with respect to Federal benefit payments. That farmers are willing to follow a pay-as-you-go tax policy is indicated by the following sentence included in the "Statement of policy of the farm conference on the national emergency," held in Chicago, June 5, 1941, representing the National Grange, the National Council of Farmer Cooperatives, and the American Farm Bureau Federation:

"In order to prevent dangerous inflation and an undue accumulation of debts as a result of the enormous expenditures for national defense, we urge that, insofar as practicable, the costs of the defense program be paid from current income."

The collection of the proposed tax from self-employed individuals is not an insuperable obstacle. On the whole, the simplicity, the timing, and the convenience of the tax will make it more efficient than any other tax, or set of taxes, that could raise a comparable amount of revenue.

SUMMARY AND CONCLUSION

The financial requirements of the defense program impose upon the country three alternatives, (1) inflation, (2) complete price control, or (3) drastic taxation.

Inflation is the worst consequence to be feared; worse even than unemployment—it would in fact increase unemployment in the long run.

Price control is necessary in limited fields. But to extend it over the whole economic structure as a substitute for sound financial policy is to adopt totalitarian methods. No authority that a democratic government can enforce will succeed in keeping prices down as long as the public has at its disposal an increasing quantity of purchasing power.

Taxation on a scale commensurate, or nearly so, with the level of expenditures is necessary both to prevent inflation now and a crushing debt load in future years. When account is taken of governmental outlays through extra-budgetary corporations, the amount of taxation required to prevent inflation is of the magnitude of $10,000,000,000. Reductions in nondefense expenditures could reduce this figure to $8,500,000,000.

The most effective, if not the only, form of taxation that will divert this sum of money to the Government is a universal, special defense tax on all income paid out to individuals, collected currently at the source. A substantial rate is necessary; 10 percent has been recommended. While this is drastic, it is not greater than the economic burden which defense imposes upon us in any case.

THE NATIONAL ECONOMY LEAGUE

A nonprofit organization founded and incorporated in May 1932, to revive the American principle of representative government for the common good, and particularly to secure the elimination of wasteful or unjustifiable Federal expenditures.

The league's present objectives are:

1. To record the facts and arguments for sound Federal finance and distribute to the widest extent within its means "fact-studies" on Government fiscal policies.

2. To reveal raids on the Federal Treasury by self-seeking minorities and pressure groups.

3. To push for a balanced Federal Budget—the only way now to avoid the complete collapse of our national credit, our system of free government, and loss of our civil liberties.

All publications of the league are distributed without charge and are sent to all Members of the Congress. Additional copies of this pamphlet may be obtained upon request. Since such distribution is made possible by voluntary gifts, individual contributions will aid materially in wider circulation and a broader, more effective, educational program, as well as make possible special research projects for which funds are not now available. A convenient form is enclosed for your use.

The National Economy League officers: Ernest Angell, chairman; Duncan M. Spencer, treasurer; Graham D. Mattison, secretary; Harley L. Lutz, consulting economist, H. G. W. Sundelof, executive director; Willard D. Arant, research director.

Executive directors: Copley Amory, Jr., Ernest Angell, Robert O. Bonnell, Ellsworth Bunker, Edwin F. Chinlund, Joseph H. Choate, Jr., Grenville Clark, Allen W. Dulles, A. Crawford Greene, Robert Hale, E. Roland Harriman, Henry R. Hayes, Carl T. Keller, Graham D. Mattison, W. W. Montgomery, Jr., George W. Naumburg, H. Irving Pratt, Jr., Lucius F. Robinson, Jr., Frederick Sheffield, Roger B. Shepard, Paul Shoup, Duncan M. Spencer, E. B. Starbuck, Ray Lyman Wilbur, Westmore Willcox, Jr., Lucius Wilmerding, Mark Wiseman.

The CHAIRMAN. Are there any questions from any member of the committee?

(No response.)

The CHAIRMAN. Thank you very much, Dr. Lutz, for your appearance.

Dr. LUTZ. Thank you, Mr. Chairman.

The CHAIRMAN. Senator Bunker.

STATEMENT OF HON. BERKELEY L. BUNKER, UNITED STATES SENATOR FROM THE STATE OF NEVADA

Senator BUNKER. Mr. Chairman, I wish to speak on the subject of mandatory joint income-tax returns. I would like at this time to urge that the action of the House of Representatives be sustained insofar as that body voted to omit a mandatory joint income-tax return provision from the revenue bill of 1941.

One of the oldest and soundest of the laws of Nevada, and of other States with a Spanish heritage, is that which recognizes a married woman as a full partner of her husband, with an equal right to the fruits of their joint labor—this is opposed to the old English common law which made here his chattel and the product of her efforts, and their joint efforts, his sole property.

We in Nevada are proud of our rights under this law, in which we feel equality and social justice are the keynotes. The State of Nevada is happy and willing to assume its share of the taxation necessary to pay for the national-defense program, just as she has been willing to assume her share in every emergency which has confronted the Nation since her admission to Statehood. But she is strongly opposed to a discriminatory tax by which residents of the State would lose the right to file separate returns in keeping with her laws. Even if the revenue involved, which is estimated at some $350,000,000 were tenfold greater, it could little compensate the Government for the sacrifice of sound social principle and the loss of priceless heritage entailed.

May I respectfully call the attention of the committee to the legality of the community property law? The provision for the taxation of the combined income of husband and wife, as though it were the income of one person, violates the fifth amendment of the Constitution of the United States in that it would deprive the taxpayer of his property without due process of law. The tax contemplated by a mandatory joint income-tax return provision is a tax levied upon the husband based and computed upon the income and property of another person, his wife. This practice has been heretofore condemned by the Supreme Court in *Knowlton* v. *Moore* (178 U. S. 41) and in *Hoeper* v. *Tax Commission of Wisconsin* (248 U. S. 206). With further reference to this subject I mention *Heiner* v. *Donnan* (285 U. S. 315), in which it is settled that there is no distinction between the "due process" of the fourteenth amendment and the "due process" of the fifth amendment. I would also like to cite *Schlesinger* v. *Wisconsin* (270 U. S. 230), *United States* v. *Baltimore and O. R. Co.* (17 Wall 322, 325, 21 L. Ed. 597, 599), *Reinecke* v. *Smith* (61 F. (2d) 324, 325), *Darcy* v. *Commissioner* (66 F. (2d) 581, 585), and *Helvering* v. *City Bank Farmers Trust Co.* (296 U. S. 85).

The provision for taxing separate incomes as joint income would effect an unconstitutional usurpation of the States' power to regulate property. A requirement for the filing of joint income-tax returns in effect would state that one of the incidents of the ownership of property by a married person is that the spouse of such person shall be taxed thereon. This is an assumption of the power of the State to regulate the ownership of property, and such assumption of power is unconstitutional, under the tenth amendment, which provides that "the powers not delegated to the United States by the Constitution, nor specifically prohibited by it to the States, are reserved to the States respectively, or to the people."

The term "incomes," as used in the sixteenth amendment, never contemplated the inclusion of a wife's income in her husband's taxable income. In furtherance of this point I refer to *Eisner* v. *Macomber* (252 U. S. 189), *Blair* v. *Rosseter* (33 Fed. (2d) 286), *Noel* v. *Parrott* (15 Fed. (2d) 669, 671), and *Towne* v. *Eisner* (242 Fed. 702, affirmed 245 U. S. 418).

The theory underlying a provision making mandatory joint tax returns is that the legal rights of the separate spouses to their separate incomes are to be ignored and that the joint income is to be treated as available to meet the family obligations imposed upon the husband. This assumes a status which is contrary to the laws that exist in most of the States as well as to the experience of the average couple where both have means.

And further, by making mandatory the filing of separate incomes jointly and thus placing many couples in surtax brackets, the proposal amounts to a penalty tax on marriage. This is a definite reversal of what has always been encouraged, and for this reason higher taxes have been placed on single persons in the way of lower exemptions, and so forth. Never before has anyone thought of reversing this procedure and taxing marriage. By the Government's offering a premium to individuals who remain or become unmarried, in effect, a social problem of the first order would thus be presented.

We in Nevada are fully cognizant of the great problem confronting the Senate Finance Committee in the necessary creation of a tax bill which would bring in sufficient revenue for our defense program so vital to our national life. The committee deserves sincere commendation for its honest and diligent work in this respect.

But in facing all emergencies that come to our country we must ever bear in mind that there can be no letting down of the ideals and principles of the constitutional rights on which our Nation was founded.

May I again urge consideration of these views, which Nevada presents unanimously.

Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Senator.

There is a witness here, I understand, who wants to get away. We will call the next witness somewhat out of order.

Mr. W. J. Salmon. Do you wish to file a statement?

Mr. SALMON. Thank you very much. Could I read it? It will take me only 5 minutes.

The CHAIRMAN. Yes.

STATEMENT OF WALTER J. SALMON, NEW YORK, N. Y.

Mr. SALMON. Mr. Chairman and gentlemen of the committee, my name is Walter J. Salmon. My address is 11 West Forty-second Street, New York City.

I am fully aware of the tremendous task which faces this committee, and also of the fact that the demands upon your time are almost unlimited. I deeply appreciate the opportunity to appear. I shall take only a few minutes to present to you one problem which seems to be of particular importance just now, and to suggest a partial remedy. I know you will give it most careful consideration.

I have been actively engaged in the real-estate business in New York City for about 45 years. At the present time I am managing and operating a number of office buildings in what is called the midtown

section, in the neighborhood of Fifth Avenue and Forty-second Street. In most cases the properties are held under long-term leaseholds, which in turn are held by various corporations. I am appearing on behalf of those corporations and on my own behalf. However, I know that many other businesses and many other businessmen have a similar problem.

Many people, I think, are under the impression that the operation of a large office building in New York City is a safe and certain way to make money. You gentlemen probably know, at least by hearsay, and I know from sad experience, that this is not the case. It is unfortunate, of course, but true, that what we call the American "profit" system is in reality a "profit and loss" system. No one has yet devised any method of guaranteeing profits. I regret to say that the business in which I am engaged has proved an all too striking example of that rule.

The fact of the matter is that the properties of which I have personal knowledge have an almost unbroken record of losses for over 10 years. Up to about 1929, conditions in the business were fairly stable. It was possible to rent a fair percentage of the available space, not all of it, but enough in some cases at least, to produce a modest profit. Since the early thirties, however, the situation has been entirely different. General business, as we all know, fell off alarmingly, and that was, of course, a very important factor. A more specific factor, affecting particularly those of us who operate in the midtown section, was overbuilding. I can cite as an example which will be familiar to all of you—the Radio City development. Magnificent as that development is, I do not think it can be successfully asserted that it was economically justified, that the additional space which it provided was required in that area. Those interested in that project had, and still have, unlimited resources. Losses would not matter so much to them as they would to the rest of us, who had devoted what capital we had, and all our efforts over a long period of years, to the development and maintenance of less extensive projects.

The typical method, and usually the only available method, of financing an office building in New York has been to borrow money on the leasehold, and then repay the loan out of future profits. Where there have been losses, the operators have usually had to finance those losses themselves. That has been our situation. We have had to dig deeply to keep our enterprises going, and the only reason why we did it, the only justification for doing it, was the hope that sometime in the future there might be some profits available with which we could recoup at least a portion of our losses.

We have now come to the point where it is possible to say that some very modest profits may perhaps be made in the next few years. The improvement in general business conditions has brought that about. How much of that is due to the impetus of the defense program, and how much of it will disappear in the post-war depression, are questions on which I cannot comfortably permit myself to dwell. I can only go on the assumption that we cannot look forward to good business permanently.

The principal point I want to make before you today is that it is utterly unfair, in such a business as ours, to measure the taxes for any single year on the basis of the results of that year alone. As I have

said, we have had large losses for many years. Such profits as we may make in the next few years will not be true profits, obviously, until we have recouped our losses. If we recoup one-tenth of our losses we shall be very happy.

For businesses which are fortunate enough to show profits year after year, measuring the income of each year separately is fair enough. Few businesses are that fortunate. I can think of many, other than my own, in which it is altogether unrealistic to measure income on a year-by-year basis. For example, it usually takes a long time, and much expense, to develop a patent. If it is sold in one year, the income does not really all belong in that year. The building of a dam, or a bridge, or a subway, may require many years. If payment is made only upon completion it should not be treated as income only of the year of completion. Lawyers are often engaged upon cases for many years, receiving their fees only when they finish. They do not earn that income only in the year in which it is paid. These are only a few examples.

If the man who develops a new patent cannot charge his expenses and losses against the proceeds which he finally derives from it, he is paying income taxes without having any real income. The same is true of the builder who is paid only in a year other than the one in which he incurred his expense. The lawyer who is paid in one year for work extending over many pays much higher taxes than his neighbor who might make the same aggregate amount over a number of years. In our situation, if we cannot first recoup our losses, we will be paying taxes although we have no real income.

I am not a tax expert, but as a layman I can see the necessity for requiring annual income returns and annual tax payments. It is much more convenient, from the administrative standpoint, to do it that way. On the other hand, also as a layman, I know that our Federal tax system is supposed to have as its foundation the principle of "ability to pay." This principle is a sound one, of course, and it is much more important than any rule of convenience which requires measuring income by short, fixed periods.

Congress has already recognized this. Before 1932, the revenue acts permitted us to carry over losses for 2 years. We did not have this privilege from 1932 to 1939, but it was restored in 1939. I understand also that a number of special situations have been taken care of. A builder with a long-term contract can spread his income over the term of the contract. A lawyer spending more than 5 years on a case can spread his fees over those years.

These provisions are all beneficial. However, they afford no substantial relief in those situations in which relief is most necessary. For example, in our business, which has gone through over 10 years of losses, we can recoup only a very small fraction of those losses under the present 2-year net-loss carry-over provision. Again, a business which has suffered a very heavy loss in one year may be unable to offset that loss fully in the next 2 years. On the other hand, the more fortunate business, which has moderate losses in not more than 2 years, can offset its entire losses.

I want to urge upon you, as a practical solution of the problem, a 5-year carry-over of net operating losses and net long-term capital

losses. This would not eliminate all the inequities, but it would go a long way. I cannot conceive of its reducing the revenues seriously. In any event, in these days of extremely high tax rates, equity and fairness are even more important than when the rates are moderate. Great Britain's need for revenue is certainly even greater, yet I understand its law permits a 6-year carry-over, which I am told works very well.

Many well-known and competent authorities have urged for many years that a 5-year net-loss carry-over be allowed. Among these I might mention Mr. Leon Henderson. In his testimony before the Committee on Ways and Means, on this very bill, he expressly approved a 5-year carry-over. I am sure no one would question its fairness. I respectfully urge its adoption.

Thank you for your courtesy in hearing me.

The CHAIRMAN. Thank you.

Now Mr. Jarvis Farley, you may state for whom you are appearing and in what capacity.

STATEMENT OF JARVIS FARLEY, BOSTON, MASS., REPRESENTING THE MASSACHUSETTS INDEMNITY INSURANCE CO.

Mr. FARLEY. My name is Jarvis Farley. I am the actuary of the Massachusetts Indemnity Insurance Co. of Boston. I want to thank the committee for the opportunity to present now for your consideration a detail which, up until now, has not received attention. You have before you, I think, a paper entitled "Memorandum on Excess Profits Tax Treatment of Reserve Funds of Companies Taxed under Section 204." I will read it rapidly as I wish to finish in the time allotted to me.

The CHAIRMAN. You may proceed.

Mr. FARLEY. The House and Senate Committee reports accompanying the 1941 excess-profits tax amendments pointed out that the high tax rates are fair if the income is of the type intended to be reached. A recent Treasury decision (T. D. 5059, July 1941) has the effect of imposing the high excess profits tax rates upon a part of the truly normal income of certain nonlife, nonmutual insurance companies whose net income is defined in section 204.

This situation arises because T. D. 5059 rules that insurance reserves cannot be classified as equity invested capital. This ruling of the Treasury Department attempts to nullify long established legal precedents holding that such reserves are invested capital. The definition of invested capital in the excess-profits tax laws of 1917 and 1918 was, except for minor changes of phraseology, synonymous with the definition of equity invested capital in the present law.

Over a period of 13 years, that is, from 1917 to 1931, and by a series of administrative rulings and court decisions, it was finally established to the satisfaction of all parties that insurance reserves were equity-invested capital under the 1917 and 1918 law. (See table of rulings and regulations and court decisions marked "Exhibit A.")

Exhibit A is a table of the rulings involved. I would like to leave for the files of the committee a brief expanding upon that list; I don't ask that it be in the record unless you gentlemen feel it should be.

Note specifically that the Commissioner of Internal Revenue in 1931 acquiesced in the *Federal Life Insurance Co. case*, thus bringing all the parties into agreement on the question.

Because the Treasury Department by T. D. 5059 has now seen fit to upset the above-mentioned arduously established agreement, it will be necessary for the affected companies to relitigate the same question in order to protect themselves from a confiscatory tax unless legislation removes the necessity.

The total exclusion of insurance reserves from equity-invested capital—as is required by T. D. 5059—would seriously prejudice and impose undue hardships on the weaker companies taxed under section 204.

Furthermore, it patently seems unfair, in view of the above historical background under which an agreement was reached by both parties, to make these companies incur the heavy expense and business uncertainty of another 13-year period of litigation. I would like to interpolate here a comment with regard to that litigation. You gentlemen are all familiar with the rule of reenactment as applied by the courts. As I understand it, if the Treasury issues a formal ruling interpreting an existing law, and if thereafter Congress reenacts the same provision, the Courts are prone to assume that Congress agreed to the published interpretation. The omission of the correction from the present bill may cause serious injustice which later retroactive legislation could not entirely erase. I understand the first cases of litigation are in the making now. It would be unfortunate if such injustice were to be brought about merely because of lack of time to consider the proposal now or because the change could not be made for purely technical reasons only, quite aside from the merits of the proposal. It seems especially senseless and useless to force relitigation since by a simple amendment to the excess-profits-tax law Congress can at one time establish the proper definition for the treatment of insurance reserves as equity-invested capital and make the litigation unnecessary.

Senator DANAHER. When you say a "simple amendment," do you want us to define what is equity-invested capital?

Mr. FARLEY. At page 5 of the memorandum there is a specific proposal with respect to that.

Senator DANAHER. All right.

Mr. FARLEY. Section 204 must not be confused with sections 201–203, which define the net income of life-insurance companies. Section 204 brings the companies' entire income into the range of taxation. We consider that section 204 provides, in the main, a tax basis which is fair and satisfactory to both the taxpayer and the Treasury. It does not give unusual credits or special privilege, but merely provides a special method of determining the net income of such nonlife, nonmutual companies. The special method was made necessary by the unique nature of insurance operations—especially by the special accounting problems introduced by the actuarial reserves which are inherent in insurance operations. It is these same reserves which were agreed upon as being invested capital under the earlier laws and which impose the present problem.

The unearned premiums and the unpaid losses of a nonlife, nonmutual company are true insurance reserves, representing the present value of the company's future obligations to policyholders. These reserves are recognized by the Internal Revenue Code. (Sec. 204 (b) (5) and (6); see also the testimony of Professor Adams before the Senate Finance Committee on October 5, 1921, p. 394 of the confidential hearings.)

They are normal, proper, and necessary in insurance operations, and appear, like capital and surplus, on the liability side of the balance sheet as showing the source of assets invested in the business. These assets are literally paid in by policyholders under policy contracts. The assets are normally invested and the income from such investments is taxable income to the company.

If the reserves are excluded from invested capital every dollar of this normal and proper income in most cases becomes "excess profits" under the invested-capital method of computing the excess-profits credit, thus imposing an undeserved penalty upon the company forced to use that method. A company which had abnormally heavy losses or expenses during the base period would have an exceptionally small excess-profits credit based on income.

Under the present law, therefore, the company with normal base period earnings is not affected and the company with a substantial surplus is not so seriously affected. The weaker company alone, with its small surplus and abnormally low base period income, is required to pay the tax, solely because invested capital is not now properly defined. To deny the reserves as invested capital—that is, to consider the investment income from the assets in most cases as entirely excess profits—is, in effect, to deny the right or propriety of making productive use of the corresponding assets. This was recognized under the 1917 and 1918 acts and we believe that Congress would not intentionally impose such a penalty now.

Senator GEORGE. Aren't those reserves usually and generally invested in securities? How do you carry your reserves?

Mr. FARLEY. They appear on the books as a liability of the company——

The CHAIRMAN. Aren't they invested as assets earning some tax-exempt dividend?

Mr. FARLEY. They may be, but there is a table here which shows the situation on the assumption that the income from tax-exempt bonds is included in excess-profits net income in order to include the securities in admissible assets, except stock which cannot become admissible assets.

The historical approach outlined above would establish the insurance reserves as equity-invested capital. It might be argued that the reserves should be considered as borrowed invested capital, for the assets are figuratively borrowed from policyholders. If they are considered to be borrowed invested capital, it would require an amendment to the law to permit that treatment.

The simplest and most practical amendment would be to add the following sentence to section 719 (a) (I):

The insurance reserves of companies subject to taxation under section 204 shall be included in borrowed invested capital.

More complicated legislation would be required to define more exactly the normal income of such insurance companies, and to do full justice to the weaker companies. The proposed amendment still hits the weaker companies hardest, but at least it does approximate justice and has the advantage of being simple.

A table is attached as exhibit B—it is the last page of this memorandum—showing the effect of that proposal on the aggregate figures of nonlife, nonmutual insurance companies, for the base period 1939. The last line of figures on the table shows the estimated normal income of the company subject to this provision. It shows it as $89,000,000. The computation of that is determined as indicated in the second paragraph of the table. This figure is after taxes so that the income before taxes would be, I estimate, in the neighborhood of $100,000,000.

Compared with this normal income are the excess-profits credits with reserves included as equity-invested capital, as borrowed invested capital, and excluded from invested capital.

The table shows that with the reserves as equity-invested capital the excess-profits credit would be approximately equal to the aggregate normal income. With reserves as borrowed invested capital a large portion even of normal income is classed as excess profits. When applied to individual companies it would be found that the weaker companies would be the ones to pay the bulk of the excess-profits tax and the stronger companies would be relatively free from that tax. For this reason it would be equitable for the amendment to provide that the reserves should be included in equity invested capital.

Such a provision would be fair in practice, even though it may not be entirely consistent with the possible nature of the reserves as borrowed capital, for it would give reasonable relief to the weaker companies without materially affecting the stronger companies. If the amendment were to provide that the reserves should be borrowed capital only, Congress would still have recognized and at least partially corrected a very real defect in the existing law.

Senator DANAHER. That proposed amendment then would not accomplish a complete reversal of T. D. 5059?

Mr. FARLEY. I think it would, if I understand your question.

Senator DANAHER. It doesn't seem so from what you say. I don't think that is what this shows.

Mr. FARLEY. Excluding the reserves would produce the right-hand column. I propose two alternative amendments—one of them to call the reserves borrowed capital; the other to call the reserves equity capital; calling the reserves borrowed capital would still leave one-third of the normal income to be taxed.

Senator BROWN. Your amendment on page 4 would bring about the result you state in the second column?

Mr. FARLEY. That is right; and calling the reserves equity invested capital would bring about the result stated in the left-hand column of the table.

On page 5 I end up the memorandum by referring to one or the other of the alternative amendments which I will get to in a moment.

There are relatively few companies who are adversely affected under the existing law and who need this legislation. To those few companies, however, the existing situation is an extreme hardship.

The amount of taxes now involved would be very small compared to the total, but to the companies affected these "improper" taxes are heavy and are paid out of their very life's blood. The credit of an insurance company is its stock in trade. Payment of the taxes primarily by the weaker companies accentuates their competitive disadvantage and failure to include reserves as invested capital would have the effect of perpetuating and strengthening the natural advantage of the stronger companies.

This subject is necessarily very technical. We have attempted to keep this memorandum as brief and nontechnical as possible and still present the outlines of our case. If further information or more detailed exposition is wanted, we will be glad to be given the opportunity to furnish it.

Specifically, this memorandum is directed to either one or the other of alternative amendments, which are as follows:

First choice.—To include the reserves in equity-invested capital by adding the following paragraph to section 718 (a):

(6) *Insurance reserves.*—The insurance reserves of companies subject to taxation under section 204.

Second choice.—To include the reserves in borrowed capital by adding the following sentence to section 719 (a) (1):

The insurance reserves of the companies subject to taxation under section 204 shall be included in borrowed invested capital.

EXHIBIT A.—*List of rulings, regulations, and decisions involved in the historical approach arriving at the agreement to treat insurance reserves as invested capital under the 1917 and 1918 excess profits tax laws.*[1]

Rulings:

Court Decisions:

Duffy v. *Mutual Benefit Life Ins. Co.*, 272 U. S. 613 (1926)

Moncure v. *Atlantic Life Insurance Co.*, 35 F. (2d) 360 (E. D. Va. 1929), aff'd 44 F. (2d) 167 (CCA-4, 1930), cert. den. 283 U. S. 823 (1931).

Federal Life Ins. Co. v. *Commissioner*, 22 B. T. A. 132 (1931) Acquiescence X-2 C. B. 23.

EXHIBIT B

The figures are obtained from Best's Fire and Casualty Aggregates and Averages, 1940 edition, pages 62, 68, and 82. They are reported there on the statutory basis required for reports to insurance departments of the various States. The statutory report is the basis of the tax reports (cf. sec. 204 I. R. C.), and a rough attempt has been made to adjust the insurance basis to the tax basis. The figures below, while they are approximations, are sufficiently accurate to illustrate the point. Dividends received are excluded from investment income and interest on tax-exempt securities is included, so that the only inadmissible assets are stocks.

[1] A detailed brief setting forth the scope of these rulings, regulations, and decisions has been prepared and will be furnished if so desired.

In the base period year 1939 stock casualty companies in the aggregate earned from underwriting operations (after Federal income taxes)	[1] $58,000,000
And from investments they earned $46,000,000, of which about one-third was tax-exempt dividends, so that the taxable income for excess-profits tax purposes was	31,000,000
Or a total of	[1] 89,000,000
The total assets of the companies, at cost value, were	1,615,000,000
The inadmissible assets (stocks) were	356,000,000
So the ratio of inadmissible to total assets was 22 percent.	
Capital, surplus, and special accounts (which are unquestioned equity invested capital) were	610,000,000
Adjust to cost value—add	57,000,000
For equity invested capital of	667,000,000
The true insurance reserves (unearned premiums and unpaid losses) were	846,000,000

[1] This estimate is of income after Federal income taxes were deducted. The amount of such taxes is not readily available, but taxable income (before taxes) may be crudely estimated as at least 10 percent higher. Thus even the credit including reserves as equity invested capital is less than the normal income.

	If the reserves are—		
	Equity invested capital	Borrowed invested capital	Excluded from invested capital
The average invested capital is	$1,513,000,000	$1,090,000,000	$667,000,000
The invested capital (reduced on account of inadmissible assets) is	1,180,000,000	850,000,000	520,000,000
And the excess-profits credit (at 8 percent) is	94,000,000	68,000,000	41,000,000
Compared with normal income of	[1] 89,000,000	[1] 89,000,000	[1] 89,000,000

The comparison of the credits with the normal income shows that in the normal year 1939 the credit counting reserves as equity invested capital is reasonable—the credit counting reserves as borrowed invested capital develops excess profits even in a normal base period year, and the credit with reserves excluded falls utterly to reflect the normal income.

[1] This estimate is of income after Federal income taxes were deducted. The amount of such taxes is not readily available, but taxable income (before taxes) may be crudely estimated as at least 10 percent higher. Thus even the credit including reserves as equity invested capital is less than the normal income.

LEGAL HISTORY OF RESERVES AS INVESTED CAPITAL OF INSURANCE COMPANIES SUBJECT TO TAX UNDER SECTION 204

The documents reproduced here are four in number:

(*a*) A letter dated February 21, 1941, and addressed to the Bureau of Internal Revenue, requesting a ruling on the problem of the treatment of insurance reserves in the computation of equity invested capital under the Second Revenue Act of 1940 and transmitting a brief on that subject.

(*b*) The brief itself, presenting the legal history of the treatment of reserves as invested capital.

(*c*) A letter dated March 6, 1941, addressed to the Bureau of Internal Revenue and pointing out that the excess-profits-tax amendments of 1941 apparently did not, because of lack of time adequately to consider the problem, provide completely adequate relief for abnormalities and that those working on the legislation had expressed the opinion that adjustments could be effected by a liberal policy of defining "equity invested capital."

(*d*) The Treasury's answer—T. D. 5059—excluding reserves from equity invested capital.

[Copy]

IVINS, PHILLIPS, GRAVES & BARKER,
Washington, D. C., February 21, 1941.

Hon. J. P. WENCHEL,
Chief Counsel, Bureau of Internal Revenue, Washington, D. C.

In re: Massachusetts Indemity Insurance Co.—Equity invested capital—Treatment of insurance reserves. Attention Mr. McLaughlin, Legislative and Regulations Division.

SIR: Several weeks ago Mr. Phillips and Mr. Barker, of our office, had a preliminary conference with your Mr. McLaughlin regarding the problem of the treatment of insurance reserves in the computation of equity-invested capital under the Second Revenue Act of 1940. At that time Mr. McLaughlin advised that he did not know whether or not the problem would be taken care of under the regulations which would presently issue from the Treasury Department. The mutually suggested procedure was that we should wait until the regulations issued, and then if they did not touch the problem, we should request a ruling on the matter and support the request for a ruling with a memorandum brief.

It is apparent from a study of the regulations as issued that the problems of insurance companies were not considered in the drafting of the regulations, and accordingly we request a ruling to the effect that the reserves of casualty insurance companies should be treated as equity-invested capital in the computation of excess-profits taxes. Memorandum brief in support of this position is enclosed herewith.

We also request that we be afforded an opportunity for an oral hearing on this matter.

Respectfully,

———— ————.

THE TREATMENT OF INSURANCE RESERVES OF A CASUALTY INSURANCE COMPANY UNDER THE EXCESS-PROFITS TAX ACT OF 1940

STATEMENT

The regulations issued by the Treasury Department dealing with the excess-profits-tax provisions of the Second Revenue Act of 1940 are silent with respect to the treatment of insurance reserves for either life or casualty insurance companies or for either stock or mutual insurance companies. Patently, because of the election privileges mentioned in section 712 of that act it becomes important that a correct ruling on this question be made prior to March 15, 1941.

It is the purpose of this memorandum to show that the reserves of casualty insurance companies should be treated as equity invested capital under the Second Revenue Act of 1940, section 718. Probably the most effective method of arriving at a correct interpretation of section 718 is an historical approach. What was the treatment of insurance reserves under the invested capital provisions of the 1917, 1918, and 1921 excess-profits tax acts and do these acts differ, insofar as our problem is concerned, from the present act?

The following pages present first the statutes and the history of the interpretations, followed by the argument by which we support our contention.

STATUTES

The pertinent provisions of the 1917 Revenue Act are contained in section 207, reading as follows:

"SEC. 207. That as used in this title the term 'invested capital' for any year means the average invested capital for the year, as defined and limited in this title, averaged monthly.

"As used in this title 'invested capital' does not include stocks, bonds (other than obligations of the United States), or other assets, the income from which is not subject to the tax imposed by this title nor money or other property borrowed, and means, subject to the above limitations:

"(a) In the case of a corporation or partnership: (1) Actual cash paid in, (2) the actual cash value of tangible property paid in other than cash, for stock or shares in such corporation or partnership, at the time of such payment (but in case such tangible property was paid in prior to January first, nineteen hundred and fourteen, the actual cash value of such property as of January first, nineteen hundred and fourteen, but in no case to exceed the par value of the original stock

or shares specifically issued therefor), and (3) paid in or earned surplus and undivided profits used or employed in the business, exclusive of undivided profits earned during the taxable year; * * *"

Section 326 of the Revenue Act of 1918 reads as follows:

"SEC. 326. (a) That as used in this title the term 'invested capital' for any year means (except as provided in subdivisions (b) and (c) of this section):

"(1) Actual cash bona fide paid in for stock or shares;

(2) Actual cash value of tangible property, other than cash, bona fide paid in for stock or shares, at the time of such payment, but in no case to exceed the par value of the original stock or shares specifically issued therefor, unless the actual cash value of such tangible property at the time paid in is shown to the satisfaction of the Commissioner to have been clearly and substantially in excess of such par value, in which case such excess shall be treated as paid-in surplus: *Provided*, That the Commissioner shall keep a record of all cases in which tangible property is included in invested capital at a value in excess of the stock or shares issued therefor, containing the name and address of each taxpayer, the business in which engaged, the amount of invested capital and net income shown by the return, the value of the tangible property at the time paid in, the par value of the stock or shares specifically issued therefor, and the amount included under this paragraph as paid-in surplus. The Commissioner shall furnish a copy of such record and other detailed information with respect to such cases when required by resolution of either House of Congress, without regard to the restrictions contained in section 257;

"(3) Paid-in or earned surplus and undivided profits; not including surplus and undivided profits earned during the year;

"(4) Intangible property bona fide paid in for stock or shares prior to March 3, 1917, in an amount not exceeding (a) the actual cash value of such property at the time paid in, (b) the par value of the stock or shares issued therefor, or (c) in the aggregate 25 per centum of the par value of the total stock or shares of the corporation outstanding on March 3, 1917, whichever is lowest;

"(5) Intangible property bonda fide paid in for stock or shares on or after March 3, 1917, than an amount not exceeding (a) the actual cash value of such property at the time paid in, (b) the par value of the stock or shares issued therefor, or (c) in the aggregate 25 per centum of the par value of the total stock or shares of the corporation outstanding at the beginning of the taxable year, whichever is lowest: *Provided*, That in no case shall the total amount included under paragraphs (4) and (5) exceed in the aggregate 25 per centum of the par value of the total stock or shares of the corporation outstanding at the beginning of the taxable year; but

"(b) As used in this title the term 'invested capital' does not include borrowed capital.

"(c) There shall be deducted from invested capital as above defined a percentage thereof equal to the percentage which the amount of inadmissible assets is of the amount of admissible and inadmissible assets held during the taxable year.

"(d) The invested capital for any period shall be the average invested capital for such period, but in the case of a corporation making a return for a fractional part of a year, it shall (except for the purpose of paragraph (2) of subdivision (a) of section 311) be the same fractional part of such average invested capital.

"The average invested capital for the pre-war period shall be determined by dividing the number of years within that period during the whole of which the corporation was in existence into the sum of the average invested capital for such years."

Section 326 of the Revenue Act of 1921 reads as follows:

"SEC. 326. (a) That as used in this title the term 'invested capital' for any years means (except as provided in subdivision (b) and (c) of this section):

"(1) Actual cash bona fide paid in for stock or shares;

"(2) Actual cash value of tangible property, other than cash, bona de paid in for stock or shares, at the time of such payment, but in no case to exceed the par value of the original stock or shares specifically issued therefor unless the actual cash value of such tangible property at the time paid in is shown to the satisfaction of the Commissioner to have been clearly and substantially in excess of such par value, in which case such excess shall be treated as paid-in surplus: *Provided*, That the Commissioner shall keep a record of all cases in which tangible property is included in invested capital at a value in excess of the stock or shares issued therefor, containing the name and address of each taxpayer, the

business in which engaged, the amount of invested capital and net income shown by the return, the value of the tangible property at the time paid in, the par value of the stock or shares specifically issued therefor, and the amount included under this paragraph as paid-in surplus. The Commissioner shall furnish a copy of such record and other detailed information with respect to such cases when required by resolution of either House of Congress, without regard to the restrictions contained in section 257;

"(3) Paid-in or earned surplus and undivided profits; not including surplus and undivided profits earned during the year;

"(4) Intangible property bona fide paid in for stock or shares prior to March 3, 1917, in an amount not exceeding (a) the actual cash value of such property at the time paid in, (b) the par value of the stock or shares issued therefor, or (c) in the aggregate 25 per centum of the par value of the total stock or shares of the corporation outstanding on March 3, 1917, whichever is lowest;

"(5) Intangible property bona fide paid in for stock or shares on or after March 3, 1917, in an amount not exceeding (a) the actual cash value of such property at the time paid in, (b) the par value of the stock or shares issued therefor, or (c) in the aggregate 25 per centum of the par value of the total stock or shares of the corporation outstanding at the beginning of the taxable year, whichever is lowest: *Provided*, That in no case shall the total amount included under paragraphs (4) and (5) exceed in the aggregate 25 per centum of the par value of the total stock or shares of the corporation outstanding at the beginning of the taxable year; but

"(b) As used in this title the term 'invested capital' does not include borrowed capital.

"(c) There shall be deducted from invested capital as above defined a percentage thereof equal to the percentage which the amount of inadmissible assets is of the amount of admissible and inadmissible assets held during the taxable year.

"(d) The invested capital for any period shall be the average invested capital for such period, but in the case of a corporation making a return for a fractional part of a year, it shall be the same fractional part of such average invested capital."

The substance of the pertinent provisions of these statutes is identical, being:

Invested capital means:

1. Actual cash paid in (for stock or shares).[1]

2. Actual cash value of tangible property paid in other than cash, for stock or shares in such corporation—at the time of such payment.

3. Paid-in or earned surplus and undivided profits.

The pertinent provisions of section 718 of the present act defining invested capital are as follows:

"SEC. 718. EQUITY INVESTED CAPITAL.

* * * * * * *

(1) *Money paid in.*—Money previously paid in for stock, or as paid-in surplus, or *as a contribution to capital;*

(2) *Property paid in.*—Property (other than money) previously paid in (regardless of the time paid in) for stock, or as paid-in surplus, or *as a contribution to capital.* Such property shall be included in an amount equal to its basis (unadjusted) for determining loss upon sale or exchange. * * *

" * * * * * * *

(4) *Earnings and profits at beginning of year.*—The accumulated earnings and profits as of the beginning of such taxable year; * * *"

The only difference in substance between the quoted provisions of the old laws and the parallel provision of the 1940 act is the amount of credit given for property paid in. Under the old laws the value at the time it was paid in was taken; under the current act the "unadjusted basis" is substituted in the second paragraph. In this memorandum the words "first paragraph," "second paragraph," and "third paragraph" refer to the three parts of the definition of invested capital (or equity invested capital) as outlined in substance above, even though the third paragraph ("earnings and profits" or "surplus and undivided profits") bears the number (4) in the 1940 act.

There are certain changes in phraseology between the old acts and that of 1940 which were not intended to change the fundamental purpose of Congress which was to tax "excess profits."

---

[1] *LaBelle Iron Works* v. *United States* (256 U. S. 377), for 1917 act. Specifically mentioned in 1918 and 1921 acts.

The only difference between the first paragraph of the earlier acts and the first paragraph of the 1940 act is that "paid-in surplus" is transferred from the third paragraph of the earlier acts to the first paragraph of the 1940 act (a purely formal change) and the words "contribution to capital" are added to the 1940 act. As will be pointed out later, this additional phraseology in the 1940 act is significant.

There is obviously no difference in effect between—

(*a*) "Actual cash bona fide paid in for stock or shares" and

(*b*) "Money previously paid in for stock."

Thus there is no difference between the second paragraphs of the earlier acts and the 1940 act except the significant added phraseology of "contribution to capital."

The verbal changes[2] in the third paragraph do not indicate any change in the basic objectives of Congress. The earlier acts used the words "earned surplus and undivided profits" while the present act uses the words "accumulated earnings and profits." The stated reason for using the words "accumulated earnings and profits" rather than the words used in the earlier acts was that the present words have been used more frequently in other revenue acts and therefore may more generally be understood.[3] If there are any differences in phraseology it is submitted that the present wording is broader in meaning than the words used in the earlier acts. Certainly there is no difference between the phrases "undivided profits" and "accumulated profits." The only difference between "earned surplus" and "accumulated earnings" is that the latter (from a bookkeeping angle) may not yet have been credited to the surplus account.

REGULATIONS AND RULINGS

The early regulations regarding the treatment of insurance reserves for invested capital purposes were amended soon after they were issued. T. D. 3153 was issued April 9, 1921 (4 C. B. 398), amending article 870 of Regulations 45 (1918 act), to read as follows:

"ART. 870. *Insurance companies.*—The reserve funds of life insurance companies, the net additions to which are deductible from gross income under the provisions of section 234 of the statute, cannot be included in computing invested capital. The like reserve funds of insurance companies, other than life insurance companies, may be included in computing invested capital. See sections 325 and 326 (a) (3) and (b) and articles 569 and 814."

By A. R. R. 3202 (II-2 C. B. 275) the same regulation was made applicable to the 1917 Revenue Act. Article 869 of Regulations 62 (1921 act, promulgated February 15, 1922), read:

"ART. 869. *Insurance companies.*—The reserve funds of insurance companies (other than life) the net additions to which are deductible from gross income under the provisions of section 234 of the statute, may be included in computing invested capital. See sections 325 and 326 and articles 569 and 814."

These regulations for other than life insurance companies have never since been changed or modified. As to mutual life insurance companies, the regulations were changed in 1927 (T. D. 4053, VI-2 C. B. 292) to give effect to the decision of the Supreme Court in *Duffy* v. *Mutual Benefit Life Insurance Company*, referred to below. But the Bureau maintained its position to the effect that the reserves of stock life insurance companies were not to be included in invested capital (I. T. 2423, VII-2 C. B. 320). This Income Tax Unit was overruled by the decision in *Moncure* v. *Atlantic Life Insurance Company*, referred to below.

In 1921 the Bureau of Internal Revenue issued Bulletin II, Income Tax Rulings Peculiar to Insurance Companies. Paragraph 10 of this bulletin deals with the invested capital of a life insurance company, and paragraphs 11-13 dealt with invested capital of mutual life insurance companies. Paragraph 28 deals with the invested capital of stock fire insurance companies. Paragraphs 41-42 deal with the invested capital of stock casualty insurance companies. These read as follows:

"41. *Invested capital.*—The invested capital of a stock casualty insurance company comprises the following:

"(*a*) Gross assets at the close of the preceding year.

[2] See joint hearings before the Committee on Ways and Means and Committee on Finance, Excess Profits Taxation, 1940, p. 95.

[3] Ibid.

"(*b*) Plus: Excess of cost price of real estate and securities over book value. (The result will be the gross assets on the basis of actual cost.)

"(*c*) Minus:

"(1) Excess of market value of real estate and securities over book value as indicated by items 39 and 40 on page 4 of the annual statement, convention edition;

"(2) Excess of book value of real estate and securities over cost. (The result will be the gross assets on the basis of actual cost.)

"(*d*) Minus:

"(1) Estimated expenses of investigation and adjustment of unpaid claims;

"(2) Commissions, brokerage, and other charges due, or to become due, to agents or brokers;

"(3) Salaries, rents, expense bills, etc., due or accrued;

"(4) Estimated amount hereafter payable for taxes (exclusive of Federal income and profits taxes);

"(5 Amounts due, or to become due, for borrowed money;

"(6) Interest due or accrued;

"(7) Returned premiums and reinsurance.

"(*e*) Minus: Depreciation, computed on the cost of buildings from the date of acquisition to the beginning of the taxable year.

"(*f*) Minus: Inadmissible assets computed in accordance with section 326 (c).

"(*g*) Plus or minus: Changes in invested capital during the year, computed in accordance with the regulations applicable to corporations in general, as follows:

Additions:

"(1) By sale of capital stock for cash or other assets;

"(2) By payment of assessments or surplus by stockholders.

"Deductions:

"(3) By payment of cash dividends out of the earnings of previous years, or the first 60 days of the taxable year;

"(4) By payment of Federal income and profits taxes.

"42. *Computation of invested capital.*—In view of the fact that the various State laws differ in regard to the computation of the unpaid claims reserve of stock casualty insurance companies, the computation of invested capital as outlined above must be based upon the same annual statement upon which the net addition to reserve funds is computed."

DECISIONS

The only case in the Supreme Court is *Duffy* v. *Mutual Benefit Life Ins. Co.* (272 U. S. 613 (1926)), which held that the reserve of a mutual life insurance company should be included as invested capital under the Revenue Act of 1917.

This decision was followed and applied to stock life insurance companies under the 1917 act in *Moncure* v. *Atlantic Insurance Co.* (35 F. (2d) 360 (E. D. Va. 1929), affirmed 44 F. (2d) 167 (C. C. A. 4th, 1930), certiorari denied 283 U. S. 823 (1931)). The Government's petition for certiorari states that by agreement with the Association of Life Insurance Presidents, this was a test case. The brief in opposition to certiorari contains the following paragraph (p. 4):

"If the learned Solicitor General in his reference to an understanding between the General Counsel of the Bureau of Internal Revenue and the Association of Life Insurance Presidents, on pages 7 and 8 of the petition, intended to inform the court that this case was selected as a test case to determine a like question affecting other stock life insurance companies, respondent acquiesces. But if he intended to suggest it had been agreed that the allowance of the prayer of the petition for certiorari is essential to a final and authoritative conclusion, respondent must emphatically disagree. An equally final and authoritative conclusion will be reached by a denial of the prayer of the petition."

After this statement the Supreme Court denied certiorari. It would seem to be pretty close in effect to an actual Supreme Court decision.

In *Federal Life Ins. Co.* v. *Commissioner* (22 B. T. A. 132, (1931), the Board decided that the reserves of a stock life insurance company should be included as invested capital under the 1918 act. In reaching this result, they overruled the earlier decision in *Home Beneficial Association* v. *Commissioner of Internal Revenue* (15 B. T. A. 1319 (1929)).

It should be specifically noted that the Commissioner of Internal Revenue acquiesced in the decision of the Board in the *Federal Life Insurance Co. case, supra* (X–2 C. B. 23).

ARGUMENT

It will be seen that almost from the formative period of the regulations and rulings dealing with the treatment of insurance reserves under the earlier revenue acts the reserves of casualty companies have been considered to be a part of their invested capital. Furthermore, the present statutory words for computing taxable income of insurance companies other than life and mutual first came into existence in the 1921 act. Thus the treatment of reserves for income-tax purposes was and has been the same under the 1921 Revenue Act,[4] and the present act and no logical distinction as to the treatment of reserves for invested capital purposes between the earlier Excess-Profits Act and the present Excess-Profits Act can be made on the ground of any difference between the two applicable revenue acts in their treatment of the reserves for normal tax purposes.

Under these circumstances it should be noted that T. D. 3153, supra, governing the treatment of reserves for casualty companies and including such reserves in the invested capital of those companies, was in existence when the Revenue Act of 1921 was adopted. Under the doctrine of *Helvering* v. *Winmill* (306 U. S. 10), dealing with the reenactment of similar statutes in the light of existing rulings, the treatment of casualty company reserves as invested capital has been given legislative approval.

Even more important than the doctrine of reenactment[5] is the long-continued practice of the Treasury Department in treating the reserves of casualty insurance companies as invested capital. Even though the Bureau of Internal Revenue contested the right of life insurance companies to treat reserves as invested capital until 1931,[6] it consistently ruled otherwise with respect to other than life insurance companies. In fact the Bureau particularly emphasized its ruling in Bulletin H, supra, wherein it sets forth in detail the methods to be used by casualty insurance companies in computing their invested capital.

It is submitted, therefore, that because of the similarity of the invested capital provisions of the present act with the provisions of the earlier acts the reserves of a casualty insurance company should be included in its equity invested capital.

Other pertinent reasons exist why the reserves of a casualty insurance company should be included in its invested capital. It will be noted that in the *Duffy case*, supra, the Supreme Court paid particular attention to the inequities that would result in the administration of the law if a different result were reached. Based on this principle, the Court said:

"We cannot suppose that Congress intended such a result; * * *." The same argument would be even more patently applicable to our particular problem. Assume two stock casualty insurance companies A and B. A loses all its records in a fire or hurricane and cannot compute its equity invested capital. Consequently, it would be relegated to the application of section 723 and would include in its equity invested capital—

(*a*) Money.
(*b*) Adjusted basis of assets.

and would reduce this by its outstanding indebtedness. The reserves, not being debts (see *Duffy case*, supra, and sec. 719), would not be deducted from the sum of (*a*) and (*b*), so the assets which offset the reserves on the balance sheet would remain in equity invested capital. The effect is to compute equity invested capital in a manner similar to the computation of invested capital as set forth in Bulletin H, supra. Congress certainly never intended such disproportionate results as would result from denying the right of B to include its reserves in invested capital simply because it failed to enjoy the happenstance of a fire or hurricane. It is submitted that in the light of section 723 Congress intended section 718 to be interpreted in the same manner that Bulletin H interpreted the earlier revenue acts.

It should be noted that the Commissioner for over 10 years has acquiesced in the decision of the Supreme Court in the *Duffy case*, *supra*, (T. D. 4053 supra)

---

[4] The principle of allowing additions to reserves as a deduction in computing taxable income existed under the 1918 act.

[5] See A Summary of the Regulation Problem, by Prof. Erwin N. Griswold, LIV Harvard Law Review, January 1941.

[6] *Federal Life Insurance Co.*, supra.

and for approximately 10 years has acquiesced in the decision of the fourth circuit in the *Atlantic Life Insurance Co. case, supra.* (Acquiescence in the *Federal Life Insurance Co. case, supra.*) Both those decisions primarily bottomed their opinion on the principle that insurance reserves should be included in invested capital under paragraphs 1 and 2 of the invested capital sections of the statute (money and property paid in, etc.) rather than under paragraph 3 of the statute[7] (surplus and profits). It would be reasonable to presume, therefore, that the Bureau rulings, dealing with other than life insurance companies, placed their reserves in invested capital under paragraphs 1 and 2 of the earlier acts. If this assumption is correct, and certainly it is logical, then it is submitted that the reserves of other than life insurance companies belong in equity invested capital under section 718 of the present act. Paragraphs 1 and 2 of the present act, so far as our problem is concerned, are no narrower than the original acts and if anything provide a broader statutory provision.

It is submitted that the present act should be considered as containing broader statutory provisions because paragraphs 1 and 2 contain the additional phraseology "contributions to capital."[8] Under the earlier acts cash or property turned over to a corporation by stockholders, not as a loan but as a contribution to capital, was always recognized as part of invested capital. If stock was issued for them they were included in paid-in capital; if no stock was issued for them they were included in paid-in surplus. (Regulations 45 and 62, arts. 813 and 837; A. R. R. 78, 2 C. B. 273.) However, contributions by persons other than stockholders was generally excluded under the earlier acts. (*Tampa Electric Co.*, 12 B. T. A. 1002; *Holton & Co.*, 10 B. T. A. 1317.) They were excluded in the cases of most all corporations until the *Duffy case, supra*, recognized that insurance companies, at least, were in a special category. In the *Duffy case*, the Court specifically spoke of life insurance reserves as contributions to capital. It said:

"True, the amount of the reserve is carried on the books as a liability, but only as the capital stock of a stock corporation is carried on its books as a liability. In both instances it is a form of bookkeeping to balance assets, which in the one case is contributed by the members and in the other by the stockholders."

It is admitted that the Supreme Court was speaking of a mutual company. But the Circuit Court of Appeals for the Fourth Circuit reasoned with respect to a stock company that the policyholders were in reality preferred stockholders and that both the stockholders and the policyholders had an associate interest in the reserves.[9] Certainly, the reserves are not debts. See *Duffy case, supra.* Cf. section 719. It would therefore seem reasonable to state that Congress by inserting the words "contributions to capital" in the 1940 act either wanted to correct the narrow interpretation resulting from the *Tampa* and *Holton decisions, supra*, or at least wanted to give legislative recognition to the *Duffy* and *Moncure cases, supra*, which recognized that reserves of insurance companies were contributions to capital.

It has been noted above that the Fourth Circuit Court of Appeals in the *Atlantic Life Insurance Co. case* also bottomed its decision on the principle that the reserves should be included in invested capital under the third paragraph of the invested-capital provisions as "earned surplus." As was said by the district court in that case:

"In the meantime, it (the reserve) is part and parcel of the assets used in the business of the company for purposes of profit, but retained to provide for future and contingent liabilities. Until liability occurs, it is surplus, because it represents the amount of value of present assets over present liabilities."

---

[7] The fourth circuit rendered its decision in the alternative, i. e., both pars. 1 and 2 as well as par. 3.

[8] See pp. 5 and 6, supra.

[9] The fourth circuit said in the *Atlantic Life Insurance Co. case:*

"The amount paid in by policyholders and carried in the legal reserve of the company was certainly money paid in by them for shares in a common fund—a fund maintained for their benefit and invested for their advantage, as well as for the advantage of the company."

See also the language of the Circuit Court of Appeals for the Second Circuit in *New York Life Ins. Co.* v. *Bowers* (39 F. (2d) 556 at 559 (affirmed, 283 U. S. 242)). The court said:

"For it is possible to regard the policyholders even of a stock company as also associates in the enterprise, and perhaps that is the juster view."

We have previously pointed out that there is no distinction between "earned surplus and undivided profits" in the earlier acts and "accumulated earnings and profits" in the present act. In *Cummings* v. *Commissioner* (73 F. (2d) 477 (C. C. A., 1st), 1934), the Court said:

"If these funds, however derived, belonged to the company when received, they would go to increase its surplus, and it cannot be seriously argued that the surplus funds in the hands of the company over and above its stock liability are not the earnings or profits contemplated by the section."

The fact that these reserves have not been subjected to income tax does not negative this conclusion. From the point of view of contributions to capital it supports it, for contributions to capital are not taxed as income. Nor does the fact that the items in question have not borne income tax destroy the analogy to accumulated earnings and profits as a part of invested capital. There are many situations in which nontaxed amounts have been held to be nevertheless invested capital. An example of this is found in *Appeal of National Grocer Co.* (1 B. T. A. 688). The property of the taxpayer was taken by a railroad company. The price paid by the railroad company showed the taxpayer a net gain of $98,768. By reason of the "involuntary conversion" provisions of section 234 (a) (14) of the Revenue Act of 1921, $51,252.58 was allowed as a deduction and only $47,515.42 was taxed as income. The Board held that the entire $98,768 was properly part of earned surplus, saying:

"This sum of $98,768 was a gain or profit accruing to the taxpayer from dealings in property and, under the provisions of section 213 of the same revenue act, the taxpayer was required to report this gain as a part of its gross income for the calendar year 1917; and, except for the retroactive exemption contained in the Revenue Act of 1921, section 234 (a) (14), the full amount of this gain and profit would then have been taxable income. Congress, however, saw fit to provide, in the Revenue Act of 1921, that an ascertainable proportion of this gain, realized by the taxpayer under the conditions prescribed, should be deducted from gross income. In like manner Congress has provided for the exemption from taxation of gains and profits from other sources, among which are dividends received by one corporation from other domestic corporations; and it has also provided that certain gains and profits should be excluded from gross income, among which are amounts of interest received upon the obligations of States and municipal subdivisions thereof and certain obligations of the United States. All of these gains and profits, however, received by a corporation and exempt from income taxes, must necessarily find their way into and become a part of the surplus and undivided profits of such corporation, and we have yet to hear of anyone claiming that amount of interest upon municipal obligations, and dividends upon the stock of other corporations, either should be or could be eliminated from the sum of surplus and undivided profits which the law provides shall be included in invested capital.

"The surplus and undivided profits of a corporation at any given time is made up of all the realized gains, profits, and income of preceding years or periods and which remains after expenses and dividends are paid. (*Marks* v. *American Brewing Co.*, 52 South. 985). It thus conclusively appears that this sum of $51,252.58, having been a part of the realized gains and profits of this taxpayer for the calendar year 1917, although not included in its taxable net income, found its way into the company's general account of surplus and undivided profits, and section 326 of the Revenue Act of 1918 specifically provides that so much of this surplus and undivided profits account as remains in the possession of the corporation at the beginning of any taxable period shall be included in invested capital. It appears that there is no authority in any revenue act nor is there any accounting reason, to support the action of the Commissioner in eliminating this sum from the taxpayer's invested capital for the years 1918 and 1919."

The Commissioner acquiesced. (IV-1 Cumulative Bulletin 3).

Another analogy may be found in the receipt of a dividend by a corporation: Only 15 percent of the corporation dividend is taxed (formerly none of it was taxed), but the entire dividend is earnings and profits within the meaning of that term. Similarly, reserves of a casualty insurance company become taxable income only to the amount by which the reserve is decreased during the year, but would anyone doubt that if it violated the State law and declared a dividend which invaded its reserves the Commissioner would hesitate to tax it to the stockholders as a dividend declared out of "earnings and profits"?

CONCLUSION

We are dealing here with a rather unusual situation, as far as the excess-profits tax is concerned. The statute makes no specific reference to insurance companies; Congress was primarily occupied in drafting it with the problems of ordinary business companies. As to such companies, it may be that the words of the statute can be applied with a rather narrow literalness. It is plain, though, that any such purely literal construction would not carry out the real underlying intent of Congress if it is applied to insurance companies. There is no reason why it should be so applied. What Congress was trying to reach was extraordinary profits, profits above those which represent the fair return on the assets normally used in the business. The words used by Congress must be construed in the light of the nature of the business to which they are applied. In the case of insurance companies other than life or mutual, the reserves represent assets normally used in the business, paid in by active participants in the business whose position is very closely analogous to that of preferred stockholders. The fact that the reserves appear on the liability side of the balance sheet does not oppose this conclusion; it supports it. That is where capital and surplus do appear on the balance sheet. The reserves represent a segregation of those items with respect to the participation in the company by the policyholders.

The courts in the *Duffy* and *Atlantic Life Insurance cases* did not proceed upon a sterile literal interpretation of the narrow sense of the words used in the statute. They recognized that such an interpretation would not carry into effect the fundamental intention of Congress when it passed the act so far as these insurance companies were concerned. They recognized that the "Capital stock" item and the "Insurance reserve" item in the balance sheet were both expressions showing the source of funds "paid in" to the company and held as part of the assets which make possible the company's business operations. The assets derived from both sources are as essential to those operations as fixed assets are to a manufacturing plant. Both items in the balance sheet thus share essential characteristics of "equity invested capital" as developed in the statute. The attention of Congress was not directed to the peculiar problems of insurance companies when the statute was drafted. But there is certainly nothing in the statute to indicate in any way that Congress had any intention to be harsh or unfair in dealing with such companies. To apply the statute in a narrow literal way would lead to such a harsh and unfair result. Therefore we must seek the substance of the statute, its real purpose, as the courts did in the *Duffy* and the *Atlantic Life Insurance cases*, and as the Commissioner did when he promulgated Treasury Decision 3153 in 1921 (applied by the Bureau in Bull. H), and when he acquiesced in the *Federal Life Insurance case* in 1931.

The possibility has been suggested that section 722 was provided by Congress to take care of hard cases and might be applied to the returns of casualty insurance companies. But it seems unlikely that Congress intended that every casualty insurance company should be taxed under section 722. If it had that intention, it would probably have said so. Moreover, from the administrative point of view, it would seem unfortunate to throw all of those complicated cases into a section 722 proceeding, especially when it is clear that those companies do not have what is fundamentally "excess profits." It would be wiser to view the problem in the large; seek what Congress was really driving at; and reach an administrative ruling that will fully carry out the fundamental intention of Congress when the law is applied to casualty insurance companies.

Looked at from the point of view of substance, and the real purpose of Congress in enacting the excess-profits tax, there can be no doubt that the reserves in question should be treated as equity invested capital.

Respectfully submitted.

IVINS, PHILLIPS, GRAVES & BARKER,
Washington, D. C., March 6, 1941.

COMMISSIONER OF INTERNAL REVENUE,
Bureau of Internal Revenue, Washington, D. C.
(Attention P. J. Mitchell.)

In re Massachusetts Indemnity Insurance Co.

SIR: In connection with the question of including insurance reserves in equity invested capital, we desire to call your attention to the effect that H. R. 3531 has upon the question from the standpoint of general Bureau policy.

When section 722 was first put into the Second Revenue Act of 1940 it provided for adjustments for abnormalities arising out of either income or invested capital. In H. R. 3531, in the Senate committee report (Rept. No. 146, 77th Cong., 1st sess.), the committee says:

"In view of these compelling motives, the provisions of that act lay a tax upon that portion of the earnings of corporations determined to be excess profits. The tax rates provided, or even higher rates, are thoroughly justified if the income subject thereto is clearly of the type intended to be reached. At the same time, equitable considerations demand that every reasonable precaution be taken to prevent unfair application of the tax in abnormal cases. The weight of the burden imposed carries with it a commensurate need for restricting its application to the cases for which it was designed."

The Congress then set out, in H. R. 3531, to attempt to formulate some definite policies with respect to the application of section 722 of the Second Revenue Act of 1940. However, in working out these problems, it becomes apparent that the Congress has only provided for abnormalities which affect the base period earnings method of determining the excess-profits tax credit, and has not provided formulae adjusting for abnormalities in the equity invested capital method of determining the credit for excess profits tax purposes.

Investigation among the Members of Congress and their assistants who worked on the drafting of H. R. 3531 discloses that they realized that they would not have time to tackle all phases of abnormalities, but they have variously expressed the opinion that the Bureau, insofar as abnormalities of invested capital were concerned, could probably take care of such adjustments through a liberal policy of determining a correct definition of equity invested capital.

We therefore submit that in the light of this situation, our client who, solely because of the lack of time to properly evaluate the problem, has lost the right to use section 722 as a relief provision in determining its equity invested capital, should be entitled to a liberal ruling from the Bureau on the problem presented in the prior memorandum.

Respectfully,

TREASURY DECISION 5059, AMENDING SECTION 19.115–3 OF REGULATION 103, RELATING TO EARNINGS OF PROFITS, AND SECTIONS 40.718–1 AND 30.718–2 OF REGULATION 109, RELATING TO DETERMINATION OF DAILY EQUITY INVESTED CAPITAL

Paragraph 1. Regulations 103 (pt. 19, title 26, Code of Federal Regulations, 1940 Sup.) are amended by striking out the first sentence following the heading of section 19.115–3 as amended by Treasury Decision 5024, approved December 19, 1940 (C. B. 1940–2, 110), and inserting in lieu thereof a new paragraph as follows:

"In determining the amount of earnings or profits (whether of the taxable year, or accumulated since February 28, 1913, or accumulated prior to March 1, 1913) due consideration must be given to the facts, and, while mere bookkeeping entries increasing or decreasing surplus will not be conclusive, the amount of the earnings or profits in any case will be dependent upon the method of accounting properly employed in computing net income. For instance, a corporation keeping its books and filing its income tax returns under sections 41, 42, and 43 on the cash-receipts and disbursements basis may not use the accrual basis in determining earnings and profits; a corporation computing income in the installment basis as provided in section 44 shall, with respect to the installment transactions, compute earnings and profits on such basis; and an insurance company subject to taxation under section 204 shall exclude from earnings and profits that portion of any premium which is unearned under the provisions of section 204 (b) (5) and which is segregated accordingly in the unearned premium reserve."

Paragraph 2. Regulations 109 (pt. 30, title 26, Code of Federal Regulations, 1941 Sup.) are as follows:

"(A) Section 30.718–1 is amended by inserting after the second sentence in the first paragraph a new sentence as follows:

"The terms 'money paid in' and 'property paid in' do not include amounts received as premiums by an insurance company subject to taxation under section 204.

"(B) Section 30.718–2 is amended by inserting after the third sentence in paragraph (a) a new sentence as follows:

"See, for instance, section 19.115–3 of Regulations 103, as amended, relating to the computation of earnings and profits in the case of a corporation computing net income on the cash, accrual, or installment basis, or in the case of an insurance company taxable under section 204."

(This Treasury decision is issued under the authority contained in section 62 of the Internal Revenue Code (53 Stat. 32, 26 U. S. C., Supp. V, 62) as made applicable by section 729 of such code, added by section 201 of the Second Revenue Act of 1940 (Public, No. 801, 76th Cong., 3d sess.); section 115 of such code (26 U. S. C., Supp. V, 115); and section 718 of such code as added by the Second Revenue Act of 1940.) (T. D. 5059; 1941-28-10778.)

The CHAIRMAN. Mr. Pach.

Will you give your name and state for whom you are appearing?

Mr. PACH. I am Vincent Pach, treasurer of the Bath Iron Works Corporation, and while my name is listed on the calendar to present this memorandum, I should like the privilege of having our accountant, Mr. Stoler, present it for me. He is here.

STATEMENT OF G. VINCENT PACH, BATH, MAINE, REPRESENTING BATH IRON WORKS CORPORATION, READ BY MICHAEL N. STOLER

Mr. STOLER. Mr. Chairman, this has to do with an apparent inequity in the excess-profits tax provision in computing the tax on long-term contractors. I should like to read from this memorandum.

This memorandum deals with what appears to be an inequity in the Second Revenue Act of 1940, as amended, which inequity it is hoped will be amended in the Revenue Act of 1941. The point in question deals with the earned-income base used by long-term contractors, as different from the base used by contractors who have reported their income on the percentage of completion basis.

1. A long-term contractor (contracts covering a construction period of 12 months or more) has the option, for Federal income-tax purposes, of either reporting his income at the time when the contract is closed out and the profit is definitely determined or else reporting the estimated profit annually, as earned (sec. 19-42-4, Regulations 103). Also under the regulations of the Commissioner of Internal Revenue, a method once adopted can be changed only after permission is secured from the Commissioner, as provided in sec. 19-41-2, Regulations 103.)

2. The foregoing has been in the regulations for many years and has proven equitable over the years. However, the inequity appears in the basis used in arriving at the base period net income for the years 1936-39 for excess profits tax purposes. (Sec. 30-721-1, Regulations 109.)

3. The second revenue act, as amended, affords some relief to a contractor reporting his earnings for income tax purposes on the completed contract basis, in that earnings arising prior to 1940 or subsequent to 1940 applicable to other years, are treated as abnormal income and are taxable at the excess-profits tax rates in effect during the years when the income was earned; thus, any abnormal income applicable to years prior to 1940 but received in 1940 would not be subject to excess profits tax.

But, in connection with base period net income which is the important factor to consider, section 721-3 of excess profits tax regulations 109, amended, reads as follows:

"Section 721 has no effect upon the computation of base period net income or of earnings and profits and therefore does not affect the computation of the excess profits credit.

Similarly, it has no application in the determination of taxes other than the excess profits tax imposed by subchapter E of chapter 2. Amounts attributed to future years are to be included in gross income for such years for excess profits tax purposes only.

4. Thus a contractor reporting on the percentage of completion basis has an advantage over a contractor who reported the earnings on the completed contract basis.

As an example, we can take two companies, both in the very same line of business and operating under the very same conditions. Company A had reported its earnings on the completed contract basis while Company B had reported its earnings on the percentage of completion basis. Further assuming that both companies have had contracts which took them approximately 3 years to complete, the average earnings basis for the two companies would be somewhat as follows:

	Company A	Company B		Company A	Company B
Net earnings—			Net earnings—Continued		
1935		$200,000	1939		$400,000
1936		200,000	1940	$1,200,000	400,000
1937	$600,000	200,000			
1938		400,000	Total	1,800,000	1,800,000

Thus, while both companies have approximately earned the same profit during the years 1935 to 1940, applying the earnings to the base years 1936 to 1939, we find that Company A has only an excess-profits credit of $150,000 ($600,000÷4) while Company B has an excess-profits credit of $400,000 (the average earnings for 1938 and 1939).

5. The Senate Finance Committee in its report on the Second Revenue Act of 1940, apparently realized the disadvantage to contractors who, in the past, had adopted the conservative basis of reporting on the completed contract basis, and stated in its report as follows:

> If it is determined that the income received in the taxable year is attributable to years in the base period, the amount of such income so attributable to such years will have the effect of increasing the base period net income and thus the credit under the average earnings method.

6. The regulations of the Commissioner of Internal Revenue, however, do not permit the inclusion of income in the base period earnings unless they were so reported in the tax returns for the base years. (See sec. 721 above.)

7. It is, therefore, suggested that contractors who have reported their earnings on the completed contract basis during the base years 1936 to 1939, inclusive, be permitted to arrive at an earnings base determined on the percentage of completion basis, as recommended by the Senate Finance Committee.

The reason we started with 1935 is that the contract may have been started at that point; both companies through 1940 have earned the same amount of money.

The CHAIRMAN. Any questions?

(No response.)

The CHAIRMAN. Thank you. Mr. Hook?

Mr. HOOK. I should like to have the privilege of reading this statements first, Senator, and then answering any questions which the committee may have.

The CHAIRMAN. Yes; you may proceed with it.

STATEMENT OF CHARLES R. HOOK, MIDDLETOWN, OHIO, REPRESENTING THE AMERICAN ROLLING MILL CO.

Mr. HOOK. My name is Charles R. Hook. My address is Middletown, Ohio, and I appear on behalf of the American Rolling Mill Co.

We submit to this committee that section 204 (2) of House bill 5417 should be eliminated entirely or at least amended to substitute the year 1941 for the year 1940.

Section 204 (3) of the House bill proposes to amend section 710 (c) 1 of the Internal Revenue Code, which defines the unused excess-profits credit, by adding at the end thereof a new sentence.

This new sentence provides that the excess-profits credit and the excess-profits net income for any taxable year beginning in 1940 shall be computed under the law applicable to 1941. This means, briefly stated, that the excess-profits credit carry-over for 1940 is to be recomputed under the new 1941 law, and is not to be the amount originally computed under the 1940 law.

The original excess-profits tax law was approved October 8, 1940. At that time it was generally recognized that there were certain extreme hardship cases; as a result, the experts of the Treasury and of the Joint Committee on Internal Revenue Taxation were requested to make a further study of such hardship cases.

The excess-profits-tax amendments of March 7, 1941, were the result of such study, and were in the nature of relief provisions. Among such relief provisions was that portion of the new amendment which allowed a 2-year carry-over of any unused excess-profits credit. The committee reports and the discussion of the amendments on the floor of the House and the Senate contained many statements to the effect that, after the most careful consideration by the tax experts, this carry-over provision was conceived and recommended for passage.

You will find collected in appendix A of this statement a number of the statements made by the chairman of the Ways and Means Committee and the Finance Committee, and by members of such committees in explaining the amendments to the House and the Senate. It is sufficient here to quote only one of such statements, that is, that found in the report of the Senate Committee on Finance, reading as follows:

> The bill affords relief in the following situations:
> (1) It relieves the hardships which may be caused by the sharply fluctuating earnings of many types of companies, the activities of which are dependent upon business cycles, by allowing unused excess-profits credits to be carried over into the 2 succeeding taxable years, thereby tending to level off the unusual effects due to rise and fall of income. In addition, the allowance of such an excess-profits credit carry-over will be of substantial benefit to new corporations, and to old corporations undergoing a period of expansion.

And I particularly call your attention, gentlemen, to the last part of that sentence, "And to old corporations undergoing a period of expansion." Because that hits us right in the eye.

After the passage of the excess-profits tax amendments on March 7, 1941, the directors, officers, and advisers of the American Rolling Mill Co. surveyed the excess-profits tax provisions and came to the conclusion that if any principle had been established after the most careful consideration, it was that portion of the bill which provided for an excess-profits tax carry-over computed in the manner provided by the

1940 law as thus amended. Accordingly, the American Rolling Mill Co. determined that it had a substantial excess-profits tax credit carry-over from 1940 into 1941; and on the basis of such determination proceeded with the development and execution of certain parts of a large national-defense construction program.

Section 204 (e) if enacted into law, would completely eliminate such excess-profits credit carry-over. It wipes it out completely. The American Rolling Mill Co. would find itself in the position of having made substantial commitments on the basis of an excess-profits credit carry-over which the House bill now proposes completely to eliminate. That this proposal is inequitable and unfair, seems too clear for argument. In the determination of many corporate policies during 1941, the excess-profits credit carry-over computed under the 1940 law was a material determining factor.

Senator BROWN. You mean by that, as to a great many companies, as well as your own?

Mr. HOOK. Yes, indeed.

Senator BROWN. That they adopted policies because of the law that was passed?

Mr. HOOK. Unquestionably, Senator.

The proposed amendment results in further unfair discrimination. Corporations which were prosperous in 1940 computed their excess-profits credit under the 1940 law and obtained the full benefit thereof in determining 1940 excess-profits liability. Corporations which were not sufficiently prosperous to use up their entire credit, as computed under the 1940 law, now find that it is proposed entirely to take away a portion of that credit; that is, corporations not using up their entire credit in 1940, now find the unused portion thereof is to be reduced or, as in our case, entirely eliminated. This, it seems to us, unfairly favors the prosperous corporations and penalizes the less fortunate ones.

That the proposal contained in section 402 (e) is really discriminatory is shown by the fact that a corporation which did not need all its excess-profits tax credit in 1940 will pay a higher excess-profits tax for the 2 years of 1940 and 1941 in relation to its earnings than a corporation which could take advantage of and use up its entire excess-profits tax credit in 1940.

And that, gentlemen, I think is a pretty serious matter. I think that is evidently very discriminatory and I don't believe the House intended it should be. I can't believe it was given the consideration and thought that it deserved when this section was put in.

Approximately 5½ months have expired since the passage of the excess-profits tax amendments on March 7, 1941. Within such period, corporate policies as affected by tax considerations have become crystallized.

We submit it is unfair and discriminatory at this time to reduce the excess profits credit carry-over from 1940, which was a material factor in such policy determinations. We urge, on the contrary, that section 204 (e) should either be entirely eliminated, or that it should be amended so as to make its provisions applicable in a prospective manner only—not in a retroactive manner.

Senator TAFT. Mr. Hook, I have had several letters from other concerns. Have you had any communications from Cincinnati concerns?

Mr. HOOK. Yes; it happens they have been sent here to Washington. I did not know whether I would have time to introduce those. One is the Rapid Electrotype Co., of Cincinnati, whose invested capital is $880,375.35 which shows that it is not a big company. To them this is a very serious matter.

Let me read a portion of this and if you like, I will leave it for the record.

The CHAIRMAN. Yes; you may do that.

Mr. HOOK. It says:

In our particular case, our excess-profits credit computed under the invested capital method was $70,430.03, and our excess-profits net income for 1940 was $16,072.06, leaving an excess-profits credit carry-over of $54,357.97. For the year to date our excess-profits net income is approximately equal to our excess-profits credit, so that we may be compelled to pay an excess-profits tax for 1941 even though for the years 1940 and 1941 combined we will not have earned net income equal to the percentage of invested capital fixed by Congress in determining excess profits. This will work a hardship upon us, for it will retard our recovery from a long series of unprofitable years.

Senator TAFT. File that.

Mr. HOOK. Yes.

Senator TAFT. Have you another one?

Mr. HOOK. This is short, and I will read it. It was written to me under date of August 11, 1941, by the Sorg Paper Co., of Middletown, Ohio. It says:

Mr. C. R. HOOK,
American Rolling Mill Co.,
Middletown, Ohio.

DEAR MR. HOOK: Pursuant to our conversation, we hereby authorize you to act for and in our behalf with respect to securing a revision of section 204 (c) of the revenue bill of 1941.

This section of the act seems to us very unjust and places our company, as well as others, at a decided disadvantage because it reduces the benefits of the carry-over of unused credits from 1940, a year in which the earnings of many companies did not require the payment of excess-profits taxes.

Our company will be obliged to pay approximately $20,000 more income and excess-profits taxes should the above section of the revenue act become operative. While this amount from a percentage standpoint is only approximately 6½ percent, it is from a dollar-and-cent basis the equivalent of a quarter of a year's dividend on the preferred stock of our company. At the present time we are in arrears over $290,000 on preferred dividends.

The attached exhibits show how section 204 (c) adversely affects our company.

Yours very truly,

THE SORG PAPER COMPANY,
(Signed) J. A. AULL, Jr.,
Vice President and Treasurer.

Senator RADCLIFFE. Do you care to make on estimate by percentages or any other way what will be the effect of this on your own company?

Mr. HOOK. Yes; I can give you that exactly.

If you would like, while I am giving you these figures, here are some extra copies. I will be glad to pass them around.

Now, what you want is exactly the dollar-and-cent effect on our particular company if this provision, 204, remains in the bill?

Senator RADCLIFFE. Yes; I would like to see how it would work out, either by actual figures or percentages.

Mr. HOOK. I will give you exhibits A and B, and here is another exhibit which will show another phase of this situation.

On exhibit B, which you have there, Senator, you will notice that on the first set-up on the left we show the tax which would be paid for the 6 months and for the year, the year being based on the actual earnings for the 6 months, after giving effect to section 204 of the bill.

Now, on the right, we set it up showing what it would be if section 204 (e) were eliminated. In other words, in the first 6 months of 1941 we will pay, if this amendment stays in, $6,545,118.72, as against $5,979,736.52 if it were eliminated.

In other words, on an annual basis, multiplying the difference by 2 for the 6 months, it amounts to $1,130,764.42, which, in view of the large amounts of money we have borrowed ourselves—not from the Government but from financial institutions for these larger defense construction purposes—makes it, as you can see, a very considerable item.

Senator TAFT. How much money have you spent in expanding your plant?

Mr. HOOK. Well, I thought somebody would ask me that question so I had better have it with me.

Since August 1, 1940, up to and including August 1, 1941, we have borrowed in all $34,000,000. Now 3½ million dollars of that was to pay off a $2,000,000 first mortgage serial note which we guaranteed of a company we took over.

And a million and a half of bank loans paid off so it left a net of $30,500,000, all of which has gone into national-defense construction, or for working capital to support defense projects.

That statement is supported by the fact that we have had issued to us up to the present time necessity certificates which are only issued where the project is a national-defense one and considered necessary in the interest of national defense.

The total amount of these certificates approved, excluding land, is $22,922,402.80, so you can see, from what I say with respect to these larger amounts of money borrowed to go into essential and necessary defense projects what our problem is.

Senator TAFT. Those are all company projects; they are not loans from the R. F. C.?

Mr. HOOK. There is a $12,000,000 loan which is a straight R. F. C. loan for the Houston, Tex., plant. The twenty-two-million-odd dollars are loans made from two insurance companies, and the longest term on any one of these loans is 15 years; that is one, the balance are all 10 years.

Senator TAFT. Now you had a carry-over of something like $2,000,000 under the old law, and that $2,000,000 carry-over is now entirely eliminated?

Mr. HOOK. Yes; we had a carry-over of $2,692,296.24, and by applying the 1941 law to 1940 it completely eliminates it, and I will show you how, if you want these exhibits.

Senator CONNALLY. Have you a lot of national-defense contracts?

Mr. HOOK. You mean direct orders from the Government?

Senator CONNALLY. Direct or indirect.

Mr. HOOK. Yes; take, for instance, one of our plants is operating 80½ percent on defense orders.

Senator CONNALLY. You are making money on that, aren't you?

Mr. HOOK. I think we are making some money on that.

I am glad you asked that question because on another we have, for instance, one of our plants at Butler, Pa., and it is no secret—and I don't mind telling you so—where, because of this unusual situation, shortage of scrap and ceiling set on our prices, we are not even coming out on a works profit on a large part of our operations.

Senator CONNALLY. You figured that when you submitted the bids, didn't you?

Mr. HOOK. No; we didn't.

Senator CONNALLY. One reason you are going to make more money in 1941 than in 1940 is because of these war contracts, isn't it?

Mr. HOOK. Well, it is the total——

Senator CONNALLY. Well, is it or isn't it?

Mr. HOOK. Of course, defense has stimulated business.

Senator CONNALLY. But you want to carry over your 1940 credit as against this stimulated business?

Mr. HOOK. No; I am not arguing against the increased revenue to the Government.

Senator CONNALLY. But you want somebody else to pay it.

Mr. HOOK. No; I want an equitable arrangement whereby the inequities of the law will be changed.

Senator TAFT. You don't want the Government to go back on its word.

Mr. HOOK. Yes.

Senator CONNALLY. Well, the Government doesn't go back on its word because everybody who deals with the Government knows that laws will be passed——

Senator TAFT. The Government has no word, is that it?

Senator CONNALLY. That isn't it; when the Government passes a law that is not going back on its word.

The CHAIRMAN. What was your normal income tax?

Mr. HOOK. $2,128,996.96.

The CHAIRMAN. That was the normal tax paid for 1940?

Mr. HOOK. Yes.

The CHAIRMAN. You had a credit under the excess-profits tax which you would carry over but for the reversal of credit under this bill?

Mr. HOOK. That is right; we would have had a carry-over of $2,692,296.24.

The CHAIRMAN. And you don't have this credit now because of the reversal of the credit?

Mr. HOOK. That is right.

The CHAIRMAN. That is substantially what your situation is?

Mr. HOOK. Yes; the reduction in invested capital, of course——

The CHAIRMAN. Yes; yes.

Mr. HOOK. But here we have an exhibit, Senator, which shows exactly how that works out, the actual figures.

Senator GUFFEY. A few days ago I passed through Butler and by your plant and I didn't see any shortage of scrap in the pile there along the railroad for about a mile. How much scrap do you use?

Mr. HOOK. Well, that plant—we have to buy, normally, if we get our normal supply of pig iron, approximately 28,000 tons per month. Now, you saw a lot of scrap there, if you passed through there, that normally we would not use; we call it "hay." That is why it has increased our cost of operations.

Senator GUFFEY. What plant are you building in Texas?

Mr. HOOK. The Sheffield Steel Corporation of Texas, a wholly owned subsidiary of American Rolling Mill.

Senator GUFFEY. An open-hearth plant?

Mr. HOOK. Yes, open-hearth. We make rods, billets, bars, plates, and wire.

Senator GUFFEY. Where is it?

Mr. HOOK. At Houston, on the ship canal, just 10 miles out of the center of the city.

The CHAIRMAN. Any additional questions?

(No response.)

The CHAIRMAN. Put in the record any exhibits or letters that you have so that we may have them.

(The letter dated August 11, 1941, from the Rapid Electrotype Co., and telegram of August 16, 1941, from Rapid Electrotype Co., interoffice communication of August 19, 1941, from Mr. Kingsbury, exhibits attached to letter of August 11, 1941, from Sorg Paper Co., and exhibits A and B of American Rolling Mill Co., and appendix A, excerpts from the Congressional Record and the Congressional Committee Reports, referred to by Mr. Hook, are as follows:)

THE RAPID ELECTROTYPE CO.,
Cincinnati, Ohio, August 11, 1941.

Mr. CHARLES R. HOOK,
Mayflower Hotel,
Washington, D. C.

DEAR MR. HOOK: We understand that you are proposing to make a protest to a congressional committee against the proposed elimination of the excess-profits credit carry-over provision of the present excess-profits-tax law. As we are not in a position to make a visit to Washington or to employ counsel to represent us, we would ask you, and hereby authorize you, to make a similar protest in our behalf.

The excess-profits credit carry-over was enacted in the original law as a relief provision and was liberalized by the amendments passed in 1941. The excess-profits tax law was intended to tax profits in excess of 8 percent of invested capital or 95 percent of the average earnings over the 4 preceding years. Since

it was the intention of the law to tax only the excess profits, it seems only fair to permit companies whose net income was less than their excess-profits credit to carry such excess over to the following or the second succeeding year, and in this manner avoid hardship to companies whose income fluctuates sharply between years, or to new or old companies whose business is rapidly expanding.

The carry-over provisions of the present law afford much-needed relief in cases of this nature, and we protest very strongly against any attempt to eliminate the present provisions without substituting provisions which will afford similar relief.

In our particular case, our excess-profits credit, computed under the invested capital method, was $70,430.03 and our excess-profits net income for 1940 was $16,072.06, leaving an excess-profits credit carry-over of $54,357.97. For the year to date our excess-profits net income is approximately equal to our excess-profits credit so that we may be compelled to pay an excess-profits tax for 1941 even though for the years 1940 and 1941 combined we will not have earned net income equal to the percentage of invested capital fixed by Congress in determining excess profits. This will work a hardship upon us, for it will retard our recovery from a long series of unprofitable years.

All small business, which has found it increasingly hard to operate within the past few years, will be similarly affected. To this group as a whole the elimination of the excess-profits credit carry-over provision would be most unfair.

We would appreciate your presenting our protest to the proper officials and trust that your protest will receive favorable consideration.

Very truly yours,

THE RAPID ELECTROTYPE CO.,
C. E. CATTON,
Secretary-Treasurer.

[Telegram]

CINCINNATI, OHIO, *August 14, 1941.*

CHARLES R. HOOK,
Mayflower Hotel, Washington, D. C.:

Supplementing our letter August 11, invested capital our 1940 excess-profits tax return $880,375.35.

THE RAPID ELECTROTYPE CO.,
C. E. CATTON.

ARMCO,
Middletown, Ohio, August 19, 1941.

Mr. CHARLES R. HOOK, *President.*

Below is given summary of applications for necessity certificates which we have issued. All of these have been approved with the exception of the application covering the new jobbing mill at Ashland.

1. Hamilton plant, for blast furnace and related equipment to provide additional pig iron capacity:
Date of application: January 14, 1941.
Amount of application: $689,505, changed to $663,802.80 because we could not substantiate $25,702.20 on the furnace.
Approved and certificate issued February 20, 1941.
Certificate No. ND N-59.
2. Hamilton plant, for 25 coke ovens to increase its coke productive capacity:
Date of application, January 14, 1941.
Amount of application, $802,690.
Approved and certificate issued February 11, 1941.
Certificate No. ND-N-58.
3. Butler division for cold reversing mill.
Date of application, January 20, 1941.
Amount of application, $650,000.
Approved and certificate issued February 20, 1941.
Certificate No. ND-N-82.
4. Middletown division for 54-inch cold mill and accessories.

Date of application, January 20, 1941.
Amount of application, $3,626,000 (excluding land).
Approved and certificate issued February 20, 1941.
Certificate No. ND-N-83.
5. Ashland division for new blast furnace.
Date of application, March 18, 1941.
Amount of application, $5,530,000 (excluding land).
Approved and certificate issued May 2, 1941.
Certificate No. ND-N-321.
6. Sheffield Steel Corporation of Texas, for a complete steel plant:
Date of application: January 14, 1941.
Amount in total: $12,000,000 (excluding land $11,650,000).
Approved and certificate issued: April 11, 1941.
Certificate number: ND-N-47.
7. Ashland division for construction of jobbing mill:
Date of application: January 20, 1941.
Amount of appplication: $1,000,000.
Not approved as yet.
The total amount approved, excluding land, is $22,022,402.80.

Referring to our funded debt, the various issues and dates on which these issues were made are listed in the following table:

Cash received	Dated	Description	Amount
Aug. 1, 1940	July 1, 1940	10-year, 3-percent debentures, series A	$5,000,000
Apr. 1, 1941	Jan. 1, 1941	do	2,500,000
Dec. 4, 1940	Dec. 1, 1940	Series B to K, debentures $5,000,000 Paid Dec. 26, 1940, series B 500,000	4,500,000
Apr. 1, 1941		14-year 3⅜-percent debentures, series L	5,000,000
		Total	17,000,000
Aug. 1, 1941	Apr. 1, 1941	Series L debentures	5,000,000
		Total	22,000,000

The funds received from sale of the first block of series A, 10-year 3-percent debentures were used to pay off the first mortgage guaranteed serial notes, 4 percent, of Hamilton Coke & Iron on July 31, 1940, in the amount of $2,000,000, and bank loans in the amount of $1,500,000 paid on August 1, 1940.

C. L. KINGSBURY, *Controller.*

THE SORG PAPER CO.

Computation of estimated taxes for 1941, based on revenue bill of 1941, showing the effect of the provisions of section 204 (e) relating to recomputation of the credit carry-over from 1940

	Giving effect to the provisions of sec. 204 (e)		Before giving effect to the provisions of sec. 204 (e)	
Estimated invested capital for 1941		$5,500,000.00		$5,500,000.00
Estimated excess-profits net income		825,000.00		825,000.00
Credit on invested capital:				
8 percent on $5,000,000	$400,000.00		$400,000.00	
7 percent on $500,000	35,000.00		35,000.00	
Specific exemption	5,000.00		5,000.00	
Carry-over from 1940: Computed under 1941 act	156,067.25		212,577.53	
		596,067.25		652,577.53
Adjusted excess-profits net income		228,932.75		172,422.47
Excess profits tax:				
On $100,000.00 $100,000.00	41,500.00		41,500.00	
On $128,932.75 $72,422.47	64,466.38		36,211.23	
228,932.75 172,422.47	105,966.38		77,711.23	
Estimated excess profits net income		825,000.00		825,000.00
Less excess-profits tax		105,966.38		77,711.23
		719,033.62		747,288.77
Subject to income tax and surtax:				
30 percent of $719,033.62, less 1 percent on $25,000	215,460.09		----------	
30 percent of $747,288.77, less 1 percent on $25,000	----------		223,936.63	
Total estimated taxes	321,426.47		301,647.86	
Difference in credit carry-over from 1940:				
Income-tax deduction		56,453.99		
Reduction in credit on invested capital at 1 percent on the excess over $5,000,000		56.29		
		56,510.28		

THE AMERICAN ROLLING MILL CO.

Estimated credit on consolidated invested capital for 1941, computed under the provisions of H. R. 5417; also the estimated credit before giving effect to the provisions of section 204 (e) of the bill

Estimated invested capital for 1941 (equity and borrowed)		$127,067,780.32
Credit on invested capital for 1941:		
8 percent on $5,000,000 equals		400,000.00
7 percent on $122,067,780.32 equals		8,544,744.62
Specific exemption		5,000.00
Total credit under the 1941 bill after giving effect to the provisions of sec. 204 (e)		8,949,744.62
If it were not for the provisions of sec. 204 (e) of the bill, we would have the benefit of a carry-over credit from 1940 as follows:		
Credit on invested capital for 1940 at 8 percent on estimated invested capital of $115,285,802.67	$9,222,864.22	
Less: Tentative excess profits net income for 1940	6,530,567.98	
Credit carry-over to 1941 from 1940		2,692,296.24
Total credit under the 1941 bill before giving effect to the provisions of sec. 204 (e)		11,642,040.86

Sec. 204 (e) of the bill amends sec. 710 (c)(1) of the act as amended by the excess-profits tax amendments of 1941 by adding the following sentence: "For such purpose the excess-profits credit and the excess-profits net income for any taxable year beginning in 1940 shall be computed under the law applicable to taxable years beginning in 1941."

The above provision appears to nullify entirely the credit carry-over from 1940 of $2,692,296.24, as follows:

Credit on invested capital of $115,285,802.67 for 1940 computed under the reduced rates under the 1941 bill		$8,120,006.19
Tentative excess-profits net income for 1940 (as above)	$6,530,567.98	
Add: Income tax for 1940 not deductible under the bill	2,128,996.98	
Tentative excess-profits net income for 1940 for purpose of computation as provided by sec. 204 (e) of the bill		8,659,564.96
Estimated unused credit for 1940		None

THE AMERICAN ROLLING MILL CO.

Computation of consolidated income and excess-profits taxes for the first 6 months 1941 (estimated), based on revenue bill of 1941, H. R. 5417

	After giving effect to provisions of section 204 (e) of the bill		Before giving effect to provisions of section 204 (e) of the bill	
	Income	Tax	Income	Tax
Consolidated net income for first 6 months 1941	$11,570,296.93			
Less: Dividends not subject to excess-profits tax	153,958.70			
	11,416,338.23			
Placed on an annual basis, $11,416,338.23×12/6	22,832,676.46			
Add: 50 percent of estimated interest on borrowed capital for 1941	368,750.00			
Excess-profits net income	23,201,426.46		$23,201,426.46	
Deduct: Credit on invested capital	8,949,744.62		11,642,040.86	
Adjusted excess-profits net income (annual basis)	14,251,681.84		11,559,385.60	
Excess-profits tax:

Net income after taxes		16,296,100.80		18,988,397.04		19,626,702.21
Net income retained after taxes in excess of American Rolling Mill Co.'s				2,692,296.24		3,330,601.41

[1] 2.45 percent (by which (1) exceeds (2)) of American Rolling Mill Co.'s earnings for the 2-year period of $31,515,335.23 results in a higher tax to American Rolling Mill Co. of $772,125.71. 2.95 percent (by which (1) exceeds (3)) of American Rolling Mill Co.'s earnings for the 2-year period of $31,515,335.23 results in a higher tax to American Rolling Mill Co. of $929,702.39.

APPENDIX A.—*Excerpts from the Congressional Record and the Congressional Committee Reports*

SENATE RECORD EXCERPTS

In the Senate on March 3, 1941 (Record, p. 1674) Senator George stated with respect to H. R. 3531:

"I may say that the Senator from Nevada has taken, in my judgment, a very wise and liberal view of this amendatory tax measure. The amendment adopted by the Ways and Means Committee and recommended favorably by the Finance Committee simply remedies certain extreme hardship cases under the excess-profits tax act. It has been agreed to by the Treasury, it has full Treasury approval, it has the approval of the staff of the Joint Committee on Taxation * * *."

Senator Harrison stated (Record p. 1676):

"I may say that that matter was very important. In addition to allowing mining interests the right to spread the income over the development period, the bill allows a 2-year carry-over for unused credits, special relief for growing corporations and other relief for changes in the character of the business."

At page 1676 Senator George stated:

"Let me point out the fact that it is very helpful to mining companies—not that the Senator from Colorado is interested only in mining companies—in that it provides for a 2-year carry-over of any unused credit that a taxpayer may have, whether he is on the prior-earning basis or the invested-capital basis. That is very helpful. Suppose that during those 2 years a corporation has had a loss or did not earn anything, it had a basis, however, which would have given it a certain exemption from the excess-profits tax. Suppose then that in the 3 or 4 years of its operation it had a large profit. In the taxable year the amendment would give it the right to carry over 2 years of its unearned (unused) credit as against the profits of the year in which it had an abnormally large profit."

Senator Harrison (Record, p. 1677) stated:

"I will now discuss briefly the main aspects of the bill:

"Section 2. The bill provides for a 2-year carry-over of the unused excess-profits credit. The unused excess-profits credit for any taxable year is the amount by which the excess-profits credit for such taxable year exceeds the excess-profits income for such year. This provision will be extremely helpful to new corporations and to old corporations undergoing a period of expansion. It will be recalled that the Senate last year adopted a provision for a 2-year carry-over of the unused excess-profits credit for any taxable year beginning after December 31, 1939, in the case of a corporation 80 percent or more of whose gross income is derived from mining or processing minerals or from processing or otherwise preparing for market any seasonable fruit or vegetable or any fish or other marine animal life. In the conference this provision was eliminated and a substitute provided which allowed a 1 year carry-over in the case of a corporation, the normal tax net income for the year did not exceed $25,000. It was requested in the conference report that the Treasury and the staff of the Joint Committee on Internal Revenue Taxation were to study this limited carry-over with a view to its possible extension. As a result of this study the bill now provides for a 2-year carry-over for all corporations, regardless of the size of their net income."

The bill was passed (Record, p. 1680) and became law March 7, 1941 (Public Law 10, 77th Cong.).

SENATE COMMITTEE REPORT EXCERPT

Report No. 75 of the Senate Committee on Finance, Seventy-seventh Congress, first session, in outlining the relief to be afforded by H. R. 3531 stated among other things the following:

"The bill affords relief in the following situations:

"(1) It relieves the hardships which may be caused by the sharply fluctuating earnings of many types of companies, the activities of which are dependent upon business cycles, by allowing unused excess-profits credits to be carried over into the 2 succeeding taxable years, thereby tending to level off the unusual effects due

to rise and fall of income. In addition, the allowance of such an excess-profits credit carry-over will be of substantial benefit to new corporations, and to old corporations undergoing a period of expansion."

Report No. 146 of Ways and Means Committee, Seventy-seventh Congress, first session, contains a similar statement.

HOUSE RECORD EXCERPTS

On February 25, 1941, speaking of the 1940 act, Chairman Doughton stated:

"The conferees had great difficulty in reaching an agreement upon that bill. We could foresee that unpredictable issues would arise, but we did not know what their nature would be or how they would arise. So we provided for further study of the subject and the pending bill is the result of the study that has taken place between October and the present time." (Congressional Record, February 25, 1941, p. 1411.)

Speaking of H. R. 3531 (act of March 7, 1941), Chairman Doughton said:

"The present bill proposes no new tax, imposes no new burden on anyone; in other words, it does not raise additional revenue; if anything, it may actually reduce the revenue slightly, but even if it does, we feel it is thoroughly justified in order to give justice to the taxpayers, because the taxpayers, of course, are the ones who support this Government." (Same reference.)

Still speaking of H. R. 3531, Chairman Doughton also said:

"The bill therefore is not confined to a mere attempt to make section 722 furnish a complete answer to the problem. Many cases were found where the hardship caused by the present excess-profits tax could be remedied by the specific provisions, such as section 2, which gives a carry-over of 2 years of the amount of excess-profits credit not needed in the taxable year * * *."

Chairman Doughton also stated on the same occasion:

"The studies leading to this legislation were conducted by the Treasury staff under the supervision of Mr. Sullivan, Assistant Secretary of the Treasury and by the staff of the Joint Committee on Internal Revenue Taxation, under the direction of Mr. Colin Stam, Chief of Staff. The joint recognition of these experts were reduced to legislative language by the legislative counsel of the House.

"In all my experience with legislation pertaining to tax matters I have never known any committee, or any staff, to work more assiduously, continuously and steadily on a problem than was given to this bill in an effort to recommend amendments to carry out the original purpose of the bill. I am glad to say that the staffs worked together not only assiduously but harmoniously, and they are in perfect agreement as to the policy outlined in this bill. Their recommendations have been fully and thoroughly considered by our committee, and as a result this bill has been approved by the committee."

Still speaking of the bill 3531 Chairman Doughton continued (Record, p. 1413):

"I may say further that there is not a smell of partisanship to this bill anywhere. It comes here with a unanimous report and every member of the committee has been present, I believe at, at least, several of the sessions when the bill was under consideration and when it was fully explained. They have acquired full knowledge of the import of this measure and it has the unanimous support of the committee."

Mr. Treadway (Record, p. 1415) stated:

"The bill has the unanimous support of the Republican minority on the committee. It is not a tax bill but a relief bill; its object is to prevent hardships and inequalities under the so-called excess-profits tax. I want to say still further that the House must remember this is a bill prepared to carry out an assurance made in the reports on the original bill which became law in October 1940. We inserted in the conference report at that time the following language relating to the question of relief:

"'It is understood that the Treasury and members of the staff of the Joint Committee on Internal Revenue Taxation would give further study to the entire problem covered by this section and will report to the appropriate committees on the subject as soon as possible.'"

Mr. Cooper (Record, p. 1418) stated:

"This bill is for the purpose of affording additional relief in hardship cases where further study and consideration have revealed that more relief should be afforded. After about 3 months' additional study and work it is possible to bring this bill before the House today providing certain additional relief for so-called hardship cases under the excess-profits tax bill of last year.

"With the indulgence of the committee I would now like to enter into a brief explanation of the principal provisions of the pending bill.

"Under present law corporations with $25,000 or less normal tax net income are allowed a 1-year carry-over of unused excess-profits credit. Under the pending bill all corporations, regardless of size, are given a 2-year carry-over of unused excess-profits credit."

The CHAIRMAN. Mr. Jaretzki. Will you give your name to the reporter and state for whom you appear?

STATEMENT OF ALFRED JARETZKI, JR., REPRESENTING SULLIVAN & CROMWELL, NEW YORK, N. Y.

Mr. JARETZKI. My name is Alfred Jaretzki. I am a member of the law firm of Sullivan & Cromwell, New York, N. Y., and am appearing on behalf of a group of investment companies of the so-called closed-end type.

In brief, what we are asking for is, in view of this increased taxation, that we be relieved from the effect of double taxation on our stockholders.

At the present time, as a result of the application of the tax law to these investment companies, the shareholder is required to pay, directly or indirectly, taxes at rates far greater than would be applicable to him if he invested directly in the underlying securities.

The CHAIRMAN. Is this the old problem of the open-end companies?

Mr. JARETZKI. This is the problem of the closed-end companies.

The CHAIRMAN. It is the same problem?

Mr. JARETZKI. Yes; the same problem. The increased tax rates proposed only serve to accentuate this unfairness. My purpose is to ask that the proposed increase in rates be applied in such a manner as to rectify this unfair and burdensome situation; and I am certain that this can be done by a few very simple amendments of the bill.

This is no new problem, but it is only with the passage of the Investment Company Act of 1940, that there came a readiness to remedy the situation. Specifically, the Securities and Exchange Commission had been unwilling that relief be granted until the investment companies were subjected to Federal regulation.

The Senate Committee on Banking and Currency in reporting the Investment Company Act wrote:

* * * it appears that the nature of these companies in many respects, constituting a conduit for distribution of income to the smaller investor, is such that they should not be subjected to the same type of taxation as the ordinary business corporation. This has already been recognized in respect of certain classes of open-end companies which receive special tax treatment under existing Federal tax laws. The record before the committee indicates that the tax problem is acute with respect to closed-end companies of the type classified in this bill as "diversified." If this bill is passed, the committee believes that the tax problem of these companies should receive prompt consideration.

In line with the foregoing, diversified investment companies—those are the companies I am representing—were exempted from the

excess profits tax of 1940. But the problem of affording relief under general corporate taxes was postponed until 1941.

At that time we were told it was inappropriate to go into the general subject and it could be taken up in the next year's bill, which is the present bill.

The diversified investment company is designed to afford the small investor an opportunity to pool his resources with those of others for the purpose of obtaining a proper diversification of risk and the benefit of expert investment management. The studies of the Securities and Exchange Commission show that there are an estimated 1,500,000 security holders in investment companies of all types; that the average value of the common stock held per stockholder in 1935 amounted to only $1,774; and they show that approximately one-half of the common stockholders of investment companies hold stock with a value of $500 or less.

I point this out because it indicates it is the small investor that holds the stock of investment companies.

These studies indicate that the typical shareholder in investment companies is one whose personal income tax under the law as it now exists would range from 4.4 to 8.8 percent and whose tax under the present bill as passed by the House would range from 4.4 to 16.5 percent.

Now, under the existing method of taxation this individual is required to pay a high price in Federal taxes for the privilege of investing through an investment company, in comparison with the individual investing directly in the stocks of the underlying companies. The individual investor is taxed only once on the earnings on his investments, and is entitled to a reduced rate of tax in the case of long-term capital gains. The investment company stockholder, on the other hand, will first have to bear a corporate tax of 30 percent on the earnings on investments, apart from dividends which are only taxed in part, and again pay a tax when those earnings are distributed to him as a dividend; in addition neither the investment company nor the stockholder is entitled to any reduced rate of tax on long-term capital gains.

For example, if an individual whose effective personal income tax rate is 15 percent sold stock of an industrial company which he had held for more than 2 years at a profit of $1,000 he would pay a tax of $75 and would retain $925. If he had invested in the stock of an investment company and the company held similar stock and sold it for a similar gain of $1,000, the investment company would pay initially a Federal income tax of $300, leaving only $700 of the profit to be distributed to stockholders. When the company distributed the $700 as a dividend to the stockholder, he would pay a tax of 15 percent, or $105. Thus the stockholder in an investment company would bear a tax of $405 and retain only $595 out of the $1,000 profit as against a $75 tax and a $925 retention on the part of the direct investor.

The proposals which we advocate are designed to eliminate as far as possible the discrimination now existing against investment company stockholders by imposing upon the company and the stockholder a tax burden comparable to that now borne by a direct investor.

Senator DANAHER. What would be the same tax to an investor in an open-end company?

Mr. JARETZKI. He generally pays substantially the same tax as the individual who invests directly.

Because we have endeavored to propose changes which would have the merit of simplicity, the amendments would still leave the investment company stockholder at some tax disadvantage compared with the direct investor, but these, we believe, would be reduced to a minimum.

It is not possible to treat these companies exactly as open-end companies because there are other problems, but we attempt to make them approximately the same.

Briefly stated the amndments are as follows:

First, apply to investment companies the provision now in effect as to capital gains on securities held by individuals, namely that only 50 percent of a capital gain or loss on the sale of securities held for more than 24 months, or 66⅔ percent in the case of securities held between 18 and 24 months, be taken into account in computing net income of these companies.

Second, extend to diversified companies the principle as to credit for dividends applying to so-called mutual or open-end companies since the Revenue Act of 1936. Specifically, provide that if a diversified investment company distributes 90 percent or more of its ordinary net income, the corporate income tax shall be imposed upon the net income remaining after deducting dividends paid to stockholders.

In other words, the corporation would only pay a tax on so much of its income as it didn't distribute to its stockholders.

Senator CONNALLY. You mean, it would be exempt from the normal tax on the theory the stockholders would pay a tax on their dividends?

Mr. JARETZKI. Yes. These mutual companies——

Senator CONNALLY. Well you are not a mutual company.

Mr. JARETZKI. These so-called mutual companies—that designation does not mean they are nonprofit.

Senator CONNALLY. I realize that; I think there is a lot of fake in some of them.

Mr. JARETZKI. The point is that the open-end companies got this treatment in 1936; we haven't. It is perfectly true that the ordinary business corporation or industry corporation has this double taxation.

Senator CONNALLY. And the bank has it?

Mr. JARETZKI. Yes.

Senator CONNALLY. And you are competing with banks?

Mr. JARETZKI. No, sir. We are competing with the individual investor.

Senator CONNALLY. You are competing with banks and trust companies?

Mr. JARETZKI. No.

Senator CONNALLY. Well, you buy and sell securities?

Mr. JARETZKI. We are an investment company, investing in securities. The stockholder buys stock and in so doing he pools his individual funds with those of others, and by so doing, is able to get a wider diversification than otherwise he could.

Now, the whole question is whether this type of company can survive if it has to pay this tax. It is perfectly true that other companies do, but we believe the Securities and Exchange Commission have come to the conclusion that investment companies cannot survive if they must pay this tax.

The CHAIRMAN. Have they made any such announcement?

Mr. JARETZKI. No, sir.

The CHAIRMAN. The Security people appeared before this committee, I think last year, or was it the last year or the year before.

Mr. JARETZKI. Several years ago before the passage of the investment company act, the S. E. C. took the position they were opposed to any amelioration of our situation so long as we were unregulated.

The CHAIRMAN. They stated they were making a study to see if you were not entitled to comparable tax treatment.

Senator BROWN. That was last year.

The CHAIRMAN. And they did recommend an exemption of your type of company?

Mr. JARETZKI. They did; they naturally don't want to voluntarily appear and urge this thing but I feel, if they were asked, they would make such a recommendation.

The CHAIRMAN. The chief distinction with your type of company and the chief reason you cannot come under the law, is your stockholders have not the right to redeem their stock?

Mr. JARETZKI. That is right; that has disadvantages and advantages. These open-end companies where the stockholder has the right to redeem at any time at the liquidating value, that is an advantage, but the disadvantage which the Securities and Exchange Commission recognizes is that there is, under such a practice, a constant flow of liquidations and in order for the organization to survive, it must constantly continue to sell its stock and open-end companies are, therefore, in the business of distributing their own stock, whereas the closed-end companies are not.

And that has its disadvantages, and the records show, on investigation of the S. E. C., that there is no better performance record for instance, on the part of the open-end than on the part of the closed-end companies. They have stated that there is no reason why one type should be preferred at the expense of the other.

They have always taken that position, but were unwilling, until we were regulated by the Federal Government, to stand behind any tax advantages to investment companies as a group. Now we are subject to Federal regulation, and I know, because I have discussed with members of the Commission and members of their staff, they are prepared to support a proposal for tax relief, and I think, if asked to appear, they would support the changes I urge.

Senator CONNALLY. You mean exemption from the normal tax?

Mr. JARETZKI. Yes.

Senator CONNALLY. You think the S. E. C. would favor that?

Mr. JARETZKI. Yes.

Senator CONNALLY. Let me ask you this question: Your business is based on the theory that a number of individuals, by pooling their buying power and purchasing stock in these investment companies, thereby acquire a more diversified list of securities, or an interest in them than would be possible if purchasing directly?

Mr. JARETZKI. Yes; that is true.

Senator CONNALLY. Do you buy on the stock exchange or over the counter?

Mr. JARETZKI. Mostly on the stock exchange.

Senator CONNALLY. You operate on the exchange?

Mr. JARETZKI. Yes.

Senator CONNALLY. And what you make goes into your company and then is distributed out to your stockholders?

Mr. JARETZKI. Yes.

Senator CONNALLY. What difference is there between you and any other people who operate on the stock exchange?

Mr. JARETZKI. Well, if a person operates directly on the exchange, they would pay this tax amounting to $75, whereas operating through investment companies, they pay a tax of $405.

When I say "operate," I am using your language, but I do not mean "operate" in the normal sense; these are investment not trading companies.

Senator CONNALLY. You trade; you buy and sell?

Mr. JARETZKI. We buy and sell the same as any individual. He may buy some shares of United States Steel today and 1 year or 2 years or 3 years or 6 months later may decide he wishes to have something else. He doesn't trade in the sense of the person who buys and sells securities every day.

Senator CONNALLY. How does the trust or officers get compensated; you just pay the officers out of the net profit; you don't get any commissions?

Mr. JARETZKI. That is correct, sir.

In order that the provisions of the statute regarding capital gains may extend to the investor through an investment company as well as the direct investor, provision should also be made that after all other net income of the taxable year of an investment company has been distributed, any distribution out of net long-term capital gain realized by the company in the taxable year shall be taxed to the shareholders as long as long-term capital gain.

Third, exempt diversified investment companies from capital-stock tax and declared-value excess-profits tax. This combination of taxes has no sound or logical application to these companies. For, as applied to a company of this type, the tax depends largely upon the capital gains which the company may happen to realize, and in substance imposes upon the company the impossible task of predicting 3 years in advance what may happen to security prices and what occasion the company may have to change its investments during that period. Such a problem does not exist in the case of ordinary business corporations where the realization of capital gains rarely occurs in substantial amounts. This principle was recognized by Congress in 1940, when diversified investment companies were exempted from the operation of the excess-profits tax then enacted. The reasons for that exemption apply especially to this proposal.

Fourth, amend section 102, which imposes a surtax on companies improperly accumulating surplus, so as to exclude long-term capital gains from net income of a diversified investment company for purposes of that section. Sound policy frequently requires that these investment companies retain long-term capital gains realized during an advancing market in order to offset inevitable losses incurred in a falling market.

There is no danger that these public companies would be used for purposes of tax evasion, because no one would attempt to avoid surtaxes by organizing or participating in a public investment company in order to save a maximum individual tax of 22 percent on long-

term capital gains, while incurring a 30-percent corporate tax on such gains.

To summarize in a few words—the stockholders in these companies are fully prepared to bear their share of the added tax burden called for in the existing emergency, but strongly urge that the existing discrimination between them and the direct investor, and between them and the investor in the open-end companies, be removed so far as practicable.

I may add that I have discussed this matter over many months with representatives of the Securities and Exchange Commission and I am confident that the Commission, if its opinion were sought by this committee, would support the substance of the proposals I have made.

Senator CONNALLY. May I ask one question? Are you contending that the investment company should not pay any more than the individual investor?

Mr. JARETZKI. Not quite, sir. I am saying in effect that if the income passes through to the individual stockholder, the company should not pay a tax at all; the stockholder should pay the entire tax the same as if he was making a direct investment.

Senator CONNALLY. You say the ordinary man would pay $75 in that case?

Mr. JARETZKI. Yes.

Senator CONNALLY. And you want each of your stockholders to pay $75?

Mr. JARETZKI. Yes.

The CHAIRMAN. In other words, you want to be treated as an ordinary trust?

Mr. JARETZKI. That would be so.

Senator BAILEY. Shouldn't you make a distinction between your closed-end investment company and other companies which have capital gains? If you make that distinction, you will probably make your case good.

Will you make that distinction in the record? Here is an ordinary corporation that owns some stock and bonds that go up in value and they sell them and carry the proceeds, if any profits were realized, and sooner or later the stockholders get dividends the same as any other taxpayer; otherwise there are two tax payments, one by the corporation and the other by the individual. You are contending in your case that there are two taxes on one profit and it is incumbent on you to show the distinction between the closed-end investment trust, making a capital gain which you know is to the profit of the stockholder or certificate holder and the corporation which makes a capital gain in the customary way.

Now, you make your distinction and show wherein this is a trust, distinctively a trust, and my stock in the corporation is just an investment; then I think you have made a good point.

Mr. JARETZKI. Because of the limited time, I have neglected that point. You call my attention to an omission in my statement which I would like to clear up.

The CHAIRMAN. You may supplement your statement by putting in the record anything in writing you desire.

Mr. JARETZKI. Thank you.

The distinction is this, that, in the ordinary industrial company, a capital gain of the kind of which you speak is a rare event and therefore of not much importance; it doesn't happen every day. If the stockholder pays a second tax on that, it is not so serious, but, with an investment company, it is a continuous process, happening all the while. During years of declining prices he suffers these losses constantly.

Senator BAILEY. The investment trust holds in its portfolio shares in trust for those who participate in the trust by way of owning certificates or stock?

Mr. JARETZKI. Yes; that is right.

Senator BAILEY. A corporation doesn't do that; a corporation holds its stocks, bonds, and properties for the purposes of carrying on the general business, and stock and bonds are held only secondarily for the stockholders.

Now, you don't have any bonds?

Mr. JARETZKI. No, sir. Some companies do have an outstanding bond indebtedness, but that is not usual.

Senator BAILEY. Let us take another illustration: Suppose I am the guardian of five children and I have to invest their funds; I have a hundred thousand dollars. The tax is on the income of the children; the guardian would not pay it.

Mr. JARETZKI. That is right.

Senator BAILEY. Well, then, tell us your distinction.

Mr. JARETZKI. You have pointed to the substance of the distinction; technically, it is not exactly that. I was a little slow in picking up your thought, but you have the substance of the distinction in what you have just said.

Senator BAILEY. You pay, as matters now stand, two profits, two taxes on the assets of the trust company's stockholders.

Mr. JARETZKI. Put it another way: Individuals have the opportunity of becoming stockholders in United States Steel or some other industry enterprise in which they can only afford a few shares or diversifying by purchasing shares in an investment company; yet, if they purchase in the latter, although it is deemed to have benefits which are sound, if they have to bear this tax, they just cannot do it.

Senator BAILEY. But go back to me as guardian or trustee holding realty: I pay one tax; you don't expect my ward to pay a tax, too?

Mr. JARETZKI. That is true.

Senator BAILEY. That is why you should draw your distinction.

Mr. JARETZKI. Yes. May I adopt the Senator's suggestion and incorporate it in the record as though it were my own?

Senator CONNALLY. Mr. Chairman, in connection with this matter of investment companies, I want to ask a question or two.

You are a lawyer, are you not?

Mr. JARETZKI. Yes.

Senator CONNALLY. I have some letters here I want to put in the record about this kind of situation. Are you familiar with *Higgins* v. *The United States*, by Justice Reed, volume 61, Supreme Court Reports?

Mr. JARETZKI. Yes; I am familiar with that.

Senator CONNALLY. With *United States* v. *Pine*, by Mr. Justice Black, and also with *United States* v. *Helvering*, also in volume 61 of Federal Supreme Court Reports?

Mr. JARETZKI. Yes.

The CHAIRMAN. May I say to you, Senator Connally, that the Treasury is proposing in the bill dealing with administrative and technical matters to deal with that exact situation?

Do you want to put that in the record?

Senator CONNALLY. I can withhold it, but I want counsel, Mr. Stearn, to see it and give it some consideration. Under this statement, an executor is not allowed to deduct an expense of the estate from the income; whatever expenses he incurs in handling property for an estate are not deductible. It seems to me that is a very unjust thing—not allowed to deduct the expenses. A man on a farm, for instance, must report in full his income without deducting expenses.

It seems to me terrible injustice.

The CHAIRMAN. As I understand that decision, it is on the language of the statute, that the executor was not engaged in business; therefore, he could not deduct it at all.

Senator BAILEY. I was rather impressed by the statement of one of the witnesses that if we passed an act on a germane subject, imposing a new tax, for instance, on some food or drug sale, on which there had been a tax and former rulings and court decisions interpreting the same had been made by the Department or court, we would have been held to ratify or reaffirm that interpretation. I don't think it is the intent of Congress to make that assumption; but if it is, I think we should put some reservations in our bill.

The CHAIRMAN. Well, they apply that rule only in cases where the rule or regulation has been relatively of long standing.

Senator BAILEY. I think that would be all right; but where it is to be considered that we acquiesce in every one of these rulings, I don't think we have the information, in many instances, of what the regulation is.

The CHAIRMAN. It is on the theory of intent, the intent being not to disturb the existing interpretation.

Senator CONNALLY. Where a statute is reenacted, you assume, when you pass it the second time, you assume that you adopt the decisions of the court and administrators in their interpretation.

Senator BAILEY. That is on the theory we are familiar with all the regulations?

Senator CONNALLY. I am not quarreling with that statement of yours that there should be some reservation to that.

The CHAIRMAN. We will recess until 2 o'clock——

Senator CONNALLY. Under excess-profits taxes, I would like to have this letter from the Houston Post in the record.

THE HOUSTON POST,
Houston, Tex., August 21, 1941.

Hon. TOM CONNALLY,
Member, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR: I had planned to be in Washington during the hearings on the Revenue Act of 1941, as passed by the House of Representatives and now being considered by the Senate Finance Committee. Having been unavoidably

detained at Houston, I wish to present to the committee my opinion on that part of the act pertaining to the tax on excess profits and its effect on corporations who at this time find themselves heavily encumbered with debts with large annual amortization of this indebtedness contracted in prior years.

My suggestions as to revision in the law governing the tax on excess profits are as follows:

Under the present law only upon one-half of capital, as evidenced by borrowed money, are you allowed to earn 8 percent without being subject to the excess-profits tax. It seems to me, and in my experience with my own company, I am being discriminated against by being allowed to earn 8 percent on only one-half of the borrowed money before computing excess-profits taxes.

My company owes substantial debts contracted several years ago with large annual amortization payments over a period of 10 years. The provision above mentioned materially affects earnings available for the payment of these debts, and with the provision as now in the law I will have a very difficult problem in meeting the annual amortization payments and keep the company in sound financial condition. I see no reason why debts honestly made, and where there was a real need for making same in the operation of a business, that you should not be allowed to earn 8 percent on all such debts before computing excess-profits taxes.

I have another serious financial problem with my company which is brought about by the aggregate of normal taxes, excess-profits taxes, and amortization on debts being in excess of my net income, and it seems to me that some provision should be made in the law for a taxpayer who does not have sufficient earnings to pay his debt amortization, his normal income tax, and excess-profits tax, and I suggest that in such a case, where the normal income tax and the excess-profits tax, plus the contracted amortization on debts created prior to January 1, 1941, is greater than the taxable income, then a taxpayer shall be entitled to a credit upon excess-profits taxes to such extent that the aggregate of normal income taxes, excess-profits taxes, and fixed amortization will not be greater than the taxable income of the taxpayer.

I believe that many corporations will find themselves in this position, for in contracting debts several years ago no reasonable businessman anticipated that his income tax and excess-profits tax would constitute such a large part of his income, and I believe that many corporations today, under the high normal taxes and the excess-profits tax, will be paying out in the way of taxes such a large amount that they will not have enough income left out of earnings to meet fixed payments on their debts contracted in prior years.

If permissible, will you be good enough to place this letter in the record of committee meetings?

Yours very truly,

(Signed) W. P. HOBBY, *President.*

(The following statement was ordered incorporated in the record:)

STATEMENT OF FRED BRENCKMAN, WASHINGTON REPRESENTATIVE OF THE NATIONAL GRANGE

The National Grange recognizes the fact that our national-defense program calls for heavy increases in taxation. Such new taxes as may be imposed in this connection should be levied as fairly and equitably as possible. These levies should be of such a character as not to destroy our system of private enterprise upon which the security and well-being of the Nation so greatly depends in the emergency with which we are now confronted. On the other hand, no person should be allowed to make any inordinate profits, nor should taxes be levied for purely punitive purposes.

We believe that the House acted fairly and wisely in deciding not to increase the existing Federal tax of 1½ cents per gallon on gasoline, and we trust the Senate may agree with the House in this matter.

The highway user of the country are already paying their full and proportionate share of all general taxes. In addition to that, they are contributing in round figures about $2,000,000,000 a year in special highway taxes of various kinds, Federal, State, and local. This sum is approximately equal to 14 percent of the total revenues accruing to all the units of government in the United States. Roughly speaking, State and local taxes on highway transportation amount to $1,500,000,000, while the Federal Government is collecting about $500,000,000 a year from this source.

State taxes imposed on gasoline now average 4⅘ cents per gallon. The existing Federal levy of 1½ cents per gallon brings the total to 5⅘ cents. Adding another cent per gallon for Federal purposes would bring the average total to 6⅘ cents per gallon. At the present retail price of gasoline, this would represent a sales tax of more than 50 percent.

AGRICULTURAL AND MOTOR TRANSPORTATION

So far as agriculture is concerned, motor transportation under modern conditions is not a luxury but an absolute necessity. More than 1,000,000 motor trucks, or about one-fourth of the country's total, are owned and operated by farmers. A recent survey discloses the fact that with the abandonment of many branch lines of railroads that are no longer profitable, there are about 48,000 communities throughout the United States that are entirely dependent upon highway transportation.

The farmer must have his motor-vehicle facilities, and he does not feel that his use of the highways is a proper and adequate measure by which to determine his contribution toward the cost of national defense.

Some idea of the importance of the motor vehicle to the American farmer may be gained from the records of the United States Department of Agriculture, which show that approximately 27 percent of the butter, 39 percent of the eggs, 65 percent of the poultry, 40 percent of the fruit and vegetables, 62 percent of the cattle, 61 percent of the calves, 68 percent of the hogs, 29 percent of the sheep and lambs, and 50 percent of the mules and horses are now moved from farm to market by truck.

When the revenues derived from gasoline taxes are expended in improving and maintaining the highways, there can be no legitimate criticism. However, it must be kept in mind that much of the gasoline purchased by farmers is used for plowing, harrowing, threshing, filling silos, pumping water, operating spraying machinery, sawing wood, grinding feed, and for other purposes that do not involve any use of the highways. Many States properly refund the tax to farmers on gasoline used in such ways as have been enumerated. Other States do not make these refunds. So far as the Federal tax on gasoline is concerned, no refunds whatsoever are made. To increase the Federal gasoline tax would, therefore, result in increasing the farmer's cost of production.

The cost of transportation constitutes the biggest single service charge that agriculture has to pay. The imposition of an additional Federal tax of 1 cent per gallon on gasoline would make present excessive transportation costs on farm commodities just that much higher. This would be true of the more than 1,000,000 trucks operated by farmers themselves. It would likewise be true of common and contract carrier trucks that transport the products of the farm, and which haul supplies consumed on the farm.

The owners of common and contract-carrier trucks will naturally speak for themselves. But it is only fair to say with respect to them that they are engaged in a highly competitive business. The exhaustive study made by former Federal Coordinator of Transportation Joseph B. Eastman shows that highway users are paying their fair share of highway costs and more. The Eastman report, made public about 2 years ago, indicates that trucks as distinguished from passenger cars are paying more than their share of the cost of improving and maintaining our highways. Assuming the correctness of these findings, it would be just as logical to place a special tax for defense purposes on the coal consumed by the railroads as it would be to place a special tax for defense purposes on gasoline.

The intrusion of the Federal Government into the gasoline-tax field cannot be regarded as legitimate. Such appropriations as the Federal Government has made for highways can all be justified from the standpoint of national defense, to facilitate the transportation of the mails, and for other purposes benefiting all the people alike.

SOURCES OF HIGHWAY FUNDS

By far the major portion of the funds that have been expended for the improvement of our highways has come from State, county, and local sources. From 1917, when the Federal Aid Highway Act took effect, until 1939, the States expended $16,695,397,000 for roads. During the same period county and local expenditures for roads amounted to $12,980,000,000, making a total of $29,675,397,000.

During the years in question, Federal expenditures on highways, which were supervised by the Bureau of Public Roads, now the Public Roads Administration, amounted to $3,225,026,166. It should be noted that this includes the money spent for the elimination of grade crossings, forest roads and trails, and national-park highways.

In addition to this, from July 1935 to June 1940 the Works Progress Administration spent $2,931,738,000 on highways, roads, and streets.

Public Works Administration grants for streets and highways from July 1933 to June 1940 amounted to $641,133,429.

The total of all these Federal expenditures aggregated $6,797,897,595, of which $4,757,046,318 was for relief.

The primary purpose of the relief expenditures was to supply work for the unemployed. In fact, in appropriating emergency relief funds for roads, Congress expressly stipulated in awarding contracts in this connection that as much hand labor as possible should be employed.

In support of the proposition that the gasoline tax properly belongs to the States, it should be kept in mind that under the Federal Aid Highway Act, the funds appropriated by Congress all go for construction. The cost of maintaining these roads devolves upon the States.

Further than that, the States and their minor subdivisions have issued highway bonds in large amounts, and they are depending principally upon the revenues derived from the gasoline tax to pay off these bonds as they mature. As of January 1, 1938, the latest reliable figures available show that the total outstanding highway bonds of the States amounted to $1,931,370,000. Of this total, bonds valued at $466,387,000 were issued to reimburse counties for roads that were originally built from the proceeds of county bonds. County and local highway bonds outstanding as of January 1, 1940, have been roughly estimated at $1,000,000,000.

These figures prove conclusively that the gasoline tax belongs to the States. While everybody recognizes that the revenues of the Federal Government must be greatly increased to meet the costs of national defense, we cannot lose sight of the fact that our State and local governments must likewise be supported and maintained. That the tax policies pursued by the Federal Government during recent years constitute nothing less than a threat to the sovereignty and independence of the States, drying up the sources of revenue upon which they must depend to finance their activities, cannot be denied. The best hope of preserving our democracy lies in preserving the independence and sovereignty to the States, and this cannot be done by pursuing policies of taxation that will gradually to reduce the States to impotency and bankruptcy.

STATES MEMORIALIZE CONGRESS

The legislatures of half the States, fearing that the intrusion of the Federal Government into a sphere of taxation developed by the States to provide funds for road improvement may have serious consequences on State financing, have memorialized Congress to withdraw from the field of motor-fuel taxation. Congress should certainly heed the voice of the elected representatives of the States in this matter, because they speak for the majority of the people of the Nation.

In considering ways and means of raising by current taxation as large a proportion as possible of the funds needed to defray the cost of national defense, it appears to be necessary to broaden the tax base and to fairly and judiciously lower the exemption on incomes. As we have already indicated, no one should be allowed to make any undue profits, whether from defense contracts or in the regular line of business. We do not want another crop of millionaires such as was spawned by the First World War. Congress can take care of this situation by properly graduating the tax on personal incomes, the corporation income tax, and the excess-profits tax.

In view of the situation with which we are faced, the nondefense expenditures of the Government should be held to the lowest possible minimum, without sacrificing any really essential public service. It would be grossly improper and unfair to impose back-breaking taxes upon the people, with the Government squandering public funds to maintain supernumerary employees on the pay roll, or in promoting projects that are nonessential, and which do not contribute in any way whatsoever to the cause of national defense.

The CHAIRMAN. We will now recess until 2 o'clock.
(Whereupon, at 12:35 p. m., this hearing was recessed until 2 p. m.)

AFTERNOON SESSION

(Pursuant to adjournment, the hearing was reconvened at 2 p. m.)
The CHAIRMAN. The first witness this afternoon is Mr. Ralph Mulligan.

STATEMENT OF RALPH C. MULLIGAN, WASHINGTON, D. C., REPRESENTING THE NATIONAL COAL ASSOCIATION

Mr. MULLIGAN. Mr. Chairman and gentlemen, my name is Ralph C. Mulligan. I reside in Washington. I am appearing as counsel for the National Coal Association which comprises, either through direct membership or through the affiliation of district associations, most of the companies engaged in the mining of bituminous coal throughout the Nation; and may I say in that connection that bituminous coal mining is carried on in at least 26 States, that it is one of the Nation's great basic industries with operations that involve an annual turnover, including transport and distribution, of upward of $2,000,000,000.

The National Coal Association has been in existence about 25 years and is truly representative of the industry. Its principal office is in Washington—804 Southern Building.

I am here to present for the consideration of this committee, our views with respect to a provision of the House bill, the effect of which is to impose upon the corporate taxpayer under certain circumstances an additional 10-percent tax on part or possibly on all of its net profits in 1941 and thereafter.

I refer to title II, section 201 of H. R. 5417 which amends section 710 of the Internal Revenue Code. The paragraph to which we take exception is numbered (2) and is entitled "Special rule in certain cases where invested capital credit is used."

I shall be brief, having in mind that persuasive testimony on this point has been presented previously to this committee and that several witnesses from our industry are scheduled to follow.

Let me preface my discussion of this 10-percent penalty provision of the House bill applicable to corporations, which either from choice or from necessity, measure their net income by the yardstick of return on invested capital, with the declaration that the producers of bituminous coal recognize the impelling necessity for increased Federal tax levies as an aid in financing the gigantic national-defense program.

I have not been asked to come here to oppose or protest a stepping up of the taxes on the profits of business corporations or upon individual incomes so long as whatever upward revision Congress approves is equitable and not discriminatory in its application, and is not punitive in character, and does not defeat its ends by prostrating production.

This committee and the Congress may rest assured that those engaged in the production of bituminous coal are ready and willing to make necessitous sacrifices for the Nation's safety in the present emergency. They foresee very great sacrifices on the part of all business and every citizen.

If the producers of bituminous coal, after long years of unprofitable operations, of annual deficits running into hundreds of millions of dollars, are now enabled by dint of their own efforts or through the stabilization of prices which was the goal of the Coal Conservation Act of 1937, to operate on the black side of the ledger instead of the red-ink side, they will not grumble about the taxes on their profits provided the percentage of their profits which they are called upon to yield to the Government is no greater than is required of other and more favorably situated business enterprises.

Everyone who is conversant with the Government's fiscal picture recognizes the pressure that is upon this committee to explore every possible source of revenue and to leave no stone unturned.

But our argument in opposition to the 10-percent-penalty tax embedded in this so-called "Special rule in certain cases where invested-capital credit is used" rests upon the premise that fiscal exigencies of the Government, the legislative responsibilities of the Congress, and the task of this committee in an upward revision of the taxes upon corporate income and profits, affords no justification for resort to discriminatory or punitive taxation.

I am sure this committee desires to deal justly, and I am confident that if you reach the conclusion that this 10-percent-penalty provision is unjust and discriminatory, you will strike it out of the bill.

I am confident that an open-minded examination of this provision can lead to no other conclusion.

The discrimination would apply to all companies which, during the period 1935 to 1939, inclusive, showed earnings of less than 8 percent of invested capital. This was certainly the case with most of the companies engaged in the production of coal. They are among the conspicuous victims of this proposed "special rule."

In practical application, this proposed special tax reaches only corporations with no earnings or small earnings during the base period. It is to be imposed upon them solely because during the base period they were unable to show substantial earnings. It is to be imposed, even though the company this year fails to earn as much as 8 percent on its invested capital.

This penalty provision in reality has nothing to do with the taxation of excess profits—profits above 8 percent, or 7 percent on invested capital, which the pending bill purports to allow.

If any of the producers of bituminous coal succeed in making excess profits, let these profits be taxed on the same basis with every other business. But let's not tuck into the excess-profits-tax section of the bill a hidden joker at the expense of companies that are just now moving out of the red and into the black. Let me illustrate the working of this special rule.

Coal company A earns, say, 7 percent on its invested capital this year. Its earnings in previous years have been equally good when measured against its invested capital. It makes its tax return next March and pays whatever income tax the law imposes.

Coal company B earns, say, 7 percent on its invested capital this year. Its earnings in the base period 1938–39 were zero or a deficit. It makes its tax return next March and pays whatever income taxes the law imposes—and then, if this 10 percent penalty tax provision is enacted, company B will pay an additional 10 percent on its net profits this year.

We submit that this is discriminatory and discriminates against the weak and in favor of the strong. It puts an extra tax load on the company that is struggling for a come-back. A provision of this character will be particularly prejudicial to the producers of bituminous coal because so many of them are in this very category of companies that, after years of losses, are now struggling to make a come-back and now see a prospect of breaking even or making a moderate profit.

I shall not take the time of the committee nor encumber the record with any voluminous statistical data touching on the question of profit and loss in the bituminous coal industry during the past decade.

It will suffice to say that the published reports of the Internal Revenue Bureau show that in every year since 1930, for every corporation engaged in the mining of bituminous coal reporting a net income, at least two, and in some years three or more corporations in that industry reported deficits; that adding together the net income of those corporations engaged in the mining of bituminous coal as were fortunate enough to have any net income, the total in the years subsequent to 1930 ranged between a low of $5,000,000 plus in 1932 to a high of $23,000,000 plus in 1934; that adding together the deficits of those corporations engaged in the mining of coal as reported a deficit, the aggregate total in the 10-year period ranged from a high of $57,000,000 in 1931 to a low of $26,000,000 in 1937. Bear in mind these are loss figures.

But the most arresting figure is in the final result—the figure reached by offsetting the profits of the companies which showed a profit, against the deficits of the companies which showed a deficit, and making allowance for the Federal taxes paid by the profit-making companies. The figures show that for the bituminous coal industry taken as an entity, there was a loss rather than a profit, beginning with 1925 and in every year since.

The aggregate loss after taxes was $26,000,000 in 1925; it reached $51,000,000 in 1932; it was $32,000,000 in 1938; it was $8,000,000 in 1939.

Another approach to the question of profit or loss in the bituminous coal industry is the relationship between production cost per ton and mine realization per ton.

This is the approach of the Bituminous Coal Division and of the Department of the Interior.

According to the figures compiled by this agency, the production cost per ton exceeded mine realization right straight through from April 1937 to September 1940. The average loss per ton in the last 9 months of 1937 was 12 cents per ton; in 1938, 14 cents per ton; in 1939, 9 cents per ton; and in the first 9 months of 1940 was 5 cents per ton. I have omitted the third and fourth decimals.

I would like to have the committee understand that my purpose in introducing this record of losses of the bituminous coal industry in connection with this discussion of the discriminatory character of the 10 percent penalty provision is not intended as an appeal for sympathy, or a plea for special favor.

We are arguing against a provision which we believe to be fundamentally and obviously unjust and discriminatory. It just happens that because of the particularly unhappy experience of the producers

of bituminous coal in the matter of profit and loss, they will be the conspicuous victims if this provision remains in the bill and is enacted into law.

The loss record of the industry makes it clear why, in the case of three companies out of five, and I venture to guess five companies out of six, will have no choice as between the average-earnings yardstick and the invested-capital yardstick when it comes to measuring their 1941 net income. Most of them will have no average earnings in the base period worth talking about.

They must, of necessity in a majority of cases, measure their profits this year or next year on the basis of invested capital. When they do this, they are snared in this special rule and the 10 percent penalty tax.

That means that if the rates and the regulations contained in the House bill are enacted into law, the coal company that had no profits before but has a profit this year, pays a regular income tax of 22.1 percent; pays a surtax of 5 percent of the first $25,000 and 6 percent on the balance; and then pays an additional 10 percent penalty assessed against all that part of net taxable income as is not more than 8 percent of his invested capital.

That means that if the company makes a profit this year but had none during the base period, its Federal income tax will approximate 40 percent of its net income, even though the company has not one dime of excess profits as defined in the bill.

It is to be borne in mind also, that this special rule applicable to companies electing the invested capital yardstick and the resulting 10-percent penalty tax, does not apply to new corporations that may be expressly set up as part of the defense production. This is another aspect of the discriminatory character of this provision.

The attempted justification for this provision offered in the House committee report was the allegation that—

> Many corporations which are making added profits directly or indirectly attributable to Government expenditures for the national defense are paying no additional taxes upon such profits. It is felt that such corporations, benefiting so substantially from the defense expenditures, should make a larger contribution from their increased income even though their income for the taxable year is still less than the invested capital credit.

That is the quotation from the House committee report.

Addressing myself just to that for a moment, that contention has a superficial plausibility which the purpose of my argument here today is to unmask. I am seeking to demonstrate the essential vice of this penalty tax, and its discriminatory character. But whatever the conclusion of this committee on that score, let me underscore the fact that the war-profits angle—the "Benefiting substantially from defense expenditures" argument has scant application to the coal industry.

The 1941 mine output of bituminous coal may run 10 percent ahead of last year. The increased output is no doubt attributable to national-defense activity. But profit or loss in the coal industry does not depend primarily upon volume of output. This is shown by the loss figures previously cited. The industry operated at a loss even when mine output was increasing. Profit depends on mine-realization price in relation to production cost.

The Bituminous Coal Conservation Act of 1937 was debated and defended as necessary to put a floor under mine prices in our industry

and to insure the producers not a profit, but a minimum price structure that would equal the cost of production. The industry is now operating on that basis. It was the medicine which Congress prescribed for a sick industry. It happens that the application of this remedy coincides with the national-defense emergency.

It is true that the coal production is expanding. But the industry's profits, if any, are not a war profit and most assuredly are not an excess profit. To penalize the industry's recovery through a tax device that will take an extra 10 percent of any profits below an 8 percent return of any profits, is without a particle of justification.

I have read, may I say, a number of presentations on this subject, and a number of analyses on the application of this tax, including one that was prepared by the Tax Committee of the Congress that appears in the House report, but it seems to me that there is no better way to illustrate the essential injustice of this special rule than to picture the scene were this theory to be applied to the individual citizen.

Citizen Jones, with a little home and a little family, has had steady employment and steady income right along for the past half-dozen years. He makes his Federal tax return next March, takes whatever deduction the law gives him and pays tax on the remainder of his 1941 income at whatever rates the law imposes.

Citizen Smith has a home and family too, but in recent years has been without steady work and with little or no income. He has gone in debt, been supported by his relatives, perhaps he has been on relief. This year he has a good job. His net income this year is exactly the same as Citizen Jones (who has been working every year). He makes his tax return next March, takes his deduction and starts to pay his tax at the same rate and in the same amount as Jones.

But, at that point, the Federal tax collector tell him, "We want an extra 10 percent tax from you; if it wasn't for the war and national-defense activities, you would still be out of work or on relief." So he is to be required to pay not only the same income tax as his neighbor Jones (who has been luckier and had had a steady job all through the depression), but he must also kick in an extra 10 percent because he did not work before but is working now.

It is difficult to imagine any Government official proposing a tax so flagrantly unjust and discriminatory. Certainly no Senator or Member of the House would support any such proposition. Yet that is exactly the way this special rule works in the case of the corporate taxpayer.

Now, that concludes what I have in mind to say on the 10-percent penalty tax.

Now, to mention briefly two other matters of important concern to all corporate taxpayers. We renew the plea that corporations under common ownership have restored to them the right to make their Federal tax return for the purpose of the normal corporation income tax, on a consolidated basis. Congress has rightly recognized that for computing excess-profits tax it is fair that consolidated income of an affiliated group should be treated as a unit. There is no rational reason for taking a different position with respect to a consolidated return for normal and surtax purposes. We submit that a requirement for separate returns for companies under common ownership makes artificial and unjust distinctions and is merely another revenue raising device that ought not to be resorted to.

Now, with the prospective higher rate of tax on corporate incomes through the combination of normal and surtax rates, the injustice of a denial of the consolidated return privilege for corporations that together comprise a business unit, is greater than ever.

The other matter is with respect to the declared value in connection with the capital-stock tax. We strongly urge an amendment of the capital-stock provision so as to permit an annual declaration of value. The bill as it now stands, contrary to past legislative practice, does not even provide for a new or amended declaration of value although it proposes a 25-percent increase in the capital-stock tax.

The problem of calculating the future trend of corporate income is always difficult, and under existing conditions is virtually impossible.

We believe that under the uncertain conditions that now confront all business, an annual declaration of value is doubly desirable and under any conditions is no more than fair.

With the permission of the committee, I would like to supplement this statement for the record with two short memoranda, which I will file with the clerk within a day or two, covering two other subjects in the existing Revenue Act of prime concern to our industry but wholly unrelated to the topics I have discussed.

The CHAIRMAN. All right, Mr. Mulligan.

(The matter referred to is as follows:)

MEMORANDUM SUBMITTED TO THE SENATE COMMITTEE ON FINANCE BY THE NATIONAL COAL ASSOCIATION IN BEHALF OF THE PRODUCERS OF BITUMINOUS COAL, WITH RESPECT TO THE QUESTION OF DEPLETION ALLOWANCE

This memorandum is prompted by a paragraph included in the statement to the committee on August 8 by Secretary of the Treasury Morgenthau, in which he asserted that "concerns engaged in extracting certain of our national resources, notably oil, have been granted far greater allowances for depletion than can be justified on any reasonable basis of tax equity," and intimated that if the individual income-tax base was to be broadened "this privilege of tax escape (i. e., depletion allowance) should be simultaneously removed."

We submit that these two propositions are entirely unrelated. We maintain that, as respects the coal industry (for whom alone we are in a position to speak), the assertion as to "far greater allowances for depletion than can be justified on any reasonable basis of tax equity" is inapplicable and untrue. We oppose any change in the present statutory provisions respecting depletion except that with respect to the percentage depletion allowance which was first written into the Revenue Act of 1928 and extended to cover coal mining in the Revenue Act of 1932, we submit that in fairness to the taxpayer an opportunity should be accorded to him to make a new election as between cost depletion and percentage depletion.

In the case of the mining industries, one of the elements of cost that has to be taken into account in the determination of net income or profit is the value to be assigned to the mineral or metal extracted. The cost of extraction, in the case of coal the cost of mining the coal, the cost of its shipment, the expenses incident to its sale, are of relatively easy ascertainment. But the cost or value of the coal itself, as an element of the total sum to be subtracted from the sales price in arriving at the net profit (if any) is a variable item, always difficult of exact ascertainment.

Congress, in its original enactment of the income tax, freely conceded that in the case of the mining industries the cost or value of the metal or mineral itself was one of the items to be reckoned with in arriving at the final figure of net taxable income. This item was termed depletion. Every ton of coal taken out of the mine depleted the total in the mine (whatever that total might be).

There is nothing mysterious about this matter of depletion; nothing fanciful or imaginary about it. It is very obvious and very real. The complexities arise when it comes to figuring it, or to writing into the law a statutory yardstick of measurement that shall be equal and fair.

Cost depletion allowance.—Congress in dealing with this question of depletion in the earlier versions of the income-tax law, left it to the Treasury and the taxpayer to figure it out. The taxpayer was to be allowed to deduct annually a fair and reasonable amount on account of depletion to the extent sustained. The Treasury was the judge of what was fair and reasonable.

The formula devised for arriving at the precise amount to be allowed for depletion was first, for the taxpayer and the Treasury to come to an agreement on the figure to be set as the cost to the taxpayer of his entire coal property (or its market value as of March 1, 1913, in case of its prior acquisition); second, for the taxpayer and the Treasury to come to an agreement on an estimate of the total number of tons in the ground prospectively recoverable, and then to divide the first figure by the second to get a per-ton figure to be allowed as the per-ton depletion allowance. This method, as provided for in earlier revenue acts, and which is retained in the present revenue act, is commonly referred to as the "cost depletion allowance."

Depletion on fixed percentage basis.—Because Congress, the Treasury Department, and the mining industries alike perceived the difficulties in the cost depletion method when applied to mineral deposits an attempt was made to devise some other formula for figuring depletion. This was the origin of the so-called "percentage depletion allowance." It is a fixed yardstick instead of a variable yardstick.

The percentage depletion allowance is contained in the Revenue Act of 1936, section 114, paragraph (b), subsection (4). The earlier provisions respecting allowances for depreciation, depletion, and exhaustion were retained in the law, and many coal-mining companies have elected to continue to adhere to the cost depletion allowance plan as applied to their particular situation. Congress and the Treasury recognized that it might be a hardship, and perhaps a gross injustice to many mining taxpayers to cancel the depletion basis already in vogue and under which they had been operating for many years. A switchover to the percentage depletion allowance basis was, therefore, left optional with the taxpayer.

Percentage depletion for coal.—Depletion allowance in the case of coal mines is 5 percent of the gross income from the property during the taxable year, but with the limitation that in no event shall the authorized allowance exceed 50 percent of the net income (computed without allowance for depletion) from the property.

What does this mean and how does it work? It means, for example, that if a coal operator mines and markets a million tons of coal during the taxable year, but his operations have failed to yield any profit (without giving any consideration to the value of the coal itself that left his property), in other words, that his operations showed no net taxable income, without figuring any depletion allowance whatever, then the latter does not come into play at all. Both the taxpayer and the Treasury are out of luck. There was no net income, hence, no income tax. The percentage depletion allowance in no way resulted in depriving the Government of any tax revenue, in no way afforded the taxpayer an "escape" from a tax.

Coal operations wherein the price received for the coal fell short of (or were no more than) the expenses incurred in digging it out of the ground, and delivering to the purchaser, have been quite common during the past decade.

It is pertinent to note that a comprehensive study of costs in the bituminous coal industry, prepared and published by the Research and Statistical Division of the National Recovery Administration, embracing 180,000,000 tons produced in 1934, showed an average net income, after depletion, of less than 3 cents per ton. This might indicate an average net income of between 5 and 6 cents per ton before depletion.

Thus it will be seen that the percentage depletion allowance for coal—5 percent of the gross income, but not to exceed one-half of the net income—is an exact mathematical formula, susceptible of easy and accurate application and computation.

It will be seen that in no event is it exorbitant, for obviously an allowance of nothing, if the coal operations yield no profit, and an allowance of a few pennies per ton, if there be a profit, as the fair cost value of the coal in the ground is a very moderate proposition.

It will be seen that in no event does the percentage depletion allowance operate to wholly extinguish a tax liability that would otherwise occur. The allowance may not in any case exceed 50 percent of the net income. In other words, if the coal operator obtains only 2 cents per ton as his net before depletion, he can only deduct 1 cent for depletion. The other 1 cent is taxable.

It will be noted further that the 5-percent maximum which the Revenue Act establishes as percentage depletion allowance for coal is far less than is accorded to other natural-resource industries. The existing law allows a 15-percent deduction in the case of metal mines, 23 percent in the case of sulfur mines, and 27½ percent in the case of oil and gas wells.

We concede that the question of the rate of percentage with respect to any particular industry may be open to argument, but we submit that such an argument constitutes no objection to this method of determination of depletion.

We cannot speak as to whether the present rates of percentage depletion for other industries are in fact too large or too small. We do assert, in behalf of a large number of bituminous-coal producers, that the 5-percent rate of allowance in the case of coal has worked out reasonably well for all concerned.

Respectfully submitted.

NATIONAL COAL ASSOCIATION,
JOHN D. BATTLE, *Executive Secretary.*

STATEMENT SUBMITTED BY THE NATIONAL COAL ASSOCIATION, IN BEHALF OF THE BITUMINOUS COAL INDUSTRY, PROPOSING INCLUSION IN H. R. 5417 OF A PARAGRAPH AMENDING THE REVENUE ACT OF 1936 (SEC. 501 (F) (2), TITLE III) DEFINING THE WORD "COST" AS APPLYING TO THE COAL INDUSTRY TO BE COST OF THE COAL ON THE CARS AT THE TIPPLE

To accomplish this, I suggest, for your consideration, the following proposed amendment to be added as a new paragraph at the appropriate place in the new act:

"The term 'cost' as defined in title III, section 501 (f) (2), Revenue Act of 1936, is herewith extended in the case of coal operators subject to tax under said title II to mean cost of the coal on the cars at the tipple, exclusive of deductions for depreciation, depletion, Federal income and excise taxes, and administrative overhead expenses."

The use of cost arises through the necessity of setting up "average margin" and "margin" computations under title III, Revenue Act of 1936, for the purpose of determining whether or not the taxpayer was presumed to have shifted to others the refunds received of the excise tax illegally collected under the Bituminous Coal Conservation Act of 1935, in order to fix liability for unjust enrichment taxes.

By section 501 (f) (2), Revenue Act of 1936, the term "cost" is stated to mean "in the case of articles manufactured or produced by the taxpayer, the cost to the taxpayer of materials entering into the articles * * *." Under this section the Bureau of Internal Revenue has construed cost in the case of the coal operator to be the cost of the coal in the ground. Thus in the case of the owner-operator, cost is taken to be the unit of cost depletion and in the case of the lessee-operator to be the unit of royalty per ton. All labor, supplies, and other actual production costs necessary to place the coal on the cars at the tipple, the customary place of sale, are excluded.

The aforesaid unit of depletion and royalty costs are, in most cases, constant throughout the prior 6 years base, or average margin period, and the 6½-month tax or margin period. Therefore the resulting "average margin" and "margin" computations result in mere comparisons between the selling prices in the two periods. Such comparisons in no wise indicate whether or not the producer shifted the excise tax to the consumer. This can only be determined when the comparison is made between true profit margins. To do this, the direct production costs, as well as the material costs, must be taken into the computation of the margins.

When the Revenue Act of 1936 was drafted, the report of the Subcommittee on Ways and Means recommended that the presumption that the excise tax was shifted to others be established by comparison of the gross profits margins of the pretax and the tax periods. The final act as passed by the House did not adopt the rule. However, the report of the Senate Finance Committee on the act recommended "the inclusion of direct manufacturing costs, as well as material costs, in the application of this presumption."

Unfortunately the direct statement that direct manufacturing or production costs were to be included in "cost" was left out of the law as finally enacted.

With respect to the determination of the unjust enrichment tax liability of the coal operators this has resulted in continuous controversies. As a result, the Bureau of Internal Revenue has been able to settle and close but a small number of the pending unjust enrichment tax returns of the coal operators. Most of such cases so far closed have been settled by arbitrary compromises. Such settlements have been accepted by the taxpayers merely to bring their accounts current and be rid of a troublesome problem. A considerable number of cases have been appealed to the United States Board of Tax Appeals. To date only one of these cases, *Hart Coal Co.*, B. T. A. Docket No. 96267, has been disposed of. In that case the General Counsel of the Bureau of Internal Revenue, both in the trial before the Board and in his subsequent brief filed with the Board, approved and vigorously defended the principle of including the actual operating costs as "cost" in arriving at the margins required by the law. However, before a decision was rendered by the Board, the case was closed by stipulation showing "no deficiency." Immediately thereafter the General Counsel changed his position and has since refused to sanction the use of any "cost" other than the unit of depletion or royalty costs.

Consequently, the unjust enrichment taxes against the coal operators, due in 1936, remain unsettled in the great majority of cases. Those concerned with the administration of the act admit that the Bureau interpretation or construction of "cost" as used in the act when applied to the coal industry is inequitable. They admit the construction of the word "cost" here contended for when applied to the coal industry will give a more reasonable answer and allow the tax to be assessed against those operators rightly liable therefor. However, they feel they are without authority to apply such construction unless Congress amends the act.

It will not be necessary to apply the amendment to other industries, because they generally purchased, in the open market, the materials processed. Consequently, such industries are, under the Bureau construction of the act, permitted to include the full cost of materials as "cost" in determining the margins, and such margins are in effect profit margins.

Respectfully submitted.

NATIONAL COAL ASSOCIATION,
JOHN D. BATTLE, *Executive Secretary.*

STATEMENT OF LOUIS F. TANNER, REPRESENTING DAVIS-WILSON COAL CO., AND OTHERS, MORGANTOWN, W. VA.

Mr. TANNER. Mr. Chairman, members of the committee; my name is Louis F. Tanner. I reside at Morgantown, W. Va. I am a certified public accountant, and have been engaged in public practice for more than 20 years. I appear here today representing the following coal companies:

Davis-Wilson Coal Co., Morgantown, W. Va.
Christopher Mining Corporation, Morgantown, W. Va.
Cochran Coal & Coke Co., Morgantown, W. Va.
Preston County Coke Co., Morgantown, W. Va.

and many others.

During all this time we have aided our clients in connection with the preparation of their income-tax returns, and in order to properly serve them it was necessary to follow all of the various tax laws that have been enacted or amended since 1918.

I reviewed all of the tax bills before they were submitted by the committee to the Members of Congress, and at times have felt that certain inequities were written into them.

It has not been my policy to make any appearance or objection opposing legislation. However, at this time I feel it my duty to raise my voice in objection to one phase of the proposed legislation, namely: the special rule as set out in title II, Excess Profits Tax Act, section 201, amending section 710 (a) (2).

Our clients are small producers of bituminous coal, operating in northern West Virginia. It is needless for me to mention to this committee the importance of the bituminous-coal industry to the Nation, since it is, and should be, considered one of the major industries.

This industry has been a sick industry for more than 10 years, and the survivors have existed during the critical period only through their determination to survive.

In spite of these obvious facts, the industry has paid its proportionate share of income taxes as well as made its contributions to the welfare of the Nation:

1. It supplied coal to the Nation at a loss and at a price less than the cost of production.

2. It assisted in establishing and maintaining a higher standard of living.

3. It assisted and aided in increasing the national income by the payment of wages at a higher average than many other industries.

4. It has contributed heavily to the employee cause by large payments required under the Social Security Act, since approximately 65 percent of the cost of production of coal are paid out for wages.

Your committee is fully aware of the hardships that this industry has undergone. The present Bituminous Coal Act was passed by the Congress during 1937 for the prime purpose of establishing and regulating the price of coal so that the industry will get at least its cost of production.

The industry's capital has been badly impaired. It was not considered a good financial risk in banking circles for obtaining credit. Naturally, this condition affected the progress of the small producers. I might mention here that the smaller producers mine about 60 percent of all the coal produced in the Nation.

The industry has striven, particularly in the East, to adjust its operations on a more economic and profitable basis. Within the past 3 years a large part of the industry revolutionized its operation by the transition from a hand-loading operation to a mechanized operation and, as a result, it is just beginning to realize the fruits from this change which has materially reduced its operating costs, resulting in a reduction in its losses.

The industry within the past few years has changed its method of selling its product. It has expended considerable sums for the installation of facilities and equipment for preparation plants so that its product can be sold.

A contributing factor toward stabilization was the establishment of minimum prices under the Bituminous Coal Act of 1937. The prices thereunder did not become effective until October 1, 1940.

Therefore, any increased earnings in the coal industry are not attributable to governmental expenditures for national defense, but are primarily attributable to (*a*) the mechanization of mining which tended to reduce the operating costs, (*b*) the preparation and cleaning of the product which tended to increase the realization, and (*c*) the establishment of minimum prices under the Bituminous Coal Act.

Under the 1941 Revenue Act, you now propose to further increase the tax rates. It is not my aim to oppose any equitable taxation under

this proposed act, but I do feel that the reason given by the Ways and Means Committee in trying to impose a "special rule" as set out in title II, Excess Profits Tax Act, section 201, amending section 710 (a) (2), should not apply to the bituminous-coal industry.

A large percentage of the coal companies showed little or no earnings during the base period, whereas as a result of the economies due to mechanization, increased realization due to preparation, and the stabilization of prices, and not governmental expenditures for national defense, these companies may show some profit. The theory of taxation based upon the ability to pay would not be applicable by the imposition of a penalty tax such as proposed by the "special rule."

This is my thought in the matter, and I feel that this section should be eliminated from the bill in order to avoid an unjust discriminatory tax against the small coal producers.

The CHAIRMAN. Are there any questions?

(No response.)

The CHAIRMAN. Thank you for your appearance.

Mr. Caulfield.

STATEMENT OF J. F. CAULFIELD, REPRESENTING ELK HORN COAL CORPORATION, CINCINNATI, OHIO

Mr. CAULFIELD. The proposed tax bill will be discriminatory as it applies to the Elk Horn Coal Corporation, because the Elk Horn Coal Corporation had no net earnings during the base period 1936 to 1939, inclusive; hence, it would be subject to the special tax of 10 percent without any offsetting credits.

The Elk Horn Coal Corporation needs relief from such discriminatory taxation. The corporation is in receivership and it should be permitted to make use of such earnings as may accrue under present conditions to bolster up its working capital and to make settlement from time to time of a percentage of the sums due its creditors. Should the corporation be subject to discriminatory taxation, this process may be greatly slowed down or completely frustrated.

Such earnings as may accrue to the Elk Horn Coal Corporation under present conditions we feel will not be due primarily to activities brought about by defense preparations but will be due to two causes: (1) The setting of Government prices, which became effective October 1, 1940; (2) economies resulting from improvement of the properties brought about by the expenditure of large sums of money.

Theoretically, when reserve is set aside based upon a percentage of the cost of equipment and such reserve is built up over the estimated life of such equipment, the reserve equals the estimated cost of the equipment at a time when the equipment is worn out.

In practice it has been found that factors which interfere with the building up of adequate reserve are (1) obsolescence prior to the expiration of the estimated life of the equipment; (2) greatly increased costs of replacement of the equipment.

The Elk Horn Coal Corporation properties have been in operation since 1914. From time to time replacements of equipment have been made at higher and higher prices, and equipment which became obsolete had to be replaced by more modern equipment.

At the present time the receivers of the Elk Horn Coal Corporation plan an expenditure of approximately $300,000 to modernize and improve some of its plants.

The only way this money can be repaid to the lenders is through earnings. If these earnings are heavily taxed, and taxed in a discriminatory manner, the repayment of the loans to the borrowers will present a serious problem. The failure to make repayment of such loans will result in the loss of property which has been pledged as collateral on the loan.

The operating properties of the Elk Horn Coal Corporation comprise approximately 25,000 acres of its total holdings of over 200,000 acres. From time to time sales and leases have been made of parts of the undeveloped coal lands.

In 1939 the corporation was in a serious position because of the failure to pay certain unemployment and social-security taxes which became overdue to the extent of approximately $65,000. At that time the corporation found a buyer for coal properties, the sale of which produced approximately $300,000.

This enabled it to pay the social-security and unemployment taxes which were overdue, and it was also enabled to bring its payments on current purchases of materials, supplies, and equipment into more current position. It is not a healthy condition, however, where a corporation has to sell its assets to pay taxes and other obligations.

In the early years of the corporation's existence, approximately 85 percent of its high-grade byproduct and coking coal was shipped to steel companies. As the years went by, the various steel companies acquired their own mines. This gave the corporation the problem of finding other markets for its output. It was successful in doing so, but naturally its selling costs were greater as the number of its customers increased. Its coal now has wide distribution, as indicated by the statement attached hereto.

During the period when N. R. A. regulations prevailed, the company prospered. Wage rates became stable, the prices which were obtainable were adequate. Simultaneous with the effective date of N. R. A., a 2-year contract was signed with labor by the district in which the Elk Horn mines were located. The wages paid under this contract could be met at selling prices which were then set.

When the N. R. A. was declared unconstitutional, the selling prices of coal gradually fell, but the wages paid under the 2-year contract were not lowered, hence, the margin of profit gradually disappeared and eventually losses occurred.

During the short period when coal prices under the Guffey Coal Act were in effect from December 16, 1937, to February 25, 1938, the corporation prospered. When these prices were suspended, prices slumped but wages remained the same as before. In consequence, the company lost money.

The corporation management considered it advisable to make expenditures to modernize its equipment, improve the property, and consequently reduce its costs. It was hoped that costs might be reduced to a point where a profit might result, even at the lowered market prices. However, it was found to be difficult to raise funds

under the conditions which then affected the coal industry and, as month after month went by and losses mounted, the working capital of the corporation became depleted and the receivership of August 22, 1940 resulted.

It may be thought that a demand for coal for defense purposes will result in increased tonnage, thereby resulting in a lowered unit cost for overhead expense and a consequent increase in net earnings.

This is not likely to be the case, because the heavy demands upon the railroads for the movement of commodities other than coal have already resulted in car shortages.

The Elk Horn Coal Corporation production and net results of operations for the base period are given below.

The proposed law imposes a special tax of 10 percent upon the difference between the amount of current earnings less the average annual earnings during the base period and the earnings calculated after deduction of invested capital exemption. This basis of calculation penalizes the Elk Horn Coal Corportion because it had no earnings during the base period.

We respectfully request that the special tax of 10 percent be eliminated from the bill.

	Tons produced	Loss		Tons produced	Loss
1936	1,014,534.55	$324,115.46	1938	1,620,553.65	$710,872.10
1937	1,749,334.60	520,684.76	1939	1,675,619.70	925,735.32

Tonnage shipments by States, year 1937

The CHAIRMAN. Are there any questions?

Senator GUFFEY. What is your output today, Mr. Caulfield, at Elkhorn?

Mr. CAULFIELD. The output today is approximately between 5,000 and 6,000 tons at our own mines.

Senator GUFFEY. Is that practically the capacity of your mine?

Mr. CAULFIELD. It is not quite the capacity. We expect to expend $300,000 to increase the capacity.

Senator GUFFEY. That is the capacity, the present output, with the equipment you have?

Mr. CAULFIELD. That is the capacity with the equipment we have; yes.

Senator GUFFEY. Are you making some money now?

Mr. CAULFIELD. We are making some money on a cash basis, and I think we will make some even after taking into consideration depreciation, depletion, and amortization, with steady production, and with the prices set under the Guffey Coal Act.

Senator GUFFEY. Have you made a settlement with your bondholders and banks for an extension?

Mr. CAULFIELD. We have paid about $160,000 of liens and preferred claims. We have about $50,000 of special claims which come prior to general creditors, and there are probably about $700,000 of general creditors' claims.

Senator GUFFEY. In what form is that? Bonds or notes?

Mr. CAULFIELD. Just open accounts. We have not made a special arrangement with them as yet.

Senator GUFFEY. Thank you very much.

The CHAIRMAN. Mr. Eichenawer.

STATEMENT OF O. K. PRICE, REPRESENTING PITTSBURGH COAL & UNION COLLIERIES CO. AND WESTERN PENNSYLVANIA COAL OPERATORS ASSOCIATION, PITTSBURGH, PA.

The CHAIRMAN. Will you give your name, please sir, and for whom you appear?

Mr. PRICE. My name is O. K. Price. I am appearing for Mr. Eichenawer. I am also appearing for the Western Pennsylvania Coal Operators Association, an association representing about 27,000,000 tons annual production; an association composed of about 105 operators representing that production, commercial production as distinguished from the captive production of the Pittsburgh district, which is about the same or a little more.

This presentation is made on behalf of the western Pennsylvania area; have for many years operated at a loss. This has depleted their working capital and consumed their capital assets. Their survival as industrial enterprises has been due to the sole fact that their operation has consisted in turning a capital asset in the form of a mineral deposit into cash even though at a loss. Probably a similarly distressing financial situation exists in other industries and individual enterprises but it has been a recognized fact that no single productive industry of comparable importance has endured a comparable adversity.

Under such advantages as are afforded by regulation imposed by the Bituminous Coal Act of 1937, which has recently been extended by the Congress, and the increased demand due to the present industrial activity the Bituminous Coal Industry to a small extent during the year 1940 and to a greater extent during the current year is emerging from the depression of former years and probably will enjoy more profitable operations than it has for approximately the past two decades, such profitable period, however, in the degree that it presently exists can only be regarded as temporary.

Recognizing the necessity of the Congress to raise ever-increasing revenues the industrial group herein represented wishes to respectfully

direct the attention of your committee to the effect of the application of certain features of the provisions of title II of the pending H. R. 5417, and particularly subsection (2) (B) of section 201 imposing a 10 percent additional tax upon increased earnings for the taxable year which are not subject to excess profit taxes otherwise under existing law. The reference to this provision in the House committee report on pages 25 and 26 is upon reading very plausible, but upon examination in application of the provision to the members of an industry such as is here represented shows that it is highly burdensome, discriminatory and destructive.

Due to their unprofitable operations over a long period of years and the depletion of their working capital and capital assets and well known competitive conditions existing in the industry the Bituminous Coal Producers of Western Pennsylvania have almost without exception had no, or no substantial earnings for many years—even preceding the years of the base period provided in the pending revenue act so that if they are under the provisions of the proposed act subjected to excess-profit taxes on an earnings basis substantially their entire current year's earnings will be taxed. This, as anticipated by the framers of the proposed act, will result in adoption by members of the industry of the invested capital basis for excess profit tax with the result that subsection (2) (B) of section 201 will automatically apply and subject such members of the industry to the 10 percent tax imposed by the section 201.

The application of the 10-percent excess-profits tax to this industrial group results in a burdensome, discriminatory, and destructive exaction, as we will now attempt to show.

(1) The burdensome feature of the tax can best be realized by contemplation of the staggering losses to which the industry has been subjected over a period of more than a decade. Time has not permitted a survey of the entire industrial group here represented, but figures as individually reported for income tax purposes obtained from members of such group, all of whom have been active producers for more than 20 years, representing more than 50 percent of the production of the entire membership, shows that during the decennial 1930–39 inclusive such members have in the aggregate realized total profits of but $228,271 and have sustained total losses of $34,801,934 or an aggregate net loss of $34,573,663. The industry is now confronted with a demand for capital for rehabilitation of plant and for extension thereof to meet the present defense demand for a prime necessity, and yet will be subject to an excess-profits tax under this provision on its current earnings, which it can only regard as temporary, and the same exaction will be repeated until the law is changed. It is to be remembered also that the invested capital base has been very much reduced by the operating losses referred to.

(2) The members of this industry which almost without exception have had constant losses over the past decade or longer and which will realize profits during the current year and perhaps some subsequent years will, under the pending bill, be currently paying a greater proportion of their earnings in Federal taxes than those of more

prosperous industries. Corporations that have been more prosperous during past years and which will pay upon a basis of earnings will escape the 10-percent tax while less prosperous corporations such as here represented and will thus constitute a tax on poverty rather than prosperity may be shown by a simple example of two corporations with like incomes and invested capital for the taxable year, the one with earnings over the base period, and probably previously, and the other without earnings over such period.

For this purpose corporation B cited as an example under the proposed law on page 25 of the House committee's report is used with and without base-period earnings.

	With base-period earnings	Without base-period earnings
1. Invested capital	$1,250,000	$1,250,000
2. Average base-period earnings	100,000	None
3. Net income, taxable year	130,000	130,000
4. Less credit—95 percent of line 2 plus specific exemption of $5,000	100,000	5,000
5. Adjusted excess-profits net income under sec. 713	30,000	125,000
6. Net income, taxable year	130,000	130,000
7. Less credit of 8 percent plus specific exemption of $5,000	105,000	105,000
8. Adjusted excess-profits net income under sec. 714	25,000	25,000
9. Excess of line 5 over line 8	5,000	100,000
Excess profits-tax under sec. 710 (a) (2) as proposed to be amended by sec. 201 of pending Revenue Act of 1941.		
10. Excess-profits tax on line 8	9,000	9,000
11. Tax at 10 percent on line 9	500	10,000
12. Total excess-profits tax	9,500	19,000
13. Net income, taxable year	130,000	130,000
14. Excess-profits tax, line 12	9,500	19,000
15. Adjusted net income	120,500	111,000
16. Normal and surtax	35,900	33,050
17. Total tax, line 12 plus line 16	45,400	52,050

It thus appears that the operation of the tax bill be highly discriminatory against corporations having small or no base period earnings.

(3) Without the opportunity to retain in their businesses a large part of current earnings the industrial group here represented will not be able to make the necessarily large capital expenditures for plant rehabilitation and extension without which the industry cannot continue. Any special tax exaction applicable particularly to corporations with small or no base period earnings will therefore be destructive and contrary to the "ability to pay" philosophy of taxation, and from a revenue producing standpoint can only result in diminishing returns.

It is therefore submitted that the proposed amendment to section 710 (a) of the existing revenue law relating to the Special Rule in Certain Cases Where Invested Capital Credit is Used, as set forth in section 201 of H. R. 5417, should be eliminated from the pending bill.

The CHAIRMAN. Do you wish to make a statement in addition to that?

Mr. PRICE. I have made no point of objection to the proposed revenue act, other than that which those who have preceded me have made, that is, the special 10-percent tax. I would like to emphasize that the western Pennsylvania operators have, perhaps, suffered more than any other group over the period of years which have preceded the present time.

I have tabulated a list of representative results from operations, or, rather, the net earnings of operators, representing more than 50 percent of the production of the association members, and it is impressive.

I make no special point, other than that this industry could not have survived the last 10 years if it had not been that it was turning a natural resource into cash, even though at a loss. It has only survived on that account. We have hopes for the future, and there is some justification for those hopes, under the stabilizing influence of the Guffey Act and some increased demand.

The CHAIRMAN. Are there any questions?

Senator GUFFEY. John Eichenawer did not come?

Mr. PRICE. He could not come.

Senator GUFFEY. I would like to ask him about the Pittsburgh Coal Co. I will not ask you about that.

Mr. PRICE. I would be glad to answer, because I represent it too.

The CHAIRMAN. Thank you for your appearance.

Mr. Beauvais and Mr. Freiberg.

I notice they are both listed here together.

STATEMENT OF L. A. FREIBERG, NEW YORK, N. Y., REPRESENTING NATIONAL HAIRDRESSERS AND COSMETOLOGISTS ASSOCIATION, INC.

Mr. FREIBERG. My name is L. A. Freiberg, representing the National Hairdressers and Cosmetologists Association, Inc. I am also speaking for Mr. Beauvais, so we can facilitate the hearings and not take too much time.

The CHAIRMAN. Yes.

Mr. FREIBERG. There seems to be an unfortunate listing on the calendar. We are not here on the proposed tax on electrical appliances, we are here in protest to section 2402 (b) of the proposed measure, which provides for a tax on cosmetics used in connection with the giving of beauty services, that tax to be based on a retail price for those cosmetics, and that price to be determined by the Commissioner.

We have learned from previous hearings of the committee that the attitude of the toilet goods and cosmetic industry with regard to special taxation on cosmetics has been gone into. While we generally want to state that it is our opinion that cosmetics have been a necessity in the life of the women of this country and should not be considered on any other basis from the standpoint of taxation, we want to confine our remarks here especially to section 2402 (b).

Cosmetology services and cosmetics are no longer luxuries since they have become a necessary part of every woman's dress.

The welfare of a nation is dependent to a great degree upon the morale of the women in the home. England's recent acknowledgment of the importance the use of cosmetics has played in this war is evidence of the position of the profession.

The National Hairdressers and Cosmetologists Association, and its affiliated membership of beauty-shop owners and operators throughout the United States believes that cosmetics should carry no greater taxation than any other necessities.

Further, this Association and its membership protests the imposition of a tax on cosmetic articles consumed in rendering cosmetology services.

The following objections are hereby made to the adoption of section 2402 (b) of H. R. 5417:

A. The provision is unfair in that it places a discriminatory tax upon the cosmetologist's tools since the use of cosmetic items is merely an incident to his work, revenue being derived almost entirely from the services rendered.

The services of the cosmetologist can be likened to those of the medical, dental, and nursing professions. These professions, in performing their services, also use certain cosmetic articles.

B. Beauty shops are not equipped to gather statistical information required to determine and record the exact amount of a pound or a pint of material used during a given period of time, since they do not employ clerical help.

According to the Bureau of Census figures for 1939, the average gross income for beauty shops of the United States is $2,789, which includes merchandise sold at retail. If forced to employ clerical help, many of them would have to discontinue business, thus increasing unemployment.

C. The provision is impractical in that it would lead to great confusion:

1. Many of the products used by the cosmetologist are prepared by him and used by him alone. Hence, there is no established retail sales valuation or price.

2. Other prepartions used by him are purchased for such use in bulk at wholesale prices and are not distributed at retail. How can any retail price be established upon which to base a retail sales tax?

3. The preparations so prepared and purchased come in bulk. It is impossible to determine, with any accuracy, the monthly consumption of these items as required under the proposal.

D. We object to one individual being given the authority to arbitrarily determine retail prices on products which are not normally retailed and for which no retail market exists.

At present a 10-percent excise tax is in effect on cosmetics, such being collected through the manufacturer. We believe that on bulk materials used in professional services, the only equitable way to collect a tax, if one is fair, is through the supplier to the beauty shop.

Our organization is willing to support a just tax program but believes, as pointed out above, that the imposition of the proposed cosmetic tax in the Federal emergency revenue bill is inequitable.

Senator BROWN. You think you can be reached by a manufacturers' sales tax?

Mr. FREIBERG. Yes; we do. It is estimated that the average beauty shop will spend about $200 per year at wholesale prices for the items which would become taxable under this provision. With 83,000 beauty shops in the United States, according to the census figures, these purchases will approximate only $16,600,000. Now, a 10-percent tax based on those figures would only be $1,666,000. If it is attempted to be collected from 83,000 beauty shops throughout the United States the Government, the Internal Revenue Department, the Treasury Department, and everyone concerned, we think, are soon going to find they will lose their hair, as I have, worrying about the hairdressers.

I am of the opinion, we are all of the opinion that the attempt to collect the tax from 83,000 beauty shops—this would also affect one hundred thousand-odd barber shops in the country, who would come under the measure, except their purchase of supplies would be even less than the beauty shops—we feel the amount of money that can possibly be realized would be greatly exceeded by the cost of collection, let alone the amount of trouble, both with the proprietors of the beauty shops and the barber shops.

The CHAIRMAN. The purchases are usually made from the manufacturers?

Mr. FREIBERG. Usually made through the wholesaler.

Senator BROWN. You think the tax should be on the supply houses other than the manufacturer and retailer?

Mr. FREIBERG. That is right. In other words, the present manufacturers' 10 percent excise tax on cosmetics, which now applies to all cosmetics used in beauty shops in giving their services, should remain as is now, and there should be no attempt to collect a tax based on the retail sales price for which there is no retail market. On the cosmetics which are sold through the beauty shop at retail, we are, of course, agreed to go along paying the same 10 percent retail tax on those cosmetics as any other agency of sale.

The CHAIRMAN. Are there any questions?

(No response.)

The CHAIRMAN. Thank you very much for your appearance.

Mr. Shaw.

STATEMENT OF T. T. SHAW, NEW YORK, N. Y., ON BEHALF OF THE BROOKLYN NATIONAL CORPORATION

Mr. SHAW. My name is T. T. Shaw. I am a member of the accounting firm of Arthur Young & Co., New York, N. Y. I am appearing on behalf of the Brooklyn National Corporation.

I wish to ask for the repeal retroactively to January 1, 1938, of section 505 (d) of the Internal Revenue Code. This section restricts the deduction of net capital losses to $2,000 in calculating personal holding company surtax.

This restriction was put into the law in 1937. The Ways and Means Committee at that time explained in its report that the reason for such restriction being placed on personal holding companies was to place them on the same basis as individuals who at that time were also re-

stricted to a deduction of $2,000 for net capital losses in their personal returns.

For years commencing on and after January 1, 1938, the $2,000 restriction was removed in the case of individuals but the restriction on personal holding companies was left in the law.

This seems clearly to have been an oversight. The restriction to $2,000 in the case of personal holding companies lost its purpose as soon as the same restriction was removed in the case of individuals. It is not, however, the fact that the provision has lost its purpose that is objectionable. It is the hardship and injustice which such a provision creates.

Where a personal holding company has taxable income of the current year but has net capital losses in excess of $2,000 (which it may deduct in calculating its normal income tax but not for the purpose of calculating its personal holding company surtax) and where such corporation has no accumulated earnings, it finds itself in such a position that it is impossible for it to avoid the prohibitive personal holding company surtax no matter what action it takes.

If it makes distributions to its stockholders, such distributions are considered to be at least in part a return of capital and the dividends paid credit is restricted to that portion of the distribution which is deemed to have been made out of earnings.

Even if the company distributed all of its assets, it still could not avoid the personal holding company surtax. Removal of the $2,000 limitation on the deduction for net capital losses would remove this hardship.

Since some personal holding companies have suffered during 1938, 1939, and 1940 through the existence of this $2,000 limitation in the law, I suggest that it be repealed retroactively to January 1, 1938.

There seems little doubt that Congress never intended the provision to operate the way it does. It is nothing less than a trap which personal holding companies, who have the combined misfortune to have no accumulated earnings and to suffer capital losses in excess of $2,000, find themselves in.

I understand the Treasury officials recognize that and admit the injustice of the provision and would be agreeable to having it removed. Its retention in the law will undoubtely cause much litigation and expense for taxpayers.

Only a week or two ago, the second-circuit court handed down a decision dealing generally with this question. The case referred to is that of *Pembroke Realty & Securities Corporation* v. *Commissioner of Internal Revenue.*

The case was decided in favor of the taxpayer, which was found not to be liable for the personal holding company surtax.

Judge Swan, in his opinion, made the following significant remarks:

> To us it appears beyond question that the Congress did not intend to impose a penalty tax upon a corporation which in fact distributed all its current earnings to shareholders. The purpose was to induce such distribution, and the tax was laid on "undistributed income." Had Pembroke's capital not been impaired, its distribution of current income would indisputably have been a "dividend," and the corporation would not have been subject to a surtax. It is incredible, in the light of the purpose of the legislation, that a different result was intended in the case of a corporation whose capital happened to be impaired * * *.

It is within the power of the courts to declare that a thing which is within the letter of the statute is not governed by the statue because not within its spirit or the intention of its makers.

In the interests of fairness to taxpayers and to avoid needless litigation and expense, I believe that section 505 (d) should be repealed and its repeal made retroactive to the date when the $2,000 restriction was removed in the case of individuals, namely, taxable years commencing on and after January 1, 1938.

Now, to repeat, the restriction on personal holding companies really has no purpose. However, it is not just the existence of the provision that is objectionable, but it is the way it works.

Perhaps you are familiar with it and have had illustrations given you already.

Let us take a simple case of a personal holding company that had an income of $100,000 in 1940, from dividends and interest, say, but it also had capital losses of $100,000 in 1940, long-term capital losses. For normal tax purposes, it would have no tax at all, because its true income would be zero.

However, for personal holding companies' surtax purposes, the law says you can deduct only $2,000 of those capital losses, and you have to pay the prohibitive tax of 75 percent on $98,000 of your nonexistent income.

Now, with a company that has been placed in that situation, if the company has no accumulated earnings on profits, as that term is understood in the income tax law, there is nothing it can do than pay the prohibitive tax, because if it makes distributions to its stockholders, such distributions are considered to be a return of capital. It seems to me that, on the face of it, is vidiculous, and it should certainly be taken out of the law.

The CHAIRMAN. Have you talked to the Treasury people about it?

Mr. SHAW. Yes; I have, Senator, and they feel, too, that it is unfair. They say, "Well, what can we do about it? It is there in the law. We just have to collect the tax if you are liable for it."

I have not spoken to any of the higher-ups; I have never been able to get in touch with them.

I cannot see how any fair-minded person would want to uphold a provision like that.

Now, in the case I referred to, where Judge Swan rendered the opinion, the corporation was ruled not to be liable in that case. So if we went to the trouble and expense of taking the case to the circuit court we could probably avoid the tax, like this company did, but if we could do that by a simple change in the law, it seems to me the situation would be cured.

The CHAIRMAN. Your matter will be given consideration, and I understand is being given some consideration in the bill dealing with the technical miscellaneous provisions of the tax act.

Mr. SHAW. Unfortunately, the company I have in mind has been hurt for the past 2 years because of the existence of this provision. While it made a distribution to the stockholders, they are considered to be a distribution of capital and it does not do the corporation any good. I think if the provision is repealed it in fairness should be repealed retroactively to 1938, when the $2,000 limitation was removed in the case of individuals. Commencing January 1, 1938,

that restriction of $2,000, which this personal holding company provision was put in to be comparable with, has been removed from the law, and so I think in fairness it should be removed retroactively to 1938.

The CHAIRMAN. I think you are entitled to some relief, but we have to be pretty careful to safeguard it, else the holding companies would accumulate a loss on stocks that you have referred to.

Mr. SHAW. We should, of course, prevent abuses, if possible.

The CHAIRMAN. It seems to me there is some merit in your contention.

Mr. SHAW. This company I have in mind acquired most of its securities at the height of the market in 1929, which depreciated to such an extent since that time that practically everything it sells it incurs a loss on. Of course, it has to dispose of its securities from time to time. It would incur capital losses at those times. When it finds itself with capital losses, and it has no accumulated earnings, it is faced with the 75-percent tax, unless it goes to the circuit court. I feel confident that if we go to the trouble and expense of doing that we can avoid paying the tax.

Senator BROWN. It is a matter of interpretation of the law. I thought what Senator George meant was whether or not you would take up the matter of some change in the legislation now or later?

Mr. SHAW. We wrote to the Commissioner several weeks ago, pointing out the inequity of the thing, and asking that the provision of the law be repealed retroactively, but we have not had any reply yet.

I have been to the Internal Revenue Building, I have seen whoever it was possible to see there, and put the thing to them. They admitted to me that it is inequitable, and should not be the law, they felt, but they say, "What can we do about it?"

Senator BROWN. It seems to me where you should take it up is with the Treasury Department, with Mr. Sullivan. They advise us from time to time in regard to legislation. You cannot get an interpretation out of them other than you have gotten, but you might put the problem to them and see if they can suggest something to cover it by legislation.

Senator LA FOLLETTE. It is my understanding that the matter is under consideration in connection with the second bill.

Senator BROWN. I think you have got a good case.

Mr. SHAW. If anyone can justify, on any theory, that provision being in the law, then I would be very glad to hear them. If there is any justification for it, let us leave it in the law.

The CHAIRMAN. We have your point.

Mr. SHAW. Thank you very much.

The CHAIRMAN. Mr. Ahrens.

STATEMENT OF BERT C. AHRENS, NEW YORK, N. Y., EXECUTIVE SECRETARY, EDUCATIONAL BUYERS ASSOCIATION

Mr. AHRENS. Mr. Chairman and members of the committee. My name is Bert C. Ahrens. Representing the Educational Buyers' Association, I speak in behalf of 380 members who are the purchasing officials of 380 colleges, universities, and hospitals, located in all parts

of the Nation, large ones and small ones, renowned and little known, tax-supported and endowed, whose object in belonging to the association primarily is to promote efficient procurement of supplies for their institutions.

Much as I would like to tell you of the success of the association in helping the member procurement officer better his professional ability and in creating opportunities for him to stretch his institutional dollar, I accede to your chairman's plea for brevity, and offer a copy of the Proceedings of the Twenty-first Annual Convention of the Educational Buyers' Association for your examination, that you may, if you desire, get an idea of the type of activity we carry on and judge for yourselves as to our success in promoting efficient procurement for our member institutions.

I wish to point out that the price of goods consumed by educational and similar institutions is vital to them and that they have helped themselves to find out how to pay the least for the best in the various quality ranges. They have examined every cost factor and have succeeded in bringing many of them to a point fair to themselves and the producer.

The tax factor is not susceptible to any other approach than this and I find myself beginning with the others in this room.

Axes ground in these hearings usually are, it is popularly believed, applied to the grindstone by the profit motive.

That motive these days unquestionably is coupled with a genuine desire to help you gentlemen in your efforts to do the best you can for the welfare of our country.

But the educational institutions do not have and never have had the profit motive. They serve the people in a very vital way and are in effect public institutions.

Past legislation has recognized that fact. Municipalities and States in the main exempt educational and eleemosynary institutions from sales taxes, as well as from taxes on their plants.

The Congress exempted them in H. R. 8148 from the application of the Robinson-Patman Act, as follows:

Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled, That nothing in the Act approved June 19, 1936 (Public, Numbered 692, Seventy-fourth Congress, second session), known as the Robinson-Patman Antidiscrimination Act, shall apply to purchases of their supplies for their own use by schools, colleges, universities, public libraries, churches, hospitals, and charitable institutions not operated for profit.

Business very properly should have a profit motive. Labor is worthy of its hire and agricultural production must be encouraged.

But taxing the educational and public-health systems of the Nation in times when cost factors are growing larger despite dogged efforts to control them, adds a burden to a public enterprise heretofore in normal times not carried. The purchasing power of the institutional dollar shrinks with other dollars in a rising cost period but there is no way for the institution to get more of them as does business, labor, and agriculture.

Endowments are not increasing and few students would pay increased tuition, in fact, there are fewer students by reason of the Selective Service Act, opportunities for high earnings, and so forth.

Now, as I said before I am begging, but while the prospect that our educational institutions will be poorer should have your consideration,

I more humbly beg of you that you do not destroy the precedent of exemption from taxation for the eleemosynary institutions of this country the work of which is unselfish and for the public good and keeps pace with, yes, leads the way in social, scientific, and even commercial progress, and makes important contributions to military development.

I am, in effect, talking for the endowed institutions, for the bill you are considering exempts the State institutions through the State exemption.

Does it not seem, considering this, that the act is discriminatory in this regard? Since the function of both State and endowed institution are the same the theory and system of State exemption might well be applied to all eleemosynary institutions.

In his report on the bill Chairman Doughton of the Committee on Ways and Means of the House of Representatives stated:

> Your committee's principal aim in this bill, however, as in all tax legislation, is the procurement of revenue.

Take the State institution consumption out of the consumption of all nonprofit institutions and you have reduced the anticipated revenue from this source considerably, since the ratio for tax-supported colleges to endowed is 32 to 68 percent.

Let us look at the prospective revenue from one class of item a great proportion of the sales of which is made to educational laboratories.

The distribution of the 1940 sales of one representative manufacturer of optical goods is as follows:

	Percent
To the Federal Government	12
To State and municipal governments	12
To hospitals	2
To educational laboratories	37
To medical students	23
To doctors	2
To industrial laboratories and individuals	12

There will be no revenue from the purchases of the Federal, State, and municipal governments which take 24 percent of the sales.

Of the 37 percent which goes to educational laboratories some is tax free since some purchasers are tax-supported institutions.

Estimated as being 60 percent of this 37 percent, tax supported, and so tax free, educational institutions add 22 percent to the aforementioned 24 percent and we have 46 percent of the total sales not available for tax revenue, leaving 54 percent available under the bill, still the bulk of which in the interest of the public welfare the Congress should not want to tax.

In order then to reach the doctors and the industrial laboratory and individual purchases, used in profit-making enterprise, the bill will miss entirely taxing 46 percent of the sales, will tax 40 percent of the sales to consumers which in the general interest should not be taxed, and so leaves the desired object of the tax, that is, the sales to doctors, industrial and individual laboratories, a mere 14 percent of the total sales of this class of merchandise.

It is estimated that the potential yield from optical goods used in education, scientific research, and public-health control is in the neighborhood of $250,000.

It is strongly urged, therefore, that paragraph (9) section 3406 of part V of the bill be stricken out in the interests of the Nation's medical students, hospitals, and educational laboratories the encouragement and assistance to which should be part of the government policy always and particularly at this time.

The general exemption from the application of the bill should certainly be accorded educational and the eleemosynary institutions so that this well-founded policy be not disturbed and particularly in these days when civilian morale and behind-the-line national strength dare not be weakened.

(The data used in the discussion of optical goods was provided by Mr. John Roberts, president of the Scientific Apparatus Makers of America.)

The CHAIRMAN. Thank you for your appearance.

(Letters by Mr. Roberts are as follows:)

MISSOURI VALLEY ASSOCIATES,
Chicago, Ill., August 20, 1941.

Hon. WALTER F. GEORGE,
Chairman of the Senate Finance Committee, Washington, D. C.

MY DEAR SENATOR GEORGE: I wish to present, on behalf of the medium-sized privately endowed college, a protest against the sales tax on optical instruments as specified in section 3406, paragraph 9, revenue bill, 1941.

From my experience, I believe that of the items in paragraph 9 (omitting the military instruments, such as fire-control optical instruments, searchlight mirrors and reflectors), approximately 70 percent will be used by the Government departments, educational institutions, hospitals, medical and dental students. Also, knowing the small profits in the industry, it will be necessary to pass the tax on to educational institutions, hospitals, and students, as the Government, State, and municipal purchases are exempt. I am inclined to think that the original framers of this bill were of the opinion that a larger proportion of such instruments were used in industry or as luxury items. However, the latter, such as opera glasses, prism binoculars, etc., are provided for under section 2400.

It is needless to state to this committee the desperate financial situation of many time-honored educational institutions that have contributed some of the best brains of the present and past in all walks of life in this country. Several members of your own committee are graduates of privately endowed colleges, and many of your colleagues come from the same type of institution. These institutions are faced with diminishing returns from their endowments and an increasing expense account, and in the near future at least they will not receive from their friends as large contributions for the support of their institutions. At present the majority are operating with an annual deficit that has been met by contributions from alumni, who now will not be as able to continue.

As a graduate and trustee of an institution in my native State of Missouri, namely, Missouri Valley College, at Marshall, I wish to ask the careful consideration of the committee in eliminating this additional tax on education, for the small amount of revenue that will be forfeited will be negligible when compared with the advantages received. If these institutions, through economical conditions or taxation, are forced to close their doors, additional burdens will be placed upon State or tax-supported institutions, which, in turn, will increase the burden and taxation upon everyone. I also am sure that the committee will agree that it is not to the best interests of the country to have only tax-supported institutions.

Very truly yours,

JOHN M. ROBERTS, *President.*

CHICAGO, ILL., *August 22, 1941.*

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

MY DEAR SENATOR GEORGE: I wish to supplement the brief of Mr. Ahrens of the Educational Buyers Association, on section 552, paragraph 9, entitled "Optical Instruments," by the following additional information:

1. *Amount of tax involved.*—For the year 1940 the sales of the optical instruments as specified in the above section and paragraph were $4,500,000. Of this total 48 percent was to the Federal Government, State, and municipal, and State-supported institutions, chiefly educational ,who under section 2406 are exempt from this taxation. Therefore, only $2,340,000 remain to be taxable. This would give a revenue of $234,000 at the 10-percent rate. These sales should be further investigated and broken down as follows:

Fifteen percent, or $675,000 sold to endowed educational institutions that are not tax supported.

Twenty-three percent or $1,035,000 was spent by students in professional schools such as medical, dental, and so forth. It is manifestly unfair to tax the privately endowed nonprofit institution and allow the State-supported (doing the same work) exemption. In the case of the young professional student, he is hard put to in order to secure his education without having to pay an educational tax on his equipment.

If we combine the above classifications we have:

Sales to privately endowed institutions	$675,000
Sales to professional students	1,035,000
Total sales to non-profit and non-tax-supported consumers	1,710,000

With these deductions there would remain sales amounting to $630,000 to profit earning and individual consumers carrying a tax of $63,000. This would be the total tax, if we exclude all nonprofit consumers. The above figures are reliable to my best knowledge and information.

2. This tax is discriminatory in that it applies only to the optical instruments used for scientific work and omits all other forms of such instruments—the luxury or individually used optical instruments (such as, opera glasses, marine glasses, field glasses, and binoculars) are taxed under section 2400, entitled "Jewelry," etc.

3. The tax would be hard to administer, for the following reasons:

(*a*) Some institutions are partially supported by taxation; the major part of their income is from endowment or student fees.

(*b*) In other instances certain departments only are tax supported.

(*c*) Some include in tuition the total cost of the student's equipment. In this case it would be hard to separate the taxable items.

(*d*) The cost of administration would be a very high percentage of the return.

Our association respectfully requests that due consideration be given to the above claims.

Submitted by

JOHN M. ROBERTS,
President, Scientific Apparatus Makers Association.

The CHAIRMAN. Mr. Satterthwaite.

STATEMENT OF WILLIAM F. SATTERTHWAITE, SALES ENGINEER, GENERAL DRY BATTERIES, INC., CLEVELAND, OHIO

Mr. SATTERTHWAITE. Mr. Chairman and members of the committee, my name is William F. Satterthwaite, representing the General Dry Batteries, Inc., of Cleveland, Ohio. We have plants in Cleveland, Ohio; Dubuque, Iowa; Baltimore, Md.; and also in Nogales, Ariz.

It is the purpose of my statement to bring to your attention the hardships which are worked upon our company by the capital-stock tax and its associated excess-profits tax under the new circumstances arising from the shortage of critical metals. This shortage has arisen from our national-defense efforts. We have requested the opportunity

of presenting this problem because we believe it works an undue hardship which is contrary to your intentions. We also ask relief as suggested at the end of this brief in the sincere belief that it conforms to your objectives.

The present revenue act and the proposed Revenue Act of 1941 require that each corporation declare a capital value for the purposes of the capital-stock tax and the declared value excess-profits tax.

This declared value is effective for 3 years, with the adjustments as required by the revenue act, and is the basis of the capital-stock tax and the declared value excess-profits tax.

Under normal conditions it is possible to make a reasonable estimate of expected earnings for the 3-year period but we are not working under normal conditions.

We manufacture dry batteries which consist of zinc, manganese dioxide, carbon, ammonium chloride—or sal-ammoniac—brass, and copper. There are also other ingredients used in small quantities but these are the ones which present the major part of our problem.

In the case of zinc, we do not know from month to month how much we will be allowed to receive due to the fact that zinc is under priority which varies from month to month. We also do not know to what extent we can obtain the other necessary ingredients to maintain production. If we cannot obtain any one of these necessary materials we are forced to shut down.

Therefore, it is impossible for us to estimate our earnings. Such an estimate is the basis of declared value and, therefore, we are at a loss as to what value to declare. This uncertainty is entirely beyond our control and will force us to either pay an unduly high capital-stock tax or declared value excess-profits tax.

The capital-stock tax requires a declaration of value once every 3 years. This year is a new declaration year and, therefore, it is the basis for the tax for the next 3 years as contemplated at the present time. The bill provides for adjustment to the initial declared value to compensate for structural changes which will affect the earnings.

Our problem is not with that particular phase of the problem. The declared value forms the basis on which the capital-stock tax is determined at the rate of $1.25 per $1,000 as proposed in the current bill.

The declared value excess-profits tax uses the declared value as the basis and imposes a tax on earnings in excess of 10 percent of the declared value.

In order to minimize these two taxes, the taxpayer endeavors to estimate the earnings as accurately as is practicable for the 3-year period and then to multiply this by 10 so that the expected earnings will not be subject to heavy excess-profits taxes.

At the same time the earnings should be estimated low enough so that the capital-stock tax itself is not excessive. Consequently the corporation in the past has endeavored to estimate its earnings accurately enough to pay equitable taxes.

The country is putting forth major efforts to defend itself against any possible aggressors and this effort constitutes a large task. The task is so great that unexpectedly large quantities of certain materials are required with the result that shortages in civilian needs are becoming very acute.

The shortage in zinc is forcing a reduction in our production which we cannot reasonably estimate for even 3 months.

While we have endeavored to protect ourselves with our zinc supplier on a contract made in 1938, this supplier has been required by the present emergency to contribute a proportion of all zinc to a pool necessary for defense. This contribution has forced a reduction in the amount of zinc which we can obtain under this contract and, therefore, we find ourselves encountering a major zinc deficiency.

Copper and brass have just come under the full allocation program and, therefore, we find ourselves facing further difficulties along the lines of metallic shortages.

Every dry cell requires a brass cap on the carbon pencil to make suitable electrical contact. Each assembled battery of two or more cells used in radio and similar work requires copper wires connecting the cells in series or in parallel.

We anticipate that before the year is ended that this shortage in copper and brass will affect us drastically.

We are further warned that shortages in other ingredients used in dry batteries probably will materialize before the end of the year. Therefore, we are placed in a position wherein we are entirely unable to estimate our earnings for as much as 3 months not to mention 3 years.

We believe it to be our patriotic duty to cooperate with the Government in every defense measure and we do so willingly. However, we do believe that under the circumstances, the capital-stock tax and its associated excess-profits tax has an element of unfairness and works an undue hardship upon us and other companies in the same position.

In conclusion we ask you to consider carefully the problem as discussed above and to modify the current revenue bill of 1941 to eliminate the inequities brought into existence by the metal shortages and the priorities. We ask that this bill be modified in two ways:

First, for the duration of this emergency and so long as priorities are in existence on the metals necessary to the construction of our product, that each year be allowed as a new declaration year.

Secondly, we urge that the declaration be made and based upon the earnings of the preceding year. In this way the inequity of the excess-profits tax or an unduly high capital-stock tax is eliminated and yet the capital-stock tax is retained as if the taxpayer had made a good estimate of his earnings.

We thank you for your careful consideration and favorable action.

I thank you for your attention.

The CHAIRMAN. We thank you, sir, for your appearance.

Mr. Graffis.

STATEMENT OF HERBERT GRAFFIS, EDITOR OF GOLFDOM, CHICAGO, ILL.

Mr. GRAFFIS. My name is Herb Graffis. I am editor of Golfdom, a business magazine of golf and represent the National Golf Foundation, a nonprofit organization.

Like everybody else here, we want a pass. The misconceptions about golf puts us behind the 8-ball. It is reputed to be the rich man's game.

Right now about five-sixths of the 3,126,000 golfers are either children of high-school age and the youth of college age or adults who play on the public golf courses. The Treasury Department has been through this excise tax experience with golf and with the other sporting goods before, and has found, so I understand, that the net has been virtually nothing.

This time it will be less, if possible, for the simple reason, they will just quit playing. The national problem now is to get people active, the kids and the adults. In the sporting goods business, we have long since learned that the most used piece of sporting equipment is the seat of the pants. The draft statistics unfortunately bear that out. We find, as you gentlemen have found, that most of the physical disabilities of the draftees are bad feet; I think they are just a few points back of bad teeth. The only people who walk any more are the mailmen, pickets, and golfers.

The golfer walks about 4 miles exercising his lungs profusely, and comes in and drinks four times what he spends in golfing equipment. Those are actual figures, gentlemen.

Due to the statements that have been made in the last Presidential election about the country golf set, we realize that we are somewhat handicapped until you gentlemen recall that the country golf set were able to throw around more conversation than voting weight, and the five-sixths of the golfers, who use this game as recreation, respectfully suggest that they be joined with the very large group that also prays for exemption.

I have filed a digest with the clerk. The figures are all there. We have, in this matter, the same serious purpose and high hope that some of you gentlemen have about your scores.

Thank you.

The CHAIRMAN. Thank you.

(Mr. Graffis submitted the following memorandum for the record:)

MEMORANDUM FILED BY HERB GRAFFIS, EDITOR OF GOLFDOM, THE BUSINESS JOURNAL OF GOLF

GOLFDOM,
Chicago, Ill., August 22, 1941.

RE: SPORTING-GOODS TAX

There are 2,162,000 active golfers in the United States of whom only 533,000 (approximately 24 percent) are members of private golf clubs having annual dues of $10 or more. The 76 percent play on public courses. In addition, there are almost 1,000,000 high-school and college boys and girls receiving golf instruction and playing in individual and scheduled team matches.

The old belief that golf is a rich man's game is blasted by the fact that golf now is the outdoor game the man, woman, and youngster in modest income brackets finds most attractive for actual participation. It is not a luxury sport. It is popular physical conditioning for people of both sexes from the ages of 13 to almost 80.

Latest available Department of Commerce Census of Manufacturer figures show for 1939 the value of golf goods to be $15,644,612. These figures probably are quite generous. For instance: The number of clubs was given as 2,855,837. The number of shafts was given as 3,218,002. The factor of breakage in steel shafts is negligible. With 362,165 more shafts than clubs reported as 1939's manufacture and the 1940 spring clearance sale of 1939 unsold clubs being extensive, there is circumstantial evidence to indicate that the $15,644,612 figure gives an overly bright picture of the extent of the golf business.

Although even a 10-percent tax on this annual volume of golf business, according to Treasury officials' past experience, would not be a revenue-raising procedure warranted by the net income, the tax effect on golf play and golf business would be serious enough to be especially undesirable in these times.

Golf already has been self-damaged by delusions of grandeur inspired by gulps of locker-room Scotch and a failure to do its figuring until the scorecard calls for pay-off. That is why the "country club set" of which you heard during the latest national campaign did not sling much weight around. That conception of the "country club set" is a picture of the vanishing American. That is why so many of the once proud private clubs have been foreclosed, and now, in not unusual cases are being played by any of the public who can lay from 25 cents to $1 on the line for a day's playing privileges.

That excess of optimism in golf has given the low-income adult and the youngsters a break. Golf-goods manufacturers, for the greater part, are the offspring of companies that wanted an outlet for certain byproducts or an off-season use of equipment and factory personnel. These manufacturers, some of whom were overly optimistic about the promise of growth in golf, and some of whom over-guessed the existing market, have been in strenuous competition for such business as is available.

Therefore, prices for golf goods have been kept lower than actual cost of manufacture and distribution warrant. It is one of those lovely instances in which the man and woman whose income barely covers living expenses get a great break.

Now, with the certain prospect of continued sharp increases in costs of such materials and labor as may be available, there looms a virtual certainty that the game will lose many whose physical and temperamental status is important to national defense. Golf already has many of its newer crop in the Army, Navy, and air forces. They were in good physical shape. They are not out of the golf market, and quite a few of them are wondering why golf driving ranges aren't among the Army recreational facilities.

The American recreation picture has changed tremendously since the emergency in 1917. This time the increased wages in defense industries are not going for wide striped silk shirts or patent-leather shoes. The representative American now is recreation minded. His and her attention to his own physical condition and that of the children has been sharpened by draft examination physical findings.

But it is not easy to get the average American physically active. Even the kids are getting sedentary. The most used piece of athletic equipment in the United States is the seat of the pants, as one very quickly learns when seeing such figures as 90,000 attendance at basketball games; 7,500,000 at the football games of 64 representative universities; 1,500,000 at national pro-league football games, around 26,000,000 at major- and minor-league baseball games. Grand entertainment, of course, and great physical culture for those who play them.

But try to get the good citizens of any age to condition themselves physically in a game that requires about a 4-mile walk in an afternoon, and you have a national physical-fitness problem pop up at you. Only mailmen, pickets, and golfers do much walking any more.

The Army learned that more than a year ago during maneuvers of National Guard troops. Many of the lads couldn't stand the road work.

There were approximately 61,220,000 rounds of golf played in the United States last year on the Nation's 5,209 golf courses. Not over 1,300 of these courses are strictly private—playable only by members and their guests. There are 711 courses publicly owned where anyone who pays the fees ranging from nothing cash to $1.50 a round can play, 1,210 privately owned courses open to the public, and of the 2,080 nine-hole so-called private courses, it is my conviction, based on extensive experience, any reasonably personable man or woman could play on payment of fees for a round.

Work Projects Administration projects have included 204 public golf courses newly constructed and 298 reconstructed or improved. The golf course, public and private, increases taxable values in its vicinity, and in the case of the public recreation facilities that usually take in enough income to more than pay for its maintenance and operation.

A significant indication of the part golf is playing in bettering the American's physical condition is the club rental plan started at Cincinnati's public courses and now at New Orleans, Houston, Dallas, Fort Worth, St. Louis, and other cities. For 15 cents a youngster or a man or woman can rent a set of four of five clubs

and get three used balls. A charge of a dime a ball is made for each one not returned. This plan has been so successful that in Cincinnati alone last year more than 20,000 rental set fees were taken in.

The average annual expenditure of the golfer for clubs, balls, and bags is only about $15, thus flatly contradicting the "rich men's game" charge. But the game now is enlisting those to whom the $15 charge for a recreation of many years' playing span is too great. This rental plan is but one activity. Golfers have contributed thousands of used clubs to be used in teaching the nearly 1,000,000 high-school and college youngsters. Increase in golf equipment prices will nip this crop in the bud. Further indication of golf's extensive and growing appeal to the class of youngsters and adults greatly in need of low-cost pleasant outdoor physical condition is in the golf practice range business. Practice range owners in numerous cities from New England to the Gulf coast have told me that as many as 30 percent of their patrons never have been on golf courses, but are getting ready for the day when they can afford clubs, balls, and green fees.

Industrial and commercial league golf teams are becoming one of the most popular sports activities of spontaneous or company organized recreation programs, due to the adequate but not strenuous nature of the exercise and the handicapping feature of golf, which allows the duffer and the proficient player to compete on a fair and interesting basis.

I recall reading an Associated Press story quoting Dr. George W. Calver, congressional physician, as advising Senators and Representatives to "walk at least an hour every day and get in nine holes of golf if possible." He was quoted as saying that the almost continuous session of 3 years has overworked and overstrained national legislators. He was reported as having said that the public should be interested in Congressmen getting some relaxation to balance their legislative worries.

The authoritative advice also may be applied to the general public of a considerable age reach whose physical condition and general temperament plainly could stand improvement. The extensive potential employment of golf for more of the average people of both sexes and a wide age range definitely is a factor in this country's national defense. The representative ordinary adult golfer is of a class that pays taxes without yowling or complaining of his pain. He asks mainly a break for the kids. He therefore respectfully submits that the meager (if any) net income of an excise tax on golf equipment would tend to beat the Government out of what it wants and must have, first, a healthy working, earning, and fighting condition of its youngsters and of its taxpayers.

The CHAIRMAN. Mr. Spargo and Mr. Blakelock. Are you gentlemen going to get together?

STATEMENT OF GEORGE E. SPARGO, DEPARTMENT OF PARKS, CITY OF NEW YORK, N. Y.

Mr. SPARGO. I am George E. Spargo, executive officer of the department of parks, city of New York, and while we, too, would like a free pass on something, it is only on those things that are actually recreational facilities of the city of New York which we would like to have you consider.

The facilities that would be most affected by the proposal you have before you are our swimming pools. There are 17 pools, all operated free in the morning for children under 14. We charge 10 cents for children in the afternoon and evening and 20 cents for adults. That is barely enough to cover the maintenance cost of these pools throughout the city. I think perhaps the most concise way for me to give this to you is to read the letter Mr. Moses sent to Senator George, but not the memorandum, which we would appreciate having incorporated in the record. We can file copies of the memorandum with you, and that will give you the rest of the story.

It says:

THE CITY OF NEW YORK, DEPARTMENT OF PARKS,
New York City, August 19, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR: I wish to call your attention to the defective wording of section 541 of H. R. 5417 known as the Revenue Act of 1941 which is now under consideration by your committee.

This section provides for a new basis for computing admission taxes by establishing a "tax of 1 cent for each 10 cents or fraction thereof of the amount paid for admission to any place. * * *"

The words "admission to any place" are also used in section 1700 of the old revenue act. Under a recent ruling these words have been construed to include charges made for the use of publicly operated swimming pools and other recreation facilities. With similar reasoning this wording could also be construed to apply to charges made for the use of hotel rooms, pay toilets, bridge and other traffic facilities, parking fields and a host of other facilities never intended by Congress when this provision was adopted.

We have been unable to get anywhere in our efforts to adjust this matter with the Internal Revenue Bureau which is insisting on the collection of taxes from the users of publicly constructed and operated swimming pools and threatening to send public officials to jail if they do not comply.

This is a problem of general application throughout the United States affecting every recreation facility operated by a State or municipality for the health and welfare of the people where a small charge is made to help defray the costs of maintenance and operation.

Specifically the city of New York has constructed with public funds and has in operation 17 outdoor swimming pools. The charge made to the users of these pools is 10 cents for children and 20 cents for adults. To add a tax to these charges because of the ruling of the Bureau of Internal Revenue will bring in very little tax revenue and will do an immense amount of harm.

An amendment has been proposed which has the approval of the United States Conference of Mayors and a number of States. A copy of this amendment is enclosed herewith. It clarifies the law in regard to publicly operated recreation facilities but makes a distinction between spectators, who pay admissions to witness a contest, performance, or exhibition, and the users of public recreation facilities who pay a charge to help maintain such facilities.

I am also enclosing a memorandum which more fully discusses the proposed amendment.

I respectfully urge your committee to support this amendment.

Very truly yours,

ROBERT MOSES, *Commissioner.*

(The memorandum discussing proposed amendment referred to in Mr. Moses' letter to Senator George of August 19, 1941, is as follows:)

MEMORANDUM ON THE QUESTION OF FEDERAL TAXATION OF ADMISSION TO BATHE IN POOLS, BEACHES, BATHS, AND RECREATIONAL FACILITIES OF THE STATE OF NEW YORK AND ITS MUNICIPALITIES

The people of the State of New York, by many acts of the legislature, approved by the Governor, have adopted a program of recreation to promote the health and welfare of the people of the State. On several occasions the people have directly approved this program by voting affirmatively on bond issues to provide funds to finance the program. The various municipalities of the State have followed the lead of the State administrations in providing like recreational facilities for their own citizens. The Federal Government has made large sums available in the form of loans, outright grants, Work Projects Administration, Civilian Conservation Corps, National Youth Administration, and other funds for like purposes. In New York City alone 17 outdoor swimming pools have been constructed.

The policy of Federal, State and municipal governments has been to provide funds from various sources for the acquisition of necessary lands and to construct buildings and equip them for recreational use. In the initial stages moneys are also supplied for maintenance and operation, but more and more the

policy has developed to make modest charges for the use of recreational facilities wherever possible so that the cost of maintenance and operation may be paid by the people using the facilities and not out of general funds. The policy is not to collect for the use of facilities more money than is actually needed for maintenance and operation. As a matter of fact, in almost no cases do the charges pay the entire costs of carrying on these projects. Resort is still made to the appropriation of funds to make to make up the difference between the actual costs of maintenance and operation and the amounts that can be collected.

In all cases the charges are adjusted to meet the ability to pay of the users of the facilities. Administrators in charge of recreational areas have always to keep in mind that the real purpose is to improve the health and general welfare of the people. The charges are adjusted whenever it is found that they are proving too much of a handicap and attendance is falling off. On the other hand, the administrator must always keep in mind that the public policy is to meet the recurring charges for maintenance and operation out of receipts instead of resorting to the tax roll.

Recently, the delicately adjusted control of this State and city policy has been thrown out of balance by demands of the Federal Internal Revenue Bureau that State and municipal agencies collect from users of recreational facilities an admission tax to be turned over to the Government. This demand is contrary to the theory which has been sustained by the highest court in this country, that the Federal Government has no power to tax a State. The answer of the taxing authorities to this broad argument is that the tax is not levied on the State but on the users of the facilities and therefore the question of one sovereign taxing another is not involved. This is specious reasoning. The fact is that the State and city charge as much as can be collected without discouraging the use of recreational facilities. Any tax that is added to what the State and city charge will simply cut down the use, which as a matter of policy, the State is encouraging, If the tax is not added to the present charges then it must be paid out of the charges collected and will be that much less money to pay the cost of maintenance and operation.

It would seem that Congress is enacting the admissions-tax section of the revenue act had in mind this fundamental theory and considered it so well accepted that it was not necessary to make an exception to the law.

There is no need to argue over the wording of the act or to go into a long dissertation on the right of one government to tax another. The fact is that this policy of recreation has been adopted by a number of States for the general welfare of the people and it should not be burdened by placing a tax on it. The best way to clarify the question is to amend the new tax bill which is now before the United States Senate and specifically state that users of recreational facilities conducted by the State or any of its municipalities will be exempt from this tax.

A distinction should be made in the case of facilities that are essentially entertainments, exhibitions, or performances rather than for the recreation of the people, such as shows and athletic events where people go to enjoy the entertainments or diversions rather than to participate in them. For this reason an amendment to specifically exempt users of public recreation facilities from paying a tax should also clarify the wording of the present tax act by specifically excepting from this exemption taxes levied on admissions of spectators to shows, exhibitions, performances, or athletic contests conducted by a State or municipality. In other words, there should be a distinction made between spectators who pay admissions and users of public facilities who pay a charge to help maintain such facilities.

REVENUE ACT OF 1941, H. R. 5417, PAGES 53-54

PART IV—CHANGES IN BASIS OF COMPUTING TAX

SEC. 541.—ADMISSIONS TAX.

(C) No tax shall be levied or collected under this section in respect of any fees, charges, or admissions collected as a prerequisite to the use of healthful recreational facilities supplied pursuant to public policy, all the proceeds of which inure exclusively to a State or any political subdivision thereof, or to any public corporation created by special Act of the legislature of a State for a public purpose, no part of the net earnings of which inure to the benefit of any private stockholders or individual, provided that this exemption shall not apply to fees, charges, or admissions collected from spectators at exhibitions, performances, or contests.

(Change designation of present paragraph C to D.)

Mr. SPARGO. To give you an idea of what some of these facilities look like, I would like also to leave with you pictures of the pools in operation and also some of the other recreational facilities in operation.

I would like to say that last year there were approximately 1½ million paid admissions to these pools and the same number of free children in the morning. Mr. Blakelock is from the Long Island State park commission, which in turn is part of the State park system in New York State, and they have a similar problem there.

We do not ask, as you notice from Mr. Moses' letter, that you give any consideration to spectator events that we put on. For example, we have an amphitheater where we put on a water carnival and show once a week. The tax on admissions to those special events, of course, we expect to pay; it is the recreational or health-building facilities on which we would like to be relieved of paying a tax and we assume you will want to continue to tax those other events where admissions are charged. You will be doing an immense amount of good if the tax on these active recreation facilities is left out of the bill.

The CHAIRMAN. Mr. Blakelock, do you wish to make a statement?

Mr. BLAKELOCK. No; Mr. Spargo has covered the subject. The situation in the State parks is the same as in the city parks and, for that matter, throughout the country where municipalities are operating such facilities.

The CHAIRMAN. We have here a letter with reference to section 3465 and section 3466 of the 1941 revenue bill which I would like to invite the Treasury's attention to, and would like to incorporate it in the record.

It is from Mr. Kenneth Hogate, who calls attention specifically to the "ticker service" that is covered by this amendment to sections 3465 and 3466. I would like to have that entered in the record and like to have the Treasury see it and make a special note of that in view of the statements made.

The letter follows:

DOW, JONES & COMPANY, INC.,
New York City, August 21, 1941.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee, United States Senate.

Re sections 3465 and 3466 of 1941 revenue bill.

DEAR SENATOR GEORGE: An attempt would probably have to be made to construe the tax imposed on news ticker services, section 3465, subsection 2 (p. 55, lines 2 and 3), as now worded, as applying to the Dow, Jones news service, although that service clearly and undeniably constitutes the public press function of disseminating news. Any such attempt would unquestionably be expensive and embarrassing, because the present language of the bill jeopardizes Dow, Jones' recognized press standing of 40 years.

Section 3466 especially excludes the press from the provisions of the previous section. We are not asking for any special exemption and accept any tax levied on the press. Rather than appear at the hearings on what is really a noncontroversial matter, I take the liberty of writing to you, with the respectful request that this letter be entered as part of the committee's records so that it will be before the members of the committee when you reach discussion of these sections of the bill.

I am sending copy of this letter to the Honorable John L. Sullivan, Assistant Secretary of the Treasury, in the belief that changes which will clearly bring the Dow, Jones news service out from under this cloud of doubt will not be resisted by the Treasury.

May I suggest that the necessary changes could easily be made? They involve only deletion of the words "news ticker services" in section 3465 and defining "the public press" in section 3466 in such a way as expressly to include every method by which press news may be disseminated to the public through the medium of the written word.

If further information is desired, I shall be most happy to hear from you. I refrain from going into detail simply to conserve your committee's time and because the facts are not in question anywhere.

With kind regards and highest respect,

Very sincerely yours,

(Signed) KENNETH C. HOGATE.

The CHAIRMAN. Are there any other witnesses here, who desire to be heard this afternoon, who are on the calendar for tomorrow?

Mr. SELLEW. I would be pleased to.

The CHAIRMAN. We would be glad to hear you. Are you on the calendar for tomorrow?

Mr. SELLEW. Yes.

The CHAIRMAN. If you will come around and give your name, we will be glad to hear you now; it will shorten the work tomorrow.

STATEMENT OF DAVID M. SELLEW, GENERAL MANAGER, AUBURN RUBBER CORPORATION, AUBURN, IND.

Mr. SELLEW. Mr. Chairman and members of the committee: My name is David M. Sellew, and I am the general manager of the Auburn Rubber Corporation of Auburn, Ind. We manufacture a line of rubber toys and rubber soles and heels for shoes. Approximately two-thirds of our production consists of rubber toys which sell on the market at a retail price of 10 cents or less. These are samples of our products.

As such a manufacturer, my company comes within the category of a small manufacturer and is affected by section 3406 of the revenue bill of 1941, passed by the House of Representatives and under which a new excise tax is imposed on rubber articles as follows:

Articles of which rubber is the component material of chief weight, 10 percent. The tax imposed under the paragraph shall not be applicable to footwear, articles designed especially for hospital or surgical use, or articles taxable under any other provision of the chapter.

In making these comments, I am assuming that the purpose of this bill is, first, for the purpose of raising revenue and, second, for the purpose of inducing a reduction in the use of crude rubber in order that a greater supply of crude rubber may be available for national-defense purposes.

Objections to this bill have been expressed by the Rubber Manufacturers Association, the Toy Manufacturers Association, and other witnesses who stressed the seriousness of discriminating in this manner against the rubber industry and the difficulties and hardships that will be caused by the ambiguous wording of the bill. These objections are, in my opinion, true statements of fact.

However, I desire to place my objections upon two special grounds, neither of which have been covered, so far as I know, by the evidence of any other witness.

First, as heretofore stated to you, the bulk of our manufactured articles consists of rubber toys, heels, stick-on soles, etc., which sell at retail for 10 cents or less. In an article selling for more than this

amount it is possible that this additional tax could be absorbed by the manufacturer, the wholesaler, or the retailer; but in an article selling for 10 cents or less the margin of profit to the manufacturer, wholesaler, or retailer is so small that the absorbing of such a tax would be impossible. These article have sold, by custom of the trade, in 5- and 10-cent stores for 10 cents, and an attempt to raise this price above the 10-cent level would encounter so much sales resistance from the public that the result would be a definite reduction in the sale of such toys and other articles; and such reduction, in my opinion, would so seriously affect the trade as would tend to drive out of business small manufacturers such as my concern. The result of this would be that it would throw out of employment our 500 employees and would prevent the Government from collecting, by way of income tax and other Federal taxes, such amounts as we are now paying and do pay when in operation. Therefore it would appear that the effect of this additional excise tax upon the manufacturer of articles that sell at 10 cents or less would be to defeat the purpose of the act and destroy more revenue from the standpoint of Federal income tax than would be received from the excise tax.

Therefore, it would seem to me, from the standpoint of revenue, this section should be amended to exempt therefrom any articles designed to sell at retail for 10 cents or less.

Second, I desire to call your attention to the fact that the act as passed by the House of Representatives placed a 10-percent excise tax on articles of which rubber is the component material of chief weight, without any reference as to whether the article is manufactured, either wholly or in part, from crude rubber.

In order to conserve the crude-rubber supply and reduce the amount of crude rubber which would be used by the manufacturers of domestic articles, it would seem to me advisable to make some incentive for the manufacturer to reduce the amount of crude rubber which he does use or will use in the manufacture of the article which he fabricates, and it would, therefore, seem to me that it would be a wise provision to exempt from the provision of such excise tax all rubber articles which do not contain more than 10 percent of crude rubber, or such other percentage as Congress might deem advisable.

Such provision would then induce the manufacturer to produce his product from reclaimed and scrap rubber as far as it would be possible to do so and refrain from the use of any more crude rubber than would be absolutely essential to the manufacturing of his product.

In addition, may I call your attention to the fact that such an amendment of this act would permit the manufacturer who does not at this time use more than 10 percent of crude rubber in the manufacture of his product to continue to manufacture on the same basis that he is now operating, and in this way continue to furnish employment and earnings which would be available for the purpose of Federal group income tax and such other revenue as might be available to the Federal Government for their use in paying the expenses of government and the defense program.

In conclusion, may I repeat that this tax, when imposed on 5- and 10-cent merchandise, will remove much of it from selling counters, which will naturally mean no revenue from this tax on this type of product and a reduction in other revenue to the Government from

manufacturers producing this type of product. Again, if no relief is provided for the manufacturer who uses small percentages of crude rubber in his products, many of them, including my company, will be forced to curtail their operations drastically, and this curtailment will add very little to the Government stock pile because of the small amounts of crude rubber used by them even in normal times.

The CHAIRMAN. Well, sir; thank you very much.

I think that exhausts the witnesses for today. We will recess until 10 o'clock tomorrow.

(The following letters, memoranda, and statements filed with the committee were ordered inserted in the record:)

ARKANSAS PHARMACEUTICAL ASSOCIATION,
Little Rock, Ark., August 7, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: My name is Irl Brite, secretary-manager of the Arkansas Pharmaceutical Association, and I reside in Little Rock, Ark.

I thank you gentlemen of this committee for the privilege of submitting to you a brief statement in opposition to an increase in the excise tax on gasoline.

I would like to point out that it is not the desire of representatives of my organization or any other loyal Arkansan to shirk his just share of the national-defense burden. All of us realize that the emergency must be met and the cost shall fall upon all of us. However, we feel that the expenditures for national defense should be borne equally by all citizens, and we also feel that it is the wish of your committee to see that an equitable distribution of taxes are levied. In view of the fact that the operators of motor vehicles are now paying a large share of the expenditures for national defense, we believe that any increase in the Federal gasoline tax at this time would further bring about a disproportionate share of the burden upon highway users. While the Federal Government is in no wise responsible for Arkansas' high gasoline tax of 6½ cents per gallon, it is, nevertheless, a burden and especially so with the present Federal gasoline tax of 1½ cents per gallon, making a total tax of 8 cents per gallon on all gasoline consumed in this State.

We will thank the members of your committee to give this matter deliberate, considerate consideration before increasing the excise tax on gasoline.

Sincerely yours,

IRL BRITE, *Secretary.*

ALABAMA INDEPENDENT SERVICE STATION ASSOCIATION, INC.,
Montgomery, Ala., August 12, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate,
Washington, D. C.

DEAR SENATOR GEORGE: I am enclosing herewith a statement in opposition to the proposal to include an additional gasoline tax in the tax bill now being considered by your committee.

It will be appreciated if you will refer it to the committee and place it in the records of the committee hearing.

Very truly yours,

ALABAMA INDEPENDENT SERVICE STATION ASSOCIATION, INC.,
By L. L. LANE, *President.*

Encl.

To the Chairman and Members, Senate Finance Committee:

GENTLEMEN: I would like to appear personally before you gentlemen to oppose the suggested increase of 1 cent per gallon in the Federal gasoline tax, but I cannot leave my service station long enough to come to Washington, and haven't the money necessary to make the trip. For those reasons the following information is given in this form for your consideration and for the committee record.

It has always been our belief that since the States had created the gasoline tax, as a type of tax for road purposes, and since the use of gasoline tax revenues for general governmental purposes definitely constitutes "double" taxation on a group of citizens, most of whom are less able to pay special and double taxes, the Federal Government should never have gone into this tax field. We have constantly fought to retain this particular tax solely to the use of the States for road purposes. The logic in this policy is borne out by the fact that the motorist has already made an outstanding contribution to national defense by way of the finest highway system in the world.

The Federal Government is now on the verge of destroying that which has made it possible for the motorist to do the road-building job that has been done. If the Federal Government continues to infringe upon this tax field and overload the motorist, the gasoline tax, as a type of tax, will ultimately break down, and with it our highway system will go to pot. The present total gasoline tax in Alabama is a 68-percent retail sales tax.

Last year when the Federal gasoline tax was increased 50 percent for national defense along with lesser increases on other commodities it was not opposed because "quick" money was recognized as essential and we were in accord with the need for preparedness. However, we see in this newest proposal extreme danger to ourselves as businessmen, and to our national defense efforts as well. We find ourselves asking the question, "Why is it even considered?" There are adequate immediate and future supplies of petroleum products for every need. Gasoline is not the only commodity that could be taxed heavily enough to bring in large amounts of money.

The service station operators of Alabama and others too, I am sure, are ready and willing to accept their fair share of the tax load. However, our ability to do so rests in the success of our business, the sole means of our income. If the Federal gasoline tax and the State general sales tax were the only taxes on our principal product, we would have no complaint nor cause for concern.

Unfortunately, this is not the case. Every item of merchandise sold by us bears from two to four separate and distinct sales taxes ranging from 4½ percent on parts and accessories to 67 percent on gasoline. We now work 1⅓ days out of every 3 for Federal, State, county, and city governments collecting taxes, without pay of course, on our merchandise. In addition to that we pay State, county, and city privilege taxes from 2 to 20 times greater than those on any other business. We have always paid our own way and expect to continue if permitted to do so.

About half of our customers have just so much money to spend with us for petroleum products. We know this because we are personally acquainted with them. We know that any additional tax will cause them to cut down on the use of our products. There are many customers who never buy more than 1, 2, or 3 gallons of gasoline at a time, and most of them use their cars for pick-up trucks in their work.

These are the same good American citizens who have already during peace time, contributed millions of dollars to national defense by way of highways and bridges already built, and who are also already contributing millions of dollars to the Federal and local governments in special motor taxes being used for general purposes.

Very truly yours,

ALABAMA INDEPENDENT SERVICE STATION ASSOCIATION, INC.,
L. L. LANE, *President.*

UNITED STATES SENATE,
COMMITTEE ON MILITARY AFFAIRS,
August 12, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Committee on Finance,
United States Senate, Washington, D. C.

MY DEAR SENATOR GEORGE: At the direction of Senator Lodge, I am submitting the enclosed telegram from Lt. Gov. Horace T. Cahill, at present Acting Governor of the Commonwealth of Massachusetts, for such action as you may deem proper.

Very sincerely yours,

T. W. WHITE, *Secretary.*

[Telegram]

BOSTON, MASS., *August 11, 1941.*

HON. HENRY C. LODGE,
United States Senate, Washington, D. C.:

Strongly protest contemplated 1-cent increase Federal gasoline tax. Will impose additional burden on 7½ millions of Massachusetts motorists and invade field of taxation which Senate Finance Committee, in its report of May 10, 1933, said should be reserved to the States.

Respectfully,

HORACE T. CAHILL, *Lieutenant Governor,*
Acting Governor of Massachusetts.

[Telegram]

HELENA, MONT.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee, Senate of the United States,
Washington, D. C.:

Reference is made to Federal revenue bill passed by House and now before your committee. My attention has been directed to recommendation by Treasury Department that bill be amended include 1-cent increase Federal excise tax gasoline. Proposed tax gasoline counting 1940 increase will bring total increase to 150 percent over 1939. Large percentage gasoline tax this State paid by farmers and essential transportation and believe this applies Nation-wide. Gasoline tax long ago removed from luxury and nonessential classification. Additional gasoline tax would further increase heavy burden now borne by lower income groups on a real necessity. Gasoline tax levy is major source of State highway income and I am fearful that further increase Federal tax bill will jeopardize State income for highway construction and maintenance purposes not to mention heavy taxation now borne by highway transportation, the disparity of taxation of consumers of gasoline, and other factors. My opinion is that proposed increase gasoline tax for national defense may have undesired effect not to mention effect on farming and agricultural production which we all consider vital to national defense. Speaking for Montana and endeavoring to look to the best interests of its citizens and with due consideration to necessary national-defense efforts I desire to enter my protest against amendment of the bill to include further increase of Federal excise tax on gasoline. I shall appreciate it if you will bring this protest to attention of your committee and file same as part of the record of hearings before it.

SAM C. FORD, *Governor of Montana.*

[Telegram]

HELENA, MONT., *August 14, 1941.*

Hon. WALTER F. GEORGE,
Chairman, Finance Committee of Senate, Washington, D. C.:

I wish to go on record heartily endorsing in full night letter sent your honorable body by Gov. Sam C. Ford on 13th instant opposing any further increase in Federal gasoline excise tax.

SAM W. MITCHELL, *Secretary of State.*

[Telegram]

HELENA, MONT., *August 14, 1941.*

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.:

Relative revenue measure passed by House now before your honorable body for consideration. This commission has given due consideration to proposal Treasury Department to increase Federal gasoline tax and wishes to go on record as unalterably opposed thereto and endorsing in full telegram to you 13th instant by Gov. Sam C. Ford of this State.

HIGHWAY COMMISSION OF MONTANA,
By H. W. HOLMES, *State Highway Engineer.*

[Telegram]

HELENA, MONT., *August 14, 1941.*

Hon. WALTER F. GEORGE,
Chairman, Finance Committee, Senate of the United States, Washington, D. C.:

Refer to Federal revenue bill passed by House and now before your committee. Understand Treasury Department has recommended that bill be amended to include 1 cent increase Federal excise tax gasoline. As one familiar with conditions in Montana, I urge that your committee refuse to approve amendment referred to since a further increase in gasoline prices will not only injure all the people of this State, but will hinder our highway construction as well. I sincerely believe that in the public interest no further tax be placed on gasoline because this will reflect in the price here and will present a burden too heavy for most of our people to bear.

JOHN W. BONNER, *Attorney General.*

ARKANSAS WHOLESALE GROCERS ASSOCIATION, INC.,
Little Rock, Ark., August 8, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

DEAR SENATOR GEORGE: My name is William L. Humphries, secretary-treasurer of the Arkansas Wholesale Grocers Association, Inc., Little Rock, Ark. I respectfully ask permission to present the views of our organization with reference to the proposal to increase the Federal gasoline tax 1 cent per gallon.

Our organization is fully cognizant of the fact that taxes must be raised to defray expenses of the national-defense program, and there is no intention of questioning the sincerity of these endeavors to finance the defense program through increases in existing taxes or the addition of new levies, but at the same time it is appreciated likewise that the Congress intends fully that there should be an equitable distribution of the cost of defense among the different taxpaying groups.

United States Government figures show that more than one-half of the owners and operators of motor vehicles, the chief consumers of gasoline, earn less than $30 per week. Despite their limited ability to pay, these consumers are now contributing more than 14 percent of all the taxes collected by Federal, State, and local units of government.

The existing disparity in taxation of consumers of gasoline was intensified when the Federal gasoline tax was increased in 1940 one-half cent per gallon, or 50 percent, while taxes on other commodities in this same revenue measure were increased only 10 to 16 percent, except distilled spirits, toilet preparations, and cabaret admissions.

In view of the fact that the operators of motor vehicles are already paying more than their share of taxes for national-defense purposes, we feel that the taxes should be evened up on other commodities before any additional taxes are added to gasoline.

The operators of motor vehicles in Arkansas are deeply appreciative of the action taken by the House Ways and Means Committee by rejecting the proposal to increase the Federal excise tax on gasoline. We sincerely trust that if this matter is brought to the attention of your committee that it likewise will take similar action.

Respectfully yours,

ARKANSAS WHOLESALE GROCERS ASSOCIATION, INC.,
WM. L. HUMPHRIES, *Secretary-Treasurer.*

MOTOR VEHICLE ASSOCIATION OF ALABAMA, INC.,
Birmingham, Ala., August 11, 1941.

To the Chairman and Members, Senate Finance Committee, Washington, D. C.

GENTLEMEN: Being unable to appear before your committee personally, I am taking this means of presenting the opposition of the Motor Vehicle Association of Alabama to any additional gasoline taxes, to be included in the record.

The trucking industry is already contributing heavily in taxes to the Federal, State, and local Governments and is the only form of transportation that has not requested and secured governmental subsidies in one form or another. Any additional gasoline tax would constitute a special tax on motor transportation, while some of the other forms of transportation would go untaxed.

Trucks constitute one of the most vital factors of national defense but, at the same time, they have been the objects of vicious and destructive regulatory legislation and restrictive taxation, practically all of which has been sponsored by competing forms of transportation. Most of this legislation, in spite of all efforts of motor transportation and its shippers, is still in effect, and we are trying to operate against overwhelming odds already. The laws and taxes adversely affecting this industry have been publicly recognized as serious bottlenecks to national defense. Any additional tax on our operations will tend to make it more difficult to handle our part in the national-defense program.

Our organization is composed not only of for-hire carriers but of private carriers as well, including farmers, lumbermen, various wholesale businesses, fruit and berry growers, and others. These truck owners unquestionably will be required to contribute heavily to Federal-tax revenues by way of other general taxes. They expect to do so, and we are glad to contribute their share to national defense but are in no position to contribute twice while others contribute once.

While the importance of the trucking industry in national defense has been emphasized almost constantly by governmental authorities, it is pointed out by the United States Department of Agriculture that farmers are most affected by the gasoline taxes. The trucks in Alabama last year, together with other motor-vehicle owners, paid 40 percent of all State-collected taxes. They also paid about 20 percent of all taxes collected by municipalities. It would appear that the motor-vehicle owners are already carrying much more than their share of the tax loads of all branches of government. It is to be remembered that the motor-vehicle owner and industry operating trucks first pay all general taxes and then, in addition, pay special levies merely because they operate motor vehicles. The Federal gasoline tax definitely constitutes double taxation on a select group of businesses and citizens.

When thinking of national defense, preparedness, and even war, it is agreed by everyone that roads and bridges are probably the most vital necessity of all, especially in this modernized day and age. In considering new taxes for these purposes, should we not remember that the motor-vehicle owner of the United States has already contributed billions upon billions of dollars to our national defense by way of the finest highway system in the world? He will continue to contribute unless he is prevented from doing so by unfair and discriminating taxation.

Very truly yours,

MOTOR VEHICLE ASSOCIATION OF ALABAMA,
J. R. ODEN, *Executive Vice President.*

UNITED STATES SENATE,
COMMITTEE ON EDUCATION AND LABOR,
August 18, 1941.

Mr. FELTON M. JOHNSTON,
Clerk to the Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SIR: Upon appeal of some people from my State, I request that the attached argument against gasoline taxes be included in the committee hearings on that proposal.

Respectfully submitted.

JOSEPH ROSIER.

WHY FURTHER INCREASE IN THE FEDERAL GASOLINE TAX SHOULD NOT ALSO BE ADDED TO THE REVENUE BILL OF 1941

The provisions of the revenue bill of 1941 as approved by the House of Representatives do not embody any increase in the prevailing Federal gasoline tax rate of 1½ cents a gallon. Instead, car owners were asked to assume their new share of additional defense costs in the form of increased excise tax rates on other automotive commodities and a new annual use tax of $5 for each vehicle.

The Federal gasoline tax rate increase was not omitted from the House revenue bill because the revenue possibilities of such a tax increase were overlooked. A concrete proposal to raise the Federal gasoline tax rate from 1½ to 2½ cents a gallon was considered by the House Ways and Means Committee during the extensive hearings on the revenue bill conducted by the committee.

A STATE TAX FIELD

On the basis of the testimony presented at these hearings the House Ways and Means Committee concluded that any further increase in the Federal gasoline tax would be unsound and unjust. In its reluctance to increase further the Federal gasoline tax the committee was conscious of the fact that the gasoline tax traditionally has been a road tax imposed by the States to finance what is still primarily a State function, road construction and maintenance.

Using revenue from the gasoline-tax and other highway-user levies, income from bond issues, and funds provided by the Federal Government's program of highway aid, the States have invested billions of dollars in extensive systems of highways. The House Ways and Means Committee realized that this investment would be jeopardized if the income of the State highway departments, which are so dependent on the yield from the State gasoline tax, should be undermined by excessive duplicating Federal gasoline taxes. Roads must be properly maintained or they deteriorate rapidly.

The States are dependent on their gasoline revenue not only to protect the investment in roads but also to honor their highway debt. Nearly $120,000,000 is required annually from the State gasoline tax revenues alone to pay the principal and interest on State highway obligations. The credit of the States is dependent on the faithful payment of these charges each year. The House Ways and Means Committee was informed by State officials that the continued discharge of these obligations, however, would be seriously threatened by Federal usurpation of the gasoline-tax field.

Convincing testimony was presented to the committee to show that the gasoline tax now is the greatest single source of State tax revenue. In 1940 State gasoline taxes yielded $864,000,000, a sum representing 26 percent of total State tax collections, exclusive of pay-roll social-security assessments. No other one tax produced a greater percentage. Two States, Nebraska and Georgia, derived at least 50 percent of their tax revenue from the levy on gasoline.

FEDERAL TAX IS DUPLICATIVE AND EXCESSIVE

The Ways and Means Committee also recalled that in 1932, when the States already had come to rely heavily on the gasoline tax as a source of revenue, the Federal Government also enacted a duplicating gasoline tax at a 1-cent-per-gallon rate. This tax, unlike the State gasoline taxes which were designed as a special charge against the motorists for the use of the highways, was enacted as a general revenue measure. The committee was aware of the fact that the Revenue Act of 1940 had increased the Federal gasoline tax rate from 1 to 1½ cents per gallon, an increase of 50 percent. This 50-percent increase was the most substantial of the increases then imposed on everyday necessities.

Up to the time of the increase in the Federal gasoline-tax rate for defense purposes, the consumers of gasoline had paid into the Federal Treasury nearly $1,500,000,000 in taxes on that commodity to aid the Government in a period of distress. With the new ½-cent-per-gallon increase in rate, these consumers of gasoline have been asked to pay annually $112,000,000 in addition to $224,000,000 in general emergency gasoline taxes they had been paying. This fact the House Ways and Means Committee appreciated.

NOT A FAIR TAX

The committee knew, too, that a tax on gasoline is a tax on the consumer of gasoline—whether it be called a manufacturers' excise tax or a retail sales tax—for the tax is included as a cost in the price the consumer must pay. Any proposal to increase the Federal gasoline tax, therefore, would need to be considered primarily in terms of the consumer from whose pocket the tax eventually is paid.

To bear a fair share of the cost of general government is the responsibility of every citizen. This is particularly true of the cost of the national-defense program.

But it was pointed out to the Ways and Means Committee that the annual payment made toward the cost of general government by an individual in the form of Federal gasoline taxes is measured by the amount of gasoline he consumes. Some individuals consume more than others because they live farther from their place of employment or because as farmers or salesmen they must consume gasoline to make a living. Accordingly their Federal gasoline-tax payments for the support of general government are greater.

These considerations have become particularly significant because the shortage of housing and labor in centers working on defense projects is requiring the assembly of skilled industrial workers from wide areas. The transportation of these workers to their jobs has been facilitated by the private automobile to a degree possible by no other means. Consequently, through no choice of their own, workers are known to be driving back and forth to work each day on a round trip taking 4 hours.

The House Ways and Means Committee concluded that it would be unjust to increase the gasoline tax and penalize those who thus must sacrifice a substantial portion of their own time in getting back and forth to their defense work by automobile. In addition to making such sacrifices in personal time, they would be called upon to pay a greater share of the defense costs simply because they had to travel farther to get to their jobs.

This fact was considered important because, as average citizens, motorists pay all the general taxes levied by the Federal Government. In addition, as highway users they alone pay the special automotive taxes. As a result, motorists now are contributing in excess of $500,000,000 more each year to the Federal Government than other citizens of the country who do not operate motor vehicles. Furthermore, reliable studies by Federal governmental agencies disclosed that the average motorist earns between $20 and $30 weekly. Special automotive taxes now cost the average motorist more than $50 annually. The country's motorists, therefore, were shown to spend about 2 weeks' wages just to meet their annual automotive tax bill.

BILL ALREADY ADJUSTED TO MAKE MOTORISTS PAY FAIR SHARE

In view of these very fundamental and important considerations, the House Ways and Means Committee, therefore, decided that it would be unfair and unsound to increase further the Federal gasoline tax. In line with the objective to compel each individual and group to assume its fair share of the new additional defense-tax burden, however, the new revenue bill as approved by the committee contained provisions for increases in the Federal excise-tax rates on automotive chassis, parts, and accessories, inner tubes, and tires. In addition, an annual "use" tax of $5 per vehicle was imposed on all car owners.

The increased Federal automotive taxes will exact from motorists about $135,600,000 each year, and the annual use tax will cost them more than $150,000,000. Combined, these new taxes on car ownership and use will cost the Nation's motorists about $286,000,000. This represents a most substantial share of the new tax bill, and the revenue will come from one separate and distinct group—the car owners. Of course, car owners—as general citizens—also are subjected to all the other new general emergency taxes. Their new $286,000,000 extra tax payment is collected from them in addition to all other taxes simply because they own cars.

To impose also an increase in the Federal gasoline-tax rate would impose on car owners a disproportionate share of the new defense costs and would disrupt the carefully balanced revenue bill as offered by the House Ways and Means Committee and finally approved by the House of Representatives.

MOBILE, ALA., *August 15, 1941.*

Hon. WALTER F. GEORGE,
Washington, D. C.

Honorable Chairman and Members Senate Finance Committee:

HONORABLE SIR: I attach brief covering some of the objections voiced by members of board of directors, Mobile division, Alabama Motorists Association, concerning proposed increased Federal gasoline tax.

We are very much concerned about this matter and we ask your consideration and support, as in our opinion further taxes on gasoline, even though it is the patriotic duty of everyone to cooperate during times of distress, is not justified after taking in consideration the heavy taxes that already exist on this commodity.

Very truly yours,

G. FRANK JONES,
Chairman, Board of Directors,
Mobile Division of Alabama Motorists Association.

Honorable Chairman and Members Senate Finance Committee:

GENTLEMEN: In view of our inability to have a representative appear personally, we wish to take this means of calling to your attention a few facts that should have a bearing on the proposed additional gasoline tax.

The gasoline tax, as a type of tax, was created and is justified for road purposes only. The motor-vehicle owner pays all other taxes for general purposes the same as does the non-motor-vehicle owner and then, in addition, pays the special sales tax on gasoline to operate his motor vehicle. To tax gasoline for purposes of a general nature constitutes double taxation on the motor-vehicle owner.

This cannot be justified on the grounds that the motor-vehicle owners are rich. The large majority of our motor-vehicle owners have incomes of less than $30 per week, and only a very small percentage are considered wealthy. The farmer and the workingman are the principal ones who pay this tax. One example is the fact that about 1,000 workers living in Birmingham are daily driving 50 miles to and 50 miles from the powder plant now being constructed at Childersburg, Ala.

Even before the Federal Government first stepped into the gasoline-tax field, the States had already monopolized this tax source for the construction and maintenance of roads and bridges. The State and local gasoline-tax rates in Alabama now reach a total of almost 7 cents per gallon and the existing Federal tax brings this to 8½ cents.

This constitutes a retail sales tax of around 68 percent already.

The motor-vehicle owner is already paying far more than his share of taxes. Last year in Alabama motor-vehicle owners paid to the Federal, State, and local governments a total of $27,576,000 in special gasoline, oil, and automotive taxes. Of this amount, $8,296,000, or 31 percent, went to general governmental functions.

Last year 40.1 percent of every tax dollar collected by the State of Alabama came from the pockets of the motor-vehicle owners, about 11 percent of our population.

STATE-HIGHWAY REVENUES

A most important factor to be considered is the effect of continued increases in the Federal tax on the State-highway revenues.

The State of Alabama and our 67 counties have an immense amount of highway bonds outstanding for the next 10 years. Present revenues are sufficient only to retire these debts, maintain present roads, add to match Federal-aid funds with difficulty. National-defense-road needs are placing additional expenses on our highway department.

Additional Federal gasoline taxes will tend to further handicap our local efforts to construct and maintain an adequate highway system. After the present defense work stops, the effect of increased Federal gasoline taxes will become highly destructive, because it is a matter of record that the higher the tax goes the fewer are the gallons of gasoline consumed. The result will be that our State-highway revenues will fall.

The motor-vehicle owner as a group has already done more for national defense than any other group of citizens. He has already delivered in peacetimes the finest highway system in the world, and no one can deny the value of such system to national-defense efforts or to war purposes.

We sincerely believe that, since there are adequate supplies of petroleum immediately available for all present and future requirements, an additional gasoline tax would be detrimental to national defense rather than helpful.

Very truly yours,

ALABAMA MOTORISTS ASSOCIATION, MOBILE DIVISION,
G. FRANK JONES, *Chairman, Board of Directors.*

LITTLE ROCK, ARK., *August 11, 1941.*

CHAIRMAN AND MEMBERS,
SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: I understand that the Treasury Department has recently recommended an increase in Federal gasoline taxes of 1 cent per gallon. We are already paying 1½ cents per gallon Federal tax, and should this increase become effective it would make us pay a total tax of 2½ cents per gallon.

I feel, as do many others, that imposing at this time an additional tax on gasoline would be detrimental rather than helpful not only to my State but to the Nation. In my State the burden would fall more heavily upon the farmers than anyone else, because Arkansas is an agricultural State. I feel now, as I have always felt, that the farmers have to carry too much of a burden, as things now stand, without making the load heavier at this particular time.

I am not unmindful of the fact that we must raise a great amount of money in order to meet the huge expenditures that are necessary in connection with our defense program, but I feel that there are other fields of taxation which can stand this burden more easily than the farmers of our country.

I sincerely hope that your honorable committee will vigorously oppose the recommendation of the Treasury Department that an increase of 1 cent per gallon be placed on gasoline.

Very truly yours,

JACK HOLT, *Attorney General.*

Gentlemen, as chairman of the Minnesota Highway Users Conference, I should like to present certain vital statistics and information relative to the proposed increase in the Federal gasoline tax now under consideration by your committee. At the outset, I wish to state that our organization is in no way attempting to avoid its fair and just share of taxation for national defense, but at the same time we would like to bring to your attention certain facts in connection with the further increased taxes on highway transportation. We fully realize that the defense movement must be financed by new and increased taxes, but at the same time it is fully appreciated that this body intends that there should be equitable distribution of the costs of defense among the different taxpaying groups throughout the country.

Despite their modest economic circumstances, owners and operators of motor vehicles as the chief consumers of gasoline are the most heavily taxed group in the country. More than half of them have an income of less than $20 per week and only 12 percent an income of more than $60 per week, according to reports issued by the Department of Commerce and the National Resources Committee. Despite their limited ability to pay, these consumers are contributing currently more than 14 percent of all the taxes collected by Federal, State, and local governments. In total, they are required to contribute each year nearly $2 000,000,000 in special levies upon automotive equipment and its operation. Of this sum, a billion and one-half is paid to the States and their localities; the remaining one-half billion goes to the Federal Government. In addition to these specialized levies, they also must pay the same taxes as other citizens for the general maintenance and upkeep of all the Government.

Gasoline is no longer a luxury; hence it is unwise to place it in that category. The vast majority of motorcar users, as pointed out, are in the lower-income classes; hence the inequity of levying a 75-percent additional Federal tax on this group.

In Minnesota our State collects upward of $20,000,000 a year in gasoline taxes. In addition to that, the Federal levy approximates $8,000,000. These two taxes constitute a 40-percent sales tax on the gasoline sold in our State. Our three largest counties, containing our three biggest cities, contribute one-third of the gasoline-tax revenues. In other words, two-thirds of our State's gasoline taxes are paid by smaller communities and the rural areas. As you already know, the farmers are not exempt from the gasoline tax; therefore this additional levy would increase the cost of gasoline to 66 percent of our consumers who reside in rural areas. In addition to that, a large portion of the tax paid by our three cities is also paid by low-income groups, i. e., those earning less than $30 per week.

Current proposals, therefore, for an increase in the Federal gasoline tax in all fairness must take into account the existence of present State gasoline taxes which were levied, of course, prior to the imposition of the Federal tax. Minnesota now taxes gasoline at 4 cents per gallon, in addition to the 1½-cent Federal levy, which brings the total to 5½ cents. An increase of the Federal tax to 2½ cents, as provided, would increase the over-all tax to 6½ cents, or the equivalent of a sales tax of 52 percent based on the current retail price. From July 1932 to July 1940, the date on which the Federal gasoline tax was increased for defense purposes, consumers of gasoline have paid into the Federal treasury nearly a billion and one-half dollars to aid the Government in a period of distress. As a result of the ½-cent-per-gallon increase enacted in 1940, these consumers were required to pay some $112,000,000 more per year.

There has been much discussion of the indispensability to the defense program of certain basic and vital materials but little attention has been paid to gasoline, which seems to be equally indispensable. Without it, most of the defense workers would be unable to reach the factories and many of the finished defense materials could not be transported away from the factory by truck. In many instances the private automobile offers the only possible means of transportation to and from defense work, and this is equally true in the transportation of farm products to the various agricultural markets. Local highway programs would also suffer since the forced curtailment of the operation of motor vehicles through taxation would have the effect of reducing this revenue by a comparable amount. Obviously, any marked reduction in available revenue would cause a serious disruption of the financial resources available for highways. Furthermore, State highway programs alone would not suffer. Of the revenue collected from the motorists, some $246,000,000 annually is being distributed now to counties for expenditures upon roads under the jurisdiction of those units. Restriction upon operation of automobiles through taxation would effect a reduction in the amount of money which the counties now obtain from such funds and a similar reduction in sums accruing to other local governmental units. Such action certainly could not be reconciled with current efforts by Federal authorities to encourage State and local officials to undertake the elimination of bottlenecks in the highway system which are considered detrimental tc national defense.

These are but a few of the arguments we submit in brief for your consideration before adding a further tax to gasoline. It is an essential commodity used by over 30,000,000 motor-vehicle operators in this Nation today. It is vitally important that serious consideration be given to this.

STATE OF ARKANSAS,
DEPARTMENT OF STATE,
Little Rock, August 9, 1941.

CHAIRMAN AND MEMBERS SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: My name is C. G. Hall, secretary of state, Little Rock, Ark. At the outset I want to express to the committee my appreciation for the courtesy of allowing me to make a brief statement in opposition to an increase in the Federal gasoline tax at this time.

Being a native of this State and having a personal acquaintance with men and women in all walks of life, I can truthfully say that no Arkansan would evade paying his just share of the cost of national-defense expenditures. Our citizenship has always done its part in any emergency, and during the war days of 1918, as well as in the present crisis, our young men volunteered their services in great numbers. I feel, along with my fellow Arkansans, that the motor-vehicle operators are now paying their fair share, if not more, of the money being raised for national-defense purposes. In this State, alone, with the second lowest per-capita income in the United States, at the present rate of 1½ cents, the Federal gasoline tax is producing an annual revenue of approximately $3,000,000. Any further increase in this excise tax at this time would place an unreasonable and excessive burden upon our highway users.

Respectfully yours,

C. G. HALL, *Secretary of State.*

ARKANSAS HIGHWAY USERS CONFERENCE,
Little Rock, Ark., August 11, 1941.

CHAIRMAN AND MEMBERS, SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: My name is William F. Scarborough, secretary-treasurer of the Arkansas Highway Users Conference. This organization's membership is comprised of the following groups:

Arkansas Automobile Club
Arkansas Automobile Dealers Association
Arkansas Bakers Association
Arkansas Bottlers Association
Arkansas Dairymen's Association
Arkansas Farm Bureau Federation
Arkansas Farmers Union
Arkansas Ice Cream Manufacturers Association
Arkansas Pharmaceutical Association
Arkansas Roadside Council
Arkansas Wholesale Grocers Association
Associated Motor Carriers of Arkansas
Oil Dealers' Association of Arkansas
State Grange
United Commercial Travelers

We, as an organization representing many groups interested in highway transportation, do not want to appear unpatriotic in carrying our part of the burden for the payment of national-defense expenditures. We do feel, however, that the highway users are already paying a disproportionate share of special levies for defense purposes in addition to an extremely heavy burden of automotive taxes which were levied prior to the emergency.

We accepted an increase in the Federal gasoline tax in July 1940 willingly and without expressing any opposition thereto. We felt then, and still feel, that motor vehicle operators should pay their fair share of taxes unecessary for the proper and adequate defense of our Nation. When the 50-percent increase in the Federal gasoline tax was enacted last year increases in other commodities approximated 10 to 15 percent. We feel and believe that your committee, upon proper investigation, will be convinced that the highway users of today are paying at least their fair share, if not more, of national-defense taxes.

We respectfully urge that the Federal gasoline tax not be increased at this time.

Respectfully submitted.

W. F. SCARBOROUGH, *Secretary-Treasurer.*

INDEPENDENT BUS AND TRUCKERS' ASSOCIATION,
Little Rock, Ark., August 7, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: My name is Willis V. Lewis, secretary-treasurer of the Independent Bus and Truckers' Association, Little Rock. I respectfully ask permission to present the views of our organization with reference to the proposal to increase the Federal gasoline tax 1 cent per gallon.

We are all aware of the fact that our national-defense program calls for heavy increases in taxation. As the Independent Bus and Truckers' Association sees it, such new taxes as may be imposed should be levied as fairly and equitably as possible. These levies should be of such a character as not to destroy our system of private enterprise, upon which the security and well-being of the Nation so greatly depends in the emergency with which we are confronted. On the other hand, no person should be allowed to make any inordinate profits, nor should taxes be levied purely for punitive purposes.

The highway users of the country are already paying their full and proportionate share of all taxes. In addition to that, they are contributing, in round figures, about $2,000,000,000 per year in special highway taxes of various kinds—Federal, State, and local. This sum is equal to approximately 14 percent of the total revenues accruing to all the units of government in the United States. State and local taxes on highway transportation amount to about $1,500,000,000 a year, while the Federal Government is collecting approximately $500,000,000 a year from this source.

With a State gasoline tax of 6½ cents per gallon added to the present 1½ cents, or a total tax of 8 cents, Arkansas motor-vehicle operators today are paying more than a 50-percent sales tax upon an essential commodity.

We respectfully urge your committee to disapprove the proposal to increase the Federal gasoline tax.

Respectfully submitted.

INDEPENDENT BUS AND TRUCKERS' ASSOCIATION,
WILLIS V. LEWIS, *Secretary-treasurer.*

THE TRAVELERS PROTECTIVE ASSOCIATION OF AMERICA,
Atlanta, Ga., July 23, 1941.

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

Re: Federal gasoline tax.

DEAR SENATOR: Because of the well-recognized principle that everyone should do his part in meeting our country's problems, we are addressing this letter to you regarding proposals to increase the Federal gasoline tax. We are fully aware that the excessive expenditures of our Federal Government will probably call for more taxes unless substantial curtailment is made in these expenditures. At the same time it should be remembered that any tax increase levied now will undoubtedly remain in effect for many years hence, and it would seem advisable to broaden the application of any additional taxes.

Taxes on motor-vehicle operation are already far beyond the bounds of reason. The fact that people continue the use of motor cars and trucks, notwithstanding the outrageous and unreasonable cost of special motor-vehicle taxes, shows how necessary is the motor vehicle in our present-day life. It would be well for us to realize the value of motor-vehicle transportation now; England and France permitted special interests to hamper the progress of motor-vehicle development with disastrous results. To quote Frederick C. Horner, member, United States Civil Defense Commission to England:

"It is no secret that transportation is a major problem in England. Over there, as over here, the railroads have been telling the public that they had plenty of equipment to take care of any emergency. Today the English railroads are still saying, 'We can take it.' They can, of course, but with no promise of delivery."

Our own transportation experiences during the World War should be a warning.

Many of our people must use motor cars and trucks in earning a living. The levying of additional special taxes in motor-vehicle operation would be an unreasonable extra burden on these people who are already forced to pay outrageous special taxes on the use of their motor cars and trucks.

The traveling man, of whom about 70,000 are included in our organization, is already paying too much in special taxes on the operation of his motorcar. This applies also to others who must use the motor vehicle in making a living. To increase this tax, now outrageously high, would seem preposterous, but we understand such proposals are being made.

We have no desire to question the sincerity of efforts to finance our national activities, but we would be unfaithful to our trust if we did not rise in protest against proposals to single out the motorcar owner for additional special taxation.

The Federal gasoline tax was put on as a "temporary emergency" tax, admittedly wrong and unfair at the time, has been reenacted from time to time, increased 50 percent last year, and now proposals are made to increase it, because it is easy to collect. Surely you can find a fairer method of raising revenue.

Gasoline is overtaxed now.

Sincerely yours,

WILBER E. BROWN.

P. S.—Please have this letter included in the record of the hearings of the Senate Finance Committee on the tax bill.

S. H. KRESS & Co.,
New York, August 15, 1941.

Senator WALTER F. GEORGE,
Chairman, Finance Committee, Senate Office Building,
Washington, D. C.

DEAR SENATOR GEORGE: We went to Washington to consider presenting to your committee the situation as to how the new revenue bill affects our business and thousands of others similarly situated.

After being at the hearing yesterday, I realized the tremendous burden placed on your committee and appreciate the sincerity with which you all are considering this immense problem. Instead of asking for a personal hearing, decided that it would be to the best interests of all to submit, in writing, our observations on provisions which we think are both inadvisable and discriminatory.

We hope that your committee will give the same consideration to these suggestions as if we used your time in making a personal presentation, and request that you place the attached on record with your committee.

This is the result of a conference with a member of your committee, Senator Clyde L. Herring, of Iowa, who is a personal friend of many years and knows the effect of these provisions upon our industry.

Yours sincerely,

S. H. KRESS & Co.,
By R. H. KRESS, *President.*

1941 FEDERAL TAX LAW (H. R. 5417, REVENUE BILL

Title 2—Excess-profits tax: Section 201 (a) applies the fixed percentage rates on the fixed dollar amount, which is an unfair application with respect to different corporations and/or industries.

By classifying the taxable brackets on the percentage of income, its application would be the same for all corporations regardless of whether or not their business is affected directly by the defense program; we suggest the following schedule as an example:

	Percent tax
First 10 percent of excess-profits taxable income	35
Next 15 percent of excess-profits taxable income	40
Next 15 percent of excess-profits taxable income	45
Next 15 percent of excess-profits taxable income	50
Next 20 percent of excess-profits taxable income	55
Balance 25 percent of excess-profits taxable income	60

Section 713 (b) base period—excess-profits credit based on income: Consider adding to make this "average of any 3 years of the 4 years." Several of the Senators stated as having previously been brought to the committee's attention as to this discriminatory feature applying to a large number of corporations who may have had one bad year due to conditions beyond their control.

Section 714—excess-profits credit based on invested capital: Why apply a 7-percent rate on the balance of capital above $5,000,000, as it only allows $10,000 additional taxable income on each million dollars of excess, and causes further confusion?

The normal Federal income tax should be first applied against corporation profits before the application of the excess profits, and the Government should collect an equal amount of tax. As the 60 percent fixed excess-profits-tax rate under section 201 on the higher-bracket percentage of the excess-profits taxable income will take care of the larger part of the profit accruing to all corporations.

Chapter 19: Retailers' excise taxes are an abomination, whether levied by Federal, State, or municipal governments because of the tremendous costs of collecting and reporting; as proposed there will be excise taxes applying on special items in our industry on dry goods, jewelry, hardware, notions, soda and lunch, and toilet goods.

For our stores 85 percent of the items sell for 25 cents or less; 56 percent are 10 cents or less. How would this tax be applied and collected without a wasteful cost to retail stores, and the Internal Revenue Department in checking same up? The bill calls for 10 percent on the majority of the items, so how could the retail store add ½ to a 5 cents sale to the customer, and 2½ to a 25-cent sale, etc., without causing definitely dissatisfied customers? It must be remembered that most States and several cities already levy sales taxes and other taxes which must be collected as a separate item.

Then again, how will the honest retailer keep the record of such collections? One hundred percent of our sales are recorded through cash registers.

Instead of a retail excise tax this should be a manufacturers' excise tax and the rates adjusted to yield the necessary income.

Inventory declines: Provision should be made for the time when the crash causes a drastic drop in market prices.

As Senator Connally suggested, a revision last year to be incorporated in section 604 (a) (2), similar to section 214 (a) of the Revenue Act of 1918, this data has been submitted to him directly to be brought to the attention of the committee.

Copy to Senator Walter F. George.

AUGUST 15, 1941.

Senator TOM CONNALLY,
Senate Office Building, Washington, D. C.

DEAR SENATOR CONNALLY: I enclose a copy of communication today sent to your chairman, Senator Walter F. George.

This is in accordance with our conversation and, on account of the time which you could give being limited, I feel sure that this brief statement will be more comprehensive than what we could have covered verbally.

Complying with your request, attached are two double-spaced copies of the following:

Section 604 (a) (2) of the Connally amendment proposed but not enacted as a part of the Revenue Act of 1940.
Section 214 (a) of the Revenue Act of 1918.
Excerpt from Dominion of Canada Excess Profits Tax, section 6 (1) (b).

In 1920 our corporation suffered an inventory loss of over $1,250,000, which was likewise reflected in our 1921 earnings, as that merchandise inventory panic lasted for 2 years.

The Government should prepare for such contingencies, which will occur at almost any time during the immediate future years; the present uncertainty of business operation was demonstrated last week when several hundred thousand hosiery-mill operators were thrown out of work as 10,000 hosiery mills closed August 2, caused by silk being placed on the defense-priority list.

As prices rise, inventories rise, particularly because of the uncertainty of deliveries. Inventory losses always accompany deflation of inflated prices and inventories.

Yours sincerely,

R. H. KRESS.

SECTION 604 (a) (2) OF THE CONNALLY AMENDMENT PROPOSED BUT NOT ENACTED AS A PART OF THE REVENUE ACT OF 1940

CONNALLY AMENDMENT

This act was subsequently amended and the following paragraph was deleted in the amendment:

(2) *Loss in inventory.*—(A) At the time of filing return for the last taxable year under this title a taxpayer may, notwithstanding any other provision of law, file a claim in abatement based on the fact that he has sustained a substantial loss (whether or not actually realized by sale or other disposition) resulting from any material reduction (not due to temporary fluctuation) of the value of the inventory for such taxable year, or from the actual payment after the close of such taxable year of rebates in pursuance of contracts entered into during such year upon sales made during such year. In such case payment of the amount of the tax covered by such claim shall not be required until the claim is decided, but the taxpayer shall accompany his claim with a bond in double the amount of the tax covered by the claim, with sureties satisfactory to the Commissioner, conditioned for the payment of any part of such tax found to be due, with interest. If any part of such claim is disallowed then the remainder of the tax due shall on notice and demand by the collector be paid by the taxpayer with interest at the rate of 6 per centum per annum from the time the tax would have been due had no such claim been filed. If it is shown to the satisfaction of the Commissioner that such substantial loss has been sustained, then in computing the tax imposed by this title the amount of such loss shall be deducted from the net income.

(B) If no such claim is filed, but is shown to the satisfaction of the Commissioner that during the period of 1 year after the date upon which the last return under this title is due the taxpayer has sustained a substantial loss of the character above described then the amount of such loss shall be deducted from the net income for the last taxable year under this title and the tax imposed by this title for such year shall be redetermined accordingly. Any amount found to be due to the taxpayer upon the basis of such redetermination shall be credited or refunded to the taxpayer in accordance with the provisions of section 322.

SECTION 214 (A) OF THE REVENUE ACT OF 1918

That in computing net income there shall be allowed as deductions:

(12) (a) At the time of filing return for the taxable year 1918 a taxpayer may file a claim in abatement based on the fact that he has sustained a substantial loss (whether or not actually realized by sale or other disposition) resulting from any material reduction (not due to temporary fluctuation) of the value of the inventory for such taxable year, or from the actual payment after the close of such taxable year of rebates in pursuance of contracts entered into during such year upon sales made during such year. In such case payment of the amount of the tax covered by such claim shall not be required until the claim is decided, but the taxpayer shall accompany his claim with a bond in double the amount of the tax covered by the claim, with sureties satisfactory to the Commissioner, conditioned for the payment of any part of such tax found to be due, with interest. If any part of such claim is disallowed then the remainder of the tax due shall on notice and demand by the collector be paid by the taxpayer with interest at the rate of 1 percent per month from the time the tax would have been due had no such claim been filed. If it is shown to the satisfaction of the Commissioner that such substantial loss has been sustained, then in computing the tax imposed by this title the amount of such loss shall be deducted from the net income.

(b) If no such claim is filed, but it is shown to the satisfaction of the Commissioner that during the taxable year 1919 the taxpayer has sustained a substantial loss of the character above described then the amount of such loss shall be deducted from the net income for the taxable year 1918, and the tax imposed by this title for such year shall be redetermined accordingly. Any amount found to be due to the taxpayer upon the basis of such redetermination shall be credited or refunded to the taxpayer in accordance with the provisions of section 252.

EXCERPT FROM DOMINION OF CANADA EXCESS-PROFITS TAX LAW, SECTION 6 (1) (B)

(16-107) *Reserve against future inventory losses.*—Such reasonable provision as a reserve against future depreciation in inventory values as the Minister, in his discretion, may allow having regard to a basic quantity of stock in trade necessary for the business as indicated by the quantity on hand at the end of the fiscal period of the taxpayer ending in one thousand nine hundred and thirty-nine: *Provided*, That no such deduction shall be allowed which provides against a decline in inventory values below the inventory prices of goods on hand at the end of the fiscal period of the taxpayer ending in one thousand nine hundred and thirty-nine: *And provided further*, That any reduction in such reserve shall be added to the profits of the year of reduction for purposes of taxation under this Act. (S. 6 (1b), c. (97.3).)

.05 *Application.*—The provision allowing a deduction for reserve against future inventory losses is applicable only when the taxpayer is liable to the tax on his excess profits and not on his annual profits; see 16-100, CCH.

OUTDOOR ADVERTISING ASSOCIATION OF ARKANSAS,
Little Rock, Ark., August 8, 1941.

Mr. CHAIRMAN AND MEMBERS OF THE FINANCE COMMITTEE,
United States Senate, Washington, D. C.

GENTLEMEN: My name is Willard D. Billingsley and this letter is being directed to you over my signature as assistant secretary of the organization set forth on this letterhead.

In the general tax bill, which recently passed the House, and which is now up before you gentlemen for consideration, you will find included in one of its sections an occupational tax on individuals, partnerships, or corporations "which are in the business of rendering an outdoor advertising service to others" and this communication has reference to that section of the proposed bill.

First, may I say that I know full well that additional taxes are necessary to meet the demands of the rather extensive defense program. Furthermore, I fully appreciate the problem with which you gentleman are faced and I know that the job is neither easy nor pleasant.

Please understand, further, that we of the outdoor advertising industry have no intention or desire to shirk our responsibilities. Myself and the others in this business are willing to pay our proportionate part of taxes, along with and on a par with other business, but do not feel that we should be singled out for this special tax, in addition to all others we are and will be required to pay.

A tax such as is proposed on our industry is not only confiscatory, because it would absorb the entire profits of the average outdoor advertising plant, but it is entirely unfair, inasmuch as no tax is proposed to be levied on any other national medium of advertising except radio.

I say that this tax would be confiscatory, because it would amount to from over 50 percent to more than 100 percent of the profits realized annually by the individuals, partnerships, and corporations engaged in the outdoor advertising business, after fair compensation for personal service is rendered.

A tax on any medium of advertising is an economic fallacy, in that it would add to the problems of marketing and distribution, thereby handicapping manufacturing, production, and sales service. We are not in the business of rendering or selling billboard space to others; our business is that of rendering advertising service.

Our billboards or advertising structures are the facilities through which we render that service and a tax on them would be similar to a tax on the tools of a workman or the services of a salesman.

The proposed levy, while it is ostensibly an occupational tax upon the business of "renting billboard space to others," is actually a tax upon outdoor advertising and while there is a provision in the measure for taxing the net time sales of radio stations on a graduated scale from 5 to 15 percent, there is no proposed tax on other major advertising media, such as newspapers, magazines, direct mail, window displays, and car cards. Furthermore, the proposed levy is not equitable because it discriminates between advertising and all other selling efforts.

Based on my knowledge of the physical facilities available in outdoor advertising and to qualify this statement, I will say that I have been engaged in this industry for more than a quarter of a century, the proposed tax will not produce the gross revenue anticipated according to the announcements in the public press. Furthermore, the administration and mechanics of applying the tax, determining the measurements of the structures, etc., would be more costly than the gross revenue produced by the tax.

Outdoor advertising (billboards) is an efficient and economical method for the dissemination to the public by Government and industry respecting subjects important to the welfare of the Nation and its citizens and certainly should not be handicapped by a tax not levied on other forms of such communication. In the present emergency, it would be detrimental to the success of the national-defense program and the maintenance of the national morale, if any of the fundamental means of disseminating information to the general public was to be crippled or made ineffective by the process of taxation, especially in view of the fact that it would not, in the final analysis, produce important revenue to the Government or serve any sound economic or sociological objective or purpose.

The record of service to the country by the organized outdoor advertising industry during the period of national emergency represented by the World War and its aftermath is one which should cause those elected representatives of the people responsible for the Nation's welfare to give serious thought to the future needs of the country, as well as the present, before lending their support to such un-American and unsound confiscatory and discriminatory proposals as contemplated in the measure which is the result of the deliberations of the House Ways and Means Committee.

Recent contributions in space, labor, and materials in the national interest, made by the men and women owning and operating outdoor advertising facilities in behalf of the United States Army and the United Service Organizations are evidence of the readiness and capacity of the organized outdoor advertising industry to serve the public interest.

In the World War of over 20 years ago, a similar tax on outdoor advertising, but expressly excluding newspaper advertising, was proposed and the Ways and Means Committee, realizing that it was unfair and patently discriminatory, after investigating the matter, deleted it. Moreover, the committee found that the possible returns would be so small in proportion to the levy contemplated and the disastrous effects upon business generally, especially the businesses served by outdoor advertising, would be so great that it would be uneconomical to impose any tax on outdoor advertising.

The same arguments as were proposed at that time are still cogent. Outdoor advertising is a national sales facility and offers the manufacturer and the merchant the lowest-cost advertising facility available to them for the movement of goods from the manufacturer through the retailer to the consumer. Certainly a trade facility of this nature should not be penalized by a special tax which is not applied to other national advertising media, such as the newspapers, etc., as we have previously stated.

A tax on any form of advertising is uneconomical, because it would serve to slow up business activity and therefore decrease the national income. Consequently, it is my contention that the proposed levy on outdoor advertising structures is absolutely unsound. As a matter of fact the levy, as proposed, loses sight of the fact that outdoor advertising is a national advertising medium. By its very terms, it proposes a tax on those concerns "who rent billboards to others" and makes it an occupational tax for such service. It, purposely or otherwise, disregards the fact that outdoor advertising is not a business of "renting space" but is a national and recognized trade facility which the leading manufacturers of this country use for the exploitation of their products because it is the most economical medium per thousand of circulation for that exploitation.

In closing, may I say that additional national income we must have and this means added taxation and if advertising must be taxed, the outdoor advertising industry will bear its proportionate part. But in taxing advertising, let's tax all advertising, that of the magazines, the newspapers, the radio, outdoor, car cards, direct mail, and keep all divisions of the advertising industry on a fair and equitable parity with the various competing media.

I sincerely trust that you gentlemen upon whose shoulders rests the responsibility of the future of our great American Nation and its people, will not permit the Federal tax bill, with its discriminatory sections relative to outdoor advertising, to go before the United States Senate without giving due consideration to the data which I have set forth above and either delete this section from the bill or amend it so as to place all advertising on a parity.

Yours truly truly,

W. D. BILLINGSLEY, *Assistant Secretary.*

THE HAYWARD-LARKIN CO.,
Spokane, Wash., August 13, 1941.

The Honorable WALTER F. GEORGE,
Chairman, Finance Committee, United States Senate,
Washington, D. C.

DEAR MR. SENATOR: Your committee now has before it for consideration the 1941 revenue or tax bill. Included in this bill is an item proposing to tax billboards on an annual basis.

We employees of this company in Spokane wish to go on record as opposing this proposed tax. While we cannot appear at the public hearing, which we understand will take place in the next few days, we wish to point out the following reasons for opposing this tax:

(1) It is discriminatory in that only one other form of advertising is taxed, leaving such forms as newspapers, magazines, direct mail, etc., untaxed;

(2) It is confiscatory in that it attempts to tax a substantial portion, if not all, of the net income left to the billboard owner after he has paid for his costs of operation.

(3) A tax on advertising is unsound in that it interferes with the sale or distribution of goods, which interference can decrease other sources of revenue to the Federal Government.

(4) Billboards perform a valuable public service which cannot be kept up if exorbitant taxes are imposed on the industry.

(5) The net revenue to be derived from this source would be negligible and out of line with the hardships it would create on the thousands of operators and employees.

(6) It proposes to tax property instead of income, a new field for the Federal Government and one which sets a bad precedent.

As your time, no doubt, is very limited, we are not attempting to go into detail, as we feel confident that persons appearing at your hearing will stress the points we have mentioned above. We do, however, hope that you will give every consideration toward the elimination of this item from the bill, both because it is discriminatory and because it would prove a false source of revenue.

Very truly yours,

(Signed by 33) EMPLOYEES OF THE HAYWARD-LARKIN CO.

TANNERS' COUNCIL OF AMERICA,
New York, August 14, 1941.

CHAIRMAN, FINANCE COMMITTEE,
United States Senate, Washington, D. C.

DEAR SIR: We refer to section 2401, chapter 10, of H. R. 5417, relating to retailers' excise taxes on furs. If your committee votes to retain this tax on furs, we desire to express on behalf of tanners of shearlings (wooled sheepskins) our approval of the action of the House of Representatives in making this a retailers' excise tax rather than a manufacturers' excise tax.

We are informed that a certain section of the fur industry is endeavoring to have the tax imposed at the point of dressing and dyeing. This would be manifestly unfair in the case of dyed shearlings (wooled sheepskins) because of the question of tax on skins being dressed and dyed for Government uses and those going into slippers and as trimmings on coats.

The largest part of the industry's production of dyed and electrified shearlings is, at present, going to the Army and Navy for military use, principally for aviators' clothing. The balance of the production is going into trimmings for slippers, collars on leather, wool, and sheep-lined coats, and some for the manufacture of women's fur coats. If the tax on furs is allowed to stay as it is written in the House draft of the bill, namely, to be added by the retailer, only dyed shearlings that are sold as furs will be affected. This seems to be the intention of Congress, as the section is apparently designed to cover articles made of wooled sheepskin which have been processed and dyed to resemble fur (such as imitation beaver, imitation wombat, etc.), and articles of which sheepskin so dyed and processed is the component material of chief value. Under rulings of the Treasury Department in connection with the Revenue Act of 1932 certain articles made of shearlings but not commonly or commercially known as articles made of fur were held to be not taxable. This classification included articles made of the so-called "domestic type" wooled sheepskins (ordinarily used as a protection against cold rather than for decorative or style purposes) which had not been dyed and processed to resemble or imitate fur. Examples of such exempt articles are boys' and workmen's sheep-lined coats and shearling-lined slippers and gloves. The term "domestic type" as used by the Treasury Department included sheep and lamb skins of either domestic or foreign origin, such as sheep or lamb skins from merino or crossbred sheep or lambs.

To insure the imposition of a tax for fur purposes only and to prevent taxation of articles in which shearlings are used for other than fur purposes, we believe that the following wording, as it now appears in the House revenue bill, should be retained:

"The is hereby imposed upon the following articles sold at retail a tax equivalent to 10 per centum of the price for which so sold: Articles made of fur on hide or pelt, and articles of which such fur is the chief component material of chief value."

On behalf of tanners of shearlings.

Respectfully submitted.

MERRILL A. WATSON,
Executive Vice President.

OMAHA, NEBR., *August 6, 1941.*

Hon. BEN F. JENSEN,
House of Representatives, Washington, D. C.

DEAR BEN: In the Revenue Act of 1941, as I understand it now stands, there is included a 10-percent excise tax to be applied against all electrical appliances. This includes a number of appliances, particulary those for cooking and water heating, which are highy competitive with appliances using other means of heating, such as gas, bottled or liquid gas, kerosene, gasoline, etc.

I do not believe there is any objection to the excise tax itself, but it does seem rather unfair to impose it upon the electrical appliances and not upon the other types of heating, especially gas. If this law is enacted as drawn, it would impose a considerable hardship on the electrical-appliance dealers and would discriminate against the taxpayer who wants to select electrical cooking and water heating equipment.

Would it not be possible and practical to include in the tax other types of cooking and water heating? I believe that it would be fair and would also add a considerable source of revenue to the bill without working any injustice on anyone.

If there is anything that you can do to have this bill amended to include these other competitive sources of heat, I would consider it a personal favor. But the time this letter reaches you it may be too late to do anything on this matter in the House, but if you can conveniently, would you call it to the attention of our Senators from Iowa?

With best personal regards and best wishes for you in these trying hours, I am,

Sincerely yours,

W. C. RATHKE.

STATEMENT OF HERBERT C. RORER, OF PHILADELPHIA, PA., REPRESENTING THE AMERICAN PHARMACEUTICAL MANUFACTURERS' ASSOCIATION

Mr. Chairman and gentlemen of the Senate Committee on Finance, my name is Herbert C. Rorer; my address, Philadelphia; and I represent the American Pharmaceutical Manufacturers' Association. This association substantially and importantly represents manufacturing pharmacy in the United States.

I am instructed to place the association on record before your committee as strongly urging a differential in the tax on ethyl alcohol for nonbeverage use as compared with that for beverage use. The establishment of such a differential would be effective to correct an inequitable tax situation wherein pure alcohol for use in the production of essential medicines is taxed at the same rate as alcohol for beverage use, thus increasing the cost of such medicine and of medical care for the sick.

It is in the public interest to reduce the cost of such medical care, and we believe it has been reliably shown that the Government would not suffer loss of revenue from the establishment of this differential. Thus, we have a situation in which the public can benefit without loss of Government revenue in times when it is of such great importance.

The members of the American Pharmaceutical Manufacturers' Association appreciate the opportunity to place this testimony on record before your committee.

STATEMENT SUBMITTED BY THEODORE NETTER, OF PHILADELPHIA, PA.

TAX COLLECTED ON A NONEXISTENT COMMODITY

Hundreds of thousands of dollars in tax have been collected by the United States Government on whisky that did not exist when the collection was made.

Treasury Decision 4653—Schedule of allowances for loss by leakage and evaporation—copy of which is attached marked "Exhibit A," provides for loss of whisky and other distilled beverage spirits caused by evaporation and leakage, graduated over a period of time beginning with 2 and ending with 80 months. Frequently it is found in taxpaying distilled spirits, when removed from internal-revenue bonded warehouses, that the loss by evaporation is greater than the schedule of allowances. Therefore, the cost of the actual gallons received by the taxpayer is many times greatly increased over the amount it should normally be.

Whisky must be aged in wooden barrels to meet the requirements of the purchasing public. Evaporation is natural and needful. The best possible white-oak wood obtainable is used in the manufacture of whisky barrels. It is impossible to obtain oak wood that is uniform in texture. Therefore, the loss caused by evaporation from some barrels is greater than others. The result is a heavy burden upon the taxpayer.

Attached are two regage forms prepared by United States Government gagers, showing the original contents, the actual proof-gallon contents, at the time of the regage, the tax-gallon contents as compiled under Treasury Decision 4053, and the actual loss in each instance on tax alone to the taxpayer under the present tax rate is $3 per gallon.

It is your petitioner's belief that Congress does not wish to levy a tax on something that does not exist. Therefore, the Treasury decision referred to governing the loss allowed should be annulled in its entirety and the tax collected only on the actual number of gallons of distilled spirits received by the taxpayer.

STATE OF ARKANSAS,
OFFICE OF LIEUTENANT GOVERNOR,
Little Rock, August 12, 1941.

CHAIRMAN AND MEMBERS, SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: While I am writing you in protest of a proposed increase in the Federal gasoline tax, I wish to state that no Arkansan, whether he be an official or a private citizen, wishes to shirk his responsibility in the defense program. It has been suggested by various news commentators that an additional tax on gasoline might be levied to help the Government finance its present program, but I should like to ask the Senate Finance Committee to consider a few points:

As you know, Arkansas is largely an agricultural state, having only 9 cities of more than 10,000 population. The rate of growth during the past decade is the lowest in the history of the State. The present population represents a density of 37 inhabitants per square mile. Evidence as to the low-scale per capita income of our population and, in many instances, the dire need for the so-called necessities of life has been furnished various branches of the Federal Government. In this respect Arkansas varies from many States that are rich in revenue-producing industries.

We have recently succeeded in refunding our tremendous highway indebtedness of $136,000,000. With an irrevocable pledge to use $3,500,000 of our revenue for highway maintenance annually, we fear that an additional increase in tax on gasoline at this time would necessitate a decrease in the use of gasoline and seriously hazard our program.

At the time automobiles were introduced they were rightly considered a novelty. But the day has long passed when an automobile can be classed as a luxury. I cannot think of a single modern business in which the automobile and the use of gasoline is not indispensable to its continuance. For that reason, if for no other, it would seem that gasoline should be removed from any category which places it on the same basis with cosmetics, liquor, and commercial amusement.

Sincerely yours,

BOB BAILEY, *Lieutenant Governor.*

THE J. B. WILLIAMS CO.,
Glastonbury, Conn., August 12, 1941.

Hon. WALTER GEORGE,
Senate Finance Committee, the United States Senate,
Washington, D. C.

DEAR MR. GEORGE: This company wishes to go on record with the Senate Finance Committee as being opposed to the elimination of the average-earnings method as one of the methods for computing the excess-profits credit. While this company filed its 1940 excess-profits-tax return and expects to file its 1941 excess-profits-tax return on the basis of an excess-profits credit worked out by using invested capital, it feels, nevertheless, that in all fairness to industry the alternative average-earnings method should be continued as one of the methods for arriving at the credit.

The dollar sign is not the measure in all instances of what is excess profits and what is not excess profits. Furthermore elimination of the earnings method for the reasons advocated by the Treasury Department attacks the profits of corporations having small invested capital for reasons of revenue and profit control only rather than for the more fundamental reason of taxing profits due to the emergency.

Congress, in the Revenue Act of 1940, as amended, did a splendid job in recognizing the need for two methods, and it is earnestly hoped that Congress, in the Revenue Act of 1941, will continue to evince the same realism.

Another point we wish to urge upon you is that the 10-percent munitions-tax levy on the profits of companies using the invested-capital method, while equitable in principle, in our opinion, attacks the profits of companies not benefiting from defense business It is felt that if the 10-percent tax on the difference between the preemergency earnings and the excess-profits credit is to stand, then such percentage should be reduced by an amount representing the percentage of nondefense business billed out by the taxpayer to the total billings, as, for example, a company's billings is made up of 75 percent defense work and 25 percent nondefense work. The special munitions tax, then, of 10 percent would be reduced by 25 percent to 7½ percent.

Respectfully submitted.

THE J. B. WILLIAMS CO.,
C. S. CAMPBELL, *Vice President.*

DUNKIRK LAUNDRY CO., INC.,
Dunkirk, N. Y., August 5, 1941.

Hon. WALTER F. GEORGE,
Acting Chairman, United States Committee on Finance,
Senate Office Building, Washington, D. C.

MY DEAR MR. GEORGE: Considering the fact that the Honorable James M. Mead is not a member of the United States Senate Committee on Finance, I felt that I would not write any of the other members of the committee but would ask that you bring to the attention of the committee what comments I make relative to the proposed 10 percent tax on commercial washers used by the laundry industry.

First, I would like to state that neither I nor our company is interested in this proposed tax on commercial washers for the very good reason that we are not in the market and will not be in the market for a washer for a number of years because of the fact that our washroom equipment is now 95 percent modern monel equipment with a capacity at least 100 percent in excess of present requirements. For this reason the 10 percent proposed tax, if enacted, would have no effect on us, and I believe that if the proposed tax should be enacted it will be much less effective than might be thought by reason of the fact that our condition as respects washroom equipment is probably that of the majority of the operators of plants throughout the country.

I would only say on this subject that it seems to me that this proposed tax is highly discriminatory in that such commercial washers as might be purchased now or for several years in the future being subject to this tax would entail a hardship on the laundry industry, whereas our chief competitor being the housewife, the home washing machine is proposed to be exempt from such tax.

The laundry industry is distinctly a local service business; the investors in the equipment are largely local, and, as compared with other national businesses, we surely would come under the heading of small business. Small business, particularly where that business cannot modify its selling price, is already at a distinct disadvantage as compared to industries which can revamp their selling

prices depending on costs, a condition which does not exist in the laundry industry by reason of the fact that the chief competitor of every local laundry is the housewife herself and by no means is the competition between the several plants in a given community.

I think that those interested in the laundry business take a great deal of pride in the fact that we approve of the national-defense program, and we, of course, expect that program to be financed by taxes; we simply think that such financing should be general and include the home washer, if any washers are to be taxed, and not simply tax the commercial washer alone.

The commercial laundries of the United States serve millions of local customers every week; in addition, they provide employment, which, according to the last figure I have, is between 250,000 and 300,000 persons, the greater majority of which are women; it happens, of our employees, 66 percent are women.

My contention is further that the commercial laundry is one of the chief factors reducing home labor, and they accomplish this purpose more effectively than the home washer by reason of the fact that the commercial laundry is in position to relieve the homemaker of all of her laundry labor, whereas the home washer relieves her of only a portion. In fact, in our case that portion of our family sales which the homemaker could do with a home washer is but 30 percent of the total amount of family sales, and this means that the washer in the industrial laundry in our case is reducing the homemakers' labors two and one-third times as much as the home washer is reducing her burdens. If this same percentage holds true throughout the United States, then the industrial washer is two and one-third times as effective in its reduction of labor to the homemaker as is the home washer, and a tax on the industrial washer is to the disadvantage of 700 homemakers out of each 1,000.

The laundry industry is already burdened by its increased labor costs due to unemployment tax and old-age benefits which the industry is in harmony with and paying the bill for, though the housewife has not these similar costs and already has a distinct advantage over the commercial laundry by reason of these taxes on industry which the homemaker does not have at all.

We are hopeful that your committee will feel favorable toward an adverse report on this subject to the Senate.

Respectfully yours,

DUNKIRK LAUNDRY CO., INC.,
A. W. CUMMINGS, *President.*

SIMPLEX MANUFACTURING CO.,
New Orleans, La., August 1, 1941.

HON. ALLEN J. ELLENDER,
United States Senate, Washington, D. C.

DEAR SIR: We are a Louisiana firm, located in the city of New Orleans. We are engaged in the manufacture of a light-weight motorcycle, known as the Servi-Cycle, which is the only light-weight motorcycle manufactured in the United States. These machines are sold over the entire United States and are exported to several foreign countries.

Since the beginning of their manufacture in 1935 they have steadily gained in popularity and are being used extensively for messenger and delivery purposes. Our business is steadily growing and undoubtedly holds great possibilities of benefits, not only to ourselves but to the city of New Orleans and the State of Louisiana as a whole. We understand that there has been proposed a 7-percent excise tax on the manufacture and sale of automobiles. Motorcycles, either large or light weight, all fall under the same classification as automobiles for excise-tax purposes so this excise tax vitally concerns us.

We believe that motorcycles, especially lightweight machines, should be put into a separate classification by themselves and either bear no excise tax at all or a lighter burden than that imposed upon automobiles.

Lightweight motorcycles are largely used by messenger and delivery boys whose income ranges from $6 to $14 per week. Any added excise tax would be an additional burden upon these boys in the lower-income bracket. Their continued employment is based upon their ownership of a lightweight machine.

It is our understanding that this additional excise tax on automobiles is proposed to serve a double purpose. First, it will bring additional revenue to help pay the cost of the defense program; and, second, it should tend to decrease the sale of automobiles, thereby conserving vital metals and materials for defense purposes.

Our machine can be used in the place of trucks and automobiles in a great many instances, and takes the place of larger units in messenger service and many delivery services, and also provides a more economical mode of transportation.

The material required to produce one of these machines by actual weight is less than 5 percent of that used in the ordinary automobile. The rubber used thereon is less than 5 percent of that required for an automobile or truck, and less than one-sixth of the gasoline consumed by an automobile or truck is required for the operation of a Servi-Cycle or less than one-tenth of those required in automobile production. Therefore, the conservation of materials and man-hours of skilled labor vital to the defense program is readily seen when a Servi-Cycle replaces a heavier motorized unit.

There has been introduced into this country, in direct competition to us, a lightweight motorcycle imported from England which has an export price f. o. b. England, of approximately $80. The import duty imposed upon these machines is at the rate of 10 percent of the export price, which amounts to approximately $8. The excise tax on our machine at the seven-percent rate would amount to $9.02 on our lowest priced machine which would make the excise tax paid on a United States product higher than the import duty on an English product.

We do not believe that it is the purpose or intent of Congress to impose on a manufacturer located in the United States an excise tax higher than an import duty or an imported vehicle of the same class.

For the above reasons we feel that one of the following steps should be taken:

1. Classify a lightweight motorcycle as "motorcycle weighing less than 150 pounds," and let it bear no excise tax or a tax which is appropriate.

2. Make the separate classification and leave the rate of excise tax the same as it now is, that is 3½ percent.

3. Provide that imported machines also pay the excise tax in order that a United States manufacturer will not be forced to pay a greater amount of excise tax than their importers pay in duty.

We call your attention again to the fact that this is entirely a Louisiana industry. Ours is the only motorized vehicle manufactured in the South, and our industry bids fair to become a very prominent one in this field. We earnestly believe that we have by far the greatest opportunity for expansion of any industry in the United States today and, therefore, ask your aid in the revision of that part of the excise-tax measure which applies to lightweight motorcycles by one of the above means, our preference being in the order named.

We will appreciate your kind cooperation in this matter.

Very truly yours,

SIMPLEX MANUFACTURING CO.,
JERRY L. PRENTISS,
Purchasing Agent.

COLLETTE MANUFACTURING CO.,
Amsterdam, N. Y., August 5, 1941.

SENATE FINANCE COMMITTEE,
Washington, D. C.

HONORABLE SIRS: We desire to file the following brief of our grievance against that portion of the Revenue Act of 1941 as it applies to sporting goods.

From reading this portion of the act, we interpret your intention to permit tax-free children's toys, such as baseball bats under 26 inches in length, badminton rackets under 22 inches over all, pool tables under 45 inches in length, hockey sticks under 30 inches in length, and so forth. There is no question that your clear demarkation of these items was not to tax children's toys. How can you reconcile a bat under 26 inches in length as a toy and not a dime rocket ball that goes with this small bat.

Where is your demarkation of other toys, such as footballs and basketballs, that sell to children from 3 years to 12 years, made, not from leather, but imitation leather; the baseballs aforementioned, stuffed with cottonseeds, excelsior, or waste felt, and for the little shaver from 3 to 12 years old?

Why should the manufacturer of badminton sets, tennis rackets, golf bags, baseball bats, and golf clubs be shown partiality in the juvenile items he makes?

The football and baseball manufacturers make footballs from imitation leather for kiddies, which are sold for 25 cents to $1. He also makes leather footballs up to $15 each. The same applies to the baseball manufacturers. He makes

baseballs stuffed with excelsior, cottonseeds, or felt scrap which sell to the kiddies for from 10 to 50 cents. He also makes balls, with rubber or cork center wound with yarn, which sell up to $2.

Any layman reading this law as it now stands can see a clear discrimination between manufacturers of various sporting goods items.

Isn't it pretty small to tax the babies' toys and shut your eyes to such items as roulette wheels and other adult gambling devices sold in the toy departments of every big department store in the country?

If we need money for defense, go ahead and tax toys but why discriminate between us toy manufacturers?

We urge you to reconsider this portion of the act that there will be no discrimination between us manufacturers of toys.

Very truly yours,

COLLETTE MANUFACTURING CO.,
By A. F. HECK, *Sales Manager.*

Do you gentlemen actually intend to tax these kiddies' toys?

Samples of the above balls are being sent you under separate cover.

AMERICAN MERCHANT MARINE INSTITUTE, INC.,
New York, August 4, 1941.

Hon WALTER F. GEORGE,
Chairman, Committee on Finance, United States Senate,
Washington, D. C.

Re: Federal gasoline tax.

MY DEAR SENATOR GEORGE: Section 554 (b) of the revenue bill of 1941 (H. R. 5417) as passed today by the House of Representatives would add a new section 3469 to the Internal Revenue Code providing in part as follows:

"(a) *Transportation.*—There shall be imposed upon the amount *paid within the United States*, on or after the effective date of part V of title V of the Revenue Act of 1941, for the transportation, on or after such effective date, of persons by rail, motor vehicle, water, or air, *within or without the United States*, a tax equal to 5 per centum of the amount so paid * * *."

If enacted, this section would require the payment of a 5 percent tax upon all steamship tickets sold in the United States for transportation from the United States to or from foreign countries. At the present time the only steamship passenger traffic of any consequence is to points in Central and South America. The establishment and maintenance of passenger services to countries in South and Central America has been a keystone of this country's foreign policy. The good-neighbor relations which the Government has sought to develop with other American countries depend to a large extent upon the promotion of passenger and tourist traffic. The deterrent effect of the proposed tax upon the building up of these relations will be exceedingly great. On the other hand, the revenue to be derived from such a tax would be quite small. It is accordingly urged that the application of the proposed tax be restricted to transportation within the United States. This purpose could be accomplished by striking out the words "or without" appearing in the phrase "within or without the United States" italics above.

In addition to urging the abandonment of this proposed tax for the reason stated, I desire to point out to you the difficulties of administration and the possibilities of unfair discrimination. The tax would be applicable only to amounts "paid within the United States." Prospective steamship passengers will attempt to avoid tax by purchasing their tickets at some steamship office outside of the United States where the tax is not and cannot be made applicable. It is submitted that is unfair to those persons purchasing steamship tickets in the United States and paying the tax thereon to permit other persons to avoid the

tax by transmitting funds to a point without the United States for the purchase there of identical tickets. Furthermore, steamship companies will be subjected to the annoyance and additional communication cost of having to make sales in foreign ports of steamship space to be used by persons residing in the United States.

In view of its detrimental effect upon inter-American relations, the petty annoyances in connection with its collection and the small amount of revenue to be derived therefrom, it is respectfully requested that your committee delete from the bill the tax upon steamship tickets for transportation in foreign commerce.

Respectfully yours,

JOHN J. BURNS, *General Counsel.*

AMERICAN MACHINE & FOUNDRY CO.,
Brooklyn, N. Y., August 7, 1941.

Senator WALTER GEORGE,
Senate Finance Committee, Washington, D. C.

DEAR SENATOR: This company wishes to go on record with the Senate Finance Committee as being opposed to the elimination of the average-earnings method as one of the methods for computing the excess-profits credit. While this company filed its 1940 excess-profits-tax return and expects to file its 1941 excess-profits-tax return on the basis of an excess-profits credit worked out by using invested capital, it feels, nevertheless, that in all fairness to industry the alternative average-earnings method should be continued as one of the methods for arriving at the credit.

The dollar sign is not the measure in all instances of what is excess profits and what is not excess profits. Furthermore, elimination of the earnings method for the reasons advocated by the Treasury Department attacks the profits of corporations having small invested capital for reasons of revenue and profit control only, rather than for the more fundamental reason of taxing profits due to the emergency.

Congress, in the Revenue Act of 1940 as amended, did a splendid job in recognizing the need for two methods and it is earnestly hoped that Congress, in the Revenue Act of 1941, will continue to evince the same realism.

Another point we wish to urge upon you is that the 10-percent munitions tax levy on the profits of companies using the invested capital method, while equitable in principle, in our opinion attacks the profits of companies not benefiting from defense business. It is felt that if the 10-percent tax on the difference between the pre-emergency earnings and the excess-profits credit is to stand, then such percentage should be reduced by an amount representing the percentage of non-defense business billed out by the taxpayer to the total billings, as for example, a company's billings is made up of 75 percent defense work and 25 percent non-defense work. The special munitions tax, then, of 10 percent, would be reduced by 25 to 7½ percent.

Respectfully submitted.

AMERICAN MACHINE & FOUNDRY CO.,
R. C. MORSE.

HARNISCHFEGER CORPORATION,
Milwaukee, Wis., August 14, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: Referring to the proposed tax bill, which is under consideration at the present time, I wish to go on record with reference to existing policies of this country.

I am of the opinion that the first consideration should be to make a drastic cut in unnecessary expenses.

I also believe that the bill, which was ordered out by the House, does not have sufficient increase in the base of the present taxes. At the present time, I am informed that about 10 percent of the population must carry the tax load of the country and, in view of the enormous expenditures which are being incurred, this is certainly very inadequate.

I am also of the opinion that the only solution for securing a sufficient amount of revenue is to pass a Federal sales tax.

Very truly yours,

W. HARNISCHFEGER.

NEW JERSEY LEAGUE OF WOMEN SHOPPERS,
Newark, N. J., August 15, 1941.

Senator WALTER GEORGE,
United States Senate, Washington, D. C.

DEAR SIR: We should like to present our views with regard to the all-important tax measure now being discussed by the Senate Finance Committee.

First, we wish to state that such proposals as the reduction of income-tax exemptions to $750 for single persons and $1,500 for married couples will prove a dangerous and unnecessary burden on people whose living standards are already perilously low. Mr. Leon Henderson in recent testimony has said, that the wage earner's dollar has already dropped 6 percent since June 1939. That means that the $750 exemption for a single man will no longer buy $14.42 worth of food, clothing, and shelter weekly. Conservative figures show that the cost of food, which figures largely in the budget of low-income groups, has risen 13 percent. On the basis of such facts, it can objectively be considered dangerous to the health of the Nation to raise the needed revenue by lowering income-tax exemptions. A general sales tax on articles which are not clearly luxuries, it seems to us, falls also into the category of pernicious tax legislation.

We urge that needed revenue be raised from the following sources. Secretary Morgenthau, too, has testified that much more revenue could be secured from excess-profits taxes than is netted at present.

1. Corporation profits above 6 percent of invested capital should be considered excess profits, and should be taxed on a graduated scale. To tax profits may hurt some people, but not in an elementary way; to tax food is dangerous to the well-being of the vast majority of our people.

2. Undivided-profits taxes should be written to prevent corporations from increasing their large surpluses.

3. The proposed 6-percent surtax on corporate earnings above $25,000 should be put into force.

4. Income from all Government securities, issued in the past or present, State, municipal, and Federal, should be taxed.

5. Transfers of wealth by gift, inheritance, insurance should be covered by a single tax; transfers of any kind totaling more than $25,000 should be taxed.

6. Upper-bracket incomes should be taxed more sharply and loopholes closed.

7. Families should be required to file single joint returns where combined earnings are more than $4,000.

It has been demonstrated that the collection of taxes from low-income groups is very costly, often absorbing a considerable share of the revenues themselves. Our proposals will net more than sufficient returns to cover the needed revenue. We urge your careful study of these proposals and their incorporation in any tax legislation which is written.

Sincerely yours,

NEW JERSEY LEAGUE OF WOMEN SHOPPERS,
HANNAH SMITH, *President.*

STATEMENT OF JOHN L. CONNOLLY, SECRETARY AND GENERAL COUNSEL, MINNESOTA MINING & MANUFACTURING CO., ST. PAUL, MINN.

Mr. CONNOLLY. Mr. Chairman and members of the committee, my name is John L. Connolly; I am secretary and general counsel of the Minnesota Mining & Manufacturing Co., St. Paul, Minn., which is and has been for the past 30 years engaged exclusively in the manufacture of coated abrasives, which is sandpaper, scotch adhesive tape, rubber cement, roofing granules, and other related products.

DIFFICULTIES OF SITUATION REALIZED

The management of the Minnesota Mining & Manufacturing Co. realizes the tremendous task of this committee in raising $3,500,000,000 in revenue in the next fiscal year. It is in complete harmony with the defense program, and stands ready to do its part in financing this program.

The House has demonstrated that the $3,500,000,000 can be raised without disturbing the present methods of computing the credit for excess-profits taxes.

HEARINGS BY HOUSE AND SENATE COMMITTEES ON PRESENT METHODS OF COMPUTING CREDIT

The present two methods of computing excess-profits tax credits were embodied in the Second Revenue Act of 1940 after your committee and the House Ways and Means Committee had held hearings and given this matter a great deal of consideration.

The invested capital credit is inapplicable to our company for the reason that the company's average earnings for the base period are in excess of 10 percent of our invested capital for the same period.

TREASURY'S PROPOSAL

Under date of May 19, 1941, the Assistant Secretary of the Treasury, John L. Sullivan, appeared before the House Ways and Means Committee and proposed that the excess-profits tax law be amended so as to eliminate the credit based on average earnings and allow only a credit based on the percentage of the net income to invested capital for the base period, not to exceed 10 percent. As I read his testimony before your committee and that of Secretary Morgenthau, the Treasury Department still advocates this change.

EFFECT ON OUR COMPANY IF TREASURY'S PROPOSAL HAD BEEN IN EFFECT IN 1940

For the year 1940 our gross income before taxes was 25 percent greater than for the year 1939, but our net after taxes increased only 6 percent for the same period. For the year 1940 our income and excess-profits taxes were equal to 32 percent of our gross taxable income, and if the Treasury Department's proposal had been in effect for the year 1940, our taxes would have amounted to 56 percent of our gross taxable income (i. e., net income before Federal income taxes). If in effect in 1937, it would have taken 58 percent of our gross taxable income.

WE ARE A GROWTH COMPANY

While we do not presume to speak for any other company, we feel confident that throughout the Nation there are countless industries in the same situation in which we find ourselves with regard to the Treasury Department's proposal to eliminate the average earnings provision of the excess-profits tax and to base this tax solely on invested capital. One of the inequities of the existing law is the failure to allow an additional credit for growing companies using the average earnings credit. These businesses and industries, like our company, are sincerely and honestly and conscientiously trying to do their bit regardless of whether or not they benefit from the defense program either directly or indirectly. In our case, the invested capital of the company, as shown on our books, does not begin to tell the story of such investment.

REASONS WHY THE INVESTED CAPITAL METHOD IS INEQUITABLE TO OUR COMPANY

Our financial statement does not show as capital investment the millions of dollars we have invested in our business by employing a large staff of laboratory and research workers to develop new products. This phase of our investment is in men not in machinery and buildings and, we submit, is living proof that we recognize the human value in the conduct of business as well as property values. It is an investment of the highest type, which, as we have pointed out, does not appear on our financial statement and would not constitute invested capital within the meaning of the excess-profits-tax law, and could not be used as collateral on which to borrow money. It is an investment when extreme courage was required to invest and reinvest in the development of products which might or might not become useful or salable. Today we employ 139 chemists.

TABLE SHOWING GROWTH OF COMPANY SINCE 1935

I would like to call your attention to a table which appeared in our company's annual report to its stockholders for the year 1940, which is follows:

Year	Income before income and related taxes	Percent increase	Net worth	Number of employees
		Percent		
1935	$2,617,418.66		$6,925,272.33	1,287
1936	3,343,886.53	28	8,155,811.16	1,632
1937	4,444,878.57	33	9,482,958.89	1,724
1938	4,250,417.21	4	11,223,087.10	1,740
1939	5,454,074.25	28	13,281,037.35	2,163
1940	6,823,786.75	25	15,162,800.10	2,675

It will be noted this table shows that, with the exception of 1938, during which year business activities of the country as a whole were considerably below the business activity for the year 1937; our growth and increase in business was steady. I call your attention also to the table which shows the number of employees and the increase in the number of employees which has been steady throughout the period under consideration.

The Minnesota Mining & Manufacturing Co. has operated profitably for a number of years, and we feel that one of the principal reasons for its success has been the constant development of new products and the investment of capital in plant and equipment to produce and market such products. To illustrate, the company has developed a line of new products which are in constant use in many lines of business, and did not replace products already on the market. A great part of our profits result from the expansion in the use of these new products which have found ready acceptance in the homes and industry.

NORMAL INCOME TAXES SHOULD BE DEDUCTED BEFORE COMPUTING EXCESS PROFITS TAXES

The purpose of an excess-profits tax, as expressed by the President and the Congress, was to prevent unjust enrichment and the creation of new "war millionaires" as a result of the defense program. The present act, as passed by the House, results in taxing normal profits at excess-profits rates. If additional revenue, rather than the prevention of unjust enrichment from the defense program, is the objective, it should be sought through other available means.

AMORTIZATION OF WAR FACILITIES

Subsection (l) of section 124 of the Internal Revenue Code as interpreted, requires a taxpayer who is selling supply items to the Federal Government under contract, to obtain a certificate of nonreimbursement in addition to his certificate of necessity, before he is entitled to a deduction for amortization. This was not the intent of the Congress when this law was passed, and, if there is any doubt, it should be corrected in this act.

THE EXCESS PROFITS TAX SHOULD BE COMPUTED UPON A PERCENTAGE IN RELATION TO THE CREDIT AS WELL AS UPON DOLLAR AMOUNTS

This provision was adopted in 1940 by the Senate, but eliminated in conference with the House. The Senate provision contained in the Revenue Act of 1940 should be adopted.

REPEAL OF THE DECLARED EXCESS PROFITS TAX, IF NOT REPEALED AN ANNUAL DECLARATION OF CAPITAL STOCK VALUE

The declared-value capital-stock tax and its companion excess-profits tax should be eliminated, and if this is impossible, the act should be amended so as to permit an annual declaration of capital stock value. It is impossible to predict what the earnings of a corporation for a 3-year period will be, but if your guess is low, you are going to be subject to a penalty, and if your guess is high, you have paid your penalty in advance. This has been true in the past and it is much more so during the present emergency.

CONCLUSION

In conclusion permit me to make the following suggestions:

1. That the present two methods of computing excess-profits credits be retained.
2. That the normal income tax should be deducted in computing excess-profits net income.
3. That subsection (i) of section 124 of the Internal Revenue Code be repealed or clarified so that a taxpayer who has applied for and received a certificate of necessity will not be required to apply for nonreimbursement certificate for each supply contract he has with the Federal Government.
4. That the provision contained in the Revenue Act of 1940 as passed by the Senate, providing that the excess-profits rates be applied to a percentage of the excess-profits credit, or the dollar amounts.
5. The declared excess-profits tax and declared-value capital-stock tax be repealed, or, if not possible, amended so that the capital stock value may be declared annually.
6. That the present act be amended so as to permit the full 100 percent of the average earnings as a credit; that this credit be increased from year to year as is permitted to taxpayers using the invested-capital method.

COPPERWELD STEEL CO.,
Glassport, Pa.

This is a copy of a brief submitted to Assistant Secretary of the Treasury John L. Sullivan and to Mr. Colin F. Stam, Chief of Staff of the Joint Committee on Internal Revenue Taxation, on the proposition that the amortization provision (sec. 124 (Code), Revenue Act of 1940) should be amended to provide an effective date of January 1, 1940 (as originally recommended by the Senate committee) rather than the presently effective date of June 10, 1940.

We urge that this statement of our case and brief be incorporated in the record of the Senate Finance Committee hearings for consideration in the present bill and for relief in a highly equitable class of cases. Submitted by Maurice J. Mahoney, assistant treasurer and attorney for Copperweld Steel Co., Glassport, Pa.

STATEMENT OF CASE OF COPPERWELD STEEL CO. FOR AMORTIZATION ALLOWANCES ON DEFENSE FACILITIES BEGUN AND PARTIALLY COMPLETED PRIOR TO JUNE 10, 1940

The following factual summary might well be entitled "the Case History of a Company" that has been harshly penalized for being patriotic—or, in other words, penalized for doing those things which the President of the United States, the Congress, and all informed citizens recognized were vitally necessary for the Nation's defense. The Copperweld Steel Co. in the latter months of 1939 and the first 6 months of 1940 expended approximately $4,000,000 (raised from the sale of new securities) for new plant equipment for the manufacture of high-alloy steels. As soon as production could be attained, these steels were taken directly by the British Government, the United States Government, and domestic corporations manufacturing military aircraft, naval equipment and machine tools, and its output has continued to go approximately 100 percent to these customers.

The company, before putting itself in position to supply these vital requirements, did not await the guarantee of protective legislation for accelerated depreciation or amortization of new equipment for this special purpose, but relied upon the general sense of fair play of the Congress and the executive departments that, at the least, it would not be penalized for having put its affairs in order to supply this country's most vital defense requirements. The resulting penalization and discrimination arises from the fact that the excess-profits-tax laws for 1940 and the provisions allowing amortization for new plant equipment were not made coextensive; that an arbitrary date of June 10, 1940, has been selected as the time for the beginning of our national-defense effort and only those projects literally begun or acquired after that date shall have the benefit of the special amortization provisions as finally enacted by the Congress. Such a result, we submit, penalizes this and other companies similarly situated out of all proportion to the revenue received therefrom and places this class of taxpayers at a distinct financial and economic disadvantage with those companies which awaited a guarantee of protective legislative benefits before expending capital for national defense facilities. All the present applicant seeks is that it, too, may be placed in an equal position with respect to the year 1940 and subsequent years with those corporations which waited without regard to whether it was later than some of us thought.

The relief sought may be granted in either of two simple ways: (1) By legislation amending the amortization provisions to make January 1, 1940, the effective date rather than June 10, 1940, and so make both the accelerated depreciation and excess-profits-tax rates coextensive throughout the year 1940; or (2) by giving the Commissioner of Internal Revenue discretion, in that class of cases where a taxpayer can show that new plant equipment acquired after January 1, 1940, has been used 100 percent for national-defense purposes (or whatever percentage has been used therefor), to give such taxpayers, to the extent warranted, equal treatment with those whose plant equipment was begun or acquired after June 10, 1940.[1]

We emphasize that, in bringing our case to your attention, we are not asking for or thinking in terms of receiving any advantage over companies which did not prepare themselves as we did, but we are asking not to be penalized and discriminated against for having done so.

HISTORY OF STEEL DIVISION DEVELOPMENT

Copperweld Steel Co. was organized August 16, 1915, under the laws of the Commonwealth of Pennsylvania. Since that time it has been engaged principally in the manufacture of copperweld (copper-covered steel) wire, widely used for electrical transmission purposes, with its plant and principal offices at Glassport, Pa. For some time prior to the latter months of 1939, the company's management had under consideration the construction of a small electric-furnace alloy steel mill from which the company's own steel requirements would be supplied. The plan contemplated an expenditure of approximately $1,200,000 to build a mill with an annual ingot capacity of 50,000 tons.

As the weeks moved on it became increasingly apparent that the outbreak of a European war was not only a possibility but rapidly becoming a probability. Progressively this probability became an inevitability. The deluge broke in September 1939. The position of the United States then became clearer. We would have to launch upon a greatly increased armament program for our own defense and, in all probability, serve as a source of supplies for the Allied cause against the Axis Powers.

It was just as widely recognized and remarked upon at this time that the United States was woefully unprepared to adequately defend itself. Our policy became one of remaining uninvolved but supplying the Allies until such time as we could prepare to defend ourselves in any emergency. The Neutrality and Embargo Acts were repealed, British and French purchasing commissions arrived in this country to survey American industrial potentialities and to place orders for all types of war equipment, particularly those involving the use of high-quality alloy steels. And, finally, there was a known shortage of electric-furnace capacity for the manufacture of these steels in the United States.

During the fall of 1939, numerous conferences were had by and between the officers of the company, and the consensus was that there would be an unprecedented demand for the higher quality steels; that all indications pointed to our own Government embarking upon a mammoth defense program. It further was the opinion that prompt action would be necessary for otherwise it would be either impossible or improbable, or both, to obtain the facilities for a steel plant or the services of the experts who could build and operate it.

As indicative in a small way of the trend of thought at around this time the following is offered:

In its report dated August 30, 1939, the Tax Research Institute of America referred to "the recent appointment of the War Resources Board" and discusses the industrial mobilization plan.

In its issue of September 16, 1939, the same publication referred to the President's recent declaration of a limited emergency. In this same report reference is made to the accomplishment of certain national defense objectives. The following statement appears in this report:

"Bear in mind that in the declaration of a 'limited' emergency under the Executive power of the President, he exceeded existing appropriations of Congress by stepping up the size of the Army, Navy, and Marine Corps. It is probable, therefore, that when it becomes desirable to step up procurement of materials, supplies, and munitions for the increased military machine, this, too, will be accomplished under the Executive powers existing in a 'limited' emergency."

[1] Under either method it will probably be necessary to make some provision for extend- time to apply for necessity certificates.

The issue of October 14, 1939, predicts as a certainty the removal of the embargo on munitions and the imposition of a cash-and-carry provision on all goods to belligerents.

On September 8, 1939, the president of the company appeared before the board of directors at a special meeting called for the purpose and recommended that the steel plant be located at Warren, Ohio, instead of Glassport, Pa., notwithstanding the fact that there would have to be a dual management and additional overhead costs. This plan was approved and arrangements made for the purchase of the necessary land at Warren since the available sites at Glassport were too small for the then contemplated expansion.

Under date of September 28, 1939, notices were mailed calling a special meeting of shareholders for November 29, 1939. This meeting was for the purpose of voting upon an increase in the authorized indebtedness of the company from $500,000 to $3,000,000. At this time the planned ingot capacity of the plant had been increased from the original 50,000 tons to 100,000 tons and the planned cost of the facilities was $1,500,000. However, when the proxy statement for this meeting was mailed out, under date of October 31, 1939, the estimated cost had been increased to $1,800,000, which amount appeared in the proxy statement.

At this time it still was the intention to manufacture the company's own steel requirements. Thus, from July to October, inclusive, the contemplated plan was changed from a 50,000-ton mill, with estimated cost of $1,200,000 to a 100,000-ton mill, with estimated cost of $1,800,000. Changes in outlook came almost from day to day, particularly during September and October, with resulting modification of plans. In the following months, however, developments occurred even more rapidly.

Construction of the plant at Warren was begun about November 1, 1939, and proceeded throughout the severest winter experienced by that district in 80 years. As the international situation unfolded from day to day, plans for the steel mill were changed "on the spot." Thus, the company was moving with the times and without awaiting protective legislation as, according to reports appearing in the press, was done by many manufacturers.

In May 1940 the company's president appeared before the executive committee of the board of directors and advised the members that the plant as then contemplated would cost $3,100,000. In the course of his report to the committee, the following statement was made:

"Before any material steps had been taken along the lines indicated (construction of a plant with capacity of 50,000 tons) the European war broke, and with this situation our entire problem changed. In order to insure our own supply of steel, as well as to insure our remaining in business in the event of our entrance into the war, or the mobilization of the productive facilities of the United States for aid to the Allied cause, two things became necessary: First, that construction of the plant be started immediately, and, second, that its melting capacity be increased. In order to attain these objectives, particularly the first, it was necessary for us to adopt an unprecedented course; that is, to begin the construction of a complete steel mill before the plans therefor had been drawn."

Shortly thereafter a letter was addressed to the holder of the company's $2,000,000 mortgage which had been placed against the company's properties in December 1939 in order to raise part of the funds to be used in the construction of the steel plant. In this letter the following statement was made:

"You are advised that, due largely to the outbreak of the European war as well as the prospects for a greatly increased national-defense program, our company altered its original program with respect to the construction of our steel plant at Warren, Ohio. As a result of these changes, the finished plant will cost $3,100,000 instead of $1,800,000 as originally estimated."

Subsequently, this amount was further increased to $3,300,000. In a report prepared by independent engineering experts in connection with a registration statement filed with the Securities and Exchange Commission, after mentioning the original estimated cost of $1,800,000, the following statement appears:

"Subsequently international and domestic developments indicated a substantial increase in the immediate demand for electric-furnace alloy steels and a further study of the market for these steels revealed the desirability of undertaking the production of higher grades and somewhat different types of alloys from those originally contemplated."

And, further:

"Also subsequent to the formation of the original plans, the developments in this country and the war situation abroad emphasized the desirability of enter-

ing production as soon as possible. A special effort was made to accelerate the erection of buildings and equipment and to complete construction as rapidly as possible."

* * * * * * *

"In our opinion, the additional and improved facilities are essential for the operations now contemplated by the company and under the conditions that have developed there has been justification for the speed-up program. We believe that the charges to the plant in the several principal categories of cost such as engineering and supervision, buildings, and equipment have been reasonable. In our opinion, the plant as a whole has been constructed at a reasonable cost and at a favorable one on a comparative basis. This is explained in great part by the company's clever and successful adaptation of used material for a large portion of the building frames and equipment."

Other statements of interest appearing in the engineers' report follows:

"There is an insistent demand for alloy steels for many types of military supplies, including shells, automotive and aircraft parts, and general ordnance requirements. The company's production should be sustained at a very high level as long as the demand for these supplies continues."

* * * * * * *

"It is impossible to predict the character and amount of the business after the cessation of the demand imposed or incidentally occasioned by the war situation and the defense requirements of this country."

After operations were begun it was found that the British Government was unable to procure its urgent requirements for annealed, spherodized, heat-treated and turned steels, the shortage in facilities necessary for the production of these items being the bottleneck in this country's steel producing facilities. Because of this condition, the board authorized increases in capital expenditures to bring the total plant cost to approximately $4,000,000.

Still later the board was advised of the inability to properly take care of domestic requirements with the then existing melting capacity. In view of this fact, an additional $1,000,000 was authorized to be expended for melting equipment and related facilities including additional floor space. Thus the cost of the plant as now authorized is estimated at $5,000,000.

From the foregoing it will be apparent that the plan as originally contemplated in effect has been entirely abandoned. As the international and domestic war and defense requirements clarified our company kept pace, placing its facilities in readiness. What started out to be a mere adjunct to the then-existing plant has been constituted a separate and distinct division, larger in size and in probable future operations than the original plant at Glassport. The reasons which prompted the management to make its recommendation for the construction of the steel plant originally contemplated have disappeared entirely. Plans for diversification of the company's bimetallic products have been tabled, and the company is not manufacturing any substantial part of its own steel requirements and has no present intention of doing so until the emergency period has ended or unless present conditions change materially.

Furthermore, a plant of the size and cost of the one now operating and nearing completion cannot be operated as a mere adjunct to the company's copperweld operations. The company definitely is in the steel business as an independent operator in an independent operation, being one of the five largest producers of electric-furnace steels in the United States.

It is in this position because of foresight with respect to the position which the United States has assumed toward Great Britain and with respect to our own national-defense program. The management was willing to back its judgment by proceeding with the building program heretofore described, confident that the facilities would be required and confident of the company's ability to compete on even terms with others in the field. It failed, however, to take into consideration the possibility that Congress would enact legislation which actually would result in penalizing the aggressive companies and favoring the timid-money ones.

Added emphasis to our unsatisfactory position under the law comes about as follows:

In computing the excess-profits-tax exemption under the average-earnings method, the base figure may be increased by new capital added to the business. New capital, however, is limited to capital raised after January 1, 1940. Hence, none of the capital raised in 1939 and used in the construction of our steel plant is eligible even though this capital was entirely non-income-producing during 1939 and during most of 1940. The effect of this new capital will be reflected when and

if we change to the invested-capital method of computing the excess-profits-tax exemption, which may be in 1941, but the net benefit will be negligable inasmuch as, in so changing methods, we will lose the benefit accruing from the relatively high earnings which we enjoyed during the base period years, i. e., 1936 to 1939, inclusive.

In other words, we are injured in one way or the other. During the base-period years, we established an earning power averaging perhaps 17½ or 18 percent on investment, an achievement attained not by inflation of our selling prices but by highly favorable purchases of many of our fixed assets and conservative policies of the management in matters affecting finances and accounting. This is an excellent record, but if we use the average-earnings method of computing the excess-profits-tax exemption, we lose the right to receive free from excess-profits tax any return on our capital raised in 1939—a total of 4½ million dollars, divided between 2½ million stock and 2 million in bonds. Hence, the effective rate to which we are entitled, taking our present capital into consideration, is very little higher than the 8 percent which the law allows under the invested-capital method.

Thus, while nominally offering alternative methods of computing this exemption, presumably to give at least some relief to businesses situated as ours, the alternatives are practically nonoperative so far as we are concerned. If we elect the one method, we lose the benefit of our 1939 capital additions; if we use the other, we lose the benefit of our favorable earning record. These two items being substantially offsetting, the net benefit is practically nil.

The effect of this is that in computing the exemption for excess-profits-tax purposes we receive only a relatively small amount by virtue of our Warren plant. Glassport business alone, despite the fact that its earning power was established without dependence on any war or defense program, will bring us close to the maximum brackets of tax rates, so that Warren income will be superimposed on the Glassport income and, hence, substantially, will all be taxable at top bracket tax rates. Had the steel division been organized as a separate corporation, the Glassport exemption would not have been greatly reduced, whereas Warren would be entitled to an exemption of four or five hundred thousand dollars, a condition which, alone, would result in a substantial savings in tax.

Unless some relief measure is available, this company will be forced to compete at an unfair disadvantage with companies which either through lack of foresight or sheer unwillingness to make any expenditures until protective legislation was enacted have been the major cause of retardment of the defense program.

If this company is denied the right to amortize at least the major part of the cost of its steel plant, it is respectfully submitted that a grave injustice will be suffered, an injustice so serious that it may jeopardize the continuation of the operations presently carried on and the larger ones which will follow upon the completion of the latest program of expansion, as well as the entire future of the business.

OUTPUT OF NEW STEEL PLANT

The new steel plant went into commercial production on October 1, 1940, manufacturing aircraft quality steels, S. A. E. alloy steels, oxidation-resistant steels, stainless steels, and other alloy steels. From the beginning it has operated on a three-shift, 24-hour day, at 100-percent capacity. Its entire output has been taken on orders direct from the British Government, direct from the United States Government, and by domestic manufacturers who have used these steels practically 100 percent in filling orders for the defense program. These steels have been turned directly into aircraft parts for the United States Army and Navy, aircraft engines, rifle barrels, boiler tubes for battleships and destroyers, munitions, armor-piercing shells, armor plate, many kinds of ordnance equipment, foreign Diesel engines, and machine tools.

Shipments for these accounts were in excess of $3,500,000 through December 31, 1940; for the first 3 months of 1941, $3,265,277; total shipments for the 6 months ending March 31, 1941, aggregate more than $6,765,000.

It will thus be seen that this company was among the first to alleviate the bottleneck in the production of high-alloy steels and has been a real factor in supplying the very essentials so vital for this Nation's defense. Nevertheless, for putting itself into position to do just this, without awaiting a guarantee of protective legislation, the company has been definitely and substantially penalized by the date set in the Second Revenue Act of 1940 as the beginning of this country's defense effort—June 10, 1940.

SUMMARY

Briefly, the entire history may be summarized by the simple statement (which we believe you will find entirely confirmed in the material set forth in the attached paper) that we expanded and diversified our plant from the one originally planned because we anticipated as long ago as September 1939 the exact conditions which now exist. Having so anticipated, the company backed the judgment of its management by authorizing the greatly increased expenditures which were necessary in order for our business to be placed in order and ready to take its place in the field.

All this was done without awaiting any protective legislation because we were confident of the need for the facilities and that if and when an excess-profits-tax law would be enacted Congress would protect the investment of private capital by the inclusion of equitable amortization provisions. This came to pass, but we are one of the unfortunate companies who were left out. The inequity of this is emphasized because we were doing exactly what the administration desired; i. e., speeding up the construction of the defense industries.

In bringing our case to your attention we are not asking for or thinking in terms of receiving any advantage over companies which did not anticipate requirements as we did, but we are asking not to be penalized for having so done.

Even more serious than the competitive disadvantage, which might be dismissed as a relative matter no better or worse than other inequities which necessarily are inherent in any tax legislation, is the absolute disadvantage which is not based on competitive position and which is so serious that it constitutes a very real threat to our ability to survive.

From conditions at present being encountered it may be stated definitely that failure to obtain substantial relief through amortization of facilities constructed prior to June 10, 1940, not only will jeopardize the future of our business but also will jeopardize our ability to continue operations at the level necessary to meet the great demand which has been placed upon us and for the fulfillment of which our plant already is equipped. And this is to say nothing of the larger operation which is scheduled for 1941 and 1942.

Being an entirely new development, the steel division required (and still requires) not only large amounts for capital construction but also for the building up and carrying of very large inventories. In financing this development the cash resources of the business have been drained to the limit. In addition, we already have sold (in 1939) senior securities aggregating $4,500,000 ($2,500,000 in preferred stock and $2,000,000 in first-mortgage bonds) and are borrowing $1,000,000 from banks in order to supply part of the funds required in the steel-division construction and operation. All of this is in addition to 75,000 shares of common stock which were sold in July 1940 for $1,350,000.

The mortgage above referred to is against our Glassport plant as well as the steel plant, which was hardly started when the loan was negotiated. Thus, in order to raise funds necessary for the steel development, we have mortgaged the future of our original business which was firmly established and virtually depression-proof.

Obviously, either the sale of additional securities or the continuation and increase of bank loans will be made much more difficult, if not impossible, if we do not have the protection which is granted by the amortization provisions of the law. If, because of the competitive disadvantage which we must suffer with respect to our steel operation, together with the hazards necessarily attendant upon an expansion in the field of war and defense industry, our future financing must be based entirely on the prospective earnings and assets of our Copperweld division, I can say definitely that we already are considerably overextended and that our position is not a desirable one from the viewpoint of investors or bankers. This is precisely the unfortunate position in which we now find ourselves.

It is impossible to see how provision for the repayment of our existing and possible additional loans can be made and the very large working-capital requirements of the steel division supplied if we have to pay out in taxes the tremendous amounts which will be due if we are not allowed amortization. The ill effect of all of these conditions will be greatly increased, of course, under the proposed higher rates which now are almost certain to be adopted for 1941 and subsequent years and if the amortization period is shortened, as it may be under the provisions of the present act.

RELIEF SOUGHT

This applicant is not asking the benefit of the amortization provision for the amounts originally contemplated to be spent—some $1,200,000—but it definitely believes that the remainder of the expenditures made prior to June 10, 1940, entered into for the foregoing reasons should be treated no differently than the expenditures by those companies who began construction after June 10, 1940. We are asking therefore that the amortization date be set at January 1, 1940, to be effective coextensively with the other revenue provisions for the year 1940.

Respectfully submitted.

COPPERWELD STEEL CO.,
T. G. COUNCILOR,
Assistant to the President.
MAURICE J. MAHONEY,
Assistant Comptroller.

JOHN W. CAFFEY,
Greensboro, N. C., August 21, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR GEORGE: As director of the North Carolina Association for Wine Control and as representative for the producers and growers of grape and fruit products in the Southern States (Virginia, North and South Carolina, Georgia, Florida, and Alabama), I am in constant contact with the conditions relating to the wine industry in this area. You, too, of course, know that Georgia, North Carolina, and Virginia have considerable grape and fruit production. Our soils are particularly adaptable to this phase of agricultural development. I, therefore, feel that the farmers who are interesting themselves thusly ought to be encouraged and this can only be done by holding the wine tax on a reasonable level.

Although the House proposal contained in the 1941 revenue bill provides for a 33⅓ percent increase in wine taxes, I am advised that the wine industry generally is willing to accept this increase, which is corresponding with that provided for on liquor. If there should be a decrease in the liquor rate, of course, we feel that wine should likewise be benefited, and most certainly we feel that no further increase at this time could be made without seriously impairing the normal agricultural expansion in grape and fruit production in the Southern States.

Accordingly, I hope that you will recognize these potentialities, and especially in view of the fact that the industry will not impose upon the committee by requesting a formal hearing.

With high esteem, I have the honor to be,
Sincerely yours,

JOHN W. CAFFEY.

AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, INC.,
Washington, D. C., August 22, 1941.

Hon. WALTER F. GEORGE,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: On behalf of its members, including practically all manufacturers of airplanes, airplane engines, and accessories for airplanes in the United States, the Aeronautical Chamber of Commerce of America, Inc., bespeaks consideration by the Senate Finance Committee of the following suggestions in regard to the pending legislation amending the Internal Revenue Code.

CAPITAL STOCK TAX

Under the code every third year, 1938, 1941, 1944, etc., are declaration years for capital-stock tax. Such declarations, with specified adjustments, hold for the 3 years for the purpose of computation of the capital-stock tax and the declared-value excess-profits tax. The Revenue Act of 1939 gave permission for an upward adustment of the declared value at June 1930, and June 30, 1940.

At the present time, due to a blanket extension of time, the corporations are giving consideration to the value to be declared this year. Under the existing law they must do this without knowing whether they will again have the

privilege of increasing such declaration in 1942 and 1943. The result is that they must try to anticipate their earnings for 1941, 1942, and 1943 in the hope that they may make a declaration now that will save them from excessive declared-value excess-profits tax for those years.

Never was there a time when prognostication of earnings was more difficult. Legal restriction of profits, wages increases, price control, and perhaps even inflation are among the clouds on the horizon which make such prediction more uncertain than ever before.

We recommend that this uncertainty be relieved by having the code amended so that upward declarations for 1942 and 1943 will be permitted and that this be made definite before the extended time for filing capital-stock-tax returns has elapsed (September 29, 1941). For the benefit of those who file their returns prior to the enactment of such legislation we recommend a period of 30 days in which to amend.

AMORTIZATION DATE

Under existing law and regulations the cost of emergency facilities, the construction, reconstruction, erection, or installation of which was completed after June 10, 1940, or which were acquired after that date, may be amortized over a period of 5 years.

This provision of the law merely gives recognition to the fact that corporations engaged in furnishing defense products should be permitted to recover out of earnings free of tax the cost of the extra facilities during the period when such products are being produced. Otherwise after the end of the emergency they would still have a large undepreciated balance in their plant account representing property that is not in use or that is economically unable to earn the depreciation. It does not and cannot produce remuneration for such facilities beyond their cost.

The propriety of the amortization principle having been recognized by law it should be made to apply to all facilities acquired, constructed, etc., for the purpose of enabling the contractor to fulfill the greatly increased demand on his capacity caused by the defense program. The President declared a limited emergency on September 8, 1939, and any plant facilities contracted for after that date for the purpose of enabling contractors to meet the needs of the British Government and its allies and of our own defense program should be included in the amortization privilege. This date was used in the draft of the provision but it was changed by the House of Representatives to July 10 (the date the President announced that efforts would be made to allow amortization). The Senate changed the date to January 1, 1940, but the date was compromised to June 10, 1940, in conference.

The effect of using this later date is to reward those contractors who waited for some assurance of amortization while penalizing those who went ahead at once in preparation for the big job ahead.

We therefore recommend that the date be eliminated entirly, relying upon the required certificate of necessity, or that it be made September 8, 1939, instead of June 10, 1940, and that a reasonable time be allowed for application for certificates of necessity in those cases which would be opened up by this change.

CERTIFICATES OF NONREIMBURSEMENT

The situation in regard to certificates of nonreimbursement was very ably presented in a joint letter from the Secretaries of War and Navy to the Speaker of the House under date of July 30, 1941. The amendments suggested in the form of a proposed joint resolution would go a long way toward correcting what now gives promise of becoming a hopeless tangle. Many companies have several hundred, and some perhaps thousands, of contracts which would require clearance, and progress so far indicates little hope that the situation will be under control by the time the bulk of the 1940 income-tax returns will be filed.

It has been suggested that the certificates of nonreimbursement be eliminated and we are in accord with this view. Under existing law and regulations (aside from amortization), the cost of plant, other than land, is recoverable out of gross earnings over the life of the property in determining net income subject to taxation. In normal times this takes the form of straight depreciation. When the life of the property is shortened by longer hours or extra shifts, the rate of depreciation is accelerated. Whether by straight depreciation or accelerated depreciation no certificate of necessity, no certificate of nonreimbursement, and no certificate of Government protection is necessary. Amortization is merely another form of depreciation applied over a shortened period estimated to repre-

sent the term of the defense effort. In no case is the result of this provision a duplication of the return of the cost of the facility. It is simply a permission to charge off the cost during the income-earning period instead of deferring part of the write-off to a later time when there may be no income to charge it against. Regulation, audit, and examination by the Revenue Bureau are sufficient safeguards against double deductions. The certificate of necessity is sufficient requirement for eligibility. Certificates of nonreimbursement should be eliminated.

NEW CORPORATIONS

Under the excess-profits-tax provisions of the laws, corporations which were in existence through the base period 1937 to 1939 have a choice of two methods of computing their excess-profits credit. Corporations formed near the end of the base period have no net earnings basis and are limited to the invested capital basis. Our experience indicates that the net-earnings basis is of material benefit to the older corporations while the struggling new companies are denied this benefit.

It is realized that the adjustment of this inequity is an extremely difficult problem and we know that your committee has given it consideration. Suggestions have been made for (*a*) an extension of the base period to years after 1939 until 3 years' earnings are available; (*b*) for a constructive earnings credit of 10 percent of sales; and perhaps several others.

We do not presume to say what is the best solution but do feel that these new corporations need the encouragement that would flow from some assistance along this line.

We know that these recommendations have been presented by others and have probably been discussed in your hearings. We ask that this letter be placed in the record and be considered in your deliberations on the new revenue bill.

Respectfully yours,

AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA, INC.
JOHN H. JOUETT, *President.*

(Whereupon, at 3:30 p. m., a recess was taken until 10 a. m., Saturday, August 23, 1941.)

REVENUE ACT OF 1941

AUGUST 23, 1941

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Senator, are you ready to go?

Senator HAYDEN. Yes.

STATEMENT OF HON. CARL HAYDEN, UNITED STATES SENATOR FROM THE STATE OF ARIZONA

Senator HAYDEN. Mr. Chairman, like all other Senators, I have received many communications relative to the revenue bill. A considerable number of them apparently are based upon the idea that nobody wants to pay any more taxes than he is now paying, but there are some special matters which I should like to bring to the attention of the committee.

I am attaching hereto and ask that it be printed in the record of the hearings a statement prepared by Congressman Jack Nichols, of Oklahoma, outlining the effect upon the aviation industry of any increase in the Federal gasoline tax.

Congressman Nichols has been called out of the city, and he therefore asked me to present his views to the committee. I am sure the committee will be interested in observing that in two-thirds of the States either no gasoline tax is collected on aviation fuel or the tax, when collected, is refunded. Since the proceeds of gasoline taxes are used primarily for the construction of highways, it would seem perfectly logical that the proceeds of a tax on aviation gasoline, if collected, should be used to assist in the construction of commercial airports.

He points out that in a great majority of States there is no tax on aviation gasoline, because the theory of the tax is that it is applied to roads; that the present payment of the gasoline tax by the commercial air lines, amounts to more than $1,000,000 a year, that the increase would tax them about $750,000 a year more, and that the effect would be a tax of about 1½ cents per mile flown on the air lines. Congressman Nichols also states that private flyers last year paid about $350,000 in gasoline tax, and that this would make their gasoline tax amount to more than a half million dollars.

I ask that Mr. Nichols' statement be included in the record.
The Chairman. We will be pleased to have it included.
(The statement referred to is as follows:)

STATEMENT OF HON. JACK NICHOLS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OKLAHOMA

Aviation and the gasoline tax.—Despite a 27-percent increase in traffic, the commercial air lines suffered a deficit of more than $2,000,000 for the first quarter of 1941, according to Brooks Earnings Indicator, Inc., which analyzed the revenue statements of 15 major air-line companies. The loss was attributed to a rise in operating expenses, together with an increase in scheduled flights. Now it is proposed to increase further the Federal tax on gasoline, which would raise the operating costs of aircraft still higher and thereby plunge the commercial air lines into greater financial difficulties.

During 1940 the scheduled air carriers consumed 74,535,000 gallons of gasoline and 1,288,000 gallons of lubricating oil, according to the reports of the Civil Aeronautics Administration. All of this gasoline and lubricating oil was subject to the Federal levies and the cost of both items was increased by the amount of the tax. For the first half of the year, the air lines were paying operating taxes on gasoline and lubricating oil to the Federal Government at the rate of about $800,000 annually. With the enactment of the Revenue Act of 1940, which raised the levy on gasoline from 1 cent to 1½ cents a gallon and that on lubricating oil from 4 cents to 4½ cents a gallon, the air lines were forced to pay an additional $376,000 annually. As a result, they now are paying Federal taxes on these two operating items at the rate of $1,176,000 each year.

If the proposed increase from 1½ cents to 2½ cents a gallon is enacted, the scheduled air carriers will have to pay another $745,000 annually. On the basis of the 1940 consumption, this would bring their Federal payments on gasoline and lubricating oil up to $1,921,000. Actually, the tax burden upon commercial air lines would run well over $2,000,000 per year because of the increase in scheduled flights during the current year.

It has been estimated that the average commercial airship consumes approximately 90 gallons of gasoline per hour and travels about 155 miles in that period. The mileage rate, therefore, is about 1.7 miles to the gallon. At the present time, the Federal Government is collecting a tax on gasoline at the rate of 1½ cents per gallon so that the tax rate now being imposed on air operation is close to a cent a mile.

If the Federal tax on gasoline is increased to 2½ cents per gallon, it will correspond to a mileage tax on air transportation of 1½ cents per mile.

Even at the present rates, air travel is paying much higher mileage taxes than any other medium of transportation.

The tremendous efforts of the Civil Aeronautics Administration in its civilian pilot-training program has brought about an expansion of private flying which even in an accelerating field such as aviation is nothing short of remarkable. Two years ago there were about 25,000 civilian pilots in the United States. Today there are more than 100,000. The importance of the civilian-pilot-training program in the defense effort and the urgent need for trained pilots not only for the military and naval air forces but also for ferrying airships, testing planes, and other defense activities was acknowledged by Congress only a few months ago in its appropriation of $25,000,000 for civilian pilot training.

In order for this program to be effective, those pilots who have completed the training courses together with the flying students in the 900 training centers throughout he country must fly a prescribed number of hours to retain or to obtain their licenses. An indication of the effect which this program has had upon private flying operations may be obtained from the mileage reports of the Civil Aeronautics Administration. Last year private operators flew a total of 264,000,000 miles as compared with 178,000,000 miles during 1939, an increase of almost 50 percent.

During the present year, it reasonably may be expected that private flying operations will increase by a corresponding percentage, provided of course that no deterrents are raised, such as increased costs of operation, which would tend to discourage private airplane usage.

Last year, private flyers used 22,400,000 gallons of gasoline and 660,000 gallons of lubricating oil. At the present rates of Federal taxation on these two operating commodities, they now are paying $366,000 annually into the Federal

Treasury. This figure is low, really, for it does not take into account the increase in private flying operations during the current year; more than likely, their tax payments will run over a half million dollars.

If the Federal gasoline tax is raised, the tax burden upon private pilots will be increased by approximately $250,000 per year. In view of the expensive program which the Federal Government already has undertaken to train civilian pilots and to encourage private flying, it hardly seems wise or consistent to exact such a penalty upon their operations. For certainly an increased tax upon plane operation will tend to discourage flying. Not only would an increase in the gasoline tax be contrary to the established intentions of Congress to develop an adequate reservoir of pilots for national defense, but it also would render useless some of the training that already has been given for this purpose by making it more difficult for civilian pilots to obtain their necessary hours in the air.

The present Federal tax of 1½ cents a gallon on aviation fuel is equivalent to a sales tax of 10 percent. When viewed in the light of the resistance which generally is expressed toward a 2 or 3 percent sales tax on other necessary commodities, this levy is outrageous. Yet it is proposed to increase the tax on this necessity to 2½ cents per gallon, which would correspond to a sales tax of approximately 17 percent.

Every State in the Union, and the District of Columbia as well, is now collecting a tax on motor fuel at rates ranging from 2 cents to 7 cents per gallon. Recognizing, however, that the aircraft operator does not derive any special benefits from such taxes as does the highway user in the way of improved roads, some two-thirds of the States either refund the tax on gasoline which is used in aircraft or exempt aviation fuel entirely. Of the 18 States that levy a tax upon gasoline used in aviation, 8 have tax rates which are lower than those on motor fuel.

This is tangible recognition of the impropriety of levying a tax upon gasoline used in the propulsion of aircraft.

The gasoline tax was originated as a highway use tax to pay for the improvement and repair of roads, and, with some minor exceptions, it always has been used for that purpose in the States. Since the need for highway improvements is the only justification for levying a tax on gasoline, it should be reserved for the States and devoted to that purpose. Furthermore, the air carriers should not be made subject to it inasmuch as they do not reap any of the benefits that result from highway improvements.

If, in the development of aviation, it had turned out coal or wood was a more efficient fuel than gasoline to propel airplanes, there would have been no necessity for any distinction in aviation usage and no need for the exemption and refund provisions in the States' gasoline tax laws. Nor would the Federal Government now be levying a tax of almost 1 cent per mile on plane operation, because Congress has never placed any such levies on coal, wood, or any other fuel used in transportation.

It seems most unfair, therefore, that the scheduled air carriers should be forced to pay, as they now are paying, $1,176,000 per year and threatened with another $745,000 tax charge in the current proposal to increase the gasoline levy, simply because the fuel which they use is a petroleum liquid similar to that used in highway transportation.

TAX ON BOTTLED SOFT DRINKS

Senator HAYDEN. The next matter I want to bring to your attention is that of the one-sixth of a cent per bottle tax on soft drinks. We have a peculiar situation in Arizona, because of the large grapefruit crop, for which there has not been an adequate market. In the past few years between 4,500 and 5,000 tons, or between 40 and 50 percent of the tree crop, has been handled each year by the Desert Citrus Products Association of Arizona, which uses the grapefruit surplus to make a soft drink. The association claims their profits have been very, very small, and that this tax would seriously affect them.

I have also received a number of general protests against the one-sixth cent bottle tax on soft drinks made to retail at not more than 10 cents. From the statements which have been made to me, it would appear that bottling companies will find it difficult, if not impossible, to pass this tax on to the consumer, and that many of the smaller companies will be forced to go out of business, if one-sixth of a cent per bottle is added to the cost of their product.

I attach hereto and ask that they be made a part of the record informative statements submitted to me by individuals who are in a position to know the actual effect of this tax proposal.

Senate LA FOLLETTE. Is the grapefruit drink carbonated?

Senator HAYDEN. Yes; it is a carbonated drink.

The CHAIRMAN. That is a tax on carbonic acid gas, and the carbonated water. This drink that you are referring to, that is not a still drink, that is a live drink?

Senator HAYDEN. Yes; to make it palatable the grapefruit juice is mixed with carbonated water. That is the way they dispose of the grapefruit surplus.

(The letters referred to are as follows:)

DESERT CITRUS PRODUCTS ASSOCIATION,
Tempe, Ariz., May 28, 1941.

Hon. CARL HAYDEN,
United States Senator, Washington, D. C.

DEAR SIR: As we understand it there will come before the House of Representatives and the Senate, in connection with the new tax structure, a bill providing for, according to the information we have, a 1-cent tax on so-called soft beverages.

Our association is owned by approximately 600 grapefruit growers in the State of Arizona and our function is to process and sell such surplus tonnage of grapefruit as our members are unable to sell through fresh-fruit sales channels. I might add that due to general economic conditions that have prevailed for some years past that our association has been called upon to handle between 40 and 50 percent of the tree crop of our members.

In connection with our efforts we have helped to develop the introduction of grapefruit carbonated beverages which you can realibze is an independent outlet for the fruit used and can hardly be considered as offering any competition to the sale of fresh grapefruit. Such being the case, this from the growers' point of view, is highly desirable business.

The surplus of grapefruit in our State has been so large that additional help has been asked for and received through the Federal Surplus Commodities Corporation, and I know we have had your support in this regard, but I must mention it to bring out the point that in order to move the growers' total crop all possible outlets must be utilized.

It is our opinion that the soft beverage industry expects, and is willing to be taxed, but as to the amount of the tax the industry is unanimous in their thoughts that 1 cent per bottle will very likely fail to produce as much revenue as some lesser tax that could be absorbed by all interested handlers, thereby keeping the price to the consumer at its present general level of 5 cents.

We have been in close contact with the manufacturer that we are selling grapefruit juice that finds its way into the beverage industry, and we have been told that there is a strong likelihood that if the 1-cent tax is assessed, the volume of grapefruit juice we can expect to sell to them in the future will be very greatly reduced, and we can quite clearly agree on that point.

This matter concerns our growers in a rather vital manner, because the volume of grapefruit that we are selling through these channels has now reached the point of from 3,500 to 5,000 tons per year. I can safely state that if this above tonnage, or any considerable portion of it, would have to be diverted to either the fresh fruit sales channels or our canned juice outlets that additional burdens would be put on us that could only result in increased difficulty in handling the growers' crops.

We respectfully submit all the above to you for your careful consideration. Kindly understand that we, your fellow citizens of the State of Arizona, expect

and will gladly bear our share of all taxes that it is found necessary to levy in the defense of our country, but we do feel that careful consideration of this beverage tax will probably reveal that the Treasury will be benefited to the same extent by some lesser tax that would not disturb the volume of consumption.

Respectfully yours,

DESERT CITRUS PRODUCTS ASSOCIATION,
E. J. KITTERMAN, *Manager.*

HOUSE OF REPRESENTATIVES, STATE OF ARIZONA,
Phoenix, Ariz., May 31, 1941.

HON. CARL HAYDEN,
United States Senate, Washington, D. C.

MY DEAR SENATOR: The excise tax proposal submitted by the Assistant Secretary of the Treasury calls for the imposition of 1 cent per bottle on soft drinks.

Please let me call your attention to a few facts of which I would appreciate your consideration.

The bottled soft drink industry recognizes its patriotic duty of participating in the national revenue-raising problems, and submits that it is ready and willing to bear its share of such burden, distributed equitably, and in recognition of the vital and equal interest of all industries and all consumers in the preservation of the American way of life.

Soft drinks are recognized as wholesome foods, consumed largely by young people and wage earners of low income. As the proposed tax is many times the margin of earnings of both the bottler and the retailer, the sales tax would have to be passed on to the consumer by an increase in the retail price. Experience has proven that, when in competition with other 5-cent items, an added cent or two to a bottle of soft drinks will greatly curtail the sales, thus reducing the volume produced and all activities connected with the industry, which is primarily a local business, employing local labor, paying local taxes, and otherwise participating in the general economic life of the community.

It is my opinion that with other nickel items available (as the case would be with only a 5-percent tax added to them), soft drinks at a higher retail price would suffer 40-percent loss in volume. This would close 35 percent of the bottling plants in the Nation, throw out of employment 60 percent of the workers, stop the sale of thousands of trucks, millions of gallons of gasoline, and basic ingredients normally used in the production of this valuable food product.

Candy bars, ice-cream cones, and soda fountains are the greatest competitors to the bottled soft drink; they can regulate the size of their package to meet the 5-percent increase in cost and still sell for 5 cents while the bottlers have millions of dollars invested in bottles which cannot be replaced with smaller ones to meet the added taxes. The bottler must absorb the entire tax and try to pass it on with an increase in the sale price, taking the bottled beverage out of the 5-cent class. The upheaval to the industry would be disastrous, not only to the bottlers but to the allied industries.

Many bottlers, including myself, have built their businesses upon confidence of protection, not destruction, from the United States Government. We have invested our life earnings in the business; if it is to be wiped out with this tax there is no alternative but the relief rolls.

Previous special levies on soft drinks have been characterized by the Secretary of the Treasury as "difficult to administer and widely evaded," justifying their repeal as "relatively unproductive and unnecessarily vexatious."

Thanking you in advance for anything you can do to equalize this excise tax bill before final passage, and with best wishes for your personal success,

Yours very truly,

W. W. MITCHELL.

CRYSTAL ICE & FUEL CO.,
Prescott, Ariz., August 11, 1941.

Hon. CARL HAYDEN,
United States Senator from Arizona,
Senate Office Building, Washington, D. C.

DEAR SENATOR HAYDEN: As one of the large number of soda-water bottlers doing a relatively small business, I wish to urge that you protest vigorously the special tax of one-sixth cent per bottle now before the Senate.

It is impossible to pass this tax on the consumer. One-sixth cent per bottle is 4 cents per case of 24 bottles and is by far the major part of our net profit. If we have to pay this, it is doubtful that we can continue in the bottling business.

A tax of this amount would not leave sufficient gross profit to take care of bottle replacement to say nothing of equipment. We already have had substantial raises in material costs on top of several special levies.

Soda water is classed as a food product. This, therefore, seems discriminatory as I understand no other food product is incorporated in the bill.

Please do your utmost to help us. We definitely want to pay our part of any defense program but feel that the one-sixth-cent-per-bottle tax would be an unequal burden on us.

Sincerely,

KENYON TRENGOVE, *Manager.*

TAX ON AUTOMOBILES AND TRUCKS

Senator HAYDEN. Another complaint comes from the Mexican border. The automobile dealers there think their business will be utterly ruined unless the excise tax on automobiles manufactured for export equals the excise tax on cars made to sell in the United States.

Section 544 of the revenue bill increases the rates of taxes on automobile and truck bodies. The automobile dealer of Arizona does not protest against increased taxes on automobiles and parts, because he fully realizes that that industry must, along with all others, bear the burden of higher taxes in the emergency. Dealers have, however, presented to me a serious problem which results from increasing the excise taxes upon automobiles manufactured for sale in this country, without at the same time making a proportionate increase in the excise taxes on automobiles manufactured for export.

A substantial part of the retail business of automobile sales along the Mexican border comes from sales to individuals living in the northern part of the Republic of Mexico. If the taxes on cars manufactured for domestic sale make the domestic price materially higher than the price for the same automobile sold at retail by the Mexican distributor, Arizona automobile dealers face a serious curtailment in volume of their business.

The situation is particularly well illustrated in the two cities of Nogales, Ariz., and Nogales, Sonora. The population of Nogales, Sonora, is 3½ to 4 times as large as the population of Nogales, Ariz., but the business houses on the American side of the line furnish staple goods of all sorts to the residents of both cities, and American business firms have, through the years, beeen expanded to cater to a volume of trade 3½ to 4 times as large as the normal volume of trade that would be expected in a city of the size of Nogales, Ariz.

It is obvious that, unless the tax rate upon automobiles manufactured for domestic sale is equalized with the rate upon automobiles manufactured for export, American automobile firms in Nogales and other similar points along the Mexican border will be seriously and adversely affected. I am attaching hereto and ask that they be printed in the record certain letters I have received outlining this situation. I am sure the committee will give very sympathetic attention to these facts.

The CHAIRMAN. Yes, sir; that may be done.

(The letters referred to are as follows:)

AUTOMOBILE DEALERS ASSOCIATION,
Phoenix, Ariz., May 22, 1941.

Hon. CARL HAYDEN,
United States Senator,
Senate Office Building, Washington, D. C.

DEAR CARL: The officers and directors of this association wish to call to your attention the very serious situation in which all automobile dealers on the Mexican border will be placed if there is any increase in the existing excise tax on automobiles and parts without a similar tax being levied on the same merchandise exported to Mexico or without some provision whereby any excise tax collected on automobiles or parts shall be refunded when and if such merchandise is exported.

Inasmuch as the existing excise tax and any increases that may be made in same are, or should be, primarily to provide revenue for defense, it would seem fair and logical to impose an equal tax on all merchandise of the same character that is exported. If this is not done, residents of foreign countries are being accorded the privilege of reduced prices which, in the final analysis, are made possible only by sacrifices of the American people.

At present, we are reliably informed, a very substantial percent of the business of automobile dealers in Nogales and Douglas consists of sales to residents of Mexico, amounting in some instances to more than 40 or even 50 percent of total volume. If any increase is made in the existing excise tax imposed upon the manufacture of automobiles for sale or use in the United States without a similar levy being imposed on the same class of merchandise for export, it will be virtually impossible for dealers located on the Mexican border to continue in business. We hope you will give this situation your earnest consideration.

It is our observation that all the automobile dealers as well as all the other citizens of Arizona are willing and anxious to pay their share of the defense program, but are vigorously opposed to grossly discriminatory and unfair taxes which will restrict and impede essential highway transportation at the very time when it is most vital to the welfare of the Nation.

Sincerely yours,

ARIZONA AUTOMOBILE DEALERS ASSOCIATION,
HENRI BEHOTEGUY, *Manager.*

[Telegram]

NOGALES, ARIZ., *June 5, 1941.*

United States Senator CARL HAYDEN,
Washington, D. C.:

May we urgently request that you personally do everything possible to impose the new excise defense tax on automobiles built for export as well as domestic use; unless this applies to Mexican export business all border dealers will be penalized to a point where they will be unable to continue operations and, therefore, create an unemployment problem which, in Nogales alone would mean at least 200 people. Kindly keep us posted through the Arizona Dealers Association of Phoenix as to any developments concerning this matter and please be advised that we are vitally interested and concerned regarding the ultimate outcome of this matter.

Very truly yours,

BUCKHORN AUTO SALES. J. F. JOHNSON.
JOHN ELIAS MOTORS. JOHN ELIAS.
BOICE MOTOR CO., J. H. BARBEE.
SANTA CRUZ COUNTY CHAMBER OF COMMERCE, DON SMITH, *Secretary.*
JACKSON MOTOR CO., J. A. JACKSON.
SAXON MOTOR CO., A. E. SAXON.
CHESHIRE MOTOR CO., ROY V. CHESHIRE.

CHARLES G. BOICE,
Nogales, Ariz., July 31, 1941.

Hon. Senator CARL HAYDEN,
Washington, D. C.

DEAR MR. HAYDEN: We have been informed by the Arizona Automobile Dealers Association that the new excise tax is soon to be placed before the Finance Committee for debate.

Since we are located along the Mexican border, you can readily see how we will be affected should this tax not apply for export business. As you already know, all cars built for export carry a 10-percent export discount, which alone puts us to an extreme disadvantage. Should the Mexican dealers get exemption on the new excise tax it would be impossible for us to do business competitively, as they would have an additional 7-percent advantage.

Our export business in the last 12 months runs a little over $60,000, and if we are deprived of this volume due to the present tax question, it will be impossible for us to continue operating in this district. Every car dealer along the Mexican border is confronted with the same problem and we are all vitally interested in the ultimate outcome.

We know you will represent us to the very best of your ability, and feel sure that by properly explaining the border situation, that we will receive the necessary protection from the standpoint of an American merchant doing business in the good old United States of America.

Yours very truly,

CHAS. G. BOICE,
J. H. BARBEE, *Manager.*

CHESHIRE MOTOR CO.,
Nogales, Ariz., August 1, 1941.

Hon. CARL HAYDEN,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Due to the writer's absence from the city, I was unable to get the information to you about our sales south of the border that Mr. Henri Behoteguy, of the Arizona Automobile Association, requested that I send you.

I have gone back over our records for the calendar years of 1937, 1938, 1939, and 1940, and find that we delivered in old Mexico from Nogales, Ariz., 184 new cars and trucks during those 4 calendar years. The total volume for our establishment was $185,000.

We, of course, feel that this business would be lost to us if the excise tax is not included on cars manufactured and shipped to Mexico.

Trusting that this is the information you desire and assuring you of our deep appreciation for what you are attempting to do for car dealers along the border, and with sincere personal regards, we are,

Yours very truly,

CHESHIRE MOTOR CO.,
C. C. CHESHIRE, *President.*

Senator BROWN. Does not the Mexican Government collect a tax?

Senator HAYDEN. Yes. That is paid anyhow. Mexico has a regular import duty which a man buying the automobile in the United States must pay if he takes it into Mexico, but if our domestic excise tax is higher than the export excise tax plus the Mexican tariff rate, the Mexican living along the border will simply not buy his car in the United States.

TAX ON TOILET PREPARATIONS

Another item that I want to bring to your attention is that section 553 of the revenue bill, as passed by the House of Representatives, imposes a 10 percent tax on the retail sales of toilet preparations and requires that beauty parlors and barber shops shall make monthly returns of toilet preparations used in the treatment of patrons and consider the total quantity used during any such month as though it had been sold at retail. It would appear to me that this latter provision

would be difficult, if not impossible, to administer and I believe that the attached protest of Miss Marjory Ricks, of the Tucson Hair Dressers Association, Local 106 of the National Hair Dressers Association, is entirely justified.

I am sure the committee will be glad to give sympathetic consideration to the statement of Miss Ricks.

(The telegram referred to is as follows:)

TUCSON, ARIZ., *August 10, 1941.*

Senator HAYDEN,
United States Senate,
Washington, D. C.:

Calling your attention to House bill 5417. The adoption of section 2404 (b) would inflict a serious hardship on our industry since the use of cosmetic items is merely an incident to our work, revenue being derived almost entirely from the services rendered. A 10-percent tax on the retail price of goods consumed, therefore, would be entirely disproportionate. We wish to call your attention to a previous bill passed in 1929, still in effect, taxing the manufacturer 10 percent.

TUCSON HAIR DRESSERS ASSOCIATION,
LOCAL 106 OF NATIONAL HAIR DRESSERS.

Senator HAYDEN. Paragraph (b) of this section, to which attention is drawn in the telegram as being wholly unworkable, provides:

(b) *Beauty parlors, and so forth.*—For the purposes of subsection (a), if any person operating a barber shop, beauty parlor, or similar establishment, uses any article described in subsection (a) in the treatment of any customer or patron, the total amount so used during any month shall be considered as sold at retail by such person during such month, and the fair retail price of such amount, as determined by the Commissioner, shall be considered to be the price at which so sold.

There is now a 10-percent tax on the preparation itself when manufactured, and you could, without difficulty, add a 10-percent tax on the retail sale of the preparation if sold by the bottle, but how can you enforce a provision requiring the barber or the lady who keeps the beauty parlor to look at the bottle at the end of the month and to tell the revenue agent how much was used during the month and how much tax should be paid? I think you ought to turn this matter over to the experts and see if you are not causing some confusion.

Senator TAFT. If the barber charged 35 cents for the haircut and 10 cents for putting something on, that is 10 cents, no matter how much the bottle cost.

Senator HAYDEN. It says, "The total amount so used during the month." If a barber uses some of Ed Pinaud's hair tonic on my hair—you notice my absence of hair—and I happen to be the only customer upon whose hair that product is used during the month, the barber must calculate the exact amount I used. Maybe he can allow a little for evaporation in the bottle; I don't know.

Senator BROWN. I am afraid he would consume the whole bottle.

TAX ON OUTDOOR ADVERTISING

Senator HAYDEN. With reference to section 557 of the proposed Revenue Act of 1941, I am in receipt of various protests against the imposition of tax upon outdoor advertising, and I am attaching hereto for the information and attention of the committee certain telegrams from organizations in Phoenix, Ariz., which I ask be incorporated into the record. I am sure the Senate Committee on Finance has no desire

to discriminate against any legitimate industry, and I therefore direct your particular attention to the telegrams I attach hereto.

(The telegrams referred to are as follows:)

PHOENIX, ARIZ., *August 5, 1941.*

Senator CARL HAYDEN,
Care United States Senate, Washington, D. C.:

The House general tax bill includes special tax on outdoor advertising signs which is an unfair attack on our livelihood and would no doubt curtail work for us. We will appreciate your influence toward eliminating this special tax from the bill before final passage.

SIGN & PICTORIAL PAINTERS LOCAL UNION,
F. L. JAMES, *President.*

PHOENIX, ARIZ., *August 5, 1941.*

Senator CARL HAYDEN,
Care United States Senate, Washington, D. C.:

The House general tax bill now before the Senate proposes a special tax on outdoor signs which we feel will place a serious curtailment on outdoor advertising causing serious reduction in labor. It seems unfair to single out one advertising medium for special tax and we earnestly solicit your support to eliminate this unjust tax from the general tax bill.

LOCAL 120, INTERNATIONAL BILL POSTERS AND BILLERS,
T. J. MERRIGAN,

PHOENIX, ARIZ., *August 6, 1941.*

Senator CARL HAYDEN,
Care United States Senate, Washington, D. C.:

Special tax on billboards in general tax bill will curtail labor in that industry and we will appreciate sincerely your efforts to remove this unfair tax from the bill.

A. E. WILLIAMS,
President, Phoenix Building Trades Council,
M. C. LEDBETTER.
President, Central Labor Council,
O. H. JOHNSON,
Editor and Business Manager, Phoenix Labor Press,
JACK PRICE,
Secretary-Treasurer, District Council of Carpenters,
HERBERT R. JOHNSON,
Business Agent, Painters and Decorators Local 86,
JOHN C. PHILLIPS,
Business Agent, Roofers Local Union 135.

PHOENIX, ARIZ., *August 5, 1941.*

Senator CARL HAYDEN,
Care United States Senate, Washington, D. C.:

We are definitely behind our national-defense program and appreciate that the cost must be met by taxation, yet we feel that the proposed billboard tax as now set up by the House Ways and Means Committee in the general tax bill is unfair to our industry and is further unfair in that it proposes to tax only one or two advertising media instead of including all advertising media. Our national association advise they feel the ultimate revenue to be derived from this tax would not be over $2,000,000 instead of the $7,000,000 originally estimated, and the cost of collection, field checking, and so forth, would consume the major portion of the gross income. We also feel that outdoor advertising as a recognized national sales facility should not be penalized by a special tax over and above the regular income-tax corporation taxes, etc., which we will be called upon to pay. If this confiscatory and discriminatory proposal is enacted into law, it will not only affect the owners and operators of outdoor advertising plants but

through curtailment will materially reduce property owners' income for sign rental and will also seriously handicap highly skilled labor, which makes it very doubtful that this proposed special tax will be of any assistance whatever to our national program. Kind regards.

OUTDOOR ADVERTISING ASSOCIATION OF ARIZONA,
AL N. ZELLMER, *Secretary.*

TAX ON JEWELRY

Senator HAYDEN. Section 553 of the Revenue Act of 1941, as passed by the House of Representatives, imposes a tax of 10 percent of the retail sales' price of jewelry, including clocks, watches, flatware, and hollowware, made of gold or silver, or plated.

The jewelers of Arizona do not ask that this tax be eliminated, because they realize that all persons and all industries must bear an increased burden of taxation, but the attached telegrams, which I ask be made a part of the record, point out that jewelry already bears a 2-percent tax in the State of Arizona, and urge that a Federal rate of 5 percent be adopted.

Inasmuch as a 5-percent rate was imposed by the Federal Government during the World War, it would appear that this protest is justified and reasonable, and I shall appreciate your giving it your very careful consideration.

(The telegrams referred to are as follows:)

PHOENIX, ARIZ., *August 12, 1941.*

Senator CARL HAYDEN,
Senate Office Building, Washington, D. C.:

Could you use influence to modify proposed jewelry tax? Ten percent exorbitant; already have 2-percent State sales tax. Many jewelry commodities are essential, therefore why discriminate against jewelry industry? Five-percent tax appears ample and fair. Thank you for your attention.

FUNK JEWELRY CO.

BISBEE, ARIZ., *August 11, 1941.*

Hon. CARL HAYDEN,
United States Senate, Washington, D. C.:

We are opposed to a 10-percent tax on jewelry if jewelry is to be taxed. We recommend a levy on 5 percent or less; 10 is too much and will hurt our business. Will appreciate your effort in behalf of a levy of 5 or less.

L. L. GILMAN JEWELRY.

BISBEE, ARIZ., *August 11, 1941.*

United States Senator CARL HAYDEN,
Washington, D. C.:

If it is decided to retain a tax on jewelry sales, we are earnestly soliciting your support in securing a rate not to exceed 5 percent. We feel that 10 percent would greatly reduce sales and injure our business. Anything you can do will be greatly appreciated.

L. R. BREHM.

PHOENIX, ARIZ., *August 12, 1941.*

Senator CARL HAYDEN,
Senate Office Building, Washington, D. C.:

Appreciate your influence to modify proposed jewelry tax. Heavy 10 percent bad for us because already have 2 percent State sales tax; 80 percent our business watches, clocks, definite necessities. Diamonds practical necessity in marriages; silverware necessity, so why penalize jewelry stores and let dime

stores sell inferior substitutes? Fountain pens and many other items just as much necessity as many clothes and household items. Prohibitive tax will cause evasions; income taxes will reduce purchases of our best customers if our business suffers because double taxing then possible tax revenue falls; higher priced clothing, electrical products, furniture can be classified as luxuries, so why single out jewelry? We think general sales tax on all business is fair, otherwise certainly jewelry tax should not be more than 5 percent to avoid wrecking a business that is vital in national welfare. Can you help bring about this fair arrangement?

FRANK SEIGLEY.

TAX ON RADIO BROADCASTING

Senator HAYDEN. The committee has, I know, heard considerable testimony respecting the proposed tax on net time sales of radio broadcasting stations and networks as contained in section 601 of the Revenue Act.

As expressed in the attached telegram from the Gila Broadcasting Co., of Safford, Ariz., this tax would appear to be discriminatory, since it is not applied equally to other advertising media. I hope the committee will give very careful attention to the statement of the Gila Broadcasting Co., which I ask to be made a part of the record.

(The telegram referred to is as follows:)

SAFFORD, ARIZ., *July 27, 1941.*

Hon. CARL HAYDEN,
United States Senator from Arizona,
Washington, D. C.:

With other members of the National Association of Broadcasters this company feels that the defense-tax bill in its present form taxing radio and billboard and excluding other advertising media is discriminatory. While taxable amount of net sales in bill excludes this company we feel that singling out radio and billboard advertising for defense tax is wrong in principle and solicit your valuable aid in formulating tax bill placing burden equally on all forms of advertising. With sincere regards.

GILA BROADCASTING CO.,
L. F. LONG, *President.*

TAX ON REFRIGERATORS

Senator HAYDEN. Section 546 of the revenue bill, as passed by the House of Representatives, amends section 3405 of the Internal Revenue Code, to increase to 10 percent the tax now imposed upon the manufacture of household type mechanical refrigerators and makes a new tax applicable to commercial types of refrigerators, including ice-cream cabinets, food and beverage display cases, water coolers, and milk-cooler cabinets.

I attach a letter from Mr. F. E. Samuels, of Phoenix, Ariz., protesting against this tax imposition, and I hope that the committee will give most careful consideration to his statements.

(The letter referred to is as follows:)

FRANK SAMUELS DISTRIBUTING CO.,
Phoenix, Ariz., August 8, 1941.

Hon. CARL HAYDEN,
United States Senate, Washington, D. C.

DEAR SENATOR: My attention has just been called to the proposal for instituting a 10-percent excise tax on commercial refrigerators, refrigeration, milk coolers, etc., and I wish to add my protest to the including of such items in the new tax bill which is pending in Congress.

I am sure you will agree with me that refrigerators and refrigeration are not luxuries in the State of Arizona but are absolute necessities in the handling of perishable foods. I am sure it would work a hardship on a great many of your constituents should these items be included on the tax bill, and I think this item is worthy of your very careful consideration, and I hope you will materially assist in the rejection of this unjust tax, which action will certainly be appreciated by everyone handling perishable foods.

With kindest regards, I am,

Yours very truly,

F. E. SAMUELS.

Senator HAYDEN. There may be another item I shall want to bring to the attention of the committee on Monday that relates to copper. I hope by that time the Treasury will have completed its study of the proposal.

That is all I care to say this morning, Mr. Chairman.

The CHAIRMAN. Thank you very much.

Mr. Shipley.

(No response.)

The CHAIRMAN. Mr. Bean.

STATEMENT OF D. D. BEAN, D. D. BEAN & SONS CO., EAST JAFFREY, N. H.

The CHAIRMAN. Mr. Bean, will you give your name and for whom you appear?

Mr. BEAN. My name is D. D. Bean. I represent our own company, the D. D. Bean & Sons Co.

The CHAIRMAN. You are down on the match tax?

Mr. BEAN. I am down on the match tax.

The CHAIRMAN. We have not had anyone on that yet.

Mr. BEAN. I understood that there was someone down here.

The CHAIRMAN. I do not recall. There might have been something said about matches.

Mr. BEAN. You are not going to have a tremendous one this time, but I am sure I am here because I feel it is mighty important to our little company.

The CHAIRMAN. The Retail Association witness made some mention of matches.

Mr. BEAN. Mr. Chairman, may I thank you for this opportunity to appear before you for the purpose of submitting this information which, I trust, outlines the very unhappy situation in which book-match manufacturers find themselves as a result of the proposed legislation levying a tax of $1 per case, which is 33 percent of the manufacturers' price.

As an individual book-match manufacturer, I believe, of course, that the subject under discussion vitally affects my own business. In submitting this information to you, I am speaking for the independent book-match manufacturers as a whole, as well as for my own company. Although we have no organization to convey this information to you as a group, I have been urged by the other independent manufacturers, to a man, to make this appeal to you.

It is with this thought in mind that I have been prompted to come down here today from New Hampshire, and at the risk of telling you

things about the match business which are already familiar to you, nevertheless, in the telling they will perhaps become clearer, and at any rate will be in the record and the burden and the responsibility of carrying them in my own mind will be relieved.

I want to tell you at the outset that I am in sympathy with your tremendous problem in seeking ways and means to raise revenue, and I know that our industry is willing to bear its part of the burden. I know, on the other hand, that it is not the intention of this committee to place a burden on the book-match manufacturers which threaten the very survival of this particular industry.

Let us differentiate right at the start between book matches and wooden stick matches. We are dealing on the one hand, in the case of wooden matches, with a product that is sold to the consumer, just as a pound of butter is sold; as contrasted with book matches which are given away gratis to the purchaser of tobacco products in the same way that straws are given at soda fountains.

Senator TAFT. That is a little hard on manufacturers of stick matches, if their competitors should be giving matches away free of charge.

Mr. BEAN. They started it. There is a fair comparison. In other words, they give you a straw with a glass of soda, and they give you a light with the cigar that they dispense.

Our company and the independent book-match manufacturers for whom I speak make only book matches.

That is the point I wish to bring out to you.

Senator TAFT. What do you mean by "independent"? Whom do you refer to as not independent?

Mr. BEAN. I do not like to get into that matter, but we refer to the "independent" as those outside the one great concern that practically makes all the matches in this country. That is common knowledge, I think.

Senator TAFT. What is the relative production?

Mr. BEAN. Why, of the book match, the independents probably make 25 and possibly 30 percent of book matches, and they do not make wood matches. The so-called trades, the Diamond, or whatever name you may call, make 75 percent of the book matches and probably 95 percent or more of the wood matches. To my knowledge, they make practically all the wood matches.

The CHAIRMAN. Well, there were a lot of these matches imported. On all the fancy stem wooden matches the tax has been 5½ cents per thousand. There is no change in that.

Mr. BEAN. In the fancy match?

The CHAIRMAN. Yes.

Mr. BEAN. Well, the fancy match, I really am not taking that under consideration at all.

The CHAIRMAN. You are not concerned with that?

Mr. BEAN. No; we are not concerned with that.

The CHAIRMAN. There is a new tax imposed of 2 cents per thousand on the wooden stem and the paper matches.

Mr. BEAN. That is right. That is where I propose to show you these inequities are.

The CHAIRMAN. You are talking about the paper match?

Mr. BEAN. I am talking about the paper match wholly. I think you will find that we are not asking for anything that is not obviously misintended to be in this law.

These matches are purchased from us by wholesalers throughout the country who, in turn, distribute them to the various retail outlets wherever tobacco products are sold.

That is our book match.

Now, there is a common expression among people engaged in the match business that book matches—I am referring wholly now to book matches—are handled like sugar, that is, due to their being a common every-day necessity of literally millions of people, the quantity is large and the manufacturer and wholesaler work on a very narrow margin.

For instance, a very large investment in specialized machinery is required to go into the match business—machinery which makes possible the purchase of all materials in their unprocessed form to be worked through the factory to the finished product with which you are familiar. There is no such thing, for example, as buying in semifinished form any part of the match.

It must be developed from the crudest raw materials right in your own factory, thus eliminating all in-between costs. And, gentlemen, I think you will agree with us when we say we are proud of the fact that we sell a case of 2,500 book matches—a total of 50,000 individual lights—all manufactured, sold, and delivered from Boston to San Francisco for $3. In other words, a little better than 8 books or over 160 matches are delivered in the wholesaler's place of business at a cost of 1 penny. We believe it is obvious on the face of it that the manufacturer cannot in any way assume any part of this tax.

We then pass the tax along to the wholesaler, who, in turn, passes it along to the retailer, and here we are faced with our problem, which has its seat in the very nature of the book-match business as differentiated from the wooden match.

As contrasted with a tax of approximately 25 percent on the wooden match, which is sold to the public at a fair margin of profits at present, the retailer is asked to pay a tax of 33 percent for an article which he has to give away. He is naturally going to be left torn between two evils. He must on the one hand give up his practice of giving out gratis matches and thereby antagonize his cigarette and tobacco customers, or he must suffer this loss himself.

Then I think right there you will find those people that are handling this at the tobacco end cannot afford to take this loss.

Leaving out this proposed tax for the moment, mounting materials and labor costs are already increasing the price of book matches to the retailer to a point which has become very burdensome; I might say to a point which has already brought the retailer face to face with a very serious problem—and an increase of 33 percent over his present rising costs is obviously prohibitive.

I spoke of a threat to the very survival of the book-match business. I meant just this. Isn't it fair to assume that book matches are going to have to be sold—and under a great handicap, because here is a product which a whole generation of the public has become accustomed to receiving free. Again, isn't it fair to assume that the sales of wooden matches, none of which are manufactured by the

independent book-match manufacturers, will increase to the detriment of book matches. Furthermore, wooden matches are handled by an entirely different type of retailer than is the case with book matches. The largest distributors of wooden matches are the chain groceries which, as their records indicate, earn substantial profits. They, inasmuch as wooden matches are sold, not given away, could if they wished to do so, either absorb the tax or pass it on in whole or in part to the consumer.

I therefore maintain that the one or two companies which are equipped to manufacture both wooden matches and book matches will be materially benefited by this disproportionate tax and that this tax which fails to differentiate between book matches and wooden matches will work to the detriment of the independent book-match manufacturers and the general public. This is a condition which we feel confident you gentlemen do not want to encourage.

On the basis of the amount of the tax itself, which would amount to 33 percent of the wholesale price, it is percentagewise one of the highest, if not the highest tax which has been proposed. By way of comparison, the proposed tax on such nonessential luxuries as jewelry and furs is only 10 percent. And, in spite of this high percentage, it can only yield a gross of approximately 2½ million dollars at the present rate of book-match manufacture, which as we have pointed out above, is certain to decline.

To conclude, I respectfully submit that the tax fails to differentiate between book matches and wooden matches. Therefore, I earnestly petition your committee to give further consideration to this inequity in the proposed legislation.

The CHAIRMAN. Thank you, sir.

Senator TAFT. What does the retailer pay today for book matches; the retail tobacco dealer?

Mr. BEAN. He pays about $3.

Senator TAFT. $3 for how much?

Mr. BEAN. For 2,500 books. That is about 50,000 matches.

Senator TAFT. $3 for 2,500 books?

Mr. BEAN. Yes; a book like this [indicating].

Senator TAFT. How much will the tax add to his cost?

Mr. BEAN. $1.

Senator TAFT. He has to pay $4 for 2,500 books of matches?

Mr. BEAN. He has to pay $4 for 2,500 books of matches if he pays this tax; yes, sir.

The CHAIRMAN. Very well, we thank you, Mr. Bean.

Mr. William Shipley? Has he come into the room?

(No response.)

The CHAIRMAN. Mr. Calamia.

STATEMENT OF ERIC CALAMIA, NEW YORK, N. Y., PRESIDENT, RETAIL TOBACCO DEALERS OF AMERICA

Mr. CALAMIA. Mr. Chairman and gentlemen, my name is Eric Calamia. I am president of the Retail Tobacco Dealers of America.

The Retail Tobacco Dealers of America is a national association representing thousands of small, independent retail tobacconists in many parts of the country. I myself am a retail tobaconnist, and have been for a great many years.

I asked permission to appear before this committee so that I might point out for your attention a peculiar circumstance as regards the distribution of book matches.

The practice on the part of retail tobacco dealers of supplying gratis matches with practically every purchase of tobacco in any of its forms has been in vogue for so many, many years that today we feel it has become a universal custom in all parts of this country. It is a form of service that the consumer has learned not only to look for and expect but today takes for granted.

Senator CONNALLY. Do you handle chewing tobacco as well as smoking tobacco?

Mr. CALAMIA. That is on a declining scale, sir.

Senator CONNALLY. You handle it?

Mr. CALAMIA. Yes.

Senator CONNALLY. And snuff?

Mr. CALAMIA. And snuff. Those may be exceptions.

There is a wrong impression on the part of many that the retail dealer is supplied with these matches without cost, possibly because they invariably carry advertising matter of some sort on their covers. However, this is a wrong impression. The retail dealer is compelled to purchase his matches, and usually does so from the same wholesaler of tobacco products that supplies him with his other tobacco requirements.

The cost today of a case of book matches is $3 to $3.25.

The CHAIRMAN. What do you call a case?

Mr. CALAMIA. A case of 2,500 books of matches.

Under this proposed tax that case, costing $3 to $3.25, would be liable to a tax of $1 a case. This the retail dealer definitely feels is a disproportionate tax, particularly in view of the fact that the matches are not sold, that he gives them away, that he has no opportunity to pass a part or the entire tax on to the consumer, but must absorb it in its entirety himself.

He feels that under this proposed tax what is supposed to be a tax on matches in reality becomes a tax upon the retail dealer.

Gentlemen, you have probably heard this from many sources, but we feel that tobacco is indeed a very competitive item, that the opportunity even under a large volume of business of earning a sufficient return to pay normal overhead is indeed difficult.

What has been my experience, after 35 years in the retail-tobacco business, I know is equally true of thousands and thousands of small tobacco dealers through all parts of the country. It is hard to tell you exactly what the normal requirements of any one retailer would be, but a very fair and conservative average would be that his consumption is from 2 to 4 cases of matches a month.

Under this proposed tax of $1 a case, that would be subjecting the retail dealer to an additional tax of from $24 to $48 a year.

Senator CONNALLY. Do you have the individual books of matches advertising your company or your store? Do you do that?

Mr. CALAMIA. The average retail dealer has a match that carries an advertisement of some nationally known product.

Senator CONNALLY. I know, but don't you have your name on there, or the tobacco merchant's name on there?

Mr. CALAMIA. The larger hotels do; the large chain stores do.

Senator CONNALLY. I am talking about you.

Mr. CALAMIA. No, sir. We buy from the distributor any match he might have. Today it might carry a gum advertisement, tomorrow it might be a razor blade. We have no control over that.

Senator CONNALLY. Does not the advertising pay part of the cost of manufacturing?

Mr. CALAMIA. If we consider those that have our own name on them we would have to change the price from $3 to $8.

Senator CONNALLY. That is not answering my question. The fact that it has advertising on it reduces the price of the match, does it not?

Mr. CALAMIA. It reduces it from $8 to $3. I am talking about the type of match that is available to the retail dealers, the book matches.

Senator TAFT. That is, if you buy a case of matches, with a gum advertisement on it, you still pay $3?

Mr. CALAMIA. That is right. If you have your own name on it, then, instead of costing $3, it costs considerably more and you cannot buy one case at a time. I am talking about the cheapest rate that the little independent dealer would have to resort to.

Senator TAFT. If you have an ad on it—does that reduce the price below $3?

Mr. CALAMIA. No; $3 is the cheapest form of book matches, $3 and $3.25. It has recently gone up to $3.25.

The CHAIRMAN. What is the price of the wooden-stem match, do you know?

Mr. CALAMIA. It would be about 75 cents a gross.

The CHAIRMAN. A gross?

Mr. CALAMIA. Yes, sir—no; it is not packed in gross any more. It is a dozen packages with 10 boxes in a package, or 120 boxes. Formerly they were packed a dozen boxes in a container.

Senator TAFT. 75 cents for what?

Mr. CALAMIA. 75 cents per dozen packages of 10 boxes to a package.

Senator TAFT. 120 boxes?

Mr. CALAMIA. That is right.

The CHAIRMAN. Are those the ordinary penny box matches?

Mr. CALAMIA. That is right, sir, the safety match.

The CHAIRMAN. All right.

Mr. CALAMIA. Gentlemen, I want you to know that my retail tobacco dealers would not want me to appear here if they thought this matter was trivial, particularly in view of the problem they realize you are faced with, and the purpose for which this money is being raised, but they do not believe it is petty or trivial to them; it is a very serious item. They wanted me to call to your attention particularly the fact that they cannot pass this proposed tax on; that 30 to 33⅓ percent, in their opinion, was a very high and disproportionate tax and that it is impossible for them, as small merchants, to pass this on in any fair and reasonable manner.

I would like permission to leave this brief, with some of these facts, for the record.

The CHAIRMAN. Yes, sir; you may give them to the clerk.

(The brief submitted is as follows:)

BRIEF PRESENTED BY ERIC CALAMIA, PRESIDENT OF RETAIL TOBACCO DEALERS OF AMERICA, INC.

Mr. CHAIRMAN AND GENTLEMEN: I am president of Retail Tobacco Dealers of America, Inc., the tobacco retailers' National Association, representing thousands of independent retailers throughout the country. I, myself am an independent retailer of tobacco products.

I would like to call to your attention the serious hardship which the 2-cent per thousand tax on paper book matches proposed in the Revenue Act of 1941 would impose upon the retail tobacco dealer. The custom for many years has been for all retailers in our trade to provide matches gratis to consumers of tobacco products. As the average tobacco retailer uses from two to four cases of book matches a month, the proposed tax of 2 cents per thousand or $1 per case would be a direct levy on the individual storekeeper of from $24 to $48 a year.

Many people fail to realize that the retail dealer has to pay for these matches even though they carry advertisements on their covers. Since 95 percent of the book matches are given away, it is obvious that the retailer is saddled with any increase in the cost of matches and it becomes an added item to his overhead and cost of doing business. The returns to the average independent retail tobacconist are hardly sufficient now for him to eke out a living wage. The increase of $1 per case, which would be a 33⅓ percent increase on the present cost of matches, is a tax of immense proportions to him.

What I know from my own personal experience, after 35 years in the retail-tobacco business, is true of the thousands and thousands of other tobacco retailers throughout the country.

I hope that this committee will come to realize that the proposed tax on book matches would single out the small independent retailer for a disproportionate burden for he would have to absorb the tax himself as he has no way of passing it on. Because of this unusual condition I trust that you will determine to eliminate this tax on paper book matches from the Revenue Act of 1941.

RETAIL TOBACCO DEALERS OF AMERICA, INC.,
ERIC CALAMIA, *President.*

Dated: Washington, D. C., August 22, 1941.

The CHAIRMAN. Mr. Stokely.

STATEMENT OF W. B. STOKELY, JR., STOKELY BROS. & CO., INDIANAPOLIS, IND.

The CHAIRMAN. Mr. Stokely, will you give your name and for whom you are appearing?

Mr. STOKELY. My name is W. B. Stokely, Jr., Indianapolis, Ind. I am appearing for Stokely Bros. & Co., manufacturers of canned foods, and the National Canners Association. The National Canners Association is an association of about 3,000 canning plants, all over the United States.

I am appearing here with regard to the excess-profits tax. I am not appearing in the guise of a tax expert. I am appearing simply as a businessman who has a great problem, and this problem is general to our industry.

The problem is this: The canning industry is one where we have wide swings of price levels up and down and consequent wide swings in profits. We might have a big year one year and a terrific loss the next year.

This industry is closely related to agriculture. Most canneries grew out of farming arrangements. Either a farmer went into the canning business, or a group of farmers got together and organized

a cannery. These canneries are general all over the United States, and, in general, they are located in small towns and small communities, and they furnish a source of employment to farmers.

They not only furnish income to the farmers, from the standpoint of taking his crop, but the crop matures at a time when the farmer, in his ordinary activities, is not so busy on the farm, and as a consequence, the farmer and his family come in and work at the cannery. We give preference to farmers in that employment.

It acts as a nice supplement to his income.

Our problem is this: the base period that has been selected, that is, 1936 to 1939, inclusive, was a period of depression for this industry. There was a very severe depression, as far as the canning industry is concerned, in all those years, except one. 1936 was normal, but 1937 was a depression year, and 1938 was very much worse, and 1939 presented a slight recovery, but was still very bad.

This condition was so general to the industry that very few members of the industry can use the average earnings method, and most of them, including ourselves, built up debt positions in those years that are a burden to us now, to the extent that unless we can retain a part of the earnings which are coming to us now to pay out those debts, I do not know how we are going to finance ourselves through this next slump period which always comes in this industry.

All the recorded history of this industry shows that every so often you get 2 or 3 bad years. It so happens that this particular base period on the average represented the 4 worst years—and this is the average of the 4 years because there is 1 good year in the 4—the 4 worst years that the industry has ever had, and that is true generally.

We are then forced to the invested-capital method of considering this situation, and canners are notoriously undercapitalized. In other words, being right next to the farmer, they have gone into business there and they are able to borrow money from the can company and from the local bank, and the farmer gives them credit on his crops until such time as the canner has disposed of his pack.

So if everything works all right, the canner can make a nice return on his capital but, if the breaks go in the other direction, two things can happen that hurt him. If there is a large crop, it hurts him because a surplus is built up and this surplus goes on the market at a sacrifice price.

Senator CONNALLY. How long can you keep the canned goods before they finally deteriorate?

Mr. STOKELY. Most products you can keep fairly indefinitely, if you are financially strong enough to do it.

Senator CONNALLY. I am not talking about financing. How long will a can of tomato juice stay good?

Mr. STOKELY. Well, it will not spoil in 3 years, we will say. However, it deteriorates slightly in quality.

Senator CONNALLY. When you have a big surplus of those products, do not you buy them, can them, and keep them over for the next year?

Mr. STOKELY. We buy them and can them, but we cannot keep them over.

For instance, I will give you an illustration. Our company does $22,000,000 of business. We have an invested capital of approximately $6,000,000 and that includes the amount that we have invested in our plants, which runs around $3,500,000.

So, we have $2,500,000 to finance a $22,000,000 business.

Senator CONNALLY. I contribute to the prosperity of your company. I drank a can of tomato juice last night.

Mr. STOKELY. Thank you, Senator. That is a very great help.

Senator CONNALLY. It was your make, Stokely Bros.

Mr. STOKELY. I appreciate that.

Senator CONNALLY. It tasted pretty prosperous to me.

Mr. STOKELY. Well, we try to put something in the can that the public will like.

I want to say, for that reason, our swings up and down, as severe as they are, they are not as severe with us as they are with the smaller canner.

Senator CONNALLY. You are making money now, are you not?

Mr. STOKELY. Yes, today; but in 1938 we lost money, we lost $700,000 odd.

Senator CONNALLY. This bill is not on former years, it is on this year.

Mr. STOKELY. Yes. That is what is bothering me, because we have built up an indebtedness currently at our low point. We owe the banks, currently, or did at the lowest point of the year $1,250,000, and in addition to that, we owed them $3,000,000 payable over a period of 5 years at the rate of $600,000 a year.

Now the indebtedness goes from this low point, and we will borrow at our peak around $8,000,000.

Senator CONNALLY. If you choose the invested-capital theory—that is what you would have to do?

Mr. STOKELY. Yes.

Senator CONNALLY. It does not make any difference whether you owe any money or not. You pay on the invested capital.

Mr. STOKELY. It makes this difference. That, in some way we have to convince the banks that sometime we are going to pay them back. We cannot just go along on the theory that we are going to owe them indefinitely. So much matures every year.

In addition to that, the banks realize the nature of this industry; that it goes up and down in profits. I think this is a very important point as connected with the excess-profits tax:

When we make those larger profits for certain years they are supposed to offset the loss years to give us a fair average; if profits are chopped off to the extent this bill chops them off, then when the loss years come along and we already have a burden of debt, then we get into such a position that we cannot hope to survive.

Senator CONNALLY. You can defer your dividends for a while.

Mr. STOKELY. I am glad you brought that up, Senator. We have not paid any dividends on our common stock in the last 4 years; and we have not paid any dividends on our preferred stock in the last 3 years.

We are not asking for this relief on the basis of paying dividends. We are asking for relief on the basis of getting our company in a sound position to weather the next period of declining inventory prices, which is sure to come.

It always has come and it always will. At this time, we are being asked by the Department of Agriculture to increase our production to the limit, to increase tomatoes, increase peas, increase corn and other items. Food is an important element in these times and I agree with

them 100 percent, but we have to go out and contract with the farmer for these products. We contract in the spring and we take the crop which he delivers to us in the summer and fall at a specified, fixed price.

Senator CONNALLY. You fix it, though, do you not?

Mr. STOKELY. We fix it by contract with the farmer.

Senator CONALLY. You say you have a fixed price.

Mr. STOKELY. Yes.

Senator CONNALLY. You do the fixing.

Mr. STOKELY. If he does not like it, he does not sign the contract.

Senator CONNALLY. And he loses the tomatoes that he has planted.

Mr. STOKELY. We fix it before he plants the tomatoes. The contract is made in advance of his planting. We furnish the seed and fertilizer, and so forth.

Senator CONNALLY. That is right.

Mr. STOKELY. It so happens on a year like this, it was fixed a little lower than we realized in this respect. Next year it will be higher.

Senator CONNALLY. That is why you are making more money this year than last year?

Mr. STOKELY. That is one reason; yes, sir.

Going back to the request of the Department of Agriculture, we are cooperating with those requests 100 percent, and I think most canners are, but we are getting on very dangerous ground, considering the capitalization of the industry, as if we make good profits this year and they are mostly taken in the form of taxes. Next year, or the year following, or some year in the future, we will have commitments out for $15,000,000 or $20,000,000 or five or six times our working capital, in goods that are coming in to be canned and on which we do not know what loss we may have to take.

The CHAIRMAN. Mr. Stokely, what is your suggestion? We tried to help you.

Mr. STOKELY. Yes; I appreciate that. I would like to pass these around, if I may. This shows a chart of canned vegetable prices over a period of time.

I am attaching a copy of this to a statement that I am filing.

My suggestion is that, in this particular type of industry, we be given some additional relief on borrowed capital.

The CHAIRMAN. Are you on the invested-capital base?

Mr. STOKELY. We have to be.

The CHAIRMAN. You had loss years in the whole base period?

Mr. STOKELY. Yes. They were bad.

The CHAIRMAN. Pretty nearly all of them were loss years?

Mr. STOKELY. Three out of the four were very bad.

The CHAIRMAN. It is really the canners that led you to give this committee the carry-over of the unused credit.

Mr. STOKELY. We appreciate that carry-over very much.

The CHAIRMAN. Everybody has got it now, but it was originally inserted to take care of your situation.

Mr. STOKELY. I appreciate that, and it is very fine, except for this situation, that it does not reach back into those loss years. It takes our fairly good years, unless during the current period we should have some loss years.

The CHAIRMAN. Yes.

Mr. STOKELY. I further understand that this House bill has been modified to such an extent that it complicates the carry-over to where we do not really understand it, as to whether we have any carry-over or not under the proposed way of figuring this credit.

The CHAIRMAN. You still have the carry-over.

Mr. STOKELY. It does not reach back to that 1937-38-39 loss period.

The CHAIRMAN. I know. You have just got the present situation. Your suggestion is that we give you a more liberal allowance on borrowed capital?

Mr. STOKELY. Yes; and I have a proposed amendment, which I will not try to go into because I am not any tax man, but it has been drafted by the National Canners Association.

I would like to file it.

Senator BROWN. You get 50 percent on the borrowed money.

Mr. STOKELY. Yes.

Senator BROWN. What do you want to do?

Mr. STOKELY. I am suggesting under certain circumstances that companies which qualify under the circumstances that we are outlining here would be allowed 100 percent on their borrowed capital, instead of 50 percent.

The CHAIRMAN. You would have to have a lot more qualify than canners.

Mr. STOKELY. I think we tie it down here to where it will not apply to anybody except where it would be equitable for it to apply.

I would rather not go into the technical side of it.

The CHAIRMAN. You need not. We just want to get what you are suggesting.

Now, have you another suggestion?

Mr. STOKELY. Yes, sir. I have filed two more suggestions. One suggestion is: Inasmuch as the canning industry is a cyclical industry, if we are going to have an average-earnings basis, then we should not take the bottom of a depression for this particular industry for the proper time for testing the earnings that we should take as normal.

Insead of this particular 4 years, we should take any 4 consecutive years, say, out of the past 7 or 8.

I have only one further suggestion. The third suggestion is that, in line with the testimony of Mr. Miller here, that the Internal Revenue Bureau be given some broad discretionary powers to take care of obvious inequities.

The CHAIRMAN. That is the only thing that will help you to take care of the obvious inequities?

Mr. STOKELY. I am afraid it is.

Thank you very much, gentlemen. I would like to file a statement and I would like to file one for the National Canners Association, also.

The CHAIRMAN. You may do so.

(The statements filed by Mr. Stokely are as follows:)

STATEMENT OF W. B. STOKELY, JR., PRESIDENT OF STOKELY BROS. & CO., INC.

When I had the privilege of appearing before this committee in September of last year, I outlined somewhat the effect of the excess-profits-tax bill then being considered on our company and the canning industry generally. I pointed out at that time that the canning industry, as a whole, is an industry which is undercapitalized and an industry in which the fluctuations between profits and

losses from year to year are very great, due largely to conditions which are not within the control of the individual canner, and due to a large extent to the close relationship of this industry to agriculture, and the influence on operating profits caused by either short crops causing excessive costs of operation, or large crops causing overproduction and consequent declining prices resulting in low profits or operating losses.

The average-earnings basis for determining excess-profits tax is not open to the average canner or to our company, because in the years selected for the base period conditions were such that in 3 out of 4 of those years we suffered drastic reductions in income due to the fact that abnormally large crops in 1937, 1938, and 1939 produced a tremendous surplus which hung over the market and depressed prices to the lowest level in the recorded statistics of the industry going back to 1890. This is visualized by the two charts prepared by the Giannini foundation of the University of California, which I am filing for the record and attaching to this statement as exhibits A and B. These charts extend about halfway through 1939 and are the latest available.

I call attention to the fact that on canned vegetables, which represent the major end of our business, the prices in 1938 reached the low point of 60 percent of the average of the prices of 1924–29, inclusive, whereas these prices at the lowest point in the low depression year of 1932 went down to only 72 percent of this average. As an illustration of the severity in this drop in prices I would like to file and attach to this statement as exhibit C a copy of a plan which I submitted to the Government at that time as a measure of relief for the industry and which plan has been substantially adopted recently as a defense measure.

It will be seen, therefore, that we are forced to adopt the invested-capital method, rather than the average earnings method. The excess-profits credit under the invested-capital method as proposed in the House bill and as now determined under the Internal Revenue Code is inequitable to our industry and to our company, as we are in the type of industry where large profits on invested capital in favorable years must be made in order to wipe out the deficits of the bad years and give us a fair return upon our capital over a period of years.

Debts incurred in 1938 and 1939 are still overhanging our company, and unless we are allowed to retain sufficient of our present earnings to put our company in sound position during the present period, the next slump in prices of canned foods, whether caused by excessive crops or general business conditions, will certainly prove disastrous for our company and for the industry.

In this connection the question naturally arises what solution can be suggested that is fair and equitable, and at the same time will not defeat the general purposes of the bill. We believe that one relief which could and should be granted corporations in this industry which are dependent upon large sums of temporary borrowed capital is to permit them to include 100 percent of their borrowed capital in the determination of invested capital and the resulting excess-profits-tax credit. This would give our industry some measure of relief and allow us to cooperate more fully with the expressed desire of the Secretary of Agriculture in expanding our production to make available larger quantities of foodstuffs. We would not otherwise dare to expand our production because we would have to consider the probability of an eventual drastic shrinkage in inventory values which might involve us in bankruptcy.

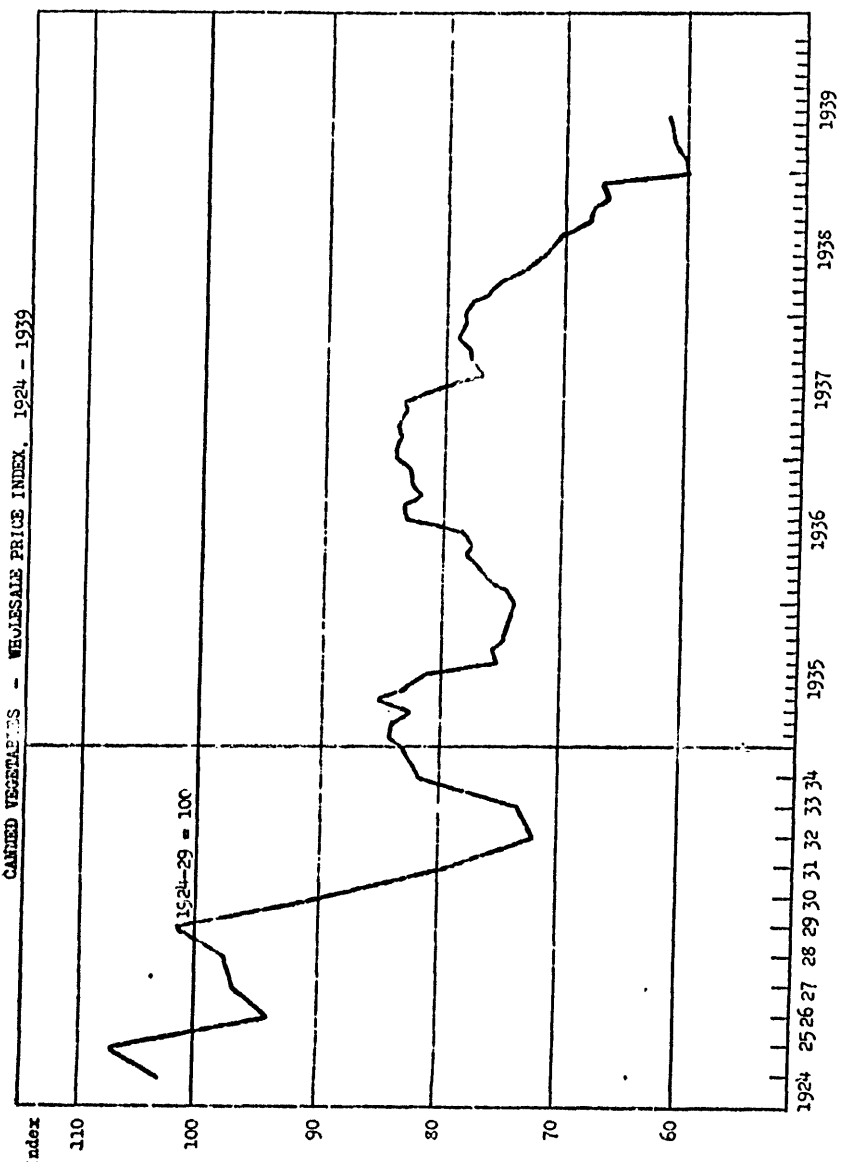
I file herewith and attach to this statement as exhibit D a proposed amendment to section 719 of the Internal Revenue Code, which in some measure affords relief to our industry. You will note that the amendment will only permit the inclusion of 100 percent of borrowed capital in cases of taxpayers in this particular industry and then only subject to the further qualification that their average short-term borrowed capital exceeds 50 percent of their average equity invested capital for the taxable year, and that their short-term borrowed capital fluctuates to the extent that the highest amount in the taxable year exceeds by a least 100 percent the lowest amount of such short-term borrowed capital during the same taxable year. With these safeguards the amendment will constitute no serious drain on the revenues to be produced by the bill. On the other hand, it will afford some measure of relief to this generally undercapitalized and debt-ridden industry and avoid the inequitable result under the present revenue act and the amendments proposed by the House bill.

The bill, as passed in the House, also carries a provision which is doubly burdensome to our industry, in that it is proposed that we be taxed an additional 10 percent on the difference between our average earnings during the base period, which as far as the canning industry is concerned represents an extreme depression period, and the amount which would be required to be

paid on the invested-capital basis. This subject has been covered by others who appeared before you, and we merely mention it for the purpose of adding our voice in all earnestness to the plea that this extra tax not be laid on companies which are already faced with an inequitable tax burden in this bill as passed by the House.

We believe that if an average earnings base period is to be used by this industry, it should not be determined on an average of 4 specific years which embrace 3 of the worst years in the industry's history. Our industry could be given some further measure of relief by giving the taxpayer the option to select any 4 consecutive years out of the last 7 as a base period for average earnings, in lieu of the 4 years provided by the bill.

EXHIBIT A



We desire to record also our full agreement with those who have appeared before you in support of a provision giving to the Commissioner of Internal Revenue broad discretion in adjusting excessive hardships in either income or invested capital. We particularly approve the draft of the proposed new section submitted by Mr. Robert N. Miller at the conclusion of his testimony on August 14, at page 489 of the record.

EXHIBIT C

INDIANAPOLIS, IND., *August 20, 1939.*

Mr. LAUCHLIN CURRIE,
Administrative Assistant to the President,
Washington, D. C.

DEAR MR. CURRIE: In compliance with out conversation, I have conferred with the directors and various committee members of the Four Way Plan.

I might say in this connection that these men are all actively engaged in business, occupying positions of high responsibility, and have given a great deal of time and study to this plan. They have been actuated by a combination of two major motives:

1. Many of them had personal experience during the World War and recall the conditions of confusion, lost motion, and extremely high prices, which occurred at that time.

2. For the general good of the industry with which they are connected.

They feel that the best interests of both the country at large and their own industry will be served by a plan such as is set forth in the attached pages. They feel that the setting up of the proposed reserve will bridge over a time in case of any emergency, so that the entire food situation, and we all realize how important food is, can and will be handled in an orderly manner, without dislocation of domestic food conditions; with a minimum of confusion and time, in the feeding of men in public service, and likewise at a great deal less cost per unit of food to the United States Government than if such a reserve were not in existence.

These and other reasons could be dwelt on in great length and detail, but I feel that all those interested realize the facts. Also, if any questions occur to you, my associates and I are available and anxious to answer them.

The basic thought in preparing the attached recommendation is to have available whenever needed for governmental uses a supply of foods in durable and quickly transportable shape at the minimum of expense to the United States Government.

Speaking strictly from a commercial, or even a mercenary standpoint, the intelligent and thinking canners of the United States, which we feel constitute the very great majority of them, believe it is much better for the industry that a cooperative move of this kind be made. Sales by canners under this plan would, without doubt, be made at much lower prices than those which would accompany a sudden emergency demand. However, as an offsetting advantage to the canners, the reserve plan would prevent interruption and dislocation of their services to their regular customers.

Thanking you for the opportunity to make this attached set of recommendations, and with every hope that they will be favorably received, I am

Very truly yours,

THE FOUR WAY PLAN, INC.,
By PAUL MORTON.

RECOMMENDATIONS FOR ESTABLISHING A NATIONAL CANNED-FOOD RESERVE IN ACCORDANCE WITH THE FOUR-WAY PLAN

The development into definite form of the ideas embodied in the four-way plan was a gradual process.

It was the outcome of discussions among a group of men, some of them connected with the canned-foods industry and some with other industries. At the outset these discussions were of a general nature, dealing with world conditions, with the relation of the United States to other countries in the present unsettled state of affairs, and finally with the possibility of cooperative action that would in advance, at a minimum of expense, accomplish those things which otherwise would be done under stress in time of emergency.

The later thinking of the group was influenced by somewhat similar activities in the locating and establishing of reserves in other items, such as metals, rubber, etc.

Copy of the four-way plan together with certain statistics is attached hereto.

This plan has been submitted confidentially and without publicity to interested parties in seven major divisions of the Government, namely, State, Treasury, War, Navy, Agriculture, Commerce, and Labor, and practically without exception it was felt that the ideas contained in the plan had such merit that further careful investigation of the proper method of putting it into effect should be made.

After careful study and much conscientious discussion of all angles, the following recommendations are respectfully offered as to the practical and economical operation of same:

That a reserve of 10,000,000 cases, made up of the three major canned vegetables, namely, corn, peas, and tomatoes, be accumulated as the major basis of the total canned foods reserve.

The reason for making the suggestion in this way is that records are available showing that in 1918 a total of more than this amount of the three abovementioned canned vegetables was requisitioned by the United States Food Administration. In other words, the general idea of this reserve, and of suggesting these figures, is to approximate, insofar as is possible at this time, what the first draft on canned food supplies might be.

In addition to the above 10,000,000 cases, a reserve be accumulated of proportionate quantities of the other canned vegetables, which are not normally used in such quantities as the three major items, such as green beans, lima beans, beets, etc.

Further components of the total reserve would include tomato products, such at catsup, juice, chili sauce, soup, etc., also canned fruit, and fruit juice.

These recommendations do not set specific figures as to number of cases of the items other than the three major canned vegetables, having in mind that the Governmental records of comparative usage, together with the experience of the departments making a study of nutrition, would permit these figures to be arrived at, using a base of 10,000,000 cases on the three major items, more accurately than could be done by others.

The above items are those which are of a seasonal nature, and are only produced through a short period during each year. It is felt, therefore, that a reserve on these items is of great importance. An immediate need of the great number of foods covered by the above list following after a short crop year, might constitute a considerable food crisis. In addition to the above, in order to make a properly rounded and balanced reserve, it is suggested that canned fish be included since this is also, to a great extent, a strictly seasonal production.

Likewise, a fully balanced reserve should include canned milk, canned meat products, and quite likely a certain amount of nonseasonal products, particularly pork and beans. While this latter item can be packed the year round so long as dry beans are available, it is thought advisable that enough for a start or backlog, in case of emergency, might well be included in this reserve set-up.

The packing of seasonal foods is in progress at present, and will be pretty much completed—other than citrus products—by the end of October. Suggestion is made that immediately after the completion of the seasonal packs the largest selection of goods is available from which to purchase. Also, it happens that acreage on canning crops has been materially reduced on practically all items this season. Yields are not large, and it is very probable that as low prices on most canned foods as will be seen for considerable time to come now exist.

It is assumed that the accumulation of these reserves would be made in the usual manner of issuing specifications for the goods together with terms of sale and purchase, and public bids received on same.

Due to the special nature of this reserve, it is suggested that certain features be included in the call for bids, most important perhaps, being the matter of storage. As one of the cooperative activities of any canner selling goods to be included in this reserve, it is contemplated that said canner furnish storage for the goods sold at his plant, or at any other point approved by purchaser, thus relieving the Government of the storage problem, which, again, in case of emergency, might be acute.

It is suggested that specifications call for 90 days' free storage by seller, after which storage would be provided by seller at the rate of one-half cent per commercial case per month or part thereof. If insurance is carried, cost of same to be borne by buyer.

It is suggested that bids be taken on foods in standard commercial corrugated or fiber cases, with separate additional costs quoted by seller if special boxes, for export or otherwise, are called for.

It is further suggested that all Government agencies draw their current canned-food requirements from this reserve and that replacement purchases to bring the reserve back to its original total amount be made at the end of each quarter of the calendar year.

Goods in storage in packers' warehouses to be put under Government seal.

There are numerous details which we have not attempted to cover here, as we believe they will present no practical difficulties, if the basic thoughts embodied in the reserve plan are approved by the Government. As stated in letter of transmittal to Mr. Currie, the originators of the plan and various other canners are available to provide all information possible. The plan has not been circulated through the entire industry. If that had been done the press would doubtless have featured it, and likely without full knowledge of facts. Summing up, the proposed national canned food reserve would accomplish various purposes, namely:

1. Provide food at prices approximately half what they were under stress purchasing which occurred in 1917–18.
2. Assure a supply well balanced as to nutrition.
3. Assure needed "seasonal pack" foods, which under this reserve plan would be ready at a moment's notice.
4. Provide foods of practically unlimited keeping qualities.
5. Provide food that can be transported anywhere with a minimum of transportation space.
6. Provide storage without taking space in Government warehouses which might be badly needed for other supplies.
7. The cans, being tin plated, would conserve a large amount of that highly important metal.
8. Avoid upsetting of movement of canned foods for domestic consumption during time of emergency, thus contributing, during such period, to the mental stability of the civil population. This is considered highly important. Shortage of food is a matter over which people in general easily get excited and even panicky.
9. Clear the way, if needed, so that canning plants could turn quickly to production of special emergency rations.
10. Prevent skyrocketing of food prices both for governmental and private use.

Those recommendations are submitted as a result of a most sincere desire to promote cooperation of Government and industry, in the belief that real cooperation is, in the long run, mutually beneficial to all concerned.

It is hoped that the fundamental thoughts we have attempted to present herewith will be approved by those to whom they are hereby submitted.

Respectfully,

THE FOUR WAY PLAN, INC.,
By W. A. MISKIMEN, *Secretary.*

CANNED FOODS VITAL STATISTICS

A $1,000,000,000 BUSINESS USING 1,003,000 EMPLOYEES

A. Agriculture:
1. Location: 45 States and Alaska, Hawaii, and Puerto Rico.
2. Acreage: 3,500,000.
3. Employees: 500,000 (fruits and vegetables only).
4. People affected: 2,250,000.
5. Farmers' income 1937: $125,000,000.
6. Seed: $7,000,000.
7. Taxes paid on land: $1,500,000.

B. Industry:
1. Companies: 3,047.
2. Plants: 3,400.
3. Capital: $500,000,000.
4. Employees at peak: 455,000.
5. Pay roll: $164,800,000.
6. Taxes: $25,000,000.
7. Production:

Year	Cases, not including meat	Value, not including meat	Value, with meat
1933	190,489,232	$465,979,190	Not available
1935	268,913,069	660,859,897	$700,373,500
1937	327,784,351	861,485,782	915,383,326

8. Surplus: (Over amount that would guarantee fair return to canner.) Carried 1937 to 1938, 40,000,000 cases. Value: $70,000,000.

9. Allied industries: (Figures used are for canned foods only.)

(*a*) Can manufacture:
Cans used: 11,205,000,000.
Value: $220,100,000.
Employees: 20,000.

(*b*) Label manufacture:
Canned food: 350,000,000 cases.
Value: $17,500,000.
Employees: 2,000.

(*c*) Materials—fuel, electric energy, and contract work: $320,000,000.

(*d*) Sugar, 1935: 585,000,000 pounds.
Value: $29,000,000.
Employees: 2,000.

(*e*) Machinery:
Value: $11,839,735.
Employees: 3,000.

(*f*) Shipping boxes:
Value: $24,500,000.
Employees: 4,000.

(*g*) Tin plate:
1,600,000 tons.
Value: $150,000,000.
Employees: 20,000.

C. Production:

	Cases	Value
1933		
Fruits	33,561,996	$84,997,839

"THE FOUR-WAY PLAN," A CONTRIBUTION DESIGNED TO ASSIST IN PREPAREDNESS FOR NATIONAL DEFENSE AND TO IMPROVE NATIONAL ECONOMIC CONDITIONS

The plan devised, known as "the four-way plan," is so-called because it is designed to achieve four highly desirable ends through one simple and economical move on the part of the Federal Government. The aims are as follows:

1. To round out the program of preparedness for national defense.
2. To improve and protect agricultural income.
3. To stabilize and increase employment.
4. To save and stabilize a basic industry.

Defense.—At the moment, we are living in a world littered with civil wars, power-mad dictators, armament races, and a grave question as to the ultimate safety of any self-respecting country, even our own, from the lawless aggression of military nations dominated by military fanatics. All of these add up to the distasteful but vitally necessary task of ample preparations for defense and for possible aid to other nations who by force of circumstances may soon, in defense of themselves, constitute the first line of defense for this country and democracy.

The situation in the canning industry at the moment has an immediate relevancy to these world conditions.

Canned foods occupy a very important position in any plan for national defense. As Napoleon said, "An Army marches on its stomach." All the battleships and fine weapons of defense that we might provide could not defend us against attack for 1 week if the men who operate them are not provided with food. It has been well demonstrated in previous wars that canned foods in large quantities are an essential part of the necessary provisioning for the Army and Navy, providing the men with a well-diversified diet in a form which can be easily transported and is not perishable.

The specific suggestion is that the various agencies of the Federal Government, Army, Navy, Marine Corps, veterans hospitals, C. C. C. camps, etc. purchase and use a sufficient portion of the present canned food surplus as a source of—

1. Current supply for said units.
2. Permanent reserve for immediate use in times of need.

As these goods are currently consumed it is suggested that replacements be made, thus the entire supply would be held intact when required for emergencies, but at the same time would be completely renewed periodically.

This reserve of foods would be immediately available:

1. In case of any expansion of the Army and Navy whether in actual war or as a preparedness measure.
2. As a quick food supply for other nations.

The time element is recognized as a most important factor in possible, apparently probable, war developments. It seems the opinion of many informed persons that the best chance for gain or victory by dictator nations in case of war would be the success of rapid crushing strokes at the very outset. If the democracies can withstand that period, their chances of final victory are vastly improved. Food—more particularly ready to use, transportable food—is a serious problem for European armies. Canned foods in variety and volume have never been developed over there as they have in the United States. Therefore, such a supply ready for immediate movement to the points of need could well be of tremendous importance in the world picture.

These suggestions apply, of course, to such canned foods as can be carried in proper storage for long periods without any deterioration whatever. Fully 98 percent of the canned goods available are of that character.

In addition to the potential value of such a supply for reasons above noted, this would be an economical time for the Government to set up such a supply as it is assumed the foods would be purchased on public bids and present prices are, as stated, very low, often less than cost.

Tin as an important metal was mentioned by Assistant Secretary of War Johnson in his broadcast address on April 5. Establishing a reserve supply of canned foods from present surplus would likewise conserve a very considerable supply of tin.

This reserve supply of canned food is highly important from the standpoint of national defense. It is believed operation of the plan constitutes a real service to the country, not only as a defense measure, but for other reasons covered in the following paragraphs.

Agriculture.—Canned foods are of basic importance to agriculture, utilizing the produce from several million acres, and providing a very important element in agricultural income in every State in the Union but three. In addition to the income actually derived from the canning crops, agricultural income is also affected in other ways. For instance, if the canning factories, 3,400 in all, are unable to take their usual amount of produce, a considerable proportion of it will undoubtedly be thrown on the already overstocked fresh market, thereby further demoralizing same, not only for these particular farmers, but all other farmers growing fresh produce.

There exists a trying, even hazardous condition in the canned foods business today. The preserving of perishable and seasonal food crops from farm and orchards in air-tight containers for use throughout the year is naturally an activity closely connected with agriculture. A large proportion of the factories today are in relatively small towns and in villages. They are an integral part of their respective communities, in fact, the canning factory is the major cash distributing agency for many towns and their adjacent areas. The degree of their prosperity or adversity very directly affects the income of the surrounding agricultural sections and of local business in the towns where located.

Employment.—The canning factories are also a very large factor in the labor market of the country. Hundreds of thousands of farmers and their employees are engaged in growing and delivering their crops to the factories. Additional hundreds of thousands are engaged in the factories themselves in preparing and canning the various products. There are also a great many thousands of additional employees in the affiliated industries, such as machinery manufacturers, box makers, label makers, can makers, and employees in the steel mills who make the tin plate that goes into the tin cans.

Industry.—Most canning plants, by the very nature of their origin and background, are better versed in preserving farm produce than they are in merchandising the finished goods. On the other hand, distributors of canned foods to whom the factories go to sell their finished goods have buyers whose sole job is to buy commodities at the lowest possible figure, having at hand market information from the entire United States on each item, and constantly insisting to would-be sellers that said sellers' prices are too high.

Again, due to the short season of packing time—often only a few weeks during harvest season for the perishable crops—most factories operate mainly on borrowed money, using their finished goods for collateral as fast as packed. The canning activity as a whole is very much underfinanced. As a result, finished goods very often cannot be carried and merchandised on a year round basis, and when, due to large crop yield or any slowing down of general business conditions, a surplus develops, "distress lots" of canned foods are plentiful, forcing the prices below cost. These stress conditions are very much in evidence at present.

Yields on produce and fruit were high in 1937 and 1938. Inventories of canned foods carried from 1937 to 1938 were heavy. The combination has kept the price of many canned foods below cost for nearly a year and a half. The small working capital per package of food preserved has been further depleted. Buyers naturally have used this condition to buy at lowest possible prices, and almost on a day-to-day basis.

Summary.—The situation, therefore, is as follows:

On the one hand we find a large surplus of canned foods of undoubtedly the best quality ever produced. This oversupply is a handicap to agriculture, labor, and industry alike. It forces discouraged canners to reduce operations drastically. Should a sudden, unforseen demand be made on the industry, under these conditions, a decided shortage would most certainly develop. This shortage could, and might, occur at a time when it would constitute a national calamity. Another major point is that this surplus of excellent canned foods is priced exceedingly low. The many items of canned foods included in this surplus supply make possible a wide and balanced diet. These goods keep perfectly over long periods, and are in compact form suitable for rapid, economical transportation and storage.

The suggestion is, therefore, repeated: That a government reserve supply of these canned foods be now established in the sincere belief that such reserve will be of material benefit in achieving the four following aims:

1. To round out the program of preparedness for national defense.
2. To improve and protect agricultural income.
3. To stabilize and increase employment.
4. To save and stabilize a basic industry.

NOTE.—Attached hereto is a brief compilation of some of the statistical facts regarding canned foods which may serve to emphasize their value and their importance as affecting agriculture and other related fields of activity.

EXHIBIT D

Amendment to Section 719 of the Internal Revenue Code

In lieu of subsection (b) of section 719 insert the following subsections:

"(b) *Borrowed invested capital.*—The borrowed invested capital for any day of any taxable year shall be determined as of the beginning of such day and shall

be (except as provided in subsection (c)) an amount equal to 50 per centum of the borrowed capital for such day.

"(c) *Borrowed invested capital of corporations engaged in processing certain commodities.*—In the case of a taxpayer 65 per centum or more of the gross income of which for the taxable year is derived from processing, canning, or otherwise preparing for market any fruit or vegetable, or any fish or other marine life, the borrowed invested capital for any day of any taxable year shall be determined as of the beginning of such day and shall be an amount equal to 100 per centum of the borrowed capital for such day provided—

"(1) Such taxpayer's average short-term borrowed capital for the taxable year exceeds 50 per centum of its average equity invested capital for such taxable year; and

"(2) Such taxpayer's short-term borrowed capital fluctuates during the taxable year to the extent that the highest amount exceeds by at least 100 per centum the lowest amount of its short-term borrowed capital during the taxable year.

"(d) *Short-term borrowed capital.*—The term "short-term borrowed capital" as used in subsection (c) means that portion of the borrowed capital referred to in subsection (a) which by the terms of the instrument evidencing the indebtedness matures in less than one year from the day for which the determination is made.

"(e) *Average equity invested capital and short-term borrowed capital.*—The average equity invested capital for any taxable year shall be the aggregate of the daily equity invested capital for each day of such taxable year divided by the number of days in such taxable year. The average short-term borrowed capital for any taxable year shall be the aggregate of the short-term borrowed capital for each day of such taxable year divided by the number of days in such taxable year."

AUGUST 25, 1941.

STATEMENT ON BEHALF OF NATIONAL CANNERS ASSOCIATION

RE COMPUTATION OF BORROWED INVESTED CAPITAL UNDER EXCESS-PROFITS-TAX LAW

The National Canners Association, a trade association whose members produce approximately 70 percent of the total annual pack of canned fruits, vegetables, and seafood, respectfully suggests that section 719 of the Internal Revenue Code should be amended to permit such canners of fruits, vegetables, and seafood, under certain restricted circumstances, to include 100 percent rather than 50 percent of their borrowed capital in computing invested capital for purposes of excess-profits taxation.

Such an amendment is essential in order to permit these canners in years of good earnings to pay off debts incurred in prior loss years and to build up a reserve for the loss years which, because of the nature of the industry, are inevitable.

As has already been demonstrated to the committee,[1] the canning industry, perhaps more than any other industry, is subject to extreme fluctuations in earnings from year to year. Profits and losses on the seasonal operations are determined entirely by natural factors—weather, crop condition, insect infestations, runs of fish, etc.—over which the canner can exercise absolutely no control. These natural factors may result in a serious underproduction or a tremendous overproduction, either of which is equally bad and may cause large losses for the year's operations. It is only when all natural factors combine to bring about a production nicely balanced with demand that the canner has a year of good earnings, and this may happen only once in 3 or 4 years. If the canner is to stay in business he must, during this single year of good earnings, make up the impairments which his capital has suffered during the bad years.

Under the terms of the present excess-profits-tax law, it is difficult if not impossible for a canner to thus make up his losses of earlier years. The annual fluctuations in earnings which have caused this difficulty make it impossible for him, in most instances, to compute his excess-profits credit under the income-credit method. Three of the years in the base period—1937, 1938, and 1939—were for most of the industry loss years, and most canners must, therefore, utilize the invested-capital method of computing their excess-profits credit.

Because of another peculiarity of the canning industry, however, the method of computing invested capital under the present law is extremely inequitable for

---

[1] See the statement on behalf of the National Canners Association filed with the committee by Paul E. Shorb on September 5, 1940, in connection with the hearings on the Second Revenue Act of 1940 (pp. 340–347 of hearings on H. R. 10413, September 3–5, 1940).

most canners. Most canning enterprises are greatly undercapitalized and operate to a very large degree on borrowed capital. Yet the present law permits such canners to consider only 50 percent of their borrowed capital in computing invested capital. Because of their undercapitalization, and this limitation on the amount of borrowed capital which may be considered, the excess-profits credit of these canners is thus limited and they are denied the opportunity in a year of good earnings to make up their losses of earlier years.

The excess-profits credit carry-over authorized by section 710 (b) (3) of the Internal Revenue Code, is, of course, extremely helpful, but it is not sufficient. For it is limited to taxable years beginning after December 31, 1939, and thus does not permit canners to make up losses for the 3 extremely bad years 1937, 1938, and 1939. Moreover, as we have seen, the excess-profits credit, which may be carried over under section 710, is in itself restricted by the undercapitalization of canners and the limitation upon borrowed capital which may be considered in computing invested capital.

Accordingly, it is suggested that section 710 of the Internal Revenue Code should be amended in the fashion suggested at the end of this statement. It will be observed that this amendment permitting 100 percent of borrowed capital to be included in computing invested capital is subject to three limitations. First, it is limited to these processing industries, where its need is greatest. Second, it is limited to companies whose short-term invested capital exceeds 50 percent of its average equity invested capital. Finally, the amendment is applicable only when the company's short-term borrowed capital fluctuates during the taxable year to a specified degree. With these safeguards the amendment will constitute no serious drain on the revenues to be produced by the bill.

AMENDMENT TO SECTION 710 OF THE INTERNAL REVENUE CODE

In lieu of subsection (b) of section 710 insert the following subsections:

"(b) *Borrowed invested capital.*—The borrowed invested capital for any day of any taxable year shall be determined as of the beginning of such day and shall be (except as provided in subsection (c)) an amount equal to 50 per centum of the borrowed capital for such day.

"(c) *Borrowed invested capital of corporations engaged in processing certain commodities.*—In the case of a taxpayer 65 per centum or more of the gross income of which for the taxable year is derived from processing, canning, or otherwise preparing for market any fruit or vegetable, or any fish or other marine life, the borrowed invested capital for any day of any taxable year shall be determined as of the beginning of such day and shall be an amount equal to 100 per centum of the borrowed capital for such day provided—

"(1) Such taxpayer's average short-term borrowed capital for the taxable year exceeds 50 percentum of its average equity invested capital for such taxable year; and

"(2) Such taxpayer's short-term borrowed capital fluctuates during the taxable year to the extent that the highest amount exceeds by at least 100 per centum the lowest amount of its short-term borrowed capital during the taxable year.

"(d) *Short-term borrowed capital.*—The term 'short-term borrowed capital' as used in subsection (c) means that portion of the borrowed capital referred to in subsection (a) which by the terms of the instrument evidencing the indebtedness matures in less than 1 year from the day for which the determination is made.

"(e) *Average equity invested capital and short-term borrowed capital.*—The average equity invested capital for any taxable year shall be the aggregate of the daily equity invested capital for each day of such taxable year divided by the number of days in such taxable year. The average short-term borrowed capital for any taxable year shall be the aggregate of the short-term borrowed capital for each day of such taxable year divided by the number of days in such taxable year."

The CHAIRMAN. Mr. Parker.

STATEMENT OF LOVELL H. PARKER, TAX ASSOCIATE, WASHINGTON, D. C.

Mr. PARKER. Mr. Chairman and gentlemen of the committee, I am listed to appear today as a "tax associate." I have prepared a rather lengthy, though condensed, memorandum covering certain

phases of the bill in general. That memorandum is too long to discuss, and with your permission, I will file it for the record.

That is the first memorandum you have before you. I think you may find some figures of value in it, especially those in connection with the surtax rates, which is a subject which has not been completely developed, I think, before the committee.

Since I asked for time, one of our clients, the Republic Steel Corporation, has asked me to present briefly two points in their behalf concerned with the excess-profits tax, and with your permission, I will read a statement thereon. I think it will take perhaps only 8 or 9 minutes. The two points which will be discussed are, first, the special 10-percent tax imposed under certain conditions upon companies making use of the invested-capital method, and, second, the reversal of the method of credits which results in the excess-profits tax being computed without prior deduction of the normal tax. I now read from the memorandum presented in behalf of Republic Steel Corporation:

Under date of September 5, 1940, in connection with hearings on the Second Revenue Act of 1940, Republic Steel Corporation, the third largest steel company in the world, filed a memorandum with this committee advocating a minimum credit allowance of 6 percent on invested capital before the imposition of an excess-profits tax. (See hearings, p. 255.)

Copy of this memorandum is attached hereto for consideration by the committee in connection with the memorandum which I am now reading. For present purposes I desire, however, to quote the conclusion of the memorandum of September 5, 1940, as follows:

> We submit that if Republic Steel Corporation is not permitted to earn at least 6 percent of its invested capital before the imposition of any excess-profits tax the expansion of its business will be retarded, the number and welfare of its 50,000 employees adversely affected, and, in the long run, the amount of taxes paid the Government diminished rather than increased.
>
> The same considerations are present in the case of most of the other units in the steel industry as has been shown by industry figures heretofore appearing in this memorandum. Undoubtedly they also obtain in other important industries.

I pause at this point to say that at the conclusion of this memorandum I shall read to the committee a letter from the treasurer of one of the largest companies in an entirely disrelated industry which will bear out what has just been stated about industries other than the steel industry. Resuming our quotation from the original memorandum:

> Therefore, we respectfully urge that the Congress of the United States make appropriate provision in the proposed tax bill for the allowance of a credit of 6 percent at least upon invested capital before the imposition of an excess profits tax.

In enacting the Second Revenue Act of 1940, Congress saw fit to permit an 8-percent credit, which provision this company regarded as not only fair but wise from the Government's own standpoint.

The memorandum, above mentioned, sought only to show that in its own case, and in the case of many corporations with similar histories, 6 percent was the very minimum which should be allowed if the absolute necessities of successful operation over a period of years were regarded. Republic Steel Corporation has no desire to make exorbitant profits out of the national-defense program. It has no desire—

even if it were able—to build up unnecessary surpluses, pay unreasonable dividends, or to create any millionaires. It does desire to maintain its credit, to pay its debts, to promote the welfare of its employees, to maintain its plants, and to pay some dividends at least to its stockholders who have invested their money in its business. It feels that the best interests of the country as well as its own will be served by such a program.

Earnings history of last decade.—For the 11-year period 1930 to 1940, inclusive, the total net income of Republic Steel Corporation after deducting deficits has amounted to approximately $15,500,000.

The year of highest earnings was 1940, when earnings amounted to approximately $21,100,000. The year of greatest loss was 1932, when the company showed a red figure of approximately $11,260,000. If the earnings for 1940 were eliminated, there would have been a deficit of over $5,000,000 as a result of operations for the 10 preceding years. In fact, Republic Steel Corporation was unable to pay any dividends on its common stock from 1931 to December 1940. The total average annual return on its invested capital of approximately $300,000,000 in the 11 years in question, has been about 1.8 percent.

Senator CONNALLY. That includes 1940, does it?

Mr. PARKER. That includes 1940; yes, sir.

Even in the banner year, 1940, its earnings were less than 8 percent on its invested capital.

A corporation cannot continue to exist over an indefinite period on such a small margin of profit. Where its history shows that a procession of peaks and valleys is inherent in its business life, it must be permitted a reasonable profit, before excess-profits taxes are applied, in the good years in order to recoup the losses of the deficit years. This is especially true in the case of the steel industry whose history shows great fluctuations in earnings.

Objections to proposals in pending revenue bill.—The pending revenue bill (H. R. 5417), as passed by the House of Representatives, makes substantial changes in the excess-profits tax as it now exists. We shall not protest against the proposal to reduce the rate of credit from 8 to 7 percent on invested capital in excess of $5,000,000, although we think that a continuation of the present 8-percent allowance would be better for the Government itself in the long run if large future revenues are to be obtained from corporation income taxes. However, we do wish to register a strong protest, first, against the special 10-percent tax proposed, and, second, against computing the excess-profits tax before deducting the normal tax—that is, against reversing the credit allowed by existing law.

Senator BROWN. Tell me, as a tax expert, does the 10-percent reduce the credit below the 4.9, or is 4.9 the minimum?

Mr. PARKER. The 10 percent would reduce it below that. Just the reversal of the credit would result in the 4.9 percent.

Senator BROWN. Is that so?

Mr. PARKER. Yes, Senator. It is almost impossible to say what the 10 percent would do. It would depend on the earnings during the base period. It might not apply at all.

Senator BROWN. I get it. In some instances it could reduce it to a point below 4.9?

Mr. PARKER. That would be the effect; yes, sir.

Senator BROWN. So instead of 8 as we originally had it, we reduce it to a point, in some instances below 4.9?

Mr. PARKER. That would be the result; yes, sir.

Senator BROWN. I see.

Mr. PARKER. These two subjects will now be briefly discussed.

Special 10-percent tax: The pending revenue bill proposes a special 10-percent tax on corporations using the invested capital method. We believe and will attempt to show that this represents an unfair and unwise discrimination against companies which are, of necessity, forced to use the invested capital method.

First, we should like to point out that the Treasury Department itself has consistently advocated the sole use of the invested capital method. Without taking sides in such a controversial issue, we feel that the bill should at least insure that those companies whose earnings history compels them to use the invested capital method will not be penalized in so doing, as against companies which are able to make use of the average earnings base. Yet this is exactly what happens under the provisions of the House bill.

Congress has recognized the necessity of the two separate methods. It has said in effect that corporations shall at least be entitled to some fair and reasonable earning on invested capital before the imposition of an excess-profits tax.

It has further said that in the case of corporations which are fortunate enough to have a history of stable earnings, their average earnings over a period shall constitute the criterion, even though the credit so established may represent many times the rate of return on invested capital allowed to companies using the invested capital method.

We submit that the two methods are designed to take care of two entirely different situations and therefore are in no way related. And yet, in the House bill, for reasons which certainly have no support in logic or fairness, the two methods are commingled in the case of companies compelled to use the invested-capital method—but not in the case of those using the average-earnings method. After providing for crediting a reasonable return on invested capital, 8 and 7 percent, the House bill then says in effect: "But we will also relate your credit to your earnings history and, if you have had only a small percentage of earning or none at all during the base period, then we will tax you 10 percent on the difference between those earnings and current earnings."

In other words, it penalizes such companies for lacking the very characteristic, that is, stable earnings, which, if possessed, would have enabled them to make use of the average-earnings method in the first instance and thus possibly receive a credit much greater than would be permitted under the invested-capital method.

Equality of treatment in this situation, if the House proposal is to be accepted, would require that corporations which use the average-earnings method be limited to a definite percentage return on their invested capital no matter what their average earnings may have been. The two principles are exactly the same. Of course, we do not advocate this because two wrongs do not make a right.

This special 10-percent tax may apply, in fact, to corporations having earnings of less than 1 percent on their invested capital, where such corporations had no base period earnings.

We think we have said enough to demonstrate not only that the proposal is unfair and discriminatory, but that it will make irrepara-

ble inroads on the income of companies which must be permitted to retain a substantial proportion of their earnings in good years if they are to survive the inevitable bad years.

Reversal of credits.—Equally as unfair as the provision just discussed, but at least not discriminatory since it applies to all corporations alike, is the proposed reversal of credits, whereunder excess-profits taxes are assessed against income prior to deduction of the normal tax. It should be noted, however, that the House bill benefits corporations using the average earnings method with respect to the method provided under existing law by providing that the earnings of base period years be computed without deduction of income taxes.

In effect, this reversal of credits amounts to the imposition of an excess-profits tax not on real earnings but on money already absolutely earmarked to pay the normal tax, which is universally recognized in accounting practice as a regular fixed business expense, to be deducted before real net earnings are arrived at. It is no different in substance than if an excess-profits tax were levied on money about to be used to meet an interest payment, a real-estate tax, a pay roll, or any other fixed business expense.

It is impossible to say by what process of reasoning a tax on such a fund can be called or considered a tax on excess profits. It is not a tax on profits at all, much less on excess profits. It is, in practical effect, a tax on a liability.

The House report on the bill (H. R. 5417), in fact, admits that this reversal of the credits is equivalent to a reduction in the rate to be allowed on invested capital before the imposition of the excess-profits tax. The report states as follows:

> The effect of the reversal of the deduction is that the 8-percent credit on invested capital provided in the bill is equivalent to a credit on invested capital of 5.6 percent after deduction of the normal tax and surtax, and the 7-percent credit on invested capital is equivalent to a credit on invested capital of 4.9 percent after deduction of the normal tax and surtax.

When the rate on invested capital allowed to the larger companies is practically only 4.9 percent, such rate is far too low to permit of successful operation in the future years, as was pointed out in our original memorandum filed with the Committee on Finance on September 5, 1940.

Conclusion.—We respectfully urge, therefore, that the special 10-percent tax be abandoned and that the credit of normal tax against net income before computing the excess-profits tax be allowed as in existing law.

Such action we believe to be for the good of the Government as well as the taxpayer, because by removing inequities and penalties, it will encourage reasonable expansion and cooperation in the defense program, and will tend to keep our national income on the upgrade, thus increasing the revenue yield, since there will be more income to tax. More important than the revenue for the one fiscal year, 1942, is the sustained revenue yield for subsequent fiscal years.

Submitted in behalf of Republic Steel Corporation by Lovell H. Parker, tax associate, Guy & Brookes, Washington, D. C.

Now, I would like to submit this letter by Mr. Weaver.

The CHAIRMAN. Mr. Parker, before you leave the Republic Steel Corporation case, if the special 10 percent were eliminated you would have a credit of approximately 5 percent against your excess profits?

Mr. PARKER. You mean because, on the first $5,000,000 you would get a certain amount of credit at 5.6 percent?

The CHAIRMAN. I mean the elimination of the 10-percent special tax would have that effect in your case, which would be higher than any earnings of this particular company during the 11-year period, or during any fixed period as shown by your table, except in 1923 and 1929. In both those years it did make somewhat above it, and also in 1926.

Mr. PARKER. Of course, in 1940, as we pointed out, nearly 8 percent.

The CHAIRMAN. Yes; that is true.

Mr. PARKER. And still when you consider the amount that must be used in a corporation for expansion and other purposes, and the number of stockholders involved—because, after all, these corporations are more or less cooperative enterprises, and there are a lot of small stockholders whose income depends on these corporate earnings and if the stockholders get income, then they pay taxes—I do not think, considering the last 10 years, when you have average earnings of only 1.8 percent, that is sufficient, it having already been pointed out that when this emergency period is over an economic disturbance will arise which will require some backlog in the treasury of a company.

Senator LA FOLLETTE. How does the first quarter of 1941 compare with the first quarter of 1940?

Mr. PARKER. 1941?

Senator LA FOLLETTE. Yes.

Mr. PARKER. It is above it, Senator.

Senator LA FOLLETTE. Do you know how much?

Mr. PARKER. No; I do not, Senator. I can find that out and supply it for the record, if you desire. I haven't the 1941 figures here.

The CHAIRMAN. With the elimination of the 10-percent tax, that special 10-percent tax, as I have stated here several times in the hearing, in view of the graduated tax you have got a flat deduction in your case of approximately 5 percent, and then with the graduated rates, you have net earnings, from your showing, of approximately 7 percent, after the payment of all taxes, normal and excess.

Mr. PARKER. The graduated rate would be of substantial benefit, Senator, if it were based on percentage brackets instead of on dollar brackets, but when you get a large company, your relief from that graduation becomes insignificant.

The CHAIRMAN. That is true and it reflects directly back on the stockholder, of course.

Mr. PARKER. And, therefore, the company. The big companies making big earnings, regardless of the fact that they may have 600,000 stockholders, will practically pay 60 percent on nearly their entire income.

The CHAIRMAN. That is true. I think even under the graduated rate and with the elimination of the 10 percent, it should be up considerably.

Mr. PARKER. This letter, which I had started to present, reads as follows:

INTERNATIONAL PAPER CO.,
New York, N. Y., August 20, 1941.

Mr. LOVELL H. PARKER,
GUY & BROOKES, *Washington, D. C.*

DEAR MR. PARKER: I have read with great interest the memorandum of the Republic Steel Corporation with respect to proposed changes in invested-capital

method of computing excess-profits tax and am in complete agreement with the reasoning behind this memorandum.

While you deal only with the steel industry, many other industries, including our own, are similarly affected. For the 10 years ending December 31, 1940, International Paper & Power Co. was able to pay only $0,731,000 in dividends on approximately $93,000,000 of preferred stock outstanding during this period, an average of only slightly more than 1 percent per annum. Of this amount $5,787,000 was paid in 1940. During the same period, the common stock received no dividends at all.

I feel that the reduction in the invested-capital credit from 8 to 7 percent on amounts over $5,000,000, the special 10 percent tax proposed, and the elimination of the normal income tax as a credit against excess-profits tax income, discriminate against the very class of corporation which it should be in the interest of the Government to build up. This discrimination consists of (1) a reduction in the invested-capital credit plus the imposition of the 10-percent tax proposed whereas the base-period-earnings exemption is increased by eliminating the deduction of income taxes in the base period, and (2) an additional penalty by the elimination of the normal income tax credit against excess-profits-tax income whereas this is minimized to the corporation using the average-earnings-base credit by adding back normal income taxes in determining the average-earnings-base credit. While it is true that this latter provision applies to all corporations generally, the fact is that the "average earnings" corporations have a material amount to add back while the "invested capital" corporations add back nothing or an insignificant amount and it only helps them in reducing the additional 10-percent tax proposed.

Why should any investor invest his money in an industry which is subject inherently to heavy losses in some periods and large profits in others if the large profits when earned are appropriated by the Government in the form of discriminatory excess-profits taxes?

I am not arguing against excess-profits taxes as such but merely for reasonable credits before computation, taking into consideration companies inherently having widely fluctuating earnings and low earnings in the base period. To my mind the credits provided in the 1940 act are reasonable and should not be changed.

Undoubtedly the changes in these credits made by the House bill will produce more needed taxes. My thought is that this needed sum should be raised in some manner that will affect all corporations alike (unless it can be raised through broadening the personal income tax base, a wage tax, or a sales tax) and not by a method that discriminates against the very class of corporations which should be helped, if private investment for profit is to be preserved.

Yours very truly,

H. R. WEAVER,
Vice President and Treasurer.

Now just briefly recapitulating what we have said, in the case of the Republic Steel Corporation, one of the largest steel companies and fairly typical of the steel industry in this country, it appears that over an 11-year period total earnings on its average invested capital during that period were only at the average annual rate of 1.8 percent.

Furthermore, but for the large earnings in 1940, it would actually have earned $5,000,000 less than nothing on its invested capital over a period of 10 consecutive years.

Finally, for the 10 years preceding December 1940, the corporation was unable to pay a single dollar as dividends to its common stockholders.

Now, in the case of the International Paper Co., the biggest company of its kind in the world and therefore typical of the paper industry over the entire decade from 1930 to 1940, it was able to pay only a total of approximately 10 percent to its preferred stockholders on the money invested by them in the company, that is, an average of only 1 percent per year. Of this amount over 50 percent was paid in 1940, the only really good year of operations during the period.

During the same decade, the company was unable to pay a dollar to its common stockholders.

In other words, here are two large industries, one admittedly having to do with the national-defense program, and one having no direct connection with the defense program, both of which——

Senator CONNALLY (interposing). Let me ask you, this company that paid 10 percent on preferred stock, what relationship did that bear?

Mr. PARKER. That was 10 percent in 10 years, or 1 percent in 1 year.

Senator CONNALLY. Ten percent in 10 years?

Mr. PARKER. That is right. We think therefore, that these two cases show the necessity for permitting companies so situated to earn a fair return upon their invested capital during years of active business if they are eventually to survive the years of deficits from operations which must inevitably follow if history repeats itself.

That is all, thank you.

Senator VANDENBERG. Mr. Parker, I would like to ask you one general question. If there is anybody in the country who knows the problem with which we are confronted from this side of the table, you do, because of your long experience with it. I have run through superficially your general brief, in addition to the particular subject which you have been discussing and, in every instance, you seem to be suggesting the elimination of tax revenue from this bill. Would you care to offer any suggestion to us as to where we might make up the amount that we would lose if we follow your suggestion with respect to deductions?

Senator CONNALLY. May I suggest that Mr. Parker has quit the prosecution and gone over to the defense?

Mr. PARKER. Yes; I do not mind answering that question, Senator.

Of course, in the first place, under a revision of surtax schedules, I did not mean to reduce the total revenue, I meant ironing out the surtax schedules so as to make them more consistent.

If you lower the base, you will get just as much from the income tax on individuals as before, I believe.

Now, as to corporations, I would make the base fair, even if you had to increase the normal corporate rate. Going further than that, of course you face a real problem, and I know that some Members of Congress have publicly stated, even those who have objected in the past to any form of sales tax, that we might have to come to such a tax. What form that should be is hard to say.

I studied those taxes for years. For instance, the gross income tax is the most productive. It permits of pyramiding and is unsatisfactory at too high a rate.

Then there is the manufacturers' sales tax, the retail sales tax, and the purchase tax, which is now used in England.

The only thought I had was if you have got to have such a tax, why wait? If it is admitted that you have got to have one anyway.

Senator VANDENBERG. If you had to choose between the various general tax principles that you have related, which one would you choose?

Mr. PARKER. I believe in going rather slowly in trying out new taxes. I think we should try out the purchase tax first which, while

a good deal like the sales tax, eliminates the tax on the necessities of life, and is more flexible than the ordinary sales tax, because the items are specified which are to be exempted or taxed.

Senator VANDENBERG. Thank you.

The CHAIRMAN. Thank you very much, Mr. Parker.

Mr. PARKER. Thank you, Mr. Chairman and Senators of the committee.

(The matter submitted by Mr. Parker is as follows:)

[Open letter to the Senate Committee on Finance from Lovell H. Parker, Tax Consultant, Washington, D. C.]

To the Committee on Finance,
United States Senate,
Washington, D. C.

MY DEAR CHAIRMAN AND MEMBERS OF THE COMMITTEE: While it will undoubtedly be impractical on account of the time element to attempt a complete revision of our internal revenue laws in connection with the bill now pending before your committee, I do believe that, in view of the very high rates which are proposed, the income tax base should be made as equitable as possible at this time to prevent grave injustices. In other words, the income tax base is just as important, or more so, than the rates of tax.

I am taking the liberty of drawing to your attention certain matters which I consider worthy of consideration in connection with this bill, whether they are general or special in character.

1. *How much additional revenue?*—When discussions with respect to the revenue bill of 1941 began before the House Ways and Means Committee, on April 24, 1941, the Secretary of the Treasury asked for $3,500,000,000 of additional revenue, which he admitted would be "an increase without precedent." At that time it was estimated that about two-thirds of the cash expenditures necessary to run the Government during the fiscal year 1942 would come from taxes (existing and proposed) and that one-third would be provided for by borrowing. There was no magic to that formula nor is there now.

On May 22, 1941, I made a statement before the Ways and Means Committee (see p. 1405, vol. 2, of House Hearings on Revenue Revision of 1941), from which I quote:

"However my theme is to suggest to the committee that it should so design this tax bill as to raise 2½ billion dollars in the first year instead of 3½, and if you do you will probably get 3½ billion dollars in the second year; whereas if you put a 3½ billion-dollar tax on the country in the first year you will probably only get 2½ billion dollars in the second year; that is, under the impact of the tax program as proposed by the Treasury Department, the burden will be so great as to decrease the national income and to decrease the tax revenue."

It is true that since the above statements were made the appropriations have been increased several billions of dollars, and I realize that your committee will, in all probability, try to reach a goal of 3½ billion dollars. I still feel, however, that more important than immediate revenue is continuous revenue for future years. If, therefore, your committee can design a bill which will provide for 3½ billion dollars of additional revenue in the first year, that is much to be desired, provided that it does not in subsequent years depress our national income and our tax revenue because of the effect of the new tax system on our economy. It seems necessary, if we are to place our principal hope for revenue on income taxes, that we have a large volume of income to tax and that, therefore, the tax bill must be designed to give reasonable incentive to our citizens to work, invest and produce income which can be taxed.

To answer the question of how much additional revenue should be raised, I would reply that the limit and the methods should be so fixed as not to prove a deterrent to the maintenance of our national income over the years immediately ahead.

2. *Surtax schedule.*—It is remarkable how little testimony has been given to the committee on the subject of surtax rates. Yet this schedule, under the new proposal of starting surtaxes on the first dollar of taxable income, vitally affects millions of our citizens.

Of course, the schedule is supposed to be based on the principle of ability to pay. This phrase "ability to pay," however, has been wrongly used. It has

served as an excuse for all kinds of punitive taxes and all kinds of tax reduction schemes. That is, one school of thought would take away in taxes 100 percent of a man's earnings over the national income average of about $1,400 per capita; the other school would either abandon the income tax or levy on income the same tax percentage, regardless of the amount of the income.

Fortunately, up to this time, the Congress has adopted neither of these extreme courses, but has attempted to adopt a schedule which, while at times steeply graduated, has, with possibly some exceptions, left the taxpayer a reasonable sum after the payment of his income tax as a reward for his labor, knowledge, and ability. Thus his efforts and his incentive to employ his talents usefully have been fostered. In my opinion, the surtax schedule proposed in the pending bill in many instances passes the danger point and will not leave the taxpayer sufficient reward to give him the proper incentive.

The Revenue Act of 1918, enacted in a similar period, imposed unprecedently high income taxes and yet this proposed revenue bill of 1941 far exceeds the rates of tax imposed by the 1918 Act. In fact, every person with a net income of over $2,300 pays more tax under this bill, and many as much as 80 percent more. The total income tax on a married man with no dependents under the 1918 act and under the pending bill is shown by way of comparison in the following table:

Comparative income-tax table, Revenue Act of 1918 and proposed revenue bill of 1941

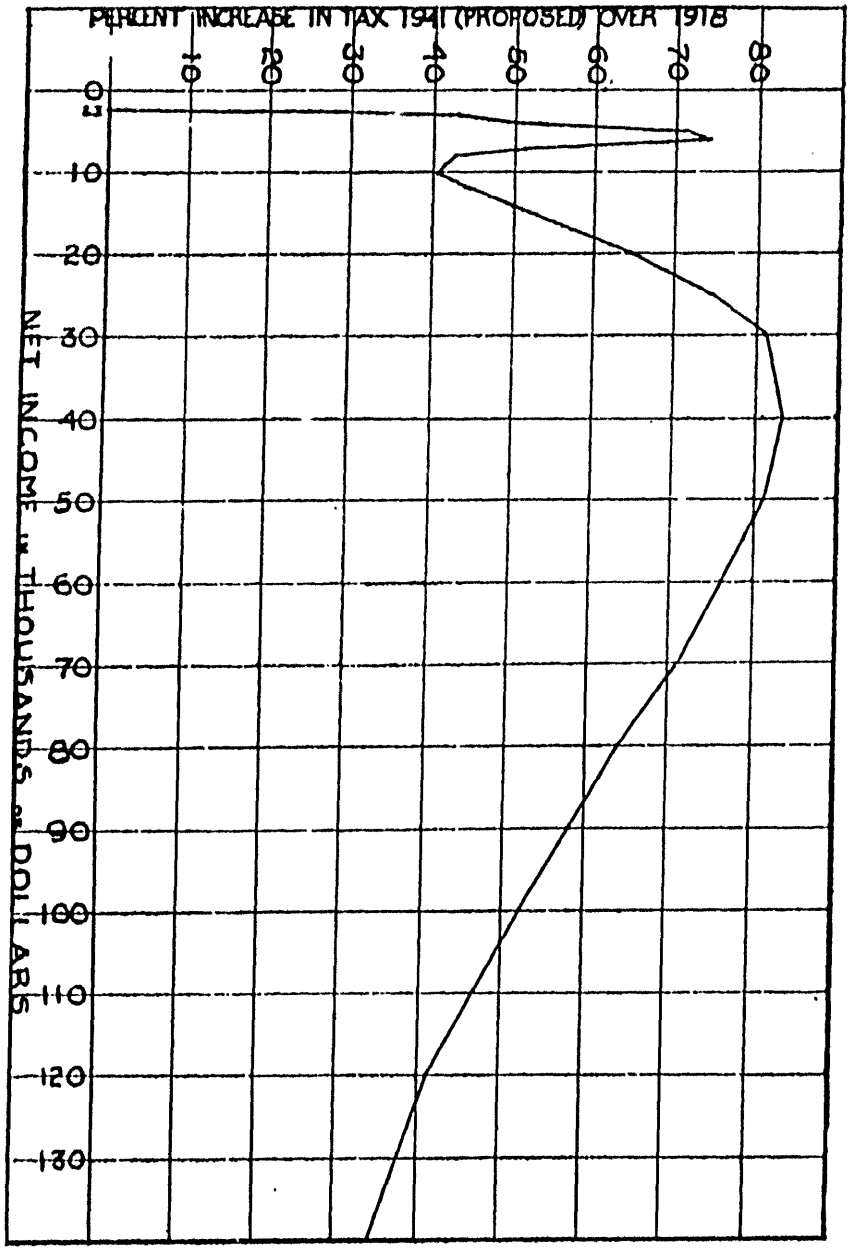
[Married man with no dependents]

Net income	1918	Percent tax to net income	1941 (proposed)	Percent tax to net income	Increase in tax	Percent increase 1941 tax over 1918 tax
$2,500	30	1.2	$38.50	1.5	$8.50	28.3
$3,000	60	2.0	85.80	2.9	25.80	43.0
$4,000	120	3.0	180.40	4.5	60.40	50.3
$5,000	180	3.6	308.00	6.2	128.00	71.1
$6,000	250	4.2	435.60	7.3	185.60	74.0
$7,000	390	5.6	596.20	8.5	206.20	52.9
$8,000	530	6.6	756.80	9.5	226.80	42.8
$9,000	680	7.6	961.40	10.7	281.40	41.4
$10,000	830	8.3	1,166.00	11.7	336.00	40.5
$12,000	1,150	9.6	1,663.20	13.9	513.20	44.6
$15,000	1,670	11.1	2,545.40	17.0	875.40	52.4
$20,000	2,630	13.2	4,338.40	21.7	1,708.40	64.9
$25,000	3,720	14.9	6,505.40	26.0	2,785.40	74.9
$30,000	4,930	16.4	8,936.40	29.8	4,006.40	81.2
$40,000	7,730	19.3	14,194.40	35.5	6,464.40	83.6
$50,000	11,030	22.0	20,002.40	40.0	8,972.40	81.3
$60,000	14,830	24.7	26,206.40	43.7	11,376.40	76.7
$70,000	19,130	27.3	32,652.40	46.6	13,522.40	71.2
$80,000	23,930	29.9	39,318.40	49.1	15,388.40	64.3
$100,000	35,030	35.0	53,310.40	53.3	18,280.40	52.2
$120,000	47,830	39.9	67,479.60	56.2	19,649.60	41.1
$140,000	60,630	43.3	81,359.60	58.1	20,729.60	34.2
$150,000	67,030	44.7	88,299.60	58.9	21,269.60	31.6
$250,000	137,030	54.8	159,013.60	63.6	21,983.60	16.0
$500,000	323,030	64.6	346,805.60	69.4	23,775.60	7.4
$750,000	513,030	68.4	540,537.60	72.1	27,507.60	5.3
$1,000,000	703,030	70.3	736,519.60	73.7	33,489.60	4.7
$2,000,000	1,473,030	73.7	1,529,501.60	76.5	56,471.60	3.8

The figures given can be more readily visualized by the following chart which shows graphically the percentage of increase in taxes proposed in this bill on incomes up to $140,000 over the taxes imposed by the War Revenue Act of 1918.

It is apparent from the table and chart submitted that either the measure of ability to pay was all wrong in 1918 or it is all wrong now, for the increases are entirely inconsistent. From the figures given, it is clear, for example, that a married man with a $6,000 net income under the bill is deemed to be able to stand a tax increase of 74 percent over his 1918 tax, one with a $10,000 net income an increase of only 40½ percent, and one with a $40,000 net income an increase of over 83½ percent.

It is urged, therefore, that the surtax schedule be more carefully studied and the increase made more consistent throughout the whole schedule.



3. *Earned income relief.*—The present law merely retains the principle of a differentiation between the tax on earned income and on investment income without giving any adequate relief. For example, a married man with a net income of $10,000 from salary under the proposed bill pays an income tax of $1,166, while a married man with a net income of $10,000 from investments pays an income tax of $1,196.80, a difference of only $30.80. In fact, the maximum difference in tax on earned income and unearned income is only $48.40, on account

of the provision in the law which stipulates that not more than $14,000 of income shall be considered as earned income. It is believed that this difference in tax is entirely inadequate.

In examining the relative financial status of the man with $10,000, received from salary, and of the man with $10,000 from investment income who does not work, I believe that it is fair to assume that the man with the $10,000 of investment income would have approximately $200,000 of capital. This means that he does not have certain of the out-of-pocket requirements which serve to drain the income of the salaried man. Roughly comparing the two situations, I have calculated that the man with investments has left about $3,000 per year after necessary living expenses, while the salaried man has only $400.

It seems clear from the above that the man on a salary is at a distinct disadvantage compared to the man with investment income, and has substantially less ability to pay. The man with investment income has ample funds to meet emergencies. The man on a salary has no such security. Moreover, and most important, it becomes under the proposed tax rates very difficult for a man starting with no capital and his only income from salary to build up any substantial capital. It is believed, therefore, that consideration should be given to an earned income relief which, at least up to a net income of reasonable size, should reduce surtaxes as well as normal taxes.

4. *Exemptions for dependents.*—The existing law and the proposed bill allow an exemption (that is, a deduction) of $400 for each dependent child under the age of 18 years.

When such a dependent becomes over 18, the exemption is automatically removed. However, it is at this very time in the case of a child attending college that the expenses of the parent in maintaining such child are the greatest. It is believed, therefore, that in the interest of equity, consideration should be given to providing that the exemption of $400 for a child should be allowed up to the age of 21, provided such child is attending college.

5. *Alimony.*—Under existing law and the proposed bill, a spouse who pays alimony is not allowed a deduction for such payment in his or her return. On the other hand, the spouse receiving the alimony pays no tax. This situation leads, under the new rates now proposed, to exceptional hardship. It may be possible, in fact, for a man having a substantial income and paying substantial alimony to have nothing left after payment of the tax. This is, of course, because he has to pay tax on all of the income which he enjoys and also has superimposed upon his income the alimony paid to the wife. It is suggested, therefore, that the committee should provide for the inclusion in gross income of the payee such alimony payments and exclude such payments from the gross income of the payor. As an optional suggestion, if legal questions are raised, it is suggested that a man pay a tax on his own income, reduced by the amount of alimony payments, and then pay a tax on his wife's income insofar as it consists of such alimony payments in an amount computed on the basis that the alimony payments were the entire net income of a single person.

6. *Custodian's fees.*—For many years the Bureau of Internal Revenue allowed custodians' fees, investment counsel fees, and reasonable management expenses in connection with handling personal as well as real property, to be deducted from income in arriving at taxable income. These deductions, in the case of personal property, are now being disallowed as the result of a court decision. It is believed that these expenses should be allowed by the law, since they are as necessary in the production of the income which is taxed as in the case of any other expenses in connection with the production of income.

7. *Excess-profits tax on new or recently formed corporations.*—The Congress has wisely provided, in the law now in force, for two optional methods of computing the excess-profits tax—namely, the invested-capital method and the average-earnings method. Both of those methods are retained in the pending bill. These two methods give reasonable treatment to a great number of corporations which would otherwise suffer exceptional hardship if only one method were provided for.

Neither existing law nor the pending bill, however, provides for any consistent treatment of new or recently formed corporations which have relatively low capital and are either completely or partially denied the use of the average-earnings method because they were not in existence during any or a part of the base period.

Our whole American philosophy demands the encouragement of new businesses and equal rights to them in comparison with rights enjoyed by the old. In fact, many sound reasons can be advanced why new companies should have some special measure of advantage during the first few years of their existence over the rights enjoyed by their seasoned competitors.

Since under existing law and the provisions of the pending bill new or recently formed companies are denied the use of the average earnings method or secure very inadequate treatment thereunder, it is suggested that such companies be entitled to compute their average earnings base by using the first 4 years of their existence as a criterion or such lesser number of years (including the taxable year) if they have not been in existence for 4 years. If it is thought this might open the door to profiteering, then it could be provided that only a certain percentage of the average earnings be allowed in computing the average earnings credit.

Much is said about taking the profit out of war and out of the defense program. This is meritorious to a certain extent, and still we must keep alive the profit motive. For example, everyone knows that nothing is more important than supremacy in the air, and yet what is the use of asking a man to put money into a new airplane plant if he takes all the risk but can only receive negligible profits after taxes?

In my judgment the developing aviation manufacturing industry is so important to this country in many ways that it should be especially classified and opportunity deliberately afforded the struggling smaller units to retain a substantial portion of their present abnormal earnings for purposes of future development.

8. *Reversal of excess-profits credit.*—I have prepared and submitted a special memorandum on this and the following point in behalf of Republic Steel Corporation. I respectfully refer the committee to this memorandum for my strong views on these points.

I strongly urge that the proposal to reverse credits be eliminated.

9. *Special 10-percent tax.*—The pending bill imposes a special 10-percent penalty tax on corporations using the invested-capital method of computing excess-profits tax. (See memorandum in behalf of Republic Steel Corporation.)

I strongly urge that this tax be eliminated.

10. *Qualified component corporation.*—On account of a technicality in the law which is believed to have been left in by mistake when the Senate revised the House bill (second revenue bill of 1940), a corporation which forms a wholly owned subsidiary during the base-period years and then dissolves it during the base period cannot include the subsidiary's earnings with its own in computing its average earnings during the base period. Inasmuch as this treatment seems inconsistent and is believed to have resulted from a mistake, it is hoped that the committee will see fit at this time to remedy the matter by changing the definition of a qualified component corporation so that the date specified in the law would be January 1, 1940. (See sec. 740 (c).)

11. *Personal holding companies.*—The purpose of the high rates imposed upon personal holding companies is obviously to get at those cases where profits are deliberately not distributed in order to permit an individual to escape high surtaxes. Examination, however, proves that the provision, as now contained in the law, works inequity in a number of situations which do not have this characteristic. It seems clear that it should be rewritten. For example, situations arise where a corporation's net income is taxed at the 75-percent rate applicable to net incomes of personal holding companies, in spite of the fact that the total amount of this net income is distributed to the stockholders. It would also seem equitable that a parent company holding practically all the stock of a subsidiary company and receiving practically all its income therefrom should not be considered to be a personal holding company, regardless of the fact that it possesses the legal characteristics, since it is really an operating company. There are actual cases where for legal reasons the holding company cannot be dissolved or where practical reasons prevent dissolution, such as financial inability to retire outstanding bond issues. It will be noted that there is no special tax on closely held operating companies.

12. *Capital stock tax.*—It is extremely difficult for corporations during this emergency period to make any accurate predictions as to their future earnings and still such predictions are necessary in setting their capital stock tax value. It is believed, therefore, that for the next 3 years corporations should either be given the right to revalue every year or at least, following the precedent

established in the past, should be allowed at their option to increase their declared value annually.

13. *Excise taxes.*—It would seem that some of the small excise taxes which return little revenue and which apply to articles not interfering with the national defense program, might well be omitted when such taxes decrease the taxable net income of the industries affected and thus hardly pay for the cost of administration. For example, a number of taxes, such as those on sporting goods, commercial washing machines, outdoor advertising, and the increased tax on safety deposit boxes, could be eliminated, among others, with very little loss of revenue.

Conclusion.—This memorandum is only intended to point out some of the general and special features which it is believed the committee might well consider in the pending bill. We are strongly of the opinion that our whole tax system needs careful revision. High rates make it imperative that the tax base be fair and be so designed as to prevent discrimination between industries or between different corporations in the same industry.

Respectfully submitted.

LOVELL H. PARKER,
Tax Associate, Gulp & Brookes, Washington, D. C.

The CHAIRMAN. Dr. Townsend.

STATEMENT OF DR. FRANCIS E. TOWNSEND, WASHINGTON, D. C., FOUNDER OF THE TOWNSEND NATIONAL RECOVERY PLAN

The CHAIRMAN. Dr. Townsend, you are appearing for the Townsend National Recovery Plan, or just generally on the question of the gross-income tax?

Dr. TOWNSEND. On the gross-income tax. Of course, I represent an organization that is vastly interested in taxation for a specific purpose but, I believe, gentlemen, that, a serious consideration of the gross-income tax at this time, when it is so obvious that the Government must raise enormous volumes of money, will be most profitable, and I want to cite you to the result of a gross-income tax as practiced in the Hawaiian Islands and in the State of Indiana.

Perhaps as good a presentation of the working of the tax as I could give is in the report of Hawaii's gross-income tax, as presented by their tax commissioner of the Territory of Hawaii. So, with your permission, I will read a couple of pages from that report. It is entitled "The Hawaii Gross Income Tax Law From the Standpoint of the Taxing Official."

We, who are the administrators of the various tax laws handed down by the legislature from time to time, fully realize the importance of a tax law such as our gross-income tax law. The numerous complexities and inability to adapt the requirements of each law to the machinery of the tax office, often present a complicated procedure, not only from the administrative standpoint, but also from the taxpayers' angle. Often the requirements of the law are such that the procedure demanded of the taxpayer is confusing to him. Further, it requires considerable time for the average bookkeeper to understand what is desired of him, thereby necessitating additional work and time to familiarize himself with the pertinent information in order that he may intelligently file the necessary reports for his employer.

In cases of this nature, it is obvious that this additional burden placed on the taxpayer is not received with open and outstretched arms. The taxpayer has his own problems in conducting the affairs of his business and more important to him is the worry of making his business pay and be in a sound financial position to meet his bills. Consequently, when additional requirements are demanded of him to comply with tax laws, the seed of antagonism is planted and the spirit of cooperation and good will so vitally essential in

the administration of our tax laws becomes a loss factor. In the administration of tax laws handed down to us, our ultimate goal is not only the assessment and collection of taxes but also a desire to retain the good will and cooperation of the taxpayer—and to this end we exert our efforts in our daily contact with the taxpayer.

In our experience we have found that the machinery of the gross-income tax law permits what we have often looked forward to—the ideal tax law, providing, as it were, the connecting link between the tax office and the taxpayers. It permits a program of direct contact with the taxpayers, which results in a "tax conscious" attitude on the part of the taxpayers. Unlike our net income and real property tax laws (which bring us in contact with the taxpayers in the case of real property approximately 3 times a year, and in the case of net income approximately 5 times a year) the gross-income tax affords contact with the taxpayers some 12 to 15 times during the year.

Let me just suggest here that one of the most valuable things in my estimation that could possibly be expected from any system of taxation would be the importance of knowing, the country knowing definitely every 30 days what the volume of business is, and who is carrying on that business.

We have no information available to us now, except about every 10 years when we have our census. It would be extremely valuable to the country to know every 30 days what the volume of business is.

Senator BAILEY. Doctor, does not the Federal Reserve Bank report monthly? Do not you get that in the Federal Reserve report?

Dr. TOWNSEND. Beg pardon?

Senator BAILEY. Do we not get a statement of the volume of business each month from the Federal Reserve report?

Dr. TOWNSEND. A great deal of that is merely an estimate. For instance, there is a tremendous volume of business done that is not recorded, and could not be any other way except as a report on the gross-income tax.

I will proceed for another page:

Again it is obvious from this standpoint that the frequent visits of the taxpayers to the tax office further provide an opportunity to acquaint them with features of other tax laws and the administration of this branch of our Government. It opens the door to the taxpayer to problems which we are confronted with in our daily routine, and leaves an impression in his mind that the taxing official, after all, is human—just as he is—and that the taxing official is not only carrying out the mandates, so to speak, of the law, but is endeavoring to perform the duties of his desk to the best of his ability as a public servant and for the compensation that the taxpayer himself indirectly contributes to.

Under the gross-income-tax law there is no intricate plan of assessing that calls for a specification beyond the mental scope of the average taxpayer. Instead, simplicity in forms and method of reporting gross receipts and computing taxes at the various rates require only a primary education. In prescribing our forms we have endeavored to remain within the bounds of simplicity. It is not necessary that one must have attended any our our higher institutions of learning to understand the method of filing.

The matter of licensing and registering is a simple process. The taxpayer applies at the local office, pays his $1, for which he receives a license granting him the privilege authorized under the law and a book of returns covering each month of the calendar year.

The returns follow the same trend. Here we have grouped the activities of the taxpayers under 14 classifications with applicable rates for his convenience. From here on, it becomes a matter for the average businessman, keeping even the simplest of records, to arrive at the total receipts or sales, during the month of operation, and to transfer the said sum to his return. Final computation of the tax completes the job of reporting and the assessment, indirectly made by the taxpayer. Payment of the tax at the collector's office (in the same building and on the same floor as the office of the assessor) is a matter of minutes.

From this point the routine affecting the said return is a matter of internal procedure for the tax office, which we have endeavored to keep on a basis of simple bookkeeping in order that the average employee on our personnel roster shall not be puzzled with complicated forms and entries. A decided advantage is gained by the Government through this monthly reporting and payment of taxes—it reduces that ever-dreaded delinquency roll. The taxpayers, soon enough realize that prompt monthly payments of their tax liability eliminate future worries and burdens.

Our law further permits a steady flow into the coffers of our Government of an average sum of approximately $375,000 monthly and is a barometer of the business trend of our territory in its various activities. The flow of moneys into the Treasury from this source has been so satisfactory that the gross-income-tax law is now commonly referred to as the "balancing tax law" of the Territory.

Its worth is known to our legislators, Government officials and businessmen who have the true interest of the community at heart. We quote herewith statement by our Territorial treasurer, William C. McGonagle, to one of our local papers—

"I only wish to comment on one phase of the gross-income tax which is of great benefit to the Territory. It is collected every month. This has eliminated the need of borrowing from the banks. The last time we borrowed against tax collections was in December 1935, and we have not had to pay any interest since that time."

I would like to insert it in the record, if possible.

On the Indiana gross-income-tax law, the report on which is found in A Study of Recent Tax Trends in Indiana, October 1940, by the Indiana Department of Treasury Board, gives a short summary to this effect:

Mr. Hoosier Citizen can look to the gross-income-tax collections, the property-tax rates, and the gasoline-tax revenue and account for approximately 90 percent of his tax burden. Contrast this with the myriad of tax laws in other States where countless factors determine the volume of receipts. Compare the collections year by year (if you can spare the time to visit a dozen different tax-collecting bureaus), and try to explain why your taxes are higher or lower. This situation is true in many other States which are rambling down Hodge-Podge Highway. To date, Indiana has elected to travel Simplicity Boulevard, and the great bulk of her citizens can see the open-book tax costs by following the trend of the three taxes—gross income, property, and gasoline.

If we do not simplify the taxing principle of government, gentlemen, we are going to arrive at a state of confusion, in fact, we have already arrived there, where the average citizen knows nothing about taxation and is disgusted with the whole procedure.

Now, you cannot have a Government supported loyally by its people who fancy themselves terribly abused continually. Today the Government is seeking every avenue of additional things to tax, when it could all be obviated, I believe, and reduced to a very simple procedure.

If we would look upon taxation and the necessity of taxation from the point of view of our market, of our public market, I think we would have a fairer conception of how best to maintain the revenues of government without any embarassment or confusion on the part of the taxpayer.

Since all of us, in our purchasing create the public market, why not say that is a public function, or a public possession, the market itself? Why not simply levy a rate of tax necessary to carry on Government functions, applied to everybody who uses the public market, and that is all of us, if we are making a living?

Say at the present emergency, we wanted to put a 5-percent tax on the gross revenues of all individuals and institutions, private institutions throughout the country, there could be little objection to the millionaires having to pay a thousand times as much as the $1,000-a-year-income man, if the rate were the same everywhere.

The gross income tax collected every month would have the tremendous advantage of telling us almost immediately where the tax was too heavily imposed, if such a condition prevailed.

I believe, gentlemen, that the taxing system will have as much to do—if we can simplify it, if we can bring it to an understandable attitude on the part of the general public—it will have as much to do as anything else in building up a loyalty to our Government which the hodgepodge system of taxation is destroying.

Now, let us see if we cannot simplify this one important function.

These two members of our United States have indicated the tremendous importance of this to themselves in the matter of raising revenue. The Hawaiian people demonstrated that they raised very considerably more revenue from the rate that they first adopted. They were going into debt at a tremendous rate and they had reduced the pay to State employees, they had done everything they could, and yet the revenues were constantly diminishing, until they adopted this simple procedure of imposing a tax upon everyone who used the public market.

In fact, they call it over there a "market privilege tax," and it is applied to everybody who engages in any kind of business, even the women who make the wreathes, they call "leis" to present to the visitors, all make their returns.

It is simplicity, indeed. All you have to do is take your cash register reports, or your books, state the amount of money that you have received in your business, and attach your check representing the rate that is applied to that business.

It has met with universal approval wherever tried. Even the big businesses of the Islands are ardently in favor of it, the pineapple industry and sugar industry. They say it simplifies matters and it broadens the tax base so that everybody is bearing proportionately his just share of the taxation.

I fear, greatly fear, the total collapse of the taxing system in this country if we cannot make it more intelligible to the people. This thing of constantly seeking new things to tax and imposing a higher rate upon the necessities of life, as well as the small luxuries, is going to end in utter chaos for our country.

I think one of the most beneficient things that this tax body could possibly do would be to simplify taxation so that the average man could understand it.

Now, I am not a tax expert; I do not know just what effect a gross-income tax would have upon the business of this country. I have my idea of how it might vastly build the business of the country, build the wealth that we produce, but of course, it is not your function to go into that here, and I am simply advocating the gross-income tax from the point of view of the average taxpayer who would hail it with acclaim, I know if it could be presented to him, and a lot of the tax forms abolished that we are cursed with today.

I do not want to attempt to go into the possibilities of revenue raising that a tax of this kind would produce, but I do want to say

that in this time of emergency, when tremendous taxes are going to be imposed upon the people, that if you wanted to have the population freely and willingly supporting their government, you have got to demonstrate to them that everybody is paying his proportionate share.

This plan of taxation was proposed by Adam Smith 200 years ago. I wonder why other nations have never undertaken it. He said at that time, the duty of every citizen of a country is to support his country in proportion to his ability to do so. That is in proportion to the revenue he enjoys under the protection of the State.

As you know, it is the general belief that the wealthy people of the country have opportunities of escaping their just taxation, that the imposition of the burden of taxation falls upon those least able to carry it. That is the general belief that is going to prevail. It is going to be intensified until we can make taxation an understandable thing by the common people. I believe that is the most important thing we can consider.

Now, as to how it might be made to produce an ever-increasing abundance of wealth, well if you will permit me to digress a little bit, I would like to say that if we could attempt this on a small scale, say, impose a low rate of tax on a gross income, and apply that to one important thing, the building in every community of an increase in the business done there—business is only done through the transfer of money from hand to hand—and if we could devise some way of taking out of the gross profit of the country the gross business, we will say, a certain specified rate and distributing that in all of the communities of the land—and we are proposing it as pensions, of course—that would immediately build a tremendous increase in the volume of business done throughout the entire country. That is what we all want.

I submit these reports, gentlemen, in the hope that this committee may go into an intensive study of the benefits that would accrue from a gross-income tax universally applied.

Now, in the bill that we have before the Congress, we exempt the low-income groups from this tax, but that would be only temporary. As the volume of business grew in the United States, the payment of wages would inevitably grow. When the average citizen is getting a decent standard of living, as suggested by the Brookings Institution, and other great fact-finding agencies, when we get the revenue of the individual up to a reasonable state, I would say that this form of tax should be applied to everybody, no matter how small an income.

If we had a decent standard of living, say of $100 a month, for each family, everybody would be quite willing to pay his pro rata share of the cost of government. Inevitably, the cost of government is going to continue to rise. The functions of government are broadening all the time. We may expect a constantly accelerating rate of tax imposed upon the public.

Let us get it down to a point where everybody can understand it and everybody will be willing to pay.

I think that is all I have to say.

The CHAIRMAN. Thank you very much.

Are there any question from the Doctor?

(No response.)

The CHAIRMAN. Thank you very much, Doctor.

Mr. Hushing? Mr. Hushing, you are chairman of the legislative committee of the American Federation of Labor?

Mr. HUSHING. Yes. Mr. Chairman, I have been smoking quite a bit and I notice the messenger passing around refreshments; I would appreciate a glass of water.

The CHAIRMAN. Yes.

STATEMENT OF W. C. HUSHING, WASHINGTON, D. C., CHAIRMAN, LEGISLATIVE COMMITTEE, AMERICAN FEDERATION OF LABOR

Mr. HUSHING. Mr. Chairman and members of the committee: Certainly some of the high officials of the American Federation of Labor appreciate the situation this committee is in and the situation the country is in generally. We are in favor of all the enormous expenditures that are being made for national-defense purposes, for aid to the democracies. We realize, too, that the normal functions of government must continue. We have a further realization that these enormous expenditures must be met, and I, for one, as a representative of labor, am doing everything possible to make our people realize the burden that will be placed upon them and which they will be obliged to bear. I want them to understand the necessity of it, and I believe if they do understand it, they will be willing to bear their full share without question.

It is my understanding that this Congress has made available for expenditures over $51,000,000,000; that the national debt is in excess of that amount, and that there is in the offing an additional appropriation of many billions of dollars for national-defense purposes and for further aid to the democracies.

Senator BAILEY. They have figures indicating that in 2½ years the national debt will be $110,000,000,000. You will find that in Mr. Kent's statement in the Washington Star, yesterday afternoon.

Mr. HUSHING. I was greatly interested in a statement which was inserted in the Congressional Record, I think it was the 14th of this month, by Congressman Taber, the ranking member of the House Committee on Appropriations. I have considerable confidence in his integrity and I believe he knows what is going on, and I quote from his figures. I shall insert in the record, if there is no objection, the Congressional page number, because I think his statement is worth checking. He gives the detail of all the obligations incurred by this Congress so far and they are in excess of $51,000,000,000.

Now then, as I said before, it is my intent, at least, to endeavor to educate our membership up to the facts that they must aid in meeting these tremendous expenditures. We do, however, want to see them levied in the proper way. We want to pay our proportionate share. As an individual I have always been glad to pay my taxes because I appreciate the things that the Federal Government, the State, and municipal government, have done for me; the protection I have enjoyed under them; the grand roads I drive over, the sewerage facilities, and other facilities, but it does gripe me sometimes to see people who are deriving benefits from this national program and who are otherwise well able to pay their taxes, evading them by a fake transfer of stock, which is, of course, legal.

Now, the executive council of the American Federation of Labor, when the Ways and Means Committee of the House had this bill under consideration, issued, under date of May 22, 1941, the following statement:

Taxes that would hit the pay envelopes of workers and cripple the buying power of the great mass of American people are the wrong way to finance the national-defense program.

We ask the House Ways and Means Committee, which is now considering a new tax bill to raise $3,500,000,000 in additional revenue, to reject any and all forms of sales-tax and pay-roll tax.

And I would ask and am now asking this committee to reject any form of sales-tax or pay-roll tax.

It is obvious that greater revenues must be raised to cover the cost of the vast defense program, but this money should not be taken away from those who do not earn enough now to maintain a decent standard of living for themselves and their families.

The minimum income which the average American family needs for decent food, shelter, clothing, and health care has been fixed by Government analysts at $2,000 a year. Yet official statistics show that two-thirds of American families receive less than $2,000 a year in income. In fact, more than one-fourth of the families in this country have total earnings of less than $1,250 a year, which is far below the income needed for bare subsistence.

American wage earners are already hard hit by taxes which directly and indirectly drain off a considerable portion of their income. These existent taxes, together with the rapidly rising cost of living, are making it increasingly difficult to maintain even present standards.

On the other side of the picture, we see that American industry is expanding on a vast scale and is reaping huge profits from the defense program. We believe that industry is entitled to a fair profit, but there is a absolutely no justification for the creation of a single new defense millionaire. Congress should revise the structure of corporate taxes accordingly.

Furthermore, there is need for even wider expansion of industry, not only for defense production, but for civilian needs. Unless this is done, serious shortages will be created in vital products needed in our everyday life.

We believe that the expansion of our modern production system, with the construction of thousands of new factories and the creation of many new industries, will provide a fertile source of additional revenue.

These fields and others should be thoroughly explored before Congress attempts to resort to heavier consumer taxes. The main burden of taxation is on the wage earner already. It would be economic folly to increase this load.

Mr. Chairman, we are opposed to a pay-roll tax such as has been suggested to this committee.

Senator CONNALLY. You don't mean a pay-roll tax for social insurance purposes?

Mr. HUSHING. Oh, no; I mean for general purposes. We are opposed to a sales tax; we are likewise opposed to the lowering of income-tax exemptions. It has been suggested that the exemption for single people, for examp' , ' e lowered to $700 per annum, so that those poor devils that make less than $13.50 a week will have to pay an income tax. We do not feel that that can be justified. I realize—I have been representing labor here at the Capital of the United States for almost 24 years, and I have a very high regard for the membership of the Congress. I don't agree with some of the things that are said in the newspapers about them. I believe the Congress at the present time, generally speaking, is considering this and other questions before it without any partisanship, and that is the way it ought to be now, and if there are any in Congress who are indulging in politics, they ought to change their ways, so I absolve anyone, especially in this committee, for any political motive, in any proposal they may make.

Now, I know that my very good friend, Senator La Follette, has year in and year out proposed amendments to lower the income-tax exemption. I am certain that friends may hold a difference of opinion without their taking offense and I believe that is the case insofar as Senator La Follette and I are concerned.

I know he has no political motive in mind, because he has offered these amendments, regardless of which political party was in power, but nevertheless there is a political implication there and if any member of the minority cared to use that as a political motive, if he could successfully, in prevailing upon the majority to adopt such a proposal, or a sales tax, which I understand Senator Vandenberg kind of likes, with certain exemptions, I believe it would change possibly the political complexion of the House and the Senate.

Senator VANDENBERG. That might be a good thing.

Senator CONNALLY. Senator Vandenberg didn't advocate a general sales tax; it was only in certain products, as I recall it; I am not committed to it, but I just say that in fairness to him.

Mr. HUSHING. I haven't seen the plan; I only know of it from what I have read in the newspapers. Now, we are a nonpartisan organization, and have no interest in the partisan phase of the situation, but we do believe that these poor devils earning meager salaries should not be taxed with an income tax. Of course they are taxed indirectly; they must bear a great burden indirectly.

Senator BAILEY. In that connection, excise taxes in this bill will probably be $2,000,000,000. What would you say would be the proportion paid by people of small income of that amount?

Mr. HUSHING. I don't know, but I do know this: It is the custom for the owner of real estate and for the proprietors of stores to pass on down in an indirect way the taxes levied on them. Now, from the political viewpoint that has been and is all very well. The fellow pays the tax; he doesn't know about it, but the moment he is directly assessed and told he must pay an income tax he is going to have his mind disabused of the idea that the Government simply reaches into the air and gets the money and gives it to him. Too many people in this country have that opinion now, and that is one reason I am trying to do in my small way what I can to educate our members. So, we object to that sort of taxation, and we will oppose it if we can secure friends on the floor to make our proposals, in case this committee does incorporate such type of taxation in the bill.

Senator VANDENBERG. May I call your attention to the fact, as Senator Bailey has indicated, that there are many, many sales taxes in that bill?

Mr. HUSHING. Yes; I understand that.

Senator VANDENBERG. And may I call your attention further to the fact that a general manufacturers' sales tax, to which I have given some favorable consideration, exempts food, clothing, and medicine, and only touches, according to your own statistics, 20 percent of the average wage earner's expenditures, and it is my opinion that the excises in the bill still will probably reach 20 percent of the earner's income, so we are only talking about an alternative method of raising this revenue.

Mr HUSHING. I read the entire bill over in a more or less casual way and I noticed there are plenty of articles with a sales tax on them. We are opposed, however, to a general sales tax.

Senator VANDENBERG. Then I suppose you would be opposed to the taxes in this bill?

Mr. HUSHING. Many of the items in the bill some would consider necessities, others are what would be considered luxuries which certainly none of the wage-earners would be able to purchase. For instance, refrigerators and radios——

Senator VANDENBERG. Wouldn't you think a general manufacturers' sales tax which had appropriate exemptions would be fairer to the wage earners than a reduced income tax level?

Mr. HUSHING. Yes; because a reduced income tax level would reach the masses more so than your proposal.

Now then, I come to a subject in the bill which I want to speak on specifically——

The CHAIRMAN. Your time is about up.

Mr. HUSHING. I notice there was no hitch in the people who preceded me.

The CHAIRMAN. We have not enforced the limit, but there are quite a few more to be heard.

Mr. HUSHING. I shall be as expeditious as possible. Now we come to title 6 in the bill—the radio tax.

The American Federation of Labor's executive council, in its meeting held this month in Chicago, adopted the following motion:

> While labor believes that the United States Government should levy extra taxes on the people to pay for defense work we do not believe in punitive or discriminatory taxation as a special levy on radio advertising broadcasts.

Now, this proposed tax, Mr. Chairman, is exactly the type of tax the American Federation of Labor executive council objects to in that statement. I had no intention of mentioning or referring to in any way those arguments made for or the organizations who advocate this tax, but their names are all in the record. Four of them are affiliates of the American Federation of Labor, and have joined with one organization not an affiliate of the American Federation of Labor in advocating this tax. None of the organizations advocating it have a single member employed by the radio stations. It is simply an attempt to deprive the radio industry, a new industry, of some of the work or some of their income and transfer it to an older industry where those who advocate the tax do have members employed.

On the other hand, we have four organizations directly employed by the radio stations. The radio stations employ approximately 40,000 people. The total membership of the organizations advocating this tax is but 85,000, and it is an interesting thing to note the main point of their contention, which, as I get it, is that it will deprive them of work.

Of course, they do mention the exorbitant profits made by radio stations, but it is not my intent to go into that phase of the question, because I believe that should be and will be taken care of by the excess-profits tax.

Their main idea, apparently, is to transfer work that is secured now by the radio stations, to the newspaper business, and, they contend that their members will lose work as a result.

Now then, according to the official figures submitted by those who advocate the tax, to the American Federation of Labor, since radio stations have come into existence, in the last 16 years, one of those

organizations has increased its membership 11.7 percent, another 9.25 percent, still another 37.5 percent, still another 45.8 percent, and still another 23.5 percent.

This is not a new question to us by any means. In the middle 1890's there was another new industry coming into existence, and, in one of the central labor unions on the west coast, which was located in the largest west-coast city, there was an organization which came in with a proposal that no member of the organization, of organized labor, ride in an automobile, even to a funeral, and the motion was adopted. This proposal here is on all-fours with and is made for the same reason that that motion was passed through that central body over 45 years ago; and in the future you will probably look back on this proposal in the same manner that you do on the one which I have just mentioned.

Senator VANDENBERG. Isn't it true that these unions who are suggesting these punitive taxes at the present time may be opening the way for a tax on all advertising by suggesting such a dangerous precedent?

Mr. HUSHING. That is true; there is some advertising, outboard advertising, also being taxed, but I have left those organizations to speak about that.

Now, a new industry does make what may be called excess profits, because the pioneers in the field have things pretty much to themselves, but as others see that it is a good thing, they enter into that field and competition becomes great with profits correspondingly decreased. That happened, I think, in the automobile industry. This proposal in this bill could well have been made against electric lights, because they put the manufacturers of oil lamps out of business, or could have been made by the candlemakers with the same force when the oil lamp came into use.

Now, that is our view in regard to this section, and we hope you will wipe it out of existence when you report the bill.

I appreciate the extra time, and your courtesy in listening to me.

The CHAIRMAN. Any questions?

Senator DANAHER. I would like to have inserted in the record here a communication received from the Associated Broadcast Technicians, which is a unit of the International Brotherhood of Electric Workers of the American Federation of Labor.

They asked specifically that our attention be invited to it, to sustain the position of the previous witness.

The CHAIRMAN. It will be entered in the record.

(The letter referred to is as follows:)

AMERICAN BROADCAST TECHNICIANS, LOCAL NO. 1230,
Bridgeport, Conn., August 16, 1941.

Hon. JOHN A. DANAHER,
United States Senator from the State of Connecticut,
Senate Finance Committee, Washington, D. C.

HONORABLE SIR: In the name of the Associated Broadcast Technician's Unit of the International Brotherhood of Electrical Workers of the American Federation of Labor, Bridgeport, Conn., Local No. 1230, I write you this communication

We, the members of Local 1230, wish to be recorded as very strongly opposed to the proposed tax on time sales of radio stations (H. R. 5417), scheduled for hearing on August 18, 1941.

Our stand on the matter is as follows:

The nature of this bill is discriminatory. If one form of advertising is taxed, then all should be taxed. Protecting the printing and publishing business from

the everyday risk of competition at the expense of the radio-broadcasting industry would not serve the public purpose and would also be contrary to the democratic principle of equality under law.

By virtue of existing Federal restrain on radio broadcasting and the absence of restraint on irresponsible publishers, the ethics of radio advertising are higher than those of any other form of advertising. Radio broadcasting has followed very closely to the narrow path of fair play and made freedom of speech an actuality during the critical and controversial times of our present history. The Senate should reward these virtues rather than penalize them.

The men engaged in the radio broadcasting field should have equal job opportunities with the men working in other advertising fields.

It is respectfully requested that our views in this matter be communicated to the other members of the committee.

Respectfully yours,

THOMAS DOYLE, *Recording Secretary.*

The CHAIRMAN. Mr. Beesley.

STATEMENT OF THOMAS QUINN BEESLEY, WASHINGTON, D. C., REPRESENTING THE NATIONAL COUNCIL ON BUSINESS MAIL

Mr. BEESLEY. I represent in Washington the National Council on Business Mail, the organization which represents the larger customers, patrons, and users of the post office, and the 14 trade and professional associations interested in the use of the mails for business and educational purposes.

Our purpose, this morning, is to draw to your attention the provisions of H. R. 5417, pages 79 to 82, which have to do with the use of motor vehicles and boats, the tax on them; a provision that places on the Post Office Department, at the request of the Commissioner of Internal Revenue, the duty of collecting this tax, the language of which provision in the House bill runs counter to previous practice of the Senate, and this committee, in all other bills which have been before the Congress, where the Post Office Department was called on for nonpostal services. The late Senator Harrison, our good friend, sponsored the language that I wish to bring to the committee's attention in the Social Security Act; the act providing for the sale of baby bonds; and other legislation wherein the Post Office Department was called on for nonpostal services by another department of the Government; in all of which cases the Post Office Department was compensated in cash by the particular department calling for the rendition of such services.

That has resulted in the recovery by the Post Office Department of quite a few millions of dollars in the past 6 years.

The first amendment was adopted in 1935. You will find the record of it, and the action on the Senate floor with respect thereto in the Congressional Record for 1935. The amendment was introduced by Senator O'Mahoney, seconded by Senator Harrison and adopted.

Senator CONNALLY. What page is that?

Mr. BEESLEY. Sir?

Senator CONNALLY. What page is that?

Mr. BEESLEY. Pages 82 and 83. The matter referred to in section G, here, requires even more serious attention than similar proposals in other bills, for the reason that the language of the bill requires the Post Office Department to keep on hand for sale by postmasters throughout the United States, stamps, stickers, or tags, which are

evidence of the payment of the $5 use tax on vehicles. That means a minimum of 29,000,000 transactions to be handled by the Post Office Department. It is not just one transaction in the handling of 29,000,000 stamps, stickers, or tags, but there is a long involved process in the transfer of the funds involved, at least 5 additional transactions for the keeping of accounts, making of reports to the Post Office Department, reports back by the Post Office Department to the local postmasters, and reports to the Treasury Department.

In many cases the postmaster will be at considerable expense out of his own pocket for the reason that the act provides that the Postmaster General may require the postmaster to give either additional or increased bond for the privilege of doing this additional work.

Now, who is going to pay the premium on that bond isn't set forth in the act. I won't go into that further, but I merely invite the committee's attention to it and feel the committee will question the fairness of the provision.

Senator CONNALLY. How are you interested in this matter?

Mr. BEESLEY. We are trying to reduce the cash cost of the operation of the Postal Service in order to bring postal revenues and expenditures into balance. We have appeared on all these bills in the last 5 or 6 years to advocate that principle, and it has resulted in the reduction of postal expenses materially, year after year, and in bringing the expenditures of the Department more nearly into balance. It may interest the committee to know that the apparent revenues for the fiscal year 1941 will be $812,000,000 in income and its cash deficit the lowest in history. I should judge that the cash deficit will be brought down to $25,000,000 this year.

Senator CONNALLY. You are wrong in that: The nearest the Post Office came to balancing its cash revenue and expenses was under Postmaster General Albert Burleson.

Mr. BEESLEY. I should have qualified that by saying, "with relation to volume."

Senator CONNALLY. The reason I interjected that is because Mr. Burleson was a very dear friend of mine and a great Postmaster General. That statement I made is true, isn't it?

Mr. BEESLEY. It is practically true.

Senator CONNALLY. Well, it is true or it isn't true?

Mr. BEESLEY. I can answer the Senator by saying there has been a change in accounting methods since that time, and there is some question as to whether the actual cash profits of the Post Office at that time were real or merely apparent. I don't want to get into that, because that is a question of bookkeeping.

Senator BROWN. There is a good deal of objection to this tax, and if we don't put the job on the Post Office, we have to put it some place else and I don't know of any agency of the Government, the set-up of which is such that it can do it as well. As I recall, we pay our duck-stamp tax through the Post Office. They are using it for the purpose of selling baby bonds and a good many other things that the Government requires, so if you are going to oppose it, unless you can suggest some other method more economical, I don't see why the Post Office shouldn't handle it.

Mr. BEESLEY. I don't object to having the Post Office handling it.

Senator BROWN. What do you want; do you want an appropriation?

Mr. BEESLEY. I think there should be inserted in this section of the act, or somewhere else, a provision requiring the Treasury Department to pay the Post Office for the service performed. That has been in all the other acts for the last 5 years. The language is almost standard; it has appeared in all the bills, and I should be glad to submit for the committee the language which is appropriate, and where it may be inserted.

Senator VANDENBERG. Do you feel the same way about it as the President, that the postmaster be called upon to help small taxpayers with their preparation of income-tax returns?

Mr. BEESLEY. If the system in making them out is to be simple enough so that it doesn't require more than the merest routine, there would seem to be no objection; but, if they have to become tax experts, as they had to become fingerprint experts in connection with alien registration, that would be something different.

Senator VANDENBERG. I am referring to the simplified form.

Mr. BEESLEY. Yes; I would see no objection to that.

(Thereupon Mr. Beesley submitted the following draft of a proposed amendment in connection with the above testimony.)

We offer to the committee, either as an amendment to this section, or as a special section separately of its own, the following text as it has appeared in previous acts of Congress:

The expenditures incurred by the Post Office Department in the District of Columbia and elsewhere in performing the duties herein imposed upon said Department shall be reimbursed to said Department by the Treasury Department, and the Secretary of the Treasury is hereby authorized and directed to advance from time to time to the credit of the Post Office Department from appropriations made for the collection and payment of taxes provided in this act such sums as may be required for such additional expenditures incurred by the Post Office Department in the performance of the duties and functions required of the Postal Service by this act.

The CHAIRMAN. Thank you, Mr. Beesley, for your appearance and your testimony.

Mr. Walton C. Ament.

Mr. Ament, you represent the newsreel companies?

Mr. AMENT. The five newsreel companies—Fox Movietone News, News of the Day, Paramount News, Pathé News, and Universal Newsreel.

STATEMENT OF WALTON C. AMENT, NEW YORK, N. Y., REPRESENTING THE NEWS REEL COMPANIES

Mr. AMENT. There is included in H. R. 5417 an excise tax of 10 percent on raw film, raw motion-picture film. As the bill is presently written this would impose a tax on news-reel film.

I don't think that was intended, nor do I think you will regard it as desirable, because such a tax would be a tax on dissemination of news.

There are five news reels operating in the United States. Their business is to present the news from here and abroad in motion pictures. They produce two issues per week for showing in all the motion-picture theaters in the country. Each issue consists of 1 reel running between 9 and 10 subjects—subjects of the same nature as those carried in the Nation's press.

The newspaper prints its news on paper, the news reel prints its news on film.

The news reel is a member of the press—a disseminator of news, and has been for 30 years.

A tax on the raw stock used by news reels would be similar to a tax on the newsprint paper used by newspapers, or a tax on leased wires used by press associations and radio-broadcasting companies.

Because a news reel's content is news it must be presented to the public through the country's theaters while its content is still news, otherwise the news-reel is of no value to the public.

To accomplish this thousands of prints or copies of a news reel issue must be made for immediate distribution throughout the country. The cost of these thousands of prints represents roughly 50 percent of the cost of a news-reel company's doing business.

Senator CONNALLY. You are talking about the film?

Mr. AMENT. Yes; I am. Within 3 weeks of such distribution that issue of the news reel has reached its maximum audience, and therefore its value as a source of income is lost.

This is not true of feature pictures where a print of such pictures continues in use as entertainment and as a source of income for a period well over a year.

On the average feature production, for instance, the cost of the raw film used in making prints does not run more than 3 percent of the total cost of production.

Yet the news reels are but a small portion of the large motion-picture industry. The raw film used by the news reels amounts to approximately 200,000,000 feet annually. The raw film used by the whole industry amounts to approximately 2,100,000,000 feet annually. Exemption of the news reels from the proposed 10-percent tax would reduce the revenue to be derived from the proposed tax by only $250,000 at the most.

The manufacturers of raw film have stated that they will pass the cost of the tax on to the newsreel companies. But a newsreel company cannot recover the cost of the tax from its customers because a newsreel is sold on a long-term flat rental contract.

War coverage has increased the cost of our business. Because of the war, we have lost the majority of our foreign income. This income cannot be recovered elsewhere because additional markets simply do not exist.

Because the cost of film is about 50 percent of the cost of a newsreel's doing business, because a newsreel cannot pass the proposed 10-percent tax on to its consumer, because exception of the raw film used by newsreels from the proposed tax on film would reduce the tax revenue by only $250,000; and finally because a tax on newsreel film would be a tax on the dissemination of news, we respectfully request that newsreel film be exempt from the proposed tax on raw film as outlined in paragraph 4, page 65, House bill, H. R. 5417. Newsreel film is film used by newsreels issued twice a week.

The CHAIRMAN. The newsreel business is done on a basis of future contracts?

Mr. AMENT. It is.

The CHAIRMAN. So that you couldn't pass it on; you have to make your contracts for a number of months in advance?

Mr. AMENT. A minimum of a year, and some contracts run longer.

The CHAIRMAN. Any questions?

Senator CONNALLY. As I understand you, this tax that you are talking about is not a tax on income but on the film itself?

Mr. AMENT. It is a tax on the film itself?

Senator CONNALLY. On the newsreel film; not a feature, just the news of the day that we see in the theaters?

Mr. AMENT. Exactly; I am talking only about the film used in newsreels.

Senator CONNALLY. Do you suggest an amendment as to how that can be effected?

The CHAIRMAN. It could be done very simply. The language reads this way:

Cameras and lenses; unexposed photographic films (including motion-picture films, but not including X-ray film or newsreel films shown biweekly).

Mr. AMENT. Semiweekly; biweekly, I think, means every 2 weeks, semiweekly, twice a week.

Senator CONNALLY. You don't tax newspapers; that is your argument?

Mr. AMENT. We regard ourselves, and we believe we are so regarded, as disseminators of news. We are members of the Press Gallery of the House and Senate. We regard ourselves, and I think are so regarded, as members of the press.

Senator CONNALY. If we don't adopt this tax, will you be rather generous in playing up some of the members in the newsreels?

The CHAIRMAN. Thank you very much.

Madeline Ross, Miss Madeline Ross? Are you appearing for the Consumers Union of the United States?

Miss ROSS. Yes; I am.

The CHAIRMAN. You may proceed.

STATEMENT OF MISS MADELINE ROSS, NEW YORK, N. Y., REPRESENTING CONSUMERS UNION OF UNITED STATES

Miss ROSS. I represent Consumers Union of United States, a nonprofit organization of consumers, with about 80,000 members throughout the United States. One purpose of Consumers Union, as stated in its charter, is—

to give information and assistance on all matter relating to the expenditure of earnings and the family income * * * to initiate and to cooperate with * * * efforts to * * * maintain decent living standards for consumers.

We feel that many of the tax proposals being made to this committee are a serious and unnecessary threat to the living standards of low-income consumers. Even families in the very lowest income category—who, even now, are not getting enough of the bare necessities of life—food, clothing, and shelter—are being seriously threatened by unfair tax proposals.

We know, of course, that defense efforts must be paid for; that there must be additional taxes to provide needed revenue. The people will not oppose any necessary sacrifices. But they must first be convinced that those better able to do so are bearing their share

of the burden. They must be sure that they are not being called upon to make enormous sacrifices, while wealthy individuals and corporations are allowed to keep grossly excessive profits.

Proposals now being considered, particularly those suggested by business groups, disregard entirely the enormous share of the tax-load already being carried by the poorest section of the population. Back of these suggestions would seem to be the notion that the biggest corporations and the wealthiest people should profit from the defense effort, while the little man pays the costs.

A study made for the Temporary National Economic Committee—Monograph No. 3: Who Pays the Taxes?--shows that in the 1938-39 period, because of the numerous regressive taxes, persons and families with incomes of less than $500 a year had 21.9 percent of their total income taken away from them as taxes.

Senator BROWN. I presume that is all taxes; Federal, State, and all other taxes?

Miss ROSS. Yes; that is all taxes.

Remember that this 21.9 percent slice out of their resources meant that they had actually less than $400 left, with which to maintain life for a year. Now compare this 21.9 percent with a total of 17.6 percent of income paid as taxes by people in the $3,000-to-$5,000-income group, and 17.9 percent for the $5,000-to-$10,000 group. It is not until we reach the level of $10,000 to $15,000 that we find families paying as high a percentage of their income for taxes as those in the very lowest income category.

How much of a burden were these taxes to the $10,000-to-$15,000 group? Data in the same monograph show that, in spite of the taxes, they were able to put aside as savings an average of 32.3 percent of their incomes. The poor families, on the other hand, were not so fortunate. Far from saving, they had to go into debt to the extent of 24.3 percent of their incomes in order to maintain themselves. It should be noted that the amount they had to borrow was just about equal to the taxes levied on them. Those who urged a broadening of the tax base, should look carefully at these figures. The trouble is that the base is already too broad.

We strongly urge the committee to reject such typical big-business proposals as those made here by a representative of the Investment Bankers' Association, who would put a 5- to 10-percent sales tax on all purchases except "absolute necessities."

This, we submit, is a discriminatory tax, directed against the poor, for the poor family must spend all it can earn or borrow, while the rich are putting big parts of their income into savings. This is not taxation based on ability to pay; it is taxation designed to wring the last possible penny out of the needy so that the rich can have more profits and more savings. Sales taxes and other taxes on consumer goods seem to be a favorite means of raising money, because they become part of the price of goods and are easily concealed from the taxpayer. But this kind of taxation, which is supposed to provide money for defense, actually strikes at the very foundations of our defense effort by injuring health and morale. Our public-health officials have been talking about the dangerous "hidden hunger" which is undermining the health of millions. Congress must not add to that hidden hunger by imposing more hidden taxes.

Proposals for new sales taxes become a brazen affront to the small man when they are offered as a substitute for the joint tax return for wealthy couples. Separate returns by families in the upper-income brackets are nothing more than a loophole for the evasion of taxes. Should this $300,000,000 loophole be again legalized by Congress, we shall be forced to conclude that Congress is willing to soak the poor in order to help the rich evade their just share of the tax burden.

And this is by no means the only evasion for which low-income families are asked to compensate. Ingenious deductions and bookkeeping devices known to corporate lawyers and accountants have played their part in reducing tax revenue received from corporations. An individual can sell securities at prices below the often inflated values at which he inherited them, and claim a capital loss, even though he may have received dividends on them for years and his loss is purely a paper one.

As another evasion, wealthy individuals often run their country estates as "farms," and thus can deduct so-called "operating expenses" from their taxable incomes. But is there any similar dodge for the poor? Has there been a single voice from the ranks of big business to suggest that the expenses of the workers' ancient and dilapidated car be deductible, even though it may be the only means he has of getting to and from the job that provides his small and overtaxed income? Has there ever been a suggestion by business that the worker be allowed to deduct his medical expenses—paid so that he can go on working—as "operating costs"? We know of none.

We are opposed, then, to any sales taxes, on the ground that they tax the poor disproportionately, that they are directed against the people who are already paying more than their just share of taxes.

We are opposed, too, to any lowering of the minimum income exemption, until every other means of raising the necessary taxes has been exhausted, until those who are profiteering from the defense effort have paid their share, and until the loopholes which the rich use to dodge taxes have been plugged.

We endorse the principle of a simplified tax return suggested by Secretary of the Treasury Morgenthau, in which tax is based solely on income, but we would propose extending the system to the rich, so that what the rich pay will be determined by their incomes and not by the cleverness of their lawyers.

After my statement, I will file for your consideration, a series of recommendations for a tax bill, which Consumers Union has drawn up.

I should like to emphasize two of the recommendations:

We urge that families with incomes over $5,000 a year be required to file a single joint income-tax return; that the legalized form of tax evasion through separate return be stopped.

In place of the present excess-profits tax, which permits corporations to make exorbitant profits without paying any excess-profits tax, simply because they have been able to gouge the public in previous years, we propose a steeply graduated excess-profits tax on all corporation profits about 6 percent of invested capital. At a time when sacrifices are being demanded of every one, should not big business be willing to sacrifice to the extent of accepting 6 percent, plus a share of the excess, as a fair return on its investments?

These are among the proposals we are filing. For the benefit of

millions of American consumers, we urge their adoption.

I should like to file this with the clerk at this time.

The CHAIRMAN. Yes; you may file it with the clerk.

(The document referred to is as follows:)

[Vol. No. 23, July 31, 1941]

BREAD & BUTTER—"FACTS YOU NEED BEFORE YOU BUY"

Published weekly and copyright, 1941, by Consumers Union of United States, Inc., a nonprofit organization. Subscription rates: $1 a year; in combination with Consumers Union Reports and Buying Guide, $4; single copies, 5 cents. Address all correspondence to Consumers Union, 17 Union Square, New York City (time does not permit answers to inquiries for special information).

Bread & Butter is issued to help consumers protect living standards by providing them with up-to-date, reliable information on what is happening to prices and quality of products. The information is compiled from all available sources; the trade press, commodity and wholesale markets, Government and industrial reports, interviews with trade specialists.

All information has been carefully checked, but it can make no claim to be infallible. Brand recommendations are based on tests and examinations made by Consumers Union and taken from Consumers Union Reports.

THE TAX BILL; BREAD & BUTTER'S PROPOSALS

The tax bill now being wrangled over in Congress can, with a single scratch of the President's pen, plough deeply into the health and general welfare of America's millions of low-income families.

The cost of defense, growing terrifically toward an estimated fifty to one hundred billion dollars, has to be paid for out of taxes. Everybody agrees to that. But living standards will be crippled unnecessarily in the process unless the burden is distributed according to ability to pay.

And last week Bread & Butter demonstrated that the tax program taking shape in Congress doesn't come within miles of that principle.

That's bad enough for consumers. But that's not all.

For whatever tax proposals are put into force now will serve as a model for future additional tax increases—and President Roosevelt has expressed the view that new taxes will be needed every year as defense costs mount up.

So an unfair tax program now may mean more and more of the same in the future. A fair program now might go far to help make tomorrow's steeper taxes bearable.

What can consumers do about the situation? They can do this. They can put all their weight, all their pressure, all their individual and organized efforts into a drive to make Congress adopt tax proposals which distribute the burden fairly.

Here and now, to get that drive started, Bread and Butter lists seven specific proposals designed to put the tax burden where it belongs, while bringing in the needed revenue. Reasons for each recommendation follow on the next page.

1. Corporation profits above 6 percent of invested capital should be considered excess profits, and excess profits should be taxed on a graduated scale beginning at 50 percent and going up to at least 80 percent.

2. Undivided-profits taxes should be written to prevent corporations from increasing their already enormous surpluses, which ultimately means smaller tax payments.

3. The proposed 6-percent surtax on corporation earnings above $25,000 should be put into force.

4. The income from all Government securities, issued in the past or present, should be taxed.

5. Any transfer of wealth—whether by gift, inheritance, or insurance—should be covered by a single tax (with a rising rate); transfers of any kind totaling above $25,000 should be taxed.

6. Upper-bracket incomes should be taxed more sharply (and loopholes available to these incomes should be closed) before increasing either the rates on incomes of $2,000 to $5,000 or taxes on consumer goods.

7. Families should be required to file a single joint tax return.

Why these proposals?

Here are the reasons for Bread & Butter's recommendations:

1. Why so much attention to excess corporation profits?

Because the handful of corporate giants who get the bulk of defense orders are cashing in heavily today; a strong excess-profits tax should therefore be the heart of any good tax bill.

As Federal Reserve Board Chairman Marriner Eccles has said: "The first source of defense revenue should be the corporation tax and excess-profits tax because, generally speaking, corporations are the greatest beneficiaries, directly and indirectly, from defense expenditures."

Today corporations can figure their normal profits either as 8 per cent of their invested capital (which is too high) or as 95 percent of the average profit they made from 1936 to 1939. A company which cashed in during those years could make exorbitant profits indefinitely and never pay any excess-profits tax.

The present law helps entrenched monopolies, since new firms have to pay excess-profits taxes on the same income which an established and profitable competitor can consider normal.

An excess-profits tax of the type advocated by Bread & Butter raised $2,500,000,000 in 1918; today it could certainly bring in far more than the $600,000,000 expected from the plan of the House Ways and Means Committee.

2. Why an undivided-profits tax?

Because corporations are building up enormous surpluses to pay out in dividends after the war, when income-tax rates will probably be reduced. Thus persons with large incomes from dividends evade paying their just share of defense.

3. Why a 6-percent surtax on corporations' earnings above $25,000?

Because, as with individuals, corporations with large incomes should pay a heavier tax than corporations with small incomes. And from the point of view of the national welfare, additional surtaxes might well be aimed at entrenched monopolies in any field.

4. Why tax the income from Government securities?

Because billions of dollars worth of these securities are tax exempt today, and their interest makes up a large part of the income of many wealthy persons.

The Government issues no more tax-exempt bonds; but if those issued in the past were taxed, the Treasury—which has proposed such a tax—estimates that as much as $300,000,000 of additional revenue could be secured annually.

5. Why a uniform tax for any transfer of wealth?

As indicated in last week's Bread & Butter, a wealthy man today can give $40,000 to his heirs, leave another $40,000 worth of insurance, and still another $40,000 in his will—before incurring any taxes whatever.

Not only is the gift-tax rate lower than the inheritance tax, but by giving away half his estate and leaving the other half in his will, a millionaire can pay both gift and inheritance taxes at a far lower rate.

Any transfer of more than $25,000 should be taxed, with the tax becoming progressively steeper as the amount increases—regardless of the method of transfer used.

Bread & Butter agrees wholeheartedly with President Roosevelt's statement: "The transmission from generation to generation of vast fortunes by will, inheritance, or gift is not consistent with the ideals of the American people."

6. Why increase taxes on upper incomes?

Because not only are the rates too low, but there are so many loopholes that wealthy men almost never pay the full rate. Last week's Bread and Butter explained in detail some of the loopholes which should be plugged, in addition to the increase in rates.

7. Why a single joint income tax return for families?

Because wealthy husbands and wives with separate incomes, by filing separate returns as allowed today, have turned the privilege into a device to avoid paying full tax rates.

If there are to be any exemptions, they should be for families making less than $5,000 because of the added household expenses when the wife is working.

Break up the horse trading

If all the loopholes in present tax laws were sealed, there would be little necessity for the proposed tripling of income taxes in the lower brackets, and for new or increased commodity taxes on automobiles, tires, liquor, household appliances, theater admissions, etc.

These proposed commodity taxes would take an extra billion dollars per year from consumers. And they will surely be followed by even higher ones unless consumers work fast.

Bread and Butter's proposals are a realistic effort to raise revenue for the Government's mounting expenditures.

But they place the burden where it properly belongs—on the corporations and the large incomes which can best afford to pay higher taxes, and which are benefiting most from defense and speculative profits.

Bread and Butter's proposals, furthermore, are based on the idea that taxation should be used to get revenue—not as a device to prevent inflation by cutting down consumer purchasing power.

There are other, more effective and more legitimate ways of dealing with inflation besides soaking the consumer and increasing the tax load on small incomes. Bread and Butter will discuss some of those ways in the next issue.

But right now consumers must go into action to break up the political horse-trading that is passing for tax discussion in Congress, and to bring the tax program back to a realistic foundation.

Bread and Butter's proposals, carefully worked out and far from extreme, are a starting point.

Write your Congressman and Senators; call these proposals to their attention; urge them to eliminate the glaring loopholes in the present tax structure.

The alternative will be a sacrifice—heavy and unfair and unnecessary to boot—on low-income groups throughout the Nation. And such unnecessary sacrifice, inevitably reflected in the health of the people, is a major blow at the ability of the Nation to defend itself.

BUY THE FOLLOWING NOW, ANTICIPATING FUTURE NEEDS

Keep in mind that your buying should be sensibly guided by your needs and income. Avoid reckless or unplanned buying. Stock up, but don't stock up too heavily. Changes in the war situation or Government action might change the whole price trend.

Fertilizers

Not long ago the United States Department of Agriculture warned that a fertilizer shortage might develop next year. Shipping and power shortages, the need for chemicals in munitions making, and the added demand for food were mentioned as possible causes for the shortages.

It isn't likely that fertilizer production will be hit as hard as it was in the last war, but wholesale prices are rising already and will probably continue on up.

If you have a garden, it is advisable to buy fertilizer now and store it for later use. There's an extra reason for this: with prices of canned vegetables going up drastically, it may pay to raise and can more of your own produce in the next few years.

Antifreeze

Last March Bread & Butter advised the purchase of antifreeze supplies for next winter. If you didn't buy then, better do it now or as early as possible in the fall.

Consumers Union has found that the best type of antifreeze for general use is the ethylene glycol type, which is likely to be in great demand for use with aircraft engines. Eveready Prestone, Zerex, Firestone, Frigitone, Cities Service Permanent, and Perma-Guard are all of this type and all priced about the same.

You can still get ethylene glycol preparations at last year's price ($2.65 a gallon) if you can find a garage or service station which has them.

Sports equipment

Sports equipment of all sorts is going up in price. Some manufacturers have already sold out all their summer goods; and when another season comes around, prices will certainly be higher.

Skis, ice skates, and roller skates have gone up at wholesale. So have sleeping bags, inflatable rubber mattresses, life preservers, camp cots, golf bags, and basketball and football lines.

Buy your equipment for next winter out of last year's stock if you can, and buy now for next summer. This year, especially, as Bread and Butter has advised before, it would be a good thing to buy as many Christmas presents of this type as possible before the summer is over.

Good buys in skis (based on opinions of expert skiers—not on laboratory tests) are: Anderson & Thompson (five grades from $12.50 up); Bean ($8.85 and up); Groswold ($10 and up); Northland ($8 and up—cheaper grades only fair); Sears' (four grades from $4.09 to $17.85, plus postage); Tyrol ($7.50, $12, and $15); Ward's (four grades from $5.89 to $16.89, plus postage). See Consumers Union Reports, January 1941, for details.

Acceptable ice skates (in order of quality) are: CCM Winterclub ($20); CCM Pastime ($15.50); Sears' catalog No. 1034 ($9.04, plus postage); Nestor Johnson ($7.50); Sears' catalog No. 1027 ($7.08, plus postage); Aristocrat ($8.50); Ward's catalog No. 6090 ($9.95, plus postage); Sears' catalog No. 1062 ($4.08, plus postage); Alfred Johnson No. 86 ($7.50); Ward's catalog No. 6017 ($6.98, plus postage). From Consumers Union Reports, November 1940.

Canned fruit

Wholesale prices on canned Hawaiian pineapple from this year's crop are higher than they were for last year's. Any increase in the shipping rates from Honolulu will add still more to the price.

The first prices on the new pack of California cling peaches were so high that they surprised even the trade, which had expected some increase. They were over 50 percent higher than last year's first tentative prices.

Recent prices on new-pack apricots were also higher in spite of the fact that the crop this year is over twice as large as last year's.

New prices on Bartlett pears are the highest in a decade or more.

And the packers are already withdrawing these new price lists, apparently with the intention of pushing prices up still further.

Retail prices have gone up a little. But it will be some weeks before the full effect of the new wholesale advances is felt. Buy now if you can.

Tea

Wholesale prices on some varieties of tea have risen more than 40 percent since the beginning of the war, and the possibility that there won't be shipping space for tea is beginning to worry the trade. Prices have gone up in the exporting countries and shipping rates have gone up a lot.

Buy a supply now before retail prices reflect the full amount of the wholesale increase.

When Consumers Union tested teas, among the good quality black teas were: Tetley Orange Pekoe and Pekoe (4 ounces for 23 cents); Mayfair (Atlantic and Pacific) Orange Pekoe India Ceylon (8 ounces for 39 cents); and Grisdale Flowery Orange Pekoe (4 ounces for 25 cents).

Prices are as of 1939; the ratings are based on the opinions of an expert tea taster. Thirty-one brands were tested; Consumers Union reports, March 1939.

BUY THE FOLLOWING AS NEEDED BUT PROTEST HIGHER PRICES

This does not mean that you should not protest all higher prices. You should, whether you have been able to stock up or not.

Butter and Margarine

New standards for oleomargarine were set up recently by the Food and Drug Administration. The list of permitted ingredients was expanded and there is talk of repealing Federal taxes which discourage the sale of oleomargarine.

No doubt dairy States will still fight the use of margarine within their own borders as they have been doing for some time. But consumers in other parts of the country may have to swing more and more to the use of margarine as the price of butter, supported by the Government, goes on up.

Butter production this spring was high; stocks of butter in storage are high. That doesn't mean, though, that consumers are going to be able to eat more butter in the coming months.

The wholesale price in June was the highest for any June since 1929. And there's every prospect that prices will be still higher later in the year.

But margarine prices will need watching, too. Coconut oil can't be imported now in large quantities and the price of cottonseed, soybean, and other oils from which margarine is made have been shooting up so fast that, unless something is done pretty quickly, even the vegetable-oil products will be out of sight.

When vitamin A is added to margarine, it is a reasonably satisfactory substitute for butter. Read the label carefully, though, before buying. If there's no statement about vitamin A, there won't be any in the margarine.

DON'T BUY UNTIL FURTHER NOTICE

"Low-end" cottons

Prices of cotton textiles of all sorts have increased greatly—as much as 80 percent in some cases. Ceiling prices set recently have already been revised upward.

Furthermore, it seems to be generally true that cheaper qualities of goods have gone up more than better ones. Rising prices are going to take a bigger bite out of the standard of living at the low end than at the high.

Unless you are an expert judge of textile quality, don't buy wash dresses, men's shirts, towels, sheets, and pillowcases at the lowest prices.

In January of this year Consumers Union found that bath towels selling for less than 35 cents, for example, were too low in quality to be economical buys.

Senator BAILEY. I think we should say that if we could get this 10½ or 11 billions from the people able to pay—the wealthy people—we would do it. There is no question but what Congress would do it. Our difficulty is to get the money. If you will show us how we could get it we will be glad to consider it.

Miss Ross. I have filed with you a number of proposals our organization has made to that end, but what I tried to say was we feel that the poor people are willing to make sacrifices, if necessary, but we ask you to explore every method of having those better able to pay do so before asking the less able—poor people—to make these sacrifices.

The CHAIRMAN. Mr. William Shipley.

Mr. SHIPLEY. Mr. Chairman, I want to apologize to you and the other members of the committee for not being here. I was advised erroneously yesterday I was to be the last witness on the calendar and that is why I was not here.

STATEMENT OF WILLIAM S. SHIPLEY, CHAIRMAN OF THE BOARD, YORK ICE MACHINERY CORPORATION, YORK, PA.

I appear before this committee to point out what appears to be misleading language used in section 546 of the proposed revenue bill of 1941.

As I understand this proposed section, it was the intent to tax that part of our business that came under the heading of "Luxury or semi-luxury" apparatus, and not the intent to tax all refrigerating and ice-making apparatus that is manufactured by our industry. However, as the bill is now worded, it could be interpreted to mean taxing all refrigerating and ice-making machinery, regardless of size or use. We cannot believe that it was the intention of this body to single out, of all the durable-goods manufacturers, the refrigerating and ice-making industry to put a special tax upon, especially when it is realized that refrigerating and ice-making apparatus is such a necessity to the welfare and health of the people and also such a vital part of the national-defense program.

Realizing that this committee desires the facts as to how any given tax proposal will unjustly affect the taxpayer, I wish to direct the committee's attention, specifically to section 546 of this revenue bill.

The purpose of section 546, we believe, is to increase the class of products taxed under section 608 of the Revenue Act of 1932, which act levied a tax on mechanical refrigerators of the household type, and the component parts thereof. This 1932 excise tax, directed toward this so-called luxury or semi-luxury article, was held not to include refrigerators or their component parts designed primarily and solely used for commercial purposes.

For the most part, the language used in the House bill is clear and accomplished the purpose. However, I feel that the use of the terms "refrigerators" and "ice-making machines" as used in subsection (a) is too broad and would be misleading, if our interpretation of the intent is correct.

The word "refrigerator," standing alone, is without limitation as to size or use. If it is a fact that refrigerators only used in connection with the small mechanical household refrigerating units are proposed to be taxed, the language now used would include the refrigerators of the large size that might be used by the packing industry and other large cold-storage plants in which food products and other essentials were stored.

It is my opinion that the House Ways and Means Committee did not intend that such a result would follow from the use of this term, but rather intended to limit the tax to those refrigerators which might be used in connection with small refrigerating apparatus.

The term "ice-making machines" is without meaning unless it shall be construed to include only those articles which are of the self-contained or movable type, that is to say, which contain within the unit itself the apparatus necessary to produce ice.

In the interest of clarification, I would recommend that subsection (a) be so worded as to limit the articles sought to be taxed to those of the self-contained or movable type. This would have the advantage of identifying the class of articles taxed and would limit their size to those normally used in commercial operations.

I assume that subsection (b) was intended to tax the component parts which are suitable for use with or as a part of those articles taxed in subsection (a). The language used in subsection (b) wherein, for example, a compressor is taxed, which is suitable for use as a part of, or with a refrigerating plant, or refrigerating system, taxes apparatus used in a large cold-storage plant or large commercial ice plant of any conceivable size. The language used does not limit the type of the component parts which would be suitable for use in connection with those articles taxed in subsection (a).

It is my opinion that the House intended to tax certain specifically named articles and the refrigerating apparatus which are, or could be, used in connection with the operation of those articles. Surely it was not the intent of the House to tax specific articles and open the door wide to the taxation of similar parts, no matter of what size or the use to which they might be placed.

Subsection (b) could be clarified simply by restricting the tax to the refrigerating apparatus which would be suitable for use with, or as a part of, the articles specifically taxed in subsection (a).

I call your attention to the fact that this is exactly what was done in connection with the taxation of our air conditioners and their component parts. In subsection (c) the House taxes our self-contained air conditioning units and in subsection (d), it taxes those component parts which are suitable for use as a part of or with such self-contained air conditioning units.

In my opinion, the administration of section 546 could be simplified, and considerable confusion and uncertainty as to the type and size of the articles sought to be taxed could be eliminated if the suggestion I have offered to you gentlemen could be followed.

It is obvious that the duty of defining the terms "refrigerators" and "ice-making machines" will fall upon the Commissioner of Internal Revenue who will be bound by the language used in the section. It follows then that refrigerators of all sizes and no matter how used would be subject to tax and great difficulty would be encountered as to properly defining the term "ice-making machines." Also consideration must be given to the fact that the Commissioner of Internal Revenue might have a hard time restricting the tax to refrigerating apparatus which is used in connection with, or as part of, the articles specifically enumerated in subsection (a), but might be required to tax all apparatus mentioned in subsection (b), regardless of its size or the application in which used.

I earnestly request your favorable consideration to the suggestions offered so that section 546 might be clarified and a workable tax structure erected.

The CHAIRMAN. Mr. Shipley, under existing law there is a tax on mechanical refrigerators which applies wholly to refrigerators of a household type.

Mr. SHIPLEY. Yes.

The CHAIRMAN. Now, the purpose of this provision was not only to increase that tax but to make it applicable to all refrigerators of this type?

Mr. SHIPLEY. Of that type?

The CHAIRMAN. Yes;

each such article having, or being primarily designed for use with a mechanical refrigerating unit operated by electricity, gas, kerosene, or gasoline.

It applies only to that type?

Mr. SHIPLEY. That would take in all sizes.

Senator CONNALLY. What percentage of your business is Government business?

Mr. SHIPLEY. I should judge at this moment 48 to 50 percent; that is, direct—I don't know how much indirect.

Senator CONNALLY. Do you manufacture the small refrigerators?

Mr. SHIPLEY. We don't manufacture the household, but do manufacture some small units.

Senator CONNALLY. But you don't manufacture this type that is being taxed?

Mr. SHIPLEY. We do; some of it.

Senator CONNALLY. Under the present law, does it touch any that you manufacture?

Mr. SHIPLEY. No; you tax household refrigerators up to 20 cubic feet and we do not get down that small.

Senator CONNALLY. You are not paying any taxes and you are being pretty careful to see that you should not?

Mr. SHIPLEY. No; that is not it.

Senator CONNALLY. You are in favor of extending it to the household refrigerators but not to the items you manufacture?

Mr. SHIPLEY. No, sir; that is not it; I am perfectly willing to pay our share of taxes, but I cannot see why out of all the durable-goods manufacturers we should be singled out.

Senator CLARK. As a matter of fact, your company doesn't manufacture these household units now?

Mr. SHIPLEY. No; not now; we don't manufacture any.

Senator CLARK. You want to put a tax on the household article rather than on the class you manufacture?

Mr. SHIPLEY. No, sir; I only ask, Is it the intent to tax all refrigerating machinery? Is that the intent? Or is it the intent to tax only those which are luxuries or semiluxuries.

Senator CLARK. Do you think it is a luxury to have air-conditioning units in these Government buildings?

Mr. SHIPLEY. Yes.

Senator CLARK. And that they ought to be taxed?

Mr. SHIPLEY. Yes. You are going to tax these room coolers that you speak of. We say that is all right, but we do not believe we should be singled out over the whole durable-goods manufacturing field in this country, and have it said, "We are going to tax you."

Senator CLARK. Any excise tax is singling out some particular industry, isn't it?

Mr. SHIPLEY. No, sir.

Senator CLARK. Any excise tax, gasoline or what not, is a tax on that particular product, isn't it?

Mr. SHIPLEY. But when there are thousands of members of the durable-goods industry all manufacturing durable machinery of some sort, why pick one out and tax him?

Senator CONNALLY. Did you manufacture the apparatus, for instance, for cooling the Mayflower Hotel?

Mr. SHIPLEY. Yes, sir.

Senator CONNALLY. I live across the street in an apartment—it is not air conditioned: If I want a unit for my apartment, you think I should be taxed for that and the Mayflower should not pay a tax?

Mr. SHIPLEY. I said I thought they should.

Senator CONNALLY. Well, that is not a household unit; how can we tax them?

Mr. SHIPLEY. If you said "comfort cooling" that would cover it, because comfort cooling, that gets you away from the idea of industry. For instance, Ford has a big plant in his airplane factory, and that is "industry" not "comfort."

Senator CONNALLY. Thank you.

Senator DANAHER. While the next witness is on her way forward let me submit for the record a letter which has come to me to be submitted to you from the National Catholic Welfare Conference with respect to the exemption of admission tickets. I would like to have it in the record.

The CHAIRMAN. Yes. It will be included.

(The letter referred to is as follows:)

NATIONAL CATHOLIC WELFARE CONFERENCE,
NATIONAL HEADQUARTERS,
Washington, D. C., August 22, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: I have been directed by the administrative board of archbishops and bishops of the National Catholic Welfare Conference to inform you, and through you, the Committee on Finance and the United States Senate, of the attitude of the National Catholic Welfare Conference with respect to section 541 (b) of the internal revenue bill (H. R. 5417) now before the Committee on Finance of which you are the chairman.

It is proposed by section 541 (b) to repeal section 1701 of the Internal Revenue Code which has been law since February 26, 1926.

Section 1701 provides in effect that no tax shall be levied under the admissions tax subchapter in respect to any admissions whose proceeds inure exclusively to the benefit of religious, charitable, or educational agencies.

The National Catholic Welfare Conference is deeply sympathetic with the task presently before the Congress in providing revenues with which to meet the heavy demands laid upon the Government by the national defense program.

In revenue laws, State and Federal, theretofore enacted, both before and during the present defense emergency, are embodied provisions which accept and safeguard the tax exempt status of religious, charitable, and educational agencies as inherent under the system of liberty prevailing in the relationship of these agencies to the State.

These agencies render a community service. The Congress understands the importance of this community service. Today that importance is enhanced because of the indispensable contributions these agencies make to the promotion and preservation of national morale.

To enact section 541 (b), as it now stands, would impose a burden upon agencies rendering these important contributions to defense morale which we are convinced the Congress neither wishes nor intends to impose.

It may be argued that admission taxes are paid by the individual, and therefore place no burden upon the organization.

We respectfully submit that, while nominally and technically this is true, it nonetheless remains the fact that the morale-minded citizen who contributes to agencies rendering these services by purchasing admissions to programs and benefits given is forced to pay more than he would have had to pay had the tax not been imposed. The consequent handicapping of the work done by the agency is obvious.

The further fact is that the process results in a duplication of effort that is costly, at a time when the avowed purpose of the bill is to devote all possible effort to defense. The tax would be collected in order to realize revenue to be expended for public purposes. It follows that the tax should not be imposed upon agencies already rendering such services in order that Government might realize moneys to be expended through political agencies in rendering service already provided by voluntary agencies.

In addition, while the tax is on the admission, the responsibility and burden of collecting the tax and paying it to the Government is placed upon the religious, charitable, and educational organization charging the admission. This is the first instance in Federal legislation wherein these organizations would be placed in such a role.

The enactment of section 541 (b) in its present form would constitute a departure by the Congress from a long- and well-established policy of the United States Government.

We, therefore, respectfully submit that section 541 (b) should be stricken from the revenue bill now being considered by your committee.

Faithfully yours,

MICHAEL J. READY, *General Secretary.*

Senator CONNALLY. At this point I would like to insert two briefs in the record. One concerns the subject of joint returns and the other the gasoline tax.

I don't want to read these briefs; I just want to insert them in the record for the consideration of the committee.

The CHAIRMAN. You may put it in, Senator. Hand them to the clerk, please.

(Thereupon two briefs, as above indicated, were handed to the clerk for filing in the record, and are as follows:)

MEMORANDUM BRIEF OF GEORGE DONWORTH, OF SEATTLE, WASH., IN OPPOSITION TO ANY PROPOSAL FOR REQUIRING INCOMES OF HUSBANDS AND WIVES, OR ANY PART THEREOF, TO BE JOINTLY RETURNED OR TAXED

PRELIMINARY STATEMENT

At the time this brief is prepared it is not known to the writer what will be the nature of the proposals that will be made to the Senate committee for a compulsory joining of the incomes of the husband and the wife, or any part thereof.

NOTE.—All italics in this brief are those of the writer.

IT IS UNCONSTITUTIONAL TO REQUIRE ANY TWO INCOMES, OR PARTS THEREOF, TO BE ADDED TOGETHER AND TAXED AND SURTAXED ACCORDINGLY

The case of *Hoeper* v. *Tax Commission of Wisconsin* (284 U. S. 206, 76 L. ed. 248) is conclusive against the constitutionality of measuring the tax of a husband or wife by reference to the income of the other spouse.

Here is a part of the language of the Supreme Court in the *Hoeper case*. The Court said:

"Since, then, in law and in fact, the wife's income is in the fullest degree her separate property and in no sense that of her husband, the question presented is whether the State has power by an income-tax law *to measure his tax*, not by his own income but, *in part*, by that of another. To the problem thus stated, what was said in *Knowlton* v. *Moore* (178 U. S. 41, 77, 44 L. ed. 969, 984, 20 S. Ct. 747), is apposite:

"'It may be doubted by some, aside from express constitutional restrictions, whether the taxation by Congress of the property of one person, accompanied with an arbitrary provision that the rate of tax shall be fixed with reference to the sum of the property of another, thus bringing about the profound inequality which we have noticed, would not transcend the limitations arising from those fundamental conceptions of free government which underlie all constitutional systems.'

"We have no doubt that, because of the fundamental conceptions which underlie our system, any attempt by a State to measure the tax on one person's property or income by reference to the property or income of another is contrary to due process of law as guaranteed by the fourteenth amendment. That which is not in fact *the taxpayer's* income cannot be made such by calling it income."

While the *Hoeper case* involved a State statute which was struck down as being in violation of the fourteenth amendment to the Federal Constitution, it is obvious that the same ground relied upon in that case would render a Federal statute of similar import void under the fifth amendment. The Supreme Court in the case of *Heiner, Collector*, v. *Donnan* (285 U. S. 312, 76 L. ed. 772) (involving a Federal tax under act of Congress) expressly held that the restraint imposed upon Congress by the fifth amendment to the Federal Constitution is the same as that imposed upon the States by the fourteenth amendment so far as this question is concerned. The Court said:

"The restraint imposed upon legislation by the due process clauses of the two amendments is the same."

In the *Heiner case* the Supreme Court relied upon the *Hoeper case*, and used the following language:

"In *Hoeper* v. *Tax Commission* (284 U. S. 206), ante, 248, 52 S. Ct. 120, supra, this court had before it for consideration a statute of Wisconsin which provided that in computing the amount of income taxes payable by persons residing together as members of a family, the income of the wife should be added to that of the husband and assessed to and payable by him. We held that, since in law and in fact the wife's income was her separate property, the State was without power *to measure his tax* in part by the income of his wife. At page 215 we said:

"'We have no doubt, that, because of the fundamental conceptions which underlie our system any attempt by a State to measure the tax on one person's property or income by reference to the property or income of another is contrary to due process of law as guaranteed by the 14th Amendment. That which is not in fact the taxpayer's income cannot be made such by calling it income. Compare *Nichols* v. *Coolidge* (274 U. S. 531, 540, 71 L. ed. 1184, 1192, 52 A. L. R. 1081, 47 S. Ct. 710.)'"

The Supreme Court further said in *Heiner* v. *Donnan:*

"Plainly, this is to measure the tax on A's property by imputing to it in part the value of the property of B, a result which both the Schlesinger and Hoeper cases condemn as arbitrary and a denial of due process of law. Such an exaction is not taxation but spoliation. 'It is not taxation that government should take from one the profits and gains of another. That is taxation which compels one to pay for the support of the government from his own gains and of his own property.' *United States* v. *Baltimore & O. R. Co.*, 17 Wall. 322, 326, 21 L. ed. 597, 599.)"

The dissenting opinion in the *Hoeper case* really emphasizes and makes more pertinent to the pending question the rule laid down by the majority of the Court in that case. The dissent is based upon the ground that the State of Wisconsin *could have reenacted the common law* relationship between husbands and wives, and the dissenting Justices thought that a State income tax could lawfully be measured by the combined income of husband and wife because the State statute could be considered *as reenacting the common law* whereby the husband became the owner of the wife's property. Obviously the dissenting opinion did not suggest that *a Federal statute* could govern the property rights of the spouses as a State statute could. In fact, the Supreme Court has always recognized that marital rights and domestic relations are exclusively within the power of the States (*Ohio* v. *Alger*, 280 U. S., page 379; *Smith* v. *Alabama*, 124 U. S. 465).

That the legislatures of the various States are exclusively vested with the power to determine the effect of the marital relation and the resulting property rights of married persons, is so fundamental a proposition in American law that it would be a waste of time to cite further authority.

COMMENTS ON THE CONTENTION OF THE JOINT STAFF THAT THE HOEPER CASE IS NOT CONTROLLING

At page 7 of its report the Joint Staff on Internal Revenue Taxation attempts to distinguish the *Hoeper case* as follows:

"But even if the *Hoeper case* be taken at its face value, the proposed amendments do not come within its scope. The motivating factor for the decision in that case was the provision that each person whose income was included within the tax computation was liable for the entire tax. It has been pointed out that the legislation here under consideration does not make the spouses jointly and severally liable for the entire tax unless they so elect. Each person is required to pay a tax only upon his own income and not upon the income of any other person. The net effect is merely that the amount of the tax which he is required to pay is conditioned by the fact that he lives in an economic unit which has other income accruing to it."

The above statement fails to give recognition to the facts and issues in the *Hoeper case.*

The Supreme Court did not give any weight in its opinion to the fact that the husband was assessed for the entire tax. Indeed, the Wisconsin statute it quotes, section 71.09 (4) (c), expressly provided that married persons could file separate returns and that "the amount of tax due *shall be paid by each* in the proportion that the average income of each bears to the combined average income."

True, as footnote 1 to the Supreme Court opinion shows, the taxpayer apparently did not elect to insist that the tax be allocated and paid in part by his wife, but since the Wisconsin statute clearly so provided, the ground for distinction set out by the Staff does not exist. This footnote reads as follows:

"'This resulted from the fact that the act provides for surtaxes graduated according to the amount of the taxpayer's net income. While the excess would have been less if returns and assessments had been made under section 71.09 (4) the total would still have been greater than the sum of the husband's and wife's taxes if separately assessed on their individual incomes."

Ordinarily one has to ascertain the "motivating factor" for the decision in the language used. We have already quoted in this brief sufficient of the Court's language to show what the motivating factor was, especially the following language:

"We have no doubt that, because of the fundamental conceptions which underlie our system, any attempt by a State to measure the tax on one person's property or income by reference to the property or income of another is contrary to due process of law as guaranteed by the fourteenth amendment. That which is not in fact the taxpayer's income cannot be made such by calling it income."

The court clearly ruled that it would be unconstitutional to measure the tax on the husband's income by using the rate that would apply to the sum of the combined income of himself and wife instead of the rate that would ordinarily apply to the amount of his own income, and held that any such attempted classification was unreasonable and arbitrary.

The ground just mentioned was squarely raised by the second assignment of error presented by the taxpayer in carrying the case to the Supreme Court. That assignment as it appears in the record on file with the Supreme Court today, complains that the Wisconsin court erred:

"In holding that section 71.09 (4) (c) of the Statutes of Wisconsin, pursuant to which a tax was levied on appellant on his own income at a higher rate because his wife also had separate income from her own separate estate than is levied on other persons of like income from like sources as appellant, does not violate the fourteenth amendment to the Constitution of the United States."

Exactly the same arguments with respect to classification and to the right to increase the tax of the husband and wife because of the income earned by the other with consequent reduction of burden were presented by the Tax Commission in the *Hooper case* as by the joint committee here. The arguments were not recognized as persuasive or sound by the Supreme Court.

THERE IS NO DECISION OF THE SUPEME COURT IN ANY WAY WEAKENING THE HOLDING IN THE "HOOPER CASE" THAT THE TAX OF HUSBAND OR WIFE CANNOT BE INCREASED BY USING AS A MEASURING BASIS ANY PART OF THE INCOME OF THE OTHER SPOUSE

In the brief in support of mandatory joint returns submitted to the Committee on Ways and Means a number of decisions of the Supreme Court are cited as supporting the belief that the Supreme Court would uphold a tax based on the joining of the incomes of two persons "where there are sufficient facts so to justify." Every case cited in that brief as supporting the possibility of taxing an income to a person other than the owner of the income was a "grantor" case (the case of a transferor or assignor) where a taxpayer, having been the outright owner of property, undertook to make a transfer and to escape the payment of the income tax. In some of those cases the taxpayer continued to have the beneficial enjoyment of the income. In others of those cases the grantor taxpayer had made a gift of the income though retaining the property on which the income accrued. We proceed to analyze those cases which are cited against us.

In *United States* v. *Hudson* (299 U. S. 498, 81 L. ed. 370) and in *Helvering* v. *Northwest Steel Rolling Mills* (311 U. S. 46, 85 L. ed. 21) neither the taxpayers nor the facts raised any question as to existence of the income nor as to its belonging to the taxpayer. In the first of those two cases (the *Hudson case*) the only question was whether a tax could be made retroactive for a period of 35 days. In the second case (the *Northwest Steel case*) the main question was the interpretation of the statute taxing the undistributed income of a corporation.

Burnet v. *Wells* (289 U. S. 670, 77 L. ed 1439) upheld the taxing of the income of a trust *to a grantor* who had created a life insurance trust and it appeared that in creating the trust the grantor taxpayer had not parted with the full beneficial interest in the trust property. The grantor had been the outright owner and had made a transfer which did not divest him of the full beneficial interest.

Helvering v. *Clifford* (309 U. S. 331, 84 L. ed 788) was also a grantor case. A trust was created by a husband as grantor by declaring himself trustee of certain securities. The Court held the grantor was still liable for the tax on the income because "in substance his control over the corpus was in all essential respects the same after the trust was created as before."

Helvering v. *Horst* (311 U. S. 112, 85 L. ed. 99) is also a grantor case. A grantor owning certain coupon bonds detached and gave to his son certain of the interest coupons thereof, retaining the bonds themselves. It was held that the grantor had *realized* the income.

Helvering v. *Eubank* (311 U. S. 122, 85 L. ed. 104) was another grantor case. A grantor insurance agent, having a contract entitling him to future commissions on insurance already written, assigned the commissions to others after fully earning them. The Court held that the case was ruled by the *Horst case*, the transferring taxpayer having assigned income that was fully earned.

Hormel v. *Helvering* (85 L. ed. 651), was also a grantor case where the grantor taxpayer created a short-term trust retaining certain benefits and controls.

Madden v. *Kentucky* (309 U. S. 83) merely held that a State could lawfully impose a higher rate of taxation on bank deposits kept outside the State than on those kept within the State. There is absolutely nothing in the case giving any color to the proposition of measuring one person's tax by the property or income of another.

Harrison v. *Schaffner* (85 L. ed. 694) is another grantor (donor) case. The Court said:

"It is enough that we find in the present case that the taxpayer, in point of substance, has parted with no substantial interest in the property other than the specified payments of income which, like other gifts of income, are taxable to the donor."

All of these cases cited before the Ways and Means Committee in the brief favoring mandatory joint returns (wherever those cases upheld the taxing of income to a person not presently the owner) were cases where the taxpayer had been the owner and had attempted to divest himself of the property or income. The grantor (assignor, donor, or transferrer) was a taxpayer seeking to avoid liability by making a transfer.

That a taxpayer, who is a transferrer or donor of property, remains liable for the income tax where he does not completely divest himself of all beneficial interest or where in some other manner he realizes the income, is, of course, a holding in accordance with general rules.

The proposal for compulsory joint returns of the incomes of husband and wife or any part thereof and measuring the amount of the tax accordingly has nothing to do with assignments or transfers or gifts. Those are reached in proper cases by other provisions of law.

The Supreme Court itself has expressly and clearly stated the distinction between a grantor (transferrer or assignor) making an insufficient or invalid transfer on the one hand and the case of husband and wife receiving incomes which are theirs by State law. In *Poe* v. *Seaborn* (282 U. S. 101), the Court speaking of *Corliss* v. *Bowers* (281 U. S. 376), expressed itself as follows:

"We held that where *a donor* retains the power at any time to revest himself with the principal of the gift, Congress may declare that he still owns the income. While he has technically parted with title, yet he in fact retains ownership and all its incidents. *But here the husband never has ownership.* That is in the community at the moment of acquisition."

We assert without fear of contradiction that there has been no decision of the Supreme Court in any way weakening its holding in the *Hooper case* where the Court declared unconstitutional the attempt to measure the tax of one person, husband or wife, using as a measure for taxing purposes the income of the other spouse.

INCOME TAXES UNDER THE SIXTEENTH AMENDMENT MAY LAWFULLY BE LEVIED ONLY UPON THE OWNER OF THE INCOME

The Supreme Court has in several cases made this proposition exceedingly plain. In *Eisner* v. *Macomber* (252 U. S. 189), referring to the sixteenth amendment defined the word "incomes." The Court said:

"Here we have the essential matter: * * * a gain, a profit, something of exchangeable value proceeding from the property, severed from the capital, however invested or employed and coming in, being 'derived,' that is received or drawn by the 'recipient' (the taxpayer) for his separate use, benefit, and disposal; *that* is income derived from property. Nothing else answers the description."

Let it be noted that the parenthetical explanatory phrase "the taxpayer" is not the interpolation of the writer of this brief. It is the language of the Court. The Court says that the taxpayer must be the recipient of the income in order to be taxable for it.

In *Bromley* v. *McCaughn* (280 U. S. 124), the Court, in upholding the gift tax as an excise and referring to other cases where excise taxes of various kinds with reference to property had been upheld, said:

"It is true that in each of these cases the tax was imposed upon the assertion of *one* of the numerous rights of property, but each is clearly distinguishable from a tax which falls upon the owner merely because he is owner, regardless of the use or disposition made of his property."

In *Taft* v. *Bowers* (278 U. S. 470), the Court upheld the validity of the provisions in the Revenue Act of 1921 which required the donee of a gift to pay an income tax on the capital gain based on the cost of the gift to the donor. In the unanimous opinion the Court said:

"Under former decisions here the settled doctrine is that the sixteenth amendment confers no power upon Congress to define and tax as income without apportionment something which theretofore could not have been properly regarded as income."

It is obvious from these decisions and all other decisions of the Supreme Court relating to Federal income taxes that there is no justification in the Constitution for including the income of one person as a measure of the income tax of another person or for increasing the income tax of one person by reason of the income received by another. Husbands and wives, whose rights are determined purely by State laws, form no exception to the rule. The proposal now made for compulsory joint returns is a startling innovation.

INAPPLICABILITY OF THE ENGLISH PRECEDENT

Those who favor the principle of mandatory joint returns by husband and wife, in whole or in part, attempt to gain support by the statement that such a law has been in effect in England for a number of years. The English precedent can have no force here for a variety of reasons.

(A) In England the British Parliament has jurisdiction over all local affairs and property rights as well as over national affairs. There is no such thing as State rights. Parliament can legislate as to the property rights of husband and wife and change them at will and its legislation cannot be questioned. In the United States the property rights of husband and wife are determined exclusively by laws of the State where the spouses reside. A Federal law cannot in any way change or affect those property rights.

(B) In England the British Parliament is supreme. There is no written constitution. An act of Parliament that has received the royal assent cannot be questioned on any ground whatsoever. No act of Parliament can be held invalid by reason of conflict with any constitution.

(C) It is a matter of common knowledge that in England the position of the husband in the family and in the household is far different from what it is in the United States. There the general custom of society attributes to the husband the dominating influence in the family, and everyone (the wife included) acquiesces in that idea. This principle is largely the result of the English tradition surviving from the common law. Under the common law the wife's personality was merged in that of the husband and her property became his. No such principle would be tolerated in this country.

(D) During the past 60 or 75 years the whole tendency of State legislation in the United States has been to get away from the barbarity of the common law whereby the wife as a result of marriage suffered deprivation of her property in favor of the husband. The whole progress of modern law in the United States has been in the direction of the recognition of the wife's individuality and her separate property rights. The astounding proposal now made is to turn back the clock of progress. It would threaten to deprive married women of recognition of the great advances that they have achieved in the United States as a result of State laws in the several States. These State laws are strongly supported by public opinion. The proposal for any kind of compulsory joint returns is an anachronism. Moreover, it is unjust. Further, the Supreme Court has held it to be a violation of the Federal Constitution.

Respectfully submitted.

DONWORTH, PAUL, DONWORTH & SMITH,
GEORGE DONWORTH,
Counsel for a Group of Married Taxpayers in the State of Washington.

STATEMENT OF FAYETTE B. DOW ON REVENUE REVISION OF 1941

My name is Fayette B. Dow. I am appearing before you today, as I have on previous similar occasions, as a representative of the American Petroleum Industries Committee, the National Petroleum Association, and the Western Petroleum Refiners Association.

The American Petroleum Industries Committee was organized several years ago to study State and Federal taxation of petroleum products and to present information to legislative committees, such as the committee which is conducting this hearing. The gasoline tax, especially when collected at reasonable rates by the States and applied to road building and maintenance, has been a good tax. Like any other tax, it is susceptible of excessive imposition. Our position never has been that of mere opposition to increased taxation. We did not oppose the half-cent increase imposed in the Revenue Act of 1940, but presented the facts surrounding the existing gasoline and automotive taxes, and indicated the proportion of additional revenue which it was proposed to collect from this group. As a matter of fact, when I making my presentation before the House Ways and Means Committee I sensed on the part of some members a feeling that our failure to oppose the increase in the gasoline tax at that time was an exercise of mistaken judgment. In opening that statement I said this:

"Personally, speaking for myself only, I conceive this bill as merely the beginning of taxation and not the last of the tax measures which this committee will consider and discuss. No person who understands the situation which confronts the country could, I think with good grace, oppose a tax measure of this kind or could fail to realize that we have here an emergency which requires us to act quickly and effectively in order that this country may be properly armed to meet whatever contingencies the future may have in store for it. It is for that reason that this statement in no wise opposes the provisions of the bill."

Since that time the situation has changed. Our Government has adopted a vast rearmament program, not only for our own defense but for aid to Britain and other democracies. This program is steadily being enlarged. No one knows how great it will become or how long it will last. But whatever the developments of the war may be, it is safe to predict that the economy of the United States will be a war economy for years to come. It is proposed to pay for two-thirds of the cost of this program out of current taxes, and we are not aware of any substantial disagreement with that policy. Even if that policy is carried out there will be a substantial addition to the public debt which must certainly be serviced, perhaps at some later day reduced, through taxation. Therefore, we think that we only engage in self-deception when we label taxes by such names as "emergency" taxes, or "defense" taxes, or think of them as temporary taxes. We are in the process of placing upon all of the American people very heavy taxes which must be borne for a very long period of time.

If this is so it becomes, I hope, an unobjectionable duty for any group which has studied the tax burdens in any field to place its facts and its views before the members of this committee for their consideration.

Running through the discussions of new taxes before this committee at this hearing are two primary objectives: One, revenue; two, the prevention of inflation. By the prevention of inflation I understand is meant the prevention of a rising spiral of prices and costs due to the fact that in a period of large Government spending for armament the national income available for purchasing consumer goods outgrows the production of those goods. Some persons suggest for this reason that taxation on specific commodities be considered from the standpoint of their competition with defense production.

The first approach to a study of a proposed tax on any commodity is the burden which the purchasers of that commodity already are bearing.

THE PRESENT BURDEN OF STATE AND FEDERAL GASOLINE AND AUTOMOTIVE TAXES

A. *The States.*—Existing gasoline taxes provide, on the average, more than 25 percent of the revenues of the States. Gasoline and other automotive taxes, as a whole, provide nobut 40 percent of the State revenues.

Stated in dollars, the States are now collecting $868,000,000 a year from their taxes on gasoline. From registration fees and other similar levies the States are collecting $450,000,000 annually.

The total annual automotive tax revenues of the States are, therefore, $1,318,000,000.

B. *The Federal Government.*—Under its present tax of 1½ cents per gallon on gasoline the Federal Government is now collecting at the rate of approximately $347,000,000 per year. The current yield of other Federal automotive taxes is about $161,027,000. The total present revenue yield to the Federal Government on an annual basis from these taxes is, therefore, $508,027,000.

The House in passing the revenue bill has increased this tax bill by $302,300,000. Passenger automobiles, parts, and accessories will pay $74,000,000; trucks, busses, and trailers, $16,100,000; tires and tubes, $51,300,000; motor vehicles, under the new "use tax," $160,000,000. This will bring other Federal automotive taxes to a total of about $463,327,000.

C. *Some significant comparisons.*—Since their inception only a little more than two decades ago gasoline and other automotive taxes have yielded $17,000,000,000 in revenue.

The present total annual gasoline tax of $1,215,000,000 is almost equal to $1 a barrel on every barrel of crude oil produced.

The present simple average combined State and Federal tax is 5.0 cents per gallon.

This is more than 100 percent of the average wholesale price of gasoline.

It is a retail sales tax of 47 percent of the average retail price.

On top of this Treasury officials now propose an increase of 1 cent in the gasoline tax. This increase, they state, will yield $255,000,000 additional revenue. But it will make the simple average tax, State and Federal, 6.0 cents per gallon, a 55-percent retail sales tax.

The time has clearly come to ask and to answer two simple questions: What is gasoline? Who pays the gasoline tax?

WHAT IS GASOLINE AND WHO PAYS THE GASOLINE TAX?

Gasoline, in peace and in war, is one of the most fundamentally necessary fuels of the modern world. The days when it was a new, experimental fuel for the new and experimental internal-combustion engine—the days when gasoline was used to drive the hand-made automobile so costly that only the well-to-do could own one—the days when the automobile was chiefly a pleasure car—those days were gone before World War No. 1 began. Since that time automobiles have been made steadily better and cheaper. Their production and sale have been not by the thousands but by the millions. Their predominant ownership is no longer by the rich, or by the so-called middle classes, but by the rank and file of the lower-income groups. In the last two decades they have completely revolutionized passenger transportation. The most recent authoritative statement on this subject was made on May 1, 1941, by Mr. Ralph Budd, president of the Burlington Railroad, and Transportation Commissioner, Advisory Commission to the Council of National Defense, before the American Mining Congress. Mr. Budd said, of all intercity passenger transportation:

"Ninety percent is in private automobiles, 5 percent on railways, about the same on busses, and one-half of 1 percent in airplanes."

In other words in the world of today gasoline is the motor fuel which provides 95 percent of all intercity passenger transportation.

Within the cities, busses and taxicabs are narrowing the field of electric streetcars. The growing use of private automobiles from home to place of work is a matter of everyone's observation.

A revolution, indeed! That 95 percent figure alone is enough to prove gasoline's right to be classed as "one of the most fundamentally necessary fuels of the modern world." Is some passenger-car transportation used for recreation purposes? Of course. That was always true of the railroad coach, of the interurban electric, and the streetcar, all of them concededly essential agencies in the days when they were predominant in passenger transportation.

Let us answer the same questions—What is gasoline? Who pays the gasoline tax?—from a different approach.

There are 131,410,000 people in this country, according to the last census.

There are 20,500,000 private passenger automobiles registered in this country—1 for every 5 persons in the country, of whatever age and of whatever economic position.

A study of automobile ownership by income groups for 1938, taken from Department of Commerce and National Resources Board sources, throws a clear light on this subject.

Income group	Percent of total persons in each group who are car owners	Number of persons owning passenger vehicles	Percent of total car owners	Number of vehicles owned	Percent of total vehicles owned
$10 per week or less	30.3	1,672,000	7.5	1,738,500	7.5
$10 to $20	43.9	4,659,000	20.9	4,769,000	20.5
$20 to $30	60.5	5,350,000	24.0	5,497,000	23.7
$30 to $40	70.8	3,946,000	17.7	4,073,500	17.6
$40 to $60	78.7	3,901,000	17.5	4,071,000	17.5
$60 to $100	86.9	1,806,000	8.1	1,945,000	8.4
$100 per week and over	93.0	958,500	4.3	1,119,000	4.8
Total		22,292,500	100.0	23,213,000	100.0

This table shows that 51.7 percent of the passenger vehicles in use in 1938 were owned by persons having an income of $30 a week or less. Only 12.4 percent of the Nation's car owners had weekly incomes of over $60.

LABOR AND THE MOTOR VEHICLE

The dependence of labor upon a cheap automobile as a means of getting to and from the job now is being brought into bold relief by the industrial expansion.

The shortage of adequate housing facilities in the vicinity of large industrial areas, or new defense industry centers, is increasing this dependence. For example, widespread publicity recently was given to 200 skilled workers living in New York who spend 4 hours each day driving 60 miles each way to and from their jobs in Bridgeport, Conn. Connecticut levies a State tax on gasoline of 8 cents per gallon—an unusually reasonable rate which considerably is below the national average. If these commuting workers purchase all of their gasoline requirements in Connecticut, and if the working year is considered to include only 300 days, State and Federal taxes on gasoline now cost each of those workers who drives his car daily to work about $135 each year. If this situation were duplicated with respect to a worker in a Tennessee aluminum plant, where a 7-cents-per-gallon State tax prevails, gasoline taxes would drain $255 annually from the worker's income. In either State, a 1-cent increase in the Federal gasoline tax would cost this worker an additional $30 annually.

It is true, of course, that the case of the New York-to-Bridgeport commuters is unusual. Nevertheless, it is common for workers to drive 10 or 20 miles each day from home to plant, and an extremely large proportion of all industrial workers drive to work, whatever the distance.

A glance at the acres of parking lots filled with low-priced cars which surround the typical factory is sufficient to suggest that the motor vehicle is indispensable in transporting labor to the job. Recent surveys, furthermore, show clearly the extent to which the private car is used for this purpose. In Midland, Mich., a chemical center, 92 percent of all workers drive to work in their own cars or ride with fellow workers. In a center of aircraft production, Glendale, Calif., 87 percent of the laborers depend on cars to get their jobs. In Youngstown, Ohio, a steel center, the proportion is 82 percent.

Of the 3,412 municipalities in the United States with a population of greater than 2,500, it has been found that 2,130, or approximately four-fifths of the total, possess no system of mass transportation whatsoever. Obviously, the residents of these communities must rely mainly upon their private automobiles for transportation.

New York City is said to possess the finest system of mass transportation in the world. Despite its miles of subways and elevated, its ferries, busses, and railroads, it is said by authorities that more than half a million workers use their cars to get to their jobs in the morning, and, of course, use them to get home again at night. From Brooklyn, and Long Island alone, 144,000 cars cross the East River each morning, carrying office workers to Manhattan. Traffic surveys indicate that more than 100,000 commuters enter New York from New Jersey every morning by private passenger car.

All these workers are buying gasoline, which, to them, is just the same as using the other available arteries of transportation. When they buy gasoline, they are paying the cost of transporting themselves to the job.

THE MOTORTRUCK AND GASOLINE TAXES

There are 4,500,000 trucks in service. To anyone who uses the highways, it is obvious that the motortruck must account for a sizeable proportion—a fair estimate is 25 percent—of all the gasoline consumed. I should like to point out, however, that as the national defense efforts of this Nation are intensified, so will be increased in direct proportion the demands made on the motortruck. Already, it has been suggested in high places that a large portion of the deep-seaworthy bottoms on the Great Lakes be diverted to the Atlantic trade. Little imagination is needed to visualize the increased dependence upon land transportation facilities which the removal of these water carriers would bring in such vast production centers as Detroit, Cleveland, Toledo, or Chicago. Even today, the motortruck is depended upon to correlate the productive efforts of the entire Nation—and as our industrial machine shifts into high gear, trucks, too, must move accordingly.

Now, it is relatively easy for most of us to accept without question the statement that trucks consume 25 percent of all gasoline and therefore would pay about 25 percent of all gasoline taxes. After all, we all can appreciate the importance of the truck in transporting milk or groceries, because this type of transportation takes place every day in every county in every State in the Nation.

But many of us come from agricultural areas, and it may be difficult for us to understand the extent to which the automobile is an indispensable form of transportation for industrial and business workers. Or many of us may have lived in large metropolitan areas all of our lives, and we hardly could be expected to know the extent to which the motor vehicle has become an absolute necessity to the farmer.

THE FARMER AND THE MOTOR VEHICLE

Regarding the farmer, and his dependence upon the motor vehicle, Mr. Knutson, a member of the House Ways and Means Committee, recently made some pertinent observations. He observed that the farmer probably uses more gasoline than any other class. He noted that the farmer has to take his milk to the creamery every morning. The farmer operates tractors and trucks and automobiles, and in many cases has from two to four motor vehicles of one description or another. He noted that the gasoline expense is very large in comparison with the farmer's volume of business, and any increased gasoline tax will be a real burden.

During 1940, one of the Members of the House of Representatives placed in the Congressional Record information indicating that farmers use about 5.5 percent of all the gasoline consumed annually in the United States for tractor and other uses on the land. He said that the farmer pays about 12½ million dollars annually to the Federal Government for every cent of the Federal gasoline tax, and that this tax payment did not take into consideration the farmers' use of gasoline for automobile or truck, but applies solely to nonhighway uses.

In addition to tractors, stationary engines, and other gasoline consuming machinery, about one-third of all motor vehicles are owned by persons living on farms and in unincorporated areas. Nearly 1,000,000 of these vehicles are trucks.

The United States Department of Agriculture estimates that 27 percent of the butter, 39 percent of the eggs, 65 percent of the poultry, 40 percent of the fruit and vegetables, 62 percent of the cattle, 68 percent of the hogs, and 50 percent of the horses and mules are moved by trucks from farm to market. Almost all cereal grains are moved from farm to elevator by truck.

Within my own experience, I know of farm laborers occupying tenant houses who, in addition to wages, receive from the farmer their firewood, pork, potatoes, milk, and a monthly allowance of gasoline.

It is not uncommon for farm laborers, like factory workers, to drive to the farm by automobile from their homes in a nearby village. On other large farms, the cattle are fed from the pick-up truck that drives the range with seed-cake. Many of the chores around the farm, today, involve the use of gasoline, and it is small wonder that agriculture accounts for such a large proportion of gasoline consumption.

The plight of the migratory farm worker is a case in point. Only his second-hand car and a supply of gasoline are his links with economic existence.

A candid consideration of the facts stated in the foregoing paragraphs should effectually and finally dispose of the impression, if it is seriously entertained by anyone, that gasoline is in a class of articles commonly called luxuries. This committee must frankly recognize that the burden of present gasoline taxes is very large and that it falls upon the masses of American people, including especially the very low-income groups.

THE GASOLINE TAX AND FEDERAL AID TO HIGHWAYS

During the hearings held by the House Ways and Means Committee on the revenue bill, it was asked whether Federal revenue from gasoline and automotive taxes had any relation to Federal aid to roads. A table, which I have attached to my statement, will make it clear that on these grounds the automotive taxpayer's account is more than square.

The Federal gasoline tax, historically speaking, never has been considered a tax for roads. Unlike State gasoline taxes, which are actually road "tolls," the purpose of the Federal gasoline tax is to raise money for national defense. Any comparison with Federal aid to roads is pure afterthought. If, however, such a comparison must be made, one might test its validity by asking why ships have not been required to pay for improvements to rivers and harbors?

On the whole subject of public aids to transportation reference should be made to the painstaking study in four large printed volumes by Coordinator Joseph B. Eastman which showed that highway users are the only persons engaged in any form of transportation who pay their way and more. In that study the Federal gasoline and other automotive excise taxes were not even credited as highway contributions by motor-vehicle operators. The Federal gasoline tax was considered a general tax levied for the general purposes of government.

In passing it may be proper to quote from Mr. Eastman's report, volume 1, page 26, the following:

"*Conclusions as to whether or not there has been public aid to motor-vehicle users as a class, 1921–37.*—Motor-vehicle user payments, consisting of State gasoline taxes and registration fees, miscellaneous State taxes and estimated municipal and county and local motor-vehicle taxes, were found to have aggregated $6,132,933,000 in the period 1921–32 and $4,751,773,000 in the period 1933–37, or $138,170,000 and $387,906,000 more than the assigned costs. * * *"

It is only for the sake of the record, therefore, that I am offering the attached table, compiled from Government sources, which shows clearly that the revenue from the Federal gasoline and other automotive taxes, since such taxes first were imposed in 1918, actually exceeds the amount of Federal funds expended upon the highways of America. These statistics of Federal road expenditures include not only regular Federal highway aid but also the expenditures of emergency relief funds on roads, which were primarily for the purpose of providing employment and not for the benefit of highway users.

CONCLUSIONS

1. As I have previously said, some suggest that the type of excise tax which is called for today is a tax on articles "which compete very heavily for materials, productive facilities, and skills for defense production." While not in accord with the principle that taxation is needed to do what agreements between the Government and manufacturers can quickly and satisfactorily accomplish, it should be pointed out that gasoline does not fall into that class. Several recent surveys show that the petroleum industry is in position to supply all normal commercial requirements and all war needs without difficulty. We have the necessary supplies of crude oil and the necessary refining capacity. Our one problem at the moment is to adjust transportation facilities that supply will meet demand. Gasoline, in fact, is "among the goods of mass consumption which in no way compete with the defense program." The Government official whose description is quoted expressed the view that the taxes on such articles are "deflationary, unnecessary, and highly inequitable."

Revenue from Federal gasoline and automotive excise taxes compared with Federal expenditures on highways, 1917–40

A. FEDERAL AUTOMOTIVE TAX REVENUES

Fiscal year	Gasoline tax [1]	Automotive excise taxes [2]	Total
1918		$23,981,000	$23,981,000
1919		49,342,000	49,342,000
1920		145,963,000	145,963,000
1921		117,323,000	117,323,000
1922		106,219,000	106,219,000
1923		146,198,000	146,198,000
1924		160,028,000	160,028,000
1925		126,552,000	126,552,000
1926		139,802,000	139,802,000
1927		66,438,000	66,438,000
1928		51,628,000	51,628,000
1929		5,546,000	5,546,000
1930		2,320,000	2,320,000
1931			
1932			
1933	$124,929,000	42,544,000	167,473,000
1934	202,575,000	86,054,000	288,629,000
1935	161,532,000	101,061,000	262,593,000
1936	177,340,000	128,032,000	305,372,000
1937	196,533,000	142,705,000	339,238,000
1938	203,557,000	87,944,000	291,501,000
1939	207,019,000	111,272,000	318,291,000
1940	220,197,000	146,225,000	366,412,000
Total	1,499,672,000	1,981,177,000	3,480,849,000

[1] Automotive consumption approximately 89 percent of total.
[2] Includes manufacturers' excise taxes on lubricating oil (automotive share only), automobile and truck chassis and bodies; other automobiles and motorcycles; parts and accessories for automobiles; and tires and inner tubes.

Total expenditures, regular Federal aid	$1,820,354,936
Total expenditures, emergency and public works	1,181,483,861
Total	3,001,838,797

[1] Statistics represent actual expenditures only not authorizations or appropriations.

Authority: Hearings before the Committee on Roads, House of Representatives, 76th Cong., 3d sess., on H. R. 7891, p. 34. Annual report, Federal Works Agency, Public Roads Administration, 1940, p. 280.

SUMMARY

Federal automotive tax revenue $479,010,000 greater than Federal highway expenditures

Total Federal gasoline and automotive excise-tax revenue, 1918–40	$3,480,849,000
Total regular Federal aid and emergency and public-works expenditures on highways, 1917–40	3,001,838,797
Excess, Federal automotive taxes over Federal highway expenditures	479,010,203

Senator GUFFEY. I would like to insert something on the inheritance-tax amendment.

I haven't it here; I will bring it.

The CHAIRMAN. Yes, Senator; you may do that.

(The data referred to by Senator Guffey is as follows:)

WRIGHT & RUNDLE,
Pittsburgh, Pa., June 24, 1941.

Hon. JOSEPH F. GUFFEY,
United States Senator,
Senate Building, Washington, D. C.

In re proposed Revenue Act, 1941.

MY DEAR SENATOR GUFFEY: On April 28, 1941, the Supreme Court of the United States in an opinion by Mr. Justice Black decided two cases of great and far-reaching importance to charitable organizations: *The United States* v. *Pyne et al., executors of Pyne* and held that the executors were not entitled to deduct against income of the estate for the year 1934 attorney fees and other expenses paid by the executors for advice concerning the administration of the estate; and

City Bank Farmers Trust Co., trustee of Duke *Under the Will of Duke* v. *Helvering, Commissioner*, and held that the trustee was not entitled to deduct as against income of the estate the reasonable ordinary commissions to which a trustee is entitled for the management of the trust estate.

Both of these decisions followed the case of *Higgins* v. *Commissioner*, decided by the Supreme Court on February 3, 1941, which held that Higgins was not engaged in carrying on any trade or business in looking after his investments, collecting the income, managing his real estate, etc., as would entitle him to deduct as against his income expenses of managing his business, such as rent, stenographers' salaries, etc.

As a result of these three decisions, the Commissioner of Internal Revenue is now holding that neither an individual, an estate during the period of administration, nor the trustee of an estate, whether created by will, inter vivos agreement, or otherwise, or whether the beneficiaries are individuals or a charity, is entitled to deduct the reasonable and ordinary expenses in managing the estates, such as commissions, office expenses, including rent, telephone, stationery, stenographic help, etc., because allegedly not engaged in carrying on a business. In other words, the Commissioner admits it is necessary for a trustee to incur and pay various expenses in the management of an estate, but denies to the trustee or to the beneficiaries the right to deduct as against income any of these necessary expenses.

If the Commissioner persists in following this procedure, it will be disastrous and expensive not only to individual beneficiaries but to charitable organizations.

As you know, I represent a number of trust estates in Pittsburgh, beneficiaries of which are many charitable organizations in Pittsburgh. The trustees collect the income from the trust funds, pay the expenses of the trust, including their own commissions, and remit the balance of the income to the charities.

If the trustee is not entitled to deduct these expenses from its gross income, then the trustee must pay a tax on the amount of commissions retained and deduct the tax from the amount payable to the charitable beneficiaries, and, hence, the charity will get that much less income. It is conceivable that ultimately, this method of procedure, year in and year out, will result in an increasingly diminished income to beneficiaries.

I cannot believe that either the courts or the Commissioner realize the effect of these decisions and of the rulings of the Commissioner.

It seems very unfair that the Commissioner refuses to recognize as a legitimate expense deductible as against income the necessary clerical help, etc., required to manage a trust estate, collect the income and disburse the same.

Under the laws as exist today, the sole relief or remedy seems to be with the Congress, which should insert a provision in the new revenue act which will allow as deductions to trustees, executors, guardians, etc., a reasonable amount for office expenses and commissions during the administration of estates or the period of the trusts.

I am sending an additional copy of this letter to you, thinking perhaps that you may pass it along to the Finance Committee of the Senate when it considers the proposed revenue legislation.

It is needless for me to tell you that anything you can do to help this situation will be greatly appreciated by many of the worthy charities in Pittsburgh of which you have knowledge.

Thank you very much.

Very sincerely yours,

J. M. WRIGHT.

The CHAIRMAN. Miss Curtis.

Miss CURTIS. I don't know whether I am the last witness or not——

The CHAIRMAN. No; there are two additional witnesses.

Miss CURTIS. Then we can't say that the women are having the last word with the committee.

STATEMENT OF CATHRINE CURTIS, NATIONAL DIRECTOR, WOMEN'S INVESTORS IN AMERICA, INC., NEW YORK, N. Y.

Miss CURTIS. My name is Cathrine Curtis. I am speaking as National Director of Women's Investors in America Inc., whose headquarters are at 535 Fifth Avenue, New York City.

We are an educational nonprofit making membership organization incorporated in 1935 for the primary purpose of financial education for women, for financial fact finding of importance to women, and to defend and protect the property rights of women. We do not give investment counsel.

Women of all types, from all walks of life, from many professions, and those representing a wide range of income brackets are included in our membership.

Many of our members are just average housewives dependent upon the earnings of the husband or family, and upon the estate saved by that family for its future security in case of death.

Some of our women supplement the family income by earnings of their own. In many instances this additional income is derived from home industry.

Many of them also have an independent income from the earnings of stock, bonds, mortgages, or insurance which they own, purchased with hard-earned savings or inherited from loved ones.

I think our membership is a typical cross section of intelligent American womanhood which at present is frightfully alarmed and concerned with the policies and problems of government and their direct effect upon the future and security of their husbands' jobs, their homes, and the welfare of their children.

In addition to speaking for the members of Women Investors in America, Inc., I also speak on behalf of countless women throughout the country with whom I am in continual correspondence—mothers,

employees, teachers, etc., but who are not active members of the organization which I am officially representing today. These women are stockholders, jobholders, home owners, and taxpayers.

From various surveys which our organization has made, during the 7 years since its incorporation, we know that women own the greatest financial stake in the private enterprise system and in the constitutional representative government upon which that private enterprise was founded and has prospered.

About 50 percent of the corporate stock of industry is owned by women. In many cases this ownership is in units of 10 shares or less; in some cases it runs considerably higher. Therefore, any Government program, whether it deals with legislation, taxation, or labor that affects the earnings and security of corporate assets directly affects their welfare in the broadest sense of the word.

More than 75 percent of the life-insurance policies are made payable to women. The assets behind these policies are invested in stocks, bonds, mortgages, and real estate.

About 60 percent of the savings accounts of this country are also in the names of women. This money, to earn interest, must of necessity be reinvested in the private enterprise system. Because of this American women are not only the world's greatest capitalists but are more vitally affected than any one group in Government policies, tax programs, and all legislative connivance which seeks to destroy our capitalistic system and impose in its stead one of Fabian socialism or Marxism.

In addition women spend about 85 percent of the consumer money and I do not have to go into details with the members of this committee as to what part of our tax bill is paid by the consumer.

Because of the foregoing you can readily understand why the women are interested in this tax bill and greatly concerned over many of its features.

I have heard or read much of the testimony given before the House Ways and Means Committee and before this committee on this bill.

Testimony given before this committee by Treasury officials states that this fiscal year's expenditures will be $22,000,000,000. And in order to raise two-thirds of this by taxation they suggest that $15,000,000,000 in taxes be raised in 1 year.

In making this request, the Treasury officials did not give to either the House Ways and Means Committee or this committee any analysis, detailed or otherwise, of the needs of the Government for—

(*a*) The ordinary expenses of Government,

(*b*) The defense program, or

(*c*) The lend-lease program.

In other words, the Congress is asked to sign, on behalf of the American taxpayer, a check for $15,000,000,000 without giving the taxpayers any concrete ideas as to what this huge sum will be spent for.

Neither has the Congress had from the Comptroller General any statement of the assets and liabilities of the United States. The committees hearing testimony on this bill have not been reminded that the national debt, including contingent obligations of the Government, already exceeds $65,000,000,000, or that since the first of this year alone new appropriations, authorizations, and commitments

exceed $51,395,000,000. The sum of these two items exceeds by $5,000,000,000 the assessed valuation of all property in the 48 States. And, further, the $51,000,000,000, which this Congress has authorized or appropriated in the 7½ months of this session, exceeds by $28,000,000,000 the total amount this country spent for prosecuting its share of the World War including loans to Allies which have not been repaid.

Challenges to the committee.—We challenge the Government's fantastic program of appropriations, authorizations, and recommendations.

We challenge the free-for-all lend-lease program as jeopardizing both our national defense and our economic life.

We challenge the validity of the one-third two-thirds formula in financing our emergency-defense program.

We challenge the ability of the Members of this Congress to convince the people of the United States of the wisdom or the necessity of draining the lifeblood of this Nation to satiate the bloodthirst of any and every nation including Communist Russia.

We challenge our ability to maintain our way of life if we permit the destruction of our entire economic system by policies which the proposed revenue act attempts to underwrite.

We challenge the desirability, the need, or the legality of using the taxing power granted government by the people as a means of supplying a needed restraint upon inflationary tendencies which the House claims is one of the objectives of this bill.

We challenge the rights and authority of this committee to ask the people of these United States for more tax money when this Congress has not yet compelled the Comptroller General to comply with the law and to file a report on the financial condition of this Government.

Joint income tax.—In addition, we wish specifically to oppose the proposal of the Secretary of the Treasury Henry Morgenthau relative to the mandatory joint income-tax return for husband and wife.

To familiarize you with the history of this proposal—it was recommended by Leon Henderson when he testified before the House Ways and Means Committee. That committee wrote the joint income-tax provision into the House bill after public hearings were closed thereby barring women from expressing their views. However, the women did express their views directly to House Members and the mandatory joint tax return was removed from the bill by a 3-to-2 vote in the House.

Secretary Morgenthau asks you to ignore the will of the House and to restore this obnoxious provision. He seeks to make this proposal palatable by exempting married women who work outside the home from such a joint return by permitting them to file individual returns. What this actually suggests, it seems to us, is offering a premium to women to desert the home and home industry.

It should be remembered that it was home industry started by colonial women that enabled this country to found its industrial capitalistic system and break away from the military capitalistic system of Europe.

The joint-tax proposal tends to destroy the home as a self-generating source of national wealth. It further tends to smother women

as a generating power. It should be remembered that home-making made this country prosper—not natural resources.

It has been stated before this committee that the joint tax proposal affects only 153,000 families. Our research has established that actually it affects approximately 17½ million families, and I would like permission to insert in the record data and statistics we have gathered relative to the far-flung effect of this proposal on the homes and family life of the Nation.

May I do so, Mr. Chairman?

The CHAIRMAN. Yes; it may be entered in the record.

Miss CURTIS. If the mandatory joint income-tax return—which the House Ways and Means Committee inserted in the bill in secret sessions behind closed doors, without giving the women of the country any opportunity to voice their opinions—becomes law, married women in the United States will be returned to the old common-law status of chattels of their husbands—the position married women have occupied in Europe for centuries.

If the mandatory joint return is adopted—its effects on the family life of the country and on the income, savings, capital, and assets of wives cannot be estimated. If the Government can merge the incomes of husband and wife for tax purposes—will that make the wife's income attachable for her husband's business and bankruptcy debts? And, if the Government can merge their income—cannot it also merge their capital and assets—again making everything the wife may have liable for attachment in case her husband is forced into bankruptcy?

Women are aroused.—Our mail indicates that the women of the country are thoroughly aroused over the unjust treatment accorded them by the Ways and Means Committee and the manner in which it adopted this proposal for mandatory joint income-tax returns.

Committee misinformed.—It would appear, from statements by members of the committee, there is a complete misunderstanding about the number and type of families which will be seriously affected, the principles which are involved, and the far-reaching social consequences of this family disrupting legislation—should it become law.

A careful study of available Government statistics establishes that this proposal will affect at least 17,500,000 families—not about 153,000 as has been announced. Further, it will bear most heavily upon the families of small incomes, not upon the wealthy as has been claimed by proponents of the measure.

Hits small families.—In addition, it will bring within the income-tax law approximately 8,400,000 families whose incomes are so small they now are not taxable under present income-tax laws, the majority of them being small suburban and farm families.

These are a few of the facts that would have been made available to the committee by the women, had we been accorded the same consideration extended by the committee to representatives of business and industry.

The printed record of the hearings discloses that the committee listened to the protests of 110 representatives of the tobacco industry, 73 from the gasoline industry, 8 from musical instrument manufacturers, 8 representatives of the carbonated beverage industry, 9 from

candy manufacturers, as well as 7 from the liquor distillers and 10 from the beer brewers.

Women receive no consideration.—Yet not one woman, nor one women's organization was extended the courtesy or opportunity to voice their opinion or to speak in defense of their rights as individuals or in defense of the American home.

Whoever produced the estimate of 153,000 families to be affected by this tax proposal gave consideration only to statistics relative to present independent tax filings of husbands and wives. No consideration, apparently, was given to the vast number of families—now tax exempt—who will be brought into the tax collector's net by this proposed mandatory joint-income return.

The following statistics relative to families and their income are found in the United States Statistical Abstract. This table reveals that about 80 percent of the families earned less than $2,000 per year in 1935. The present chaotic condition of Government statistics makes accurate analysis impossible, but applying the family group ratios of the 1935-36 table to the family unit figure for 1940 which is quoted by the Bureau of the Census, we find the following:

Family income groups.—

Family income	Number of families	Percent of all families	Cumulative, percent
Under $250 to $750	9,457,959	27.13	27.13
$750 to $1,250	9,674,100	27.75	54.88
$1,250 to $2,000	8,426,055	24.17	79.05
$2,000 to $3,000	4,479,719	12.85	91.90
$3,000 to $5,000	1,879,042	5.39	97.29
Over $5,000	944,750	2.71	100.00
Total	34,861,625		

Considering the above table—it reveals about 15 million families fall within the family income band from $1,250 to $5,000 per year. To this should be added another 2½ million families in the $750 to $2,000 band who unquestionably will be affected by this proposal.

If official statements relative to increased earnings for workers are correct—then a large percentage in the $750 to $2,000 band in 1935-36 are now above the $2,000 joint-income figure. It must be recognized that the families in this band who—according to official statements—have benefited in the past 6 years by increased earnings—are those of the farmers and mechanical and industrial workers.

Incidental earnings become taxable.—By forcing even the small, incidental earnings of women—as well as the earnings of all minors—into the joint return, the incomes of million of families will exceed the $2,000 exemption allowed for husband and wife, and $100 for each dependent, and therefore will be subject to Federal income tax.

The women of these families have experienced economic hardships during the past several years, but now—due to increased demands for industrial and mechanical workers—are receiving their first real pay envelopes in years. These pay envelopes will be taxed 16½ cents out of every dollar in them over the $2,000 exemption base, if thi joint-return proposal is adopted, whereas under the present law, they would not be reached other than by the existing innumerable hidden taxes which all of us now pay.

Some of the earnings of women that would become taxable under the joint-tax proposal would come from such varied sources as:

Salaries.	Tourist.	Raising chickens.
Wages.	Summer boarders.	Nursing.
Business.	Sewing.	Cleaning.
Investments.	Baking and canning.	Teaching.
Real estate.	Washing.	Clerical work.
Annuities.	Gardening.	Clerking, etc.

Penalizes happy marriage.—Summing up, the proposal, which was adopted in secret session of the committee, will affect not only the incomes of a comparatively small number of wealthy couples, as has been suggested, but also will place a heavy and unnecessary tax burden on the families of workers with small incomes.

Further than this—it will destroy the independence of women and wipe out benefits of wills, trust funds, individual property ownership and legacies. It will return women—free-born American women—to the primitive status of being the chattels of their husbands.

Women's independence in this country—as an individual—is threatened by this mandatory joint income-tax proposal. Her basic property rights are at stake.

The penalizing of happy married life—by levying a discriminatory tax burden thereon—and the subsidizing, by Government, of separation and divorce—by way of lesser tax burdens, is something to which no Member of Congress should be a party.

If there is no intent to penalize marriage—why is this proposal designed to apply only to those married couples living together? If living under the same roof is used as an excuse to join their incomes for tax purposes—why should it not also apply to brothers and sisters who live together—or to any group of relatives who jointly occupy the same household and benefit by the joint income of all who live under the same roof?

In addition there are specific features now in the bill to which the women object.

Among these are:

I. *Proposal to increase estate taxes.*—This proposal tends to strike at the security of millions of homes. What is an estate? It is that portion of income set aside either through savings, investments, or insurance in order to provide security for the family and dependents after the death of the wage earner of the family. Do the increases in estate taxes proposed by this bill reveal any desire to protect this form of home security? An examination of the proposed increases tends to establish the contrary.

Under this bill it is proposed to increase taxes on the net taxable estates as follows:

	Percent increase
From $1 to $5,000	50
From $5,000 to $10,000	350
From $10,000 to $20,000	250
From $20,000 to $30,000	116⅔
From $30,000 to $40,000	200
From $40,000 to $50,000	200

A net taxable estate of more than $100,000 will pay, under this bill, the same percentage of increased tax as demanded from a net taxable estate of less than $5,000—that is, 50 percent. From net taxable estates of more than $100,000 the percentage of increase goes steadily down-

ward—and the public is being led to believe this proposed tax program is designed to make war profiteers pay the major part of the defense load to protect the masses.

Actually, however, it would appear to be designed to destroy the great middle class, which constitutes the very backbone of our Nation, and to establish here only two classes—the bureaucrats and the enslaved workers—the only two classes permitted to exist in any centralized government.

I subscribe to the remarks by Mr. Roy Osgood made before this committee relative to the estate-tax problem and strongly urge the committee to develop some program that will provide a stable tax rate for estate or death taxes.

II. *Excess-profits tax.*—It is generally claimed that the proposed increase in excess-profits tax is for the purpose of reaching profits attributable to the defense program.

The proposed schedule will:

(*a*) Through the 10-percent increase in all brackets of the excess-profits tax reach:

1. A vast number of nondefense industries,
2. A large volume of normal profits, and
3. Will affect the earnings and assets of approximately 15,000,000 stockholders.

(*b*) By tapping of all profits in so-called profitable years—business and industry will be unable to provide the reserves needed to tide them over periods of hard times—signs of which already are ominously apparent, and

(*c*) Make impossible normal expansion and even necessary modernization and replacements in industry.

If one were asked to devise a sure way of turning the tide of economic progress in this country into a certain decline, no more effective method could be devised for the accomplishment of this objective than to take away all returns of business and industry—above wages and salaries—and popularly spoken of as profits, thereby providing no means of maintaining, let alone expanding, economic enterprise in this country. Such a system further would prevent the normal provision of new jobs for young men and women who grow up to seek gainful employment.

From the point of view of future revenue—this policy means the destruction of the free enterprise system out of which taxes can be paid.

Nowhere in the proposed revenue act is there a more vicious provision than that which requires the computation of the excess-profits tax upon th amount paid as income tax. This is accomplished by the requirement that the excess-profits tax be computed before the computation and deduction of the income tax computation and deduction of the income tax. By what possible reasoning can earnings of a business enterprise—paid out in income taxes—be considered taxable income?

Under the existing law, the income tax is allowed as a deduction in the computation of the excess-profits tax.

This feature of the bill seems like a deliberate attempt to penalize private enterprise for the crime of producing wealth and creating gainful opportunities to make a living for millions of American men and women.

If you deprive industry of the opportunity to build reserves, what will happen when we face the transition from a war economy to a peace economy? Surely you must recall the attempts to turn this country from a republic to a sovietized Government immediately following the World War. There is ample evidence in the files of congressional and State legislature committees to establish that Bolshevists had counted heavily upon the economic shock following from such a transition with its resultant millions of unemployed.

However, the record shows that through reserves built during the war period industry was able quickly to change over to a peacetime economy, expand its plants, create new industries, and cut heavily into unemployment.

Those same records further establish that Sidney Hillman, present Associate Director General of the Office of Production Management of our defense program was very active in the 1919 Bolshevist plot in this country.

Is there intent concealed in this bill—under the guise of preventing war profits—to bar industry from creating the reserves that will be needed for the coming war-to-peace transition?

It would seem to be the duty of Congress to decrease excess-profits taxes, thereby aiding industry to create the reserves that will be needed to protect free enterprise in that transition period from war to peace rather than through this proposed increase in excess-profits tax to aid those who would destroy our free enterprise system.

III. *Radio broadcasting and network tax.*—The provision in the bill (title VI) covering the radio broadcasting and network tax runs counter to the maximum revenue principle found throughout most of the tax bill. Three brackets of taxable earnings are set up:

	Percent
(*a*) $100,000 to $500,000, tax rate	5
(*b*) $500,000 to $1,000,000, tax rate	10
(*c*) In excess of $1,000,000, tax rate	15

The lump-sum rates set up in the bill, however, permit broadcasting stations and networks to obtain lower rates than those specified above by holding their time sales down to certain levels.

For example, on time sales in excess of $1,000,000, the tax is specified at the rate of 15 percent. Accordingly a station or network selling $1,000,000 worth of time would pay a tax of $150,000, and a station or network selling $1,010,000 worth of time would pay a tax of $151,500, according to the explanation of this title in the report on the bill put out by the House Ways and Means Committee.

Actually, however, the bill contains lump-sum payment provisions that place a great premium upon the curtailment of radio time sales. Thus a station or network selling $1,010,000 worth of time would pay not $151,500 but only $110,000, because the bill states that in this case the tax shall be computed as follows:

> If the net time sales exceed $1,000,000—an amount equal to 15 percent of the net time sales—or an amount equal to $100,000 plus the amount of the net time sales in excess of $1,000,000, whichever is the lesser.

Similar provisions are found on each of the other two brackets—waiving the possibility of obtaining the full rates specified on the bill—on condition that the time sales are held near the bracket minimum in each instance.

Why did the Ways and Means Committee of the House hold out this premium for restricting time sales on the air? Did the committee deliberately forego the opportunity of collecting the full rate of taxation specified in the bill in order to accomplish the "plowing under" of radio time and station and network facilities?

This possible explanation of the House committee's intent is given added weight through the fact that the committee's report on the bill omits any mention of the lump-sum payments by which this end is accomplished.

We have become accustomed to plowing under pigs, plowing under corn, plowing under cotton, plowing under profits, even plowing under reputations, but will the public peacefully accept the plowing under of radio time?

What is the real purpose behind this provision? Is it to deliberately curtail paid entertainment time on the air and thereby allow more sustaining time for war propaganda and the promotion of Government programs?

This committee must surely realize that if this tax principle can be applied to spoken advertising it can also be applied to printed advertisements of newspapers and other publications.

Further, commercial programs are used to promote and increase sales of manufactured products of our private enterprise system. Curtail that promotional advertising and you decrease sales, cut production, reduce earnings, increase unemployment, and generally wreck the normal functioning of our industrial economy.

Furthermore, these would lead to a material reduction in the anticipated national income, thereby greatly decreasing the revenues this bill is supposed to raise.

Every housewife knows full well that her family cannot continue to support indefinitely the ever-increasing tax burden placed upon it. If they know this—certainly the businessmen of this country know it also and it goes without saying that you intelligent men serving on this committee must be quite aware of the deplorable state of this country's finances and the unsound tax patchwork quilt which has been thrown over our national economy.

With our ever-increasing debt, our reduced earnings, our skyrocketing cost of living, and our increased taxes, the citizens of this country are in a sorry plight. They are quite conscious of the fact that due to bad management of Government and the imposition of socialistic theories and legislation in Government promoted by starry-eyed dreamers, this country has been unable to properly support itself since the depression.

Regardless of the millions of dollars appropriated they also know we have as yet no adequate national-defense equipment. In spite of all this we now find ourselves in the amazing situation of being called upon to support and even finance foreign countries and to continue to deprive ourselves of our own national defense while we scatter it to the four winds—from Africa to China—and now Russia.

You and I both know that this riotous unbridled spending—supposedly in the name of national defense—actually can result only in national bankruptcy.

Every economist, every statistician, every businessman, and the public generally, know perfectly well that the international defense

program recommended and planned by the British Government and Mr. Roosevelt can never in heaven's name be maintained by our economy, and sooner or later it is going to blow up. As far as we are concerned it might just as well blow up now while we women still have a small stake left in the private enterprise system, a small stake which we intend to protect and preserve by every means at our disposal.

The CHAIRMAN. Any questions?

(No response.)

The CHAIRMAN. Thank you.

Mr. Burton G. Daw. Will you give the committee your name?

Mr. DAW. Burton G. Daw.

STATEMENT OF BURTON G. DAW, REPRESENTING LASALCO, INC., ST. LOUIS, MO.

Mr. DAW. I am just a small manufacturer, trying to get along.

The CHAIRMAN. Are you from St. Louis?

Mr. DAW. Yes. I will try and make this as snappy as possible.

The trick seems to be to evolve a method of taxation which will result in revenue for the Government without breaking or making crooks of all the people.

Senator CONNALLY. You have something there.

Mr. DAW. *The incentive plan.*—The progress of the United States can be laid to equality of opportunities and responsibilities called democracy. During the last few years the trend has been toward inequalities with privileged classes, through Federal and State laws. These inequalities have destroyed the ambition and incentive of thousands, causing them to turn from hard work and striving, to a resigned attitude of letting the Government take from those that have and support those that have not.

Many believe it impossible to put more people to work, and eliminate Government projects to feed our citizens, but nothing is impossible and it can be done and the following is a brief outline of the recommended plan. Please note that there is no favoritism in this plan. All have the same chance.

The incentive plan consists of two distinct parts, both requiring each other for success, so before attempting to pass judgment on one part of the plan, study the other part, and the relation of one to the other.

I. *Equal distribution of profits.*—We can agree, I think, that both capital and labor require a definite understanding as to what they may expect from each other and the Government in particular.

(*a*) As an incentive to investors and capital, one-third of net earnings of all business should be paid in cash to the stockholders. This insures the investor of cash profits, if any are made. In other words, immediate returns.

(*b*) The employed should be given one-sixth of net profits as a cash bonus, giving them incentive for cutting costs and better work.

(*c*) One-sixth of net earnings should be used for unemployment insurance, health and sick benefits, old-age pension, and so forth, for employees.

(*d*) One-sixth of net earnings should be used as a reserve.

(*e*) One-sixth of net earnings should be used for expansion or new developments.

Conclusion:

Investors benefited by (*a*) exclusively.

Employee benefits by (*b*) and (*c*), exclusively.

While (*d*) and (*e*) are of equal benefit to both labor and capital.

Probably one of the most disheartening and unfair efforts of democracy is that of our present methods of taxation.

Luxury and sales taxes together with gasoline, automobile, and cigarette taxes take probably two to three times the percentage of a poor man's income as it does of a man in the middle brackets.

What logical reason have we for taxing gasoline for automobiles when we do not tax hay and oats for horses? Why should a beer drinker pay a tax while a soft drink goes untaxed? Why should we put a tax on cigarettes and not on gum or candy? Because a father wants to leave his children a million dollars, why should the inheritance tax take most of it and kill his desire to accumulate $1,000,000, when we know he can't possibly make $1,000,000 without first spending $10,000,000 somewhere along the line?

II. *Revised taxation.*—A. Eliminate all present taxes—personal, real estate, sales, gasoline, cigarette, income, business, corporation, inheritance, automobile, and so forth.

(*a*) Without taxes there would be no farm or railroad problems. The rents would be less.

(*b*) Homes and farms paid for and not mortgaged could not be taken from owners.

(*c*) We would all drive bigger and better automobiles if they and gasoline were not taxed.

(*d*) There would be an incentive to accumulate homes, better cars, furniture, and real property, knowing that after they were paid for no more rent or taxes would have to be paid to keep them.

(*e*) Cigarettes, 5 cents; beer, 5 cents.

(*f*) The poorer people could afford to move out from the slums to places of their own if they were not penalized by excessive taxes—most of which are hidden—in proportion to their incomes.

(*g*) Business not being taxed would pay bigger dividends and could build more automatic equipment for competing with cheap foreign labor for export.

(*h*) Eliminating taxation of railroads and other methods of transportation would reduce the freight and passenger rates so that the Middle West could be more thickly populated and compete with the East on export and long-haul shipments.

(*i*) Old or unfortunate people unable to work would not be taxed and they could not be thrown out of their own environment if their homes were paid for; therefore, an incentive for home ownership.

(*j*) The realization that ownership insures security is an incentive for accumulation and takes the problem away from Government.

(*k*) This is not the old single-tax plan when land was the basis of taxation.

(*l*) While we can earn we can pay our taxes, but when taxes take from us everything we have worked to accumulate, because we cannot earn enough for the taxes, we lose our incentive.

(*m*) There are no favorites or inequalities in arriving at taxation on a basis of a percentage of ones earnings, either from labor or investments and the unfortunate are protected.

B. Replace all present taxes with an incentive tax which would be, say 30 percent of the earnings of individuals from labor and investments, with no exemptions.

(*a*) Salaries and dividends would be paid after 30 percent had been sent to the State capitals to be divided between Federal, State, and local governments.

(*b*) The minute a person stopped working, the tax would stop.

(*c*) A person might accumulate money or land but as long as it didn't earn anything for him he would not pay a tax but the profit made on the sale of land would be automatically taxed.

(*d*) To raise or lower taxes no special class of people would have to be considered. Just change the percentage and all would be treated alike.

(*e*) Anybody living without working would be subject to investigation as there would be no taxes received from them. So racketeers, thieves, and those making a living illegally would be carefully checked, thus reducing crime.

(*f*) A referendum vote would be necessary to put the incentive plan in operation, but, when you stop to think of those who would benefit directly, it does not seem impossible:

1. People unfortunate and unable to work.
2. People who are ambitious and desire to accumulate great wealth realize that after the 30 percent is paid, the rest is definitely theirs.
3. Cigarette smokers.
4. Automobile drivers.
5. Home owners.
6. Hourly workers.
7. Labor, who would be assured of sharing the earnings.
8. Investors, interested in prompt returns.
9. Business, which would expand if it were not for heavy taxes ever after.
10. Young men and young women who want to get ahead in the world can build slowly.
11. Farmers.
12. Those interested in eliminating hidden taxes and knowing the truth about the costs of Government.

If there are any questions the committee would like to ask, I should be glad to answer them, if I can.

Senator CONNALLY. Or if you have a further statement, you may put it in the record.

The CHAIRMAN. Any further questions?

(No response.)

The CHAIRMAN. Mr. MacKenzie. You are from Salt Lake City, Utah?

Mr. MACKENZIE. Yes.

The CHAIRMAN. You may proceed.

STATEMENT OF A. G. MacKENZIE, SALT LAKE CITY, UTAH

Mr. MACKENZIE. I am A. G. MacKenzie, of Salt Lake City, Utah, where I am engaged in the mining business. I am here as a spokesmen for metal-mine operators of our region. I have not the knowl-

edge or the disposition to enter into the technicalities of this bill. My desire is merely to tell you how we in the western part of the country feel about some of the provisions of this excess-profits-tax law as it stands, or as it will be, if the bill is passed in its present form.

This bill proposes to apply the excess-profits tax to income before deducting the income tax, thus requiring us to pay an excess-profits tax on the income tax we have to pay the Government. We do not see how money paid as taxes can be deemed excess profits.

As I understand it, the allowances made on invested capital under this bill will be only about 5 percent. The present 8 percent is bad enough, but 5 percent is out of the question as a normal return on mining investments as money will not go into the business on that basis. As I understand it, the bill recognizes this as to new money going into the business and proposes to allow $1.25 for each $1 of new money invested. We cannot understand why such a roundabout method is employed when it would be so much simpler and more equitable to allow a reasonable rate of return in the first place instead of fixing too low a rate and then applying that to more than the amount actually involved. People who put their money and faith and efforts into making a mine out of a prospect are certainly entitled to equal consideration with those who do not come in until the mine is made.

This bill has a new form of excess-profits tax in the amount of 10 percent on those who have been unfortunate enough not to have earned a reasonable return on their capital during the base period. I do not understand precisely how this formula will work, but we do regard it as unjust to lay a special tax on people because they have had some hard luck in the recent past.

We do not understand the philosophy of determining the credit allowance based on earnings for the years 1936 to 1939. We do not understand why, after it has been determined, the amount is taken at 95 percent instead of what it actually is. These years 1936 to 1939 do not at all constitute a normal period of the industry in my part of the country. The best of them were not too good, and the others were pretty bad. Then, we find a provision to eliminate 1 year of loss so that only 3 of the years are taken into the calculation, but they have to be divided by 4 to get the average. That is not the kind of arithmetic we use and have always used. We divide the sum of three items by 3 to get the average.

The best approximation of normal profits you can get out of this 4-year period for our business is to take 2 of the years and ascertain their average. This would not be too good for the industry, but it would be much more nearly fair than the present requirement.

Generally, those 2 years would be 1936 and 1937, but that would not be true in all cases. For mines which were just getting into production in the first years there should be an opportunity to use the later years. And if a mine were particularly unfortunate in one of the earlier years it ought to be allowed to take another. Actually, in order to get even approximately the normal profits of this period our mines should have the privilege of adding the profits of any 2 of the years and divide the sum by 2.

We have another situation which bothers us greatly and which may not suggest itself to those not familiar with our kind of business, although I believe it has been alluded to in these hearings. We are asked for all the metal we can produce, and, of course, we are trying to get it out.

If we mined at the normal rate year after year, and realized no more than a normal profit per ton of ore or pound of metal, we should expect to have no excess-profits tax to pay. But if in any year we increased the rate of production we should probably have the excess-profits to pay on the increased income, even though the profit per unit was no more than normal or in some cases even less than normal. We do not object to paying excess-profits tax when we are making more than normal profits, but it is hard to be asked to increase production from a wasting asset this year, for instance, and then find that although we have made only normal or perhaps less-than-normal profits on the volume produced we have to pay an excess-profits tax that may run as high as 60 percent. We feel there ought to be some way provided so that excess-profits taxes would not be placed on normal profits of production.

We have always had trouble in connection with taxation of our industry to find where we stand with respect to invested capital and prior earnings. Many of our mines have been developed by men who did not have much capital. Sometimes a valuable mine is made in this way, so that the actual cash investment is comparatively small but the investment of time, sacrifice, effort, skill, and perseverance is great. If such a mine were fortunate in the base period specified in this bill, and if the method of calculation were reasonable, it would have treatment comparable with that of mines developed through direct application of large amounts of cash.

If, however, it was one of the unfortunate mines which were compelled to shut down or operate at a low rate during part or all of the base period due to low metal prices or low demand it may show no reasonable amount of base-period income. We understand there are some provisions in the law which are intended to give a fair allowance for those so unfortunate as not to have either a reasonable invested capital or income allowance. Such provisions are essential, but we understand relief is expressly denied to those who have suffered through low metal prices or low demand. Yet these were the prime causes of our troubles in the years 1930–39, and both are matters which were and are beyond our power to control. Low prices and low demand should be specifically recognized as grounds for relief in such cases.

I have refrained from discussion of peculiar conditions of our industry or from expression of our desire to make our utmost contribution to the general welfare of the country. I assume that you have been told of our physical problems previously and that you take it for granted, as you can, that we are bending all our efforts to obtain maximum production. And that we, like other industries, have our worries with respect to priorities and other unfamiliar problems. Yet in our minds most prominently all the time is the specter of a tax program which we do not understand and with implications that overshadow all we are doing and hope to do. We greatly fear that, unless changed in many respects, it may actually impede what we

regard as the country's greatest demand on us and as our own most urgent obligation—maximum production of essential metals.

We wish we could have the assurance from those who understand and create these bills that the excess-profits tax has been put on a fair basis so that we could go ahead with one of our most important problems so clarified that we could make provision for it and devote more of our thought and energy to production. We, therefore, sincerely trust that you can, at this time and in this bill, get at least some of these matters straightened out so that we can proceed with the conviction that we have a tax law that is really fair to us and that will enable us to do all possible in the way of production.

The CHAIRMAN. Thank you.

Senator BAILEY. Have you some amendments along the line of the last paragraph there?

Mr. MACKENZIE. No, sir; would you want any? As I said, I am not a tax expert.

The CHAIRMAN. We endeavored in the last supplemental excess-profits tax bill to take care of some of your problems; all were not covered, and you have an industry that really ought to be separately treated, in my opinion.

I don't think, however, you can have an excess-profits tax that would deal with your mineral interests in this country, unless you could give it special treatment, because there are so many different problems identified with it.

If we could have gotten in a general relief provision that would have enabled the Treasury to consider abnormalities, both in income and capital investment, you could have been relieved. The Treasury didn't want that because it would have put a great burden on the Treasury and led to a complicated system of determining what was a reasonable return to the industry under given conditions. I frankly do not see how you are going to be greatly relieved, unless you can get a general relief provision, because special relief provisions all meet some but obviously not all the cases that arise in the industry.

Mr. MACKENZIE. Something of that nature I think would be very helpful, and if we could know that such a rule would be invoked in all deserving cases.

Of course, where a thing is not set out specifically in the law, there often occurs a conflict of opinion as to its application.

The CHAIRMAN. That is true; there was a great deal of litigation under the old excess-profits tax, and the Treasury is trying to avoid that and it is understandable they should, but at the same time I don't see any way that you are going to meet particular situations in particular industries, like mines.

Any questions?

Senator DANAHER. Not of this witness.

On August 14, Mr. William C. Warren, of the firm of Milbank, Tweed & Hope, appeared here as attorney for some companies engaged in advertising in transportation facilities, and at the time of his appearance I asked him certain questions as to his view of the legal effect of our right to impose certain taxes.

At that time he was directed to submit a memorandum for the committe. (See p. 473.)

I now have it in my hand and would like to have it incorporated in the record. I would like to have a copy submitted to the Treasury, in the hope that they will consider the legal problems involved and be prepared to advise us when we reach that phase of the bill.

(The memorandum is as follows:)

MEMORANDUM TO SENATOR JOHN A. DANAHER, SUBMITTED BY ATTORNEY WM. C. WARREN OF THE FIRM OF MILBANK TWEED & HOPE

Section 3269 of the revenue bill of 1941 as passed by the House of Representatives imposes a graduated excise tax on lessors of outdoor billboards, the tax being based on the number of square feet of each billboard. During my appearance before the Senate Finance Committee in opposition to this excise tax on behalf of those companies having advertising displays on properties of common carriers you asked me whether the Federal Government, in order to keep the highways attractive and safe, could impose a tax on lessors of gasoline filling stations and lessors of roadside stands along the highways in the same manner as section 3269 imposes a tax on the lessors of outdoor advertising.

Your question indicates extremely clear thinking because if the purpose of this excise tax is to keep the highways attractive and safe it will never be achieved by legislation such as that proposed. Although this Federal excise tax would tend to discourage advertising through lessors of outdoor billboards, it would, in no way, affect the great bulk of outdoor advertising—that which is owned and considerably more objectionable. Undoubtedly, the effect of such a Federal excise tax, if enacted into law, would be to discourage outdoor advertising through lessors because the apparent discrimination would create an unfair competitive advantage to magazines and newspapers. Most of the bill boards along the highways are owned and not leased and, therefore, would not be subject to the tax imposed by section 3269. Those billboards which are owned and leased are usually not maintained and serviced with any degree of regularity.

For that reason the billboards are often extremely unattractive and in a state of disrepair. Then, too, with few exceptions all of the small billboards along the highway are owned and not leased. Some companies keep no actual record of the location of their small outdoor billboards along the highway, usually make no consistent effort to maintain and keep them attractive after the small billboards have been erected. The result is that after a few months these small owned billboards present an untidy appearance, and definitely detract from the natural beauty of the countryside; as time goes on, these conditions become progressively worse. These billboards should be contrasted with the regularly serviced outdoor billboards of the advertising lessor companies all of which are well located, well constructed, well maintained, and usually add considerable interest to our highways. The great number of gasoline filling stations and roadside stands along the highway which you mention, together with their several small billboards and neon signs, presents a greater problem in maintaining the beauty of the highway and its safety than do the large outdoor billboards, including those owned as well as leased. In most instances, these gasoline filling stations and roadside stands are owned and not leased. For these reasons any legislation having as its purpose the safety and preservation of the attractiveness of highways which taxes only lessors of outdoor billboards utterly and completely fails its purpose. Any legislative attempt by Congress to tax the owners of outdoor billboards, gasoline filling stations, and roadside stands would seem to require apportionment of the tax among the States according to their respective numbers because such a tax would appear to be a direct property tax. This constitutional limitation makes such a tax impossible.

Evidently your opinion is the same as mine, that someone interested in the beautification and safety of the highway has proposed this excise tax and has caused it to be incorporated into the revenue bill of 1941. You, therefore, asked, in substance, the question whether the features of section 3269 could be incorporated into Federal tax legislation so as to reach other structures and activities along the highways which are equally if not more damaging to their attractiveness and safety. If the purpose of such a Federal excise tax were to raise revenue, then it would seem that, if section 3269 is constitutional a similar

excise tax applied to lessors of gasoline filling stations and roadside stands would be constitutional. However, if the tax legislation had an ulterior purpose—to eliminate leased gasoline filling stations and leased roadside stands—a wholly different constitutional question is presented. Such a Federal excise tax, with high rates, might be held to constitute a penalty by the Supreme Court of the United States and therefore unconstitutional.

Article I, section 8, clause 1, of the United States Constitution declares that—

"The Congress shall have power to lay and collect Taxes, Duties, Imposts, and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts, and Excises shall be uniform throughout the United States;"

The only limitation expressly contained in that clause of the Federal Constitution is that any Federal excise tax must be uniform, which has been interpreted to mean geographical uniformity. *Knowlton* v. *Moore* (178 U. S. 41 (1900)). As long as any Federal excise tax is levied solely for the purpose of raising revenue and with no ulterior purpose, it seems that such a Federal tax would be constitutional. However, when the power to levy excise taxes is resorted to in order to accomplish other purposes than the raising of revenue a difficult constitutional question is always presented. The tenth amendment of the United States Constitution is a definite limitation on the power of Congress to levy excise taxes. This amendment provides that—

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Federal excise taxes may be and are levied for regulatory purposes. When Federal taxes are thus employed the controlling right to levy them must be derived from the authority of Congress as set forth in the United States Constitution to regulate the matter in question. Of course, in such instances a Federal excise tax carrying into effect one of the delegated powers of Congress can successfully withstand constitutional attack of that ground. However, a different constitutional question is presented when Congress enacts an excess tax which has for its major and presumably intended effect the regulation of a matter that Congress has no constitutional authority to regulate.

The Federal Government is not granted a general police power by the United States Constitution—the power directly to regulate the affairs of men for the purpose of advancing the general safety, health, morals, and welfare. However, the Supreme Court of the United States has from time to time held that Congress does have such police power as is incidental to the exercise of its delegated powers. The question then is directly raised: To what extent, if at all, may the Federal Government employ its taxing power for the ulterior purpose of regulating matters not within its special competence? It is necessary to turn to the cases. In one of the earliest cases we find that a Federal excise tax of 10 percent on the amount of State bank notes paid out by any bank was sustained in *Veazie Bank* v. *Fenno* (8 Wall. (U. S.) 533 (1860)), even though the purpose and effect of the tax was to drive such notes out of circulation. See also *Hampton* v. *United States* (276 U. S. 394 (1928)). In *In re Kollock* (165 U. S. 526 (1897)) and *McCray* v. *United States* (195 U. S. 27 (1904)) slightly different situations existed because the ulterior purposes concerned matters not within the direct domain of the Federal Government. The first decision involved a Federal excise tax of 2 cents a pound on oleomargarine and other butter substitutes. The exaction was unanimously sustained by the Supreme Court. Congress thereupon increased the tax to 10 cents a pound on the oleous substitute when colored to look like butter. The tax law was attacked not only as an infringement on the police power reserved to the several States but also because the high rate of tax destroyed the appellant's business and so allegedly deprived him of his property without due process of law. Again in the Supreme Court sustained the tax. In *Sonzinsky* v. *United States* (300 U. S. 506 (1937)) the Supreme Court sustained a Federal excise tax of $200 on each sale of machine guns and sawed-off shotguns against the charges that the enactment was a regulatory and not a revenue measure.

The use of an ostensible taxing power to achieve control of matters not within direct congressional competence has not, however, been entirely unchecked. In *Bailey* v. *Drexel Furniture Company* (259 U. S. 20 (1922)) the Supreme Court held unconstitutional a purported Federal tax of 10 percent of the net profits of certain described industries employing child labor. On the same day in *Hill* v. *Wallace* (259 U. S. 44 (1922)) the Supreme Court held

unconstitutional a Federal tax of 20 cents a bushel on all sales of grain of a future delivery but exempted from the tax, sales or exchanges, which received a license from the Secretary of Agriculture and complied with the detailed regulations prescribed by the law for the conduct of trading on the exchange. In *United States* v. *Constantine* (296 U. S. 287 (1935)) a Federal law taxing those dealing in intoxicating liquor contrary to the provisions of the State law, $1,000 for the privilege of carrying on such illegal business, was held invalid. Again the Court found in intent to regulate matters beyond the scope of the Federal power. Then in *Carter* v. *Carter Coal Co.* (298 U. S. 238 (1936)) the Supreme Court declared unconstitutional a 15-percent sales tax on bituminous coal, but exempted operators who accepted codes of fair competition prescribed by the act. The court attempted to distinguish *Veazie Bank* v. *Fenno, supra, McCray* v. *United States, supra*, and similar cases because in those cases the contention that the imposition was a penalty rather than a tax rested solely on the amount of the tax. Here the Supreme Court indicated that the very "face of the act" disclosed its regulatory purpose.

These cases and others that the Court has not crystallized definite criteria in this field. It would seem that the distinction might be one of degree rather than of kind. Then too, the Court seems not to favor any devise labeled as a tax which, if sustained, would easily lead to extension of Federal power into all realms of human activity. The Court evidently appreciates its quasi-political responsibility of maintaining the traditional separation of powers between the several States and the Federal Government. Chief Justice Taft appropriately said in the *Drexel Furniture case:*

"Grant the validity of this law, and all that Congress would need to do, hereafter, in seeking to take over to its control any one of the great number of subjects of public interest, jurisdiction of which the States have never parted with, and which are reserved to them by the tenth amendment, would be to enact a detailed measure of complete regulation of the subject and enforce it by a so-called tax upon departures from it. To give such magic to the word 'tax' would be to break down all constitutional limitation of the powers of Congress and completely wipe out the sovereignty of the States." (U. S. Reports, vol. 259, p. 38.)

It does seem that a Federal excise tax designed to eliminate leased gasoline filling stations and leased roadside stands would have many constitutional difficulties to overcome. Whether the Supreme Court would try to sustain it as in pursuance of the "commerce power" is problematical. But it does seem that the supervision and control of these local activities belong solely to the States and any invasion by the Federal Government as to the supervision and control of these activities should be invalidated even though it be ostensibly a taxing act. For the Court to do otherwise would seem to open the door to any regulation of local activities which Congress should deem proper and would completely break down the sovereignty of the several States.

The CHAIRMAN. That completes the schedule of witnesses, and the public hearings; therefore it will be closed.

The committee will meet in executive session at 10 o'clock on Monday, with representatives of the Treasury.

Senator BAILEY. Will it be possible for the Treasury to have at that time a bill to meet some of these objections?

The CHAIRMAN. I suppose the Treasury will be ready to report on specific items; I imagine they would not be able to draw a bill in accordance with the objections we have received here.

Well, thank you very much, gentlemen, for your attendance here for these 2 weeks.

(Additional material ordered inserted in the record is as follows:)

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 20, 1941.

Hon. WALTER F. GEORGE,
Chairman of Senate Finance Committee
United States Senate, Washington, D. C.

MY DEAR SENATOR GEORGE: After having devoted several months of study to the tax question, I want to take this means of placing before your committee some of my thoughts in connection with the increasingly important problem of

providing the necessary money to meet our prevailing Government expenditures.

I made this study with the thought of suggesting amendments to the tax bill when the legislation was before the House, but despite the negative votes of a substantial number of us, the tax bill was brought in under a closed rule which barred any amendments being made on the floor of the House. It is for this reason that I am writing you my thoughts on the tax question with the hope that you will bring these views before the members of your committee, or insert them as part of your printed hearings, as you deem best.

My study has been devoted to the specific problem of how best to distribute the burden of Federal taxation so as to—

1. Help avert inflation;

2. Raise as large a proportion of our current expenditures as possible from current revenues; and

3. Apply the heaviest taxes, insofar as possible, at the point where they can be most easily and equitably paid.

I believe that these objectives can be best approximated under present conditions by the addition of some form of tax on "abnormal increments" which grow out of the large profits being made by certain individuals and corporations benefiting primarily from defense activities. The suggestion I wish to propose is entirely apart from such measures as were contained in the tax legislation which passed the House with regard to taxing so-called excess profits; the suggestion which I propose is aimed at achieving the enunciated objective of practically all Government officials to the end that excessive profits may be eliminated from all defense activities.

In brief, I seriously recommend that your committee assign its experts to making a careful study of the revenue-raising possibilities of a special tax on "abnormal increments." In my opinion, this tax could be easily computed, equitably levied, and conveniently paid since it would be levied only on net revenue increments which were definitely in excess of the average returns from previous years. If this proposal were adopted, next year's income-tax blanks would provide space in which the taxpayer would report "net income of taxpayer after all taxes were paid in 1940, $_____." Following that would be a line reading "Net income of taxpayer after all taxes are paid for 1941, $_____." After that a line reading "Increase in net income of taxpayer after all taxes are paid $_____."

This additional income, where it exists in a substantial amount, will usually be a direct or indirect result of our defense spending; it will be a net excess return over the previous average; it will in most cases be beyond the income which the taxpayer had planned on receiving in preparing his yearly budget and should therefore be an item on which a schedule of taxes could be levied which will bring rich returns to the Government without working a hardship upon the taxpayer.

I think it will come as close to the objective of taxing the profit out of wartime activities as any approach which has yet been developed.

May I point out to your committee that England has been using a tax developed along these lines practically since the beginning of the war. The first system used by England was to levy a 100-percent tax against this abnormal increment, but it was soon discovered to be unwise to take the whole amount since that discouraged initiative. The present English system is to levy a 100-percent tax with a stipulation that 20 percent of this "take" is to be returned to the taxpayer after the war is over. I do not think it is necessary in this country to levy a tax anywhere near as large as that levied by the English on these "abnormal increments." I also believe that certain exemptions can be provided in the lower brackets, and that an equitable formula can be developed to establish an average base to use as a normal return instead of the single year of 1940. All of this is a matter to be worked out in detail by tax experts as they apply various formula to the statistics of income average through the office of the United States Treasury Department. I simply want to take this opportunity of presenting the suggestion to the committee with the sincere recommendation that it be carefully explored as a possible device for providing a substantial increase in our national revenue without seriously crippling business or impairing the ability of any individual to meet his tax load.

I would like to offer one further suggestion. Inasmuch as the House of Representatives struck out the provisions inserted by the House Ways and Means Committee providing for mandatory joint income-tax returns by married couples, the tax bill as it is now written will raise approximately $300,000,000 less than was originally contemplated. To the extent that the elimination of the manda-

tory joint income-tax returns provides an opportunity for legal tax avoidance by married couples with substantial incomes, I am sure that a device can be inserted in the tax bill which will tax these incomes to the same extent as they would be subject to were the joint income tax made mandatory. This can be worked out without incurring the objections raised by women's groups that joint income-tax returns allegedly tend to subjugate the status of women to that of men. I think you will agree that something along these lines is necessary to prevent the obvious inequalities which now exist in 8 of our States where our married taxpayers enjoy the tax concessions and legal means of evasion which are not universal throughout the other 4 States. I hope that your committee will appoint a group of experts to study available methods for equalizing tax burdens among married couples in all 48 States so that existing injustices and inequalities may be eliminated while at the same time maintaining the rights of women to maintain an independent status where they choose to do so.

With all good wishes, I am

Cordially yours,

KARL MUNDT, *M. C.*

STATEMENT BY HON. CHARLES R. ROBERTSON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NORTH DAKOTA

Chairman George and Members of the Committee:

I am advised that efforts are being made to revive and have written into the 1941 revenue bill the Treasury proposal calling for a 1-cent per gallon increase in the Federal tax on gasoline. That proposal was advanced when the revenue bill was under consideration by the Ways and Means Committee of the House. I opposed it then and I desire now to reemphasize that opposition.

In this critical period, when billions of dollars are being poured out to strengthen our national defense and protect our internal economy, it is, of course, inevitable that all of us must pay higher taxes. I think the Nation as a whole is reconciled to that fact and is willing to bear that increased burden so long as it is levied on a fair and equitable basis.

I believe that increasing the Federal tax on gasoline from 1½ cents to 2½ cents per gallon is neither fair nor equitable and is a violation of the very fundamental taxation principle that taxes should be levied on the ability to pay.

Taxes on motor-vehicle operation in this country have already reached far beyond the bounds of reason. Many of these taxes are carry-overs from the day when motor vehicles were a luxury. Automotive transportation continues to be taxed at luxury rates despite the fact that it is now one of our most major and essential industries. The very fact that people continue to use motor cars and trucks, notwithstanding these unreasonable special taxes, shows what a necessary part they have become in our daily lives.

An increase in Federal gasoline tax will increase the burdens of those least able to bear it and constitute a tax upon those people who are already bearing a disproportionate share of the load. One of the hardest hit by such an increase would be our great agricultural industry. It will be a tax on the tools with which our farmers feed the Nation.

In my State, for example, it is estimated that the farmers pay 75 percent of the gasoline tax. An increase of 1 cent in the Federal gasoline tax will cost the consumers of North Dakota more than a million and a half dollars a year and this will be in addition to the nearly two and one-half million dollars which they already pay.

This committee well knows the efforts that have been made in the past few years to achieve parity for agriculture. We are at last in sight of that goal and to impose an increased tax on gasoline, which is an absolute necessity in modern farming, seems to me both illogical and unwise. It is as though we were to deliberately set up an obstacle to keep agriculture from reaching a position of parity after we have had that goal as an objective all these years; it is undoing with one hand what we are trying to do with the other. The cost of transportation is probably the biggest single service charge that agriculture has to pay.

Today, our farmers are being told that food will win the war and are being urged to increase their production as a means of aiding the democracies in their struggle against aggression. Since Congress already increased the Federal tax on gasoline by 40 percent in 1940, certainly an additional increase cannot be justified at this time on a commodity which is so absolutely essential in the

production of food and in the production of other necessities in our defense program.

In addition to the tax on gasoline levied by the Federal Government, the various States also collect a heavy tax on this commodity. Farmers, however, are generally exempt from paying this State tax on gasoline used for agricultural purposes. This is not true with the Federal tax. No exemption is made and the farmer must pay the Federal tax on every gallon of gasoline used in the raising of his crops. Furthermore, State gasoline taxes are used for building and maintaining highways, but the Federal gasoline tax goes toward the general operating revenues of the Government.

It is not only the farmer who would be hit if this proposed increase in Federal gasoline tax is authorized but such a tax would also be a hardship upon millions of workers and their families who use the family car in going to and from their jobs. Such an increase will also handicap the great truck transportation industry and this will affect adversely the businessman and consumers generally in towns and cities. Such an increased tax, therefore, is chiefly an additional burden upon the efforts of millions of men and women to earn a living.

Taxes are not abstract things. They must be considered from the standpoint of those who will be called upon to pay them. For that reason, I would like to call the attention of the committee to excerpts from various letters I have received on the subject of automotive taxes in general. The first is from S. W. Corwin, one of the largest automobile dealers in North Dakota:

"Thank you very much for your good letter of the 28th. It's quite a relief to hear from someone in Congress who doesn't believe it proper to pile a disproportionate share of the tax load on the automobile business and everything connected with it. The automobile dealers, as a rule, are a pretty liberal-minded class of merchants who have paid more than their share of the overhead for so many years. They don't squawk when they're faced with more. However, Congress might as well realize that these tremendous automobile taxes the country has been using will soon cease if it becomes impossible for the public to either buy or operate cars.

"You and I have known each other for a great many years and you are aware that at both Fargo and Bismarck, N. Dak., we have operated a good average automobile distributing business. For 27 years we have developed this business. Our profits have degenerated until now we are only able to show a net gain of about 2 percent on our gross. It just isn't in the picture for merchants to have the very large investment we do and to take the tremendous chances we do financially to show a trifling profit of 2 percent. If Congress sees fit to make it even more difficult for us to make money, it will be impossible for us to continue.

"I admit that if our Government continues to push us into this war, which is unwanted by most of the population, someone has to pay the bill and the merchant seems to be the easiest place to get it. In that case, we will have to pay our share without making too much trouble over it. I already have a son who is voluntarily an officer in the Army and I have another son who will be 21 this fall and who expects to enter the same way. I have no other children. It's bad enough to have to give your family to the Government if after this is done Congress also deprives us of our business. I cannot feel that we have the right people in office at Washington."

The second quotation is from a letter written by Leo A. Winter, executive secretary of the Northwest Truck and Bus Association:

"Motor transportation has fixed tariffs. It will also be paying far in excess in special taxes if the proposed increase in the Federal tax on gasoline is carried out. Thus, this great American industry may fall short of doing the job it could have done in the interest of national defense had it been assisted, rather than penalized, through excessive taxation."

The trend in recent years to single out the automobile industry for numerous special taxes is also attacked in a letter I have received from Dave Kelley, president of the Grand Forks Automobile Dealers Association, he states:

"As you know, all of North Dakota, except the valley counties, have had almost continuous and total crop failures for the past 12 years. The residents of these areas have of necessity neglected replacement and repair of their cars and trucks. This year, with the first prospect of a crop and the first sharp increase in haulage requirements, they would be forced to replace and repair their transportation equipment at a price 20 percent higher than other areas which have enjoyed better conditions.

"In this day and age no one can consider the automobile or truck a luxury. Most farmer-owned automobiles are used both to carry agricultural products, such as butter, eggs, cream, etc., and to pull trailers in which are moved grain and livestock. This activity most certainly is a vital part of any defense program."

In opposing further increases in the Federal tax on gasoline and higher special taxes on the motor-transportation and automotive industry generally, I am not unmindful of the fact that this Committee is confronted with a very, very difficult problem in drafting legislation for raising the additional revenues that will be needed to finance the great appropriations that have been made.

I respectfully submit, however, that need alone can in no way justify the placing of an additional tax upon a commodity and an industry where the rate of tax is already exorbitant.

WASHINGTON, *August 23, 1941.*

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

DEAR SENATOR GEORGE: On behalf of those who have advised me of their views on the proposed revenue bill of 1941, I am including below a brief digest of the chief contentions against the proposed measure which have been brought to my attention by constituents. It is submitted for the attention of the committee.

1. Many persons have expressed alarm at the possibility that the past average-earning basis of computing excess-profits taxes may be supplanted entirely by the capital investment criterion. They view such a decision as a change of rules in the middle of the game. It seems to many to be a decision fraught with the danger of losing their game entirely.

2. At the same time, they are concerned about the possibility of extending capital-stock valuations for 3 years at a time when business conditions are generally unsettled.

3. On the other hand, others are concerned about the proposed 10-percent surtax on income over and above that derived during the basic period of 1936 to 1939 by companies using the invested capital formula of computing excess-profits tax. In the case of mergers since that time, a company is placed at a discriminatory disadvantage by subnormal profits resulting from less competence on the part of its predecessor subsidiaries. Coal companies, for example, realized little or no return on investment during that period.

4. Others have charged with apparent plausibility that the Treasury-suggested elimination of the percentage depletion allowance would discourage exploration and new supplies of minerals at a time when this particular type of expansion is a vital necessity.

5. Still others have viewed the proposed tax upon radio and outdoor advertising as an opening wedge for subsequent taxation of newspaper advertising, and for the attendant threat to freedom of the press. It is viewed also as the advance guard of a wave of increased cost of all consumer goods. They condemn the proposed partial exemptions of radio advertising when no early exemption is similarly granted for outdoor advertising. There is the case of one side-line outdoor advertiser whose annual net profit would be face to face with a fatal $400 tax under the proposed provision. Another medium for the presentation of the Government's defense program would be eliminated.

6. Fur merchants have complained bitterly against a proposed fur tax which would be made applicable to sales prior to September 1, or applicable to payments on installment or conditional sales contracts made prior to the date upon which the act would become effective. Even the fur dressers themselves agree with these merchants that the tax should be placed with the dresser rather than with the retailer.

7. Producers of commercial refrigerating mechanisms have noted that a 10-percent tax on their equipment, vital to the transfer of perishable foods, would bring hardship either to small food merchants or to the 130,000,000 food consumers, or to both.

8. Still others have expressed concern with the proposed 10-percent blanket tax upon all electrical appliances. They insist that electric ranges have long since ceased to warrant a luxury classification, and therefore should not be discriminated against by a tax which does not touch gas and fuel-oil ranges. They point out that more than 100,000 electric ranges are in use in each of 9 States, while only 23 States claim more than 100,000 nonelectric ranges.

9. Independent dealers in tires and tubes condemn a tax on inventories of these commodities if, as some charge, the large chain-store dealers will at the same time be permitted to postpone tax payment on tires and tubes until sold.

10. It is also charged that further increases in Federal gasoline tax would have a harmful effect upon agriculture; that the "defense" effort would be further curtailed in view of the fact that (e. g., in Indiana) 39 percent of Indiana communities have neither rail nor air service, and that citizens of Indiana already spend more than a week's salary each year in gasoline tax.

11. Users of photographic equipment have complained that the proposed tax on the tools of their trade is discriminatory in that it draws no distinction between amateur and professional photographers.

12. Symphony orchestras and civic theaters, which already depend largely upon subsidy and sacrifice to maintain their services to the community, are discouraged at the prospect of an additional 10-percent admissions tax, which would extend to their groups.

13. It is further charged that the proposed tax on bank checks can, in the light of previous experience, add little or nothing in revenue when the expense of collection has rivaled the revenue collected. Furthermore, it is asserted that the tax would reduce the number of checks written and further curtail the source of revenue by reducing collections of taxes on deposits and service-charge income.

14. Many persons who use fuel oil, additional tax upon which is proposed in the revenue act, have been forced to do so in many cases by antismoke legislation and campaigns.

These are some of the contentions which have reached my desk, and I shall be grateful to you if you can find it possible to grant them review by your committee.

Most sincerely,

RAYMOND E. WILLIS.

rew/cn

KIRKLAND, FLEMING, GREEN, MARTIN & ELLIS,
Washington, D. C., August 23, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Committee on Finance, Washington, D. C.

MY DEAR SENATOR GEORGE: This letter is submitted to you in behalf of Mutual Broadcasting System, pursuant to leave which I understand was accorded by your committee for the filing of briefs and statements with reference to H. R. 5417 by Saturday, August 23, 1941.

Mutual subscribes to and supports the position taken in behalf of the broadcasting industry by counsel representing the National Association of Broadcasters at the hearing held before your committee Monday, August 18, and urges that the tax on radio broadcasting stations and networks be completely eliminated from the bill for the reasons urged by Mr. Alvord.

Because of its form of organization and method of operation, Mutual feels that an additional word may be in order to direct attention to the manner in which the tax will affect it, as well as organizations which are integral parts of its network. While in form a corporation for profit, Mutual, as you probably already know, is in reality a cooperative enterprise operated on a nonprofit basis. Its stockholders are a number of stations and regional networks and, in addition, of course, a number of other stations and regional networks are affiliated with it, including many low-powered stations in small communities.

Mutual's expenses, including the maintenance of a Nation-wide wire-line system, and a further substantial sum to meet the cost of operating a network, are met out of (*a*) small commissions retained by it from the amounts received for time sales over its affiliated stations, (*b*) contributions to wire-line costs by affiliated stations, and (*c*) underwriting of the remainder by its stockholders. Thus all revenues from advertising are paid over to the stations and are not retained by the Mutual corporation. Mutual's primary purpose is, through its cooperative organization, to preserve a maximum of independence in the stations, combined with the advantages of network programs, and to assure the stations the maximum proportion of their card rates on network advertising, to the end that the profits of network operation will go to the stations composing the network.

Because of this method of operation, the proposed tax does not appear to impose on Mutual as large a burden as on other networks having a different form of organization. Actually, the burden will be proportionately just as heavy and its

consequences perhaps even more harmful. A correspondingly greater burden will fall on the stations and regional networks constituting the Mutual System, with an eventual impairment of their ability to maintain and contribute to Mutual the high standard of program service heretofore made available. With minor exceptions, all Mutual programs are produced by and exchanged between the Mutual stations. Stations receive no compensation for the elaborate and expensive sustaining-program service they furnish to the network.

According to trustworthy information from its affiliated stations and regional networks, the proposed tax will mean the difference between profitable and unprofitable operation for many of them. This point has perhaps been adequately developed in the testimony you have already heard, so far as individual stations are concerned, but does not seem to have been fully explained with reference to regional networks. There are over 30 regional networks in operation in the United States, varying greatly in size, territory covered, permanence of organization, and financial stability. Several such networks are affiliated with Mutual and comprise a very important part of its Nation-wide system, including the New England States, Texas, and the Pacific coast.

To a large extent, in fact generally, a regional network consists of an aggregation of smaller stations in a region, connected by wire in order effectively to compete with one or more high-powered stations serving approximately the same territory. Obviously, in this process regional networks have expenses which their competitors do not have, consisting of wire-line cost and cost of network operation. The proposed tax will impose an inequitably large burden on them because, in addition to the reasons you have already heard, they will not be permitted to deduct these very considerable expenses which their competitors do not have, with a resulting impairment of their ability to give good service and, in the case of those affiliated with Mutual, to contribute to Mutual's program service, and their continued underwriting of an independent and station-owned Nation-wide network.

Respectfully submitted.

LOUIS G. CALDWELL,
Counsel for Mutual Broadcasting System, Inc.

AUTOMOBILE MANUFACTURERS ASSOCIATION,
Detroit, Mich., August 20, 1941.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR MR. GEORGE: As the Senate Finance Committee has under consideration H. R. 5417, the members of the Automobile Manufacturers Association submit for its attention the attached statement relative to automotive taxation.

This brief was first presented to the members of the House Ways and Means Committee, but was submitted too late for inclusion in the record of the hearings before that committee.

Since the issues covered remain, we respectfully request that the statement be made part of the record of the hearings of the Finance Committee, which are being held at present.

Very truly yours,

ALVAN MACAULEY, *President.*

STATEMENT OF THE AUTOMOBILE MANUFACTURERS ASSOCIATION ON PENDING PROPOSALS FOR CHANGES IN FEDERAL AUTOMOTIVE TAXATION, BY AUTOMOBILE MANUFACTURERS ASSOCIATION, DETROIT, MICH.

Conscious of the tremendous task confronting your committee in raising additional revenue, the members of the Automobile Manufacturers Association desire to present certain principles bearing on Federal automotive excise taxes which they believe should be considered in the formulation of every tax measure.

The leading manufacturers of automobiles and motortrucks in the United States, as represented by the association, are in accord with the underlying objective of the Ways and Means Committee in seeking to raise sufficient additional revenue from taxation so that a larger proportion of our necessary defense program costs may be placed on a pay-as-you-go basis, especially since the industry concurs in the suggestions made by Secretary Morgenthau and

numerous other witnesses that every effort should be made to afford all possible savings in nondefense expenditures.

The membership of this association, as always, stands ready to pay its fair share of the taxes necessary to finance the gigantic expenditures for which the program calls.

Following are the facts for which we ask consideration:

1. It should be recognized that the automotive excise tax which is levied is paid by the consuming public. Although designated as a manufacturers' excise tax, it is a sales tax which falls upon all purchasers regardless of income level. Fully one-half of the Nation's automobiles are owned by persons who earn less than $30 a week. This fact should be especially noted in connection with the proposal to levy a $5 annual tax on car use.

2. It is most important in this special period that if repressive taxes are imposed, they shall be recognized for what they are, so that they may be removed promptly and completely the moment that the country again looks to domestic trade and to production for employment and a well-spread prosperity.

3. Suggestions that heavy taxes be placed on automotive products to curtail the production of consumer durable goods in order to further defense will fail of the desired result unless comparable taxation is applied to all goods and products coming in the same category.

4. The assumption that a heavy tax on automotive items would result in deferred spending and in savings, and would be an anti-inflationary force is invalid unless integrated in a program of economic control designed to curtail natural demand to the level of available supply of all products affected by the defense situation.

Standing alone, on the other hand, such a tax merely would tend to substitute governmental dictation of expenditures for the public's right of free choice in selecting goods to meet its needs and wants.

5. The objective of the Ways and Means Committee is taxation to produce revenue. High rates of taxation on motor products are advocated by their sponsors for the purpose of discouraging the purchase of cars and would, therefore, tend to extinguish this source of revenue—already affected by necessary defense curtailment—especially so if automotive products were singled out for such burdens as the consumer demand would turn from autmotive to other durable goods left free of tax.

6. The owners and operators of motor vehicles are already subject, not simply to double but treble and quadruple, taxation. They are now paying more than two score special taxes to State and local governments in addition to general taxes paid in common by all taxpayers. Automotive taxes paid by users amount to over one-third of the State revenues.

7. States rely almost entirely on revenues from automotive products to meet the payments on highway bonds and other highway costs of maintenance which are fixed obligations. Further extension of Federal taxation in this revenue field would seriously affect the ability of the States to meet these fixed charges and to expand their highway system in the future—an expansion vitally necessary.

8. Manufacturers' excises were originally imposed as "emergency" taxes on articles deemed to be luxuries, or at least dispensable conveniences. Automotive products, because of the use to which they have been put by the public, are clearly in the category of necessities today. The extent of the necessity of the private passenger car is indicated in some detail in the appended newly completed report: A Factual Survey of Automotive Usage, which is drawn from data collected in the highway planning surveys of the United States Public Roads Administration and the several States.

9. The facts presented with regard to the incidence of automotive taxes and their effect on the American people apply with full force to proposals made for imposing an excise tax on used cars. In addition, no machinery exists at the present time within the Federal Government for the collection of such a tax, making it of doubtful aid in raising revenue.

10. The President of the United States recognized the urgent need of highway transportation in the defense period by asking funds for access roads to industrial plants, military cantonments, and other centers of defense activity. If the facilities for use must increase, it is because the traffic must increase. Motor vehicle operation, not only by the Army, but by freight carriers and by individuals driving to and from their work, is a growing necessity, not a shrinking one. It will soon be apparent that placing an adequate supply of

private vehicles in the hands of those who will need them to carry on their work will constitute an increasing problem during the period of curtailed production. A similar and possibly more serious situation will exist in regard to motortrucks and busses.

Many industrial plants engaged in the production of goods for the defense program depend on automobilse as means for their employees moving to and from work, and would be unable to increase their forces as required if automobile ownership did not supply the new workers with transportation. Many new defense factories have been built in locations miles away from centers of population because those who planned their erection counted on private automobiles to get men to the factories. It is no longer unusual for employees to drive 20 miles to work.

The critical housing problem which exists in certain defense areas today is being solved in many instances by a reliance on the use of motor transportation, and much of the hope for the development of low-cost housing depends on the utilization of inexpensive land areas accessible only by motor transportation.

The dependence of defense plants upon the motortruck for movement of supplies is too well known to need recounting here. (A memorandum on this subject, recently filed with the Office of Production Management, is appended.)

11. Motor-vehicle taxes constitute a tax on transportation—on the most used form of passenger transportation—in the United States.

Imposition of a punitive and repressive tax on one form of transportation alone would amount to a subsidy to other forms of transportation. A tax on passenger cars is basically no different from a tax on locomotives, day coaches, streetcars, ships, and airplanes. A tax on trucks is no different from a tax on any other freight-carrying unit. A tax on gasoline (other than for defraying highway costs) is equivalent to a tax on locomotive fuel.

We hold that all of the statements we have made above are fully consistent with the present requirement for the widest sharing of a greatly increased tax burden. We further believe that they are fully in keeping with orderly and effective execution, in the most rapid way possible, of the national-defense program which this industry seeks to serve.

Respectfully submitted.

ALVAN MACAULEY, *President.*

APPENDIX

TECHNICAL CORRECTION SOUGHT IN LAW

We wish to call attention to a long-standing situation which discriminates against a type of vehicle which is of particular importance to a large portion of the population: Under Treasury rulings based on language written into law when the industry was young, and motorbusses as used today were unknown, these carriers are taxed at the same rate as private passenger cars.

The Ways and Means Committee has recognized the need for curing this discrimination, and it is hoped that its recommendations on this point will be accepted by the Congress.

AUTOMOBILE MANUFACTURERS ASSOCIATION,
Detroit, Mich., June 1941.

Mr. LEON HENDERSON,
Administrator, Office of Price Administration and Civilian Supply, Washington, D. C.

DEAR MR. HENDERSON: In anticipation of the problems in civilian transportation that the defense effort would bring to the motor-vehicle user, to business and industry, and to Government, the Automobile Manufacturers Association in the fall of 1940 undertook a factual survey of passenger-car use, with a view to assembling information that would be helpful to all concerned in dealing with the subject.

Through the United States Public Roads Administration and the highway authorities of several States, the association obtained permission to analyze in detail a group of reports which constitute the most important data yet collected concerning the day-by-day use of automobiles by the public. This was supplemented by a later study undertaken specifically for the association.

As a result of this cooperation, we are privileged to submit herewith a report of the major findings.

Among the subjects dealt with in this report are these:

For what principal purposes are most of the country's 26,000,000 passenger cars operated?

To what extent is industrial production, including defense, dependent upon their operaton?

What proportion of the cars, and how much of their mileage, are employed for going to work or on business?

What problems of maintenance, repair, and replacement are indicated for the older cars?

Which occupational groups use the newer cars?

We believe the data presented in this report will be of interest and assistance to you and your associates in the Government who have to do with problems of civilian supply as they relate to automobile use.

Very truly yours,

ALVAN MACAULEY, *President.*

A FACTUAL SURVEY OF AUTOMOBILE USAGE

By AUTOMOBILE MANUFACTURERS ASSOCIATION, Detroit, Mich.

WHERE THE FACTS WERE OBTAINED

This report embraces findings from three sources:

1. The principal survey covered 76,000 car owners, representing a cross section of 3,400,000 motorists in 6 representative States.

The information was gathered on questionnaires during the years 1936-38 by the highway departments of these States, while they were engaged, in cooperation with the United States Public Roads Administration, in making the great highway planning surveys out of which the master plan for future highway development has evolved.

The planning surveys comprehend the whole range of highway transport problems—planning, financing, construction, and use. They are continuing projects, supplying the facts needed to make possible an orderly and efficient development of facilities adequate to the long-range demands of the Nation's highway traffic.

The data analyzed in the present report comprise only one segment of the road-use section of the studies, which in turn represent but one phase of the planning surveys as a whole.

The six States which were selected in consultation with the Public Roads Administration are Connecticut, Georgia, Indiana, Michigan, Nebraska, and Oregon.

These were chosen, first, to be as representative as possible of the Nation as a whole; and second, to offer the most complete and comparable material for detailed analysis.

Facts were gathered by the State authorities themselves. Information from the State compilations was tabulated and analyzed especially for this report by the Automobile Manufacturers Association. All statistical summaries were submitted for review to the State authorities and to the United States Public Roads Administration. The conclusions drawn in this report are the industry's own.

2. The second survey dealt with in this report was conducted during the winter of 1940-41 by the Opinion Research Corporation. It covered the entire country, with a much smaller but nevertheless scientifically controlled sample.

Because of a different method of inquiry, the second survey was able to go further in developing details of numerous driving habits, yielding answers not duplicated in the State reports. The two add up to the same general result. Minor discrepancies, where they exist, are primarily attributable to the fact the Opinion Research poll was made in mid-December, when recreational driving probably was somewhat below average.

3. Supplementing the two special surveys were road-use reports from 29 States, in addition to the 6 covered by the detailed analysis. (See fig. 1.) These 29 reports, while not analyzed in the same close manner as the 6, have produced a broad segregation of automobile driving into business-necessity purposes, on the one hand, and social-recreational, on the other.

Close agreement on major findings was reached through these three sources, indicating that a perspective of considerable accuracy has been obtained.

I. THE WORK CARS DO

Over city streets and the network of roads and highways covering the United States, automobiles last year made approximately 15,000,000,000 round trips, for a total of 498,000,000,000 of passenger-miles of travel.

From the road use reports of 35 States, from analysis of questionnaires in 6 regionally typical States, and from a survey made by the Opinion Research Corporation, emerges evidence that—

1. More than half of that mileage, and three-fourths of those trips, were for purposes connected with earning a livelihood, or closely related economic pursuits, which this report classifies as "necessity driving."

2. Ninety-six percent of the 26,000,000 passenger cars in the country are engaged in that necessity driving.

3. Applied to the estimates of total travel in 1940, this means that private-car owners amassed 274,000,000,000 passenger-miles of necessity usage last year, in more than 11,000,000,000 round trips.

These 274,000,000,000 passenger-miles, exclusive of recreational driving, are equivalent to almost three and one-half times the total passenger mileage of all other forms of transportation combined. (See fig. 2.) The 73,000,000,000 estimated for railroads, busses, Pullman cars, airplanes, and electric railways, furthermore, include all kinds of travel, recreational as well as business.

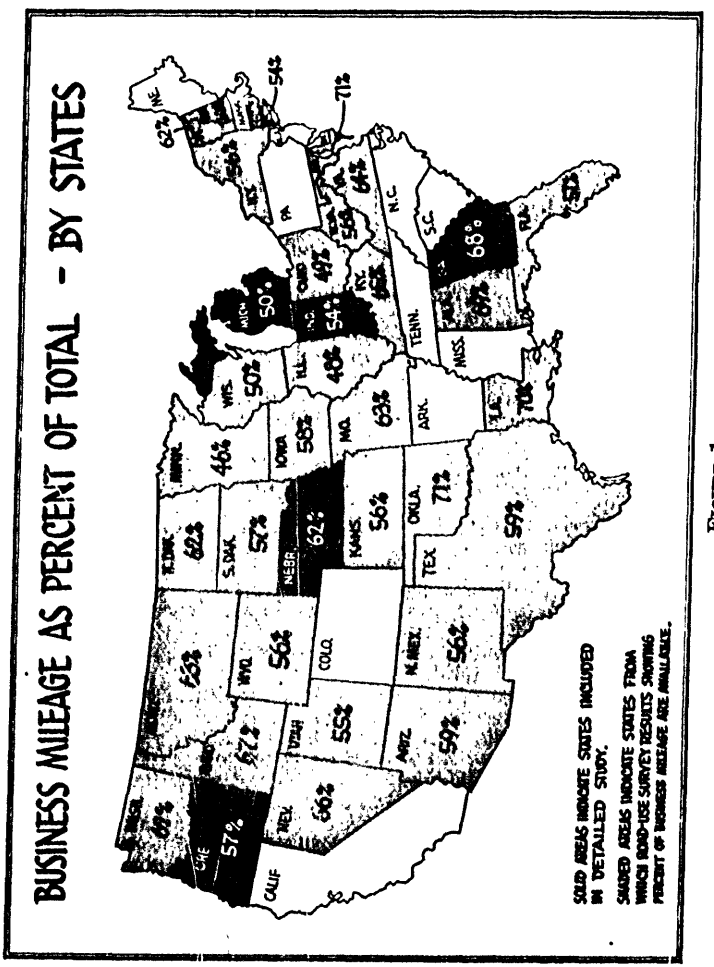

FIGURE 1

Automobile performance records are like fingerprints, in that no two are exactly alike. Each car at the end of a year has its own different speedometer reading of miles traveled, its own individual record of trips made, reflecting the varying distances from each other of home, job, school, church, shopping centers, and other community institutions as selected by each automobile owner.

Examination of large numbers of car-owners' records discloses, however, that despite the individual variations there exist distinct patterns of usage for each car group and each occupational group of owners.

Yet, necessity use was found, in terms of mileage and trips, to predominate among all groups of cars and car owners in the country.

The average annual mileage per car for necessity purposes, for example, was found to range from 46 percent of total mileage in one State up to 71 percent of the total in two States, with the other 32 States scattered in between. (See fig. No. 3.) Of the total reporting, 30 States found the average of business mileage to be 54 percent of the total driving, or more.

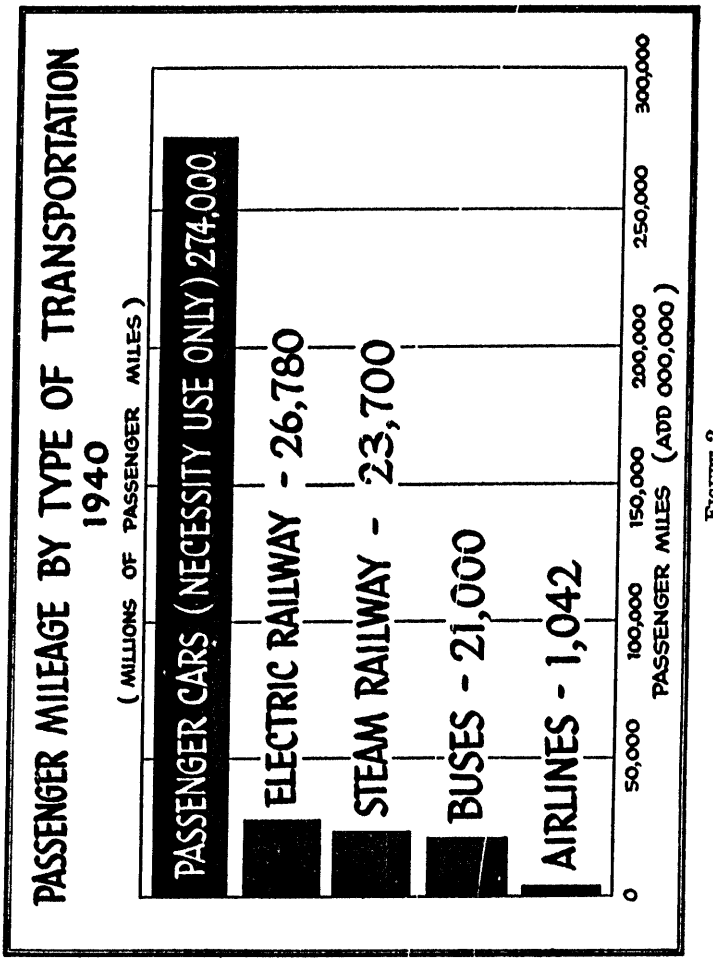

FIGURE 2

•The Opinion Research survey reported an even higher percentage of necessity driving for the test week's mileage, but since the count was made during mid-December, a seasonal decline in recreational travel could have affected the result.

Corroborating the mileage records is evidence that necessity objectives are responsible for three-fourths of all trips taken. In the six representative States, the average numbers of round trips per car in a year were:

State	Average total trips annually	Number of necessity trips annually	Percent of total necessity use
Connecticut	644	487	75.7
Georgia	612	514	83.9
Indiana	557	425	76.3
Michigan	518	383	73.9
Nebraska	541	424	78.4
Oregon	487	394	80.9

These two measures of car use, mileage and number of trips, have separate significance.

The amount of mileage driven is the factor that controls gasoline and oil consumption, and to a great extent the wear of the car, repair and parts replacement, tax revenues yielded to Government, and other major economic considerations.

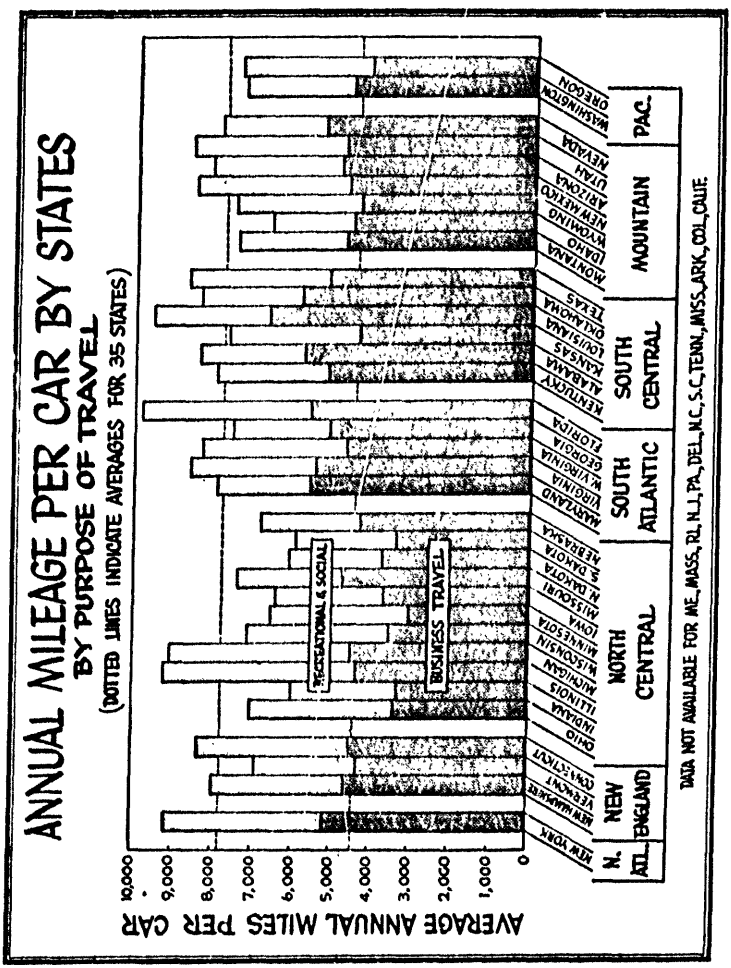

FIGURE 3

But to measure the need for automobile operation in continuing the present organization of family and individual living, or to meet modifications made necessary by the current national effort for defense, the number of times each day or week or year that a car is driven to the factory, the office, the market, or the school, may be found the most substantial yardstick.

II. MOST DRIVING IS LOCAL

The findings that three trips out of every four are for necessity purposes (see fig. No. 4) ties into the conclusion which the Public Roads Administration presented in 1939, in its report, Toll Roads and Free Roads, to the effect that motor trips in this country are predominantly short and local.

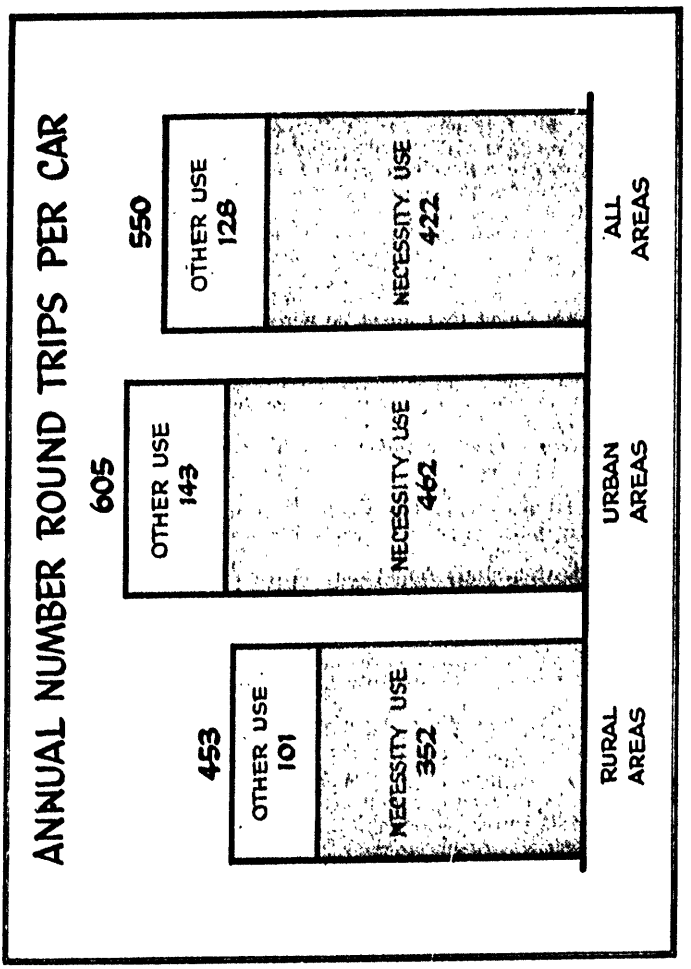

FIGURE 4

Even outside of cities, it was found, trips less than 5 miles in length constitute the major portion of all that are made.

Short trips tend to be the frequent ones, closely integrated with routine movement within the community. Longer journeys, on the other hand, are generally less frequent and usually identified with social and recreational uses of the motorcar, such as vacation trips, week-end tours, Sunday driving.

Evidence produced in the present study eliminates need for assumptions. Driving records by motorists in the six key States (none of which, incidentally, was included among those covered by the 1939 report) confirm the fact that the preponderance of short trips represents also a preponderance of necessity driving.

It is now shown that one-third of all car owners make from 200 to 400 round trips a year for necessity purposes. This 200–400 bracket appears to be dominated by cars making 1 trip per day to and from work, or on business.

Rural and urban areas both show about one-third of their cars in the 200 to 400 trips-a-year class.

Apart from this central third of the cars, one-fourth of all urban-owned cars make more than 600 necessity trips a year. In rural areas only 15 percent come in this high-frequency classification.

In urban districts only 2 cars out of 10 report fewer than 200 trips annually for necessity purposes, but 2 out of 5 rural cars do so.

Six out of 10 cars owned in urban areas are regularly driven to work and back, and of these, 60 percent are so used once a day.

One car out of every seven used in reaching the job makes between 600 and 800 trips annually for this purpose. This places them in the "twice-a-day" class; whether as workers who return to their homes at the noon hour, or those whose wives or other members of the household may take and pick them up, using the car for other purposes during the remainder of the day.

More than one-fourth of the cars used to get to work carry other workers besides the driver, the Opinion Research survey reports. These cars average approximately five persons for every two cars, including the drivers. (For further details on this function of car use, see ch. VII, p. 27.)

The effect of occupation upon frequency and length of trips is pronounced. The highway surveys found that all of 30 percent of the farm-owned cars are in the 200 to 400 annual round-trip category, and 47 percent average under 200.

By contrast, only 1 car-owning physician out of 10 reports fewer than 200 necessity trips a year, and 31 percent—nearly one-third—make more than 1,000. The average length of round trips for necessity driving is 12.5 miles for farm cars, 10 miles for doctors.

Commercial travelers have so much greater trip mileage that, in the five States where occupation of driver was recorded, they average 28.8 miles per trip.

Among commercial travelers 11 percent report more than 1,000 round trips a year for necessity purposes, while nearly half are grouped between 200 and 600 trips.

The Opinion Research study found that 34 percent of all cars had made no journey as long as 200 miles during the year preceding the interviews. For another third the longest trip was between 200 and 600 miles.

Approximately three-fourths of all long trips, this survey found, are for social and recreational purposes, but the sum total of trips of 200 miles or more amounts to only 12 percent of total mileage driven in a year.

III. VARIATIONS BY SIZE OF COMMUNITY

In all groups of communities a fairly regular minimum of "must" service for motorcars is found. While the State reports disclose wide variation between rural and urban-owned cars in total mileage (see table, p. 14), the average necessity mileage was 4,331 per car registered in unincorporated areas, and 4,636 miles a year in the cities.

Total mileage figures show that the bigger a community, the more miles its automobiles tend to run. Cars owned in the unincorporated areas of 31 States reporting to the Public Roads Administration traveled an average of 6,606 miles annually per car. On the other hand, owners living in the cities of 100,000 population or more, showed an average of 8,094 miles.

But the same reports, and also the analyses of the six-State questionnaires, place a major part of the extra city car-miles in the social and recreational column, leaving a considerable uniformity in necessity uses.

The term "unincorporated areas" suggests farm cars. Actually, this population group, as established by United States Census Bureau, includes almost as many nonfarmers—suburban residents, persons living in small villages or open country but not deriving livelihood from the land—as it does farmers.

Preliminary 1940 census figures show the movement of population toward suburban areas outside cities proper has been very great in the past decade. The unincorporated county areas surrounding the 92 largest cities increased in population 14 percent between 1930 and 1940, whereas the cities themselves increased only 3 percent.

This decentralization in itself has resulted in additional millions of persons becoming dependent upon private cars for transportation to jobs, to supply points, and for other essential travel.

The Opinion Research study concludes:

"So far as automobile-owning families are concerned, the picture of workers' homes clustered about mill or factory is obsolete. On the contrary, 70 percent of workers in car-owning families go to work by automobile."

(In 1936 special traffic studies made in the city of Detroit spotted the point of origin of cars parking in various industrial areas of the city. A very pronounced scattering of home sites and relatively small "colonization" close to places of employment was shown by the resulting charts.)

When the drivers covered by the Opinion Research study were asked how they would get to work by bus, streetcar, or train. Only one-third, half of whom live couldn't go at all. On the assumption, individually, that mass transportation agencies would be capable of carrying them all, half the car owners said they would get to work by bus, streetcar, or train. Only one-third, half of whom live within 1 to 5 miles from their jobs, said they would walk.

Necessity mileage among cars owned in the unincorporated areas constituted 65.6 percent of their total mileage, according to the 31 State data. This is higher than in any other population group. Here is the record, on the basis of averages per car:

Population group of place of ownership	Average annual miles per car		Necessity mileage percent of total
	Total	Necessity use	
Unincorporated areas	6,606	4,331	65.6
Incorporated areas with population of—			
Less than 1,000	7,436	4,404	59.2
1,000 to 2,500	7,843	4,399	56.1
2,500 to 5,000	8,236	4,431	53.8
5,000 to 10,000	8,221	4,363	53.0
10,000 to 25,000	8,293	4,267	51.5
25,000 to 100,000	8,360	4,311	51.6
100,000 and over	8,094	4,636	51.5
All areas (31 States)	7,706	4,417	56.7

The mileage records in Connecticut, Georgia, Indiana, Michigan, Nebraska, and Oregon, which are broken down a little more finely to give 11 population classifications ranging from cities over 1,000,000 population (Detroit, Mich., only one in sample) down to the unincorporated areas, tell the same story.

Total mileage per car averaged 9,738 for Detroit owners, contrasted with 6,971 for cars owned in the unincorporated areas of the 6 States, but necessity driving was 4,753 and 4,491 per car, respectively.

Thus, while slightly lower, necessity mileage is a greater part of the total among owners at the rural end of the population scale than in the large communities. (See fig. 5.)

In almost all cities, local transportation has become primarily automotive. A recent summary brought together by the Automobile Manufacturers Association found that in cities up to the 500,000-population class, as many as 70 percent or more of the people entering the business sections of the city on a typical day (excluding pedestrians) do so by private automobile. Another survey disclosed that there now are 2,100 American towns and cities ranging in population from 2,500 up to the 25,000-50,000 class, which have dispensed with, or have grown up without, intraurban mass-transportation systems of their own. Their combined populations of 11,844,000 persons depend, for routine movements other than afoot, upon private cars.

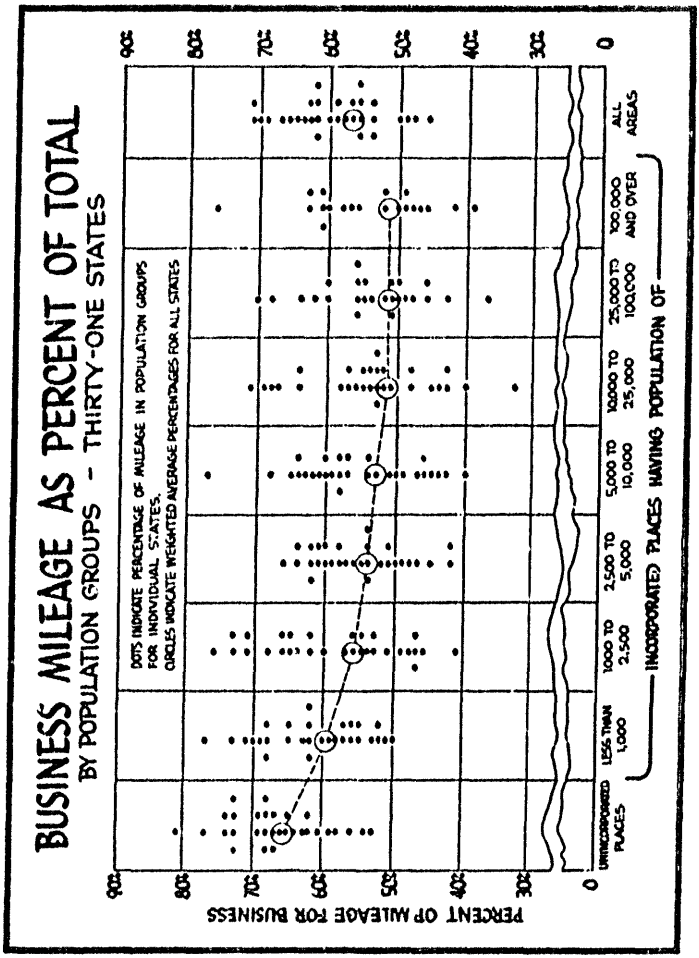

FIGURE 5

All the findings and surveys come together on the fact that, with all of the variations in mileages and trips, automobile travel in communities of all sizes, from farm to village to town to metropolis, is preponderantly for necessity purposes.

IV. EFFECTS OF OCCUPATION ON CAR USE

While mill workers, doctors, salesmen, and farmers all have different objectives in their automobile driving, it would be difficult to single out any one group of owners to say they have more or less need for their cars than the others.

In the analysis of the questionnaires from five of the States (Connecticut did not record occupational data), it was possible to sort out seven broad occupational classifications, which cover more than half of all car owners interviewed. The groups are farmers, industrial and construction workers, commercial travelers, physicians, lawyers, real-estate and insurance salesmen, and other salesmen (unclassified but not including retail clerks).

Since the questionnaires were not originally intended to produce exact occupational classifications, the samples were not balanced to produce a conclusive statistical verdict. However, important general facts stand out. Occupations divide owners into two broad groups, each with distinctive driving characteristics. (See fig. 6.)

The first group, including the owner whose work is on the farm, in the factory, or on some other job which ordinarily does not require him to use his automobile during production hours, has an annual mileage near or below the national average. Car owners in this group use their vehicles to get back and forth to work, to reach stores and schools and churches, but do not regularly drive them during the course of their daily work.

The second group, which has an annual mileage far above the average, covers exactly those occupations which may be logically expected to involve use of a car regularly in the conduct of a business or profession.

The traveling salesman's average annual mileage is shown at 18,791 miles, or more than double the average per car of all drivers. But the average for medical men also is very high, and doctors top all the analyzed occupations in the number of round trips, having an average of 947 trips yearly per car.

The legal, insurance, and real-estate groups and unclassified salesmen also are found in the high-mileage class.

Below is the comparison of total miles driven annually per car, analyzed by occupations:

Occupation:	*Average annual mileage per car*
Commercial travelers	18,791
Physicians	12,932
Legal profession	12,898
Insurance and real-estate salesmen	12,618
Salesmen (unclassified)	12,303
Workers	7,057
Farmers	5,750
All other occupations [1]	8,650
Average mileage, all groups	8,139

[1] A cross-section of car users, whose occupational definition was not susceptible to accurate classification.

In every group listed above, necessity driving claims half or more of both mileage and number of trips. Here is the record:

Occupation	Percent of total	
	Necessity mileage	Necessity trips
Commercial travelers	80.9	86.5
Physicians	66.8	89.0
Legal profession	61.6	77.4
Insurance and real-estate salesmen	71.8	85.8
Other salesmen	66.6	81.5
Workers (industrial and construction)	49.4	72.3
Farmers	66.8	78.3
All others	70.7	76.6

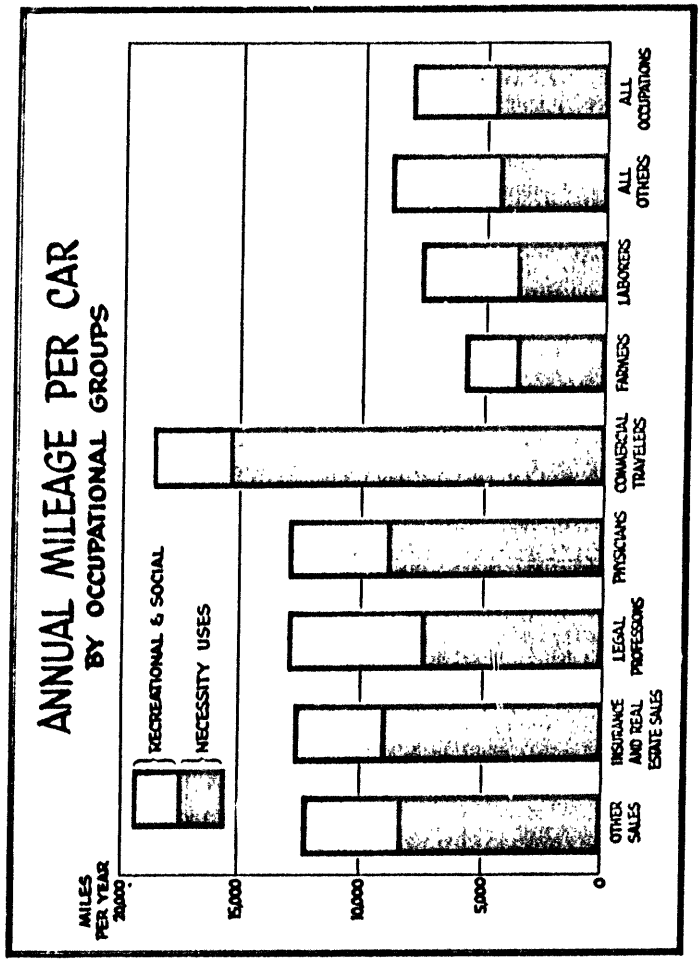

FIGURE 6

A factor of importance is that the information was collected before the pressure of defense production stepped up the use of cars by industrial workers and others who now are employed more days per week and year.

Two of the occupational groups singled out in the State survey, farmers and physicians, although at opposite ends of the driving scale, present an interesting comparison.

While the doctor's annual total of 12,032 miles per car is more than twice as high as the 5,750 miles driven yearly by the farmer-owned car, and the doctors reported 947 round trips a year, which is two and a half times the 392 trips averaged by the farm car, on a percentage basis 66.8 percent of the doctor's mileage, and 66.8 of the farmer's mileage—exactly the same figure for the 5 States surveyed—are for economic purposes.

Part of the reason for differences in total mileage among these groups is undoubtedly economic.

The data in this survey do not directly reflect income distribution. (See fig. 7.) On a trip basis, the physician's necessity use runs up to 89 percent of the total, since a doctor is called upon to go out at all hours of the night and day.

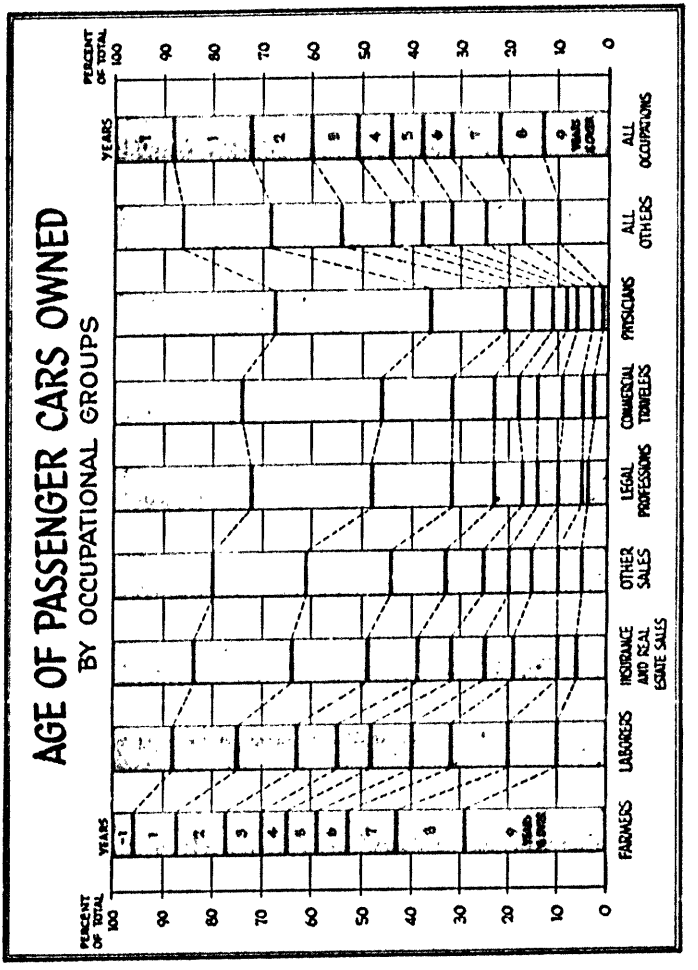

FIGURE 7

But the relative frequency of business trips for the farm car is impressive too—four out of five trips are for necessity purposes.[1]

The Opinion Research Corporation survey yielded a similar picture on a national scale, although the methods of occupational classification were so different that direct comparisons cannot be made. It was found that among farmers the principal necessity usage is for business trips and shopping. Wage earners, in general, travel the longest distances in reaching their job. And the only car-owner groups found driving primarily for recreational and social purposes are retired persons, widows, students, and domestic workers.

[1] The survey found that 98.4 percent of farmer-owned cars are operated in part or entirely for business purposes. A survey conducted in Illinois, Iowa, Nebraska, Kansas, and Missouri by the Corn Belt farm dailies, showed that 98.9 percent of the farmers surveyed purchased their cars either for business use, or for business and pleasure combined.

V. THE DOCTOR'S CAR—AN OCCUPATIONAL CASE STUDY

Group-average figures do not wholly spell out the picture of car operation from an occupational standpoint.

The five-State sample of medical men's cars was found to be sufficiently compact to make possible a more detailed distribution. Here are the results:

Nine out of ten doctors who own automobiles use them in their professional work.

Out of every 100 who so use their private automobiles (see Fig. 8):

Sixteen have more than 1,500 trips annually for necessity driving.

Fifteen make from 1,000 to 1,500 trips per year.

Ten report from 800 to 1,000 round trips.

Twenty-eight range from 400 to 800 trips annually.

Twenty-two list from 200 to 400 round trips (this contains the once-a-day group, where presumably a round of patients is visited in a single trip).

Nine report fewer than 200 round trips a year.

Judged by the frequency of use, the doctor's car is as much a part of his professional equipment as a stethoscope or thermometer.

For all car-owning physicians, the average number of round trips annually was found to be 947, of which 842, or 89 percent, are credited to professional and other necessity purposes. This is the highest occupational group average found in the surveys.

The great bulk of these trips is concerned with transportation to and from the office, and on professional calls. The average was 808, which is equivalent to slightly more than 15 round trips a week.

It was found that in the rural areas, one-half of the necessity trips made by doctors averaged more than 15 miles in length. In the larger cities, 4 out of 10 cars average this distance.

In the small towns, where distances are relatively less, a higher proportion of the doctor's trips are shorter. The following table records the percentage distribution of trip length by size of community:

Average number of miles per round trip	Rural areas	1,000 to 5,000	5,000 to 25,000	25,000 to 100,000	100,000 and over	Average for all areas
	Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
Less than 5	7	17	41	20	6	17
5 to 10	29	20	25	21		24
10 to 15	14	28	13	16		21
15 to 20	12	5	8	9		10
20 to 25	14	8	3	4	13	9
25 or more	24	22	10	[illegible]	15	19

As might be expected from this record, the mileage of doctors' cars ranks high among all groups of car owners. The average distance traveled in a year was shown to be 12,032 miles per car, of which necessity driving accounted for 8,640 miles. Most of this—8,428 miles—was in calling on patients, or in reaching the office or hospital from home.

In towns ranging in population from 5,000 to 25,000, doctors reported lower mileage, following the trend which is typical of all cars in such communities. But the frequency of trips is higher in the smaller towns.

Although the doctor uses his car nine times for necessity transportation for every social and recreational trip, the latter is likely to be three or four times longer. The average length of a pleasure trip for doctors seems to be 40 miles, compared with a general average of 10 miles per trip for all necessity driving. But all of his social and recreational driving combined adds up on the average to only 4,292 miles a year, less than a third of his total.

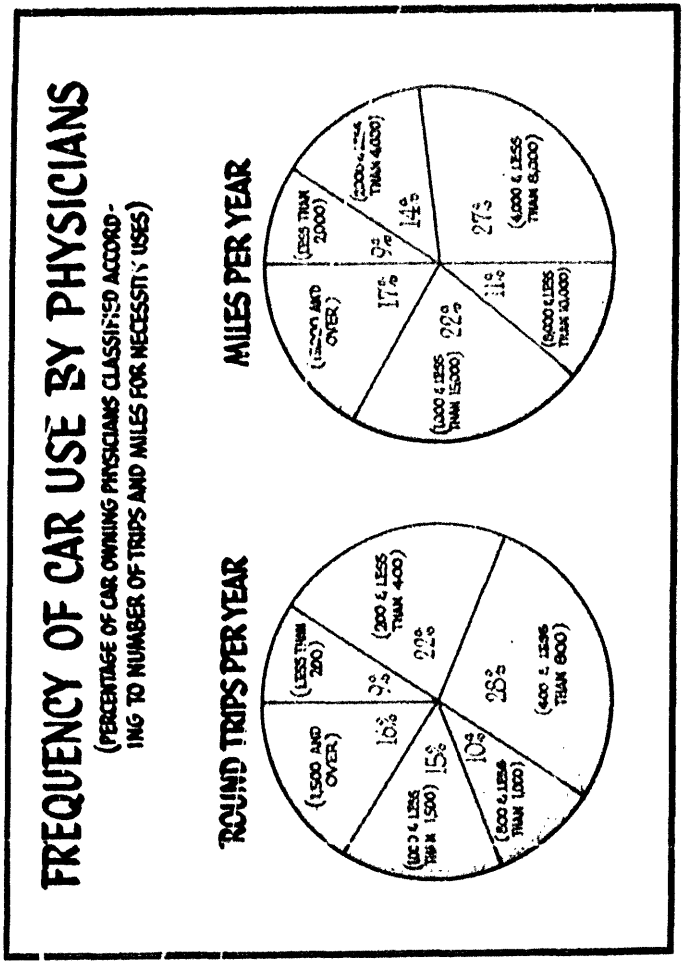

FIGURE 8

VI. EFFECT OF CAR AGE ON USE

In the life cycle of an automobile the number of miles traveled (see fig. 9) and of trips made declines sharply with the advancing age of the car.

During its life span, a typical car changes hands two, three, or more times, often moving from one occupational group to another.

Occupations which require high mileage and constant use tend to have new or "young" cars, trading frequently.

Eighty-nine percent of doctors' cars at the time of survey were found to be less than 5 years of age, and 33 percent were 1 year old or less.

In the six-State surveys, new cars which had been in operation 1 full year were found to be driven on the average of 10,768 miles annually. But vehicles 9 years old or older average only 4,770 miles a year. Intervening ages show a progressive decline.

But, in general, the cars which are nearing the end of their operating life show a much higher ratio of necessity mileage and trips.

Here is the record from the six-State analysis:

Age of car	Average annual mileage	Percent of total necessity miles	Average number round trips	Percent of total necessity trips
1 year	10,768	54.7	619	77.0
2 years	9,628	54.7	620	77.5
3 years	8,592	54.2	593	77.2
4 years	8,106	53.5	604	77.6
5 years	7,624	52.8	545	75.2
6 years	7,053	53.0	524	74.8
7 years	6,718	53.9	496	75.5
8 years	5,804	56.6	468	77.1
9 and over	4,770	61.2	417	78.5

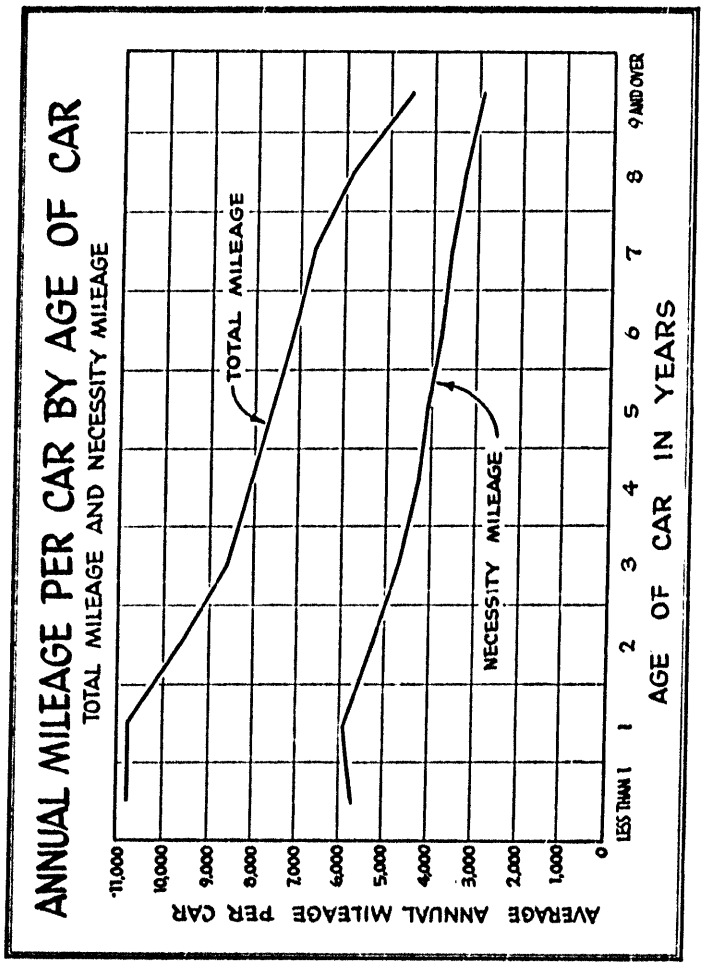

FIGURE 9

The noticeable jump in percentage of necessity usage for cars 9 years old and over suggests that among those of extreme age the ratio may approach 100 percent.

Records for the decade ending with 1939 show that during that time 85 percent of all new cars sold at retail were absorbed as replacements for scrapped vehicles.

During the depression decade, when the combined registration of cars and trucks averaged approximately 27,000,000, the number of new vehicles per

year required to replace scrapped units averaged 2,388,184 (Automobile Facts and Figures, 1940, p. 7). At the present time the automotive transport system is based upon the operation of approximately 26,000,000 passenger cars and 4,000,000 trucks.

Estimates as to the production of new units required to maintain existing rolling stock commonly are based on the assumption that the rate of retirement of worn-out cars is the same today as it was during these previous years. That may be unduly conservative, since the registration figures as of July 1940 showed that one car in four was 9 years old or older.

Eighteen percent of all cars in use were 10 years old or older; 12 percent, 11 years or older; and 6 percent, 12 years or older. More than 4,500,000 passenger cars in service were manufactured prior to 1931.

Following is a tabulation of the ages of cars in use July 1, 1940, and their percentage ratio to the total number of passenger automobiles registered:

Year of manufacture	Number in use [1]	Percent of total cars		Age of car
		Simple	Cumulated	
1940	2,321,239	9.15	100.00	Less than 1 year.
1939	2,422,671	9.55	90.85	1 year.
1938	1,745,888	6.88	81.30	2 years.
1937	3,498,466	13.79	74.42	3 years.
1936	3,243,875	12.75	60.63	4 years.
1935	2,220,362	8.75	47.88	5 years.
1934	1,696,971	6.69	39.13	6 years.
1933	1,250,152	4.93	32.44	7 years.
1932	864,957	3.41	27.51	8 years.
1931	1,438,197	5.67	24.10	9 years.
1930	1,483,787	5.85	18.43	10 years.
1929	1,674,351	6.60	12.58	11 years.
1928	773,170	3.05	5.98	12 years.
1927	302,555	1.19	2.93	13 years
Prior to 1927	441,333	1.74	1.74	14 years and over.
Year not given	188,489			
Total, all cars	25,556,463			

[1] As of July 1, 1940 Data from R. L. Polk & Co. as shown in Automotive Industries, issue of Mar. 1, 1941.

The large proportion of the rolling stock which is near the end of its practicable operating life includes the cars that, as a group, average 6 miles out of every 10, and 8 trips out of 10, on necessity travel—going to work, marketing, etc. Ownership of these cars appears from registration data to be quite largely among farmers.

The armament-production program has added very materially to the number of men going to work; in many cases has increased the distances they have to travel; while defense-plant locations are in many cases not reached by adequate mass transportation. New cars and old, efficient or inefficient, are now harnessed in great numbers to an increased load.

Extent to which cars, regardless of age, are integrated as essential equipment in the daily lives of millions of persons, is reflected in the Opinion Research Corporation answers to inquiries as to what car owners themselves think about their driving.

It was learned that more than half regard their cars as indispensable for going to work or out on business, with a substantial portion concluding: "Oh, I couldn't make out at all without a car."

VII. MAJOR PURPOSE OF DRIVING—MAKING A LIVING

Singled out from the total of necessity uses, driving to work and using the car on the job account for roughly one-half of all automobile usage in the United States. These two objectives consume more mileage than all social and recreational travel combined. (See fig. 10.)

The Opinion Research poll found that 64 percent of all cars are used for travel to and from places of employment to a greater or less extent. Half of all cars are used for this purpose regularly.

The same survey disclosed that 58 percent of all cars are used on business trips; 9 out of 10 of these at least once a week, and 6 out of 10 every working day.

In conducting that poll, the interviewers paid careful attention to the distinction between these two types of driving.

This distinction was not particularly important in the State-road-use questionnaires and, in replying many motorists are believed to have interpreted "business trips" to include driving to places of business. Hence driving on business probably is overstated in the results, at the expense of the "driving to work" classification.

But when the two are combined, the State surveys corroborate the Opinion Research findings to show that the driving in connection with making a living is the major purpose of automobile travel.

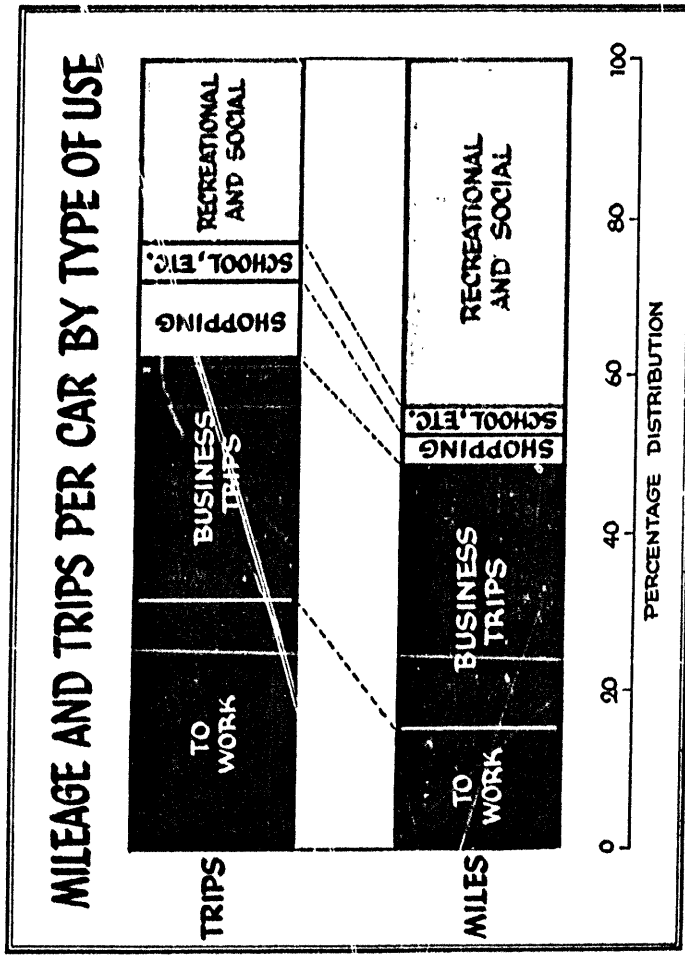

FIGURE 10

The six-State analysis discloses that driving to work and on business together account for approximately three out of every five trips made by all cars (see fig. 10), while only one trip out of five is devoted to social and recreational purposes. The fifth trip is for marketing, going to school or to church, or to a transportation terminal.

In Connecticut, driving to work and on business accounts for 55 percent of total trips. The corresponding percentages are 59 percent in Georgia; 69 in Indiana; 60 in Michigan; 61 in Nebraska; and 65 in Oregon.

The surveys were made during a period of much lower employment than at present, yet the number of round trips per car for driving to work, and on business averaged 352 annually in Connecticut; 361 in Georgia; 385 in Indiana; 311 in Michigan; 386 in Nebraska; and 318 in Oregon.

VII. THE FAMILY SHOPPING BY AUTOMOBILE

Six out of seven automobiles today are used for family shopping. Almost all of these are so employed at least once a week, and two-thirds of them oftener. (See fig. 11.)

The Opinion Research study indicates that a full 14 percent of all the 23,000,000 private-car owners in the country (3,000,000 cars are believed to be owned in multiple-car families, commercially, or by Government) might have to abandon their present principal purchasing locations, or move their homes, if for any reason they should be deprived of automobiles. That means approximately three and a quarter million families.

Distance between home and store is a dominant reason for this. Only 9 percent would abandon shopping centers they now use which are 1 to 2 miles from home, but 22 percent of those who depend on stores 5 to 8 miles from home state they would have to give them up. Thirty-one percent of those who drive more than 8 miles for their shopping say they would not be able to continue using present marketing points without their cars.

Two-thirds of the car owners do their principal marketing 2 or more miles from home. Forty-five out of each hundred travel 3 or more miles, and 30 out of each 100 drive 5 miles or more to shop.

Farmers lead in dependence on the automobile for marketing. Of the 1 in 12 cars that, according to their owners, are used more for marketing than anything else, 61 percent are farm cars. One-third of the surveyed farm-car owners report that without cars they could not get to their present supply points at all. Another 10 percent could do so as long as the farm truck remained in commission.

An important factor in the market picture is that fully a third of all car owners habitually drive to at least 1 secondary shopping point. Of these, 3 out of 10 say the secondary market is from 8 to 18 miles from home; 7 percent, roughly 1 out of every 14 cars in the country, go more than 30 miles.

In part these long shopping distances reflect the movement to suburban zones that has developed during the past decade.

It is a significant fact that the 1940 United States Census of Population finds that the nonurban population of the country is now made up almost equally of farmers and nonfarmers. The latter, whether living in open country, incorporated or unincorporated villages, and satellite towns around big cities, number more than 27,000,000.

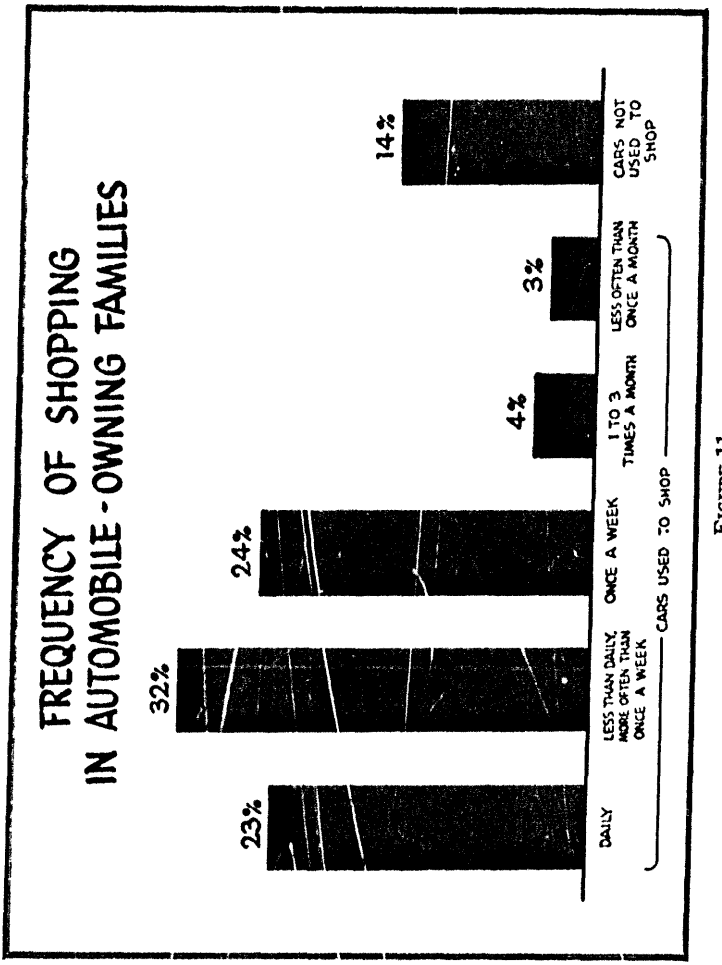

FIGURE 11

Results of the six-State highway surveys tend to support these findings from the Opinion Research poll, but do not present exact records of shopping mileage and trips.

In part this is because much driving has more than one necessity purpose. For instance, the father enroute to work may take the children to school and, on the way home, may stop to pick up the groceries. But in filling out questionnaires for the State surveys, owners in numerous cases recorded only the major purpose of each trip. Hence these surveys produced only "minimum" records of mileage and trips for shopping purposes.

The Opinion Research poll, on the other hand, recorded a test week of driving in mid-December, when the ratio of shopping mileage probably was higher than average. Its findings of 11 percent of all mileage devoted to family shopping may be regarded therefore as a "maximum," and the correct measure probably lies between that figure and the six-State survey average of 4-plus percent.

The latter, by itself, is equivalent to 1 mile of shopping travel for each car in the country each shopping day.

IX. HAULING AND OTHER USES

Related to shopping is a type of automobile use defined in the State questionnaires as "hauling and to market." This is predominantly farm driving.

Nine out of every hundred farm passenger cars are used for this purpose.

One-half of the farm cars so used engage in hauling once a week or oftener; 1 car out of 10 makes more than 300 round trips a year; and 1 in 6 makes between 100 and 200 a year, or 2 to 4 a week.

These trips average 12.6 miles each. Very few of these cars travel more than 2,000 miles annually for this purpose—only 18 out of 100—but another 10 percent average 1,000 to 2,000, and 46 percent pile up distances between 200 and 1,000 miles.

Other groups of owners also use their cars for hauling on an occasional basis.

Two percent of wage-earners' cars, 3 percent of cars owned by the unclassified group of salesmen, 2 percent of commercial travelers' cars, show such driving.

Cars owned by skilled craftsmen of various trades, carrying their tools or materials to the job, and those of salesmen carrying samples, evidence this hauling function performed by many automobiles.

X. TAKING THE CHILDREN TO SCHOOL

One in every five automobiles is used in driving to and from school, according to records of two States (Connecticut and Georgia), which were specially analyzed as to school driving.

The average round trip for this purpose is 5.0 miles. Three out of four cars used to transport children to school report average trips of more than 2 miles in length, and over half of them average 4 miles or more per round trip.

The annual school mileage for automobiles so used is 795, or 10 percent of their total driving for the year.

School driving is found in the cities as well as in rural areas.

The Opinion Research survey found that, on a country-wide basis, one-third of the families having children of school age use their cars frequently for this purpose.

In answering the State questionnaires many motorists appear to have failed to report secondary purposes of their trips. Therefore, in general, figures on school use appear to be on the conservative side since the youngsters often may ride with the father en route to work, or with the make making a shopping trip.

The role of the private family car is auxiliary to the great school-bus systems which carry 3,125,000 children each school day.

It is a substantial auxiliary, however, since all the cars reporting use for this purpose average 135 school trips a year.

XI. DRIVING BY DAYS OF THE WEEK—USE OF THE CAR FOR CHURCH

With one-half of all automobile mileage chargeable to purposes of making a living, the distribution of necessity driving of all sorts over the several days of the week acquires importance.

This phase was inquired into by the Opinion Research study, and the following distribution was found:

Monday through Friday: 65 percent of all passenger car mileage is tied up with earning a living.

Saturday: 45 percent of mileage used going to work or on business, but 22 percent used for shopping, against half as much shopping mileage on other week days.

Sunday: Despite the fact that this is the day when much of the recreational driving is done, 21 percent of the total recorded was devoted to purposes connected with work.

This survey was made before the systematic effort to extend the 40-hour work-week and to eliminate the week-end "blackout," so that an allowance needs to be made for the increasing number of Saturday and Sunday working shifts.

In making the six-State analysis, mileage involved in driving to church was also recorded, with the finding that this use is important, both in mileage and frequency of trip, to one-fourth of the cars surveyed.

Average length of the trip to church for all six States is 5.1 miles.

Of the owners who use their cars to take themselves and families to Sunday worship, exactly one-half were found to average between 50 and 60 round trips a year. This represents a regular use, Sunday after Sunday.

Another 20 percent of the cars driven to church were found to average in excess of 60 trips annually, and 30 percent averaged less than 50. These ratios apply, with minor variations, throughout occupational and population groups studied. However, the automobile is more important for church-going to farmers than to other groups studied; 3 out of 10 farmer-owned cars are used for this purpose, and a quarter of these have more than 500 miles of church driving annually, reflecting the relatively greater rural distances.

Forty-three percent of the farm cars which are driven to church average between 50 and 60 round trips a year.

BRIEF ON ESSENTIAL DEFENSE USES OF MOTOR TRUCKS PRESENTED TO WILLIAM S. KNUDSEN, DIRECTOR GENERAL, OFFICE OF PRODUCTION MANAGEMENT, APRIL 24, 1941

Submitted by MOTOR TRUCK COMMITTEE, AUTOMOBILE MANUFACTURERS ASSOCIATION, in behalf of the MOTOR TRUCK MANUFACTURERS OF THE UNITED STATES

ESSENTIAL DEFENSE USES OF MOTOR TRUCKS

The motor truck members of the Automobile Manufacturers Association and the Ford Motor Co., a nonmember, jointly represent the manufacturers of over 90 percent of the motortrucks produced in the United States in presenting this brief.

The industry recognizes the vital problems involved in the necessary acceleration of production for defense that will demand sacrifices on all industries, and, in that light, the motortruck industry will in good spirit abide by your final decision with respect to curtailment of production.

Is the urgent need for freight-moving capacity going to be met, if the already reduced percentage of truck-producing capacity available for civilian transport, is again cut equally with passenger cars?

The industry feels duty-bound to present facts pertaining to the transportation aspects of the defense program so that they may be weighed in your deliberations leading to a decision on truck-production curtailment.

Production of military equipment

Since the national-defense program started, the industry has been assuming an ever-increasing load in the production of military vehicles and numerous other armaments. From August 1, 1940, to July 31, 1941, the motortruck manufacturers will have produced more than 137,000 military vehicles to meet requirements for the 1,418,000 Army. The industry understands that these are minimum requirements. Information on what additional capacity of the industry will be required for military vehicles is, no doubt, available to the military strategists.

Manufacturers of motortrucks are also engaged in producing tanks, artillery ammunition components, tractors, shells, limbers and adapters, fire engines, ambulances, engines, machinery, pedestal mounts, trailers, and tank transmissions. In addition, they are negotiating with the Army, Navy, and Office of Production Management for production of other armaments.

Will transportation for defense be impaired?

Will curtailment in production in face of increased demand for military vehicles, plus the truck-plant capacity that is already being used for other armaments, divert the industry from the production of civilian vehicles essential to defense?

Will this create a partial break-down in transportation for defense?

Transportation is the lifeline in the defense program. It must be in the picture alternately all along the line from raw materials down through to the military and civilian consumer.

Utility of trucks and railroads on parity in 1918

This factor was recognized by the Priorities Division of the War Industries Board in July 1918, during the World War when, in face of a passenger car curtailment, motortrucks were given a "B-4" rating (not to be confused with the present B-4 on materials priorities), defined as follows:

"Class B comprises orders and work which while not primarily designed for the prosecution of the war, yet are of public interest and essential to the national welfare or otherwise of exceptional importance."

Trucks in 1918 were regarded in the same classification as railroads and other utilities in which there was no distinction made as between the military and essential civilian services performed.

During that time, because of congestion in railroad movement, the Council of National Defense passed the following resolution in March 1918:

"Resolved, That the Council of National Defense approves the widest possible use of the motortruck as a transportation agency, and requests the State councils of defense and other State authorities to take all necessary steps to facilitate such means of transportation, removing any regulations that tend to restrict and discourage such use."

Carrying out the intent of this resolution, so-called Return load bureaus were established in cities throughout the country to facilitate the maximum use of motortruck transport to overcome delays caused by railroad congestion.

Trucks now are a more integral part of our national economy than in 1918. Demands of consumers and shippers on motortruck service have today brought motortruck registrations to 4,650,000 units, or nearly ninefold greater than were in existence in 1918. However, it must be remembered that a comparatively small percentage of these vehicles are in intercity highway transport service, most of them being engaged in the movement of essential commodities from farm to market and in local delivery service to the consumer.

Reports from Europe are to the effect that motortrucks, civilian as well as military, are a principal key to the successes of the German Army.

Other indications are that Britain is woefully lacking in highway transportation facilities due to curtailment of truck production for making of other armaments, and restrictive licensing measures. This transportation shortage in Britain is becoming more acute due to bombings of key railroad points and other acts of war. These considerations, plus the question of sabotage, are mentioned because they seem pertinent to similar transportation problems that might arise in this country in an emergency.

Doubt as to transportation adequacy

There are numerous conflicting statements as to the adequacy of the existing transportation facilities in the United States to stand up under the strain as production for defense accelerates. The divergent views of informed persons indicate the need for a comprehensive analysis of the transportation facilities to determine their ability to do the job.

However, information available shows that the transportation agencies are already running close to capacity, that pinches have been felt in some quarters and that, with intensification of the defense program, this is bound to increase rather than decrease.

Individual railroad executives differ in opinion as to their ability to handle the increased traffic. An "Analytical Study of Railroad Car Equipment" prepared by R. N. Janeway for the National Resources Planning Board, briefly, shows, among other things:

(*a*) Thirty percent decline in railroad-owned freight cars since 1929.

(*b*) No increase in car utilization efficiency beyond the demonstrated maximum level can be relied upon to materialize in an emergency.

(*c*) In a war emergency, would require 360,000 more cars, than are now available (August 1940).

Need for flexible transportation

If, as indicated, the railroads need several hundred thousand cars, will they be able to obtain them from their suppliers in view of the shortages of materials?

Even if the railroads were able to augment their present facilities with several hundred thousand additional cars and were able, in a reasonable time, to have

sufficient equipment, a question arises as to whether the utilization of this equipment can be made flexible enough to have adequate facilities in the right places at the right times.

There are 48,000 communities in the country not served by railroads. In addition, there are numerous functions of the motortruck, such as work on cantonment construction, supplementing rail service and others, that cannot be replaced by any other transportation service.

The Interstate Commerce Commission foresees the flexible job that will be required. In its Fifty-fourth Annual Report to Congress, the Commission states:

"The extraordinary measures which the Government is now taking to prepare for national defense have brought to the forefront the question whether the transportation facilities of the country will be able to do their part adequately and effectively. That the burden upon them will be very heavy is certain, and the difficulties in sustaining it will be enhanced, as they were at the time of the World War, by the fact that the currents of traffic will be shifted from their normal course and that the danger of congestion will arise in unusual and unexpected places and at times, it may be, without warning."

An illustration of this is the shifting of coastwise and canal shipping facilities to ocean service thereby materially increasing the burden on land borne transportation.

Truck transportation is more flexible than railroads and, for that reason, is likely to be called upon to assume a relatively greater share of the defense load than its proportion of normal traffic. Accurate knowledge as to the adequacy of existing trucking facilities to carry the load is much more obscure than information on the railroads.

It has been reported in the press that an inventory of all the trucks in the country is under way through the cooperation of the War Department, the Public Roads Administration and the American Association of Motor Vehicle Administrators. The information developed in that survey should throw further light as to whether there are adequate truck transportation facilities. It is known, however, that trucks now in operation are already close to capacity and that much of the traffic they are moving is raw materials, parts, and finished products into and out of plants producing for defense.

Defense plants use of trucks

In the short time available for filing this brief, it was possible to obtain only samples of the extent of this traffic. Figures based on 36 companies show that 4.3 percent of the incoming traffic and 22.1 percent of the outgoing traffic move by motortruck. The total percent of incoming and outgoing is 12.1 percent.

As typical of unsolicited comment in these replies, one aircraft manufacturer reports 90 percent of its tonnage is handled by truck because the truck permits a lower minimum. These smaller quantities can be accumulated quicker by truck than by rail.

Another aircraft manufacturer reports 50 percent of its tonnage is handled by truck. Claims 100 trucks a day in and out. Both these firms expect decided increases during the next 6 months of shipments handled by truck.

Increasing truck uses for defense

Companies manufacturing for defense have already indicated that they have been confronted with delays caused by lack of transportation facilities. On the basis of 15 companies, there is an indication that the anticipated increase of truck traffic will amount to 10 percent for the next 6 months, as compared with the first quarter of this year.

As another approach to obtaining the picture, an analysis was made by a number of motortruck manufacturers of the break-down of retail sales. This showed that 21.4 percent of the sales for the period from January 1 to April 15, 1941, was of military vehicles. Eighteen percent of the sales to civilians were for defense uses.

It is the opinion of motortruck manufacturers that the sales of trucks to civilians for defense purposes—directly or indirectly—are conservative and that, in a more extensive survey of the situation, the figure would be much higher, particularly from the standpoint of part-time uses of the trucks in defense activity. If it is desirable, a more exhaustive study of this can be made.

Other essential uses of trucks

The vehicles coming under the category of nondefense are, of course, largely going to the farmer, the grocer, the baker, the dairy, and practically every line of business. The question that this poses is whether or not the limitations on the number of vehicles will disrupt the orderly supply of essential commodities to the consumer and, as well, have an adverse effect on the cost of transportation. In other words, even outside of the strictly military and defense vehicles sold to civilians for defense, it might be desirable to weigh the over-all problem to determine whether the consumer should be deprived of sufficient transportation service, or whether, in the early stages of the curtailment program, there are other quarters in which the materials might be conserved without cutting down on transportation which is so vital to the defense program itself, as well as to civilian morale.

In illustration of the vital role of truck transportation, it is pertinent to point out that statistics compiled by the United States Department of Agriculture show that 62 percent of the cattle, 68 percent of the hogs, 61 percent of the calves, 65 percent of poultry, 39 percent of the eggs, 40 percent of the fruits and vegetables, 27 percent of the butter, and nearly 100 percent of the milk shipped to leading markets is hauled by motortrucks. Essential uses of trucks in practically all other civilian lines of business can be cited.

Another consideration that enters into this truck problem is the recognition by the President, by the Public Roads Administration, by the War Department and by the defense authorities of the need for an extensive highway program to improve strategic and access roads and bridges as an essential to the defense program. It would seem just as important as having adequate highway facilities to be certain that there are adequate vehicles to perform the transportation services over those highways.

Truck industry move to conserve materials

The motortruck industry has been keenly aware, over a period of months, of the gigantic task of so many ramifications that confronts the Office of Production Management, and it is the desire of the industry to cooperate in every way possible to lessen the magnitude of this task. Several days prior to the announcement with regard to the 20 percent curtailment, the manufacturers of motortrucks met in Detroit to consider the problems arising out of the shortage of materials and the procuring of essential parts for military, as well as civilian vehicles. At this meeting, it was agreed to survey the possibilities in the industry for conserving on the materials such as aluminum, nickel steel, brass, copper, zinc, and others on which it is understood there are critical shortages.

A questionnaire has been drafted (but has not as yet been released) to determine the minimum amounts of these materials that would be necessary to carry on the production of vehicles. This questionnaire is designed to determine how far critical materials can be conserved in the construction of a motortruck, and to seek engineering opinion as to how far substitutes are feasible from a production standpoint, giving due consideration to avoiding loss of time caused by retooling, even if machine tools were available.

If the industry is right in its thinking that this information will be valuable to the Office of Production Management, we should be glad to carry through with this survey which has been temporarily postponed in view of Office of Production Management's desire to save materials by cutting the number of vehicles produced.

In any event, a committee of engineers, versed in the technical problems arising out of conservation of strategic and critical materials, has been appointed by the Automobile Manufacturers Association motortruck committee and is available for consultation with Office of Production Management staff members, if desired.

Summary

In conclusion, the industry wishes to call particular attention to the following points on the transportation-for-defense aspects of motortrucks:

Existing and ever-increasing production of military vehicles and other armaments in motortruck plants has already been limiting the ability of the truck producers to meet civilian demands.

At the same time, speeding of production for defense is placing added demands on the flexible service that is rendered more efficiently by motortrucks.

Twenty-two percent of outgoing tonnage of plants producing defense matériel is moved by trucks. A 10-percent increase is anticipated within the next 6 months. This indicates that trucks are handling an even greater proportion of the defense traffic than of normal traffic.

Until a more comprehensive and impartial review is made to determine the adequacy of existing transportation facilities to meet the defense requirements, severing of the supply line may have an adverse effect on transportation for defense through lack of enough facilities.

While data show a substantial portion of truck output used for defense purposes, this is not the complete picture of the functions of trucks in facilitating the defense program since the data presented does not include movement of foodstuffs, clothing, and other goods necessary to the life, health, and well being of the millions of Americans engaged in defense activities.

Break down in railroad service during 1918 caused trucks, from a prority standpoint, to be considered in the same category as utilities and essentials.

The industry sees further possibilities for conservation of strategic and critical materials by use of substitutes and this is now under study.

The motortruck manufacturers again desire to emphasize their position that defense requirements must come first.

We only raise the question as transportation men, as to how far curtailment of motortruck production may be carried without impairing total defense output through disruption of transportation service.

Respectfully submitted in behalf of the motortruck manufacturers.

ROBERT F. BLACK,
Chairman, Motortruck Committee,
Automobile Manufacturers Association.

APRIL 24, 1941.

STATEMENT OF THE NATIONAL AUTOMOBILE DEALERS ASSOCIATION CONCERNING EXCISE TAXES ON AUTOMOTIVE PRODUCTS

By NATIONAL AUTOMOBILE DEALERS ASSOCIATION, Washington, D. C.

National Automobile Dealers Association has upward of 17,000 members, each of whom is enfranchised by a manufacturer of automobiles to sell new automobiles, or automobiles and trucks, replacement parts, and accessories. The members of this association sell about 85 percent of all new automobiles sold in the United States. Through the 17,000 dealers who are direct members and by reason of the cooperation of local and State automobile dealer associations, this association speaks for all automobile dealers who are articulate through organization.

While the revenue act of 1941 was being considered by the Ways and Means Committee of the House of Representatives the Treasury Department recommended to that committee that the excise taxes on new automobiles be increased from 3½ to 7 percent. Other witnesses representing other agencies of the Federal Government recommended to that committee increasing the excise taxes on new automobiles to 20 percent or more. Not, however, for the purpose of raising revenue but for the purpose of dampening consumer demand for new automobiles which would thereby result in a curtailment of production of these articles.

This association by proper action of its members assembled in convention established as the policy of this association the determination to aid and assist in the defense program. Pursuant to this policy and by reason of the extraordinary suggestions made to the Ways and Means Committee, L. Clare Cargile, president of the association, pursuant to instructions of the executive committee, appeared before the House Ways and Means Committee setting forth the basic policy of this association to aid in the defense program, and by reason of the conviction that the maintenance of private automobile transportation is essential to the defense program, opposed the suggestions for high punitive and discriminatory taxes on automobiles, trucks, replacement parts, and accessories.

This association was gratified by the report of the Ways and Means Committee and its subsequent acceptance in the action of the House of Representatives with reference to the matter of excise taxes on automotive products. While this action called for a 100-percent increase in these taxes, which is

drastic, and places a real burden on the industry, nevertheless automobile dealers were willing to assume this burden pursuant to their determination of assisting in and sacrificing for the defense program.

The position of this association and the automobile dealers for whom it speaks in relation to the considerations of these matters by the Senate Finance Committee is unlike that in reference to the Ways and Means Committee hearings in that no specific proposals to further increases these taxes have been made before this committee. If such proposals are made, we must assume that they will be made in executive sessions of this committee, under which circumstances this association will have no opportunity to counsel with the committee on the necessity or propriety of such proposals. We, therefore, are filing this statement to reiterate and reemphasize the basic positions established before the Ways and Means Committee.

We wished to point out to the committee that the considerations recited by the witnesses before the Ways and Means Committee to justify extremely high excise taxes on automotive products, no longer need be considered as essential in the tax program. These considerations were to curtail production of consumer durable goods, to dampen consumer demand thereby creating a backlog of consumer demand for the post-defense period, and to prevent inflation. The curtailment of new automobile production has been provided for through the joint action of Office of Production Management and the Office of Price Administration and Civilian Supply in the order issued on August 21, 1941. This order provided allotments for the months of August, September, October, and November 1941, representing an average 26½-percent reduction and looking toward an average of 50-percent curtailment for the 1942-model year. In order to accomplish the 50-percent average it will be necessary to curtail new automobile production 74 percent during the latter months of the model year. This drastic curtailment removes the necessity of seeking that objective through high excise taxes.

Pursuant to the Executive order issued by the President on August 9, 1941, the Board of Governors of the Federal Reserve System, issued Regulation W on August 22, 1941, to become effective September 1, 1941, restricting the terms on which automobiles can be sold, whereby a minimum of one-third of the purchase price must be made as a down payment and the payment of the deferred balance must be made within a maximum of 18 months. All of the objectives urged by witnesses before the Ways and Means Committee for high excise taxes on automobiles were recited in the Executive order of the President as reasons for regulation of consumer credit and this regulation having been promulgated, there is no longer any necessity to seek to curb inflation or to dampen consumer demand through high excise taxes.

We think it important in levying taxes on the motorcar that its necessity uses be given careful consideration. Contrary to casual opinion, the passenger car nowadays is a luxury vehicle in only a minimum degree. Its necessity uses not only outnumber all others but, owing to new conditions brought about by defense work, they are constantly growing. Here follow official statistics, taken from the United States Census, Opinion Research Corporation, Public Roads Administration, and War and Agriculture Department records, indicating the manifold passenger-car necessity uses:

There are approximately 27,000,000 passenger automobiles in the United States, and practically all of them are devoted, in part at least, to necessity driving.

The necessity driving of the Nation is 274,000,000,000 passenger-miles annually. This is approximately three and one-half times the passenger mileage of all other types of transportation, including steam and electric railways, busses, and airplanes.

The largest percentage of necessity driving occurs in rural sections and small towns. The Bureau of the Census gives the rural population of the country as 57,245,753, and, with the exception of a few horse-and-buggy and bus-line patrons, all of these persons are dependent on the automobile for transportation. An additional 12,678,823 persons who live in 2,320 cities that do not have mass transportation facilities also are dependent on the automobile exclusively.

The farmer is hit especially hard by any increase in the cost of passenger automobiles. Thirty-eight percent of all the passenger automobiles of the Nation are on farms. The average age of these rurally owned cars is 7 years, so replacements during the next 2 years are bound to be large.

Six out of every 10 cars owned in the cities are usually driven to and from work. Twenty-five percent of cars owned by workers are utilized by their owners

for carrying other passengers to work. Many new defense plants are being built in sections which have no public transportation, and hence the workers must depend solely on automobiles for transit.

Believing that motorcar transportation always would be available, thousands of persons have bought homes in recent years away from electric railway and bus lines. The 1940 census shows that in 92 of the largest cities of the country since 1930 the unincorporated surrounding areas increased almost five times as rapidly as the population within the city limits.

The necessity uses of the motorcar are strikingly illustrated by United States Army figures. A year ago the Army possessed 29,867 motor vehicles. Today it has 153,000. The current program calls for 262,950 next year.

Although no specific recommendations have been made by witnesses before this committee but in the chance that the matter may come up during executive sessions, we wish to point out to the committee objections to the imposition of any excise taxes on used cars. A large part of the trading in and selling of used automobiles is done by used car dealers who are not organized, who are constantly shifting their places of operations, and who by the reason of the manner in which they conduct their businesses are difficult to regulate and are difficult to collect taxes from. This fact would make it very difficult for the appropriate authorities to collect such taxes, it would by reason of the evasion by a large number impose an unfair competitive burden on new-car dealers. Furthermore, in order to escape the tax there would be an incentive for individual car owners to attempt to sell their cars directly, which would divert used cars from the normal channels of trade, producing a disruptive effect and would seriously hamper enforcement of State regulations and the collection of State taxes. It is the firm conviction of this association that such a tax would be uncollectible.

In conclusion we wish to point out that we believe that excise taxes on automobiles, automobile parts and accessories, tires, tubes, batteries, and gasoline should not be a permanent part of the Federal tax structure, as all of these are essential to a vital form of transportation. However, recognizing that in this emergency excise taxes on these articles may be necessary for the additional revenue needed, such taxes must be borne. We believe that the rates adopted by the House of Representtives are the highest which in fairness should be imposed on these articles. Any higher taxes would be detrimental to the essential transportation of civilians and civilian goods, to the essential movement of military personnel and equipment, and too great a burden on a vital necessity would impair civilian morale.

We respectfully direct your attention to the statement made before the Ways and Means Committee on behalf of this association, as that statement being available we did not wish to burden this committee with a repetition thereof.

Respectfully submitted.

NATIONAL AUTOMOBILE DEALERS ASSOCIATION,
L. C. CARGILE, *President.*

STATEMENT BY JOHN T. BARNETT, DIRECTOR, INDEPENDENT PETROLEUM ASSOCIATION, DENVER, COLO.

Secretary Morgenthau, in his recent appearance before the Senate Finance Committee, stated:

"For years, the concerns engaged in extracting certain of our national resources, notably oil, have been granted far greater allowance for depletion than can be justified on any reasonable basis of tax equity, if the income tax is to be extended to lower incomes, this privilege of tax escape should simultaneously be removed."

In his statement the Secretary apparently admits that some depletion allowance should be recognized for concerns engaged in producing what he terms our "national resources," notably oil. His criticism goes only to the amount of the allowance. It is a little difficult to understand why the Secretary designates oil as a national resource any more than he would designate our manpower, our farms, or our factories. To me they are all in the same sense national resources. However, there is one difference in these national resources which the Secretary fails to mention; that is, the oil and other mineral resources of the Nation are what has been termed and recognized as exhaustible resources for the reason that all of them, and especially oil, when employed in the uses of industry or national defense, are totally exhausted by such use, whereas the same is not true of the other national resources mentioned above.

Ever since the principle of the income tax was adopted and applied in this country it has been the settled policy of Congress and of the Treasury Department to recognize this difference in the character of our national resources and to compensate for the inevitable exhaustion of them by granting to the owners thereof specified depletion allowances to enable such owners and operators, by the expenditure of the reserves made possible by such depletion allowance, to prospect and search for similar additional resources and thus partially at least to replace those exhausted by use.

That policy having been adopted presumably upon a sound and equitable basis, there is every reason for its continuance. As no one, not even the Secretary, has denied the soundness, or justice, or equity of that underlying basis, I think it may be assumed that some allowance for depletion is justified.

The depletion percentage originally allowed, I believe, was 50 percent, but was reduced and now is, and for a number of years last past has been, 27½ percent, with the limitation that in no event should it exceed 50 percent of the net income from the property.

There has been some talk at different sessions of Congress of limiting the amount of depletion to the basis of actual cost of the particular property producing the oil, and much argument has been made by various persons for the adoption of such a principle. These arguments have always been rejected by Congress, and quite properly so, for the very good reason that the over-all cost to any oil producer of building up a spread of oil properties capable of yielding production for a period of years has very little, if any, relation to the cost of the individual pieces of property which happen to yield oil in any 1 year. The true relationship between depletion and cost must be referred to cost in a broad and general sense—that is, in the sense of what it would cost to replace by new discoveries and development the oil fields as a group being exhausted by use. There is no one who knows anything about that phase of the oil industry who would claim that such replacement can be had for the amount of the tax saved by a 27½-percent depletion allowance.

This subject has been so completely covered heretofore in arguments made before the Ways and Means Committee of the House and the Senate Finance Committee by representatives of the Independent Petroleum Association, individual owners and operators, and others that it would seem not to be necessary to repeat or to reargue the fundamentals of the question.

I desire, however, in connection with the consideration of this problem, to point out to the taxing authorities of the Nation some facts which I fear they have not fully considered:

First. The oil industry, as a whole, has been and is continuing to be a great source of income to the National Treasury, not only through the payment of income taxes by those concerns engaged in the industry, but by the tax that is levied by the Government upon the gasoline and any other residual products derived from the crude oil. The combined sums collected by the Government in the form of taxes on the industry have been of staggering amounts, and this new tax bill will undoubtedly increase the gasoline tax and raise the percentage of tax on corporations and other producers of oil until even greater amounts will be paid.

Second. If for any reason new supplies of oil are not sought out and provided by the industry to take the place of the reserves annually exhausted, not only will the industries of the Nation and national defense suffer, but the Treasury Department itself will suffer a severe decline in the income now being derived by it from the oil industry.

Third. If, as is undoubtedly true, and as the oil industry maintains, the 27½-percent depletion allowance is a tremendously vital and important factor in replacing the supply of oil annually exhausted, that fact should be frankly recognized by the Treasury Department and it should long hesitate and carefully consider the disallowance of depletion. The Treasury itself, in such event, would probably be the greatest income loser.

As the hump on the camel is the reserve that provides the camel with the necessity of food and drink over lean and exhausting periods, so the 27½-percent depletion allowance provides the hump on the oil industry and enables it, as a whole to meet otherwise exhaustive periods of inadequate supply of oil.

ALVORD & ALVORD,
Washington, D. C., August 25, 1941.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

Re radio-broadcasting tax.

DEAR MR. CHAIRMAN: On August 21 there was submitted to your committee, on behalf of Mr. John B. Haggerty (chairman, board of governors, International Allied Printing Trades Association, and president, International Brotherhood of Bookbinders), a statement in support of title VI of the pending bill (H. R. 5417), and recommending a 100-percent increase in the radio-broadcasting tax provided for by that title. While my oral testimony before the committee (hearings, pp. 676-681), together with the written memorandum which I submitted for the record (hearings, pp. 681-689), constitutes an adequate reply to the arguments presented by Mr. Haggerty, his statement contains certain erroneous statements which require correction.

(1) *Need for revenue.*—Mr. Haggerty's first argument is that the revenue needs justify the imposition of a special tax on radio broadcasting, at double the rates proposed by the House. The simple answer to this argument is that the revenue needs can never be great enough to excuse an unjust, discriminatory tax.

(2) *Return on investment.*—Mr. Haggerty next revives the specious argument that the tax is justified because radio broadcasters earn large profits on the investment in, or "value" of, their physical property. He speaks as though the only outlay required were the cost of a moderate amount of technical equipment. He completely neglects the need for operating capital, the certainty of early losses, the constant hazards of the business, and the necessity for plowing back earnings in order to maintain efficient service. In any event, capital is only one of many income-producing factors. As this committee has repeatedly recognized, such factors as individual ability and initiative deserve equal encouragement.

(3) *Entertainment.*—In attempting to justify his position, Mr. Haggerty overemphasizes the entertainment aspects of radio. Radio broadcasting is, as Mr. Haggerty says, the principal source of entertainment in America today. That entertainment, incidentally, comes to the public whether or not it can afford to pay for it, the cost being borne by the advertiser. Of far greater importance, however, is the fact that radio broadcasting is also the principal source of information in America today. In the latter respect, radio performs a unique and vital public service.

(4) *Monopoly.*—Mr. Haggerty once again puts forward the argument that the radio-broadcasting industry's alleged monopoly, based upon a public franchise, justifies the tax. It has already been pointed out to this committee that no broadcaster has a monopoly of the listening public and that radio has no monopoly of advertising media. Furthermore, the necessity for regulation, far from justifying the proposed tax, does not even justify a tax based upon the costs of regulation, unless a similar tax is imposed at the same time upon all businesses regulated by the Federal Government. The imposition of such taxes would require the reversal of a long-standing national policy.

In an effort to demonstrate that the opposition of advertising agencies is founded solely upon a desire to protect a monopolistic source of unconscionable profits. Mr. Haggerty asserts that newspapers and magazines pay a 15-percent commission to advertising agencies for securing advertising, but that radio broadcasters "pay rebates and discounts as well as agency commissions ranging from 36 percent upward." He alleges that these discounts line the pockets of the advertising agencies and cites as his authority, first, a letter from Frank K. White, treasurer of the Columbia Broadcasting System, to Editor and Publisher, and, second, the National Broadcasting Co. red network 1941 published rate card.

Curiously enough, Mr. White's letter, published in the May 3, 1941, issue of Editor and Publisher, specifically states that the standard 15-percent commission is allowed to recognized advertising agencies and carefully explains that discounts, which he states "correspond generally to the frequency and space allowances which are made to advertisers by magazines and newspapers," are passed along "to the advertisers (and not to the agencies)."

Similarly, Mr. Haggerty purports to quote the National Broadcasting Co. published rate card as indicating that large discounts are allowed to advertising agencies. His supposed quotation contains words which would prove his point if they apepared on the rate card, but the fact is that they do not appear there. Wherever the word "advertiser" appears on the rate card, Mr. Haggerty has

inserted, after that word, the phrase "(advertising agency)," so that his purported quotation is not a quotation at all.

As Mr. White's letter indicates, the discounts and rebates allowed by radio broadcasters correspond generally to the frequency and space discounts allowed by other advertising media. They are mere volume discounts, inducing the advertiser to maintain his advertising throughout the year. In the case of radio, they tend to maintain program continuity, an obviously salutary result.

(4) *Wage earners' interest.*—Finally, Mr. Haggerty attempts to belittle the stake the wage earner has in radio. Here again, he disregards the facts. The radio-broadcasting industry has at least 22,000 full-time employees. Its annual pay roll is about $60,000,000, or well over $1,100,000 weekly. The average weekly pay check in the industry is one of the highest in the country, and is becoming higher every year. In addition to full-time employees, about 30,000 more are employed on a part-time basis. Perhaps 250,000 more are employed in the manufacturing and distributing fields. Mr. Haggerty is not specific in his claims of a loss of job opportunities in the printing trades. In view of the increase in recent years in the aggregate circulation of both newspapers and magazines, it is at least doubtful whether he could be specific.

Mr. Haggerty fails to present a single valid argument in favor of the proposed tax. The fact of the matter is that the tax is being urged not because it will produce revenue, not because it is a sound tax measure, but solely in the hope that it will hamper the normal operation of competition between various advertising media. The use of the taxing power for this purpose cannot conceivably be justified. For labor as a whole, and even for the printing trades alone, it would be a short-sighted policy. The stimulation of competition by the development of new industries does not destroy job opportunities, it creates them. In this connection, Mr. W. C. Hushing, chairman of the legislative committee of the American Federation of Labor, had this to say to this committee:

"This is not a new question to us by any means. In the middle 1890's there was another new industry coming into existence and in one of the central labor unions on the west coast, which was located in the largest west coast city, there was an organization which came in with a proposal that no member of the organization, of organized labor, ride in an automobile, even to a funeral, and the motion was adopted. This proposal here is on all-fours with and is made for the same reason that that motion was passed through that central body over 45 years ago; and in the future you will probably look back on this proposal in the same manner that you do on the one which I have just mentioned.

* * * * * * *

"This proposal in this bill could well have been made against electric lights, because they put the manufacturers of oil lamps out of business, or could have been made by the candlemakers with the same force when the oil lamp came into use." (Hearings, August 23.)

I shall appreciate it if this letter can be incorporated in the record of the hearings.

Respectfully,

ELLSWORTH ALVORD,
Attorney for National Association of Broadcasters.

THE NATIONAL CLUB OF AMERICA FOR AMERICANS, INC.,
Washington, D. C., August 21, 1941.

Senator WALTER F. GEORGE,
Chairman, Finance Committee,
Senate Office Building, Washington, D. C.

HONORABLE SIR: As your committee is now holding public hearings on the Revenue Act of 1941, known as H. R. 5417, I desire on behalf of the National Club of America for Americans, Inc., under the laws of California, to submit a few suggestions for consideration of your committee, that will uphold the Federal Constitution, reduce the legal cost of government, and will prepare the way for anticipated saving in conducting the Government, also reduce the labor and worries of the Members of Congress in raising taxes to run the Government.

1. Strike out the unconstitutional provisions of the national social security law that allows the Federal and State Governments to illegally pay out the

public's money in relief to aliens in all the States, and some of the States old-age pensions to aliens.

In a letter addressed to me from the Social Security Board under the date of February 26, 1936, the Board admits that the national Social Security Act grants old-age pensions to aliens. I quote part of that letter:

"The States are to decide whether or not noncitizens are eligible to old-age assistance, and nearly all State laws now make citizenship a condition for eligibility to old-age assistance."

In order that the committee may know the estimated amount of public money which is illegally going to aliens. I suggest you request the Social Security Board to furnish the following information: First column, the name of each State and our possessions; second column, number of aliens drawing old-age pensions; third column, estimated amount of Federal money for 1 year going in pensions to aliens; fourth column, number of aliens drawing relief; fifth column, estimated amount of Federal money for 1 year going to aliens for relief; sixth, grand total for each State and a grand total for all the States and our possessions. Have this data placed in the record.

I contend that the Social Security Board's paying public money for old-age pensions and relief to aliens is unconstitutional as it is contrary to the fourteenth amendment to the Federal Constitution, which reads as follows:

"All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any protection of the laws."

I call your attention to this fact, that when you deny old-age pensions, or deny relief to aliens you do not deprive the alien of equal protection of the laws for they still receive police and fire protection the same as a citizen, nor do you deny the alien life, liberty, or prosperity, for you are not taking the alien's life, nor do you take the alien's liberty away from him, nor do you take any property away from the alien, but, in granting old-age pensions and relief to aliens, you abridge the privileges and the immunities of the American citizens.

I trust Congress will lose no time in amending the national social security law so that the law will free the American citizens from the illegal burden of being taxed to give relief and old-age pensions to aliens.

Further anticipated cut in cost of government can be secured by at once amending our immigration laws in order to guarantee to Congress and the American citizens that an immigrant will not become a public charge or an immigrant violator of our laws be undeportable to his own country by adding the following to our immigration laws.

"And in the event such immigrant does become a public charge, or violates our laws, such immigrant shall be at once returned to the country from whence he came or to such country of which he is a citizen."

Pass such a law and you will not need any deportation treaty with any country.

Further suggestion that will save money to the taxpayers, reduce the cost of crime, give greater protection to United States, also give greater security to the old American citizens, by passing the following legislation:

"Set up the machinery for the registration and fingerprinting of both American citizens and aliens. It would cause alien criminals and aliens illegally in United States to leave the country in a hurry; also would prevent any alien from illegally entering United States, a real defense act. It also would reduce the cost of crime in the United States, would mean more employment for American citizens; and Congress can anticipate a further saving in the cost of government by passing a national old-age pension to American citizens, as all registration data on citizens and aliens would be in Washington. Provide a provision in the Federal pension law that the old American citizens could file their application for an old-age pension in their local post office and then mail their application to Washington. When the pension had been granted a Federal check could be mailed to the old-age citizen wherever he might live. This plan would mean an army of social-service workers and the expense—of their office could be dispensed with in every State. The Federal old-age pension should be the same to all American citizens who reach the required age, regardless of what State they live in or whether they are rich or poor."

For your information I am attaching hereto the full letter from the Social Security Board in reference to matters contained in my letter.

Sincerely yours,

ROYAL C. STEPHENS, *President.*

SOCIAL SECURITY BOARD,
Washington, D. C., February 26, 1936.

Mr. ROYAL C. STEPHENS,
1235 First Avenue, San Diego, Calif.

DEAR MR. STEPHENS: The President has referred to us your letter of December 18, in which you comment on the Social Security Act.

You are not quite correct in your interpretation of title I of the act. The States are to decide whether or not noncitizens are eligible to old-age assistance, and nearly all State laws now make citizenship a condition for eligibility to old-age assistance.

Another point on which we wish to correct your statement is that the selection of the officers to administer the old-age assistance laws is left entirely to the States themselves. The Social Security Board has no power to selection or appointment of administrative officers in the States.

Very truly yours,

(Signed) ROBERT HUSE,
Assistant Director,
Bureau of Informational Service.

NATIONAL DEFENSE,
Arcadia, Calif., August 22, 1941.

Hon. Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: If you will kindly refer to page 1326 of the hearings on the revenue bill before the Ways and Means Committee, you will find there, more fully expressed than I can express in this letter, the views of the retired enlisted men of the Army regarding the proposed tax bill now under consideration by your committee.

I would appreciate it if you would read this letter to the members of your committee and incorporate it in your hearings as a protest against the lowering of the income-tax exemption.

If any lowering or changes in the income-tax laws are approved by your committee, may I call your attention to the following fact, which can be verified from the official records, to wit: Retired enlisted men of the armed forces who receive even less than $50 per month retired pay, in which amount is included their allowances, are required to pay income tax on the $15.75 which they receive for quarters, fuel, food, and clothing, while, at the same time, officers in the active service who receive as much as $156 per month for quarters, fuel, subsistence, etc., pay absolutely no income tax on this $156 per month which they receive.

It is unfair, gentlemen of the committee, to tax an enlisted man for the $15.75 which he receives for these necessities, while officers in the active service who receive virtually 10 times more than do the enlisted men pay no income tax on this $156.

It is accordingly requested that your committee write a provision in the tax law to provide that the amount of money which retired enlisted men of the armed services receive in cash as commutation for quarters, fuel, subsistence, clothing, and so forth, be hereafter tax exempt; or, if this is not done, that a provision be written in the law forcing officers in the active service who receive up to $156 per month for similar benefits, be required to pay income tax.

In all fairness we ask, why should the retired enlisted man who does not receive sufficient to live, be forced to pay an income tax on his allowances; while officers who receive up to $808 per month (pay and allowances) pay absolutely no income tax on $156 per month allowances which they receive?

I inclose herewith a clipping which shows that the State of New York has exempted officers of the Army from paying income tax on their allowances; but no exemption has been made by the State of New York in regard to the allowances received by our aged, disabled, and retired enlisted men.

To recapitulate: Either retired enlisted men should be freed from paying an income tax on the $15.75 which they receive for quarters, clothing, and sub-

sistence, or officers of the Regular Service drawing 10 times more, should be required to pay on parity with that of retired enlisted men.

We reiterate our former statement that it is unfair to lower the income tax exemptions on our citizens, for the Government records prove that less than $2,400 per annum is not a sufficient income for a family of four; therefore, to lower the income tax exemptions for single men to $750 and married persons to $1,500, lowers their living standards and contributes very little to the aggregate tax revenue.

As shown in the hearings before the Ways and Means Committee, the Congress is destroying private initiative and free enterprise when they take from persons in the lower income categories their own right to spend their earnings (through a lowering of income tax exemptions) when the Government takes this same money from the lower income groups and spends it in unnecessary Government activities.

I do not believe that you and the members of your committee desire to stifle and destroy private enterprise, which you will be doing if you lower income tax exemptions.

I enclose herewith a page from our September issue, and would appreciate it if you would consider the proposals we advance here in connection with your tax measure.

Thanking you for your favorable consideration, and with best wishes, I am

Sincerely yours,

J. H. HOEPPEL.

WASHINGTON, D. C., *August 26, 1941.*

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SIR: May I take the liberty of calling your attention to what seems to us a very misleading impression made by Mr. John B. Haggerty, chairman of the International Allied Printing Trades Association, in a brief he submitted to the Senate Finance Committee, August 21, 1941, advocating a special tax on radio broadcasting commercial revenues, recorded on pages 1140 and 1141 of the report of hearings. In this brief he said:

"Another group that opposes the proposed tax consists of the advertising agencies. These, too, have a reason for complaint that is not hard to understand. The commission paid by newspapers and magazines for securing advertising is 15 percent. Network broadcasters and many of the larger radio stations can and do pay rebates and discounts, as well as agency commissions ranging from 36 percent upward."

And again:

"Having in mind that the advertising agencies receive some 36 percent from radio broadcasting companies, as admitted by the treasurer of the Columbia (which does not advertise special discounts or rebates), as compared with only 15 percent from printed publications for placement of advertising, it might be well for the committee to look over the National Broadcasting Co. billings of those advertising agencies whose billings exceeded $1,500,000 in 1940."

The impression made is that advertising agencies receive 36 percent as compensation for themselves, including the regular agency commission of 15 percent. This is quite untrue. And the inference is also drawn by Mr. Haggerty that—

"Little wonder the advertising agencies are concerned about a tax on radio broadcasters."

This is entirely out of keeping with the facts. The agency receives no other compensation from radio broadcasters than the same standard rate of 15 percent on the net which is allowed by magazines and newspapers.

There is no financial incentive whatever to prefer radio to publications. They are both used impartially by the agency as and when needed to reach a given market or solve a given advertising problem for the client.

The 15 percent is not allowed to agencies for "securing advertising," but for making it productive of sales results to clients, and out of this 15 percent the agency earns a net profit averaging 1.7 percent, according to our figures for the year 1940.

The other discounts and rebates referred to do not belong to the agency. They belong to the client, whom the agency merely represents. There is nothing "generous" about them. They are simply an inducement to the advertiser to make

a steady weekly use of broadcasting and to continue it for at least a year. Newspapers use the same device, more or less, for the same reason.

Will you be good enough to include this letter in the record?

Respectfully,

AMERICAN ASSOCIATION ADVERTISING AGENCIES,
JOHN BENSON, *President.*

BRIEF ON BEHALF OF THE BEAUTY AND BARBER SUPPLY INSTITUTE, INC., OF NEW YORK, N. Y., WITH RELATION TO PASSAGE IN ITS PRESENT FORM OF SECTION 2402 OF THE PROPOSED REVENUE BILL OF 1941

To the honorable the Chairman and Gentlemen of the Senate Finance Committee of the United States:

In the matter of H. R. 5417, revenue bill of 1941.

A. PRELIMINARY

I. The petition

This brief is submitted respectfully to induce the Senate Finance Committee to adopt and the Senate to pass section 2402 of H. R. 5417, the revenue bill of 1941, in the same form as that section was passed by the House of Representatives.

II. Section 2402

As passed by the House of Representatives, section 2402 (a) of H. R. 5417 levies a retail excise tax of 10 percent on all toilet preparations and section 2402 (b), which is the immediate concern of this brief, provides that the tax imposed by the previous subsection shall be based upon the total amount of toilet preparations used during any month by the beauty shop, barber shop, or similar establishment, and the total amount so used shall be considered as sold at retail, the tax to be based upon the fair retail price of the amount of toilet preparations so sold, as such price shall be determined by the Commissioner of Internal Revenue. Section 2402 (b) as passed by the House reads as follows:

"SEC. 2402. (b) For the purposes of subsection (a), if any person operating a barber shop, beauty shop, or similar establishment, uses any article described in subsection (a) in the treatment of any customer or patron, the total amount so used during any month shall be considered as sold at retail by such person during such month, and the fair retail price of such amount, as determined by the Commissioner, shall be considered to be the price at which so sold."

III. The purpose of this brief

The undersigned believes that the tax as imposed by section 2402 of H. R. 5417 creates an equitable tax which will present no enormous difficulties in collection and will so far increase the revenues to be obtained by the Federal Government as to make any additional difficulties involved in its collection minimal. This brief is further dedicated to the proposition that to change this tax into a manufacturer's excise tax or to require that the manufacturer or distributor be made the agency for the collection of this tax would create great inequalities, would impose upon the manufacturers a burden which should properly belong to the barber shop and the beauty shop and would reduce the revenues most necessary at this period of national defense to an amount far below that which would be yielded by the passage of the bill as it now stands.

B. ARGUMENT

IV. The beauty and barber shops which would be required to pay the tax in section 2402 of the proposed bill would not suffer as a result of such taxation

1. It is, of course, a matter of common knowledge that the many thousands of beauty and barber shops throughout the country are more or less one- or two-man establishments operated in the main as unincorporated businesses, or at the most as partnerships. These business establishments, it is commonly realized, do not and have not for many years maintained a strict system of account-

ing. As a matter of fact, it is true that such organizations are extremely haphazard in keeping books and in maintaining records.

The effect of this haphazard nature of doing business is to deprive the Federal and State Governments of a large source of revenue which they might otherwise realize. Moreover, this indifferent way of keeping books and record creates an inequality which results to the favor of the beauty and barber shops and to the detriment of such other retail organizations as chain groceries, clothing stores, and the like. The imposition of the present tax upon the beauty and barber shops and the requirement that they make the necessary monthly returns would as a matter of course require a stricter method of accounting and a strict attention to the keeping of books and records which would redound to the benefit of the State and Federal Governments not only in the matter of this excise tax here under consideration, but also to the general question of income taxes which could not be evaded if a strict system of bookkeeping were maintained.

2. In addition to the fact that the imposition of the presently proposed tax would in a financial way be beneficial to the various taxing units involved, it should be pointed out that the present state of national emergency creates a patriotic duty to which the beauty and barber shop must respond as have all other units of the national economy. The mere fact that the beauty shop and the barber shop is a small unit of the total national economy, when taken singly, is no measure of the real importance of the beauty and the barber shop when regarded as a whole and as part of the Nation's business. It is a matter of common knowledge again that many hundreds of millions of dollars are yearly spent in these shops throughout the Nation and thus far these organizations have escaped the direct taxation which has been imposed on other types of businesses lacking the over-all gross income of this line of business.

V. Revenue

Two other methods of imposing this tax are feasible apart from that proposed by section 2402 as it presently stands.

A manufacturer's excise tax on toilet preparations might be imposed which would be similar to the tax now existing under the Internal Revenue Code. Such a tax would then be payable by the manufacturer and based upon his selling price. This tax at 10 percent would yield no more than is presently being yielded by the tax now on the statute books and consequently reenactment of such a tax would not only defeat the purpose of Congress in revising the revenue bill, but would in addition lighten the burden of the manufacturer when compared with the new burdens being imposed on other manufacturers in other lines of business.

The second alternative for section 2402 in the proposed bill is to make the manufacturer the agent for the collection of the retailer's excise tax and require the manufacturer to pay the tax and collect from the retailer. Such an alternative errs on the other extreme. It imposes burdens upon the manufacturer which he should not be asked to assume. It makes the manufacturer bear a proportion of tax far beyond that which other manufacturers in other lines of businesses are being asked to pay. It requires the manufacturer to make a cash outlay month by month which would go far in many instances toward making it impossible for the manufacturer adequately to function.

To illustrate the unfair and inequitable burdens which such a substitute for the present section 2402 would create, the following example may be used.

Suppose that the manufacturer makes a bottle of tonic which the beauty or barber shop would sell or use and which the Commissioner of Internal Revenue might decide had a fair retail price of $1. The cost to the manufacturer of this item is 35 cents, and his selling price to the wholesaler is 45 cents. If the manufacturer were to be required to collect and pay the 10-percent retailers' excise tax based on the fair retail price as established by the Commissioner, the manufacturer would have to pay to the Federal Government on this item which costs him 35 cents a tax of 10 cents which would be an approximate increase of 33⅓ percent over the manufacturer's own manufacturing cost. This increase of 33⅓ percent would have to be paid monthly by the manufacturer to the Government and in many instances such payment would have to be made prior to the actual collection by the manufacturers of this amount. The manufacturer would thereby have perforce to make an additional investment in his produce of 33⅓ percent which would in many instances prove uncollectible and in all instances prove a great burden since

the manufacturer in the industry has not and has never had to any great extent direct contact with the retailer.

It should also be pointed out that the imposition of the tax on the manufacturer directly or as agent of the retailer would in every instance result in a greater burden upon the public because, in the natural process of distribution, were the manufacturer to pay the tax, the wholesaler and the retailer would pass the tax on to the public and not in the exact amount by which it has been imposed upon the manufacturer but in larger sums. On the other hand, if the retail beauty and barber shops were to be required to pay the tax as they will be so required under the terms of section 2402 as it now stands, the retailer will pass this tax on to the public in the exact amount which the retailer is required to pay.

VI. Collection

1. The argument has been advanced from many quarters that to impose a tax upon the beauty and barber shops such as that proposed in section 2402 would be to create a problem of collection which would be burdensome to the Internal Revenue Department and excessive in cost. This argument ignores the remarks made in IV above, and it further ignores the fact that the increase of revenue to be expected from such a tax would more than offset any increased cost to the Internal Revenue Department in the collection of such a tax. Furthermore, it should be remembered that the tax as proposed in section 2402 will be administered by the Commissioner of Internal Revenue and that it is perfectly feasible for the Commissioner to issue regulations which will so facilitate the collection of this tax by standardizing the methods of making returns and simplifynig the forms upon which returns are to be made, that it is extremely doubtful that the collection of the tax from the beauty and barber shops will be more expensive in any way than the collection of the tax from the manufacturers.

2. Another argument which has been employed by those who advocate a revision of proposed section 2402 is that the tax as there imposed will provide many opportunities and possibilities for evasion. The mere statement of this argument is its own refutation. Our own Internal Revenue laws have since 1916 afforded many opportunities of evasion, but the sound administration of these laws by the Internal Revenue Department and Congress' vigilance have closed up the gaps where such opportunities lie with the result that the opportunities which now exist for evasion are small, if they actually exist at all.

C. CONCLUSION

VII. Revenue bill of 1941 (H. R. 5417) section 2402 should be recommended to the Senate by the Senate Finance Committee and should be passed by the Senate as it presently stands

Because of the arguments advanced above, the honorable chairman and gentlemen of the Senate Finance Committee, Senate of the United States, are respectfully urged to direct their attention to the admirable provisions of section 2402 of the revenue bill of 1941 (H. R. 5417) and to recommend to the full body of the Senate that this section of the new revenue bill be passed as it presently stands, since such a tax would be fair and equitable, would call into play the legal and patriotic duties of a large segment of this Nation's business, would not prove unduly difficult in its administration, would create no striking possibilities of evasion, and would, most importantly, yield far larger revenues than any alternative which has been suggested without at the same time unfairly burdening any other group in the industry.

Respectfully submitted.

BEAUTY AND BARBER SUPPLY INSTITUTE, INC.,
By JOSEPH BYRNE, *Secretary.*
WALTER C. B. SCHLESINGER, *Counsel.*

(Thereupon, at 1:15 p. m., the hearing concluded.)

(The following statement and memoranda were subsequently submitted by Senator Connally:)

STATEMENT OF HON. TOM CONNALLY, UNITED STATES SENATOR FROM THE STATE OF TEXAS

Mr. Chairman, I would like to present a memorandum regarding the Finance Committee's action proposing to disregard the community-property system of legal and beneficial ownership of income and property.

The hasty action of the Senate Finance Committee in adopting an amendment directed at the community-property system of marital property is unfair, unwise, and illegal.

1. It is unfair, because the community-property States, while perfectly willing to rely on the presentation made on the House floor with respect to the universal mandatory joint return, had no notice whatever of any prospect that the Finance Committee would abandon that proposal and in effect single out the community-property States for discriminatory taxation.

Indeed the Assistant Secretary of the Treasury, Mr. Sullivan, specifically testified before the Ways and Means Committee as follows:

Mr. REED. I was just wondering how much consideration you have given to this complexing problem that has faced the committee for a long time, known as community-property taxes.

Mr. SULLIVAN. I think that later in the year there will be a bill in here containing many revisions to the code. I thought that that might be a more appropriate place to consider that question than in this bill.

Mr. REED. I say, have you been considering that question of the amount of revenue that it will produce?

Mr. SULLIVAN. Yes, sir.

Mr. REED. About how much revenue do you figure that you might gain?

Mr. SULLIVAN. I will get that figure for you.

Mr. REED. Will you put that in the record?

Mr. SULLIVAN. Yes; I will.

(The estimate referred to follows:)

Estimated increase in individual income taxes under the suggested Treasury surtax schedule if taxpayers in community-property States are required to allocate community-property income to its actual recipient

	Millions of dollars
Income tax	13.8
Defense tax	1.2
Total	15.0

Certainly this statement amounts to an admission that the bill expected later this session is "a more appropriate" place for consideration of the community-property question. Certainly community-property States Representatives were led to believe that the question would be considered on its own merits in this later bill and that they would then have opportunity for full hearing. Certainly the present last-minute action of the Finance Committee has taken unfair advantage of them, and the committee should reverse its action and permit the question to come up for hearing in connection with the later bill.

2. The action is unwise because it means that for revenues which amount to less than $15,000,000 on the high Treasury surtaxes, the passage of the revenue bill including the excise taxes will be indefinitely delayed.

The intense feeling in the community-property States regarding their system of marital property may be difficult for common-law States to understand, but it is there nevertheless; and the citizens of those States are as intent upon its preservation, and the recognition of its consequences, as they are upon the rights of free speech and liberty. The attempt to impose a different system or to ignore an actual constitutional and statutory scheme of marital property ownership in those States arouses the utmost resentment; and Senators and Representatives from those States have no alternative but to fight it to the last ditch. Long and arduous debate will plainly be involved, particularly in view of the lack of any public hearing by the committee on the subject. It is not unlikely that the Treasury will lose four or five times as much from the resulting delay in enacting the excise taxes as they will gain from this provision even if finally adopted.

3. The proposal to single out the citizens of community-property States to compel them to pay tax on income belonging to their spouses is certainly violative of due process under the fifth amendment to the Constitution.

The Supreme Court of the United States in a series of carefully prepared and presented cases held that one-half of the community income belonged to the husband and one-half to the wife, that it was actually owned by them in these proportions, and therefore taxable to them in such proportions (*Poe* v. *Seaborn*, 282 U. S. 101; *Hopkins* v. *Bacon*, 282 U. S. 122; *Bender* v. *Pfaff*, 282 U. S. 127; *Goodell* v. *Koch*, 282 U. S. 118). The sixteenth amendment gives Congress authority to tax income, but it does not give it authority to tax the income belonging to one person to another. Those incidents of ownership, legal and beneficial, established by State law have always been recognized as governing by the Federal courts and by Congress. The very incidents, legal and beneficial, of ownership by husband and wife in community income which the Supreme Court held made one-half of it taxable to the husband and one-half to the wife are also governing as to the power of Congress to tax one spouse with the income of the other.

None of the "grantor" cases, "trust" cases, or "income gift" cases has any bearing on this question. Indeed, it is to be noted that in interpreting exactly the same language of the revenue act under which the Supreme Court has held that the income of various trusts and transferred items were included in the grantor's and transferor's income the Supreme Court expressly decided that community income belonged and was taxable one-half to the husband and one-half to the wife.

In other words, the Supreme Court has drawn the line directly between unreal technical transfers attempting to avoid taxation of income to its real owner in these cases and the real incidents of ownership, legal and beneficial, to community-property spouses. The line thus drawn is valid constitutionally as well as for purposes of statutory construction.

These "grantor" "transferor" cases therefore give no support to the power of Congress to tax the husband or the wife with the income belonging to the spouse. Such action by a State was held unconstitutional in *Hoeper* v. *Tax Commission* (284 U. S. 206) as violative of the due-process clause of the fourteenth amendment. The same due-process clause is equally applicable to such action by Congress under

the due-process clause of the fifth amendment (*Heiner* v. *Donnan*, 285 U. S. 312).

The present action is more directly contrary to the holding in the *Hoeper case* than the joint-return proposal, for there can be no question of creating a family classification in eight States of the Union, nor is there a question of measuring the tax by a combined income. The proposal is to tax one person on income which the Supreme Court has held legally and beneficially belonged to another. This proposed action falls under the direct condemnation of the *Hoeper case* even as the joint committee counsel interprets it.

Of particular interest on the problem of community income are the comments by the ninth circuit court of appeals in *Graham* v. *Commissioner* (95 Fed. (2d) 174), decided March 4, 1938. The income involved was net community income of $82,577.64, derived from the professional architectural services of the petitioner's husband. The court said:

> Even though "earned income" were defined as income received as compensation for personal services actually rendered by the taxpayer, still petitioner's half of the above-mentioned community income would be within the definition. The Board found that said community income was received as compensation for professional services rendered by petitioner's husband. Respondent assumes, erroneously, that these services were rendered by petitioner's husband individually, on his own account and for himself alone, thus assuming as a fact that which, in Washington, is a legal impossibility. When a married man residing in Washington practices a profession or engages in any gainful occupation or activity, he does so as the agent of a marital community consisting of himself and his wife (*Poe* v. *Seaborn*, *supra*). He cannot do so in any other way or in any other capacity. Services rendered by him are actually rendered by the community; that is to say, by him and his wife, equally. So, in this case petitioner was, no less than her husband, the actual renderer of the services for which they received as compensation the community income above referred to.
>
> That petitioner did not personally participate in the professional labors of her husband is immaterial. One may actually render a personal service without personally performing the acts constituting the service. Otherwise, a partnership acting through one of its members, or a principal acting through an agent, could not actually render a personal service, the truth being, of course, that such services can be and, in countless instances are, actually so rendered.
>
> Respondent cites *Burnet* v. *Harmel* (287 U. S. 103, 110, 53 S. Ct. 74, 77; 77 L. Ed. 199), and *Thomas* v. *Perkins* (301 U. S. 655, 659; 57 S. Ct. 911, 912; 81 L. Ed. 1324), to the effect that, in the absence of language evidencing a different purpose, a Federal income-tax act "is to be interpreted so as to give a uniform application to a Nation-wide scheme of taxation," and that "State law may control only when the Federal taxing act, by express language or necessary implication makes its own operation dependent upon State law," all of which is true but not here applicable. There is here no conflict between the State law and the Federal taxing act, no attempt by the former to control the operation of the latter. The Federal act defines "earned income" as including compensation for personal services "actually rendered," but it does not define the term "actually rendered." Whether the personal services here involved were actually rendered by petitioner's husband alone, as claimed by respondent, or were actually rendered by the marital community, as claimed by petitioner, is a question to which the Federal act provides no answer. The question must, therefore, be determined by the State law. By that law, these services are deemed to have been actually rendered by the community; that is to say, by petitioner and her husband, equally.
>
> As to uniformity of application, respondent's construction of section 31 would tend to defeat rather than promote such uniformity. It is conceded that, if an ordinary business partnership, acting through one of its members, had rendered the services here involved, such services would be deemed to have been actually rendered by the partnership, and each partner's share of the compensation received therefor would be regarded as "earned income," within the meaning of section 31. A uniform application of this section requires that the same treat-

ment be accorded to a member of that species of partnership known as a marital community.

Furthermore, as was said in *Poe* v. *Seaborn* (282 U. S. 101, at 51 S. Ct. 58, 61; 75 L. Ed. 239, p. 117), "the constitutional requirement of uniformity is not intrinsic but geographic. * * * And differences of State law, which may bring a person within or without the category designated by Congress as taxable, may not be read into the revenue act to spell out a lack of uniformity."

(Senator Connally submitted the following memoranda for the record:)

COMMUNITY PROPERTY INCOMES AND THEIR TAXATION, AN ADDRESS BY GEORGE DONWORTH, SEATTLE, WASH.

[Read at the joint conference of the Pacific Coast Institute of Law and Administration of Justice and Washington State Bar Association, July 27, 1935]

Mr. Chairman, Ladies, and Gentlemen:

In view of the provisions of the Federal Constitution relating to taxation of incomes, the authoritative decisions of the Supreme Court and the historical development, the basis upon which the Federal Government may impose an income tax can hardly be said to be open to question. That the basis upon which such a tax is levied against any individual is the ownership of the income by that individual is an established constitutional doctrine. In the case of a community income the husband owns one-half of the income and the wife owns one-half.

In 1895, in *Pollock* v. *Farmers Loan & Trust Co.* (157 U. S. 429, 158 U. S. 601), the Supreme Court clearly enunciated the proposition that under the Constitution an income tax is a direct tax and that a tax on the income of real or personal property is a direct tax on the property producing such income. It necessarily resulted, as that Court declared, that under the then existing provisions of the Constitution, such a tax could not be imposed unless apportioned among the several States in proportion to population.

The impracticability of levying an income tax in proportion to population led to the adoption of the sixteenth amendment, taking effect February 25, 1913. Under that amendment Congress has power "to lay and collect taxes on incomes from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration."

As the Supreme Court has since pointed out (*Eisner* v. *Macomber*, 252 U. S. 189; *Bromley* v. *McCaughn*, 280 U. S. 124), the sixteenth amendment did not extend the taxing power to new subjects, but merely removed the necessity which otherwise existed for an apportionment among the States of taxes laid on income. The Supreme Court said in *Eisner* v. *Macomber* (which I call the *Macomber case* to distinguish it from the earlier case of *Towne* v. *Eisner*, 245 U. S. 418):

"A proper regard for its genesis as well as its very clear language requires also that this amendment shall not be extended by loose construction, so as to repeal or modify, except as applied to income, those provisions of the Constitution that require an apportionment according to population for direct taxes upon property real and personal. This limitation still has an appropriate and important function, and is not to be overridden by Congress or disregarded by the courts."

The word "incomes" being now in the Constitution, the definition of that word and its implications is a function of the Supreme Court. In exercising that function the Court has spoken in no uncertain language. In the *Macomber case* the Court said, in defining the meaning of the term:

"Here we have the essential matter: * * * a gain, a profit, something of exchangeable value proceeding from the property, severed from the capital, however invested or employed and coming in, being 'derived,' that is received or drawn by the 'recipient' (the taxpayer) for his separate use, benefit, and disposal; that is income derived from property. Nothing else answers the description."

Let it be noted that the parenthetical phrase "the taxpayer" is not my interpolation. It is the language of the Court. Income is something derived by the taxpayer.

The dissenting opinions in the *Macomber case* picture in clear relief the substantial holding of the Court. The dissenting opinion of Mr. Justice Holmes takes the ground that the word "incomes" in the sixteenth amendment was

used, not in the sense announced in the majority opinion of the Court, but in a broader sense conforming to a supposed common understanding among the public. Nevertheless, the above-quoted declaration as to the meaning and effect of the amendment has been expressly reaffirmed by the same Court and is the established law. In *Bromley* v. *McCaughn* (280 U. S. 124), the Court, in upholding the gift tax as an excise and referring to other cases where excise taxes of various kinds with reference to property had been upheld, said:

"It is true that in each of these cases the tax was imposed upon the assertion of one of the numerous rights of property, but each is clearly distinguishable from a tax which falls upon the owner merely because he is owner, regardless of the use or disposition made of his property."

In *Taft* v. *Bowers* (278 U. S. 470), the Court upheld the validity of the provisions in the Revenue Act of 1921 which requires the donee of a gift to pay an income tax on the capital gain based on the cost of the gift to the donor. In the unanimous opinion, the Court said:

"Under former decisions here the settled doctrine is that the sixteenth amendment confers no power upon Congress to define and tax as income without apportionment something which theretofore could not have been properly regarded as income."

So in *Home Savings Bank* v. *Des Moines* (205 U. S. 503) (not an income-tax case), the Court said:

"Taxes are assessed against persons upon the property which they own, not upon the property which others own. We should be reluctant to suppose that there has been any departure from this principle in this law."

It being established that an income tax can be assessed only against the owner of the income, the next point for consideration is: By what law is the ownership of income determined? It is determined by the same law as the ownership of any other class of property, namely, by the statutes and decisions of the State in which the property originates or has its situs.

There are 48 States in the Federal Union. In no two of the States are the statutes concerning property rights alike. In no 2 of the States are the laws concerning marriage and the property rights of married persons of identical tenor. There are 48 different systems by which property rights in general and the property rights resulting from the marriage relation are determined. The legislature in each of the 48 States is supreme in determining all such matters entirely without restraint so far as concerns the sixteenth amendment, which merely authorizes the imposition of Federal income taxes without apportionment. In fact, the States are subject to no restraint whatever in determining the property rights of their citizens not originating under a Federal law or treaty except that imposed by the fourteenth amendment which prohibits the deprivation of the property of any person without due process of law. Aside from the fourteenth amendment (which certainly gives no added Federal power in connection with the imposition of income taxes), each of the 48 States is as free to determine for itself the results of the marriage relation as if it were an independent nation and the Federal Union had never been formed. There is no dissent on this point in the decisions of the Supreme Court.

In *Smith* v. *Alabama* (124 U. S. 465), the Court said:

"It has never been doubted but that this entire body and system of law, regulating in general the relative rights and duties of persons within the territorial jurisdiction of the State, without regard to their pursuits, is subject to change at the will of the legislature of each State, except as that will may be restrained by the Constitution of the United States. Is it to this law that persons within the scope of its operation look for the definition of their rights and for the redress of wrongs committed upon them. It is the source of all those relative obligations and duties enforceable by law, the observance of which the State undertakes to enforce as its public policy. And it was in contemplation of the continued existence of this separate system of law in each State that the Constitution of the United States was framed and ordained with such legislative powers as are therein granted expressly or by reasonable implication."

This principle was well expressed by the supreme court of Washington in *Curry* v. *Wilson* (57 Wash. 509), where the court said:

"The right of the State to fix the character of property acquired by its citizens and the terms under which it shall be holden, is a right of sovereignty and a matter in which the Congress of the United States can have no concern."

In speaking of the power of the State to control and regulate property rights

of married persons, the Supreme Court of the United States said, in *Neilson* v. *Kilgore* (145 U. S. 487):

"Marriage is a civil institution, a status, in reference to which Mr. Bishop has well said 'public interests overshadow private' * * * one which public policy holds specially in the hands of the law for the public good, and over which the law presides in a manner not known in the other departments."

In *Ohio* v. *Agler* (280 U. S. 379), the Court said:

"It has been understood that the whole subject of the domestic relations of husband and wife, parent and child, belongs to the laws of the States and not to the laws of the United States. * * * In the absence of any prohibition in the Constitution or laws of the United States, it is for the State to decide how far it will go."

Similar declarations are made in *U. S.* v. *Hudson* (7 Cranch 32).

The case of *Kansas* v. *Colorado* (206 U. S. 46), contains clear and excellent language pointing out how restricted are the powers of the Government of the United States when the attempt is made to trench upon local subjects of legislation.

It is well to bear in mind this observation made by the Court in the last-cited case:

"One cardinal rule underlying all the relations of the States to each other is that of equality of right. Each State stands on the same level with all the rest. It can impose its own legislation on no one of the others, and is bound to yield its own views to none."

In 8 States of the Union, including Washington, the property rights of married persons are governed by a statutory relation generally known as the community system. The form of the community system differs in each of the 8 States, but in all of them the marriage relation results in a species of partnership between husband and wife. In the other 40 States there is no community system. Nevertheless it would be distinctly erroneous to refer to these 40 States as "common-law States."

The rules of the common law relating to the property rights of husband and wife were barbarous rules. Every one of the 40 States that inherited those rules has materially changed them, and further statutory changes are constantly taking place. Uninformed persons not familiar with the community-property system and its underlying reasons gratuitously assume that that system was devised and put in force by 8 States for the purpose of reducing the Federal income taxes payable by their citizens. Nothing could be farther from the truth. With the exception of California, which in 1927 amended its community-property statute (this amendment being more in the nature of the filling of a hiatus in the law than the adoption of a new system), all the community property States have retained their system without amendment since sometime in the last century. All of these 8 States chose that method of regulating the property rights of married persons because they considered it the most just system. They adopted it long before the sixteenth amendment was proposed or thought of.

Not only for many years before 1913, but during the period since that date, the amendments to the community-property laws of those States have been few and minor. It is a safe assumption that the 40 noncommunity-property States have in the past 50 years more often and more materially changed the laws relating to the property rights of married persons than have the community-property States. They are progressing away in varying degrees from the barbarity of the common-law rules governing this subject. While they are to be congratulated on this progressive approach to marital justice, we may express the hope that they will not be led into any "holier than thou" or "more in the fashion than thou" attitude toward the well-tried and steadier system of community property. The community system is not aware of any inferiority complex. Those who, living elsewhere, read about it and register their disapproval without having experienced its workings, seem to regard it (quoting, I believe, Christopher Morley) "like a thoroughbred bulldog, ugly enough to be attractive."

It is sometimes said by those who would attempt to change the present method of taxing community incomes that the application of the income-tax law to citizens living under community-property laws results in inequality. The fact is that the application of the Federal income-tax law to the property systems of all the States results in some inequality. As no two States have the same local laws of property, a Federal law uniform in its terms throughout the country necessarily produces different results in operating upon different

local systems. This has frequently been recognized as one of the necessary results of our Federal Union.

As the Supreme Court pointed out in *Florida* v. *Mellon* (273 U. S. 12, differences of State law which may bring a person within or without the category designated by Congress as taxable may not be read into the revenue acts to spell out a lack of uniformity.

The product of a constant and a variable is of course a variable. The only way to produce a uniform result in the application of a Federal income-tax law is to enact a constitutional amendment which would transfer to the Federal Government the power to fix and regulate the property rights of married persons. No one, I hope, is suggesting that course. Such inequality as results from the application of the Federal law to the diverse property systems of the 48 States is a part of the price we pay for our Federal Union. The results of this inequality have been much exaggerated by the opponents of the community property system. In every one of the 40 noncommunity States, husbands transfer income-producing property to their wives and thus divide an income which otherwise would belong solely to the husband. They make use of many other methods, lawful under their respective State laws, for effecting transfers of income. They voluntarily do what the citizens of the State of Washington are compelled to do and cannot avoid doing, namely, they vest in their wives the ownership of a part of their accumulations received after marriage.

The sun shining from the heavens shines uniformly upon all things. Where it shines upon 48 different objects, there cannot be 48 shadows of the same length and form unless the objects are of the same height and size. Though the sun shines with uniformity, men know that diversity in their created structures is inevitable.

Such inequality as results from the application of a Federal law to situations arising from the varying laws in the 48 States was bargained for and agreed upon at Philadelphia in 1787, where a division of powers between Federal and State sovereignties and jurisdictions was made a basic principle of the Constitution. The same freedom of State legislation was bargained for again and agreed upon again when the sixteenth amendment was adopted. By that amendment the people of the United States constitutionally decreed that Congress may lay and collect taxes on incomes from whatever source derived, but they conferred no power upon Congress to regulate property rights or the results of the marital status in the several States. It is obvious that in 1913 and prior years when the sixteenth amendment was under consideration and was adopted, everyone knew what is known now, namely, that questions concerning the general ownership of property producing income in each of the several States must be determined by the laws of that State. Then as now the community-property system was in force in 8 States. It was a time-honored system. Its basic principles were well known. From the beginning of statehood each of these States had established and maintained the system because its citizens believed it to be the most just method of defining the property rights of husband and wife.

When the power was thus conferred upon Congress to tax incomes without apportionment, the community-property system was taken into consideration fully as much as was any other of the numerous and varying statutory systems for regulating the rights of married persons existing in any of the States. There was no uniformity anywhere. The whole matter of ownership was left to the local determination of the States as it had been in 1787 and has been ever since.

The suggestion has been made from time to time that Congress should amend the income tax statutes so as to "hit" in some way the community-property system. Various devices have been suggested for this "hitting." One device suggested has been that Congress should by statute declare that management and control by the husband are considered equivalent to ownership. This reminds me of a conundrum that made the rounds among school boys years ago: "How many legs could a dog have if you considered his tail one?" The answer was: "He would have four, because considering it one would not make it one."

It does not require much consideration to discern the invalidity, and if not the absurdity, of this suggested device. Time and again it has been decided by the courts, State and Federal, that the husband's power of management and control is no more than a statutory power of attorney, the equivalent of an irrevocable power of attorney which a wife may give to her husband, or vice

versa, in any of the States. Washington decisions embodying this conclusion are numerous. Some of them are:

Schramm v. *Steele* (97 Wash. 309); *Olive Co.* v. *Meek* (103 Wash. 467); *Marston* v. *Rue* (92 Wash. 129); *Stewart* v. *Bank of Endicott* (82 Wash. 106); *Bortle* v. *Osborne* (155 Wash. 585); *Huyvaerts* v. *Roedtz* (105 Wash. 657).

To quote at length from these decisions would unduly extend this paper. Time and again the Supreme Court of Washington has decided that the community property, real and personal, is actually owned by two persons, namely, by the husband and by the wife, and that this ownership is an actual legal title vested equally in each spouse.

Schramm v. *Steele* (97 Wash. 309), may be taken as typical. In that case the court said:

"The same circumstances, all of them and no others, which make real estate community property make personalty community property. The two kinds of property are impressed with the community character by the same facts and by force of the same words in the same defining statute. All property, whether real or personal, property and pecuniary rights without exception, acquired after marriage by either husband or wife, or both, otherwise than by gift, bequest, devise or descent, is community property. * * * The provision of the statute entrusting the husband with the management and control of community personal property * * * except he shall not devise by will more than one-half thereof (Rem. Code, sec. 5917), must be construed in the light of this dominant fact of ownership. The property referred to is community property, that is, property belonging to the community. The husband is made, by the statute, the manager, not the owner. * * * To hold that the whole substance of the term community property as applied to personalty consists in a mere contingent expectancy of the wife, would make of the term 'community personal property' a palpable misnomer. It would take away every community element except that the wife's labors and sacrifices had helped to earn it. It would destroy that equality which it is the obvious purpose of our community property law to conserve. * * * The words of the statute are generally no broader than those often employed in general powers of attorney for the management and disposition of personal property; but we have yet to learn of a case in which such a power, however broad, was held to destroy the estate of the donor of the power and subject the property to the personal debts of the attorney in fact."

Many other Washington decisions are equally clear and emphatic in upholding the equal title and ownership of the two spouses in the community property, real and personal, neither having a superior title or interest to the other.

In *Marston* v. *Rue* (92 Wash. 129), the court used language to the effect that under the Washington statute the community property, real and personal, is just as much the wife's as the husband's.

Kaufmann v. *Perkins* (114 Wash. 40), and numerous other cases hold that, as to real estate, conveyances, and agreements for conveyances and leases made by the husband alone are void, even as against the husband.

A voluntary conveyance of a half interest made to a wife by a husband in New York can have no greater effect. Yet no attempt is made to tax the New York husband for the entire income after making such a conveyance. Even the gift tax gives him liberal exemptions, especially if made by annual gifts of $5,000 each.

The Supreme Court of the United States has considered and sustained the provisions of State community-property statutes in a variety of cases, among which are *Arnett* v. *Read* (220 U. S. 311); *Warburton* v. *White* (176 U. S. 484); *Buchser* v. *Buchser* (231 U. S. 157). I discuss later two of these cases which decisively bear on our present subject.

Those who advocate the insertion in the Federal income-tax statute of a declaration that management and control by the husband with respect to community property shall be the basis of the Federal income tax are not really content to declare management and control the equivalent of ownership; they really propose to make management and control superior to ownership and to predominate over ownership as the basis of the Federal tax. There is no doubt where the ownership lies; hence they wish to depart from ownership and base the tax solely on management and control. But they propose this only in the case of community property. That means in effect that they propose this rule for eight States only. They do not suggest that management and control by the husband be given a like effect in the non-community-property States.

We may note, in passing, the injustice of following a State community-property statute only to the point of joining the earnings of a husband and wife in a common fund and then departing from that statute insofar as it fixes the ownership in the two spouses equally of the fund thus created. This injustice and the constitutional difficulties involved are frankly recognized by some writers on the subject. They suggest, therefore, with more justice a uniform system of taxing "family incomes" throughout the United States, disregarding practically in their entirety all State statutory provisions defining the property rights of married persons.

The Supreme Court of the United States has decided in *Arnett* v. *Read* (220 U. S. 311), and *Warburton* v. *White* (176 U. S. 484), that the wife's vested interest in community assets in States having the community system in property in the constitutional sense, and that it cannot be taken away from her without compensation, by reason of the fourteenth amendment. That Court has equally decided in *Warburton* v. *White* that the management and control given by statute to the husband can be taken away without compensation despite the fourteenth amendment, because it is not a property right vested in the husband but a mere statutory agency subject to change whenever the legislature so wishes. The proponents, therefore, of the management-and-control device seriously propose to base an income tax upon something which the Supreme Court has held is not property and is not protected by the fourteenth amendment, namely, the right of management and control. And they equally propose to disregard something which the Supreme Court has said is property and cannot be taken away without compensation, namely, the wife's statutory ownership of her one-half interest. What chance there is of the upholding of such a device as a constitutional Federal enactment may be readily conjectured. It seems not too much to say that any proposition of departing from the trail well blazed by the Supreme Court, the trail of ownership, leads into a hopeless morass of tangled substitutes. Let it be noted that in this paper when I speak of the Supreme Court, without other designation, I mean the Supreme Court of the United States.

We hear it said that the Supreme Court has upheld the imposition of an income tax on one who is not the owner. An analysis of the cases cited as sustaining that proposition will show, I think, that they do not in fact support it. In all those cases it will be found that the person, not the owner, against whom the Supreme Court has held that a Federal income tax may lawfully be imposed was one who had been the owner and had not entirely divested himself of that ownership. Of course, there are numerous cases in the books holding that a status once established for taxing purposes retains its efficacy until completely changed. A partial change does not prevent the exercise of the taxing power against one originally taxable.

I am reminded that I once lived in the town of Machias, in Maine. There was a citizen of our town who was going to change his residence to Cherryfield. He said: "I will beat the town of Machias and the other towns out of 1 year's taxes." The towns in Maine have jurisdiction to do the assessing and the taxing, and by statute they assess and tax property to the owner in the town where he resides on the first day of April.

So on March 31 John Doe, of Machias, arranging to remove from that town, packed up his household goods, having already sold out everything he did not want to take, and, with his family, drove 15 miles on the way of Cherryfield. He arrived at the town of Jonesport in the afternoon of March 31.

He spent the night of March 31 and the day and night of April 1 in Jonesport. He left Jonesport about 10 o'clock on the 2d of April, arriving a few hours later at the town of Cherryfield, where he took up his permanent abode.

He said: "I cannot be taxed in Machias because I left there for good on March 31; they won't think of taxing me in Jonesport, because I was only passing through there on April 1. As far as Cherryfield is concerned, I was not living there until the 2d of April."

His plan failed. They taxed him in Machias, and the tax was upheld. The Court said that for taxation purposes a status once acquired continued until it was completely changed. A partial change was not recognized. His status on April 1 was that of a resident of Machias, because he had not yet acquired any other status. That is the substantial principle that I find applied in the cases where a person no longer the complete owner is held to be subject to an income tax.

Why is it that in all of these cases the decision upholding the tax pursues the point of an interest retained by the grantor, the former owner? It is because the income tax is assessed against the owner and the courts refuse to recognize an incomplete change of ownership. The cases cited under this head are *Reinecke*

v. *Smith*, 289 U. S. 172; *Burnet* v. *Wells*, 289 U. S. 670; *Burnet* v. *Leininger*, 285 U. S. 136; a partnership case where *Hoeper* v. *Tax Commission of Wisconsin*, cited below, is distinguished but left unquestioned. All of these are grantor cases, where a tax was upheld against a grantor who had not completely parted with the title. There is an excellent comment on *Burnet* v. *Leininger* in *Lowery* v. *Helvering* (70 Fed. (2d) 713).

It has been suggested that *Burnet* v. *Wells* (289 U. S. 670), cited above, has a broader implication than I have indicated. I do not think so. In that case, by a 5-to-4 decision, the Court sustained an income tax against a grantor who in creating a trust directed that a part of the income should be applied to the payment of premiums thereafter accruing on life-insurance policies taken out by the grantor before the creation of the trust on his own life for the benefit of two women considered by the court to be members of his family, an expenditure which the majority opinion speaks of as being "a common item in the family budget." All nine of the Justices recognized that a remaining interest in the grantor was necessary in order to uphold the assessment of an income tax against him, and that he could be taxed only for so much of the income as represented that interest. It was tacitly assumed by all that the validity, construction, and effect of the instrument creating the trust were to be judged by State laws. State laws also controlled as to the construction of the life-insurance policies. Congress had enacted a special provision in the revenue act directing that—

"Where any part of the income of a trust is or may be applied to the payment of premiums upon policies on the life of the grantor * * * such part of the income of the trust shall be included in computing the net income of the grantor."

Five justices held the statute to be constitutional because the grantor had a continuing interest in the policies. They were at much pains to point out that it was a grantor who was taxed and that his continuing interest was substantial.

Mr. Justice Cardozo, speaking for the majority, said:

"If the insurer without cause were to repudiate the policies, the insured [the grantor] would have such an interest in the preservation of the contracts that he might maintain a suit in equity to declare them still in being (citing authorities). The contracts remain his, or his at least in part, though the fruits when they are gathered are to go to someone else."

The outstanding fact is that the Court in the majority opinion upholds the constitutionality of the assessment of the tax only because of the continued interest of the grantor who first took out the policies and later created the trust.

In effect all the grantor cases are distinguished from the community property cases by the court itself in the *Seaborn case* (282 U. S. 101), cited below. There (as shown in the passage of the opinion hereinafter quoted) the court pointed out the difference between the situation of a grantor technically parting with the title while, in fact, retaining ownership with its incidents in whole or in part, and the situation of the husband under the community property system where "the husband never has ownership."

The leading case of *Poe* v. *Seaborn* (282 U. S. 101), and the companion cases (the income-tax cases dealing with community property), decided in 1930, make it clear that ownership of the income is the basis of the assessment of income taxes under the sixteenth amendment and that that ownership is determined by the local State laws. That case involved the community-property law of Washington and held the husband, not liable for a Federal income tax assessed against him by the Commissioner on the entire community income. The decision is rested definitely on the ground that only one-half of the community income belonged to Seaborn, the other half being his wife's. In decisions rendered the same day a like ruling was made as to community incomes in Texas, Louisiana, and Arizona (*Hopkins* v. *Bacon*, 282 U. S. 122; *Bender* v. *Pfaff*, 282 U. S. 127; *Goodell* v. *Koch*, 282 U. S. 118).

The three cases last cited and *Poe* v. *Seaborn* were test cases. The Government there strongly asserted the theory that the husband's management and control of community property is the equivalent of ownership and that to hold the contrary would involve an unfair discrimination against the taxpayers in the 40 States having other systems. These contentions were fully considered by the Court and were overruled. The question must therefore be regarded as set at rest by these four cases, especially when they are read in connection with the later cases of *Hoeper* v. *Tax Commissioner of Wisconsin* (284 U. S. 206) and *Heiner* v. *Donnan* (285 U. S. 312), hereinafter discussed.

For 15 years the practice of the Department has been in accordance with this principle. In April 1920, United States Internal Revenue Commissioner's office decision No. 426 (2 C. B. 198) gave specific recognition to the community-property laws of Texas and Washington, and upheld the propriety of returns dividing the community income equally between the husband and wife. Later in the same year, by opinion of Attorney General Palmer, the ruling was extended to all of the community-property States except California, where the local State courts had held that under the then existing statutes the wife had no vested interest in the community property or income. In February 1921 the second opinion of Attorney General Palmer (32 Ops. Atty's. Gen. 435) considered the subject exhaustively and adhered to the ruling already announced. There has since been no departure from it. Various attempts have been made to persuade Congress to amend the income-tax law by the insertion of language by which the advocates of a change hoped that this established practice might be overborne. Both Houses of Congress have turned deaf ears to these proposals.

The holdings of the Supreme Court may be synopsized, I think, by stating that in no case has that Court held any person liable for a Federal income tax unless he was the owner or had been the owner of the income or the property producing it, and had parted with an interest less than the entire interest, thus retaining a substantial interest in himself. In the *Seaborn case* (282 U. S. 101) the Court, speaking of *Corliss* v. *Bowers* (281 U. S. 276) (a case cited to the Court as having a contrary import), expressed itself as follows:

"We held that where a donor retains the power at any time to revest himself with the principal of the gift, Congress may declare that he still owns the income. While he has technically parted with title, yet he in fact retains ownership with all of its incidents. But here (in the *Seaborn case* construing the community-property law of the State of Washington) the husband never has ownership. That is in the community at the moment of acquisition."

The case of *Hoeper* v. *Tax Commission of Wisconsin* (284 U. S. 206) establishes the proposition that an income tax assessed against a husband cannot be increased by reason of the fact that his wife receives an income which she owns. That case, like others decided by the Supreme Court, denies the asserted power to add together two incomes owned by the husband and wife and to tax them as one income to the husband. It holds that the Constitution is violated as to the fourteenth amendment when a State attempts to tax a husband for property or income which under the State law belongs to his wife.

In *Heiner* v. *Donnan* (285 U. S. 312) the Court states that a course of action prohibited to the States by the fourteenth amendment is prohibited to the Federal Government by the fifth amendment. It is held, applying this principle, that a Federal statute is unconstitutional which creates a conclusive presumption that gifts made within 2 years prior to the donor's death were made in contemplation of death. The court says that the conditions stated in the opinion "show that to impose liability for the tax as a gift tax upon the estate, as they in terms require, is, in effect, to exact tribute from the gains or property of one measured by the gains or property of another." This holding and this language are pertinent when it is proposed to add together and tax to the husband in the higher bracket two incomes which under State law belong to two persons, namely, one to the husband and one to the wife. The proposal becomes obviously more unwarranted and unjust when the husband has also a separate income, since in that case it is proposed to add the two community incomes to the separate income of the husband and to subject the husband to a higher rate of tax and surtax as a consequence.

Nor can the supporters of the proposed innovation find consolation in the opinion of the dissenting judges in the *Hoeper case*. That being the case of a Wisconsin State tax, the tax was imposed by the same legislative authority which had established the property relations of husbands and wives and had changed the common law of the State of Wisconsin in that respect. The dissenting judges pointed out that Wisconsin, if it so desired, could have restored the common law and in that way could have vested the entire ownership of the wife's property in the husband. In their view it followed that the Wisconsin statute there in question could be treated as a reenactment of the common-law property rights of husband and wife, insofar as the State income tax was concerned. That is the only ground that the dissenters appear to have found for questioning the validity of the majority decision.

In the case of a Federal income tax on incomes owned by husbands and wives, no such considerations exist. United States statutes cannot change the relations or the property rights of husbands and wives in any State. The United States cannot reenact the common law as to property rights between husbands and wives

in any State. The *Hoeper case* is emphatic and is in line with the other cases cited which declare that there is a constitutional barrier to the enactment of a Federal law which would join together and tax as a unit incomes which, under State law, are owned by the husband and by the wife.

INHERITANCE AND ESTATE TAXES

So far as concerns inheritance and estate taxes, little need be added. It necessarily follows from the provisions of the Washington statutes and decisions that the wife's interest in community property is a continuing interest existing during marriage and thereafter, and that in case of the husband's death the wife in no sense inherits her one-half interest in the community property from the deceased spouse. In the converse case, equally, the husband is not an inheritor of his one-half, but is a continuing owner both before and after the wife's death. The long-established practice of the inheritance tax department of the State of Washington in this regard is too well known to justify further comment.

The Federal Government has uniformly adhered to the same method in valuing and taxing the estates of deceased married persons. The rule was made clear by Internal Revenue General Counsel's Memorandum No. 7773 (August 1930) in which reference is made to the decisions of the United States District Court for the Northern District of Texas in the *Vincent* and *Underwood cases*. In those cases the decisions of the Court were oral and consequently unreported. In the General Counsel's memorandum No. 7773 it is said:

"In view of the court's decision in the *Vincent* and *Underwood cases* which are applicable to the instant case, it is the opinion of this office that the value of B's interest in the community property is not a part of A's gross estate within the purview of section 302 (a) of the Revenue Act of 1926, notwithstanding the fact that she elected to take under the will."

The general principle stated in the cited memorandum had been enunciated in department rulings long previously. The only question raised in 1930 and on which the General Counsel's opinion was sought was whether a different rule applied where, by reason of testamentary provisions, an election by the wife was required.

In referring to the two decisions just mentioned, the memorandum says:

"In each of those cases the Court held without written opinion that the interest of the wife in the community estate was not a part of her deceased husband's gross estate. The Government did not appeal from those decisions."

I believe no question has been suggested as to the propriety of this long-established practice in the application of the laws governing the Federal and State estate and inheritance taxes.

GEORGE DONWORTH.

NOTE.—In *Blair* v. *Commissioner of Internal Revenue* (— U. S. —), decided February 1, 1937, the unanimous opinion of the Court cites twice with approval *Poe* v. *Seaborn* (282 U. S. 101) in support of the proposition that the decisions of the State courts are final as to property rights and that Federal income-tax liability attaches to ownership of the income as defined by State laws.

NOTE 2.—While for obvious reasons the State statutes and decisions cited in the foregoing paper are those of the State of Washington, it follows under the decisions of the Supreme Court of the United States therein discussed that the conclusion reached is equally applicable to community incomes received by residents of the other seven States where the community-property system is in force.

MEMORANDUM BRIEF

(*a*) Explanation of substantial character of wife's ownership of half of the community partnership income and property in Louisiana.

(*b*) Summary of the practical and substantial differences between the community property or marital partnership law and the common law.

(*c*) Illustrations of the practical and serious burdens on husbands in relation to their property rights in community property States, as distinguished from common law States, which entitle such community property States to the benefit of separate returns for income-tax purposes.

(*d*) Discrimination and unfairness to community property States resulting from the attempt by the Government to ignore local State laws regulating and fixing ownership and property rights by the passage of the proposed bill. (H. R. 8396.)

CHARLES E. DUNBAR, Jr.,

New Orleans, La., Attorneys for
Louisiana Community Property Taxpayers Committee.

FOREWORD

Following an earlier opinion applicable to Texas rendered in 1920, the Attorney General of the United States, on February 26, 1921, rendered an opinion which was promulgated by the Commissioner of Internal Revenue as Treasury Decision 3138 on March 3, 1921, based on exhaustive study of the laws of all the community property States. In these opinions, the Treasury Department announced that in Louisiana, Texas, Arizona, New Mexico, Idaho, Nevada, and Washington, all of which are community property States, the wife, as a partner in community, was the vested and real owner of one-half of all of the community property and income of the community partnership, and that all community partnership income, for the reason that it belonged equally to husband and wife, might be returned separately for income-tax purposes. (California was excepted from the ruling in 1921. Subsequent changes in the community property law of California have resulted in the Government recognizing the same right of husbands and wives in California since 1930.)

In 1921 and 1924, attempts were made in Congress to amend the revenue act, which amendments were designed to compel the husband in community partnership States to include in his individual income-tax return the half of the community income which belonged to his wife under the local State law. These amendments were similar to H. R. 8396, which is now pending in Congress. Arguments were made and briefs were filed in behalf of the community partnership States in 1921 and 1924 showing that the proposed amendments were grossly discriminatory and unjust, and, as a result, the amendments were rejected by Congress (appendix 1). When the sponsors of the legislation in 1921 and again in 1924 failed to persuade Congress to ignore the laws of the community partnership States and to compel by legislative fiat the husband to pay taxes on his wife's half of the community partnership income, efforts were then made to change the rulings of the Treasury Department and of the Attorney General which had been in effect for many years. Following the decision of the Supreme Court in *U. S.* v. *Robbins* (269 U. S. 315), dealing with the law of California, the Treasury Department finally decided to institute test suits in some of the other community partnership States, so that the Supreme Court of the United States might decide the matter. The Supreme Court of the United States in 1930 unanimously decided that the prior rulings of the Attorney General and Treasury Department were correct and that accordingly in the States of Louisiana, Washington, Texas, New Mexico, and California the wife had a legal and real ownership in half of the community partnership property and community partnership income, and the right of husbands and wives in community property States to make separate returns of the community income was again recognized (appendix 2). The Treasury Department accepted the decisions of the United States Supreme Court dealing with the local laws of Louisiana, Texas, Washington, Arizona, and California, as applicable to the remaining community property States of New Mexico, Idaho, and Nevada without the necessity of further test cases. Another attempt is now being made by legislative act to take away from husbands and wives in community partnership States the rights, which, after a careful study of the local laws, have been recognized by three Attorneys General, the Treasury Department, and the Supreme Court of the United States (appendix 3). The pending bill which has been introduced for this purpose is H. R. 8396, which reads as follows:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That for the purpose of determining the income-tax liability of any individual during any taxable year beginning after December 31, 1933, property of a marital community shall be considered as the property of, and income of a marital community shall be considered as the income of, the spouse who has the management and control thereof under the law of the jurisdiction in which the marital community exists, and such spouse shall alone be entitled to the deductions and credits allowed under the internal revenue laws which are properly allocable to such property or income."

The purpose of the above-quoted bill, which is now pending, is to ignore and nullify the effect of the local community partnership laws of Louisiana, Washington, Texas, California, New Mexico, Arizona, Idaho, and Nevada, and force the husband in these States to include in his individual tax return property and income, which, under the law of his State, does not belong to him, but which belongs to his wife. The present proposed legislation is not only grossly discriminatory and unfair to the community property States, but it violates the Constitution of the United States.

The sixteenth amendment to the Constitution permits Congress to tax a person's income. The Federal Government under this amendment has adopted on the whole a policy of taxing the real or equitable owner of income as determined by local State law. If ownership as created by the local statutes of the various States is not recognized by Congress and is to be disregarded by Congress endless complications, hardships, and gross injustice and discrimination will result and uniformity in matters of Federal taxation will be destroyed.

To the average layman and lawyer unfamiliar with the community-property or marital-partnership law there is a general impression that the only difference between the laws of community-property States and common-law States is a difference of theory, and that the community-property law is only a fiction which gives community-property States benefits in relation to income-tax returns at the expense of common-law States that have a different system of law.

It is respectfully submitted that such an impression is erroneous and contrary to the law and facts as announced by three Attorneys General, the Treasury Department, and the Supreme Court of the United States (appendix 4).

The purpose of this memorandum is to explain simply and briefly, with as little use of technical language and the citation of authorities as posible, the general principles of the community law and by practical illustrations to demonstrate that the community-partnership law is not only theoretically different from the common law, but as a practical and substantial fact creates a marital partnership in which the wife is the real and substantial owner of one-half of the community property and income, with resulting burdens and practical limitations on the property rights of husbands, unknown to the common law, which entitle such husbands in community-property States to the corresponding benefits that they now enjoy in the way of separate income-tax returns.

BRIEF EXPLANATION OF THE EFFECT OF THE COMMUNITY-PARTNERSHIP LAW

The most important effect of the law of Louisiana and other community-property States is to create a partnership between the husband and wife, and, as a result, one half of the income and property acquired during marriage by this partnership immediately vests in the wife and the other half in the husband. The community system of law as it exists in Louisiana and other States is more analogous as a matter of legal principle and substantial fact to a partnership than any other common-law legal status. The right of the husband to administer and manage the community partnership property that is acquired after marriage as a result of the joint or individual efforts of the two spouses is in substance analogous to that of a managing partner at common law or a trustee at common law with very broad power of administration (appendix 5). Under the community or partnership theory, the husband and wife, with certain exceptions, become absolute and equal owners of all property and income acquired by them during the marriage, share and share alike (appendix 6). The courts of the various States have repeatedly held that there is no distinction to be made between husband and wife as to the degree, quantity, nature, or extent of the interest each has in the community property (appendix 7). The husband, as managing partner or trustee, or, as he is called in some of the community States, "the master of the community," is given the administration of the community property by law, and this right to administer is terminated by divorce, or by his death or the death of his wife. This right of administration may also be terminated, without the necessity of a divorce, by a separation of the community property and a liquidation of the partnership, which may be claimed and obtained by the wife on the ground that the husband is a gambler, or if he is guilty of mismanagement or otherwise incompetent or incapable of properly administering the community partnership property.

The pending bill proposes, although the husband is admittedly not the owner, to tax him on his wife's half of the community-partnership property, because he is the manager and administrator of the community partnership under the local

State law. It is probably unnecessary to state, that in common-law States, a managing partner of a partnership is not required by the Federal revenue act to include in his individual income-tax return, the share of the partnership income belonging to his other partner or partners. The proposed bill, however, would require the husband, who is analogous to a managing partner at common law, to include in his individual income-tax return not only his share of the community-partnership income, but the share which belongs to his wife as a partner in the community partnership. In short, it is proposed that for taxation purposes the community partnership in eight States is to be treated differently from ordinary partnerships in every State of the Union.

PRACTICAL ILLUSTRATIONS OF THE WIFE'S ONE-HALF OWNERSHIP OF THE COMMUNITY-PARTNERSHIP PROPERTY AND INCOME AND THE SUBSTANTIAL RESTRICTIONS AND LIMITATIONS PLACED ON THE HUSBAND'S ADMINISTRATION OF THE COMMUNITY-PARTNERSHIP PROPERTY

(*a*) The husband in Louisiana, in addition to being restricted by law as to gifts of community-partnership property (appendix 8), is expressly denied, by statute, the right to dispose of or deal with the community-partnership property or income in fraud of his wife's property rights in half of the community-partnership property and community income. The liberal equitable power of our courts in relation to fraud are an ever-present potential protection to the wife against an unfaithful or dishonest husband, who deals with the community-partnership property in violation of his trust or fiduciary obligation as master and managing partner of the community (appendix 9). The husband is merely the managing partner of the marital partnership, with full discretion and power of administration, but, as an agent and fiduciary, he must act in good faith in the handling of the wife's interest in the community partnership. If the husband wastes the community-partnership property in dissipation and debauchery for his own pleasure, it has been held in several community-property States which have no express statute on the subject similar to the Louisiana statute, that such conduct on his part is a disposition of the community property in fraud of his wife's rights. The husband, in common-law States, since he is the owner of all property acquired by him during marriage, can give it away to anyone he pleases and whenever he sees fit. Moreover, he can use it for gambling, waste it in dissipation, or dispose of it in any other way he chooses, and it is no fraud against the wife, and the wife has no right to complain, because, in common-law States, the husband is the exclusive owner of all of the property and the wife has no interest in it (appendix 10).

(*b*) Unlike the common law, and because of the community-partnership law, if the husband in Louisiana, even in the absence of fraud on his part, is wasteful, reckless, incapable or incompetent, or if he is a careless administrator and is mismanaging the community-partnership property, or if his affairs are in such disorder as to jeopardize the wife's property rights, or, a fortiori, if he is fraudulently disposing of community property, the wife can immediately demand and obtain a separation of property, which carries with it the dissolution and liquidation of the community partnership. The wife, under such circumstances, receives immediate possession and control of her half of the community property existing at the date of the separation of property, and takes over the immediate control and administration of her half of the community property and removes the husband thereafter as managing partner of the community property. Each spouse thereafter manages his or her property, and all property thereafter acquired belongs, as separate property, to the spouse acquiring it. While the wife sues for separation of property, she may, as a matter of protection, immediately obtain an injunction restraining the husband from further activity as manager of the community property (appendix 11). This right of the wife in Louisiana is similar to the right of a partner in an ordinary commercial partnership to provoke a liquidation or dissolution of the partnership in case of mismanagement or fraud. Furthermore, this right of the wife in Louisiana has nothing to do with and is distinct from her right to a divorce, and can be asserted by her while she and her husband are living together as man and wife. This right of the wife to force a dissolution and liquidation of the community, in case the husband is incompetent or guilty of mismanagement, or fraud, or if his affairs are in disorder, is a serious limitation and check on the husband's authority as manager of the marital partnership, and is a substantial safeguard established for the benefit and protection of her property right.

This very practical remedy given by the Louisiana law to the wife is consistent only with the theory that the husband is only an administrator or managing partner, and that the wife has a real and substantial ownership in half of the community property administered by the husband, which the Louisiana courts will protect. In common-law States the wife, of course, has no such right, because there is no community partnership between husbands and wives created and established by State law. The husband, in common-law States, is the owner of all property acquired by him during marriage, and it is immaterial whether he is incompetent or incapable, and he can spend it in dissipation or debauchery, gamble with it, or mismanage it, as he chooses, and the wife, because she has no ownership or interest in her husband's property, has no legal right to complain (appendix 11).

(*c*) That the husband is only the managing partner of the community partnership and cannot enjoy or use the property for himself is further demonstrated by his inability to use community partnership income or property without accountability to his wife. Thus, if he uses any part of the community partnership income for the benefit of his separate estate, he becomes a debtor to the community partnership to the extent to which his separate estate has been enhanced in value. If he pays his separate debts out of the community funds, his separate funds must reimburse the community for the amount so paid. In common-law States, where there is no community partnership between husbands and wives all property and income acquired by the husband during marriage belongs exclusively to him, and all property and income acquired by the wife during marriage belongs to her, and the husband can use and spend his property and income to pay his personal and separate debts, or in any other way he pleases, and his wife has no legal right to complain because she has no interest or ownership in the property and income acquired by her husband during marriage (Appendix 12).

(*d*) The wife, in the event that she does go into business for herself, is still a partner in the community estate and if she acts unwisely and contracts debts, these debts operate against the entire community estate and against the husband individually, since he is the head and master of the community. This situation is true even though the husband has nothing whatever to do with the business which the wife has undertaken and even though he objects to the debts being contracted. (See appendix 13.)

(*e*) The husband in Louisiana can, by his will, dispose only of his half of the community property, and is powerless to affect the wife's half. The converse of the husband's lack of testamentary power over the wife's half of the community income is illustrated by the completeness of the wife's power of disposition of her half. The wife can will her half of the community property to anyone she chooses, even to a lover, and when she dies, the husband must, by agreement or judicial partition, sell the community property, and liquidate any and all business ventures in order to deliver the value of half of the marital partnership property to the legatee or legatees of the wife. It is only because one-half of the community partnership property belongs to the wife that the law gives her the right of testamentary disposition of half of the community partnership property and income. At common law, because the husband owns all property and income acquired by him after marriage, he has the free and unrestricted power of testamentary disposition of the whole of this property, and his wife cannot dispose of any of his property by will. Likewise, since the wife is the exclusive owner of all property acquired by her during marriage, she can dispose of all of it by will, and the husband cannot dispose of any part thereof. This is because there is no community partnership in common-law States and the wife has not a half interest in any part of the husband's property acquired during marriage, and the husband has not a half interest in any part of the wife's property acquired during marriage (appendix 14).

(*f*) If the wife in Louisiana dies without having made a will, her half of the community partnership property and income descends to her heirs, and her husband is powerless to prevent it. It has been held in Louisiana, that even the illegitimate children of the wife, born before her marriage and not the children of her husband, were entitled, on her death, to inherit her share of the community estate, to the exclusion of the surviving husband (appendix 15). If the wife in Louisiana dies, her heirs or legatees pay both State and Federal inheritance taxes on her half of the community partnership property and income, and if the husband happens to be the legatee or heir of his wife, he is required

to pay both a State and Federal inheritance tax. Thus, under the law of Louisiana, if a man has the misfortune to lose his wife, he must pay to the United States and the State of Louisiana a heavy inheritance tax for the privilege of inheriting from her one-half of the property which in a common-law State would be considered entirely his. In this connection, it should be noted that the Treasury Department recognizes the community partnership and the wife's half ownership in the community property and income for the purpose of levying an inheritance tax on the husband or the heirs of the wife, or the theory that they receive the wife's property and income, and yet, if the present bill is adopted, the Government will compel the husband to pay an income tax on the same property and income, evidently on the theory that it should be treated as his property. We submit that this is in effect "blowing hot and cold" at the same time (appendix 16).

The rules we have stated are unknown to the common law. At common law, all of the property acquired by the husband during marriage belongs to him alone, and, accordingly, upon his death, descends to his heirs, and his heirs must pay both State and Federal inheritance taxes; and, conversely, all the property acquired by the wife during marriage belongs to her alone, and, upon her death, descends to her heirs, and her heirs must pay both State and Federal inheritance taxes.

(*g*) The community partnership in Louisiana is dissolved and the husband is automatically removed as managing partner in case a divorce is obtained by either husband or wife, and as a result the community partnership property is immediately liquidated and the community property and accrued income divided equally between the husband and wife. This is true irrespective of the merits of the marital disagreement, and even though the wife alone is guilty and wholly to blame for the situation bringing about the divorce and the resulting dissolution and liquidation of the community partnership (appendix 17). The right of the wife in this connection is independent of any question of alimony, which is governed and regulated by separate statutes. The wife's right, in the event of divorce, to remove the husband as manager of the community partnership and immediately receive one-half of the community partnership property and income results from the fact that in Louisiana she is the owner of one-half of the community partnership property and income. As a consequence, therefore, if a wife in Louisiana is guilty of adultery and runs away with her lover, she can leave instructions with her attorney, in connection with the divorce proceedings, to require an immediate dissolution and liquidation of the community partnership, and she can force the husband to account for and deliver to her immediately one-half of the community partnership property and income, which she can then spend, if she pleases, in luxury with her lover. In a common-law State, a wife leaving her husband under such guilty circumstances could be divorced by her husband, and would not even be entitled to alimony, much less to an equal division of property. The simple reason for this result, as we have said before, is because in common-law States the husband is the exclusive owner of all the property acquired by him during marriage, and the wife has not the slightest interest or ownership in his property.

SUMMARY

In the light of the many illustrations of the practical and substantial nature of the wife's ownership and the restrictions on the husband as agent or managing partner of the community partnership we have briefly outlined, we submit that the proposed bill is grossly unjust and discriminatory. The pending community property bill, in substance, proposes to tax the husband on income which belongs to his wife, by treating the income as if it were his, when, as a matter of fact, he cannot give it away if he chooses; when he cannot dispose of it in fraud of his wife's property rights, if he pleases; when, if he is reckless, careless, or a bad manager, he loses the administration of it; when, if he is of a speculative disposition, or the disorder of his affairs is such as to jeopardize his wife's property rights, he loses the administration of it; when he loses the administration of it in case of a divorce and even without any fault on his part, if his wife is unfaithful to her marital obligations; when he cannot spend it to improve his separate property, if he wants to; when he cannot use it to pay his separate debts, if he pleases; when he has no right or power to have it descend to his heirs; when, if his wife dies, he loses the administration of it and must deliver it to his wife's heirs;

and when, if it is willed to him by his wife, he takes it not as owner, but by inheritance, and is compelled to pay both a State inheritance tax and a Federal estate tax for the privilege of receiving it.

None of these restrictions and limitations on the power of the husband with regard to property and income acquired during marriage exists in common law States, where the husband is the owner of all of the property and income acquired during marriage; and, conversely, the restrictions and limitations we have outlined exist in Louisiana, because the wife is the owner of one-half of the property and income acquired during marriage by the marital partnership composed of both husband and wife.

We have emphasized the fundamental and practical features of the Louisiana community-partnership law, in order to show clearly that the community partnership between husband and wife in Louisiana and other community-property States is not a fiction, but is, in substance, a partnership imposed by law, which creates burdens and limitations as well as privileges in relation to the property rights of husbands and wives. These burdens and limitations on property rights are unknown in the common-law States, and, we submit, if it were true that any benefits flowed from the community-partnership law, they are more than counterbalanced by the multitude of burdens and restrictions placed upon the property rights of husbands and wives in Louisiana, which do not exist in any common-law State. The proposed bill is unjust and discriminatory in its practical effect, and violates sound principles of uniformity in Federal taxation.

PRACTICAL INSTANCES OF DISCRIMINATION AND UNFAIRNESS, WHICH WILL RESULT FROM THE PASSAGE OF THE PROPOSED BILL

The Supreme Court of Louisiana has held that under the Louisiana community-partnership law, the earnings of the wife from a business, trade, occupation, or industry carried on separate from her husband, as well as the earnings of the husband, become community-partnership property under the management and control of the husband, and each spouse has an undivided and equal half ownership in the combined earnings (appendix 18). Since a wife's earnings, as pointed out above, are community-partnership property under the Louisiana law, if the proposed Treadway bill is adopted by Congress a husband in Louisiana would be compelled to pay a Federal income tax not only on his own earnings and income, but also on the combined earnings of his wife, which, under the Louisiana law, constitute community-partnership property and which neither in law nor fact belong as a whole to the husband. The effect of the adoption of the proposed Treadway bill would be to tax one person (the husband) on the property partly owned and entirely earned by another (the wife) which would not only be unjust and grossly discriminatory but unconstitutional.

Moreover an attempt to force the husband and wife in Louisiana, who, under our local law, are in substance partners, to report all of the community-partnership income in the name of the husband alone, when, as a matter of law and fact the husband owns only one-half of the community income, and is merely the managing partner of his wife's other half, will not produce uniformity, but, on the contrary, will unfairly discriminate against Louisiana and other community-property States, and will ignore the fundamental law of our State by treating what in Louisiana is in substance a partnership created by law, differently from voluntary partnerships in every common-law State.

Furthermore, in addition to the discrimination resulting from voluntary partnerships, it is important to note that as a matter of fact there are a number of common-law States that permit husbands and wives to form partnerships voluntarily and, in these States, husbands and wives may make voluntary partnership agreements which may accomplish the same result, by contract, that the law accomplishes in Louisiana. Where such a partnership agreement has been entered into between husband and wife in these common-law States, the Commissioner of Internal Revenue has recognized that each spouse may return his or her distributive share of the partnership income, and is liable only for the tax upon such share. Numerous cases, both in the Federal court and before the Board of Tax Appeals, recognize that under the common-law system separate returns by husband and wife, effecting a division of income, may easily be arranged by any one of a number of legal transactions which have been sanctioned by the law. For example, an informal joint venture or partnership for

the purpose of trading on the stock exchange has been recognized as legally authorizing husband and wife to return one-half of the profits each (appendix 19). Likewise an oral agreement that a partnership should exist in a lumber business between husband and wife, although the wife takes no active part in the business, will authorize separate returns and, in the same case, a donation of a farm by the husband, which the husband subsequently rented from the wife, was authorized and the wife was permitted to return the profits from the farm (appendix 20). A simple declaration by the husband that he is purchasing certain property and that the ownership is to be divided equally between him and his wife authorizes the wife to return one-half of the profit resulting from a subsequent sale on her separate income tax (appendix 21). There are numerous other cases illustrating the same principle and rulings (appendix 22). As shown by the rulings set out in the Income Tax Service of the Commerce Clearing House, section 1169, the Government has recognized and permitted separate returns as a result of a partnership entered into between husband and wife in 22 common-law States and in the District of Columbia.

It is to be noted that none of the transactions above referred to, which have been held legal in common-law States, is permissible under the Louisiana law. The husband and wife in Louisiana cannot make contracts with each other or enter into partnership agreements (appendix 23). It is thus apparent that while the common-law States, by a variety of legal transactions between husband and wife which have already been approved by the Government, permit the making of separate returns by husbands and wives and the shifting of property in various ways to authorize a rearrangement of income between husband and wife, none of these accepted legal methods in common-law States is possible under Louisiana law.

Moreover, the voluntary partnership arrangements between husbands and wives in the common-law States, permitting and authorizing husbands and wives to make separate income-tax returns referred to above, will not be affected or changed by the proposed Treadway bill because the Treadway bill only applies to so-called community-property States and is, therefore, intended to and actually does affect only eight community States. The adoption of the proposed Treadway bill, therefore, would result in permitting husbands and wives who are voluntary partners in other States to divide income, and would, in eight States of the Union, where a partnership between husband and wife is created by law and called a community partnership, prevent the division of income between the partners, and the making of separate returns by the partners.

On the other hand, if the husband in community-property States is analogized to a trustee at common law insofar as he manages one-half of the community-partnership property and income for his wife, surely it cannot be contended that one in the position of a trustee for another person can or should be forced to add the income derived from property administered for the benefit of the beneficiary to his individual property and income for Federal income-tax purposes. Yet, this is in substance what the pending community-property bill proposes to do, by forcing a Louisiana community husband to add the community partnership income to his personal income for taxation purposes.

It is respectfully submitted that if the inhabitants of common-law States should be of the opinion that it is to their interest to place the burdens and limitations on the husband's earningsc and accumulations during marriage and confer upon the wife a substantial property right in the earnings and accumulations of the husband during marriage, which the law of Louisiana confers upon her, there is nothing to prevent them from changing their laws accordingly, and from accepting this advanced view of women's rights by adopting the community-partnership system. By establishing a community-partnership system which has prevailed in eight States long before the income-tax amendment was adopted, common-law States may obtain any advantages, if such there are, that flow from the law and facts in community-partnership States. It is evident that the community-partnership system is so substantial in its nature with reference to property rights that common-law States, up to this time, have considered it objectionable in this regard and not desirable to adopt on any theory of Federal income-tax benefit.

With reference to the argument as to the necessity for bringing about harmony in the Federal taxation law, this is impossible on account of the fact that the Federal tax must be based on the person's income, and what is property and income of an individual, corporation, or partnership is necessarily a matter depending on the constitutions and laws of the various States of the Union. We

have already pointed out that in many common-law States husbands and wives may make voluntary partnership agreements and obtain the same benefits which result from a community-property partnership established by law. More than this, in all common-law States a husband may make a gift of half of his property to his wife, and thereafter the income from the property thus donated may be returned as the separate property of the wife (appendix 24). This is done as a matter of practice and has never been questioned. The laws of Louisiana and other community States make the wife the owner of one-half of the income and property acquired during marriage and yet the Federal Government, by the proposed amendment, is attempting to ignore this fundamental law of the State for taxation purposes. The result will be, in case the proposed bill is adopted, that simply because the property becomes joint property as a result of the positive law of Louisiana and other community-property States, a different rule will be applied in community States than is applied in other States where the same situation is brought about voluntarily.

In Louisiana a gift by a husband to his wife during marriage is as a matter of law revocable during the marriage, and in view of the provisions of the Revenue Act taxing income from revocable trusts to the grantor, the Treasury Department may contend that the income from property donated by a husband to his wife should remain taxable to the husband. In common-law States no such contention can be made and the income from donated property is clearly taxable to the wife only. Thus the Louisiana law may prevent the husband from making an effective division with his wife by donation to her. This is not important so long as the present Treasury regulations stand, recognizing the right of the husband and wife in Louisiana each to return his or her half of the community-partnership income, but it affords another reason why, so long as spouses in noncommunity States can make an effective division of property by donation from one spouse to another with a resulting division of income for income-tax purposes which spouses in Louisiana may not be able to accomplish, Congress should not undertake by passage of the pending bill to ignore the division which the fundamental law of Louisiana automatically accomplishes between the spouses (appendix 25).

It is important to note, in connection with an explanation and statement of the practical effect of the wife's half-interest in community-partnership property in Louisiana and other community-property States, that a common-law State will recognize the ownership and legal title of the wife in one-half of the community-partnership property acquired while the spouses are domiciled in Louisiana, when the spouses leave Louisiana and community-partnership property is removed by the spouses from Louisiana to other States. It is a generally recognized proposition of conflict of laws that the title and status of property is to be determined by the law of the jurisdiction under which the property was acquired, and in case of the removal of the property to another State, the State to which the property is removed will assume and recognize the law of the jurisdiction from which the property was removed, in order to determine the ownership of the property. Thus, if a husband and wife domiciled in Louisiana accumulate $1,000,000, this is community property, and under the amendment disregarding the Louisiana law for Federal tax purposes, the husband is compelled to report as his income the wife's one-half of the income of this property. If the husband and wife, however, sell their Louisiana property and move to New York or some other common-law State and invest the proceeds of the property in the latter State, the common-law States, under the law and decisions of the courts, recognize the vested interest of the wife created by the law of Louisiana, where the property was acquired, and the $1,000,000 invested in New York is, therefore, recognized by the courts of New York as belonging one-half to the husband and one-half to the wife. This is true, even though the property technically may stand in the name of the husband in the common-law State, for under such circumstances the husband is considered trustee for $500,000 of the property for the benefit of the wife. In New York, therefore, or in any common-law State, when the property taken from the community State is reinvested, one-half immediately becomes the property of the husband and the other half the separate property of the wife, and the husband and wife may make separate returns for Federal income-tax purposes (appendix 26).

It is clear, in the light of these facts, that if the proposed bill is passed, the result of the situation will be that a husband and wife who sell their community property in Louisiana and reinvest it in common-law States where the same property will be considered separate property, will be able to make separate

returns in the common-law States, whereas if they had remained in Louisiana they could not make separate returns. The proposed bill, in attempting to emasculate the law of Louisiana and other community-property States, and applying, as it does, only to community-property States, would result in discrimination against community-property States, and would not be legally applicable when the husband and wife removed their property to another State.

We have the amusing and illogical situation of Congress attempting to fix property rights in eight States for taxation purposes in the very teeth of the law of the eight States involved, when, if the same property is removed to the other States of the Union, these latter States recognize the law of Louisiana and the property rights of the spouses, and Congress following the law of the common-law States, taxes the former community husband and wife on the very basis that they should have been taxed on if the pending community-property bill had not been adopted. In short, Congress would recognize for income-tax purposes the law of common-law States which recognize the law of Louisiana, but when dealing directly with Louisiana citizens the Louisiana property law would be disregarded.

Another gross discrimination against and injustice to citizens of community-property States that would result from the passage of the pending bill is illustrated by the fact that earnings and profits of both the wife and husband become community-partnership income and property in community-property States. In Louisiana, for example, the salary or wages of the wife, if she is employed, and the earnings of the wife if she is engaged in a business, occupation, or industry separate from her husband, become community-partnership income and property if she is living with her husband at the time they are acquired. Moreover, money and profits made by a wife in speculation wth money or property belonging to her separate estate become the income of and belong to the community partnership (appendix, 27). On the contrary, in a common-law State, the wife's earnings and profits during marriage would be her separate income and property. The husband in common-law States has no interest or ownereship whatever in her earnings or profits and she can make them the subject of a separate return upon which she pays a tax based only upon their amount, and the common-law husband in his tax return can omit all such earnings and profits of his wife. If the present bill is adopted, the husband in Louisiana and other community-property States would have to pay on all the wife's earnings and profits as well as on all his own, and in addition upon dividends, rents, and interest upon his wife's separate property under his administration. The accumulation of all of this income in a single return as required by the present bill would, of course, greatly increase the tax rates and the resulting tax in community-property States would be much greater than in a common-law State where the wife could make a separate return of her own earnings. In short, husbands and wives in community-property States would be required to pay much larger taxes than husbands and wives in common-law States on the same character of income. This is only another illustration of the inequity and unfairness resulting from any attempt on the part of the Government to disregard the local State laws with reference to the ownership of income and property. Unless the Government is prepared to go to the full extent of requiring husbands and wives in every State, common law as well as community, to combine all their income in one return, there can be no justification for requiring such a result in community States alone.

We might give numerous illustrations, showing that by contract the ownership of property may be and is frequently changed in the various common-law States, resulting in a different application of the Federal income-tax law. This condition of affairs is inherent and fundamental under our State and Federal Constitutions, and ownership and property rights, as fixed by the various State laws must, in the nature of things, be followed by the Federal Government in applying its laws. It is submitted that the principles we have outlined are elementary under our constitutional system. In Louisiana, the community-partnership law is imposed by statute, and does not result from contract, and, of course, was not adopted to bring about any income-tax benefits, because the community-partnership law was in existence many years before the adoption of the first income-tax law. In fact, the community-partnership law has been a part of the civil law of Louisiana ever since colonial days. Louisiana inherited the community-partnership law from France, which in turn borrowed it from Spain, where it had prevailed since the seventh century (appendix, 2, 3, 5, 6, and 7).

UNIFORMITY AMONG ALL STATES COULD FAIRLY BE OBTAINED BY FEDERAL LEGISLATION ONLY BY REQUIRING INCOME OF HUSBAND AND WIFE IN EVERY STATE TO BE COMBINED IN FEDERAL INCOME TAX RETURNS

It is apparent, since the law of each State must determine questions of ownership, that it is not possible to obtain identical practical results from the operation of the Federal revenue laws in each of the 48 States of the Union, unless Congress wishes to do violence to the dual character of our Government and the historic and settled principle that the Federal Government will recognize property and the ownership of property as defined and created by local State laws in the various States. It has been suggested that uniformity is desirable. It is obvious that uniformity cannot be obtained by having Congress, in the form of a discriminatory legislative act, disregard the fundamental laws of 8 States of the Union, and, at the same time, recognize the local law of all of the other States of the Union as a guide and basis for the application of the Federal income-tax law. If the Government desires to tax the separate income of both husband and wife as a whole and as a unit in one return, it is not fair to attempt to bring about this result by legislative fiat in only 8 States of the Union. If identical uniformity is desired, Congress should tax husbands and wives as a unit in all the States of the Union, and compel a single return in which must be included the income of both husband and wife in all States. Insofar as husbands and wives are concerned, such a law would be perfectly uniform in its application in every State of the Union. In fact, we understand that this is the method of solving the problem suggested and recommended by Secretary Morgenthau of the Treasury Department. (See statement of Secretary Morgenthau, issued December 15, 1933; appendix 28.) In referring to this method of solving the problem of uniformity, we do not intend to suggest that husbands and wives of common-law States would approve such a law even if it could be sustained under the Constitution. In fact, it might be contended with considerable force that by the adoption of such a bill husbands and wives would be discriminated against in favor of single persons.

The foregoing brief summary of the community partnership law and its practical operation make clear how futile and impossible it is for Congress to ignore property rights in an attempt to produce uniformity, and that instead of securing uniformity, the proposed bill, even if it could be adopted under the Constitution, will produce endless confusion and inequities. Moreover, we feel that we have demonstrated that the proposed bill (H. R. 8396) is discriminatory and if passed will result in gross unfairness to the taxpayers of eight States of the Union.

Respectfully submitted.

CHARLES E. DUNBAR, JR.,
SPENCER, GIDIERE, PHELPS & DUNBAR,
Attorneys for Louisiana Community Property Taxpayers Committee.

APPENDIX

The following decisions, statutes, and authorities are submitted in support of the statements of law contained in the foregoing brief:

(1) Vol. 61, Congressional Record, No. 146, for November 3, 1921; pp. 8037, 8038; Report of hearings before Committee on Ways and Means, House Reports, Revenue Division, 1924, pp. 104, 348, 375 to 482, inclusive.

(2) *Poe* v. *Seaborn* (Wash.), 75 Law Ed. 239–247, 282 U. S. 101–118; *Fred O. Goodell* v. *I. B. Koch* (Ariz.), 75 Law Ed. 247, 282 U. S. 118–122; *Jacob O. Bender* v. *Wm. Pfaff* (La.), 75 Law Ed. 252, 282 U. S. 127–132; *Geo. C. Hopkins* v. *G. W. Bacon* (Texas), 75 Law Ed. 249, 282 U. S. 122–127; *United States* v. *Malcolm* (Cal.), 75 Law Ed. 714, 282 U. S. 792; see also *Warburton* v. *White*, 176 U. S. 484; *Arnett* v. *Reade*, 220 U. S. 311.

(3) Opinions of Acting Attorney General Mitchel in 1927, and Opinions of Attorney General Daugherty in 1924; Attorney General Stone in 1924, and Attorney General Sargeant in 1926; see 32 Op. Att. Gen. 208, 435; 34 Ibid 376, 395; 35 Ibid. 89, 205. General Counsel Memorandum, 6351; 32 Op. Att. Gen. 435. T. D. 2090, 2137, Of. Dec. No. 426, reported at 2 C. B. 198. T. D. 3071, reported at 3 C. B. 221; and T. D. 3138. See also appendix (1), *supra*.
