Senate Committee on Finance Questions for the Record

Drug Pricing in America: A Prescription for Change, Part II February 26, 2019

> Questions for: Olivier Brandicourt, M.D. Chief Executive Officer Sanofi

Senator Grassley: For all witnesses:

The Department of Health and Human Services' proposed rule, "Fraud and Abuse; Removal of Safe Harbor Protection for Rebates Involving Prescription Pharmaceuticals and Creation of New Safe Harbor Protection for Certain Point-of-Sale Reductions in Price on Prescription Pharmaceuticals and Certain Pharmacy Benefit Manager Service Fees", envisions that drug manufacturers will offer upfront discounts rather than the back-end rebates that are now commonly provided. Some observers argue that a 1996 court case called into question whether manufacturers could offer upfront discounts, resulting in today's rebate-based system. I've heard differing opinions as to whether the issues related to the initial court case are still relevant. If the HHS proposed rule is finalized, can you assure the Committee that your company will offer upfront discounts? If not, why?

As the question notes, one of the practical implications of the Proposed Rule is to incentivize a shift from back-end rebate payments to upfront discounts that are passed through at the point-of-service to the patient (at least in part). We understand that some in the health care industry have raised concerns that the nation's antitrust laws, specifically the Robinson-Patman Act, and long-running antitrust litigation involving drug manufacturers, wholesalers, and pharmacies could prevent or reduce discounting under a pricing structure without rebates. But, the Robinson-Patman Act focuses on price discrimination -- involving any dimension of price -and it does not distinguish between upfront discounts and rebates. In addition, the referenced litigation, In re Brand Name Prescription Drugs Antitrust Litigation, did not result in any change in the ability of a prescription drug manufacturer to offer an upfront discount. Consequently, because Sanofi's view is that the antitrust laws apply equally to upfront discounts and back-end rebates, we do not believe that they present any impediment to offering upfront discounts to patients at the point of sale. Sanofi is committed to working with other stakeholders to lower patient out-of-pocket costs, and the company will carefully review any final rule issued by HHS regarding the Anti-Kickback Statute and its safe harbor regulations -- with the goal of providing point-of-sale discounts to patients in a compliant manner to help lower patient out-of-pocket costs.

Please describe how you expect your company to respond to the HHS proposed rule to eliminate safe harbor protection for back-end rebates in Medicare Part D that is referenced above if it is finalized. Assuming you are confident that antitrust laws do not prevent your company from offering upfront discounts, specifically, do you envision that your company lowers the list price of a drug to the current after-rebate net price, offer discounts equal to the current rebate amount, or a combination of both?

Sanofi is committed to working with other stakeholders to lower patient out-of-pocket costs, and the company will carefully review any final rule issued by HHS regarding the Anti-Kickback Statute and its safe harbor regulations -- with the goal of providing point-of-sale discounts to patients in a compliant manner to help lower patient out-of-pocket costs.

With respect to list price, if (1) the proposed changes to the anti-kickback statute safe harbors were codified, and (2) Congress implemented similar changes to the commercial insurance market, Sanofi would lower the list prices of its prescription medications for products in competitive categories for which there is currently a material difference between list price and net price on the assumption that patient access and affordability would be improved. Sanofi also supports policy changes that would de-link other payments in the pharmaceutical supply chain from list price.

We support extending the intent behind the anti-kickback statute safe harbor proposed rule to the commercial market so that incentives are aligned across the marketplace. Together, we believe these changes would facilitate Sanofi's ability to lower our list prices. However, we recommend a step-wise approach, implementing changes to the commercial market after the safe harbor rule is implemented on January 1, 2020. Such an approach would provide an opportunity for stakeholders and the government to identify unintended consequences, and address them, prior to extending these policies to the commercial market.

We want to ensure that the new system achieves its goal of improving affordability for patients. For instance, CMS should monitor and evaluate how the new system affects formulary access, utilization management, and patient cost-sharing, particularly with respect to medicines with a lower list price. We also have concerns that changes to the rebate system may lead to new fees, which simply require manufacturers to pay previous rebate values in new ways, rather than creating savings for patients.

Without a better understanding of how these policy changes ultimately would affect the competitive marketplace, patient access, and affordability, we are unable to quantify the amount of upfront discounts or any potential list price reduction.

To what extent are the back-end rebates your company currently offers contingent on the amount of market share realized for your drugs as a result of Part D plan formulary placement and other techniques?

Sanofi negotiates rebates with PBMs and Part D plans to secure better formulary position for our products, which in turn provides the best possible access and cost sharing for the majority of

Medicare Part D beneficiaries. When evaluating what level of rebates to offer, Sanofi considers the potential business impact of such arrangements.

Please provide a breakdown of percentage of sales that go to each payer (including Medicare, Medicaid, private pay, other) and a similar percentage by volume of the total number of each drug compared to total volume. Please provide this data for the most recent year available.

Do your companies hire consultants or lobbyists to promote products at state Medicaid Pharmacy & Therapeutics Committees? To whom do you disclose advocacy activities surrounding state Medicaid programs, if at all?

Sanofi does not hire external consultants or lobbyists to advocate for coverage of our products at state Medicaid Pharmacy & Therapeutics Committees. Sanofi employees do attend state Medicaid Pharmacy & Therapeutics Committees meetings. Relevant advocacy activities to support Medicaid access and coverage of our medicines, if any, are disclosed to states in accordance with individual state laws.

1. Please describe how the costs of patient assistance programs are accounted for within your company's financial statements. Please also describe the types of

4

⁴ The data used to derive this information is contracted sales data. Because many of these products are purchased through non-contracted sales, Sanofi has a limited view regarding through which channels these products are purchased. Percentage by volume by channel results in similar percentages to percentage by sales so a separate chart is not provided.

market information, such as prescribing and use patterns, that your company collects from different types of patient assistance programs and patient hub services.

Within Sanofi's financial statements, Sanofi includes the administrative costs of the company's co-pay assistance programs, other point-of-sale programs, and free drug patient assistance program (Sanofi Patient Connection) in the "Selling and general expenses" line item. For co-pay assistance and other point-of-sale programs, Sanofi records the pharmacy reimbursement amount paid by the company as a reduction in sales. Sanofi records free product provided through Sanofi Patient Connection within "Cost of Sales." Sanofi Care North America, the 501(c)(3) operating foundation that donates free product to Sanofi Patient Connect, records the free goods as a "Contribution" when received from Sanofi and as a "Donation" when donated to Sanofi Patient Connection.

With regard to market information associated with its patient assistance programs and hub services, Sanofi generally collects data that aids in the efficient administration and operation of these programs. For example, the vendors operating Sanofi Patient Connection and the hubs collect information provided by patients on enrollment forms, including patient and provider demographic information, patient insurance information, patient diagnosis, and prescription information necessary to evaluate patient program eligibility and/or administer the program. (Sanofi does not itself receive patient protected health information except in very limited circumstances, such as when a patient reaches out to Sanofi directly when they do not agree with their patient assistance eligibility determination or when Sanofi monitors vendor calls for compliance with company policies and procedures.) With respect to Sanofi Patient Connection, Sanofi does not use this information for purposes other than administering the patient assistance program. With respect to hub services, in addition to using this information to administer hub programs, Sanofi may use this data to develop market and business insights.

With respect to Sanofi's point-of-sale patient assistance programs, Sanofi also receives anonymized program utilization data, including information about patient out-of-pocket costs, the average amounts that Sanofi reimburses pharmacies through the program, abandonment rates, dispensing pharmacies, and the prescribers writing the prescriptions associated with program utilization. This information is used to administer the program. Sanofi may also use this data to develop market and business insights.

2. Please provide a list of all contributions since January 1, 2014, that your company has made to any tax exempt organizations working on issues related to drugs within your product lines, including but not limited to patient groups, disease awareness groups, medical or professional societies, universities or hospitals, industry associations or leagues. For each contribution, please provide the name of the organization that received the donation, the date the donation was made, the amount of the donation, and a description of the purpose of the contribution (i.e., was the contribution for the general fund, a specific purpose to a specific program, or continuing medical education). Please also note whether the contribution was unrestricted or restricted; if it was restricted, please explain all restrictions. Finally,

if your company maintains a foundation or other separate charitable arm, please provide the name of all such entities, and list all donations made from that entity or entities.

In the attached documents, we have provided information for the period January 1, 2015 through December 31, 2018 regarding payments made by Sanofi US to tax exempt organizations. The information is provided in a number of documents consistent with how Sanofi maintains this information. In some cases, this information may be over-inclusive and include non-tax exempt organizations (e.g., contributions for independent medical education into both non-profit and other entities). The information includes contributions and sponsorships to various tax-exempt healthcare-oriented organizations, including patient groups. The information also includes contributions made for independent medical education grants, and to teaching hospitals for investigator-sponsored trials and for physician fellowship payments. On March 8, 2018, Sanofi acquired Bioverativ, Inc., a biopharmaceutical company focused on therapies for hemophilia and other rare blood disorders. The attached documents also describe the monetary contributions to tax exempt organizations made by Bioverativ since March 8, 2018.

With respect to any foundations or charitable arms of Sanofi, from January 1, 2014 through the end of 2017, Sanofi maintained an entity called Sanofi Foundation of North America, a 501(c)(3) nonprofit operating foundation that was closed at the end of 2017. Donations made from that entity are included in the attachments described above. Currently, Sanofi maintains an entity called Sanofi Cares North America, which is a 501(c)(3) nonprofit operating foundation that makes donations of Sanofi products free of charge to eligible financially-needy uninsured and underinsured patients through a program known as the Sanofi Patient Connection. Sanofi Cares North America also donates product to five non-governmental organization partners for the purpose of emergency disaster relief – Americares, DirectRelief, Heart to Heart International, MAP International, and Project Hope, and to approximately one hundred summer camps with 501(c)(3) status for children with diabetes.

Pay for delay agreements cost consumers and taxpayers billions in higher drug costs every year. The FTC has gone after drug companies that enter into these settlements where the brand pays the generic company to keep its lower cost alternative off the market. I'm the lead republican sponsor of S. 64, the "Preserve Access to Affordable Generics and Biosimilars Act," which would help put an end to these deals.

• Do you agree that these pay-off agreements keep drug costs high for patients because they delay competition?

information prior to 2015 is archived in databases and systems that Sanofi does not currently maintain and which are not easily accessible. The information available does not distinguish between restricted and unrestricted grants.

6

⁵ These contributions may not relate to particular drug products. Sanofi US supports programs and initiatives of external, independent, not-for-profit organizations that align with Sanofi US's corporate vision and values. These organizations are generally healthcare-oriented and focus on one or more therapeutic areas in which Sanofi US is actively involved. The attached information focuses on Sanofi US entities that manufacture and sell drug products and does not include entities that manufacturer and sell consumer health products or vaccines. Contribution

With respect to patent litigation, Sanofi believes it is inappropriate to presume that any settlement of patent litigations related to pharmaceutical products is anticompetitive. Patent settlements are often the most efficient and effective way to resolve disputes regarding patented drugs, and they often lead to the earliest appropriate entry of generic products into the market, which benefits patients. In fact, settlements permit entry of a generic alternative into the market earlier than expiration of the relevant branded product's patent. Each patent litigation and potential settlement presents unique factors and must be considered individually and in light of the relevant circumstances.

• Has your company ever entered into these kinds of settlements with a generic company?

No, Sanofi does not enter into "pay for delay" or "reverse payment" agreements that prohibit generic drug or biosimilar development after the expiration of a patent. Sanofi has reached settlements in patent infringement cases, and these agreements have allowed the generic company to commercialize its product before the expiration of the branded product's patent(s).

• Do you support the pay for delay bill?

We support the intent behind this legislation to promote competition, including prohibitions on "reverse payment" agreements. However, we have significant concerns with the way that this bill is drafted, and therefore we do not support this particular legislation.

We believe that it is inappropriate to make settlements of patent litigations presumptively illegal or to classify such settlements as anticompetitive. Such settlements can be the most efficient and effective way to resolve legitimate disputes regarding patented drugs, and they often lead to the earliest appropriate entry of generic products into the market, which in turn benefits patients. As stated above, each patent litigation and potential settlement presents unique factors and must be considered individually and in light of the relevant circumstances.

Additionally, we have concerns that this bill could apply retroactively to agreements entered into after June 17, 2013. For clarity and certainty in the marketplace, any new legislation governing the settlement of patent litigation should apply prospectively only.

Rebate Traps/Walls

I'm increasingly concerned about the effect of so-called "rebate traps" or "rebate walls" on patients' access to quality, lower cost medicine. I understand there is ongoing litigation challenging these practices as anti-competitive.

1. Does your company engage in the bundling of rebates over multiple products? If so, why? And what benefit does the consumer gain from that?

Sanofi offers discounts in bundled sales arrangements only in limited circumstances. For example, Sanofi may offer bundled discounts on its products Toujeo[®] and Lantus[®] to ensure that both products attain a formulary position that benefits patients. This is especially important because the products may serve patients with different medical needs.

2. Does your company view these practices as anticompetitive or harmful to patients' access to quality, lower cost medicine?

Sanofi prioritizes patient access to medications at a reasonable cost. Sanofi's arrangements with individual PBMs or insurers promote this goal by maintaining stability of supply at affordable prices. In competitive drug markets, Sanofi may enter into arrangements with particular PBMs or insurers that permit Sanofi to further reduce its prices on one or more medications in exchange for greater certainty regarding the amount of those medications it will sell over a specified term. These arrangements promote patient access to quality, affordable medications, are procompetitive, and comply with the antitrust laws.

Moreover, in competitive drug markets Sanofi's ability to ensure patient access to affordable medications is affected both by PBMs and insurers (who may have considerable negotiating leverage over manufacturers) and by other manufacturers (who may respond to competition from Sanofi in a variety of ways). While some manufacturers may respond by building "rebate walls" or "rebate traps" around their products, Sanofi shares the Committee's concern about practices that are harmful to patients' access to quality, affordable medication.

3. If a policy were adopted to eliminate rebates, or to require that rebate savings be passed on to the consumer, would that in and of itself solve the issue of rebate "traps" and "walls"? And would consumers benefit from such a policy?

The elimination of safe harbor protection for rebates would remove incentives for manufacturers to attempt to influence formulary placement through such discounts. It is also possible that competitive products would be launched at lower list prices and more readily incorporated into formularies on the basis of their clinical benefits in a world without rebates. This would benefit the system overall, including consumers.

Drug Pricing

a) When setting the list price of a drug, does your company consider regulatory costs or compliance? If so, how specifically do those factors affect the list price of a drug? Please provide at least one specific example, if applicable, from your current product portfolio.

The primary factors that Sanofi considers in setting list price include the value of the product, the competitive environment, patient affordability and access, investment in further product development or needs to reinvest in R&D more generally. In certain limited cases, Sanofi also will consider regulatory costs when setting the list price of a product. These factors may be considered, for example, where ongoing clinical trials are needed for a particular therapy or when the FDA mandates a Risk Evaluation and Mitigation Strategy ("REMS") for a product – such as with Sanofi's drug Lemtrada®. Sanofi does not, however, consider our routine and ongoing regulatory compliance efforts within the cost of our products. Rather, those efforts are considered part of Sanofi's operating costs.

b) When setting the list price of a drug, does your company consider the risk of liability or litigation? If so, how specifically do those factors affect the list price of a drug? Please provide at least one specific example, if applicable, from your current product portfolio.

When conducting its pricing analysis for a new drug, Sanofi does not specifically consider the risk of liability or litigation associated with such product.

Senator Roberts:

- 1. What role do you see Value Based Arrangements (VBAs) playing in the effort to reduce prescription drug costs? What potential do these arrangements have to find the "sweet spot" between controlling costs to patients and encouraging innovation of new drugs?
- 2. How can VBAs help lower what patients pay out-of-pocket?
- 3. Can Congress do more to allow for and encourage the use of VBAs?

This response covers the three VBA questions above.

Sanofi believes that encouraging an environment that is supportive of value-based arrangements would help promote drug affordability, increase patient access to medicines, and improve patient adherence and outcomes. Although there are different types of these agreements, value-based contracts generally tie prices and payments to the value of a particular prescription drug product – while potentially reducing patient out-of-pocket costs and providing patients with better access to the most innovative drug products. A manufacturer could, for example, condition payment for a product on its success in meeting a predefined clinical outcome, and this type of arrangement could make drugs more affordable and lower healthcare costs throughout the system.

Facilitating value-based arrangements also could encourage new drug innovation, control costs for such new products, and recognize the full value of complex and personalized treatments. Nevertheless, despite the promise of these arrangements, industry stakeholders — including manufacturers and payers — need better legal and regulatory clarity. For example, we support the creation of a safe harbor from Anti-Kickback Statute liability to protect value-based agreements. We also are supportive of any legislation that would facilitate value-based arrangements and protect them from legal enforcement, such as the Patient Affordability, Value, and Efficiency Act (PAVE Act).

Senator Cornyn:

For all witnesses:

We continue to hear that rebates negotiated off of the list price of a drug are both good and bad.

Pharmacy benefit managers and plans have argued that rebates are used to lower premiums across the board and that it is the best way to seek a price concession on otherwise expensive drugs.

Your industry argues that these payers are insisting on higher rebates that can only be achieved by raising list prices.

But patients often lose under this system, with out of pocket costs being tied to list price. Insulin patients appear to be routinely impacted by this perversity in the system.

- Please explain to the committee how your company would reduce list prices if rebates were no longer a part of the equation?
- What assurance can you provide that you would in fact lower your prices?
- What actions should be taken to ensure that patients are actually seeing the benefits of lower out of pocket costs?

If (1) the proposed changes to the anti-kickback statute safe harbors were codified, and (2) Congress implemented similar changes to the commercial insurance market, Sanofi would lower the list prices of its prescription medications for products in competitive categories for which there is currently a material difference between list price and net price on the assumption that patient access and affordability would be improved. Sanofi also supports policy changes that would de-link other payments in the pharmaceutical supply chain from list price.

We support extending the intent behind the anti-kickback statute safe harbor proposed rule to the commercial market so that incentives are aligned across the marketplace. Together, we believe these changes would facilitate Sanofi's ability to lower its list prices. However, we recommend a step-wise approach, implementing changes to the commercial market after the safe harbor rule is implemented on January 1, 2020. Such an approach would provide an opportunity for stakeholders and the government to identify unintended consequences, and address them, prior to extending these policies to the commercial market.

We want to ensure that the new system achieves its goal of improving affordability for patients. For instance, CMS should monitor and evaluate how the new system affects formulary access, utilization management, and patient cost-sharing, particularly with respect to medicines with a lower list price. We also have concerns that changes to the rebate system may lead to new fees, which simply require manufacturers to pay previous rebate values in new ways, rather than creating savings for patients.

Without a better understanding of how these policy changes ultimately would affect the competitive marketplace, patient access, and affordability, we are unable to quantify the amount of any potential list price reduction.

With respect to actions that should be taken to ensure patients are seeing the benefit of lower out-of-costs, we support legislation that would incentivize manufacturers to lower list prices by connecting better patient access and affordability to such pricing actions.

If rebates are driving high list prices for drugs as drug manufacturers' claim, why do you think that Part B drugs, which have no PBM rebates, are also seeing significant price increases? Whose fault is that?

Sanofi considers a variety of factors when setting or raising its list prices. These factors include the value of the product, the competitive environment, patient affordability and access, investment in further product development or needs to reinvest in R&D more generally. Within this framework, any list price increase is made consistent with our pricing principles, including our commitment to limit the total annual increase to a level at or below the NHE projected growth rate, as estimated by CMS.

Although we agree that one factor in price increases across the industry may be the increased demand for rebates at the PBM and health plan level, that is not the only factor. In fact, Sanofi believes that reducing incentives for high prices throughout the supply chain by delinking payments from list price would have a meaningful impact on price and patient costs. This is true, for example, with group purchasing organizations (GPOs) that negotiate pricing for Part B providers. As with PBMs, these GPOs negotiate rebates and administrative fees that are linked to the list price of the product. These structures thus create the same misalignment of interests as in the PBM setting. It is important to note, as well, that the current average sales price (ASP)-based system for Medicare Part B works to moderate price growth because reimbursement reflects the weighted average of discounts given to providers, payers, and other commercial purchasers. This means that the Medicare program and its beneficiaries benefit from the discounts health plans and providers negotiate on these drugs. Due to this market-based competition, ASP reimbursement rates often are substantially lower than list prices.

Biosimilar Competition/Insulin

Biosimilars have been much anticipated as a solution to the drug pricing crisis. In particular, the FDA is moving to make insulin a biologic that would be subject to biosimilar competition in the future.

But we are hearing from all of you that the biosimilar market doesn't work and the benefit of these cheaper but equally effective alternatives are really not available to U.S. patients.

- Can a biosimilar version of insulin be part of the solution for diabetes patients?
- If so, what changes need to be made to the system so that patients and the taxpayer can realize the benefit of biosimilars? (Merck gave up on pursuing a biosimilar to Sanofi's Lantus⁶)

⁶ https://www.fiercepharma.com/pharma/merck-ditches-biosimilar-lantus-but-will-ease-path-for-mylan-s-rival-insulin-product

11

Sanofi believes that biosimilars currently – and will continue to – result in increased competition. In fact, this type of competition has grown among insulin manufacturers in recent years, and we expect that it will continue to lower prices for patients with diabetes. For example, in 2016, Eli Lilly introduced a follow-on biologic to Sanofi's drug Lantus. Additionally, in 2018, Sanofi introduced Admelog, a follow-on biologic of Humalog, at a list price that was 15% lower than the reference product. Mylan also is developing a second follow-on insulin glargine that references Lantus, and Sanofi is developing a biosimilar insulin aspart, a rapid-acting insulin, which we expect to introduce in 2021. Sanofi expects that the already highly competitive diabetes drug market will become increasingly robust over time – including with the anticipated introduction of interchangeable biosimilar basal and rapid acting insulins.

There are changes already in place that will help patients and taxpayers realize the benefit of biosimilars. Specifically, in March 2020, certain biologics that are currently regulated as drugs, including long acting insulins, will be regulated as biologics and therefore will be subject to the existing biosimilars pathway. We expect the change in insulin regulation to spur the continued development of substitutable or interchangeable insulin products, and to increase competition in this space generally.

Senator Young:

For all witnesses:

1. Re-evaluating Business Strategies in Foreign Countries

Since taking office, President Trump has made reducing drug prices one of his highest priorities – and has repeatedly spoken about his frustration with the U.S. subsidizing the costs of pharmaceuticals for the rest of the world. He has gone so far as to issue proposals, like the International Pricing Index (IPI) Model, in an attempt to bring down prescription drug prices.

Questions for All Companies:

With the increased scrutiny of the industry and of the drug supply chain as a whole in the United States

- Have any of your companies re-evaluated your business strategy in foreign countries?
- If not, then why?

No, Sanofi has not reevaluated its business strategy in foreign countries. Other countries have implemented systems, such as price controls or reference price regimes, to directly and artificially regulate the price of medicines. In our experience, there is not an opportunity for Sanofi to negotiate prices with these foreign government payers. Sanofi's only choice is to accept the government-mandated price, or to not sell the pharmaceutical in that country, which not only hurts a company financially, but more importantly harms patients.

We note that, although these systems may be effective at controlling budgets for central payers, they come at a steep cost for patients, including severe access restrictions and rationing.

For instance, one analysis of the report released to justify the International Pricing Index found that 96% of new cancer medicines are available in the U.S. compared to 71% in the United Kingdom and 65% in France.⁷

As a Sanofi specific example, Dupixent is the first drug to be approved for moderate to severe atopic dermatitis (eczema) in the US. FDA granted Breakthrough Therapy designation to Dupixent as preliminary clinical evidence indicated that "the drug may demonstrate substantial improvement over available therapy on clinically significant endpoint(s)". Dupixent was approved by FDA in March 2017 under Priority Review, which means that FDA's goal is to take action on this application within 6 months (compared to 10 months under standard review). Within 24 hours of FDA approval, Sanofi shipped orders for Dupixent to be made available to US patients. In contrast, Health Canada approved Dupixent in November 2017. However, Dupixent is still not publicly reimbursed in Canada.

• If a proposal, like IPI, were implemented, would it force your companies to potentially "walk away from the negotiating table when other countries demand low prices subsidized by America's seniors," as HHS Senior Advisor for Drug Pricing Reform John O'Brien has said?

In our experience, there is not an opportunity for manufacturers to negotiate with a government. Sanofi's only choice is to accept the government-mandated price, or to not sell the product in that country, which, as noted above, not only hurts Sanofi financially, but more importantly harms patients.

• What are some of your ideas on how we can ensure Americans aren't shouldering the full cost of pharmaceuticals?

While we understand the concern that Americans are shouldering more than their fair share of the cost of innovation in the pharmaceutical sector, the list price discrepancy between the U.S. and other countries is due, in primary part, to the different health care systems. Because Sanofi pays significant rebates to payers and PBMs, the difference between the price in other developed countries and the net price in the U.S. is not nearly as large.

Sanofi's top priority is reducing out-of-pocket costs for patients. We believe that there need to be reforms to the current system to better align incentives, including market-based approaches to pricing that promote competition and ensure patients have affordable and sustainable access to innovative medicines. Currently, payers and PBMs inconsistently pass through the growing savings that they receive from increased negotiated rebates. Accordingly, despite increasing rebates and lower net prices, out-of-pocket costs for many patients have continued to grow. Sanofi supports policies that pass PBM and payer rebate savings to patients at the pharmacy counter through lower copays and coinsurance. Sanofi would also support policies that would incentivize responsible pricing by tying smaller list price increases, or even list price reductions, to both access and affordability for patients.

-

⁷ http://phrma-docs.phrma.org/download.cfm?objectid=0C19E240-19C7-11E9-87D20050569A4B6C.

2. Foreign Countries' Pricing and Reimbursement

President Trump and Secretary Azar have both repeatedly described their frustrations with "foreign freeloading" of U.S. drugs in the last year.

"When foreign governments extort unreasonably low prices from U.S. drug makers, Americans have to pay more to subsidize the enormous cost of research and development. . . . It's unfair and it's ridiculous, and it's not going to happen any longer."

Questions for All Companies:

• Do you agree that because of foreign countries' pricing and reimbursement systems, U.S. patients and innovators are shouldering the burden for financing medical advances?

It is true that the U.S. is the main engine in pharmaceutical and biotechnology innovation in the world. Although U.S.-based manufacturers manage clinical trials globally, there are substantially more research and development dollars invested in the U.S. than in any other country. To illustrate, in 2015, PhRMA member companies spent over \$47 billion in domestic R&D and only \$12 billion in R&D abroad. For Sanofi, in 2018, we spent nearly \$7 billion on R&D globally – a substantial portion of which in the U.S. – and we expect that our annual R&D spend will be consistent through 2021. These investments in research, in turn, create significant and important job opportunities in the United States.

However, it is important to note that while other countries' pricing and reimbursement systems may help to contain costs in those countries, they come at a steep cost for patients, including severe access restrictions and rationing. For instance, one analysis of the report released to justify the International Pricing Index found that 96% of new cancer medicines are available in the U.S. compared to 71% in the United Kingdom and 65% in France. Moreover, the list price discrepancy between the U.S. and other countries is due, in part, to the different health care systems. Because Sanofi pays significant rebates to payers and PBMs, the difference between the price in other developed countries and the net price in the U.S. is not nearly as large.

• How do foreign countries' pricing and reimbursement systems affect our prescription drug costs?

Pricing and reimbursement systems in other countries do not affect how Sanofi prices its medicines in the United States. Consistent with our pricing principles, when Sanofi sets the price of a new medicine in the U.S., we hold ourselves to a rigorous and structured process that includes consultation with external stakeholders. In our view, an objective measure of a new product's value considers the benefit to patients, compared to a standard of care; the reduced need – and therefore costs – of other health care interventions; and any increase in quality of life

⁸ http://phrma-docs.phrma.org/download.cfm?objectid=0C19E240-19C7-11E9-87D20050569A4B6C.

and productivity. We believe our pricing reflects these factors. We also consider factors such as the affordability for patients and any unique factors specific to the medicine, like the need to support ongoing clinical trials, implement important regulatory commitments, or develop sophisticated patient support tools that improve care management and help decrease the total cost of care. Additionally, under our pricing principles, we have pledged to limit price increases at or below the National Health Expenditure (NHE), which is the projected annual healthcare spending growth rate as estimated by CMS.

• Are foreign governments taking note of the concerns being raised by the Trump Administration and have they responded in any way?

Sanofi is not aware of any responses by foreign governments to U.S. drug pricing policy proposals advanced by the Trump Administration.

• Has there been any noticeable change in any of our trade agreements since these concerns have been raised by the Trump Administration?

Sanofi is not aware of any such changes.

3. Medicaid Closed Formulary Proposals

In an attempt to bring down drug costs, various states have been exploring whether to exclude certain drugs from its Medicaid program. For example, the state of Massachusetts' recently asked CMS for permission to create a closed formulary where the state Medicaid program would pick at least one drug per therapeutic class. CMS denied their waiver request citing violation of federal law, but this proposal does bring up important questions on how to contain drug prices in state Medicaid programs.

Questions for All Companies:

• If the principles of the Medicare Part D program – including the necessary patient protections – were applied to state Medicaid programs, do you think it lower drugs costs while ensuring access to patients?

The Part D program encourages strong competition in the marketplace, including by providing beneficiaries with choice of different plans and encouraging drug manufacturers to compete for formulary position to support broad access to their medicines (in part by securing lower cost-sharing obligations for patients in preferred formulary tiers). By contrast, state Medicaid programs are obligated, as a condition of a manufacturer's participation in the Medicaid Drug Rebate Program, to cover company's products (subject to certain narrow exceptions). Consequently, although we believe that increased competition in the Medicaid program could help to lower drug prices, including if Medicaid implemented certain of the Part D program's principles, it is not immediately clear how these changes would further enhance patient access.

4. Medicaid "Best Price"

In the Trump Administration's Blueprint, they suggested that because drug manufactures have to give Medicaid the "best price" on drugs, there is no incentive to offer deeper discounts to other payers - both government and commercial - than what is already offered under the Medicaid Drug Rebate Program.

Questions for All Companies:

• Does the Medicaid "best price" requirement encourage manufacturers to increase initial prices?

The Medicaid Rebate Act, and CMS's corresponding rules, require drug manufacturers to pay rebates to the State Medicaid Programs for units of drug dispensed to their beneficiaries. Medicaid "Best Price" generally is defined as the lowest price offered to commercial purchasers in the United States, and it is one of two key metrics used for setting the level of rebates that manufacturers must pay to each state Medicaid program for Medicaid beneficiary utilization. Best Price does not, therefore, reflect a price point at which manufacturers sell products to Medicaid, and Sanofi does not view the Medicaid Best Price requirements as encouraging manufacturers to set higher initial prices. However, Medicaid Best Price considerations are a factor in assessing whether to offer higher rebate amounts to our commercial (Best Price-eligible) customers.

• What, if any, changes would you suggest we make to the program?

With regard to the Medicaid Drug Rebate Program and the determination of Best Price, the Trump Administration's Pricing Blueprint⁹ highlights the impediments that exist under current rules with regard to value-based discounting arrangements. Sanofi would like to pursue more innovative product discounting strategies – including arrangements in which we would stand behind the value or outcomes that our products provide to patients and to the healthcare system generally. But, current Medicaid rebate calculation rules regarding bundled discount arrangements, and the manner in which manufacturers must account for discounts that are incurred over long periods of time, present significant obstacles to adopting these arrangements. If the rules for the Medicaid Drug Rebate Program were amended to permit manufacturers to exclude certain appropriately-structured value-based discounts from their Best Price calculation, it is likely that Sanofi could adopt more innovative value-based discount contracts, and that these arrangements in turn could result in significant savings for patients and the system.

5. Outcomes-Based Contracts

In almost all of your testimonies, you highlight your support of outcomes-based contracts and how we need to be shifting our system toward that approach.

Questions for All Companies:

⁹

- How will these contracts lower drug costs for patients in both the near-term and long-term?
- How will they lower overall healthcare costs for our federal programs?
- What have the preliminary results looked like so far?

Sanofi believes that encouraging an environment that is supportive of value-based arrangements would help promote drug affordability, increase patient access to medicines, and improve patient adherence and outcomes. Specifically, value-based arrangements tie prices and payments to value while reducing patient out-of-pocket costs and providing patients with better access to the most innovative drug products. For example, value-based arrangements can be premised upon the effectiveness of a manufacturer's product, which may help to secure payer coverage for new and innovative therapies. Where payment to a manufacturer is conditioned on the value or clinical outcomes of a product, value-based arrangements also may help to improve patient cost-sharing challenges. Additionally, value-based arrangements could encourage new drug innovation while controlling costs for such new products by aligning the price of the drug to the value the drug brings to the patient.

Recently, Sanofi has executed value-based contracts related to Soliqua 100/33, Praluent, and Kevzara. These arrangements are in their nascent stages, and we do not have sufficient information to assess the results.

Despite the promise of these and similar arrangements, Sanofi strongly believes that better legal and regulatory clarity would facilitate greater proliferation of value-based contracts. For example, we support the creation of a safe harbor from Anti-Kickback Statute liability to expressly protect value-based agreements. We also are supportive of legislation that would remove Best Price-barriers to value-based contracts, such as the Patient Affordability, Value, and Efficiency Act (PAVE Act).

6. Transparency/Point of Sale

In almost all of your testimonies, you express your support for the Trump Administration's proposal to allow manufacturers to provide PBMs up-front discounts that are passed onto patients at the point-of-sale.

Questions for All Companies:

- Do you feel like this proposal will make the transactions within the drug supply chain more transparent?
- If so, would this transparency bring down drug costs –overall and for specialty drugs?

Because the proposed rule would require manufacturer discounts to be provided at the pharmacy counter, the proposal will facilitate increased transparency with respect to the arrangements between manufacturers and PBMs, and with respect to the discounts manufacturers offer on their medicines. We believe such increased transparency would result in lower patient costs.

However, Sanofi believes that HHS's proposal does not go far enough in creating the kind of systemic change needed to create a more transparent drug supply chain throughout the entire U.S. healthcare system. We believe that increased, system-wide transparency, that appropriately protects competitively sensitive information, would improve competition by making relevant information available to patients and policymakers. Providing more information about what is driving costs in the system, and taking steps to curtail misaligned incentives related to the flow of money through the system, for instance through legislation like the C-THRU Act, would allow for increased competition and better-informed decision making.

7. The Relationship between Wholesalers and Manufacturers

When talking about the pharmaceutical supply chain, a lot of focus has been placed on the Pharmacy Benefit Manager. But there's another side of the equation that I'd like to ask about -

Questions for All Companies:

- How do wholesalers negotiate pricing with manufacturers?
- What impact does this have on drug costs?
- What incentives or disincentives do they have to contain price increases?

Wholesalers do not typically negotiate pricing with manufacturers. Wholesalers are merchant-middlemen in the supply chain, and they generally facilitate the efficient distribution of drugs and biologicals to end customers (such as pharmacies or clinics). While Sanofi may offer a prompt pay discount to wholesalers, wholesalers generally purchase product at Wholesale Acquisition Cost (i.e., list price) and they facilitate the acquisition of products by end purchases – frequently at prices that are negotiated between Sanofi and the end purchaser. If wholesalers sell to end purchasers at a loss based on the negotiated price, wholesalers will issue a "chargeback" to the manufacturer for the difference. In addition, Sanofi pays service fees to wholesalers to operationalize this distribution and chargeback process, and those fees typically are based on a percent of WAC. As with fees paid to PBMs, Sanofi's view is that flat pricing for wholesaler administrative services could exert downward pressure on drug prices by delinking list price from fee payments.

Senator Wyden:

For All Witnesses:

Proposed Rebate Rule

As has been done in many other settings, drug manufacturers said during the hearing that one reason list prices for drugs are high is that pharmaceutical benefit managers (PBMs) demand larger and larger rebates in order for the drug to receive favorable placement on a formulary. You and your colleagues who testified during the hearing stated if the Administration's proposal on changes to the anti-kickback safe harbor for pharmaceutical rebates took effect, your company would likely lower list price.

Like many Oregonians, I am skeptical drug manufacturers would voluntarily lower their prices. Therefore, would you support legislation that would 1) make similar changes the Administration has put forward related to Part D and Medicaid managed care, 2) change the rebate system in a similar way to the proposal for the commercial market, and 3) require drug makers to lower the list price of their drugs equal to the amount of rebates provided today?

If (1) the proposed changes to the anti-kickback statute safe harbors were codified, and (2) Congress implemented similar changes to the commercial insurance market, Sanofi would lower the list prices of its prescription medications for products in competitive categories for which there is currently a material difference between list price and net price on the assumption that patient access and affordability would be improved. Sanofi also supports policy changes that would de-link other payments in the pharmaceutical supply chain from list price.

We support extending the intent behind the anti-kickback statute safe harbor proposed rule to the commercial market so that incentives are aligned across the marketplace. Together, we believe these changes would facilitate Sanofi's ability to lower our list prices. However, we recommend a step-wise approach, implementing changes to the commercial market after the safe harbor rule is implemented on January 1, 2020. Such an approach would provide an opportunity for stakeholders and the government to identify unintended consequences, and address them, prior to extending these policies to the commercial market.

We want to ensure that the new system achieves its goal of improving affordability for patients. For instance, CMS should monitor and evaluate how the new system affects formulary access, utilization management, and patient cost-sharing, particularly with respect to medicines with a lower list price. We also have concerns that changes to the rebate system may lead to new fees, which simply require manufacturers to pay previous rebate values in new ways, rather than creating savings for patients.

Without a better understanding of how these policy changes ultimately would affect the competitive marketplace, patient access, and affordability, we are unable to quantify the amount of any potential list price reduction.

We support legislation that would incentivize manufacturers to lower list prices by connecting better patient access and affordability to such pricing actions. The U.S. market-based approach to drug pricing has been successful in reducing net prices, but in the current system, that value is not being passed on to patients. We expect that the reforms we note above would address that issue while preserving a market-based approach that promotes competition and ensures patients have affordable and sustainable access to innovative medicines.

Medicaid Drug Rebate Program

The Medicaid Drug Rebate Program (MDRP) requires manufacturers to provide a basic rebate and an additional inflationary rebate for both brand and generic drugs. The inflationary rebate is an increasingly substantial part of total rebates due in large part to

large increases in drug prices that exceed inflation. Under current law, this inflationary rebate is capped at 100 percent of Average Manufacturer Price (AMP). This is the case even when manufacturers continue to raise their prices well above inflation.

- 1. Please provide a list of all of your pharmaceutical products that have reached the Medicaid AMP rebate cap in any of the 20 quarters from January 1, 2014 through December 31, 2018.
- 2. For each drug listed in response to question 1, please also provide a list of which quarters and years each drug hit the cap.

Sanofi takes steps to ensure that it complies with all applicable laws related to the Medicaid Drug Rebate Program, including that it is paying rebates to the state Medicaid programs in accordance with law. Sanofi sells NDCs in 29 product families for which it pays Medicaid rebates at 100% of AMP. Respectfully, Sanofi's view is that the detailed information requested by this question is confidential and proprietary. We would be happy to work with the Committee to provide this information in a way that mitigates against competitive harms that could arise from public disclosure of this information.

Medicaid Drug Rebate Program Compliance

I am concerned about recent reports and legal settlements surrounding drug manufacturers' failure to comply fully with the requirements of the MDRP. For example, an analysis by the U.S. Department of Health and Human Services Office of Inspector General found that between 2012 and 2016 taxpayers may have overpaid by as much as \$1.3 billion for 10 potentially misclassified drugs. That is why I introduced the Right Rebate Act with Chairman Grassley to prevent drug manufacturers from manipulating Medicaid to increase their profits. However, I continued to be concerned about oversight and manufacturer compliance with the requirements of the Medicaid Drug Rebate Program. Accordingly, please describe the following:

1. Your company's current compliance plan and procedures used to ensure compliance with the requirements of the Medicaid Drug Rebate Program including internal audits or other checks you use to identify compliance vulnerabilities.

Sanofi takes steps to ensure that it complies with all applicable laws related to its participation in the Medicaid Drug Rebate Program (MDRP). These steps include, for example, documenting Medicaid rebate calculation methodologies, processes, and reasonable assumptions as appropriate. Sanofi's government price reporting personnel also hold weekly meetings with the Sanofi legal department, including with support from outside counsel as needed, to ensure that compliance questions are discussed and addressed in a timely manner. Sanofi's MDRP compliance is tested through several audits, including biannual Sarbanes-Oxley Act audits, biannual external audits, conversations with an external consultant government pricing advisory team, and annual calculation audits of Average Manufacturer Price and Best Price.

2. Any past or ongoing issues of non-compliance.

Given the complexity of the MDRP and applicable law and guidance, Sanofi routinely reviews its calculation methodologies and reasonable assumptions. In the normal course of business, questions may arise as to specific Sanofi compliance processes for the MDRP. When such questions arise, Sanofi takes prompt steps to engage with CMS about appropriate next steps, including a restatement of any of the components of the Medicaid rebate calculation if needed. Such restatements are administrative in nature and expressly contemplated by the CMS regulations.

3. Any corrective actions taken to address identified problems or issues of noncompliance with the MDRP and how such steps were communicated to the Centers for Medicare & Medicaid Services.

As noted above, in the event that Sanofi identifies any compliance questions that it believes warrant review by CMS, Sanofi promptly engages with CMS. This may occur, for example, in the event of statutory or regulatory changes, or if CMS releases new sub-regulatory guidance.

4. Any steps taken to improve compliance and ensure that all Medicaid drug rebates owed to the federal government and the states are paid in full.

Sanofi's government price reporting team routinely works with in-house and outside counsel regarding compliance with the Medicaid Drug Rebate Act and CMS rules. As part of this continuing compliance, the company assesses its calculation processes and reasonable assumptions for purposes of calculating Average Manufacturer Price, Best Price, and Unit Rebate Amount. In certain cases, moreover, Sanofi engages directly with CMS to seek the agency's view of Sanofi's reasonable assumptions or compliance processes. In any instance in which Sanofi would determine that the State Medicaid Programs were underpaid rebates, Sanofi would engage with CMS to determine the appropriate way forward, including restating pricing metrics and paying additional rebates to the states.

Bonus Payments Tied to Specific Drugs

I am concerned by the potential for employee financial incentives to encourage high launch prices and price increases for prescription drugs.

- 1. Is your salary, bonus or other compensation tied to sales or revenue targets of a single product your company sells? Has it ever been? If yes, please state the product or products to which your salary, bonus or other compensation was tied.
- 2. Is your salary, bonus or other compensation tied to either revenue or net income of the company as a whole? Has it ever been? If yes, please explain what assumptions about price increases are used when the compensation committee sets revenue or net income goals. Does the compensation committee provide any guidance to executives in regards to the amount of revenue that the company will generate from price increases versus volume growth?

The Sanofi Board of Directors, acting on the recommendation of the Compensation Committee, sets the compensation for the Chief Executive Officer (CEO). That compensation structure includes fixed compensation, variable compensation, options, performance shares, and benefits in kind.

Sanofi's overall compensation policy is designed to motivate and reward performance by ensuring that a significant portion of compensation is contingent on the attainment of financial, operational, and extra-financial criteria aligned with the corporate interest and with the creation of shareholder value. Therefore, in 2017 (the most current year in which public information is available), as Sanofi's CEO, Dr. Brandicourt was eligible for up to 250 percent of his target fixed compensation in variable compensation. Several factors are considered in determining his variable compensation; 40 percent is based on financial indicators, and 60 percent is based on specific individual objectives, including external growth, product launches, operational transformation, organization and staff relations, and new product pipeline.

Dr. Brandicourt's compensation package also includes equity-based compensation, which is medium-term and aims to align the interests of the CEO with those of the shareholders and other stakeholders. In 2017, he received a set number of options to subscribe for shares, based on performance conditions measured over a three year period, as well as performance shares based on business net income, return on assets, and total shareholder return.

Net Prices

In your testimony, you stated, "we have increased transparency by providing, each year, information about our list and net prices across all of our medicines," and that "in 2018, the average aggregate list price increase across all Sanofi medicines in the U.S. was 4.6 percent...the price actually paid to Sanofi, declined by 8 percent. So declining average aggregate net price in [2018] represents the third consecutive year in which the amount paid by payers across all of our medicines went down." Please describe how the company's year-over-year aggregate net price is calculated. Please also specifically address the following questions:

Sanofi calculates the aggregate net price as follows: Brand net sales are divided by common units for the appropriate period. This amount – "net price per unit" – is then compared to the prior period. This amount establishes any increase or decrease for the brand for the period being calculated. Once this is done for all brands, the increase/decrease is weighted by gross sales (i.e., volume) to show the aggregate net price impacts for Sanofi's portfolio of medicines.

1. How many products are included in the calculation of the average net price change? What was the median net price change?

This analysis is done on 79 separate products, covering 76 brands. Some brands have multiple product forms with different prices; Sanofi separates these product forms when calculating average net price.

The median net price change in 2018 was zero percent across all products. Removing products with no net price change, the median net price change in 2018 is -1.0%. This calculation is not weighted by gross sales.

2. Is net price weighted? If so, how? For example, in determining the aggregate net price does the company assign different weights to different products based on volume or other factors? Are "on patent" and "off patent" drugs weighted identically? Are other statistical weights used or are all products treated equally?

All products are weighted by gross sales (i.e., volume), irrespective of whether Sanofi has any current patents related to the product. No other statistical weights were used.

3. Does the figure that you provided during your testimony account for U.S. prices, international prices, or both? Generally speaking, when your company reports net price changes, does it differentiate between U.S. and international prices?

The data Dr. Brandicourt provided regarding average aggregate list price and average aggregate net price accounted for U.S. prices. Sanofi's annual pricing report¹⁰ and related reporting on net price consider U.S. prices only.

4. Please list the five drugs your company sold in the U.S. that had the greatest year-over-year net price increase in 2018, noting the increase for each drug by dollar figure and percentage. Please list the five drugs your company sold in the U.S. that had the lowest year-over-year net price increase (and/or the greatest decrease) in 2018, noting the increase (or decrease) for each drug by dollar figure and percentage.

Products with Greatest Average Net Price Increases in 2018¹¹

Product	YOY	YOY U.S.
	Percentage	Dollar Change
	Change	by Unit
Renvela ¹²	40%	1.00
Imovax ¹³	15%	30.10
Caprelsa ¹⁴	12%	1536.60
Hectorol ¹⁵	11%	0.03

¹⁰ https://mediaroom.sanofi.com/-/media/Project/One-Sanofi-Web/Websites/Global/Sanofi-COM/mediaroom/pdf/2019/Prescription Medicine Pricing 2019.pdf

23

¹¹ We have excluded products that were discontinued/divested in 2018, have no sales in 2018, or if the reason for net price increase was due to changes in prior accounting estimates or assumptions (as opposed to changes in rebates and discounts).

¹² Sanofi did not take any list price increases on Renvela in 2018. The net price increase is due to (1) changes in prior accounting estimates/assumptions, and (2) increasing use of generics in class, resulting in (i) change in the mix of business, and (ii) a reduction in rebate payments.

¹³ Sanofi took a 5 percent list price increase on Imovax in 2018.

¹⁴ Sanofi took a 5 percent list price increase on Caprelsa in 2018.

Zaltrap ¹⁶	9%	0.60
-----------------------	----	------

Products with Greatest Average Net Price Decreases in 2018¹⁷

Product	YOY Percentage Change	YOY U.S. Dollar Change by Unit
Renvela AG	-74%	-1.57
Zolpidem CR	-68%	-0.26
Leflunomide	-63%	-0.59
Clolar	-48%	-894.26
Priftin	-26%	-0.54

- 5. For 2018, what was the average net price change in the U.S. market for (1) drugs with no competition, (2) drugs with <u>only</u> branded competition, and (3) drugs with generic competition?
 - (1) Drugs with no competition ¹⁸: 0.0%
 - (2) Drugs with only branded competition ¹⁹: -2.1%
 - (3) Drugs with AB-rated generic/follow-on biologic/biosimilar competition: -13.5%
- 6. In its most recent pricing report, Sanofi states that it "increased the price of 35 of our 76 prescription medicines" in the United States. This statement appears to be in regards to list price. How many of these medicines had their net price increase?

Seventeen of the 35 prescription medicines with list price increases also had average net price increases.

7. In its most recent pricing report, Sanofi states that "in 2018, 55 percent of our gross sales were given back to payors as rebates, including \$4.5 billion in mandatory rebates to government payors and \$7.3 billion in discretionary rebates." For each product, please disclose the gross sales and the amount of rebates paid.

Product-level rebate information is confidential and proprietary information for competitive reasons and falls within the definition of "trade secret" under the Trade Secrets Act,

¹⁵ Sanofi reduced the list price of Hectorol by 47% in October 2018. The net price increase was due to a reduction in rebate payments.

¹⁶ Sanofi did not take any list price increases on Zeltrap in 2018.

¹⁷ We have excluded products that were discontinued/divested, have no sales in 2018, or if the reason for net price decline was due to changes in prior accounting estimates or assumptions (as opposed to changes in rebates and discounts).

¹⁸ We define a product as having no competition if there are no other products in the therapeutic class.

¹⁹ We define a product as having only branded competition if there is no generic, follow-on biologic, or biosimilar product in the therapeutic class.

18 U.S.C. § 1905, Exemption 4 of the Freedom of Information Act, 5 U.S.C. § 552(b)(4), and the Defend Trade Secrets Act of 2016, 18 U.S.C. § 1836. Public disclosure of this information would cause significant harm to Sanofi and Sanofi's customers, and competitors would gain unfair competitive advantage if they were to obtain this information through public disclosure.

We note that Congressional and Executive agencies have historically expressed concern that disclosure of such information could inhibit competition. For example, in 2007 when then-Chairman Waxman asked several Medicare Part D prescription drug plans ("PDPs") to submit to the House Oversight and Government Reform Committee information on the negotiated price discounts, rebates and other price concessions that they obtained from drug manufacturers, the CBO issued a report concluding that public disclosure of that information could reduce the rebates that PDPs received and thus raise Medicare costs. 20 Specifically, the CBO found that the disclosure of rebate data could cause the variation in rebates among purchasers to decline. Because PDPs generally secure rebates that are somewhat larger than the average rebates observed in commercial health plans, the disclosure of Part D rebates to competitors could create pressure to reduce those rebate amounts, which in turn could increase costs for the Medicare program and, on average, the costs for Medicare beneficiaries. ²¹ Specifically, the CBO found that the disclosure of rebate data could cause the variation in rebates among purchasers to decline. Second, CBO concluded that disclosure of rebates could facilitate tacit collusion among the manufacturers of competing brand-name drugs, reducing the rebates to PDPs and thus increasing net drug prices.²² Similarly, the Federal Trade Commission ("FTC") has cited concerns regarding the anti-competitive effects of disclosing net pricing and other price-sensitive information. In the context of the healthcare industry generally, the FTC noted:

[Price transparency] can actually harm competition and consumers. Some types of information are not particularly useful to consumers, but are of great interest to competitors. We are especially concerned when information disclosures allow competitors to figure out what their rivals are charging, which dampens each competitor's incentive to offer a low price, or increases the likelihood that they can coordinate on higher prices.²³

Moreover, in describing its concerns about a New York state bill that would have required pharmacy benefit managers ("PBMs") to disclose their rebate arrangements with drug manufacturers, the FTC explained that disclosure of this information could "facilitate collusion, raise prices, and harm the patients the Bill is supposed to protect." The FTC further explained that, without knowledge of such competitor rebate information:

²⁴ FTC, Office of Policy Planning, Bureau of Competition and Bureau of Economics, Letter to Hon. James L. Seward re: New York Senate Bill 58, at 5 (March 31, 2009), *available at* https://www.ftc.gov/sites/default/files/documents/advocacy_documents/ftc-staff-comment-honorable-james-l.seward-concerning-new-york-senate-bill-58-pharmacy-benefit-managers-pbms/v090006newyorkpbm.pdf.

[M]anufacturers have powerful incentives to bid aggressively for formulary position, because preferential formulary treatment may yield increased sales. Unprotected disclosures thus may raise the price that New York consumers pay for pharmaceutical coverage by undermining competition among pharmaceutical companies for preferred formulary treatment. ²⁵

For these reasons, in public settings, we have provided rebate information at an aggregate level only, to prevent reverse engineering by competitors to learn our net pricing information for specific products. We would be happy to work with the Committee to provide this information in a way that mitigates against competitive harms that could arise from public disclosure of this information.

Senator Menendez:

For all witnesses:

Part 1: When new products enter the market, do drug companies set high initial rebates and then provide deep rebates in order to gain access to insurance plan's formularies?

We can only speak for Sanofi. Consistent with our pricing principles, when Sanofi sets the price of a new medicine, we hold ourselves to a transparent, rigorous, and structured process that includes consultation with external stakeholders. In our view, an objective measure of a new product's value considers the benefit to patients, compared to a standard of care; the reduced need – and therefore costs – of other health care interventions; and any increase in quality of life and productivity. We believe our pricing reflects these factors. We also consider factors such as the affordability for patients and any unique factors specific to the medicine, like the need to support ongoing clinical trials, implement important regulatory commitments, or develop sophisticated patient support tools that improve care management and help decrease the total cost of care. Additionally, under our pricing principles, we limit annual list price increases to the National Health Expenditure, which is CMS's projected annual healthcare spending growth rate. Since we established our pricing principles in 2017, all price increases for our insulin products have been at or below NHE.

Sanofi offers rebates to health plans and PBMs in order to help secure and maintain favorable formulary positions. Our aim in these negotiations is to establish affordable access to patients. Currently, however, payers and PBMs inconsistently pass through to patients the growing savings they receive from increased negotiated rebates and discounts. Accordingly, despite increasing rebates and lower net prices, out-of-pocket costs for many patients have continued to grow. Sanofi supports policies that would pass through PBM rebate savings to patients at the pharmacy counter in the form of lower cost-sharing.

_

²⁵ *Id. See, also*, FTC, Office of Policy Planning, Bureau of Competition, and Bureau of Economics, to Assemblyman Greg Aghazarian re: California Assembly Bill No. 1960 (September 7, 2004) (concluding that, if manufacturers learn the exact amount of the rebates offered by their competitors through required PBM disclosures, then tacit collusion among manufacturers is more feasible, which may lead to higher prices for PBM services and drugs), *available at* <a href="https://www.ftc.gov/sites/default/files/documents/advocacy_documents/ftc-comment-hon.greg-aghazarian-concerning-ca.b.1960-requiring-pharmacy-benefit-managers-make-disclosures-purchasers-and-prospective-purchasers/v040027.pdf.

Part 2: If CMS finalizes the rebate rule, do you anticipate future products entering the market with significantly lower initial list prices?

We can only speak for Sanofi. If (1) the proposed changes to the anti-kickback statute safe harbors were codified, and (2) Congress implemented similar changes to the commercial insurance market, Sanofi would lower the list prices of its prescription medications for products in competitive categories for which there is currently a material difference between list price and net price on the assumption that patient access and affordability would be improved. Sanofi also supports policy changes that would de-link other payments in the pharmaceutical supply chain from list price.

We support extending the intent behind the anti-kickback statute safe harbor proposed rule to the commercial market so that incentives are aligned across the marketplace. Together, we believe these changes would facilitate Sanofi's ability to lower our list prices. However, we recommend a step-wise approach, implementing changes to the commercial market after the safe harbor rule is implemented on January 1, 2020. Such an approach would provide an opportunity for stakeholders and the government to identify unintended consequences, and address them, prior to extending these policies to the commercial market.

We want to ensure that the new system achieves its goal of improving affordability for patients. For instance, CMS should monitor and evaluate how the new system affects formulary access, utilization management, and patient cost-sharing, particularly with respect to medicines with a lower list price. We also have concerns that changes to the rebate system may lead to new fees, which would simply require manufacturers to pay previous rebate values in new ways, rather than creating savings for patients.

Without a better understanding of how these policy changes ultimately would affect the competitive marketplace, patient access, and affordability, we are unable to quantify the amount of any potential list price reduction. When setting the price of a new medicine, Sanofi's decision making will continue to be guided by our pricing principles framework, which are discussed in Part 1 of this response.

Senator Carper: For all witnesses:

a. What are your recommendations for lowering prices for the 40 percent of drugs that do not offer rebates in Medicare Part D? In the health insurance plans that you offer your employees, do you ask your insurers to pass through the full manufacturer rebates to the beneficiaries?

To address prices of drugs that are not subject to rebates in Medicare Part D, Sanofi supports policies that would incentivize responsible pricing by tying smaller list price increases, or even list price reductions, to both access and affordability for patients. Sanofi also believes that value-based discounting arrangements could drive down the price of prescription drugs in all contexts, regardless of the existence of rebates, including for Medicare Part D. Sanofi favors

reforms in applicable statutes and regulations to permit manufacturers and payers to adopt these arrangements more broadly than is the case today.

The Sanofi medical plan is self-insured; as such, the company pays the majority (approximately 80%) of the health care claims that are incurred by our employees and their dependents. Sanofi does not, therefore, pass rebates through to members. Importantly, the Sanofi PPO medical/Rx plan, which covers 90% of our employees who elect medical coverage, maintains very low member cost-sharing for prescriptions. For example, members incur no cost (\$0 co-pays) for Sanofi and partner prescription drugs. For non-Sanofi prescriptions, the out-of-pocket expense varies for generic (\$15/prescription), preferred brand (\$25/prescription) and non-preferred brand (\$40/prescription).

b. The systems for pricing and distributing drugs are opaque and difficult to understand. What are your recommendations for increasing transparency in how your companies set the list prices for drugs, and for improving transparency in the supply chain for prescription drugs? Would you support federal standards for transparency in setting the list prices for drugs?

Sanofi supports increased system-wide transparency, which would improve competition by making relevant information available to patients and policymakers. Two years ago, Sanofi announced our progressive and industry-leading principles to help stakeholders understand our pricing decisions and to advance a more informed discussion of issues related to the pricing of medicines.²⁶

Sanofi's pricing policy includes a commitment to transparency in how we price new medicines coming to the market for the first time. When Sanofi sets the price of a new medicine, we hold ourselves to a transparent, rigorous, and structured process that includes consultation with external stakeholders. In our view, an objective measure of a new product's value considers the benefit to patients, compared to a standard of care; the reduced need – and therefore costs – of other health care interventions; and any increase in quality of life and productivity. We believe our pricing reflects these factors. We also consider factors such as the affordability for patients and any unique factors specific to the medicine, like the need to support ongoing clinical trials, implement important regulatory commitments, or develop sophisticated patient support tools that improve care management and help decrease the total cost of care.

Tied to our pledge to keep annual list price increases at or below the projected U.S. National Health Expenditure growth rate, Sanofi has committed to providing its rationale should Sanofi increase any list price above the NHE growth rate, highlighting clinical value, real world evidence, regulatory change, new data, or other circumstances that support our decision. Sanofi also has committed to disclose annually our aggregate U.S. gross and net price changes from the prior calendar year. These data may help illustrate how pricing changes accrue to manufacturers versus others in the value chain, highlighting our discrete role in the broader U.S. health care system.

²⁶ https://mediaroom.sanofi.com/en/articles/2017/sanofi-pricing-principles-for-the-u-s/.

We support federal standards for transparency in the rationale for price increases above a certain threshold, provided that there are appropriate guardrails. Sanofi believes that increased transparency should accomplish three goals:

- 1) Preempt similar state laws, as was done with the Sunshine Act, to create a consistent reporting process;
- 2) Ensure information that if released publically could be anti-competitive is kept confidential.
- 3) Take a holistic approach to transparency, such as requiring PBMs to disclose when the net price of a medicine has declined and whether the increased rebates are used to lower costs for patients or for other reasons.

We would be willing to work with this Committee on appropriate policy solutions.

c. In nearly every sector of the health care industry, Medicare, Medicaid, employers, and insurers are moving away from fee-for-service payments to reimbursements based on value and performance. Prescription drugs and medical devices were the glaring exceptions to this trend until recently. How many of your drugs are included in value-based contracts and how many patients are benefiting from them? How do these value-based contracts work to lower drug prices for both patients and taxpayers?

At this time, Sanofi has entered into value-based arrangements involving three Sanofi products: Soliqua 100/33, Praluent, and Kevzara. At present, we are not able to identify the specific number of patients who benefit from these arrangements.

Sanofi believes that encouraging an environment that is supportive of value-based arrangements would help promote drug affordability, increase patient access to medicines, and improve patient adherence and outcomes. Specifically, although there are different types of these agreements, value-based contracts generally tie prices and payments to the value of a particular prescription drug product — while potentially reducing patient out-of-pocket costs and providing patients with better access to the most innovative drug products. A manufacturer could, for example, condition payment for a product on its success in meeting a predefined clinical outcome, and this type of arrangement could make drugs more affordable and lower costs throughout the system.

d. Last year, Senator Portman and I did an investigation on the pricing of an opioid overdose reversal drug called EVZIO, manufactured by Kaléo. Kaléo increased the price of EVZIO from \$575 in 2014 to \$4,100 in 2017. We found that the best price Medicare was able to get for EVZIO, about \$4,000, was much higher than the price other federal programs and private insurers were able to get. It seemed that Kaléo was able to get this higher price of \$4,000 from Medicare by helping doctors fill out paperwork showing that the drug was medically necessary, even though

there are cheaper alternatives on the market. As a result of the investigation, Kaléo announced it will bring a generic version of the drug to market at only \$168 per pack. Are any of your companies providing medical necessity paperwork to doctors in order to get your drugs covered by Medicare?

No. Sanofi does not provide patient-specific clinical or medical necessity information to physicians in furtherance of the Medicare coverage of any of Sanofi's products for particular patients. Consistent with guidance from the Department of Health and Human Services Office of Inspector General (OIG), Sanofi typically provides physicians with a copy of an applicable blank prior authorization form, or in some cases, the form with only the physician's demographic information filled out, along with separate instructions for filling out the form. Also, in keeping with OIG guidance, Sanofi provides physicians with template appeals letter for instances in which a physician needs to appeal non-coverage for a Sanofi product. These template letters do not include any patient medical information, and instead are provided only as a guide for physicians to describe the reasons that the patient requires his or her prescribed Sanofi product. Similarly, Sanofi provides physicians with template letters of medical necessity, which do not offer medical information on specific patients. Instead, these documents provide a general framework pursuant to which physicians may prepare their own, patient-specific letters of medical necessity. These measures comply with the OIG guidance in that they provide "limited support" in connection with a purchase or prescribing decision for a Sanofi product.

e. In 2017, the Rand Corporation estimated that biosimilar drugs, which are competitors to complex, biologic drugs, could save the United States more than \$50 billion over the next decade. Some of you have also argued that increasing the use of biosimilar drugs would help lower drugs costs for consumers and taxpayers. What is delaying the uptake of biosimilar drugs in the United States? What policies do you recommend to increase the development of biosimilar drugs?

Sanofi supports the entry of biosimilar medicines in the market after a reasonable period of time after the innovator biologic is developed, which we believe is already reflected in U.S. law. There are changes already in place that will help patients and taxpayers realize the benefit of biosimilars. Specifically, in March 2020, certain biologics that are currently regulated as drugs, including long acting insulins, will be regulated as biologics and therefore will be subject to the existing biosimilars pathway. We expect the change in regulation to spur the continued development of substitutable or interchangeable products, and to increase competition in this space generally. Further, we believe that as healthcare providers become more familiar with biosimilars, the uptake of biosimilar drugs will increase. Findings from a recent review show that there is an overall lack of biosimilar familiarity among U.S. and European healthcare providers,

²⁸ See, e.g., https://www.visitspconline.com/servlet/servlet.FileDownload?file=00P3600000Q1TbyEAF.

-

 $^{^{27} \}textit{See, e.g.,} \ \underline{\text{https://www.visitspconline.com/servlet/servlet.FileDownload?file=00P3600000Q1TboEAF}.$

leading to low prescribing comfort as well as safety and efficacy concerns.²⁹ The study concludes that, to realize the full cost-saving potential of biosimilar medicines, clinician-directed biosimilar education is necessary to address the gaps in biosimilar knowledge, facilitate prescribing changes, and ultimately increase biosimilar use.

Senator Cardin:

1. The United States is one of the only countries in the world to allow prescription drug manufacturers to advertise directly to consumers through magazines, billboards, radio, and television commercials. While I will not argue that it is beneficial to educate consumers about an unfamiliar disease and encourage them to seek medical help, most commercials from all of your companies recommend asking about a specific brand name drug, not a medical condition. Furthermore, even if your advertisements follow all FDA rules and list medication side effects, they also almost always list these while a smiling, apparently healthy person is walking on a beach.

Researchers say that this type of imagery, combined with viewing hours of drug commercials each month, leads consumers to underestimate the risks associated with medications. For the past decade, studies have shown that aggressive direct-to-consumer advertising is associated with rising drug prices and an increase in inappropriate drug prescriptions.

For Mr. Gonzalez, Dr. Soriot, Dr. Caforio, Ms. Taubert, Mr. Frazier, Dr. Bourla, and Dr. Brandicourt:

a. Since researchers have concluded that consumers are misunderstanding the benefits and risks described in your ads, what further policies could help you and your colleagues ensure that you are educating patients in a clear manner?

Sanofi believes DTC advertisements can play an important role in both raising awareness about a disease and educating patients about their treatment options. The benefits of DTC advertisements are reflected in the results of a recent survey conducted by Princeton Survey Research Associates International, which found that DTC advertisements often prompt conversations about alternatives such as generics or lifestyle changes, and prompt positive behaviors, such as information-seeking and medicine adherence.³⁰

When DTC advertisements solely discuss a particular disease or condition without mentioning or alluding to a specific drug, FDA considers the advertisements disease awareness communications. Disease awareness communications are not considered promotional labeling or advertising, and thus such communications are not subject to the requirements of the Federal,

31

²⁹ See Factors Affecting Health Care Provider Knowledge and Acceptance of Biosimilar Medicines: A Systematic Review, 25 J. Managed Care & Specialty Pharm. 102-112 (Jan. 2019), available at https://www.jmcp.org/doi/10.18553/jmcp.2019.25.1.102.

³⁰ https://www.phrma.org/report/2017-direct-to-consumer-advertising-survey-results.

Food, Drug and Cosmetic Act (FDCA) or FDA regulations. In contrast, DTC advertisements that make claims about a drug are subject to requirements governing disclosure of risk and other information, including a statutory requirement to include a brief summary relating to side effects, contraindications, and effectiveness. FDA's prescription drug advertising regulations distinguish between print and broadcast advertisements, which require a "brief summary" for print advertisements and what is referred to as a "major statement" of risks for broadcast advertisements. FDA regulations also set forth additional requirements for information to be included in both print and broadcast advertisements. Certain broadcast advertisements, including the initial television advertisement for a prescription drug and all television advertisements for prescription drugs subject to a Risk Evaluation Mitigation Strategy with elements to assure safe use, are subject to pre-dissemination review by FDA. Even where a television advertisement is not subject to mandatory review, sponsors may elect to voluntarily submit the advertisement to FDA for advisory review.

While the time-limited nature of broadcast DTC advertisements can present challenges in ensuring a drug advertisement presents all information required by the FDCA and FDA regulations in a manner easily digestible to a consumer, or even HCP, audience, Sanofi strives to disseminate balanced DTC advertisements that clearly and effectively communicate a product's benefits and risks. To that end, prior to airing any DTC television advertisement, Sanofi submits each advertisement to FDA for pre-dissemination review and incorporates FDA's comments, even when such review is not required for the advertisement in question. To further the objective of ensuring that DTC advertisements educate consumers about potential treatment options in a non-misleading manner, we believe industry would benefit from a regulatory framework that allows for greater flexibility in the risk and other information required to be included in broadcast advertisements, including, for example, the flexibility to focus on select significant risks in the advertisement itself while directing consumers to a website for a more fulsome discussion of a product's risks. FDA has acknowledged that its regulations provide "only limited flexibility" for risk disclosure in broadcast advertisements. Thus, allowing for greater flexibility in content control in DTC advertisements would likely require amending existing FDA regulations, as well as potentially the underlying statutory provisions governing the information required to be disclosed in advertisements.

Pharmaceutical Companies Continue to Raise Prices

1. As you are well aware, high prescription drug prices are the number one concern for Americans and their families. According to the Organization for Economic Cooperation and Development, the average American spends around \$1,208 annually on prescription drugs. There have been several instances where brand name or even generic drugs that have been on the market for years continue to increase in price.

One of the most well known examples is Mylan's increase of the price of EpiPen from less than \$100 in 2007 to more than \$600 in 2016. Another example, is the ever-increasing price of insulin. Sanofi increased the price of a vial of Lantus from \$88.20 in 2007 to \$307.20 in 2017. And those are just a small sample of price increases.

For Mr. Gonzalez, Dr. Soriot, Dr. Caforio, Ms. Taubert, Mr. Frazier, Dr. Bourla, and Dr. Brandicourt:

a. Why don't we see price decreases for drugs that have been on the market for years without new formulations or added benefit?

Current regulations, including price reporting requirements, create uncertainty about the implications of lowering a list price. We are working with CMS on alternatives that could enable us to put lower list price versions of our products on the market. Until such system changes are implemented, we are working to improve the affordability of our products for those who are uninsured or underinsured through our many patient support programs.

It is important to note, as well, that revenues from existing therapies are used to fund future R&D across therapeutic areas. Sanofi's R&D strategy is to allocate resources to priority therapeutic areas based both on scientific opportunity and unmet medical need, leveraging multiple therapeutic modalities and accelerating early development. Our R&D pipeline currently contains 81 projects, including 33 new molecular entities in clinical development, and 35 projects are in Phase III or have been submitted to regulatory authorities. From 2008 to 2017, Sanofi invested over \$55 billion dollars globally in R&D. Last year we invested almost \$7 billion globally, or approximately 24% of our gross profits, in our research and development activities. We expect to continue to spend around the same on R&D in the coming years.

Pay for Delay

1. Pay for delay is a tactic that more and more branded drug manufacturers have been using to stifle competition from lower-cost generic manufacturers. This allows you to sidestep competition by offering patent settlements that pay generic companies not to bring lower-cost alternatives to market.

These "pay-for-delay" patent settlements benefit both brand-name pharmaceutical companies by helping them avoid costly patent litigation and general manufacturers by rewarding them a hefty sum to delay entering the market with a cheaper drug alternative. However, these deals do not benefit consumers. According to an FTC study, these anticompetitive deals cost consumers and taxpayers \$3.5 billion in higher drug costs every year.

For Mr. Gonzalez, Dr. Soriot, Dr. Caforio, Ms. Taubert, Mr. Frazier, Dr. Bourla, and Dr. Brandicourt:

a. Does your company partake in pay-for-delay settlements?

No, Sanofi does not enter into "pay for delay" agreements that prohibit generic drug or biosimilar development after the expiration of a patent. Sanofi has reached settlements in patent infringement cases, and these agreements have allowed the generic company to commercialize its product before the expiration of the applicable patent covering Sanofi's innovator product.

b. Why would a pharmaceutical company enter into a pay-for delay agreement?

We can only speak for Sanofi, and we do not enter into "pay-for-delay" settlement agreements.

c. Do you think these agreements stifle competition and prevent generic alternatives to your branded medications?

With respect to patent litigation, generally, Sanofi believes it is inappropriate to presume that any settlement of patent litigations related to pharmaceutical products is anticompetitive. Such settlements are often the most efficient and effective way to resolve disputes regarding patented drugs. Additionally, they often lead to the earliest appropriate entry of generic products into the market thereby benefiting patients – earlier than expiration of the relevant patents. Each patent litigation and potential settlement presents unique factors and must be considered individually and in light of the relevant circumstances.

Drug Rebate Rule

1. In January, the Department of Health and Human Services' (HHS) Office of Inspector General (OIG) promulgated a new regulation to remove regulatory safe harbor protections under the Anti-Kickback Statute (AKS) for rebates on prescription drugs rebates paid by manufactures to PBMs under Medicare Part D and for Medicaid managed care organizations (MCOs). The OIG proposal attempts to ban most rebates by eliminating their regulatory protections.

The rule is predicted to increase net drug costs in its early years. The CMS actuaries estimate it would cost \$196 billion over 10 years. Despite this high price tag, the beneficiary benefits are limited. The proposed rule notes that under the CMS Actuary's analysis, the majority of beneficiaries would see an increase in their total out-of-pocket payments and premium costs; reductions in total cost sharing will exceed total premium increases.

I wanted to ask a question about the Administration's rebate rule, which I understand that many of the drug manufacturers, and your main trade association, strongly support. According to an analysis of the rule by the Office of Actuaries at CMS, drug manufacturers are likely to initially retain 15 percent of the current rebates as higher net drug prices.

For Mr. Gonzalez, Dr. Soriot, Dr. Caforio, Ms. Taubert, Mr. Frazier, Dr. Bourla, and Dr. Brandicourt:

a. Given that estimate, can you provide the Committee with any assurances that prices will not increase under this proposed rule?

At this time, it is difficult to predict the effect of the Administration's proposed rule. It is our expectation that it will result in lower out-of-pocket costs for patients by protecting only manufacturer rebates to Medicare Part D and Medicaid MCO plans and their PBMs that are reflected in the point-of-sale price. Without a better understanding of how these policy changes ultimately would affect the competitive marketplace, patient access, and affordability, however, we are unable to provide assurances regarding how prices might change.

We want to ensure that the new system achieves its goal of improving affordability for patients. For instance, CMS should monitor and evaluate how the new system affects formulary access, utilization management, and patient cost-sharing, particularly with respect to medicines with a lower list price. We also have concerns that changes to the rebate system may lead to new fees, which simply require manufacturers to pay previous rebate values in new ways, rather than creating savings for patients.

Senator Brown:

According to an article recently published in the Journal of the American Medical Association, medical marketers spend nearly \$30 billion dollars in 2016, up from \$17 billion in 1997. Direct-to-Consumer (DTC) advertising had the biggest percentage increase: from \$2.1 billion, or 11.9% of all medical marketing, in 1997 to \$9.6 billion, or 32% of total spending, in 2016.

1. All witnesses: Can each of you please provide what your ratio of spending on sales and marketing to research and development is today?

In 2018, Sanofi's global ratio of spending on sales and marketing³¹ to research and development was approximately 117%.

Price-Gouging

Sanofi, as I understand it, has made a pledge to the public to limit its price increases to the national health expenditures growth projection.

- 1. Dr. Brandicourt: As the Chair of the Board of Directors at PhRMA would you support membership requirements that would cap annual price increases for drugs sold as part of Medicare, similar to what Sanofi has pledged?
- 2. Dr. Brandicourt: Given that PhRMA members are considering creating higher standards for themselves, would you support an industry-wide standard on annual price increases that applies to all pharmaceutical corporations, whether or not they are members of PhRMA?

Dr. Brandicourt appeared before the Committee on behalf of Sanofi; we cannot speak on behalf of PhRMA or any other company. We note that pricing discussions among PhRMA

³¹ "Sales and marketing" includes, but is not limited to: sales force, promotion, and marketing management.

members, or pharmaceutical manufacturers more generally, could implicate federal antitrust laws and therefore would be inappropriate.

Two years ago, Sanofi announced our progressive and industry-leading pricing principles, which include a pledge to keep annual list price increases at or below the projected U.S. National Health Expenditure (NHE) growth rate, as calculated by CMS. In 2018, all of Sanofi's price increases across its medicines were consistent with those pricing principles, as are all pricing actions taken in 2019.

3. All witnesses: What policies would you propose to help ensure lower <u>launch</u> prices for new drugs?

For Sanofi, the key requirement for any policy solution is that it should result in improved access and lower prescription out-of-pocket drug costs for patients, while maintaining incentives for innovations. To reform the current misaligned incentives in the current system, Sanofi supports de-linking payments to PBMs, payers and others in the supply chain from the list price. Additionally, we support policies that would incentivize lower launch prices, smaller list price increases, or even list price reductions, by requiring health plans to cover those medicines at an affordable co-pay level and only allow access restrictions consistent with the label and accepted best clinical practice.

Transparency

In many of your testimonies, you mentioned that the current system of pharmacy benefit manager (PBM) back-end rebates do not rarely results in a scenario where the PBM passes on savings to consumers at the point of sale (POS). The Administration recently proposed a rule to eliminate the anti-kickback statute safe harbor protections for these drug rebates.

1. All witnesses: do you agree that greater transparency should be required to understand how manufacturers and PBMs are negotiating prices and rebates to ensure that savings are passed down to beneficiaries?

Yes. Sanofi supports policies, such as those proposed in the C-THRU Act, that would encourage or require PBMs and payers to be transparent regarding how they use manufacturer rebates and pass through manufacturer rebates to patient at point of sale in the form of lower out-of-pocket costs.

As part of our pricing principles, Sanofi voluntarily discloses annually our aggregate U.S. gross and net price changes from the prior calendar year. These data help illustrate how pricing changes accrue to manufacturers versus others in the value chain, highlighting our discrete role in the broader U.S. health care system.

PBMs

An Axios article from March 7, 2019 highlights the fact that, while "pharmaceutical companies put a lot of the blame for high drug prices on pharmacy benefit managers,"

many large pharmaceutical companies "rely on PBMs to manage their own health care benefits."

1. All witnesses: in your role as an employer, does your company contract with a pharmaceutical benefit manager (PBM) to administer the prescription drug benefits for your employees and negotiate lower drug costs on your behalf?

Yes, we do.

2. All witnesses: for those of you who do use a PBM to help manage the prescription drug benefit for your employees, how do you utilize the rebates your PBM negotiates to lower health care costs or drug costs for your employee plans and what does your company do with that savings? Specifically, do the savings go toward lowing premiums?

The Sanofi medical plan is self-insured; as such, the company pays the majority (approximately 80%) of the health care claims that are incurred by our employees and their dependents. Therefore, Sanofi uses rebates to defray the overall cost of its health plan, which allows us to keep plan costs stable for all participants.

We offer our employees generous healthcare coverage and have been able to keep the deductibles of our PPO, which covers 90% of our employees who elect medical coverage, at \$200 for single coverage and \$400 for family coverage over the past few years. With respect to our PPO prescription drug benefit, members incur no cost (\$0 co-pays) for Sanofi and partner prescription drugs. For non-Sanofi prescriptions, the out-of-pocket expense varies for generic (\$15/prescription), preferred brand (\$25/prescription) and non-preferred brand (\$40/prescription). The Sanofi plan's actuarial value is around 90%, which puts it at the "platinum" level.

3. All witnesses: for those of you who do use a PBM to help manage the prescription drug benefit for your employees, does your PBM offer point-of-sale rebates to your employees?

Yes, our PBM does offer point-of-sale rebates, however only around 8% of its clients currently are enrolled in point of sale rebates.

Senator Whitehouse:

For all witnesses:

1. Please describe any policy changes you support that would result in your company lowering the list prices of its drugs.

For Sanofi, the key requirement for any policy solution is that it should result in improved access and lower prescription out-of-pocket drug costs for patients, while maintaining incentives for innovations. To reform the current misaligned incentives in the current system,

Sanofi supports de-linking payments to PBMs, payers and others in the supply chain from the list price. Additionally, we support policies that would incentivize lower launch prices, smaller list price increases, or even list price reductions, by requiring health plans to cover those medicines at an affordable co-pay level and only allow access restrictions consistent with the label and accepted best clinical practice.

Sanofi also supports the intent behind legislation like the SPIKE Act, which would impose price transparency requirements on companies that increase the list price of a particular drug over a certain threshold. We believe that increased transparency should accomplish three goals: (1) preempt similar state laws, as was done with the Sunshine Act, to create a consistent reporting process; (2) ensure information that if released publically could be anti-competitive is kept confidential; and, (3) take a holistic approach to transparency, such as requiring PBMs to disclose when the net price of a medicine has declined and whether the increased rebates are used to lower costs for patients or for other reasons.

2. How much does your company's research and development portfolio rely on taxpayer-funded research conducted by the National Institutes of Health (NIH)? How many of your company's products are based, at least in part, on NIH research, and how many are the result of research funded solely by your company?

In identifying targets for new drugs, Sanofi relies on global science, which often includes NIH-funded research. Sanofi has collaborated with NIH on various research and development (R&D) initiatives on projects related to HIV, Epstein-Barr virus, influenza, and respiratory syncytial virus.

While there is no question that NIH plays a vital role in basic research and early discovery, the majority of Sanofi's current portfolio of products in the pre-development to development phases do not rely on NIH funding. Sanofi reinvests a significant portion of its revenue into the R&D of new or improved medicines and vaccines. Last year, Sanofi globally spent almost \$7 billion on R&D globally, an increase of approximately 7 percent from 2017, which reflects our commitment to bringing better therapies to patients. Sanofi plans to maintain this level of R&D investment through 2021, and our R&D pipeline now contains 81 projects, including 33 new molecular entities in clinical development, and 35 projects that are in Phase III or have been submitted to regulatory authorities. This investment means that Sanofi potentially will seek approval for nine new medications in the next three years, primarily in therapeutic areas where Sanofi sees the greatest nexus between our expertise and patient need: diabetes, vaccines, oncology, immunology, rare diseases, and rare blood disorders.

3. In each of the last five years, how much has your company spent on research and development versus the advertising and marketing of your products?

I	USD ³²	Research and Development	
			Marketing ³³

³² Sanofi reports its financials in Euros. All financial figures reported in this document have been converted from Euros into U.S. dollars. These are Sanofi global financial figures.

³³ Includes global spending on "promotion" and "marketing management."

2018	\$6,954,920,000	\$4,519,400,000
2017	\$6,238,080,000	\$3,764,280,000
2016	\$5,689,200,000	\$3,006,300,000
2015	\$5,590,200,000	\$2,773,100,000
2014	\$6,160,440,000	\$2,673,000,000

- 4. During the hearing, you mentioned that your company would be likely to lower the list prices of its drugs if the recent proposal by the Trump administration to change the current system of rebates was extended to the private market.
 - a. If the policy was extended to the private market, how large would the list price reductions be relative to the size of the rebates your company is currently providing?

If (1) the proposed changes to the anti-kickback statute safe harbors were codified, and (2) Congress implemented similar changes to the commercial insurance market, Sanofi would lower the list prices of its prescription medications for products in competitive categories for which there is currently a material difference between list price and net price on the assumption that patient access and affordability would be improved. Sanofi also supports policy changes that would de-link other payments in the pharmaceutical supply chain from list price.

We support extending the intent behind the anti-kickback statute safe harbor proposed rule to the commercial market so that incentives are aligned across the marketplace. Together, we believe these changes would facilitate Sanofi's ability to lower its list prices. However, we recommend a step-wise approach, implementing changes to the commercial market after the safe harbor rule is implemented on January 1, 2020. Such an approach would provide an opportunity for stakeholders and the government to identify unintended consequences, and address them, prior to extending these policies to the commercial market.

We want to ensure that the new system achieves its goal of improving affordability for patients. For instance, CMS should monitor and evaluate how the new system affects formulary access, utilization management, and patient cost-sharing, particularly with respect to medicines with a lower list price. We also have concerns that changes to the rebate system may lead to new fees, which simply require manufacturers to pay previous rebate values in new ways, rather than creating savings for patients.

Without a better understanding of how these policy changes ultimately would affect the competitive marketplace, patient access, and affordability, we are unable to quantify the amount of any potential list price reduction.

b. How will this proposal affect how your company sets the list prices for new drug products?

When setting the price of a new medicine, Sanofi's decision making will continue to be guided by our pricing principles framework. When Sanofi sets the price of a new medicine in the U.S., we hold ourselves to a rigorous and structured process that includes consultation with

external stakeholders. In our view, an objective measure of a new product's value considers the benefit to patients, compared to a standard of care; the reduced need – and therefore costs – of other health care interventions; and any increase in quality of life and productivity. We believe our pricing reflects these factors. We also consider factors such as the affordability for patients and any unique factors specific to the medicine, like the need to support ongoing clinical trials, implement important regulatory commitments, or develop sophisticated patient support tools that improve care management and help decrease the total cost of care.

To the extent reform of the anti-kickback statute safe harbors results in changes in the competitive marketplace, patient access, and affordability, the rule is likely to affect our pricing of new medicines.

c. If the proposal is finalized and not extended to the private market, will your company make any list price reductions? If so, how large would the reductions be relative to the size of the rebates your company is currently providing?

Sanofi is committed to working with other stakeholders to lower patient out-of-pocket costs, and the company will carefully review any final rule issued by HHS regarding the Anti-Kickback Statute and its safe harbor regulations — with the goal of providing point-of-sale discounts to patients, in accordance with law, to lower their out-of-pocket costs.

Without addressing the currently misaligned incentives across all payer channels, it is unclear the extent to which Sanofi would be able to lower list prices. We would need a better understanding of how the rule ultimately would affect the competitive marketplace, patient access, and affordability in both the government and commercial insurance markets in order to quantify the amount of any potential list price reduction.

Senator Hassan:

For all witnesses:

In June of 2018, the Medicaid and CHIP Payment and Access Commission (MACPAC) unanimously recommended under Recommendation 1.1 in their annual report to Congress that Congress remove the statutory requirement that manufacturers blend the average manufacturer price (AMP) of a brand drug and its authorized generic. ³⁴

This requirement created an unintended loophole. Rather than use the price of the authorized generic, drug companies can sell its authorized generic to a corporate subsidiary at an artificially lower price, and use that lower price to bring down the AMP, which in turn lowers the rebate obligation.

Does your company engage in this practice? Has your company ever engaged in this practice in the past?

³⁴MACPAC: Improving Operations of the Medicaid Drug Rebate Program: https://www.macpac.gov/wp-content/uploads/2018/06/Improving-Operations-of-the-Medicaid-Drug-Rebate-Program.pdf

Sanofi currently markets authorized generic versions of certain of its products, through corporate affiliates, under separate National Drug Codes ("NDC"). Sanofi's general approach for these products has been that if two products share the same drug, dosage form, and strength, and both are sold by the same corporate entity or Sanofi business unit, then their sales are blended for the calculation of AMP and Best Price.

Senator Cortez Masto:

1. Question to Olivier Brandicourt, Sanofi

In October you were asked by a reporter whether you would lower the price of insulin if point-of-sale rebates were enacted. Your response was "We realize that some medicines remain economically out of reach for some patients. We take this issue seriously and will continue to seek innovative solutions to help make insulins more affordable for patients." Please answer that question more specifically: will you lower your list price in response to the rebate rule?

If (1) the proposed changes to the anti-kickback statute safe harbors were codified, and (2) Congress implemented similar changes to the commercial insurance market, Sanofi would lower the list prices of its prescription medications for products in competitive categories for which there is currently a material difference between list price and net price on the assumption that patient access and affordability would be improved. Sanofi also supports policy changes that would de-link other payments in the pharmaceutical supply chain from list price.

We support extending the intent behind the anti-kickback statute safe harbor proposed rule to the commercial market so that incentives are aligned across the marketplace. Together, we believe these changes would facilitate Sanofi's ability to lower its list prices. However, we recommend a step-wise approach, implementing changes to the commercial market after the safe harbor rule is implemented on January 1, 2020. Such an approach would provide an opportunity for stakeholders and the government to identify unintended consequences, and address them, prior to extending these policies to the commercial market.

We want to ensure that the new system achieves its goal of improving affordability for patients. For instance, CMS should monitor and evaluate how the new system affects formulary access, utilization management, and patient cost-sharing, particularly with respect to medicines with a lower list price. We also have concerns that changes to the rebate system may lead to new fees, which simply require manufacturers to pay previous rebate values in new ways, rather than creating savings for patients.

Without a better understanding of how these policy changes ultimately would affect the competitive marketplace, patient access, and affordability, we are unable to quantify the amount of any potential list price reduction.

2. Questions to all witnesses

As a portion of your revenue, for what percentage of the drugs in your portfolio do you offer no rebates? Based on the drugs in your pipeline, do you foresee that portion growing? For those drugs is your list price equal to your net price?

When considering rebates paid by Sanofi in any form, including those that are government-mandated, Sanofi offers rebates on all of its products at some point in the distribution channel. We do not expect that this will change based on the company's pipeline.

Do you invest more in R&D than you generate in US sales revenue? Please include specific figures.

In 2018, Sanofi spent \$6,954,920,000 globally on R&D, a 7% increase over 2017 and approximately 24% of its global gross profits. In 2018, Sanofi's US net sales were \$13,617,200,000.

Do you invest more in R&D than you spend on marketing and administration? What company functions do you consider to be included in administration? Please include specific figures.

Yes. In 2018, Sanofi spent \$6,954,920,000 globally on R&D, and \$6,921, 880,000 globally on marketing and administration. "Administration" includes, but is not limited to: finance, human resources, external affairs, legal, business services, business development, and internal audit.

Do you invest more in R&D than you spend on marketing and sales? What company functions do you consider to be included in sales? Please include specific figures.

In 2018, Sanofi spent \$6,954,920,000 globally on R&D, and \$8,154,980,000 globally on marketing and sales. The primary function included in "sales" is the sales force.

Why do you advertise for the drugs you manufacture? What factors do you consider in choosing which drugs you advertise?

Sanofi believes that advertising is an important tool to inform and educate the public about its medicines, while raising general awareness of diseases that are frequently surrounded by stigma. We are committed to ensuring that our advertisements provide accurate, accessible, and useful health information to patients and consumers. Our communications are designed to educate patients and consumers about serious health conditions and the availability of treatments, and to encourage them to seek guidance from their healthcare professionals about appropriate treatment. We consider a variety of factors in determining whether and how to advertise a product, including patient needs and the unique aspects of an individual product or disease state.

_

1st Jan 2015 - 30th June 2015

Sanofi US and its affiliate Genzyme Corporation are committed to supporting independent medical education activities in therapeutic areas in which the Company is involved, for healthcare professionals, patients, and consumers to improve patient care and health outcomes in therapeutic areas in which the Company is engaged. Sanofi US and Genzyme Corporation are part of the Sanofi Group, a global pharmaceutical company.

Sponsorships and Charitable Donations 1st Jan 2015 - 31st Dec 2015

Sanofi US and its affiliate Genzyme Corporation are committed to supporting sponsorships for specific activities and initiatives of healthcare organizations and institutions, independent medical or professional societies, trade organizations and organized patient groups to improve patient care and provide information to the medical and/or patient communities. The goal of our charitable giving approach is to fund general operational support for patient/disease organizations, or program support for community-based organizations. Sanofi US and Genzyme Corporation are part of the Sanofi Group, a global pharmaceutical company.

Applicant names are provided by the requestor. If applicants apply as a group for a single activity; all applicants may be not be identified above. "Funding Amount" is the amount that the Company funded during 2015 identified above. "Funding Amount" does not include funds that may have been provided by other affiliated Sanofi Company Entities, (e.g., Sanofi Pasteur)

Sponsorships and Charitable Donations 1st Jan 2016 - 31st Dec 2016

Sanofi US and its affiliate Genzyme Corporation are committed to supporting sponsorships for specific activities and initiatives of healthcare organizations and institutions, independent medical or professional societies, trade organizations and organized patient groups to improve patient care and provide information to the medical and/or patient communities. The goal of our charitable giving approach is to fund general operational support for patient/disease organizations, or program support for community-based organizations. Sanofi US and Genzyme Corporation are part of the Sanofi Group, a global pharmaceutical company.

Applicant names are provided by the requestor. If applicants apply as a group for a single activity; all applicants may be not be identified above. "Funding Amount" is the amount that the Company funded during 2015 identified above. "Funding Amount" does not include funds that may have been provided by other affiliated Sanofi Company Entities, (e.g., Sanofi Pasteur)

Sponsorships and Charitable Donations 1st Jan 2017 - 31st Dec 2017

Sanofi US and its affiliate Genzyme Corporation are committed to supporting sponsorships for specific activities and initiatives of healthcare organizations and institutions, independent medical or professional societies, trade organizations and organized patient groups to improve patient care and provide information to the medical and/or patient communities. The goal of our charitable giving approach is to fund general operational support for patient/disease organizations, or program support for community-based organizations. Sanofi US and Genzyme Corporation are part of the Sanofi Group, a global pharmaceutical company.

Applicant names are provided by the requestor. If applicants apply as a group for a single activity; all applicants may be not be identified above. "Funding Amount" is the amount that the Company funded during 2017 identified above. "Funding Amount" does not include funds that may have been provided by other affiliated Sanofi Company Entities, (e.g., Sanofi Pasteur)

Sponsorships, Charitable Donations, Memberships and Fellowships 1st Jan 2018 - 31st Dec 2018

Sanofi US and its affiliate Genzyme Corporation are committed to supporting sponsorships for specific activities and initiatives of healthcare organizations and institutions, independent medical or professional societies, trade organizations and organized patient groups to improve patient care and provide information to the medical and/or patient communities. The goal of our charitable giving approach is to fund general operational support for patient/disease organizations, or program support for community-based organizations. Sanofi US and Genzyme Corporation are part of the Sanofi Group, a global pharmaceutical company.

Applicant names are provided by the requestor. If applicants apply as a group for a single activity; all applicants may be not be identified above. "Funding Amount" is the amount that the Company funded during 2018 identified above. "Funding Amount" does not include funds that may have been provided by other affiliated Sanofi Company Entities, (e.g., Sanofi Pasteur)

Name of Study

A roadmap for the conversion from sliding scale to basal insulin in the long term care setting.

A Phase I Study of Cabazitaxel, Mitoxanthrone, and Prednison (CAMP) for Patients with Metastatic Castration-Resistant Prostate Cancer and ne An Exploratory Randomized Phase II Multicenter Trial of Abiraterone Acetate with or without Cabazitaxel in Treatment of Metastatic Castration F A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re Detection of early end-organ damage by endothelial dysfunction with reactive hyperemia-digital peripheral arterial tonometry in patients with Fal Improved Detection, Diagnosis, and Management of Fabry Disease through Serial Ophthalmic Documentation and Tear Fluid Analysis

A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Re

Effects of an Intensive Intervention on Medication Adherence, Glycemic Control, and Readmission Rates in Patients with Type 2 Diabetes

FLuctuATion reduction with inSUlin and Glp-1 Added togetheR (FLAT-SUGAR)

Simplification of diabetes regimen in elderly patients using glargine

Phase I Study of Plerixafor (AMD3100) and Bevacizumab for recurrent high-grade glioma

Phase I/II Trial of Combination AMD3100 and Bortezomib in Relapsed or Relapsed/Refractory Multiple Myeloma

Phase I/II Trial of Combination AMD3100 and Bortezomib in Relapsed or Relapsed/Refractory Multiple Myeloma

Taxotere Plus Six-Month Androgen Suppression and Radiation Therapy vs Six-Month Androgen Suppression and Radiation Therapy for Patient:

Phase I/II Study of Plerixafor and Clofarabine in Previously Untreated Older (>= 60 years) Adult Patients with Acute Myelogenous Leukemia (AN G-CSF and Plerixafor with Sorafenib for Acute Myelogenous Leukemia with FLT3(ITD) mutations

Phase I/II Study of Plerixafor and Clofarabine in Previously Untreated Older (>= 60 years) Adult Patients with Acute Myelogenous Leukemia (AN G-CSF and Plerixafor with Sorafenib for Acute Myelogenous Leukemia with FLT3(ITD) mutations

A Phase III Trial of Irinotecan/5-FU/Leucovorin or Oxaliplatin/5-FU/leucovorin with Bevacizumab, or Cetuximab (C225) or with the Combination of Phase I/II Study of Low-Dose Oral Clofarabine for the treatment of IPSS INT-1, INT-2 or HIGH Myelodysplastic Syndromes (dysplastic type) Part A Multicenter, Randomized, Controlled Trial Evaluating the Safety, Efficacy and Cost-Effectiveness of Seprafilm Adhesion Barrier Following Cest A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtuzumab on Surrogate Markers of Disease Activity and Repair using Advanced MRI measures in Subjects with Retaking A study of the effects of Alemtu

Do the Benefits Outweigh the Risks? Assessing Patients' Perceptions of Newborn Screening for Lysosomal Storage Diseases

A Randomized Study of Once Daily Fludarabine-Clofarabine vs Fludarabine Alone Combined with IV Busulfan Followed by Allogeneic Hemopoi. A Randomized Study of Once Daily Fludarabine-Clofarabine vs Fludarabine Alone Combined with IV Busulfan Followed by Allogeneic Hemopoi. A Randomized Study of Once Daily Fludarabine-Clofarabine vs Fludarabine Alone Combined with IV Busulfan Followed by Allogeneic Hemopoi.

A Randomized Study of Once Daily Fludarabine-Clofarabine vs Fludarabine Alone Combined with IV Busulfan Followed by Allogeneic Hemopoi

A phase II study of cabazitaxel with or without carboplatin in patients with metastatic castration-resistant prostate cancer previously treated with

A phase II study of cabazitaxel with or without carboplatin in patients with metastatic castration-resistant prostate cancer previously treated with

An Exploratory Randomized Phase II Multicenter Trial of Abiraterone Acetate with or without Cabazitaxel in Treatment of Metastatic Castration F

Assessment of Aubagio?s neuroprotective effect on the development of T1 black holes

Assessment of Aubagio?s neuroprotective effect on the development of T1 black holes Post-partum MRI Changes in Women with Multiple Sclerosis.

Post-partum MRI Changes in Women with Multiple Sclerosis.

Post-partum MRI Changes in Women with Multiple Sclerosis.

Detection of early end-organ damage by endothelial dysfunction with reactive hyperemia-digital peripheral arterial tonometry in patients with Fal Innovation in the timely diagnosis and multidiscipinary treatment of Fabry disease

A Prospective, Multicenter Study Of Fabry Disease Clinical and Biochemical Findings in Young Pediatric Patients (The MOPPET Study)

Reproductive Fitness in Individuals Affected by Fabry Disease (FIT)

Investigating Pompe Prevalence in NEuromuscular Medicine Academic Practices (IPANEMA Study)

The Fabry Pain Inventory: Validation of a New Clinical Tool to Comprehensively Capture the Fabry Pain Experience

Effects of Fabry Disease on Myelination in the In Vivo Adult Human Brain

Improved Detection, Diagnosis, and Management of Fabry Disease through Serial Ophthalmic Documentation and Tear Fluid Analysis

Phase II Study of Clofarabine in Patients with Recurrent or Refractory Langerhans Cell Histiocytosis

Phase I/II Trial of Combination AMD3100 and Bortezomib in Relapsed or Relapsed/Refractory Multiple Myeloma

Leukine (sargramostim) for Parkinson's disease

A Phase II Trial of GM-CSF Protein plus Ipilimumab in Patients with Advanced Melanoma (ECOG 1608)

Phase II Study of Clofarabine and High-Dose Melphalan Conditioning Prior to Allogeneic Heamtopoietic Cell Transplantation for Myelodysplasia A Phase II Trial of GM-CSF Protein plus Ipilimumab in Patients with Advanced Melanoma (ECOG 1608)

A Phase I/II Trial of Concurrent Chemohormonal Therapy Using Enzalutamide (MDV-3100) and Cabazitaxel in Patients with Metastatic Castratic Creation of a registry of patients treated on TAX3503

Phase I/II Trial of Combination AMD3100 and Bortezomib in Relapsed or Relapsed/Refractory Multiple Myeloma

An Exploratory Randomized Phase II Multicenter Trial of Abiraterone Acetate with or without Cabazitaxel in Treatment of Metastatic Castration F

A Randomized Phase 2 study to Evaluate the Efficacy of Rasburicase in Patients at Risk for TLS During Two Cycles of Chemotherapy

Aflibercept Maintenance for patients with resected or ablated metastatic colorectal cancer

An Exploratory Randomized Phase II Multicenter Trial of Abiraterone Acetate with or without Cabazitaxel in Treatment of Metastatic Castration F A Multi-center Randomized Phase II Study of the Impact of CD34+ Cell Dose on Progression-free Survival Following High-Dose Therapy and At Phase I Study of Plerixafor (AMD3100) and Bevacizumab for Recurrent High-grade Glioma

A Prospective, Multicenter Study Of Fabry Disease Clinical and Biochemical Findings in Young Pediatric Patients (The MOPPET Study)

Innovation in the timely diagnosis and multidiscipinary treatment of Fabry disease

Reproductive Fitness in Individuals Affected by Fabry Disease (FIT)

Reproductive Fitness in Individuals Affected by Fabry Disease (FIT)

MGH Fabry Screening Initiative

A Comparison of Pharmacological vs. Psychological Interventions to Improve Adaptive Function in Fabry Patients Undergoing Enzyme Replace Detection of early end-organ damage by endothelial dysfunction with reactive hyperemia-digital peripheral arterial tonometry in patients with Fal Online Social Networking Use Among Individuals Affected with Lysosomal Storage Diseases: "Friend" or Foe?

Characterization and analysis of pathophysiology of the gastrointestinal complications of Fabry disease.

A Phase II Study of VEGF-Trap plus Modified FOLFOX 6 in Previously Untreated Patients with Metastatic Colorectal Cancer

A Randomized, Controlled, open-labeled Clinical Trial of Thymoglobulin Induction and Extended Delay of Calcineurin Inhibitor Therapy for Rena Comparison of I-124 and I-131 Radiopharmacokinetics in Patients who have Well-differentiated Thyroid Cancer and have been Prepared with R A Phase I/II Trial of Concurrent Chemohormonal Therapy Using Enzalutamide (MDV-3100) and Cabazitaxel in Patients with Metastatic Castratic Phase II Study of Clofarabine and High-Dose Melphalan Conditioning Prior to Allogeneic Heamtopoietic Cell Transplantation for Myelodysplasia

Phase II Study of Aflibercept in Patients with Advanced, Progressive Carcinoid Tumors

Epidemiology of Diabetes Interventions and Complications

Phase II Study of Clofarabine and High-Dose Melphalan Conditioning Prior to Allogeneic Heamtopoietic Cell Transplantation for Myelodysplasia Phase II Study of Clofarabine in Patients with Recurrent or Refractory Langerhans Cell Histiocytosis

Epidemiology of Diabetes Interventions and Complications

Phase II Study of Clofarabine and High-Dose Melphalan Conditioning Prior to Allogeneic Heamtopoietic Cell Transplantation for Myelodysplasia

A Phase II Trial of GM-CSF Protein plus Ipilimumab in Patients with Advanced Melanoma (ECOG 1608)

Eliglustat Tatrate Named Patient Program

Safety and Efficacy Trial of Escalation of Plerixafor for Mobilization of CD34+ Hematopoietic Progenitor Cells and Evaluation of Globin Gene Tra

Phase II Study of Clofarabine in Patients with Recurrent or Refractory Langerhans Cell Histiocytosis

Phase II Study of Aflibercept in Patients with Advanced, Progressive Carcinoid Tumors

A Phase II Study of VEGF-Trap plus Modified FOLFOX 6 in Previously Untreated Patients with Metastatic Colorectal Cancer

A Phase II Study of VEGF-Trap plus Modified FOLFOX 6 in Previously Untreated Patients with Metastatic Colorectal Cancer

Comparison of I-124 and I-131 Radiopharmacokinetics in Patients who have Well-differentiated Thyroid Cancer and have been Prepared with R

A Phase II Study of VEGF-Trap plus Modified FOLFOX 6 in Previously Untreated Patients with Metastatic Colorectal Cancer

Phase II Study of Clofarabine in Patients with Recurrent or Refractory Langerhans Cell Histiocytosis

A Phase I/II Trial of Concurrent Chemohormonal Therapy Using Enzalutamide (MDV-3100) and Cabazitaxel in Patients with Metastatic Castratic

A Phase II Study of VEGF-Trap plus Modified FOLFOX 6 in Previously Untreated Patients with Metastatic Colorectal Cancer
